hearing loss, tinnitus, and vertigo resulting from nonsuppurative disease of the labyrinth with the histopathologic feature of endolymphatic hydrops (distention of the membranous labyrinth). **Menkes' d.**, see under *syndrome*. **mental d.**, see under *disorder*. **Merzbacher-Pelizaeus d.**, familial centrolobar sclerosis. **metabolic d.**, one caused by some defect in the chemical reactions of the cells of the body. **metazoan d.**, a disease caused by metazoan parasites, such as nematodes, cestodes, trematodes, and arthropods. **Meyer's d.**, adenoid vegetations of the pharynx. **Meyer-Betz d.**, a rare familial disease of unknown etiology, marked by attacks of myoglobinuria, which may be precipitated by strenuous exertion or possibly by an infection, and which results in tenderness, swelling, and weakness of muscles of varying intensity. It may occur with or without diffuse chronic myopathy or dystrophy. Called also *idiopathic, spontaneous, or familial myoglobinuria*. **miasmatic d.**, one due to malarial infection. **microdrepanocytic d.**, sickle cell-thalassemia d. **Miescher's d.**, elastosis perforans serpiginosa. **Mikulicz's d.**, a benign, self-limited lymphocytic infiltration and enlargement of the lacrimal and salivary glands of uncertain etiology (possibly an autoimmune response), usually affecting middle-aged or older women. It is considered by some to be identical with Sjögren's syndrome; others suggest that it is a different form of the same malady, with a common etiology. When associated with sarcoidosis, malignant lymphoma, or collagen disease, the similar clinical picture is called *Mikulicz's syndrome*. **milk-borne d's.**, diseases caused by organisms transmitted in milk; the principal ones are cholera, diphtheria, dysentery, food infections, foot-and-mouth disease, summer diarrhea, brucellosis, scarlet fever, septic sore throat, tuberculosis, and typhoid fever. **milky d.**, **milky-white d.**, a fatal infection of beetle larvae due to *Bacillus papilliae* or *B. lentimorbus*, in which the "blood" of the larvae appears milky white as a result of the profuse multiplication and sporulation of the bacilli. The infection may be produced deliberately in Japanese beetles to control their population. **Miller's d.**, osteomalacia. **Mills' d.**, ascending hemiplegia that eventually develops into quadriplegia; its etiology is unknown. **Milroy's d.**, congenital hereditary lymphedema of the legs caused by chronic lymphatic obstruction; other areas, including the arms, trunk, and face may be involved. Called also *Meige's d.*, *Milroy's edema*, *Nonne-Milroy-Meige syndrome*, and *congenital lymphedema*. **Minamata d.**, a severe neurologic disorder caused by alkyl mercury poisoning, usually characterized by peripheral and circumoral paresthesia, ataxia, dysarthria, and loss of peripheral vision, and leading to severe permanent neurologic and mental disabilities or death. It was prevalent between 1953 and 1958 among those who ate sea food from Minamata Bay, Japan, which contained an excess of alkyl mercury compounds. **Minor's d.**, hematomyelia involving the central parts of the spinal cord. **mish d.**, a dysentery in Syria caused by eating apricots. **Mitchell's d.**, erythromelalgia. **mixed connective tissue d.**, a disorder combining features of scleroderma, myositis, systemic lupus erythematosus, and rheumatoid arthritis, and marked serologically by the presence of antibody against extractable nuclear antigen. **Möbius' d.**, periodic migraine with paralysis of the oculomotor muscles. **Moeller-Barlow d.**, subperiosteal hematoma in rickets. **molecular d.**, any disease in which the pathogenesis can be traced to a single molecule, usually a protein, which is either abnormal in structure or present in reduced amounts; the classical example is abnormal hemoglobin in sickle cell anemia. **Molten's d.**, Pictou d. **Mondor's d.**, phlebitis affecting the large subcutaneous veins normally crossing the lateral chest region and breast from the epigastric or hypochondriac region to the axilla, occurring in both males and females. **Monge's d.**, chronic mountain sickness. **Morel-Kraepelin d.**, schizophrenia. **Morgagni's d.**, hyperostosis frontalis interna. **Morquio's d.**, see under *syndrome*. **Morquio-Ullrich d.**, Morquio's syndrome. **Morton's d.**, see under *toe*. **Morvan's d.**, a form of syringomyelia marked by painless ulceration of the tips of the fingers (paronychia) and analgesic paralysis and atrophy of the forearms and hands. **mosaic d's.**, infectious diseases of plants caused by viruses and characterized by mottling of the foliage. **Moschcowitz's d.**, thrombotic thrombocytopenic purpura. **motor neuron d.**, any disease of a motor neuron, including spinal muscular atrophy, progressive bulbar paralysis, amyotrophic lateral sclerosis, and lateral sclerosis. **mountain d.**, see under *sickness*. **Mozer's d.**, myelosclerosis in adults. **Mucha's d.**, **Mucha-Habermann d.**, pityriasis lichenoides et varioliformis acuta. **mucosal d.**, a disease of cattle, due to the virus of bovine virus diarrhea; ulcerations in the mouth may be the only sign, but often there is fever, diarrhea, loss of appetite, and a drop in milk yield. **mule spinner's d.**, warts or ulcers of the skin, especially of the scrotum, which tend to become malignant; so called because they were found chiefly among the operators of spinning mules in cotton mills. **Münchmeyer's d.**, a diffuse progressive ossifying polymyositis. **Murray Valley d.**, see under *encephalitis*. **mushroom picker's d.**, **mushroom worker's d.**, an allergic respiratory disease closely resembling farmer's lung, developing in persons working with moldy compost prepared for growing mushrooms in closed areas, especially in those handling the dried material after harvesting.

mushy chick d., omphalitis of birds; see under *omphalitis*. **Mya's d.** (*obs.*), congenital dilatation of the colon. **Nadia d.**, a disease of unknown etiology that affected residents of the Nadia District of West Bengal in 1964. It was marked by burning sensations of the hands and feet, anorexia, diarrhea, and lethargy, followed by hyperkeratosis of the soles with black pigmentation and fissures, and by facial erythema. **Nairobi d.**, an infectious disease of sheep and goats in Africa, especially in the region around Nairobi, marked by acute hemorrhagic gastroenteritis, green, watery diarrhea, mucopurulent nasal discharge, and breathing difficulty; it is caused by a virus transmitted by the ticks *Rhipicephalus appendiculatus* and *Amblyomma variegatum*. **nanukayami d.**, nanukayami. **naronian d.**, an endemic intermittent fever once prevalent at Narenta (Bosnia, Yugoslavia). **navicular d.**, necrotic inflammation of the navicular bone in horses, causing intermittent lameness; called also *grog*. **Newcastle d.**, an influenza-like viral disease of birds, including domestic fowl, characterized by respiratory and gastrointestinal or pneumonic and encephalitic symptoms. First seen near Newcastle, England, the infection is also transmissible to man by contact with infected birds. Called also *avian influenza*. **Nicolas-Favre d.**, lymphogranuloma venereum. **Nidoko d.**, epidemic hemorrhagic fever. **Niemann's d.**, Niemann-Pick d. **Niemann-Pick d.**, a hereditary disease characterized by massive hepatosplenomegaly, brownish yellow discoloration of the skin, nervous system involvement, and presence in the liver, spleen, lungs, lymph nodes, and bone marrow of foamy reticular cells or histiocytes which store phospholipids, chiefly lecithin and sphingomyelin. Called also *lipid histiocytosis*, *Niemann's d.*, *Pick's d.*, *phosphatide thesaurismosis* or *lipoidosis*, *sphingomyelinosis*, *sphingomyelin lipidosis*. **nodule d.**, **nodular worm d.**, a disease of sheep and cattle, caused by a minute worm, *Oesophagostomum columbianum*, which infests the intestines, becoming embedded in the mucous membrane, where it causes the formation of nodules of varying size. **Nordau's d.**, degeneracy. **Norrie's d.**, a hereditary disorder consisting of bilateral blindness from retinal malformation, mental retardation, and deafness, transmitted as an X-linked trait; called also *atrophia bulborum hereditaria*. **nosema d.**, a disease of bees caused by *Nosema apis*, characterized by dysentery and paralysis. Cf. *pebrine*. **Novy's rat d.**, a viral disease discovered by Novy in his stock of experimental rats. **oasthouse urine d.**, Smith-Strang d. **occupational d.**, one due to factors involved in one's employment, e.g., various forms of pneumoconiosis or dermatitis. **Oguchi's d.**, a form of congenital night blindness occurring in Japan. **Ohara's d.**, a disease observed in Japan; probably identical with tularemia. **oid-oid d.**, [from *discoid* and *lichen-oid*] Sulzberger-Garbe syndrome. **Ollier's d.**, enchondromatosis. **Olmer's d.**, bouton-neuse fever. **Ondiri d.**, bovine infectious petechial fever. **Opitz's d.**, thrombophlebitic splenomegaly; enlargement of the spleen due to thrombosis of the splenic vein. **Oppenheim's d.**, amyotonia congenita. **organic d.**, one associated with demonstrable change in a bodily organ or tissue. **Oriental lung fluke d.**, parasitic hemoptysis. **Ormond's d.**, retroperitoneal fibrosis. **Osgood-Schlatter d.**, osteochondrosis of the tuberosity of the tibia; called also *apophysis tibialis adolescentum*, *Schlatter's d.*, and *Schlatter-Osgood d.* See also *osteochondrosis*. **Osler's d.**, 1. polycythemia vera. 2. hereditary hemorrhagic telangiectasia. **Osler-Vaquez d.**, polycythemia vera. **Osler-Weber-Rendu d.**, hereditary hemorrhagic telangiectasia. **Otto's d.**, osteoarthritic protrusion of the acetabulum; arthrokataclasis. **overeating d.**, pulpy kidney d. **Owren's d.**, Factor V deficiency; see *coagulation factors*, under *factor*. **ox-warble d.**, see *larva migrans*. **Paas's d.**, a familial disorder marked by skeletal deformities such as coxa valga, shortening of phalanges, scoliosis, spondylitis, etc. **Paget's d.**, 1. osteitis deformans. 2. an inflammatory cancerous affection of the areola and nipple, usually associated with carcinoma of the lactiferous ducts and deeper structures of the breast, and occurring usually in middle-aged women. 3. see *Paget's d.*, *extramammary*. **Paget's d.**, *extramammary*, a counterpart of Paget's disease of the breast, which usually involves the vulva, and sometimes other sites, such as the perianal and axillary regions. **Panner's d.**, osteochondrosis of the capitulum of the humerus. **parenchymatous d.**, one which attacks the parenchyma of an organ. **Parkinson's d.**, paralysis agitans. **parrot d.**, psittacosis. **Parrot's d.**, see under *pseudoparalysis*. **Parry's d.**, Graves' d. **Parsons' d.**, Graves' d. **Patella's d.**, pyloric stenosis in tuberculous patients following fibrous stenosis. **Pavy's d.**, cyclic proteinuria. **Payr's d.**, constipation with left upper quadrant pain attributed to kinking of an adhesion between the transverse and descending colon with obstruction; probably a manifestation of the irritable colon syndrome rather than an organic lesion. Called also *splenic flexure syndrome*. **pearl d.**, tuberculosis of the peritoneum and mesentery of cattle. **pearl-worker's d.**, recurrent inflammation of bone with hypertrophy, seen in persons who work in pearl dust. **Pel-Ebstein d.**, Hodgkin's d. **Pelizaes-Merzbacher d.**, familial centrolobar sclerosis. **Pellegrini's d.**, *Pellegrini-Stieda d.*, a condition characterized by a semilunar bony formation in the upper portion of the medial lateral ligament of the knee, due to traumatism; called also *Köhler-Pelle-*

grini-Stieda d. and *Stieda's d.* **periodic d.**, a condition characterized by regularly recurring and intermittent episodes of fever, edema, arthralgia, or gastric pain and vomiting, continuing for years without further development in otherwise healthy individuals. **periodontal d.**, any disease or disorder of the periodontium; see *periodontitis* and *periodontosis*. **Perrin-Ferraton d.**, snapping hip. **Perthes' d.**, osteochondrosis of the capital femoral epiphysis; see *osteochondrosis*. **Peyronie's d.**, induration of the corpora cavernosa of the penis, producing a fibrous chord; called also *fibrous cavernitis*, *penis plastica*, and *penile induration*. **Pfeiffer's d.**, infectious mononucleosis. **Phocas' d.**, chronic glandular mastitis with the formation of numerous small nodules. **Pick's d.**, 1. (Arnold Pick) lobar atrophy of the brain. 2. (Friedel Pick) ascites and fibrotic liver disease associated with constrictive pericarditis; called also *pericardial pseudocirrhosis of the liver*. 3. (Ludwig Pick) Niemann-Pick d. **Pictou d.**, cirrhosis of the liver in horses and cattle in Nova Scotia due to ingestion of *Senecio jacobaeus*, the ragwort; called also *Molten's d.* and *Winton d.* **pink d.**, acrodynia. **Pinkus' d.**, lichen nitidus. **plaster-of-Paris d.**, atrophy of a limb which has been enclosed in a plaster-of-Paris splint. **Plummer's d.**, the development of toxicity (hyperthyroidism) in simple adenoma of the thyroid. **pneumatic hammer d.**, vasospastic disease in the hands resulting from use of a pneumatic hammer. **policeman's d.**, tarsalgia. **polycystic d. of kidneys**, a heritable disorder marked by cysts scattered throughout both kidneys. It occurs in two unrelated forms: The *infantile* form, transmitted as an autosomal recessive trait, may be congenital or appear at any time during childhood. There is a high perinatal mortality rate, and almost all cases lead to hypertension. In older children cystic and fibrotic disease of the liver may be associated. The *adult* form, transmitted as an autosomal dominant trait, is marked by progressive deterioration of renal function. Called also *polycystic kidneys* and *polycystic renal d.* **polycystic ovary d.**, Stein-Leventhal syndrome. **polycystic renal d.**, polycystic kidney d. **polyhedral d's**, infectious diseases of insects, especially caterpillars, caused by viruses. **Pompe's d.**, glycogen storage d. (type II). **Poncet's d.**, tuberculous rheumatism. **Posada-Wernicke d.**, coccidioidomycosis. **Pott's d.**, tuberculosis of the spine. **pregnancy d.**, pregnancy toxemia in ewes. **Preiser's d.**, osteoporosis and atrophy of the carpal scaphoid due to trauma or to fracture which has not been kept immobilized. **Pringle's d.**, adenoma sebaceum. **Profichet's d.**, see under *syndrome*. **pullet d.**, pyelonephritis of young hens of unknown etiology, characterized by loss of appetite, diarrhea with watery or whitish evacuations, and sometimes darkening of the comb; affected birds appear drowsy. **pullorum d.**, see *white diarrhea* (def. 2), under *diarrhea*. **pulpy kidney d.**, a fatal enterotoxemia usually seen in young animals, chiefly lambs, but which may affect sheep, goats, and cattle of any age; it is caused by *Clostridium perfringens* type D. Pathologically, the kidneys are mottled and soft in consistency and the cortex is jelly-like or almost semifluid; the liver is severely congested with small hemorrhages diffusely scattered over its surface. **pulseless d.**, progressive obliteration of the brachiocephalic trunk and the left subclavian and left common carotid arteries above their origin in the aortic arch, leading to loss of pulse in both arms and carotids and to symptoms associated with ischemia of the brain (syncope, transient hemiplegia, etc.), eyes (transient blindness, retinal atrophy, etc.), face (muscular atrophy, etc.), and arms (claudication, etc.). Called also *arteritis brachiocephalica* or *brachiocephalic arteritis*, *Martorell's syndrome*, *reversed coarctation*, and *Takayasu's disease* or *syndrome*. **Purtscher's d.**, traumatic angiopathy of the retina with edema, hemorrhage, and exudation, usually following crush injuries of the chest; called also *Purtscher's angiopathic retinopathy*. **Pyle's d.**, metaphyseal dysplasia. **pyramidal d.**, buttress foot. **Quervain's d.**, see *de Quervain's d.* **Quincke's d.**, angioneurotic edema. **rag-sorter's d.**, anthrax. **railroad d.**, transit tetany. **Ramsay Hunt d.**, see under *syndrome*, def. 1. **rat-bite d.**, see under *fever*. **Raynaud's d.**, 1. a primary or idiopathic vascular disorder characterized by bilateral attacks of Raynaud's phenomenon. The disease affects females more frequently than males. Called also *Raynaud's gangrene*. See *Raynaud's phenomenon*, under *phenomenon*. 2. paralysis of the throat muscles following parotiditis; called also *local asphyxia*. **Recklinghausen's d.**, neurofibromatosis. **Recklinghausen's d. of bone**, osteitis fibrosa cystica. **Recklinghausen-Applebaum d.**, hemochromatosis. **Reclus' d.**, 1. a painless cystic enlargement of the mammae, marked by multiple dilatations of the acini and ducts. 2. cellulitis with induration. **redwater d.**, bacillary hemoglobinuria. **Reed-Hodgkin d.**, Hodgkin's d. **Refsum's d.**, a hereditary disease associated with a defect in the metabolism of phytanic acid, manifested chiefly by chronic polyneuritis, retinitis pigmentosa, and cerebellar signs (including mild ataxia), with persistent elevation of protein in the cerebrospinal fluid. There may be ichthyosis, nerve deafness, and electrocardiographic abnormalities. It is transmitted as an autosomal recessive trait. Called also *heredopathia atactica polyneuritiformis* and *Refsum's syndrome*. **Reichmann's d.** (*obs.*), gastrosuccorhea. **Reiter's d.**, nongonococcal urethritis followed by conjunctivitis and

arthritis, of unknown etiology, and occurring predominantly in males; it is frequently associated with keratoderma blenorrhagica, stomatitis, ulceration of the glans penis, and balanitis. Called also *Reiter's syndrome*. **Rendu-Osler-Weber d.**, hereditary hemorrhagic telangiectasia. **Renikhet d. (obs.)**, Newcastle d. in chickens. **rheumatic heart d.**, the most important manifestation of and sequel to rheumatic fever (q.v.), consisting chiefly of valvular deformities. **rheumatoid d.**, a systemic condition best known by its articular involvement (rheumatoid arthritis) but emphasizing nonarticular changes, e.g., pulmonary interstitial fibrosis, pleural effusion, and lung nodules. **Ribas-Torres d.**, variola minor. **rice d.**, beriberi. **Riedel's d.**, see under *struma*. **Riga-Fede d.**, granuloma of the frenum linguae in children, occurring after abrasion by the lower central incisors; called also *Fede's d.*, *Riga's d.*, and *cachectic aphthae*. **Riggs' d.**, compound periodontitis. **Ritter's d.**, dermatitis exfoliativa neonatorum. **Robles' d.**, onchocerciasis, caused by *Onchocerca volvulus* (q.v.). **Roger's d.**, a ventricular septal defect; the term is usually restricted to small, asymptomatic defects. **Rokitansky's d.**, acute yellow atrophy of the liver; see under *atrophy*. **rolling d.**, a disease of laboratory mice characterized by lateral rolling movements, by neurolysis and by a polymorphonuclear leukocytic reaction in the brain; it is caused by a potent neurolytic exotoxin produced by *Mycoplasma neurolyticum*. **Romberg's d.**, facial hemiatrophy. **Rose d.**, the urticarial form of swine erysipelas. **Rosbach's d.**, hyperchlorhydria. **Rot's d.**, **Rot-Bernhardt d.**, meralgia paresthetica. **Roth's d.**, meralgia paraesthetica. **Roth-Bernhardt d.**, meralgia paraesthetica. **Rougnon-Heberden d.**, angina pectoris. **round heart d.**, a disease of unknown etiology which causes sudden death in apparently healthy poultry; a greatly enlarged heart is seen post mortem. **Roussy-Lévy's d.**, a type of familial ataxia marked by disorders of gait, clubfoot, and lack of tendon reflexes. **Rubarth's d.**, hepatitis contagiosa canis. **Rummo's d. (obs.)**, downward displacement of the heart; cardiopneumonia. **runt d.**, a syndrome produced experimentally by injecting immunologically competent cells into genetically foreign hosts that are unable to reject these elements, resulting in gross retardation of host development and fatal consequences; called also *graft vs. host reaction*. **Rust's d.**, tuberculous spondylitis of the cervical vertebrae. **Ruysch's d.**, Hirschsprung's d. **saccharine d.**, a term proposed for any disease resulting from the overconsumption of refined carbohydrate foods in combination with the removal of dietary fiber and protein, including diabetes, cardiovascular disease, constipation, obesity, peptic ulcer, etc. **Sachs' d.**, Tay-Sachs d. **sacroiliac d.**, chronic tuberculous inflammation of the sacroiliac joint. **St. Agatha's d.**, mastitis. **St. Aignon's d. (obs.)**, favus. **St. Anthony's d.**, 1. chorea. 2. vernacular name for ergotism. **St. Apollonia's d.**, toothache. **St. Avertin's d.**, epilepsy. **St. Avidus' d.**, deafness. **St. Blasius' d.**, peritonsillar abscess. **St. Dymphna's d.**, insanity. **St. Erasmus' d.**, colic, def. 2. **St. Fiacre's d.**, hemorrhoids. **St. Gervasi' d.**, rheumatism. **St. Gotthard's tunnel d. (obs.)**, hookworm d. **St. Hubert's d.**, rabies. **St. Job's d.**, syphilis. **St. Mathurin's d.**, idiocy. **St. Modestus' d.**, chorea. **St. Roch's d.**, plague. **St. Sement's d.**, syphilis. **St. Valentine's d.**, epilepsy. **St. Zachary's d.**, mutism. **salivary gland d.**, cytomegalic inclusion d. **Sander's d.**, a form of paranoia. **Sanders' d.**, epidemic keratoconjunctivitis. **Sandhoff's d.**, a variant of Tay-Sachs disease marked by a progressively more rapid course, due to a defect in the enzymes hexosaminidase A and B. Unlike Tay-Sachs disease, it is not confined to Ashkenazic Jews. **sandworm d.**, larva migrans. **San Joaquin Valley d.**, coccidioidomycosis. **sartian d.**, a facial skin disease endemic in Turkestan, resembling cutaneous leishmaniasis; called also *Turkestan ulcer*. **Saunders' d.**, a dangerous condition seen in infants having digestive disturbances to whom is given a large percentage of carbohydrates; it is marked by vomiting, cerebral symptoms, and depression of circulation. **Schamberg's d.**, progressive pigmentary dermatosis. **Schanz's d.**, traumatic inflammation of the tendo achillis. **Schaumann's d.**, sarcoidosis. **Scheuermann's d.**, osteochondrosis of vertebral epiphyses in juveniles; see *osteochondrosis*. **Schilder's d.**, a subacute or chronic form of leukoencephalopathy of children and adolescents. Clinical symptoms include blindness, deafness, bilateral spasticity, and progressive mental deterioration. There is massive destruction of the white substance of the cerebral hemispheres, cavity formation, and glial scarring. The disease usually occurs sporadically, but a familial form has been reported. Called also *encephalitis periaxialis diffusa*, *progressive subcortical encephalopathy*, *Flatau-Schilder disease*, and *Schilder's encephalitis*. **Schimmelbusch's d.**, cystic d. of breast. **Schlatter's d.**, **Schlatter-Osgood d.**, **Osgood-Schlatter d.** **Schmorl's d.**, 1. herniation of the nucleus pulposus into an adjacent ventral body. 2. necrobacillosis of wild and domestic rabbits, rats, and other wild animals, due to infection with *Fusobacterium necrophorum* (Schmorl's bacillus); it is characterized by abscesses on various parts of the body, or by areas of necrosis around the mouth, nose, eyelids, throat, and chest. **Scholz's d.**, a familial form of leukoencephalopathy transmitted as an X-linked recessive trait. Beginning at about

eight years of age, it is characterized by demyelination of the white substance of the brain, sensory aphasia, cortical blindness, deafness, weakness and spasticity of the limbs, complete paralysis, and dementia. **Schönlein's d.**, see under *purpura*. **Schönlein-Henoch d.**, see under *purpura*. **Schottmüller's d.**, paratyphoid, def. 2. **Schridde's d. (obs.)**, congenital generalized dropsy. **Schroeder's d.**, a condition characterized by hypertrophic endometrium and excessive uterine bleeding, probably due to deficiency of the gonadotropic hormone. **Schüller's d.**, 1. Hand-Schüller-Christian disease. 2. osteoporosis circumscripta cranii. **Schüller-Christian d.**, Hand-Schüller-Christian d. **Schultz's d.**, agranulocytosis. **Schwediauer's d.**, see *Swedjaur's d.* **secondary d.**, 1. a morbid condition occurring subsequent to or as a consequence of another disease. 2. one due to introduction of incompatible immunologically competent cells into a host rendered incapable of rejecting them by heavy exposure to ionizing radiation. **Seitelberger's d.**, infantile neuroaxonal dystrophy. **self-limited d.**, one which by its very nature runs a limited and definite course. **Selter's d.**, acro-dynia. **senecio d.**, cirrhosis of the liver occurring as the result of poisoning by the plant *Senecio*. **septic d.**, one which arises from the development of pyogenic or putrefactive organisms. **serum d.**, see under *sickness*. **Sever's d.**, epiphysitis of the calcaneus. **severe combined immunodeficiency d. (SCID)**, a group of rare congenital disorders in which the functional capacities of both the humoral (B-lymphocyte) and cell-mediated (T-lymphocyte) components of the immune system are absent or severely depressed. The disorder occurs in several genetic forms, including one involving deficiency of adenosine deaminase. Affected persons are susceptible to severe candidiasis and to pneumonias caused by viruses, low-grade pathogenic bacteria, and *Pneumocystis carinii*. **Shaver's d.**, bauxite pneumoconiosis. **shimamushi d.**, scrub typhus. **shipyard d.**, epidemic keratoconjunctivitis. **Shichito d.**, scrub typhus. **shuttle-maker's d.**, a condition in shuttle-makers, marked by faintness, shortness of breath, headache, nausea, etc., attributed to inhaling the dust of poisonous wood from which the shuttles (devices used in weaving) are made. **sickle-cell d.**, any of the diseases associated with the presence of hemoglobin S, including sickle cell anemia, sickle cell-hemoglobin C or D disease, and sickle cell-thalassemia disease. **sickle cell-hemoglobin C d.**, a genetically determined anemia in which the red cells contain both hemoglobin S and hemoglobin C. **sickle cell-hemoglobin D d.**, a genetically determined anemia characterized by the presence of both hemoglobin S and hemoglobin D in red blood cells. **sickle cell-thalassemia d.**, a hereditary anemia involving simultaneous heterozygosity for hemoglobin S and thalassemia. Called also *microdrepanocytosis*, *microdrepanocytic d.*, *hemoglobin S-thalassemia*, *sickle cell-thalassemia*, and *thalassemia-sickle cell disease*. **silo-filler's d.**, pulmonary inflammation, often with acute pulmonary edema, caused by inhalation of the irritant gases (especially oxides of nitrogen) which collect in recently filled silos. **Simmonds' d.**, panhypopituitarism. **Simons' d.**, lipodystrophia progressiva. **sixth d.**, exanthema subitum. **sixth venereal d.**, lymphogranuloma venereum. **Sjögren's d.**, see under *syndrome*. **Skevas-Zerfus d.**, sponge-diver's d. **sleeping d.**, narcolepsy. **sleepy foal d.**, a form of equolosis affecting foals within the first three days of life, due to infection with *Actinobacillus equuli*, characterized by sudden onset, extreme prostration, and death usually within 12 hours. **Smith's d.**, mucous colitis. **Smith-Strang d.**, a defect in methionine absorption transmitted as an autosomal recessive trait, in which the urine has a characteristic odor resembling that of the interior of an oasthouse due to alpha-hydroxybutyric acid formed by bacterial action on the unabsorbed methionine; it is characterized by white hair, mental retardation, convulsions, and attacks of hyperpnea. Called also *methionine malabsorption syndrome* and *oasthouse urine d.* **Sneddon-Wilkinson d.**, subcorneal pustular dermatosis. **sod d.**, vesicular dermatitis. **specific d.**, any disease, such as syphilis, due to a characteristic moribific agent. **Spencer's d.**, a form (probably viral) of epidemic gastroenteritis. **Spielemeyer-Vogt d.**, the juvenile form of cerebral sphingolipidosis. **sponge-diver's d.**, a condition encountered by divers in the Mediterranean who come in contact with the stinging tentacles of sea anemones of the genera *Sagartia* and *Actinia*, which are frequently attached to the base of sponges; it is marked by burning, itching, erythema, necrosis, and ulceration. Called also *Skevas-Zerfus d.* **Stanton's d.**, melioidosis. **Stargardt's d.**, hereditary degeneration of the macula lutea occurring between the ages of six and twenty, marked by rapid loss of visual acuity and by abnormal appearance and pigmentation of the macular area. **Steinert's d.**, myotonic dystrophy. **Sterbe d.**, a disease of horses in South Africa; a serum prepared from horses affected with this disease is said to be curative of malarial poisoning. **sterility d.**, a deficiency disease observed in experimental animals and due to a lack of vitamin E in the diet. **Sternberg's d.**, Hodgkin's d. **Sticker's d.**, erythema infectiosum. **Stieda's d.**, Pellegrini's d. **stiff lamb d.**, a disease of lambs due to vitamin E deficiency; also, a polyarthritis in lambs due to infection with *Erysipelothrix insidiosus*, marked by stiffness and lameness; called also *white muscle d.* **Still's d.**, a variety

of chronic polyarthritis affecting children and marked by enlargement of lymph nodes, generally of the spleen, and irregular fever; called also *juvenile rheumatoid arthritis*. **Stokes' d.**, Graves' d. **Stokes-Adams d.**, Adams-Stokes d. **Stokvis' d.**, enterogenous cyanosis; see under *cyanosis*. **storage d.**, a metabolic disorder in which some substance accumulates or is stored in certain cells in unusually large amounts; the stored substances may be lipids, proteins, carbohydrates, or other substances. See, for example, *glycogen storage d.*, *mucopolysaccharidosis*, and *proteinosis*. Formerly called *thesaurismosis*. **storage pool d.**, a blood coagulation disorder due to failure of the platelets to release ADP in response to aggregating agents (collagen, epinephrine, exogenous ADP, thrombin, etc.). It is characterized by mild bleeding episodes, prolonged bleeding time, and reduced aggregation response to collagen or thrombin. **structural d.**, any disease in which there are microscopic changes. **Strümpell's d.**, 1. a hereditary form of lateral sclerosis (q.v. under *sclerosis*) in which the spasticity is principally limited to the legs; called also *Strümpell type*. 2. polioencephalomyelitis. **Strümpell-Leichtenstern d.**, hemorrhagic encephalitis. **Strümpell-Marie d.**, rheumatoid spondylitis. **Stühmer's d.**, balanitis xerotica obliterans. **Sturge's d.**, **Sturge-Weber-Dimitri d.**, Sturge-Weber syndrome. **Stuttgart d.**, a nonjaundiced type of canine leptospirosis caused by *Leptospira canicola*; called also *canine typhus*. **Sudeck's d.**, post-traumatic osteoporosis. **Sutton's d.**, 1. [R. L. Sutton, Sr.] (a) halo nevus; (b) periadenitis mucosa necrotica recurrens. 2. [R. L. Sutton, Jr.] granuloma fissuratum. **Sutton and Gull's d.** (obs.), arterio-capillary fibrosis. **Swediaur's (Schwedlauer's) d.**, inflammation of the calcaneal bursa. **sweet clover d.**, a hemorrhagic disease of animals, especially cattle, caused by ingestion of spoiled sweet clover, which contains the anticoagulant dicumarol. **Swift's d.**, acrodynia. **Swift-Feer d.**, acrodynia. **swineherd's d.**, a benign meningitis caused by *Leptospira pomona* and *L. hyos*, seen in those who work with swine or pork. **Sylvest's d.**, epidemic pleurodynia. **Symmers' d.**, giant follicular lymphoma. **systemic d.**, one affecting a number of organs and tissues. **systemic mast cell d.**, systemic mastocytosis. **Takahara's d.**, acatalasia. **Takayasu's d.**, pulseless d. **Talfan d.**, infectious porcine encephalomyelitis. **Talma's d.**, myotonia acquisita. **Tangier d.**, a familial disorder first observed in inhabitants of Tangier Island on the Chesapeake Bay, characterized by a deficiency of high-density lipoproteins in the blood serum, with storage of cholesterol esters in the tonsils and other tissues. **tarabagan d.**, plague in humans resulting from the bite of an ectoparasite of the Mongolian marmot (tarabagan). **tartaric d.**, gout and calculus (Paracelsus). **Tay's d.**, see under *choroiditis*. **Tay-Sachs d.**, the infantile form of cerebral sphingolipidosis in which symptoms become noticeable at about 4 to 6 months of age. A progressive disorder, it is characterized by degeneration of brain cells and the macula (with formation of a cherry-red spot on both retinas) and eventually by dementia, blindness, paralysis, and death. Affecting chiefly Ashkenazic Jewish children, it is inherited as an autosomal recessive trait and is due to an error of lipid metabolism in which a defect in hexosaminidase A results in accumulation of ganglioside GM₂ in the brain. Called also *Sachs' d.* and *GM₂ gangliosidosis*. A variant of Tay-Sachs disease is known as *Sandhoff's disease* (q.v.). **teart d. in cattle**, a diarrhea that affects cattle that graze on certain pastures in England, due to the presence of molybdenum in the herbage. **Teschen d.**, infectious porcine encephalomyelitis. **thalassemia-sickle cell d.**, sickle cell-thalassemia d. **Thaysen's d.**, nontropical sprue, or celiac disease. **Theiler's d.**, spontaneous encephalomyelitis of mice, caused by invasion of the nervous system by a common viral infection of the intestinal tract; called also *Theiler's mouse encephalomyelitis* and *murine encephalomyelitis*. **Thiemann's d.**, familial avascular necrosis of the phalangeal epiphysis, beginning in childhood or adolescence and resulting in deformity of the interphalangeal joints; called also *familial osteoarthropathy of the fingers*. Similar lesions may occur in the great toes and first tarsometatarsal joints, in which case it is known as *osteocondritis ossis metacarpi et metatarsi*. **Thomsen's d.**, myotonia congenita. **Thomson's d.**, a hereditary condition characterized by developmental hyperkeratotic lesions and xerodermatous changes; see also *Rothmund-Thomson syndrome*, under *syndrome*. **thyrocardiac d.**, thyrotoxic heart d. **thyrotoxic heart d.**, heart disease associated with hyperthyroidism, marked by atrial fibrillation, cardiac enlargement, and congestive heart failure; called also *thyrocardiac d.* **Tietze's d.**, see under *syndrome*. **Tillaux's d.**, mastitis with the formation of multiple tumors in the breast. **Tommasegli's d.**, pyrexia and hematuria due to excessive use of quinine. **Tooth d.**, progressive neuropathic (peroneal) muscular atrophy. **Tornwaldt's (Thornwaldt's) d.**, see under *bursitis*. **Tourette's d.**, Gilles de la Tourette's syndrome. **Traum's d.**, infectious abortion (brucellosis) in swine. **Trevor's d.**, dysplasia epiphysealis hemimelica. **trophoblastic d.**, a group of disorders that have their origin in the placenta, including hydatidiform mole, chorioadenoma destruens, and gestational choriocarcinoma. **tsetse-fly d.**, nagana. **tsutsugamushi d.**, scrub typhus. **tunnel d.**, 1. (obs.) hookworm d. 2. decompression sickness. **twin-lamb d.**, pregnancy tox-

emia in ewes. **Tyzzler's d.**, a disease caused by *Bacillus pili-formis* and characterized by necrotic lesions of the liver and intestine; originally described in Japanese waltzing mice, it also affects rats, rabbits, gerbils, dogs, and man. **Underwood's d.**, sclerema. **Unna's d.** (obs.), seborrheic dermatitis. **Unverricht's d.**, progressive familial myoclonic epilepsy. **Urbach-Oppenheimer d.** (obs.), necrobiosis lipoidica diabetorum. **Urbach-Wiethe d.**, lipid proteinosis. **vagabonds' d.**, **vagrants' d.**, discoloration of the skin in persons subjected to louse (*Pediculus humanus corporis*) bites over long periods; called also *parasitic melanoderma*. **van Buren's d.**, Peyronie's disease. **Vaquez' d.**, **Vaquez-Osler d.**, polycythemia vera. **veld d.**, **veldt d.**, heartwater. **venereal d.**, a contagious disease, most commonly acquired in sexual intercourse or other genital contact; the venereal diseases include syphilis, gonorrhea, chancroid, granuloma inguinale, lymphogranuloma venereum, genital herpesvirus infection, and balanitis gangraenosa. **veno-occlusive d. of the liver**, an acute or chronic condition encountered predominantly in children, characterized by partial or complete occlusion of the branches of the hepatic veins by endophlebitis and thrombosis, leading to centrilobular necrosis, fibrosis, and portal hypertension with ascites; it was first observed in children in Jamaica and probably resulted from the toxic action of alkaloids ingested in bush tea. Called also *serous hepatitis*. **vent d.**, rabbit syphilis. **Verneuil's d.**, syphilitic disease of the bursae. **Verse's d.**, calcinosis intervertebralis. **vibration d.**, blanching and diminished flexion of the fingers with loss of perception of cold, heat, and pain and osteoarthritic changes in joints of the arm, due to continuous use of vibrating tools. **Vidal's d.**, lichen simplex chronicus. **Vincent's d.**, necrotizing ulcerative gingivostomatitis. **Vogt's d.**, see under *syndrome*. **Vogt-Spielmeyer d.**, the juvenile form of cerebral sphingolipidosis. **Volkmann's d.**, a congenital deformity of the foot due to a tibiotarsal dislocation; called also *Volkman's deformity*. **Voltoini's d.**, an acute purulent inflammation of the internal ear with violent pain, followed by involvement of the meninges with subsequent fever, delirium, and unconsciousness. **von Economo's d.**, lethargic encephalitis. **von Gierke's d.**, glycogen storage d. (type I). **von Hippel's d.**, angiomas confined principally to the retina; when associated with hemangioblastoma of the cerebellum, it is known as *von Hippel-Lindau d.* **von Hippel-Lindau d.**, hereditary phakomatosis characterized by congenital angiomas of the retina and cerebellum; there may also be similar lesions of the spinal cord and cysts of the pancreas, kidneys, and other viscera. Neurologic symptoms, including seizures and mental retardation, may be present. Called also *cerebroretinal or retinocerebral angiomas*, and *Lindau-von Hippel d.* **von Jaksch's d.**, anemia pseudoleukemica infantum. **von Recklinghausen's d.**, see *Recklinghausen's d.* **von Willebrand's d.**, a congenital hemorrhagic diathesis, inherited as an autosomal dominant trait, characterized by a prolonged bleeding time, a deficiency of coagulation Factor VIII, and often impairment of adhesion of platelets on glass beads, associated with epistaxis and increased bleeding after trauma or surgery, menorrhagia, and postpartum bleeding. Called also *angiohemophilia*, *Minot-von Willebrand syndrome*, *pseudohemophilia*, *vascular hemophilia*, and *Willebrand's syndrome*. **Vrolik's d.**, osteogenesis imperfecta congenita. **Wagner's d.**, colloid milium; see under *milium*. **Waldenström's d.**, osteochondrosis of the capital femoral epiphysis; see *osteocondrosis*. **walk-about d.**, Kimberley horse d. **Wartenberg's d.**, 1. cheiralgia paresthetica. 2. brachialgia statica paresthetica. 3. partial thenar atrophy. **Wassiliew's d.**, leptospiral jaundice. **wasting d.** any disease marked especially by progressive emaciation and weakness. **Weber's d.**, Sturge-Weber syndrome. **Weber-Christian d.**, nodular nonpurpurative panniculitis. **Weber-Dimitri d.**, Sturge-Weber syndrome. **Wegner's d.**, osteochondritic separation of the epiphyses in hereditary syphilis. **Weil's d.**, leptospiral jaundice. **Weir Mitchell's d.**, erythromelalgia. **Wenckebach's d.** (obs.), cardiopapitis. **Werdnig-Hoffmann d.**, see under *paralysis*. **Werlhof's d.**, idiopathic thrombocytopenic purpura. **Werner-His d.**, trench fever. **Werner-Schultz d.**, agranulocytosis. **Wernicke's d.**, see under *encephalopathy*. **Wesselsbron d.**, a mosquito-borne viral disease causing death of lambs and abortion and death in ewes in Africa; it is communicable to man, in whom it causes a mild febrile illness. **Westphal-Strümpell d.**, see under *pseudosclerosis*. **Whipple's d.**, a malabsorption syndrome characterized by diarrhea, steatorrhea, skin pigmentation, arthralgia and arthritis, lymphadenopathy, and central nervous system lesions. The intestinal mucosa is infiltrated with macrophages containing PAS-positive material (the remnants of bacillary microorganisms which invade the lamina propria). **white heifer d.**, a condition reputed to most commonly occur in white heifers, usually of the Shorthorn breed, in which there is a rubber-like sheet of fibrous tissue and membrane stretching across the posterior part of the vagina; the coverage may be partial or complete. Called also *persistent hymen*. **white muscle d.**, 1. muscular dystrophy in calves, caused by vitamin E deficiency. 2. stiff lamb d. **white-spot d.**, lichen sclerosus et atrophicus; sometimes used erroneously for guttate morphea or guttate scleroderma. **Whitmore's d.**, melioidosis. **Whytt's**

d., tuberculous meningitis causing acute hydrocephalus. **Wil-
lis' d.**, diabetes mellitus. **Wilson's d.**, [S.A.K. Wilson] hepa-
tointestinal degeneration. **Winckel's d.**, a fatal disease of
newborn infants characterized by jaundice, hemoglobinuria, hem-
orrhage, bloody urine, cyanosis, polyuria, collapse, and convul-
sions. **Winkler's d.** (*obs.*), chondrodermatitis nodularis chron-
ica helicis. **winter vomiting d.**, outbreaks of vomiting
which have been observed in various countries. **Winton d.**,
Pictou d. **Witkop's d.**, **Witkop-Von Sallmann d.**, heredi-
tary benign intraepithelial dyskeratosis. **Wolman's d.**, pri-
mary familial xanthomatosis in infants, associated with involve-
ment and calcification of the adrenal glands, failure to thrive,
vomiting, diarrhea, hepatomegaly, splenomegaly, foam cells in the
bone marrow and other tissues, and early death; it is transmitted
as an autosomal recessive trait. **woolsorters' d.**, pulmonary
anthrax. **x d.**, 1. Mackenzie's name for a series of morbid
symptoms of unknown origin, consisting of a feeling of general ill
health with sensitiveness to cold, dyspepsia, intestinal disorder,
and disturbance of respiration and of the action of the heart. 2.
hyperkeratosis (3rd def.) 3. aflatoxicosis. **Zahorsky's d.**, ex-
anthema subitum. **Ziehen-Oppenheim d.**, dystonia muscu-
lorum deformans. **zymotic d.**, a disease due to the action of
an enzyme, as of a moribund germ or a ptomaine.

disengagement (dis'en-gāj'ment) liberation of the fetus, or
parts thereof, from the vaginal canal.

dis-equilibrium (dis-e'kwī-lib're-um) a disturbed state of equi-
librium, either physical or mental. **linkage d.**, a genetic phe-
nomenon in which certain phenotypic combinations are much
more common than would be expected on the basis of gene
frequencies of individual genes.

disesthesia (dis'es-the'ze-ah) dysesthesia.

disgerminoma (dis-ger'mī-no'mah) dysgerminoma.

dish (dish) a shallow vessel of glass or other material for labora-
tory work. **culture d.**, a shallow glass vessel for making bac-
terial cultures. **dappen d.**, a small heavy ten-sided piece of
glass, each end of which is ground into a small cup for mixing
dental medicaments or fillings. **evaporating d.**, a laboratory
vessel, usually wide and shallow, in which material is evaporated
by exposure to heat. **Petri d.**, a shallow glass receptacle for
growing bacterial cultures. **Stender d.**, a vessel of various
forms and sizes, used in preparing and staining histologic speci-
mens.

disharmony (dis-har'mo-ne) lacking harmony; discordant.
occlusal d., a condition in which (a) contacts of opposing occlusal
surfaces of teeth are not in harmony with other tooth contacts and
with the anatomic and physiologic control of the mandible, or (b)
occlusions do not coincide with their respective jaw relations.

disimmune (dis'i-mūn') deprived of immunity.

disimmunity (dis'i-mū-ni-te) the state that results from the
loss of immunity.

disimmunize (dis-im'u-niz) to deprive of immunity.

disimpaction (dis'im-pak'shun) (*obs.*) the relief or removal of
an impaction.

disinfect (dis'in-fekt') [*dis-* + *L. inficere* to corrupt] to free
from pathogenic organisms, or to render them inert.

disinfectant (dis'in-fek'tant) 1. freeing from infection. 2. an
agent that disinfects; applied particularly to agents used on
inanimate objects. Cf. *antiseptic*. **coal-tar d.**, creosote.

disinfection (dis'in-fek'shun) the act of disinfecting. **con-
comitant d.**, **concurrent d.**, immediate disinfection and dis-
posal of discharges and infective matter all through the course of
a disease. **terminal d.**, disinfection and destruction of infec-
tious material after the recovery of a patient from an infectious
disease or after his death.

disinfestation (dis'in-fes-ta'shun) the extermination or de-
struction of insects, rodents, or other animal forms which might
transmit infection and which are present on the person or clothing
of an individual or in his surroundings; defaunation.

disinhibition (dis'in-hī-bish'un) the abolition of inhibition; in
an experimental animal, the revival of an extinguished condi-
tioned reflex or response by a stimulus to which the animal is
unaccustomed.

disinomenine (di'sī-nom'ē-nin) an alkaloid, $C_{19}H_{25}O_4N$,
formed by the oxidation of sinomenine.

disinsected (dis'in-sekt'ed) freed from insects or vermin.

disinsection (dis'in-sek'shun) disinsectization.

disinsectization (dis'in-sek'ti-za'shun) removal of insects
from; extermination of insects or vermin.

disinsector (dis'in-sek'tor) an apparatus for the removal of in-
sects or vermin from patients or their clothing.

disinsertion (dis'in-ser'shun) 1. rupture of a tendon from its
insertion into a bone. 2. detachment of the retina at its periph-
ery; retinodialysis.

disintegrant (dis-in'tē-grant) disintegrator; an agent used in
the pharmaceutical preparation of tablets, which causes them to
disintegrate and release their medicinal substances on contact
with moisture.

disintegration (dis'in-tē-gra'shun) [*dis-* + *L. integer* entire]

the process of breaking up or decomposing. **radioactive d.**,
see under *decay*.

Disipal (dis'i-pal) trademark for a preparation of orphenadrine
hydrochloride.

disjoint (dis-joint') to disarticulate.

disjunction (dis-junk'shun) the act or state of being disjointed.
In genetics, the moving apart of bivalent chromosomes at first
anaphase of meiosis. **craniofacial d.**, Le Fort III fracture;
see under *fracture*.

disk (disk) [*L. discus*; *Gr. diskos*] a circular or rounded flat plate;
also *disc*. **A d.**, A band; see under *band*. **abrasive d.**, a
dental disk with abrasive particles attached to one or both of its
surfaces or its edge. **Amici's d.**, Z band; see under *band*.
anangiod d., a retinal disk without blood vessels. **aniso-
tropic d.**, **anisotropic d.**, A band; see under *band*. **ar-
ticular d.**, 1. a pad of fibrocartilage or dense fibrous tissue
found in some synovial joints; see *discus articularis*, and for names
of articular disks of particular joints, see entries beginning *discus*
articularis, under *discus*. 2. meniscus articularis. **Bardeen's**
primitive d., the embryonic structure which develops into the
intervertebral ligament. **Blake's d's**, disks of paper for past-
ing over drumhead perforations. **blastodermic d.**, the early
germinal disk during the period of cleavage. **blood d.**, see
platelet. **Bowman's d's**, flat, disklike plates which make up
striated muscle fibers. **carborundum d.**, a dental disk
charged with carborundum. **choked d.**, papilledema. **cili-
ary d.**, orbiculus ciliaris. **cloth d.**, a dental disk made of one
or more round pieces of cloth. **cupped d.**, a pathologically de-
pressed optic disk. **cutting d.**, a dental disk charged with an
abrasive material and used for grinding or reducing teeth.
cuttlefish d., a dental disk charged with powdered cuttlefish
bone. **dental d.**, a thin, circular piece of paper or other material,
usually operated by a dental engine, and used in procedures
on the teeth or dental restorations. It may be used for carrying
polishing powders, such as chalk, pumice, rouge, or whiting, or be
specially treated with such substances as cuttlefish bone, emery,
garnet, or sand, for fine cutting or polishing. **diamond d.**, a
dental disk charged with small diamond particles. **ectoder-
mal d.**, an elongated plate of epithelial cells developed from the
inner cell mass in the human conceptus about a week after
fertilization. **embryonic d.**, a flattish area in a cleaved
ovum in which the first traces of the embryo are seen; called also
germinal d. and *gastrodisk*. **emery d.**, a dental disk charged
with emery powder. **Engelmann's d.**, H band; see under
band. **gelatin d.**, a disk or lamella of gelatin, variously medi-
cated; used chiefly in eye diseases. **germinal d.**, embryonic d.
Hensen's d., H band; see under *band*. **I d.**, the light disk or
band of a striated muscle fiber; called also *isotropic disk* or *J disk*.
interarticular d., articular d., def. 1. **intercalated d.**,
dense bands that extend in a serrated fashion transversely across
cardiac muscle fibers, separating one fiber from another but
containing contact specializations, including desmosomes and gap
junctions. **intermediate d.**, Z band; see under *band*. **in-
terpubic d.**, *discus interpubicus*. **intervertebral d's**, lay-
ers of fibrocartilage between the bodies of adjacent vertebrae,
consisting of a fibrous ring enclosing a pulpy center; called also
disci intervertebrales [NA], *intervertebral cartilages*, *fibrocartilagi-
nes intervertebrales*, and *intervertebral fibrocartilages*. **intra-**

articular d., fibrous structures within the capsules of diarthro-
dial joints. **isotropic d.**, **J d.**, I band; see under *band*. **M**
d., M band; see under *band*. **Merkel's d's**, Merkel's corpus-
cles. **micrometer d.**, a glass disk, engraved with a scale,
used in an ocular in making microscopical measurements.
Newton's d., a disk which is divided into seven sectors that are
colored the seven primary colors of the spectrum and which, when
rotated rapidly, appears to be white. **optic d.**, *discus nervi opti-
ci*. **Placido's d.**, a disk having concentric circles marked on
it; used in examining the cornea. **polishing d.**, a dental disk
charged with a polishing agent rather than an abrasive material;
used for polishing teeth or fillings. **proligerous d.**, *cumulus*
ophorus. **Q d.**, A band; see under *band*. **Ranvier's tac-
tile d's**, terminations of nerve fibers in cup-shaped bodies in the
transparent substance between Grandy's corpuscles. **Rekoss**
d., the rotating device for quickly changing the lenses in the
ophthalmoscope. **sandpaper d.**, a dental disk charged with
pulverized silica. **Schiefferdecker's d's**, a substance in

neurons staining black with silver nitrate, assumed to occupy the space in Ranvier's nodes between Schwann's sheath and the axon. **slipped d.**, popular name for herniation of an intervertebral disk. **stenoepic d.**, an opaque disk having a narrow slit; used for testing for astigmatism. **stroboscopic d.**, a disk used in eye examinations to produce distortion of objects seen. **tactile d.**, a disklike nerve termination in a tactile cell, as in an end-organ of a nerve of special sense. **thin d.**, Z band; see under *band*. **transverse d.**, A band; see under *band*. **Z d.**, Z band; see under *band*.

disk- see *disko-*.

diskectomy (dis-kek/'to-me) excision of an intervertebral disk.

diskiform (dis/'ki-form) in the shape of a disk.

diskitis (dis-ki/'tis) inflammation of a disk, particularly of an interarticular disk.

disko-, disk- [L. *discus*; Gr. *diskos*] a combining form denoting relationship to a disk, or disk-shaped, see also words beginning *disco-*.

diskogram (dis/'ko-gram) a roentgenogram of an intervertebral disk.

diskography (dis-kog/'rah-fe) roentgenography of the spine for visualization of an intervertebral disk, after injection into the disk itself of an absorbable contrast medium.

dislocatio (dis/'lo-ka'she-o) [L.] dislocation. **d. erecta**, subglenoid dislocation of the shoulder with the arm in a vertical position and the hand on top of the head.

dislocation (dis/'lo-ka'shun) [*dis-* + L. *locare* to place] the displacement of any part, more especially of a bone; see *Plate*. Called also *luxation*. **Bell-Dally d.**, nontraumatic dislocation of the atlas. **closed d.**, simple d. **complete d.**, one which completely separates the surfaces of a joint. **complicated d.**, one which is associated with other important injuries. **compound d.**, one in which the joint communicates with the external air. **congenital d.**, one which exists from or before birth. **consecutive d.**, one in which the luxated bone has changed its position since its first displacement. **divergent d.**, one in which the ulna and radius are dislocated separately. **fracture d.**, dislocation complicated by fracture of, or adjacent to, a joint. **habitual d.**, one which often recurs after replacement. **incomplete d.**, a subluxation; a slight displacement. Called also *partial d.* **intrauterine d.**, one which occurs to the fetus in utero. **Kienböck's d.**, isolated dislocation of the semilunar bone. **d. of the lens**, displacement of the crystalline lens of the eye. **Lisfranc's d.**, dislocation of the forefoot at the tarsometatarsal joints. **Monteggia's d.**, dislocation of the hip joint in which the head of the femur is near the anterosuperior spine of the ilium. **Nélaton's d.**, dislocation of the ankle in which the talus is forced up between the end of the tibia and the fibula. **old d.**, a dislocation in which inflammatory or fibrotic changes have occurred. **open d.**, compound d. **partial d.**, incomplete d. **pathologic d.**, one which results from paralysis, synovitis, infection, or other disease. **primitive d.**, one in which the bones remain as originally displaced. **recent d.**, one in which there is no complicating inflammation. **simple d.**, one in which the joint is not penetrated by a wound. **Smith's d.**, upward and backward dislocation of the metatarsals and the medial cuneiform bone. **subastragalar d.**, separation of the calcaneus and the navicular bone from the talus. **subspinous d.**, dislocation of the head of the humerus into the space below the spine of the scapula. **traumatic d.**, one due to an injury or to violence.

dismemberment (dis-mem/'ber-ment) amputation of a limb or a portion of it.

dismutase (dis-mu/'tās) any of a group of enzymes that have the ability to catalyze the reaction of two molecules of the same compound to yield two molecules in different oxidation states. **superoxide d.**, an enzyme present in aerobic and facultative bacteria but not in anaerobes, which catalytically converts superoxides by the reaction $2O_2^- + 2H^+ + H_2O_2 + O_2$.

dismutation (dis-'mu-ta'shun) a complex enzymic process that results simultaneously in oxidation and reduction or also in decarboxylation.

disocclude (dis/'ō-klūd') to grind a tooth so that it does not touch its antagonist in the other jaw in any of the movements of mastication.

disodium (di-so/'de-um) having two atoms of sodium in each molecule.

disome (di/'sōm) [*di-* + Gr. *sōma* body] a chromosome set having paired members.

Disomer (di/'so-mer) trademark for preparations of dextropheniramine maleate.

disomus (di-so/'mus) [*di-* + Gr. *sōma* body] a double-bodied monster.

disopyramide (di-so-pēr/'ah-mid) [USP] chemical name: α -[2-bis(1-methylethylamino)ethyl]- α -phenyl-2-pyridineacetamide. A cardiac depressant with anticholinergic properties, $C_{21}H_{28}N_4O$, used as an antiarrhythmic. **d. phosphate**, the phosphate salt of disopyramide, $C_{21}H_{26}N_4O_4 \cdot H_2PO_4$, having the same actions and uses as the base, administered orally.

disorder (dis-or/'der) a derangement or abnormality of function; a morbid physical or mental state. **affective d's**, 1. any of a group of mental disorders in which a disturbance of affect is predominant, including depressive neurosis, the major affective disorders, and psychotic depressive reaction. 2. major affective d. **behavior d.**, a type of behavior deviation marked by impulsive, antisocial acts; the term has been used to refer to any abnormal behavior. Called also *conduct d.* **behavior d's of childhood and adolescence**, a group of personality disorders occurring during childhood and adolescence, characterized by overactivity, inattentiveness, shyness, feelings of rejection, over-aggressiveness, timidity, or delinquency; they are less severe than psychoses but more resistant to treatment than transient situational disturbances because they are more stabilized and internalized. **brain d.**, see *organic brain syndrome*, under *syndrome*. **character d.**, a personality disorder characterized by maladaptive behavior, emotional responses that are socially unacceptable, and minimal feelings of anxiety or other symptoms that usually accompany neuroses. **conduct d.**, behavior d. **functional d.**, a disorder not associated with clearly defined physical cause or structural change, i.e., having no detectable organic basis. Called also *functional illness*. **major affective d.**, any of a group of psychoses, including involuntional melancholia and the various forms of manic-depressive psychosis, characterized by a severe disorder of mood, either extreme depression or elation or both, which do not seem to be attributable entirely to precipitating life experiences. Called also *affective psychosis*. **mental d.**, any psychiatric illness or disease, whether functional or of organic origin; called also *mental disease* or *illness* and *emotional illness*. **personality d.**, a mental disorder which stems from the personality of the individual and in which there is minimal feeling of subjective anxiety and little or no feeling of distress. **personality d., epileptoid**, see *explosive personality*, under *personality*. **personality d., histrionic**, see *hysterical personality*, under *personality*. **psychophysiologic d.**, **psychosomatic d.**, a group of disorders characterized by physical symptoms and demonstrable structural and/or physiological changes in which emotional factors are believed to play a major etiologic or pathogenic role. Typically a single organ system is involved, usually under autonomic control.

disorganization (dis-or/'gan-i-za'shun) the process of destruction of any organic tissue; any profound change in the tissues of an organ or structure which causes the loss of most or all of its proper characters.

disorientation (dis-o/'re-en-ta'shun) the loss of proper bearings, or a state of mental confusion as to time, place, or identity. **spatial d.**, a condition in which a pilot or other air crew member is unable to determine accurately his spatial attitude in relation to the surface of the earth; it occurs only in conditions of poor visibility or when vision is otherwise restricted and results from vestibular illusions. Called also *pilot's vertigo*.

disoxidation (dis/'ok-se-da'shun) deoxidation.

dispar (dis/'par) [L.] unequal.

disparasitized (dis-par/'ah-si-tizd) freed from parasites.

disparate (dis/'pah-rat) [L. *disparatus*, *dispar* unequal] not situated alike; not exactly paired; dissimilar in kind.

dispensary (dis-pen/'sah-re) [L. *dispensarium*, from *dispensare* to dispense] 1. a place where medical or dental skill, treatment, and remedies are provided for the indigent ambulant sick at little or no cost to them. 2. any place where drugs and medicines are actually dispensed.

dispensatory (dis-pen/'sah-to-re) [L. *dispensatorium*] a treatise on the qualities and composition of medicines. **D. of the United States of America**, a collection of monographs on unofficial drugs and drugs recognized by the United States Pharmacopoeia, the British Pharmacopoeia, and the National Formulary, and on general tests, processes, reagents, and solutions of the U.S.P. and N.F., as well as drugs used in veterinary medicine.

dispense (dis-pens') [L. *dispensare*, *dis-* out + *pensare* to weigh] to prepare and distribute medicines to those who are to use them.

dispermine (di-sper/'min) piperazine.

dispermy (di'sper-me) the penetration of two spermatozoa into one ovum.

disperse (dis-'pur-sāt) a suspension of finely divided particles of a substance.

disperse (dis-pers') [L. *dis-* apart + *spargere* to scatter] to scatter the component parts, as of a tumor or the fine particles in a colloid system; also the particles so dispersed.

dispersible (dis-per/'si-b'l) capable of being dispersed.

dispersion (dis-per/'shun) [L. *dispersio*] 1. the act of scattering or separating; the condition of being scattered. 2. the incorporation of the particles of one substance into the body of another, comprising solutions, suspensions, and colloid solutions. 3. a colloid solution. **colloid d.**, a colloid solution. **molecular d.**, solution, def. 1.

dispersity (dis-per/'si-te) the degree of dispersion of a colloid, i.e., the degree to which the dimensions of the disperse particles have been reduced.

Anterior temporal mandibular dislocation

Vertebral dislocation

Subcoracoid dislocation

Subglenoid dislocation

Posterior dislocation of hip

Dislocated carpal lunate
(lateral view)

Dislocation of ankle

Posterior dislocation of elbow

Posterior dislocation of knee

Dislocation of thumb

dispersoid (dis-per'soid) a colloid in which the dispersity is relatively great.

depersonalization (dis-per'son-al-i-za'shun) depersonalization.

dispert (dis'pert) a medicinal preparation obtained from a vegetable drug or endocrine gland by extracting its therapeutical constituents in the cold and then reducing the product to a dry concentrated form.

Dispholidus (dis-fol'i-dus) a genus of venomous colubrid snakes. *D. typos* is the boomslang of South Africa. See table accompanying snake.

dispira (di-spi'rah) [*di-* + Gr. *speira* coil] dispireme.

dispireme (di-spi'rem, di-spi'rēm) [*di-* + Gr. *speirēma* coil] the stage of cell division which follows the diaster; so called because the cytoplasm is divided into two parts, in each of which the chromatin appears to assume the form of a coil. See *mitosis*.

displaceability (dis-plās'ah-bil'i-te) the quality of being susceptible to movement from an initial position, or the degree to which such movement is possible.

displacement (dis-plās'ment) 1. removal from the normal position or place; ectopia. 2. percolation. 3. a mental mechanism in which the emotional charge attached to one set of ideas is displaced (transferred) onto other, initially unrelated, ideas. 4. in dentistry, the malposition of the crown and root of one or more teeth from the normal line of occlusion; also the deflection of the mandible from its normal path of closure, i.e., posterior displacement. **condylar d.**, an abnormal position of the head of the mandibular condyle in the fossa due to a deviation or shift of the mandible, which is often the result of malocclusion. **fetal d.**, a group of cells which, during fetal development, has become displaced from its normal relations. **fish-hook d.**, a form of displacement of the stomach in which the orifice of the pylorus faces directly upward, and the duodenum runs upward and to the right to join the pylorus at an angle, producing a constricting hook; there is no evidence that such displacement causes symptoms. **gallbladder d.**, wandering gallbladder. **tissue d.**, change in the position of tissues as the result of pressure or other force.

dispoire (di'spōr) one of two spores, as the basidia of higher fungi; opposed to tetraspore (four-spored basidium).

disporous (di'spo-rus) having two spores, as the basidia of the higher fungi.

disposition (dis'po-zish'un) a tendency either physical or mental toward certain diseases.

disproportion (dis'pro-por'shun) a lack of the proper relationship between two elements or factors. **cephalopelvic d.**, a condition in which the head of the fetus is too large for the pelvis of the mother.

disruption (dis-rup'shun) the act of separating forcibly, or the state of being abnormally separated.

disruptive (dis-rup'tiv) bursting apart; rending.

Disse's spaces (dis'ēz) [Joseph Disse, German anatomist, 1852-1912] - see under *space*.

dissect (di-sekt', di-sekt') [*L. dissecare* to cut up] to cut apart, or separate; applied especially to the exposure of structures of a cadaver, for anatomical study.

dissection (di-sek'shun) [*L. dissecio*] 1. the act of dissecting. 2. a part or whole of an organism prepared by dissecting. **aortic d.**, dissecting aneurysm. **blunt d.**, dissection accomplished by separating tissues along natural cleavage lines, without cutting. **sharp d.**, dissection accomplished by incising tissues with a sharp edge.

dissector (di-sek'tor) 1. one who dissects. 2. a handbook used as a guide for the act of dissecting.

disseminated (dis-sem'i-nāt'ed) [*L. dis-* apart + *seminare* to sow] scattered; distributed over a considerable area.

dissepiment (dis-sep'i-ment) partition; separation.

dissimilate (dis-sim'i-lāt) [*L. dis-* neg. + *similare* to make alike] to decompose a substance into simpler compounds, for the production of energy or of materials that can be eliminated.

dissimilation (dis'sim-i-la'shun) the act or process of dissimilating (see *dissimilate*); the reverse of assimilation.

dissociable (dis-so'shē-b'l) easily separable into component parts; separable from associations.

dissociant (dis-so'she-ant) a strain of microorganisms derived by bacterial dissociation.

dissociated (dis-so'she-āt'ed) split off from consciousness. Cf. *dissociation* (def. 3).

dissociation (dis-so'she-a'shun) [*L. dis-* neg. + *sociatio* union] 1. the act of separating or state of being separated. 2. resolution by heat of a molecule into two or more simpler molecules. 3. a defect of mental integration in which one or more groups of mental processes become separated off from normal consciousness and, thus separated, function as a unitary whole. Cf. *unconscious*. **albuminocytologic d.**, increase of protein with normal cell count in the spinal fluid. **atrial d.**, independent beating of the left and right atria, each with normal rhythm or with various combinations of normal rhythm, atrial flutter, or atrial fibrilla-

tion. **atrioventricular d.**, control of the atria by one pacemaker and of the ventricles by another, independent pacemaker; when the ventricular rate is more rapid than the atrial rate, ventriculoatrial (retrograde) block is present but atrioventricular conduction (anterograde) usually is not impaired. **auriculo-ventricular d.**, atrioventricular d. **bacterial d.**, the change, due to mutation and selection, in colonial morphology (usually from mucoid or smooth to rough) of bacteria in culture on laboratory media; called also *microbic d.* **interference d.**, **d. by interference**, control of the atria by the sinoatrial node or other atrial pacemaker and of the ventricles by a lower pacemaker (atrioventricular dissociation) with a phasic rhythm related to capture of the ventricle (anterograde) or atrium (retrograde) by conduction from the pacemaker in the other chamber; called also *atrioventricular interference d.* **microbic d.**, bacterial d. **peripheral d.**, sensory disturbance in which touch, superficial pain, and temperature sensibility are diminished in the hands and feet; seen in polyneuritis. **syringomyelic d.**, loss of pain and temperature sense due to a lesion in the region of the central canal of the spinal cord implicating the spinothalamic fibers with preservation of other sensory modalities. **tabetic d.**, disturbance of the vibratory and muscle-tendon sensibility due to lesion of the dorsal columns.

dissogeny (di-soj'ē-ne) [Gr. *dissos* twofold + *gennan* to produce] the state of having sexual maturity in both a larval and an adult stage.

dissolution (dis'so-lu'shun) [*L. dissolutio, dissolvere* to dissolve] 1. the process in which one substance is dissolved in another. 2. separation of a compound into its components by chemical action. 3. liquefaction. 4. the process of loosening, or of relaxing. 5. death.

dissolve (diz-zolv') 1. to cause a substance to pass into solution. 2. to pass into solution.

dissolvent (diz-zol'vent) 1. a solvent medium. 2. a medicine capable of dissolving concretions within the body. 3. solvent; capable of dissolving substances.

dissonance (dis'so-nans) discord or disagreement. **cognitive d.**, discord or disharmony of thoughts, beliefs, and behavior.

Dist. abbreviation for *L. distilla*, distil.

distad (dis'tad) in a distal direction.

distal (dis'tal) [*L. distans* distant] remote; farther from any point of reference; opposed to proximal. In dentistry, used to designate a position on the dental arch farther from the median line of the jaw.

distalis (dis-ta'lis) distal; [NA] a term denoting remoteness from the point of origin or attachment of an organ or part.

distally (dis'tal-le) in a distal direction.

distance (dis'tans) the measure of space intervening between two objects or two points of reference. **angular d.**, the aperture of the angle made at the eye by lines drawn from the eye to two objects. **cone-surface d.**, in radiology, the distance measured along the central beam from the distal end of the cone to the surface of the irradiated object. **focal d.**, the distance from the focal point to the optical center of a lens or the surface of a concave mirror. **infinite d.**, in ophthalmology, a distance of 20 feet or more; so called because rays entering the eye from an object at that distance are practically as parallel as if they came from a point at an infinite distance. **interarch d.**, 1. the vertical distance between the maxillary and mandibular arches (alveolar or residual) under certain conditions of vertical dimension that must be specified. 2. the vertical distance between the maxillary and mandibular ridges; called also *interridge d.* **interocclusal d.**, the distance between the occluding surfaces of the maxillary and mandibular teeth when the mandible is in physiologic rest position; called also *interocclusal rest space, gap, or clearance*, and *free way space*. **interocular d.**, the distance between the two eyes, usually used in reference to the interpupillary distance. **interpediculate d.**, the distance between the vertebral pedicles as measured on the roentgenogram. **interpupillary d.**, the distance between the centers of the pupils of the two eyes when the visual axes are parallel; in practice usually measured from the lateral margin of one pupil to the medial margin of the other. **interridge d.**, interarch d. **map d.**, see *map unit*, under *unit*. **object-film d.**, in radiology, the distance from the site or plane being radiographed, to the surface of the film. Unless otherwise specified, this distance should be construed as being measured along the central ray. **source-cone d.**, in radiology, the distance measured along the central ray from the front surface of the source of radiation to the distal end of the cone. **target-skin d.**, the distance intervening between the anode from which roentgen rays are deflected and the skin of the body surface interposed in their path. **working d.**, the distance between the front lens of a microscope and the object when the instrument is correctly focused.

distemper (dis-tem'per) a name for several infectious diseases of animals, especially canine distemper. **canine d.**, a specific infectious respiratory and sometimes gastrointestinal disease of dogs characterized by fever, dullness, loss of appetite, and a discharge from the eyes and nose. It is caused by a virus and it is

also infectious for foxes and ferrets. **cat d.**, panleukopenia. **colt d.**, strangles, def. 1.

distemperoid (dis-tem'per-oid) an attenuated canine distemper virus that has been subjected to several passages in ferrets; called also *Green's distemperoid*.

distensibility (dis-ten'si-bil'i-te) capability of being distended. **distention** (dis-ten'shun) the state of being distended or enlarged; the act of distending.

distichia (dis-tik'e-ah) distichiasis.

distichiasis (dis'ti-ki'ah-sis) [Gr. *distichia* a double line] the presence of a double row of eyelashes on an eyelid, one or both of which are turned in against the eyeball.

distichous (dis'ti-kus) arranged in two vertical rows; said of the arrangement of leaves where the leaf at one node is opposite to those just above and below it.

distil, distill (dis-til') [L. *destillare*; *de* from + *stillare* to drop] to volatilize by heat and then cool and condense the evaporated matter, as to purify a substance or to separate a volatile substance from other less volatile substances.

distillate (dis'til-lāt) material that has been obtained by distillation.

distillation (dis-til-la'shun) vaporization; the process of vaporizing and condensing a substance to purify the substance or to separate a volatile substance from less volatile substances. **destructive d., dry d.**, decomposition of a solid by heating in the absence of air, which results in volatile liquid products. **fractional d.**, that which is attended by the successive separation of volatilizable substances in the order of their respective volatility. **molecular d.**, a process of purification applied to drugs and pharmaceuticals during which the crude material is evaporated under high vacuum of about one millionth of an atmosphere, and the condensate is caught on a cooled surface held close in front of the evaporating layer. The process is applied currently to vitamins A, D, and E, to animal and vegetable sterols and hormones, and to drugs and intermediates. **vacuum d.**, distillation under reduced pressure to avoid the decomposition which might occur at atmospheric pressure.

distobuccal (dis'to-buk'al) pertaining to or formed by the distal and buccal surfaces of a tooth, or by the distal and buccal walls of a tooth cavity.

distobucco-occlusal (dis'to-buk'o-ō-kloo'zal) pertaining to or formed by the distal, buccal, and occlusal surfaces of a tooth.

distobuccopulpal (dis'to-buk'o-pul'pal) pertaining to or formed by the distal, buccal, and pulpal walls of a tooth cavity.

distocervical (dis'to-ser'vī-kal) 1. pertaining to the distal surface of the neck of a tooth. 2. distogingival.

distoclination (dis'to-kli-na'shun) deviation of a tooth from the vertical, in the direction of the tooth next distal (posterior) to it in the dental arch.

distoclusal (dis'to-kloo'zal) disto-occlusal.

distocclusion (dis'to-kloo'zhun) a malrelation of the dental arches in which the mandibular arch is in a posterior (distal) position in relation to the maxillary arch; called also *posterocclusion*.

distogingival (dis'to-jin'jī-val) pertaining to or formed by the distal and gingival walls of a tooth cavity; called also *distocervical*.

distolabial (dis'to-la'be-al) pertaining to or formed by the distal and labial surfaces of a tooth, or the distal and labial walls of a tooth cavity.

distolabioincisal (dis'to-la'be-o-in-si'zal) pertaining to or formed by the distal, labial, and incisal surfaces of a tooth.

distolingual (dis'to-ling'gwal) pertaining to or formed by the distal and lingual surfaces of a tooth, or the distal and lingual walls of a tooth cavity.

distolinguoincisal (dis'to-ling'gwo-in-si'zal) pertaining to or formed by the distal, lingual, and incisal surfaces of a tooth.

distolinguo-occlusal (dis'to-ling'gwo-ō-kloo'zal) pertaining to or formed by the distal, lingual, and occlusal surfaces of a tooth.

distolinguopulpal (dis'to-ling'gwo-pul'pal) pertaining to or formed by the distal, lingual, and pulpal walls of a tooth cavity.

Distoma (dis'to-mah) [*di-* + Gr. *stoma* mouth] former name of a genus of trematode worms; as now used, a general term including various genera of trematodes or flukes, such as *Paragonimus*, *Fasciola*, etc. **D. bus'ki**, *Fasciolopsis buski*. **D. conjunc'tum**, *Amphimerus noverca*. **D. feli'neum**, *Opisthorchis felinus*. **D. haematobium**, *Schistosoma haematobium*. **D. hepat'icum**, *Fasciola hepatica*. **D. heteroph'y'es**, *Heterophyes heterophyes*. **D. rin'geri**, *Paragonimus westermani*. **D. sinen'sis**, *Clonorchis sinensis*. **D. westerman'i**, *Paragonimus westermani*.

distomatosis (dis'to-mah-to'sis) distomiasis.

distomia (di-sto'me-ah) the presence of two mouths.

distomiasis (dis'to-mi'ah-sis) infection by trematodes or flukes. **hemic d.**, schistosomiasis. **hepatic d.**, infection by *Opisthorchis*, *Dicrocoelium*, *Fasciola hepatica*, or *Fasciola gigantica*. **intestinal d.**, infection by *Fasciolopsis* or other intestinal flukes. **pulmonary d.**, parasitic hemoptysis.

distomolar (dis'to-mo'lar) a supernumerary molar; any tooth found distal to a third molar.

Distomum (dis'to-mum) distoma.

distomus (di-sto'mus) [*di-* + Gr. *stoma* mouth] a fetus having a double mouth.

disto-occlusal (dis'to-ō-kloo'zal) pertaining to or formed by the distal and occlusal surfaces of a tooth, or the distal and occlusal walls of a tooth cavity.

disto-occlusion (dis'to-ō-kloo'zhun) distocclusion.

distoplacement (dis-to-plās'ment) displacement of a tooth distally.

distopulpal (dis'to-pul'pal) pertaining to or formed by the distal and pulpal walls of a tooth cavity.

distopulpolabial (dis'to-pul'po-la'be-al) pertaining to or formed by the distal, pulpal, and labial walls of a tooth cavity.

distopulpolingual (dis'to-pul'po-ling'gwal) pertaining to or formed by the distal, pulpal, and lingual walls of a tooth cavity.

distortion (dis-tor'shun) [L. *dis-* apart + *torsio* a twisting] the state of being twisted out of a natural or normal shape or position. In psychiatry, a mechanism through which material offensive to the superego is replaced by disguised transformations of the original material. In radiology, deviation of a radiographic image from the true outline or shape of an object or structure. **para-taxic d.**, distortions in judgment and perception, particularly in interpersonal relations, based upon the need to perceive objects and relationships in accord with a pattern from earlier experience.

distortor (dis-tor'tor) [L.] that which distorts. **d. o'ris**, musculus zygomaticus minor; see *Table of Musculi*.

distoversion (dis'to-ver'zhun) the position of a tooth which is farther than normal from the median line of the face along the dental arch.

distractibility (dis'trak-tī-bil'i-te) a morbid or abnormal variation of attention; inability to fix attention on any subject.

distraction (dī-strak'shun) [L. *dis-* apart + *tractio* a drawing] 1. a state in which the attention is diverted from the main portion of an experience or is divided among various portions of it. 2. a form of dislocation in which the joint surfaces have been separated without rupture of their binding ligaments and without displacement. 3. excessive space between fracture fragments due to interposed tissue or too forceful traction. 4. surgical separation of the two parts of a bone after the bone is transected. 5. in orthodontics, unusual width of the dental arch.

distress (dī-stres') [L. *distringere* to draw apart] physical or mental anguish or suffering. **idiopathic respiratory d. of newborn**, see *respiratory distress syndrome of newborn*, under *syndrome*.

distribution (dis'tri-bu'shun) [L. *distributio*] 1. the specific location or arrangement of continuing or successive objects or events in space or time. 2. the branching, as of an artery, to supply various tissues. 3. the geographical range of an organism or disease. 4. in statistics, a set of numbers representing instances of a variable arranged according to their value. **Bernoulli d.**, a mathematical formula for calculating the theoretical distribution of male and female children to be born to any given set of parents. **dose d.**, in radiology, a representation of the variation of dose with position in any region of an irradiated object.

districhiasis (dis'tri-ki'ah-sis) [Gr. *dis* double + Gr. *thrix* hair + *-iasis*] a condition in which two hairs grow from a single follicle.

distrix (dis'triks) [Gr. *dis* double + Gr. *thrix* hair] the splitting of hairs at their distal ends.

disturbance (dis-tur'bans) a departure or divergence from that which is considered normal. **emotional d.**, mental disorder.

sexual orientation d., a condition in which the affected individual's sexual interests are primarily directed towards persons of the same sex and the individual is either disturbed by, in conflict with, or wishes to change his or her sexual orientation; it is to be distinguished from homosexuality and lesbianism. **transient situational d.**, a transient mental disorder, occurring as a reaction to overwhelming environmental stress. If symptoms persist after the stress is relieved, the diagnosis of another mental disorder is indicated.

disubstituted (di-sub'stī-tūt-ed) having two atoms in each molecule replaced by other atoms or radicals.

disulfate (di-sul'fāt) a compound containing two sulfate ions or radicals, as in titanium disulfate, $Ti(SO_4)_2$ (not to be confused with bisulfate).

disulfide (di-sul'fid) a compound of a base with two atoms of sulfur; see also under *bond*.

disulfiram (di-sul'fi-ram) [USP] chemical name: tetraethylthioperoxydicarbonic diamide [$(H_2N)C(S)_2$]. An antioxidant, $C_{10}H_{20}N_2S_4$, occurring as a white to off-white, crystalline powder, which inhibits the oxidation of the acetaldehyde metabolized from alcohol, resulting in high concentrations of acetaldehyde in the body. Extremely uncomfortable symptoms occur when alcohol is ingested subsequent to the oral administration of disulfiram (see *mal rouge*); used to produce an aversion to alcohol in the treatment of chronic alcoholism. Called also *tetraethylthiuram disulfide*.

dithiazanine iodide (di'thi-az'ah-nēn) chemical name: 3-ethyl-2-[5-(3-ethyl-2-(3*H*)-benzothiazolinyldene)-1,3-pentadienyl]-benzothiazolium iodide. A dark green crystalline powder, $C_{23}H_{23}IN_2S_2$, used as an anthelmintic against strongylids and whipworms.

dithio (di-thi'o) the chemical group $-S_2-$.

dithiol (di-thi'ol) a chemical compound containing two sulfhydryl (thiol) radicals.

dithranol (dith'rah-nōl) anthralin.

dithymol diiodide (di-thi'mol di-i'o-did) thymol iodide.

Ditropan (di'tro-pan) trademark for a preparation of oxybutynin hydrochloride.

Ditropenotus aureoviridis (di'tro-pē-no'tus aw're-o-vir'i-dis) former name for *Pyemotes ventricosus*.

Dittel's operation (dit'elz) [Leopold Ritter von Dittel, Vienna urologist, 1815–1898] see under *operation*.

Dittrich's plugs (dit'riks) [Franz Dittrich, German pathologist, 1815–1859] see under *plug*.

Ditylenchus (dit-ē-len'kus) a genus of small nematodes. **D. dip'saci**, the stem and bulb eelworm, a parasite of various grains, grasses, and bulbs, such as lilies, hyacinths, gladioli, narcissi, and onions; when ingested with the latter, it may be found as a pseudoparasite in the feces. Called also *Anguillulina putrifaciens*.

diurea (di-u-re'ah) a crystalline substance, $C_2H_4N_4O_2$, 1,2,4,5-tetrazine-3,6-dione, derivable from two molecules of urea, slightly soluble in ethanol or water. Called also *p-urazine* or *urazin*.

diureide (di-u're-id) see *ureide*.

diurese (di'u-rēs') the act of effecting diuresis.

diureses (di'u-rēs'ēz) plural of *diuresis*.

diuresis (di'u-re'sis), pl. *diureses* [Gr. *diourein* to urinate, to pass in urine] increased excretion of urine. **tubular d.**, diuresis resulting from the presence of nonabsorbable or poorly absorbable, osmotically active substances (mannitol, urea, glucose, etc.) in the renal tubules.

diuretic (di'u-ret'ik) [Gr. *diourētikos* promoting urine] 1. increasing the excretion of urine. 2. an agent that promotes the excretion of urine. **cardiac d.**, a drug that causes diuresis by increasing the force of the heart beat. **hemopiesic d.**, one that acts by raising the blood pressure. **hydragogue d.**, one that promotes a copious discharge of water from the kidneys. **loop d.**, any diuretic (e.g., furosemide and ethacrynic acid) that appears to exert its action on the sodium reabsorption mechanism of the ascending limb of the loop of Henle, resulting in excretion of urine isotonic with plasma. **mechanical d.**, any agent that acts favorably by washing out the urinary tubules. **osmotic d.**, a low-molecular-weight substance, e.g., mannitol, capable of remaining in high concentrations in the renal tubules and thereby contributing to the osmolality of the glomerular filtrate. **thiazide d.**, any of a group of synthetic compounds that effect diuresis by enhancing the excretion of sodium and chloride.

diuria (di-u're-ah) [L. *dies* day + *urine*] frequency of urination during the day.

Diuril (di'u-ril) trademark for preparations of chlorothiazide.

diurnal (di-er'nal) [L. *dies* day] occurring during the day.

diurnule (di-ern'ül) [L. *diurnus* daily] a pill or other preparation containing the complete allowance of a medicine for one day.

Div. abbreviation for L. *divide*, divide.

divagation (di'vah-ga'shun) incoherent speech.

divalent (di-va-lent) [Gr. *dis* twice + *valens*] 1. bivalent. 2. carrying an electronic charge of two units.

divarication (di-var'i-ka'shun) separation; divergence; diastasis.

divergence (di-ver'jens) a spreading or tending apart; in ophthalmology, the simultaneous abduction of both eyes. **negative vertical d.** (–V.D.), the condition in which the visual line of the left eye deviates upward or the visual line of the right eye deviates downward. **positive vertical d.** (+V.D.), the condition in which the visual line of the right eye deviates upward, or the visual line of the left eye deviates downward.

divergent (di-ver'jent) [L. *divergens*; *dis*-apart + *vergere* to tend] tending apart; deviating or radiating away from a common point.

diversine (di-ver'sin) an amorphous sinomenine alkaloid, $C_{20}H_{27}O_5N$.

diversion (di-ver'zhun) a turning aside. **antigenic d.**, the change in the antigenic structure of tumor cells or tissue to that normally found in different cells or tissue.

diverticula (di'ver-tik'u-lah) [L.] plural of *diverticulum*.

diverticular (di'ver-tik'u-lar) pertaining to or resembling a diverticulum.

diverticularization (di'ver-tik'u-lar-i-za'shun) the act of forming diverticula, pockets, etc.

diverticulectomy (di'ver-tik'u-lek'to-me) [*diverticulum* + Gr. *ektomē* excision] excision of a diverticulum.

diverticleve (di'ver-tik'u-lēv) an instrument for lifting up a

bladder diverticulum so that the subjacent bladder wall may be separated.

diverticulitis (di'ver-tik-u-li'tis) inflammation of a diverticulum, especially inflammation related to colonic diverticula which may undergo perforation with abscess formation. Sometimes called *left-sided* or *L-sided appendicitis*.

diverticulogram (di'ver-tik'u-lo-gram) [*diverticulum* + Gr. *gramma* mark] a roentgenogram of a diverticulum.

diverticulopexy (di'ver-tik'u-lo-pek'se) surgical fixation of a diverticulum in a new position following its separation from the initial adjacent or adherent structures.

diverticulosis (di'ver-tik'u-lo'sis) the presence of diverticula, particularly of colonic diverticula, in the absence of inflammation. Cf. *diverticulitis*.

diverticulum (di'ver-tik'u-lum), pl. *divertic'ula* [L. *divertere* to turn aside] a circumscribed pouch or sac of variable size occurring normally or created by herniation of the lining mucous membrane through a defect in the muscular coat of a tubular organ. **acquired d.**, any diverticulum produced secondarily, mechanically or by disease. **allantoic d.**, the entodermal sacculatation that becomes the allantois; called also *allantoic vesicle*. **divertic'ula ampul'lae duc'tus deferen'tis** [NA], sacculations in the wall of the ampulla of the ductus deferens. **caliceal d.**, **calyceal d.**, an epithelial-lined cavity in the kidney, situated peripherally to a calix and connected to it by a narrow isthmus, the lining of the cavity being continuous with that of the calix. **cervical d.**, one derived from an embryonic branchial groove or pouch. **diverticula of colon**, **colonic diverticula**, acquired herniations of the mucosa of the colon through the muscular layers of the bowel wall, which may become inflamed (see *diverticulitis*). **false d.**, an intestinal diverticulum due to the protrusion of the mucous membrane through a tear in the muscular coat. **functional d.**, a benign, radiological entity, in which a diverticulum-like shadow is demonstrated by contrast medium, although subsequent laparotomy shows no sign of any corresponding anomaly. **ganglion d.**, a hernial protrusion of the synovial membrane through a tendon sheath. **Ganser's d.**, multiple pulsion diverticula of the sigmoid flexure. **Graser's d.**, false diverticulum of the sigmoid flexure. **Heister's d.**, bulbus venae jugularis superior. **hepatic d.**, one arising from the embryonic duodenum and forming the liver, gallbladder, and bile ducts. **d. il'ei ve'rum**, Meckel's d. **intestinal d.**, a pouch or sac formed by hernial protrusion of the mucous membrane through a defect in the muscular coat of the intestine. **Kirchner's d.**, a diverticulum of the eustachian tube. **laryngeal d.**, a diverticulum of the laryngeal mucous membrane. **Meckel's d.**, an occasional sacculatation or appendage of the ileum, derived from an unobliterated yolk stalk; called also *d. ilei verum*. **Nuck's d.**, processus vaginalis peritonei. **pancreatic diverticula**, two outpocketings from the embryonic duodenum, later forming the pancreas and its ducts. **Per-tik's d.**, an unusually deep recessus pharyngeus. **pharyngo-esophageal d.**, a diverticulum at the junction of the pharynx and esophagus; called also *Zenker's d.* **pituitary d.**, Rathke's pouch. **pressure d.**, **pulsion d.**, a sac or pouch formed by hernial protrusion of the mucous membrane through the muscular coat (as of the colon or esophagus) as a result of pressure from within. **Rokitansky's d.**, a traction diverticulum of the esophagus. **supradiaphragmatic d.**, a diverticulum of the esophagus situated just above the diaphragm. **synovial d.**, a hernial protrusion of the synovial membrane of a joint or a tendon sheath. **thyroid d.**, an outpouching of the ventral floor of the embryonic pharynx that becomes the thyroid gland. **diverticula of trachea**, **tracheal diverticula**, pouches projecting from the trachea. **traction d.**, a localized distortion, angulation, or funnel-shaped bulging of the full thickness of the wall of the esophagus, caused by adhesions resulting from some external lesion. **vesical d.**, diverticulum of the bladder. **Zenker's d.**, pharyngoesophageal d.

divi-divia (div'e-div'e) the leguminous pods of *Caesalpinia cori-aria* (Jacq.) Willd., plants of South America; the seeds contain tannin and gallic acid and have been used as an astringent and in tanning.

divinyl (di-vi'nil) a gaseous hydrocarbon, vinyl ethylene, $CH_2:CH:CH:CH_2$. **d. oxide**, vinyl ether.

division (di-vizh'un) [L. *divisio*] the act of separating into two or more parts. **cell d.**, the fission of a cell. **cell d., direct**, see *amitosis*. **cell d., indirect**, see *meiosis* and *mitosis*. **craniosacral d.**, see *pars parasymphathica systematis nervosi autonomici*. **equational d.**, the second meiotic division, essentially mitotic in type, characterized by the separation of sister chromatids. The latter are genetically identical since they are longitudinally-split reduplications of individual chromosomes. **maturation d.**, **meiosis**. **reduction d.**, the first meiotic division, so called because at this stage the chromosome number per cell is reduced from diploid to haploid. **thoracicolumbar d.**, **thoracolumbar d.**, see *pars sympathica systematis nervosi autonomici*.

divulse (di-vuls') to pull apart forcibly.

divulsion (dī-vul'shun) [L. *dis-* apart + *vellere* to pluck] the act of separating or pulling apart.

divulsor (dī-vul'sor) an instrument for dilating the urethra.

Dixon Mann see *Mann*.

dizygotic (dī'zi-got'ik) pertaining to or derived from two separate zygotes, as dizygotic (fraternal) twins.

dizygous (dī-zī'gus) dizygotic.

dizziness (diz'i-nes) a disturbed sense of relationship to space; a sensation of unsteadiness with a feeling of movement within the head; giddiness; lightheadness; dysequilibrium. Cf. *vertigo*.

DL- (de-el) chemical prefix (small capitals) denoting that the substance is an equimolecular mixture of two enantiomorphs, one of which corresponds in configuration to D-glyceraldehyde, the other to L-glyceraldehyde.

dl- (de-el) chemical prefix formerly used to denote that the substance is an equimolecular mixture of the dextrorotatory and levorotatory enantiomorphs, such as is produced by chemical synthesis without resolution or by the process of racemization. The sign $\pm$ is currently used.

DLE discoid lupus erythematosus.

DM diastolic murmur.

D.M. see *diphenylamine-arsine chloride*.

D.M.D. Doctor of Dental Medicine.

dmelcos (dmel'kos) a culture of Ducrey's bacillus (*Hemophilus ducreyi*) grown on gelose and sterilized; formerly used as a test for chancroid, and injected into patients with paresis to induce high temperature.

DMF an expression of the accumulated dental caries experience in permanent teeth, *D* representing the number of carious teeth; *M* the number of missing teeth; and *F* the number of filled teeth.

DMPE 3,4-dimethoxyphenylethylamine.

D.M.R.D. Diploma in Medical Radio-Diagnosis (British).

D.M.R.T. Diploma in Medical Radio-Therapy (British).

DMSO dimethyl sulfoxide.

DMT dimethyltryptamine.

DN dibucaine number.

Dn. dekanem.

dn. decinem.

DNA deoxyribonucleic acid (see under *acid*). **recombinant DNA**, DNA that has been artificially introduced into a cell so that it alters the genotype and phenotype of the cell and is replicated along with the natural DNA.

DNase deoxyribonuclease.

D.N.B. dinitrobenzene; Diplomat of the National Board (of Medical Examiners).

DNCB dinitrochlorobenzene.

D.O. Doctor of Osteopathy; diamine oxidase.

D₂O the symbol for heavy water.

D.O.A. dead on arrival.

Dobell's solution (do-belz') [Horace Benge *Dobell*, English physician, 1828–1917] sodium borate solution; see under *solution*.

Dobie's globule, layer (line) (do'bēz) [William Murray *Dobie*, English physician, 1828–1915] see under *globule*, and see *Z band*, under *band*.

dobutamine (do-bu'tah-mēn) chemical name: (+)-[2-[3-(4-hydroxyphenyl)-1-methylpropyl]amino]ethyl]-1,2-benzenediol. A synthetic catecholamine, C₁₅H₂₃NO₃, used as an adrenergic with cardiotonic actions. **d. hydrochloride**, the hydrochloride salt of dobutamine, C₁₅H₂₃NO₃·HCl, having the same actions as the base.

Doca (do'kah) trademark for desoxycorticosterone acetate.

Dochmius duodenalis (dok'me-us du'o-dē-na'lis) former name for *Ancylostoma duodenale*.

Docibin (do'si-bin) trademark for a crystalline preparation of vitamin B₁₂; see *cyanocobalamin*.

docimasia (do'se-ma'ze-ah) [Gr. *dokimazein* to examine] an assay or examination; an official test. **auricular d.**, Wreden's sign. **hepatic d.**, the search for glycogen or glucose in the liver. **pulmonary d.**, determination as to whether air has entered the lungs of a dead infant, as an indication whether it was born dead or alive.

docimastic (do'se-mas'tik) pertaining to docimasia; of the nature of an assay or test.

dock (dok) to remove part or all of the tail of an animal.

doconazole (do-ko'nah-zōl) chemical name: *cis*-1-[[4-[[[1,1'-bi-phenyl]-4-yloxy)methyl]-2-(2,4-dichlorophenyl)-1,3-dioxolan-2-yl]-methyl]-1*H*-imidazole; an antifungal, C₂₆H₂₂Cl₂N₂O₃.

doctor (dok'tor) [L. "teacher"] 1. a practitioner of the healing arts, one who has received a degree from a college of medicine, osteopathy, dentistry, or veterinary medicine, licensed to practice by a state. 2. a holder of a diploma of the highest degree from a university, qualified as a specialist in a particular field of learning.

doctrine (dok'trin) a theory supported by authorities and hav-

ing general acceptance. **Arrhenius' d.**, see under *theory*. **Flourens' d.**, see under *theory*. **Monro-Kellie d.**, the quantity of blood within the cranium must be approximately constant at all times, in health or disease; the doctrine refers to quantity of blood not to blood flow. **neuron d.**, the doctrine that the nervous system is entirely cellular, that its cells are distinctive as to morphological type and functional characteristics, and that its cells are not in protoplasmic continuity but are juxtaposed without a significant amount of intervening extracellular substance.

docosate calcium (dok'u-sāt) [USP] chemical name: sulfobutanedioic acid 1,4-bis(2-ethylhexyl) ester calcium salt. An ionic surfactant, C₄₀H₇₄CaO₄S₂, occurring as a white, amorphous powder; used as a fecal softener, administered orally. Called also *dioctyl calcium sulfosuccinate*.

docosate sodium (dok'u-sāt) [USP] chemical name: sulfobutanedioic acid 1,4-bis(2-ethylhexyl) ester sodium salt. An anionic surfactant, C₂₀H₃₇NaO₇S, with wetting, detergent, emulsifying, and dispersing properties, occurring as a white, waxlike plastic solid; used as a fecal softener, administered orally or rectally, and for its solubilizing action as a tablet disintegrant. It has also been used for its dispersing and emulsifying properties in dermatological preparations. Called also *dioctyl sodium sulfosuccinate*.

dodecadactylitis (do'dek-ah-dak'tī-li'tis) [*dōdecadactylon* + *-itis*] duodenitis.

dodecadactylon (do'dek-ah-dak'tī-lon) [Gr. *dōdeka* twelve + *daktylos* finger, from its length] the duodenum.

Döderlein's bacillus (ded'er-linz) [Albert Siegmund Gustav *Döderlein*, German obstetrician and gynecologist, 1860–1941] see under *bacillus*.

Dogiel's corpuscles (do-zhe-elz') [Jean von *Dogiel*, Russian physiologist, 1830–1916] see under *corpuscle*.

dögling (deg'ling) [Danish and German] the northern bottlenosed whale (*Hyperoodon ampullatus*).

Dogmatist (dog'mah-tist) 1. the first of the post-hippocratic schools of medicine, in which the open-minded spirit of Hippocrates' teaching became merged with a strict formalism which cared more for rigid doctrine than for investigation. The most important members of this school—Dioscorides of Carystus and Praxagoras of Cos—were, however, far more enlightened than the label "Dogmatist" would seem to imply. 2. a believer in or practitioner of the Dogmatist theory of medicine.

Döhle's disease, inclusion bodies (de'lēz) [Paul *Döhle*, German pathologist, 1855–1928] see *syphilitic aortitis*, under *aortitis*, and see under *body*.

Döhle-Heller aortitis (de'lē-hel'er) [K.G.P. *Döhle*; Arnold Ludwig Gotthilf *Heller*, Kiel pathologist, 1840–1913] syphilitic aortitis.

doigt (dwa) [Fr.] finger or toe. **d. mort** [Fr.], dead finger.

Doisy (doi'se), Edward Adelbert. An American biochemist, born 1893; co-winner, with Carl Peter Henrik Dam, of the Nobel prize for medicine and physiology in 1945, for the isolation and synthesis of vitamin K.

dol (dōl) [L. *do'lor* pain] a unit of pain intensity.

dolabrate (do-lab'rāt) [L. *dolabra* ax] ax-shaped.

dolabriform (do-lab'ri-form) dolabrate.

Dold's test (reaction) (dolts) [Hermann *Dold*, German bacteriologist, born 1882] see under *test*.

Dolérís' operation (dol-a-rēz') [Jacques Amédée *Dolérís*, French gynecologist, 1852–1938] see under *operation*.

dolicho- (dol'i-ko) [Gr. *dolichos* long] a combining form meaning long.

dolichocephalia (dol'i-ko-sē-fa'le-ah) dolichocephaly.

dolichocephalic, dolichocephalous (dol'i-ko-sef-ah'lik; dol'i-ko-sef'ah-lus) [*dolicho-* + Gr. *kephalē* head] long headed; having a cephalic index of 75.9 or less. Called also *mecocephalic*.

dolichocephalism (dol'i-ko-sef'ah-lizm) dolichocephaly.

dolichocephaly (dol'i-ko-sef'ah-le) the quality of being dolichocephalic.

dolichocolon (dol'i-ko-ko'lon) [*dolicho-* + *colon*] an abnormally long colon.

dolichocranial (dol'i-ko-kra'ne-al) having a cranial index of 74.9 or less.

dolichoderus (dol'i-ko-dēr'us) [*dolicho-* + Gr. *dere* neck] an individual with a long neck.

dolichofacial (dol'i-ko-fa'shal) having a long face.

dolichogastric (dol'i-ko-gas'tre) [*dolicho-* + Gr. *gastēr* stomach] (*obs.*) a term once proposed to replace gastropnoia, because the condition is one of stretching of the center of the stomach.

dolichohieric (dol'i-ko-hi-er'ik) having a sacral index below 100.

dolichokerkic (dol'i-ko-ker'kik) having a radiohumeral index above 80.

dolichoknemic (dol'i-ko-ne'mik) having a tibiofemoral index of 83 or above.

dolichomorph (dol'fī-ko-mor'fik) [*dolicho-* + Gr. *morphē* form] built along lines that tend toward the slender or longer type.

dolichopellic, dolichopelvic (dol'fī-ko-pel'ik; dol'fī-ko-pel'vik) [*dolicho-* + Gr. *pella* bowl] having a pelvic index of 95 or above.

dolichoprosopic (dol'fī-ko-pro-sop'ik) dolichofacial.

dolichosigmoid (dol'fī-ko-sig'moid) [*dolicho-* + *sigmoid*] (*obs.*) an abnormally long sigmoid flexure.

dolichostenomelia (dol'fī-ko-ste'no-me'le-ah) [*dolicho-* + Gr. *stenos* narrow + *melos* limb] arachnodactyly.

dolichuranic (dol'fī-ko-u-ran'ik) [*dolicho-* + Gr. *ouranos* palate] having a maxilloalveolar index of 109.9 or less.

Döllinger's ring (del'ing-erz) [Johann Ignaz Josef Döllinger, German physiologist, 1770–1841] Schwalbe's ring.

Dolophine (do'lo-fēn) trademark for preparations of methadone hydrochloride.

dolor (do'lor), pl. *dolo'res* [L.] pain; one of the cardinal signs of inflammation. **d. cap'itis**, headache. **d. cox'ae**, coxalgia, def. 2. **dolo'res praesagien'tes**, false pains late in pregnancy, similar to those experienced during menstruation, indicating that labor is imminent. **d. va'gus**, wandering pain.

dolores (do-lo'rēz) plural of *dolor*.

dolorific (do'lor-if'ik) producing or causing pain.

dolorimeter (do'lor-im'ē-ter) an instrument for measuring pain in dogs.

dolorimetry (do'lor-im'ē-tre) [L. *dolor* pain + Gr. *metrein* to measure] the measurement of pain.

dolorogenic (do-lor'o-jen'ik) dolorific.

DOM 2,5-dimethoxy-4-methylamphetamine.

Domagk (do'mak), Gerhard. A German physician and biochemist, 1895–1964; winner of the Nobel prize for medicine in 1939, for his work on the chemotherapy of infectious diseases.

domain (do'mān) in immunology, any of the homology regions of heavy or light polypeptide chains of immunoglobulins.

domaria (do-mar'i-ah) yaws.

domazoline fumarate (do'mah-zo'lēn) chemical name: 2-[3,6-dimethoxy-2,4-dimethylphenyl)methyl]-4,5-dihydro-1*H*-imidazole (*E*)-2-butenedioate (1:1); an anticholinergic, C₁₄H₂₀N₂O₂·C₄H₄O₄.

Domeboro (dōm-bor-o) trademark for preparations of aluminum subacetate.

domiciliary (dom'i-sil'e-ār'e) [L. *domus* house] pertaining to or carried on in the house or place of permanent residence, as domiciliary treatment.

dominance (dom'i-nans) 1. the supremacy, or superior manifestation, in a specific situation of one of two or more competitive or mutually antagonistic factors. 2. the appearance, in a heterozygote, of one of two alternative parental characters; see *Mendel's law*, under *law*. **cerebral d.**, the dominance of one cerebral hemisphere over the other, in cerebral functions, demonstrated by laterality in voluntary motor acts. **incomplete d.**, failure of one gene to be completely dominant, the heterozygotes showing a phenotype intermediate between the two parents; called also *partial d.* and *semidominance*. **lateral d.**, the preferential use, in voluntary motor acts, of ipsilateral members of the major paired organs of the body (arm, ear, eye, and leg). **ocular d.**, the preferential use of one eye over the other, in vision. **one-sided d.**, lateral d. **partial d.**, incomplete d.

dominant (dom'i-nant) 1. exerting a ruling or controlling influence; in genetics, capable of expression when carried by only one of a pair of homologous chromosomes. 2. a dominant allele or trait.

domiphen bromide (do-mī-fen) chemical name: *N,N*-dimethyl-*N*-(2-phenoxethyl)-1-methylecanaminium bromide. A quaternary ammonium compound, C₂₂H₄₀BrNO, occurring as colorless to faintly yellow, crystalline flakes, effective against a wide range of gram-negative and gram-positive bacteria and against certain fungi; used as a topical anti-infective and to disinfect instruments and utensils.

domperidone (dom-per'fī-dōn) chemical name: 5-chloro-1-[3-(2,3-dihydro-2-oxo-1*H*-benzimidazol-1-yl)propyl]-4-piperidinyl]-1,3-dihydro-2*H*-benzimidazol-2-one; an antiemetic, C₂₂H₂₄ClN₅O₂.

Donath's phenomenon (test) (do'naths) [Julius Donath, German immunologist, 1870–1950] see under *phenomenon*.

Donath-Landsteiner test (do'nath-land'sti-ner) [Julius Donath; Karl Landsteiner, Austrian physician in New York, 1868–1943] see under *test*.

donaxine (do-nak'sēn) gramine.

Donders' glaucoma, law (don'derz) [Franciscus Cornelius Donders, Dutch physician and ophthalmologist, 1818–1889] see *glaucoma simplex*, and see under *law*.

Donec alv. sol. fuerit abbreviation for L. *do'nec al'vus solu'ta fu'erit*, until the bowels are opened (i.e., until a bowel movement occurs).

donee (do-ne') recipient; host (def. 2).

Don Juan (don-joo'an, or don-hwan) a man who is sexually promiscuous.

Don Juanism (don-hwan'izm) sexual promiscuousness in the male.

Donnan's equilibrium (don'an-z) [Frederick George Donnan, English chemist, 1870–1956] see under *equilibrium*.

Donné's corpuscles (bodies), test (don-āz') [Alfred Donné, French physician, 1801–1878] see *colostrum corpuscle*, under *corpuscle*, and see under *tests*.

donor (do'nor) 1. an individual organism that supplies living tissue to be used in another body, as a person who furnishes blood for transfusion, or an organ for transplantation in a histocompatible recipient. 2. in chemistry, a substance or compound which contributes part of itself, as an atom or radical, to another substance (acceptor). **general d.**, universal d. **hydrogen d.**, a substance or compound that gives up hydrogen to another substance (the hydrogen acceptor). **universal d.**, a person with group O blood (International Classification); such blood (blood cells preferred, rather than whole blood) is sometimes used in emergency transfusion.

Donovan bodies (don'o-van) [Charles Donovan, Irish physician, formerly in Sanitary Service in India, 1863–1951] 1. *Calymmatobacterium granulomatis*. 2. Leishman-Donovan bodies.

Donovania (don-o-va'ne-ah) [Charles Donovan] a genus of schizomycetes, included in the order Eubacteriales, suborder Eubacteriineae, family Parvobacteriaceae, tribe Pasteurellaeae. **D. granul'matis**, a gram-negative, pleomorphic, rod-shaped microorganism that is not cultivable on non-viable media but grows in the yolk, yolk sac, and amniotic fluid of the chick embryo. It is serologically related to *Klebsiella pneumoniae* and coliform bacilli, and is grouped with *Pasteurella*, *Malleomyces*, and *Actinobacillus* by some workers. It is the causative agent of granuloma inguinale in man. Called also *Calymmatobacterium granulomatis* and *Donovan body*.

donovanosis (don'o-vah-no'sis) granuloma inguinale.

dopa (do'pah) an amino acid, 3,4-dihydroxyphenylalanine, produced by oxidation of tyrosine by tyrosinase; it is the precursor of dopamine and an intermediate product in the biosynthesis of norepinephrine, epinephrine, and melanin. L-dopa (*levodopa* [USP]), the naturally occurring form, is used in the treatment of parkinsonism.

dopamantine (do'pah-man'tēn) chemical name: *N*[(2-(3,4-dihydroxyphenyl) ethyl) tricyclo[3,3,1,1^{3,7}] decane-1-carboxamide; an antiparkinsonian agent, C₁₉H₂₃NO₃.

dopamine (do'pah-mēn) chemical name: 4-(2-aminoethyl)-1,2-benzenediol. A monoamine, C₈H₁₁NO₂, formed in the body by the decarboxylation of dopa; it is an intermediate product in the synthesis of norepinephrine, and acts as a neurotransmitter in the central nervous system. **d. hydrochloride**, the hydrochloride salt of dopamine, C₈H₁₁NO₂·HCl, used to correct hemodynamic balance in the treatment of shock syndrome; administered intravenously.

dopaminergic (do'pah-mēn-er'jik) activated or transmitted by dopamine; pertaining to tissues or organs affected by dopamine.

dopa-oxidase (do'pah-ok'sī-dās) an enzyme that oxidizes dihydroxyphenylalanine (dopa) to melanin in the skin, producing pigmentation; called also *dopase*.

Dopar (do'par) trademark for a preparation of levodopa.

dopase (do'pās) dopa-oxidase.

Doppler effect (phenomenon, principle) (dop'lerz) [Christian Johann Doppler, Austrian physicist and mathematician, 1803–1853] see under *effect*.

Doppler's operation (dop'lerz) [Karl Doppler, Vienna surgeon] see under *operation*.

Dopram (do'pram) trademark for a preparation of doxapram hydrochloride.

Dopter's serum (dop-terz') [Charles Henri Alfred Dopfer, French bacteriologist, 1875–1950] see under *serum*.

doxastine hydrochloride (dor'as-tēn) chemical name: 8-chloro-2,3,4,5-tetrahydro-2-methyl-5-[2-(6-methyl-3-pyridyl)ethyl]-1*H*-pyrido[4,3-*b*]indole dihydrochloride; an antihistaminic, C₂₀H₂₂ClN₃·2HCl.

Dorbane (dor'bān) trademark for a preparation of danthron.

Dorendorf's sign (dor'en-dorfs) [Hans Dorendorf, German physician, born 1866] see under *sign*.

Doriden (dor'i-den) trademark for preparations of glutethimide.

dormancy (dor'man-se) the state of being dormant; in bacteriology, the property exhibited by some bacteria of lying dormant for a time before starting growth.

dormant (dor'mant) [L. *dormire* to sleep] sleeping, inactive, quiescent.

dormifacient (dor'mī-fa'shent) [L. *dormire* to sleep + *facere* to make] producing sleep; counteracting the conditions which tend to prevent sleep.

dornase (dor'nās) a shortened term for *deoxyribonuclease*; used also as a word termination, as in *streptodornase*. **pan-**

creatic d., a stabilized preparation of deoxyribonuclease, prepared from beef pancreas: used as an aerosol to reduce tenacity of pulmonary secretions.

Dornavac (dor'nah-vak) trademark for a preparation of pancreatic dornase.

Dorno's rays (dor'no) [Carl Wilhelm Dorno, Swiss climatologist, 1865-1942] see under ray.

Dorn-Sugarman test [John H. Dorn, American obstetrician; Edward J. Sugarman, American chemist] see under tests.

dorsa (dor'sah) [L.] plural of *dorsum*.

Dorsacaine (dor'sah-kān) trademark for a preparation of benoxinate hydrochloride.

dorsad (dor'sad) toward the back or dorsal aspect.

dorsal (dor'sal) [L. *dorsalis*; from *dorsum* back] 1. pertaining to the back or to any dorsum. 2. denoting a position more toward the back surface than some other object of reference; same as posterior in human anatomy.

dorsalgia (dor-sal'je-ah) [*dorsum* + *-algia*] pain in the back.

dorsalis (dor-sa'lis) [L.] dorsal; [NA] a term denoting a position closer to the back surface. Cf. *posterior*.

dorsi- (dor'si) see *dorso-*.

dorsiduct (dor'si-dukht) [*dorsi* + L. *ducere* to draw] to draw toward the back or dorsum.

dorsiflexion (dor'si-flek'shun) [*dorsi-* + *flexion*] backward flexion or bending, as of the hand or foot.

Dorsiflexion of foot (Hauser).

dorsimesal (dor'si-mes'al) dorsomesial.

dorsispinal (dor'si-spi'nal) pertaining to the back and vertebral column.

dorso-, dorsi- [L. *dorsum* back] combining form denoting relationship to a dorsum or to the back (posterior) aspect of the body.

dorsoanterior (dor'so-an-te're-or) having the back of the fetus toward the front of the mother.

dorsocephalad (dor'so-sef'ah-lad) [*dorso-* + Gr. *kephalē* head] directed toward the back of the head.

dorsodynia (dor'so-din'e-ah) dorsalgia.

dorsointercostal (dor'so-in'ter-kos'tal) situated in the back and between the ribs.

dorsolateral (dor'so-lat'er-al) pertaining to the back and to the side.

dorsolumbar (dor'so-lum'bar) pertaining to the back and the loins.

dorsomedian (dor'so-me'de-an) the median line of the back.

dorsomesial (dor'so-me'se-al) pertaining to the median line of the back.

dorsonasal (dor'so-na'sal) pertaining to the bridge of the nose.

dorsonuchal (dor'so-nu'kal) pertaining to the back of the neck.

dorsoposterior (dor'so-pos-te're-or) having the back of the fetus directed toward the mother's back.

dorsoradial (dor'so-ra'de-al) pertaining to the radial or outer side of the back of the forearm or hand.

dorsoscapular (dor'so-skap'u-lar) pertaining to the posterior surface of the scapula.

dorsoventrad (dor'so-ven'trad) [*dorso-* + *venter* belly] directed from the dorsal toward the ventral aspect.

dorsoventral (dor'so-ven'tral) 1. pertaining to the back and belly surfaces of the body. 2. passing from the back to the belly surface.

dorsum (dor'sum), pl. *dor'sa* [L.] [NA] 1. the back. 2. the aspect of an anatomical part or structure corresponding in position to the back; posterior, in the human. **d. of foot**, d. pedis. **d. of hand**, d. manus. **d. lin'guae** [NA], the superior surface of the tongue. **d. ma'nus** [NA], the back of the hand; the surface opposite the palm. **d. na'si** [NA], **d. of nose**, that part of the external surface of the nose formed by junction of the lateral surfaces. **d. pe'dis** [NA], the upper surface of the foot; the surface opposite the sole. **d. pe'nis** [NA], **d. of penis**, the anterior, more extensive surface of the dependent penis, opposite the urethral surface. **d. of scapula**, facies dorsalis scapulae. **d. sel'lae** [NA], the quadrilateral plate on the sphenoid bone that forms the posterior boundary of the sella turcica; the posterior clinoid processes project from its superior extremity, and it is continuous inferiorly with the clivus. **d. of testis**, margo posterior testis. **d. of tongue**, d. linguae.

dosage (do'sij) the determination and regulation of the size, frequency, and number of doses.

dose (dōs) [Gr. *dosís* a giving] a quantity to be administered at one time, such as a specified amount of medication, or a given quantity of roentgen ray or other radiation. **absorbed d.**, the amount of energy from ionizing radiations absorbed per unit mass of matter, expressed in rads. **air d.**, the intensity of a roentgen-ray (x-ray) or gamma-ray beam in air, expressed in roentgens. Sometimes called *exposure d.* **average d.**, the quantity of an agent which will usually produce the therapeutic effect for which it is administered. **booster d.**, an amount of immunogen (vaccine, toxoid, or other antigen preparation), usually smaller than the amount given originally, injected at an appropriate time interval after primary immunization to sustain the immune response to that immunogen (e.g., to maintain protection of the individual against infectious disease agents). See also *anamnesic reaction*, under *reaction*. **cumulative d.**, **cumulative radiation d.**, the total dose resulting from repeated exposures to radiation. **curative d.**, a dose that is sufficient to restore normal health. **curative d., median**, a dose that abolishes symptoms in 50 per cent of the test subjects. Abbreviated C.D.₅₀. **daily d.**, the total amount of a drug administered in a 24-hour period. **depth d.**, the intensity of radiation at a given depth in an irradiated body, expressed as a percentage of that at the surface of the body nearest the portal of entry. **divided d.**, a fraction of the total quantity of the drug prescribed, to be given at intervals, usually during a twenty-four hour period. **doubling d.**, in radiation biology, the dose of ionizing radiation which will result in a doubling of the current rate of spontaneous biological changes, such as mutations or cancers of various kinds, in a population. **effective d.**, that quantity of a drug which will produce the effects for which it is administered; abbreviated E.D. **effective d., median**, a dose that produces the desired effect in 50 per cent of a population. Abbreviation ED₅₀. **emergency d.**, an immunizing injection given immediately after an injury. **epilating d.**, the amount of radiation necessary to cause temporary or permanent loss of hair. **erythema d.**, the amount of radiation which, when applied to the skin, causes temporary reddening of the skin. **exit d.**, the intensity of radiation emerging from the body at the surface opposite the portal of entry. **exposure d.**, air d. **fatal d.**, lethal d. **fractional d's**, amounts of an agent less than that usually administered, given at shorter intervals than usual. **infective d.**, that amount of pathogenic microorganisms that will cause infection in susceptible subjects. Abbreviated I.D. **infective d., median**, the amount of pathogenic microorganisms that will produce infection in 50 per cent of the test subjects. Abbreviated I.D.₅₀. **integral d.**, **integral absorbed d.**, in radiation biology, the total energy absorbed by an individual or other biological object during exposure to radiation, expressed in gram-rads (100 ergs). **intoxicating d.**, the dose of sensitogen required to bring on an allergic reaction. **L + d.**, the smallest amount of diphtheria toxin which will kill a 250-gm. guinea pig within four days when mixed with one unit of diphtheria antitoxin before being injected subcutaneously. **lethal d.**, the amount of an agent, such as radiation, which will or may be sufficient to cause death. Called also *fatal d.* **lethal d., median**, the amount of pathogenic bacteria, bacterial toxin, or other poisonous substance, required to kill 50 per cent of uniformly susceptible animals inoculated with it. In radiology, the amount of ionizing radiation that will kill, within a specified period, 50 per cent of individuals in a large group or population. Abbreviated L.D.₅₀. **lethal d., minimum**, 1. the amount of toxin which will just kill the experimental animal; abbreviated M.L.D. 2. the smallest quantity of diphtheria toxin which will kill a guinea pig of 250-gm. weight in four to five days when injected subcutaneously. **Lf d.**, the amount of diphtheria toxin which in the shortest time produces precipitation when mixed with one standard unit of antitoxin. **limes nul d.**, **L₀ d.**, the amount of diphtheria toxin which is exactly neutralized by one standard unit of antitoxin. **Lr d.**, the amount of diphtheria toxin which, when mixed with one standard unit of antitoxin, will produce a minimal skin reaction in a guinea pig. **maintenance d.**, a dose (often a daily dose or dosage regimen) sufficient to maintain at the desired level the influence of a drug achieved by earlier administration of larger amounts. **maximum d.**, the largest quantity of an agent that may be safely administered to the average patient. **maximum permissible d.**, the largest amount of ionizing radiation that a person may receive according to recommended limits in current radiation protection guides; abbreviated M.P.D. **median tissue culture infective d.**, that quantity of a cytopathogenic agent (virus) that will produce a cytopathic effect in 50 per cent of the cultures inoculated. Abbreviated TCID₅₀. **minimal d.**, **minimum d.**, the smallest quantity of an agent that is likely to produce an appreciable effect. **optimal d.**, **optimum d.**, the quantity of an agent which will produce the effect desired without unfavorable effects. **organ tolerance d.**, in radiology, that amount of radiation which can be administered without appreciable damage to a normal organ; abbreviated OTD. **permissible d.**, that amount of ionizing radiation that, in the light of current knowledge, is not expected to lead to appreciable bodily injury and

is allowable according to current radiation protection guides; see also *maximum permissible d.* **priming d.**, a quantity several times larger than the maintenance dose, used at the initiation of therapy to rapidly establish the desired blood and tissue levels of the drug. **radiation absorbed d.**, see *absorbed d.* and *rad²*. **reacting d.**, the second dose of sensitizing antigen administered to an animal; it is followed by an immediate hypersensitive (e.g., anaphylactic or allergic) response. Cf. *sensitizing d.* **sensitizing d.**, the first dose of sensitizing antigen (e.g., protein) administered to an animal in the induction of a hypersensitivity (e.g., anaphylactic or allergic) response; cf. *reacting d.* **skin d.**, 1. the air dose of radiation at the skin surface, comprising primary radiation plus backscatter. 2. the absorbed dose in the skin. **therapeutic d.**, a quantity several times larger than the maintenance dose, used in vitamin therapy when a marked deficiency exists. **threshold d.**, the minimum dose of ionizing radiation that will produce a detectable degree of any given effect. **threshold erythema d.**, the single skin dose that will produce in 80 per cent of those tested, a faint but definite erythema within 30 days, and in the other 20 per cent, no visible reaction. Abbreviated T.E.D. **tissue d.**, the absorbed dose of radiation in a tissue or organ, expressed in rads. **tolerance d.**, the largest quantity of an agent, such as x-ray energy, that may be administered without harm. **toxic d.**, the amount of an agent which will cause toxic symptoms. **volume d.**, integral d.

dosimeter (do-sim'ē-ter) in radiology, an instrument used to detect and measure exposure to radiation, commonly a pencil-sized ionization chamber with a built-in electrometer used in monitoring exposure of personnel. Called also *dosage meter*.

dosimetric (do'se-met'rik) of or pertaining to dosimetry.

dosimetrist (do-sim-ē'trist) one who plans an optimum radiation treatment technical dosage pattern, or establishes a summation isodose pattern for the radiation treatment by means of isodose curves or other data supplied by a radiation physicist.

dosimetry (do-sim'ē-tre) [Gr. *dosis* dose + *metron* measure] the determination by scientific methods of the amount, rate, and distribution of radiation emitted from a source of ionizing radiation.

dosis (do'sis) [L., Gr. "a giving"] dose. **d. curati/va**, the minimum amount of a therapeutic agent that will effect a cure. **d. eff'icax**, d. curativa. **d. refrac'ta**, fractional dose. **d. tolera'ta**, the largest amount of a therapeutic agent that can be given with safety.

dossier (dos'e-a) [Fr.] the accumulated records of a patient's case history.

dot (dot) a small spot or speck. **Gunn's d's**, white dots seen about the macula lutea on oblique illumination. **Maurer's d's**, irregular dots, staining red with Leishman's stain, seen in erythrocytes infected with *Plasmodium falciparum*; called also *Maurer's clefts*. **Mittendorf's d.**, a congenital anomaly manifested as a small gray or white opacity just inferior and nasal to the posterior pole of the lens, representing the remains of the lenticular attachment of the hyaloid artery; it does not affect vision. **Schüffner's d's**, minute granules observed in erythrocytes infected with *Plasmodium vivax* when stained by certain methods, such as Romanowsky's or Wright's stain; called also *Schüffner's granules* or *punctuation*. **Trantas' d's**, small, white calcareous looking dots in the limbus of the conjunctiva in vernal conjunctivitis.

dotage (do'tij) feebleness of mind in old age; senility; senile psychosis.

dotard (do'tard) a person who is weak minded from old age.

dothiepin hydrochloride (do-thi'ē-pin) chemical name: 3-dibenzo[b,e]thiepin-11(6H)-ylidene-N,N-dimethyl-1-propanamine; a tricyclic antidepressant, C₁₉H₂₁NS·HCl.

double bind (dub'l bind) in psychiatry, a type of communication in which one individual directs contradictory verbal remarks to another who is unable to perceive the lack of congruence and cannot respond effectively or escape from the situation. Also, the situation produced by such interaction.

double-blind (dū'b'l-blind) denoting a study of the effects of a specific agent in which neither the administrator nor the recipient, at the time of administration, knows whether the active or an inert substance is given.

doublet (dub'let) a combination of two similar or complementary entities, as a combination of two components into a single lens, or of two microtubules in a cilium. **Wollaston's d.**, a microscopical lens consisting of a combination of two planoconvex lenses for correcting chromatic aberration.

douche (dōosh) [Fr.] a stream of water directed against a part of the body or into a cavity. **air d.**, a current of air blown into a cavity, particularly into the tympanum, for opening the eustachian tube. **alternating d.**, transition douche. **fan d.**, water applied to the body in a fan-shaped spray. **jet d.**, water applied to the body in a single stream. **Scotch d.**, a jet douche of alternating hot and cold water. **Tivoli d.**, a reclining bath in which a hot douche is employed over the patient's abdomen. **transition d.**, a douche of alternating hot and cold water; called also *alternating d.* **Weber's d.**, a nasal douche.

Douglas's cry, etc. (dug'las) [James Douglas, Scottish anatomist in London, 1675-1742] see under *cry*, *cul-de-sac*, *fold*, *ligament*, *line*, *pouch*, *space*, and *septum*.

douglascele (dug'lah-sēl) posterior vaginal hernia.

douglasitis (dug-lah-si'tis) inflammation of Douglas' pouch (excavatio rectouterina).

dourine (doo-rēn') a contagious disease of donkeys and horses, characterized by swelling of lymph glands, genital inflammation, and paralysis of hind limbs. It is caused by *Trypanosoma equiperdum* and spread by sexual contact. Called also *covering disease*.

Dover's powder (do'verz) [Thomas Dover, English physician, 1660-1742] ipecac and opium powder.

dowel (dow'li) a peg or pin, generally of metal, for fastening an artificial crown or core to the root of a natural tooth, or for fastening a die into a working model for the construction of a crown, inlay, or partial denture; called also *post*.

down (down) lanugo.

Down's syndrome (disease) (downz) [John Langdon Haydon Down, English physician, 1828-1896] see under *syndrome*.

downgrowth (down'grōth) a growing downward; something that grows downward. **epithelial d.**, see under *ingrowth*.

doxapram hydrochloride (dok'sah-pram) [USP] chemical name: 1-ethyl-4-[2-(4-morpholinyl)ethyl]-3,3-diphenyl-2-pyrrolidinone monohydrochloride monohydrate. A respiratory stimulant, C₂₄H₃₀N₂O₂·HCl·H₂O, occurring as a white to off-white, crystalline powder; used in the treatment of postanesthetic respiratory depression, administered intravenously.

doxaprost (doks'ah-prost) chemical name: (13E)-15-hydroxy-15-methyl-9-oxoprost-13-en-1-oic acid; a bronchodilator, C₂₁H₃₆O₄.

doxepin hydrochloride (dok'sē-pin) [USP] chemical name: 3-dibenzo[b,e]oxepin-11(6H)ylidene-N,N-dimethyl-1-propanamine hydrochloride. A tricyclic compound, C₁₉H₂₁NO·HCl, occurring as a white crystalline powder, having marked antianxiety and significant antidepressant activity; administered orally. It is also used as an antipruritic in veterinary medicine.

Doxinate (dok'si-nāt) trademark for a preparation of dioctyl sulfosuccinate sodium.

doxogenic (dok'so-jen'ik) [Gr. *doxe* opinion + *gennan* to produce] caused by one's own mental conceptions, as doxogenic disease.

doxorubicin (dok'so-ru'bi-sin) chemical name: (8S-cis)-10-[(3-amino-2,3,6-trideoxy-α-L-lyxo-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,8,11-trihydroxy-8-(hydroxyacetyl)-1-methoxy-5, 12-naphthacenedione. An antineoplastic antibiotic, C₂₇H₂₉NO₁₁, isolated from *Streptomyces peucetius* var. *caesius*; used in the treatment of various neoplastic conditions, including leukemia, sarcomas, lymphomas, neuroblastomas, and Wilms' tumor, administered intravenously. **d. hydrochloride** [USP], the hydrochloride salt of doxorubicin, C₂₇H₃₀ClNO₁₁, having the same actions, uses, and route of administration as the base.

doxycycline (dok'se-si'klēn) [USP] chemical name: 4aS-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5a,10,12aa-pentahydroxy-6a-methyl-1,11-dioxo-2-naphthacenecarboxamide monohydrate. A semisynthetic broad-spectrum antibacterial of the tetracycline (q.v.) group, C₂₂H₂₄N₂O₈·H₂O, derived from methacycline, it occurs as a yellow crystalline powder; administered orally. **d. calcium**, a complex prepared from doxycycline hyclate and calcium chloride, having the same actions and uses as the hyclate salt; administered orally. **d. hyclate** [USP], **d. hydrochloride**, a salt, (C₂₂H₂₄N₂O₈·HCl)₂·C₂H₄O·H₂O, occurring as a yellow crystalline powder, having the antibacterial effects of other tetracyclines; administered orally.

Doxy-II (dok'se) trademark for a preparation of doxycycline.

doxylamine succinate (dok-sil'ah-mēn) [USP] chemical name: N,N-dimethyl-2-[1-phenyl-1-(2-pyridinyl)ethoxy]ethanamine butanedioate (1:1). An antihistaminic, C₁₇H₂₂N₂O·C₄H₆O₄, occurring as a white or creamy white powder; administered orally.

Doyen's clamp, operation (dwah-yahz') [Eugene Louis Doyen, surgeon in Paris, 1859-1916] see under *clamp* and *operation*.

Doyère's eminence (hillock) (dwa-yärz') [Louis Michel François Doyère, French physiologist, 1811-1863] see under *eminence*.

Doyme's familial honeycombed choroiditis (doinz) [Robert Walter Doyme, Oxford ophthalmologist, 1857-1916] see under *choroiditis*.

D.P. abbreviation for L. *directio'ne prop'ria* ["with proper direction"]; Doctor of Pharmacy; Doctor of Podiatry.

D.P.H. Diploma in Public Health.

D.P.M. Diploma in Psychological Medicine; Doctor of Podiatric Medicine.

DPN diphosphopyridine nucleotide; now called *nicotinamide adenine dinucleotide* (NAD).

DPT diphtheria-pertussis-tetanus (vaccine).

DR reaction of degeneration; see under *reaction*.

dr. dram.

drachm (dram) [Gr. *drachmē*] dram.

dracontiasis (drak/'on-ti'ah-sis) [Gr. *drakontion* (little dragon) tapeworm] dracunculiasis.

dracuncular (drah-kung/'ku-lar) pertaining to or caused by nematodes of the genus *Dracunculus*.

dracunculiasis (drah-kung/'ku-li'ah-sis) the state of being infected with nematodes of the genus *Dracunculus*; called also *guinea worm disease*.

Dracunculoidea (drah/'kung-ku-loi'de-ah) a superfamily of phasmid nematodes including the genus *Dracunculus*.

dracunculosis (drah-kung/'ku-lo'sis) dracunculiasis.

Dracunculus (drah-kung/'ku-lus) [L. "little dragon"] a genus of nematode parasites of the superfamily Dracunculoidea. **D. medinen'sis**, the guinea worm or Medina worm, a threadlike worm, 30 to 120 cm. long, which inhabits the subcutaneous and intermuscular tissues of man and several domestic animals in India, Africa, and Arabia. Its embryos are discharged through an opening in the skin upon contact with water, in which they enter the bodies of a small crustacean, *Cyclops*, where they undergo larval development. Called also *dragon* or *serpent worm*; formerly called *Filaria medinensis*.

draft (draft) a potion; dose. **black d.**, the compound infusion of senna. **effervescing d.**, one which contains an acid and sodium or potassium bicarbonate. **mustard d.**, a mild rubefacient paste of mustard and flour. **Riverius' d.**, Rivière's potion.

drag (drag) the lower or cast side of a denture flask to which the cope is fitted.

dragée (drah-zha') [Fr. "sugar-plum"] a sugar-coated pill, or medicated confection.

Dragendorff's test (drag'en-dorfs) [Georg Johann Noël *Dragendorff*, German physician, 1836-1898] see under *tests*.

drain (drān) any device by which a channel or open area may be established for the exit of fluids or purulent material from any cavity, wound, or infected area. **cigarette d.**, a drain made by drawing a strip of gauze or surgical sponge into a tube of gutta-percha. **controlled d.**, a drain made by pressing a square of gauze into the wound and then packing with gauze strips, the ends of which, together with the corners of the square, are left projecting from the wound. **Mikulicz's d.**, a drain formed by pushing a single layer of gauze into a wound or cavity, then packing with several thick wicks of gauze as the original layer is forced farther and farther into the defect. **Mosher d.**, a truncated cone of copper mesh, used in the drainage of brain wounds. **Penrose d.**, cigarette d. **quarantine d.**, one left in place after laparotomy to drain the peritoneal cavity. **stab wound d.**, drainage accomplished by bringing out the drain through a small separate wound adjacent to the major operative incision. **Wylie d.**, a stem pessary of hard rubber having a groove along the stem.

drainage (drān'ij) the systematic withdrawal of fluids and discharges from a wound, sore, or cavity. **basal d.**, withdrawal of the cerebrospinal fluid from the basal subarachnoid space for the relief of intracranial pressure. **button d.**, drainage of a peritoneal transudate by means of a special button affixed to all layers of the abdominal wall. **capillary d.**, drainage effected by strands of hair, catgut, spun glass, or other material of tiny diameter which induces capillary attraction. **closed d.**, drainage of an empyema cavity carried out with protection against the entrance of outside air into the pleural cavity. **closed pleural d.**, continuous aspiration of the pleural cavity by means of an intercostal drainage tube passing into an airtight receiving vessel to which suction is applied. **continuous suction d.**, see *Wangensteen d.* **Monaldi's d.**, a method of suction drainage of tuberculous cavities of the lungs. **open d.**, drainage of an empyema cavity through an opening in the chest wall into which one or more rubber drainage tubes are inserted, the opening not being sealed against the entrance of outside air. **postural d.**, therapeutic drainage in bronchiectasis and lung abscess by placing the patient with the head downward so that the trachea will be inclined downward and below the affected area. **suction d.**, closed drainage of a cavity, with a suction apparatus attached to the drainage tube. **through d.**, drainage achieved by passing a perforated tube or other type of drain through a cavity, so that irrigation may be effected by injecting fluid into one aperture and letting it escape through another. **tidal d.**, drainage of the urinary bladder by an apparatus which alternately fills the bladder to a predetermined extent and then empties it by a combination of siphonage and gravity flow. **Wangensteen d.**, continuous drainage by suction through an indwelling gastric or duodenal tube; for treatment of intestinal obstruction, paralytic ileus, etc.

dram (dram) a unit of weight which, in the apothecaries' system, equals 60 grains, or $\frac{1}{8}$ ounce; in the avoirdupois system it equals 27.34 grains, or $\frac{1}{16}$ ounce. Symbol $\mathfrak{d}$; abbreviated dr. Called also *drachm*. **fluid d.**, a unit of capacity (liquid measure) of the apothecaries' system, being 60 minims, or the equivalent of 3.697 ml. Abbreviated fl.dr.

Dramamine (dram'ah-mēn) trademark for preparations of dimenhydrinate.

dramatism (dram'ah-tizm) pompous and dramatic speech and behavior in mental disorder.

dramatization (dram'ah-ti-za'shun) that part of the dream-work in which the manifest content of the dream is an action or situation.

drastic (dras'tik) [Gr. *drastikos* effective] 1. acting powerfully or thoroughly. 2. a violent purgative.

draught (draft) draft.

dream (drēm) a conscious series of images, emotions, or thoughts that occur during sleep, usually during the rapid eye movement (R.E.M.) stage of sleep. **clairvoyant d.**, one that seems to reveal a real event to the sleeper. **day d.**, wishful, purposeless reveries, without regard to reality. **wet d.**, a slang term for nocturnal emission.

Drechsel's test (drek'selz) [Edmund *Drechsel*, Swiss chemist, 1843-1897] see under *tests*.

drench (drench) a draft of medicine given to an animal by pouring it into its mouth.

Drepanidotaenia (drep'ah-nid-o-te'ne-ah) a genus of tapeworms parasitic in birds. *D. lanceola'ta* (*Hymenolepis lanceolata*) is a tapeworm of ducks and geese once reported from man.

drepanocyte (drep'ah-no-sit') [Gr. *drepanē* sickle + *kytos* cell] a sickle cell.

drepanocytemia (drep'ah-no-si-te'me-ah) sickle cell anemia.

drepanocytic (drep'ah-no-si'tik) pertaining to drepanocytes (sickle cells); having sickle-shaped cells.

drepanocytosis (drep'ah-no-si-to'sis) an occurrence of drepanocytes in the blood.

Drepanospira (drep'ah-no-spi'rah) [Gr. *drepanē* sickle + *speira* coil] a genus of Spirillaceae parasitic on protozoa.

Dresbach's anemia (syndrome) (dres'bahks) [Melvin *Dresbach*, American physician, 1874-1946] elliptocytosis.

dresser (dres'er) a surgical assistant who dresses wounds, etc.

dressing (dres'ing) any of various materials utilized for covering and protecting a wound. See also *bandage*. **adhesive absorbent d.**, a sterile individual dressing consisting of a plain absorbent compress affixed to a film or fabric coated with a pressure-sensitive adhesive substance. **antiseptic d.**, a dressing of gauze impregnated with an antiseptic material. **bolus d.**, tie-over d. **cocoon d.**, a dressing of gauze affixed to the surrounding skin by collodion or other liquid adhesive in such fashion that its elevated appearance resembles a cocoon. **cross d.**, transvestism. **dry d.**, dry gauze or absorbent cotton applied to a wound. **fixed d.**, a dressing impregnated with plaster of Paris, starch, or silicate of soda, utilized to secure fixation of the part when the material dries. **Lister's d.**, gauze impregnated with phenol, once used for covering or packing a wound. **occlusive d.**, one which seals a wound from contact with air or bacteria. **paraffin d.**, a dressing of gauze impregnated with paraffin. **pressure d.**, one by which pressure is exerted on the area covered to prevent the collection of fluids in the underlying tissues; most commonly used after skin grafting and in the treatment of burns. **protective d.**, a light dressing to prevent exposure to injury or infection. **stent d.**, a dressing in which is incorporated a mold or stent, to maintain position of a graft. **tie-over d.**, a dressing placed over a skin graft or other sutured wound, and tied on by the sutures which have been made of sufficient length for that purpose; called also *bolus d.*

Dressler's disease (dres'lerz) [*Dressler*, physician in Wurzburg] intermittent hemoglobinuria.

drift (drift) a chance variation, as in gene frequency from one generation to another; the smaller the population, the greater are the random variations. Called also *genetic d.* or *random genetic d.* **antigenic d.**, change in the antigenic structure of a virus strain, probably resulting from natural selection of virus variants circulating among an immune or partially immune population. **genetic d.**, see *drift*. **random genetic d.**, see *drift*.

drill (dril) a rotating cutting instrument for making holes in hard substances, such as bones or teeth. **bur d.**, see *bur*. **cannulated d.**, a drill with a hole through the center of its long axis, to be used over a guide wire. **dental d.**, see *bur*.

Drinalfa (drin-al'fah) trademark for preparations of methamphetamine hydrochloride.

drinidene (dri'nī-dēn) chemical name: 2-(aminomethylene)-2,3-dihydro-1*H*-inden-1-one; an analgesic, C₁₀H₉NO.

drink (drink) a quantity of liquid taken in one or a series of successive swallows; to take a drink. **sham d.**, a drink, as by an esophagostomized dog, in which swallowed water fails to be ingested or retained in the stomach.

Drinker respirator (drink'er) [Philip *Drinker*, American public health engineer, born 1894] see under *respirator*.

drip (drip) the slow, drop by drop, infusion of a liquid. **alkalinized milk d. of Winkelstein**, a method of treating certain cases of ulcers, in which a mixture of 5 gm. of sodium bicarbonate in 1 quart of whole milk is allowed to drip into the stomach through a small nasal or oral tube at the rate of 30 drops per minute, producing constant achlorhydria. **intravenous d.**,

continuous intravenous instillation, drop by drop, of saline or other solution. **Murphy d.**, see *Murphy method*, 2d def., under *method*. **nasal d.**, a method of giving fluid slowly to dehydrated infants through a catheter inserted into the nose and pushed down into the esophagus. **postnasal d.**, the dripping of discharges from the postnasal region into the pharynx due to hypersecretion of mucus in the nasal or nasopharyngeal mucosa or to chronic sinusitis.

Drisdol (driz'dol) trademark for preparations of ergocalciferol.

drive (driv) the force which activates human impulses.

drobuline (dro'bu-lēn) chemical name: $(\pm)\alpha$ -[(1-methylethyl)-amino]methyl- γ -phenylbenzenepropanol; a cardiac depressant with antiarrhythmic action, $C_{19}H_{25}NO$.

drocarbilar (dro-kar'bil) chemical name: arecoline N-acetyl-4-hydroxy-*m*-arsanilate. An odorless powder, $C_{16}H_{23}AsN_2O_7$, freely soluble in water; used as an anthelmintic in veterinary medicine.

drocinonide (dro-sin'o-nid) chemical name: 9-fluoro-11 β ,21-dihydroxy-16 α -17-[(1-methylethylidene)bis(oxy)]-5 α -pregnane-3,20-dione; an anti-inflammatory, $C_{24}H_{35}FO_6$.

drocode (dro'kod) dihydrocodeine.

Drolban (drol'ban) trademark for a preparation of dromostanolone propionate.

dromo- (drom'o) [Gr. *dromos* a course] a combining form denoting relation to conduction, or to running.

dromograph (drom'o-graf) [*dromo-* + Gr. *graphein* to record] an instrument for recording conduction or flow.

dromostanolone propionate (dro'mo-stan'o-lōn) [USP] chemical name: 2 α -methyl-17 β -(1-oxopropoxy)-5 α -androstane-3-one. An androgenic, anabolic steroid, $C_{23}H_{36}O_3$, occurring as a white to creamy white, crystalline powder; used as an antineoplastic agent in the palliative treatment of advanced metastatic, inoperable breast cancer in certain postmenopausal women, administered intramuscularly.

dromotropic (drom'o-trop'ik) affecting the conductivity of a nerve fiber.

dromotropism (dro-mot'ro-pizm) [Gr. *dromos* a course + *tropē* a turn, turning] the quality or property of affecting the conductivity of a nerve fiber. **negative d.**, the property of diminishing the conductivity of a nerve. **positive d.**, the property of increasing the conductivity of a nerve.

drop (drop) [L. *gutta*] a minute sphere of liquid as it hangs or falls. **ear d's**, medicated oil or water to be dropped into the external auditory meatus. **enamel d.**, enameloma. **eye d's**, a medicated solution to be dropped into the conjunctival sac. **foot d.**, footdrop. **Hoffmann's d's**, ether spirit. **nose d's**, a medicated solution to be dropped into the nose. **d. phalangette**, a condition in which the terminal phalanx of a finger or toe is permanently flexed, as in baseball finger or mallet finger. **wrist d.**, wristdrop.

dropacism (drop'ah-sizm) [Gr. *drōpax* plaster] the removal of hairs by means of a plaster.

droperidol (dro-per'i-dol) [USP] chemical name: 1-[1-[4-(4-fluorophenyl)-4-oxobutyl]-1,2,3,6-tetrahydro-4-pyridinyl]-1,3-dihydro-2*H*-benzimidazol-2-one. A drug of the butyrophenone series, $C_{22}H_{22}FN_3O_3$, occurring as a white to light tan, amorphous or microcrystalline powder; used for its antianxiety, sedative, and antiemetic effects as a premedication prior to surgery and during induction and maintenance of anesthesia, administered intravenously or intramuscularly. A combination of droperidol and fentanyl citrate (known as *Innovar*) is administered intramuscularly to produce neurolept analgesia.

droplet (drop'let) a diminutive drop, such as the particles of moisture expelled from the mouth in coughing, sneezing, or speaking, which may carry infection to others through the air.

dropper (drop'er) a pipet or tube for dispensing liquid in drops.

dropping (drop'ing) the limping gait of a horse, which is due to a neurologic disorder affecting the extensors of the limb.

dropsical (drop'si-kal) affected with or pertaining to dropsy.

dropsy (drop'se) [L. *hydrops*, from Gr. *hydōr* water] the abnormal accumulation of serous fluid in the cellular tissue or in a body cavity; see also *hydrops*. **abdominal d.**, ascites. **acute anemic d.**, epidemic d. **d. of amnion**, hydramnios. **articular d.**, hydrarthrosis. **d. of belly**, ascites. **d. of brain**, hydrocephalus. **cardiac d.**, gross edema related to heart failure. **d. of chest**, hydrothorax. **cutaneous d.**, edema. **epidemic d.**, a disease epidemic in India, Mauritius, and Fiji among the natives only, characterized by fever, anemia, and diarrhea, and followed by sudden edema; called also *argemone oil poisoning*. **famine d.**, nutritional edema. **d. of head**, hydrocephalus. **hepatic d.**, that which is due to disease of the liver. **nutritional d.**, nutritional edema. **d. of pericardium** (*obs.*), hydropericardium. **peritoneal d.**, ascites. **renal d.**, anasarca due to kidney disease. **salpingian d.**, hydrosalpinx. **war d.**, nutritional edema. **wet d.**, beriberi.

Drosophila (dro-sof'i-lah) [Gr. *drosos* dew + *philein* to love] a genus of flies; the fruit flies. **D. melanogaster**, a small fly often seen about decaying fruit; used extensively in experimental genetics.

drosopterin (dro-sop'ter-in) any of a group of bright red pteridine pigments of the eye of *Drosophila* which are readily decomposed by light.

drowning (drown'ing) suffocation and death resulting from filling of the lungs with water or other substance or fluid, so that gas exchange becomes impossible. **secondary d.**, delayed death from drowning, due to such complications as pulmonary alveolar inflammation.

droxacin sodium (droks'ah-sin) chemical name: 5-ethyl-2,3,5,8-tetrahydro-8-oxo-furo[2,3-*g*]quinoline-7-carboxylic acid sodium salt; an antibacterial, $C_{14}H_{12}NNaO_4$.

droxilcon A (droks'i-fil'kon) chemical name: 2-hydroxyethyl methacrylate polymer with ethylenebis(oxyethylene)dimethacrylate and 1-vinyl-2-pyrrolidinone; a hydrophilic contact lens material, $(C_6H_{10}O_2)_x(C_{14}H_{22}O_2)_yI(C_6H_5NO)_z$.

Dr.P.H. Doctor of Public Health.

drug (drug) 1. any chemical compound that may be used on or administered to humans or animals as an aid in the diagnosis, treatment, or prevention of disease or other abnormal condition, for the relief of pain or suffering, or to control or improve any physiologic or pathologic condition. 2. a narcotic. **antagonistic d.**, one that tends to counteract or neutralize the effect of another. **crude d.**, the whole drug with all its ingredients. **habit-forming d.**, any drug, such as alcohol, tobacco, morphine, cocaine, opium, that produces dependence, whether physical or psychic.

drug-fast (drug'fast) drug-resistant.

druggist (drug'ist) pharmacist.

drug-resistant (drug're-zis'tant) resistant to the action of drugs; said of microorganisms. Called also *drug-fast*.

drum (drum) 1. the middle ear (auris media [NA]). 2. membrane tympani.

drumhead (drum'hed) the tympanic membrane (membrana tympani [NA]).

Drummond's sign (drum'unds) [Sir David Drummond, English physician, 1852-1932] see under *sign*.

drumstick (drum'stik) a nuclear lobule attached by a slender strand to the nucleus of a small proportion of polymorphonuclear leukocytes of normal females but not of normal males.

drupe (droop) [L. *drupa* an overripe olive] stone fruits in which the outer part of the ovary wall forms a skin, the middle part becomes fleshy and juicy, and the inner part forms a hard pit or stone around the seed; e.g., peaches, plums, apricots.

drusen (droo'sen) [Ger., pl. of *Druse* stony nodule, geode] 1. hyaline excrescences in Bruch's membrane (lamina basalis choroidae); they usually result from aging, but sometimes occur with other pathologic conditions. 2. rosettes of granules occurring in the lesions of actinomycosis.

Drysdale's corpuscles (driz'dälz) [Thomas Murray Drysdale, American gynecologist, 1831-1904] see under *corpuscle*.

Dryvax (dri'vaks) trademark for a preparation of smallpox vaccine.

D.S.C. Doctor of Surgical Chiropody.

DT duration tetany.

D.T.D abbreviation for L. *da'tur ta'lis do'sis*, give of such a dose.

DTIC dacarbazine.

DTIC-Dome (dōm) trademark for a preparation of dacarbazine.

D.T.P. distal tingling on percussion; see *Tinel's sign*, under *sign*.

dualism (du'al-izm) [L. *duo* two] 1. the theory that there are two distinct stem cells for blood cell formation: one for the lymphatic cells and the other for the myeloid cells. 2. the theory that human beings are made up of two independent systems, mind and body, and that psychic and physical phenomena are fundamentally independent and different in nature.

dualist (du'al-ist) an adherent of the dualistic theory.

dualistic (du'al-is'tik) 1. twofold. 2. pertaining to dualism.

Duane's syndrome, test (du-ānz') [Alexander Duane, ophthalmologist in New York, 1858-1926] see under *syndrome* and *test*.

duazomycin (du-az'o-mi'sin) an antibiotic substance with antineoplastic properties, produced by *Streptomyces ambifaciens*; formerly called *duazomycin A*. **d. A**, former name for duazomycin. **d. B**, former name for azotomycin. **d. C**, former name for ambomycin.

dubi (doo'be) the native name on the Gold Coast for yaws.

Dubini's chorea (disease) (du-be'nēz) [Angelo Dubini, Italian physician, 1813-1902] see under *chorea*.

Dubois's abscess, disease (du-bwahz') [Paul Dubois, French obstetrician, 1795-1871] see under *abscess* and *disease*.

Dubois's method (treatment) (du-bwahz') [Paul Charles Dubois, Swiss psychiatrist, 1848-1918] see under *method*.

DuBois-Reymond's law (dü-bwah'ri-maw') [Emil Heinrich DuBois-Reymond, German physiologist, 1818-1896] see under *law*.

Duboisia (du-boi'se-ah) a genus of solanaceous plants; *D. myoporoides* yields hyoscyamine and scopolamine.

Dubos enzyme (crude crystals, lysin), medium (doo-bos') [René Jules Dubos, French biochemist in America, born 1901] see *tyrothricin*, and see under *culture medium*.

Duboscq colorimeter (du-bosk') [Louis Jules Duboscq, French optician, 1817-1886] see under *colorimeter*.

Duchenne's disease, etc. (du-shenz') [Guillaume Benjamin Amand Duchenne, French neurologist, 1806-1875] see under *disease, dystrophy, paralysis, trocar, and type*.

Duchenne-Aran muscular atrophy (disease, type) (du-shen'ar-an') [G. B. A. Duchenne; F. A. Aran] spinal muscular atrophy; see under *atrophy*.

Duchenne-Erb paralysis, syndrome (du-shen'airb) [G. B. A. Duchenne; Wilhelm Heinrich Erb, German internist, 1840-1921] Erb-Duchenne paralysis.

Duchenne-Landouzy dystrophy (type) [G. B. A. Duchenne; L. T. J. Landouzy] facioscapulohumeral muscular dystrophy; see under *dystrophy*.

Duckworth's phenomenon (sign) (duk'worths) [Sir Dyce Duckworth, British physician, 1840-1928] see under *phenomenon*.

Ducobee (doo'ko-be) trademark for preparations of vitamin B₁₂; see *cyanocobalamin*.

Ducrey's bacillus (doo-kräz') [Augusto Ducrey, Italian dermatologist, 1860-1940] *Hemophilus ducreyi*.

duct (dukt) [L. *ductus*, from *ducere* to draw or lead] a passage with well-defined walls, especially a tube for the passage of excretions or secretions; called also *ductus* [NA]. **aberrant d.**, any duct that is not usually present or that takes an unusual course or direction, such as the *ductulus aberrans superior*. **acoustic d.**, *meatus acusticus externus*. **adipose d.**, an elongated sac in the cellular tissue filled with fat. **alimentary d.**, thoracic d. **allantoic d.**, allantoic stalk. **alveolar d.**, *ductuli alveolares*. **d. of Arantius**, *ductus venosus*. **archinephric d.**, *pronephric d.* **arterial d.**, *ductus arteriosus*. **Bartholin's d.**, *ductus sublingualis major*. **Bellini's d.**, *tubuli renales recti*. **Bernard's d.**, *ductus pancreaticus accessorius*. **bile d.**, *common, ductus choledochus*. **bile d.**, *interlobular, ductuli interlobulares*. **biliary d.**, *biliferous d.*, the passages for the conveyance of bile in and from the liver. **Blasius' d.**, *ductus parotideus*. **Bochdalek's d.**, *ductus thyroglossus*. **d. of Botall**, *ductus arteriosus*. **branchial d.**, drawn-out branchial grooves 2, 3, and 4, which open into the temporary cervical sinus of the embryo. **canalicular d.**, *ductus lactiferi*. **cervical d.**, the opening from the exterior into the temporary cervical sinus of the embryo. **choledochous d.**, *ductus choledochus*. **chyliferous d.**, thoracic d. **cloacal d.**, Reichel's cloacal d. **cochlear d.**, 1. a spirally arranged membranous tube in the bony canal of the cochlea; see *ductus cochlearis* [NA]. 2. *canalis spiralis cochleae*. **common bile d.**, the duct formed by union of the cystic duct and the hepatic duct; called also *ductus choledochus* [NA]. **Coschwitz' d.**, a supposed salivary duct forming an arch over the dorsum of the tongue, proved by von Haller to be a vein. **cowperian d.**, *ductus glandulae bulbourethralis*. **craniopharyngeal d.**, *hypophyseal d.* **d's of Cuvier**, common cardinal veins: two short venous trunks in the fetus opening into the atrium of the heart; the right one becomes the superior vena cava; called also *Cuvier's sinuses* and *ductus cuvieri*. **cystic d.**, *ductus cysticus*. **deferent d.**, *ductus deferens*. **efferent d.**, a duct that gives outlet to a glandular secretion. **ejaculatory d.**, *ductus ejaculatorius*. **endolymphatic d.**, *ductus endolymphaticus*. **d. of epididymis**, *ductus epididymidis*. **d. of epoophoron**, *ductus epoophori longitudinalis*. **excretory d.**, one that is merely conductive and not secretory. **excretory d. of bulbourethral gland**, *ductus glandulae bulbourethralis*. **excretory d. of seminal vesicle**, *ductus excretorius vesiculae seminalis*. **excretory d. of testis**, *ductus deferens*. **frontonasal d.**, *nasofrontal d.* **galactophorous d.**, *ductus lactiferi*. **gall d.**, *biliary d.* **d. of gallbladder**, *ductus cysticus*. **Gartner's d.**, *ductus epoophori longitudinalis*. **gasserian d.**, *ductus paramesonephricus*. **genital d.**, *genital canal*. **guttural d.**, *auditory tube*. **Haller's aberrant d.**, a small coiled tube extending from the lower part of the canal of the epididymis; called also *ductus aberrans halleri*. **Hensen's d.**, *ductus reuniens*. **hepatic d.**, *common, ductus hepaticus communis*. **hepatic d.**, *left, ductus hepaticus sinister*. **hepatic d.**, *right, ductus hepaticus dexter*. **hepaticopancreatic d.**, *ductus pancreaticus*. **hepatocystic d.**, *ductus choledochus*. **d. of His**, *ductus thyroglossus*. **hypophyseal d.**, an embryonic structure composed of the elongated Rathke's pouch joining the infundibulum of the embryonic hypophysis; called also *craniopharyngeal duct*. **incisive d.**, *incisor d.*, *ductus incisivus*. **intercalated d.**, a slender initial portion of the duct system interposed between an acinus of a gland and a secretory duct. **interlobular d.**, channels located between different lobules of a gland; see *ductuli interlobulares*. **lacrimal d.**, *canaliculus lacrimalis*. **lacrimonasal d.**, *ductus nasolacrimalis*. **lactiferous d.**, *ductus lactif-*

eri. **Leydig's d.**, *d. mesonephricus*. **lingual d.**, a depression on the dorsum of the tongue at the apex of the terminal sulcus. **longitudinal d. of epoophoron**, *ductus epoophori longitudinalis*. **Luschka's d.**, tubular structures in the wall of the gallbladder, some connected with bile ducts but none connected with the lumen of the gallbladder; they may be aberrant bile ducts. **lymphatic d.**, channels for conducting lymph. **lymphatic d.**, *left, thoracic d.* **lymphatic d.**, *right, ductus lymphaticus dexter*. **mammary d.**, *mamillary d.*, *ductus lactiferi*. **mesonephric d.**, *ductus mesonephricus*. **metanephric d.**, *ureter*. **milk d.**, *ductus lactiferi*. **d. of Müller, müllerian d.**, *ductus paramesonephricus*. **nasal d.**, *ductus nasolacrimalis*. **nasofrontal d.**, a duct in the lateral wall of the nasal cavity extending from the infundibulum of the ethmoid bone to the frontal sinus; called also *frontonasal d.* **nasolacrimal d.**, *ductus nasolacrimalis*. **nasopharyngeal d.**, the lumen of the nasopharynx. **nephric d.**, *ureter*. **omphalomesenteric d.**, the narrow tube connecting the umbilical vesicle (yolk sac) with the midgut of the embryo; called also *omphalomesenteric canal*, *umbilical duct*, *vitelline duct*, *vitellointestinal duct*, and *yolk stalk*. **ovarian d.**, *tuba uterina*. **pancreatic d.**, *ductus pancreaticus*. **pancreatic d.**, *accessory, pancreatic d.*, *minor, ductus pancreaticus accessorius*. **papillary d.**, *tubuli renales recti*. **paramesonephric d.**, *ductus paramesonephricus*. **paraurethral d.**, *ductus paraurethrales*. **parotid d.**, *ductus parotideus*. **d. of Pecquet**, thoracic d. **perilymphatic d.**, *ductus perilymphatici*. **primordial d.**, *ductus paramesonephricus*. **pronephric d.**, the duct of the pronephros, which later serves as the mesonephric duct (*ductus mesonephricus*); called also *archinephric d.* or *canal*. **d's of prostate gland**, *prostatic d.*, *ductuli prostatici*. **Rathke's d.**, that part of the ductus paramesonephricus lying between its main part and the sinus pularis. **Reichel's cloacal d.**, the cleft between Douglas' septum and the cloaca in the embryo. **renal d.**, *ureter*. **d's of Rivinius**, *ductus sublinguales minores*. **Rokitansky-Aschoff d.**, see under *sinus*. **sacculoutricular d.**, *ductus utriculosaccularis*. **salivary d.**, the ducts that convey the saliva: they are the ductus parotideus, ductus submandibularis, ductus sublingualis major, and ductus sublinguales minores. **d. of Santorini**, *ductus pancreaticus accessorius*. **Schüller's d.**, *ductus paraurethrales*. **secretory d.**, a smaller duct that is tributary to an excretory duct of a gland and that also has a secretory function. **semicircular d.**, the long ducts of the membranous labyrinth of the ear; called also *ductus semicirculares* [NA]. **semicircular d.**, *anterior, ductus semicircularis anterior*. **semicircular d.**, *lateral, ductus semicircularis lateralis*. **semicircular d.**, *posterior, ductus semicircularis posterior*. **semicircular d.**, *superior, ductus semicircularis superior*. **seminal d.**, passages for the conveyance of spermatozoa and semen, including the ductus deferens, ductus excretorius vesiculae seminalis, and ductus ejaculatorius. **d. of seminal vesicle**, *ductus excretorius vesiculae seminalis*. **Skene's d.**, *ductus paraurethrales*. **spermatic d.**, *ductus deferens*. **d. of Steno, Stensen's d.**, *ductus parotideus*. **sublingual d.**, the ducts of the sublingual salivary glands, including the ductus sublingualis major and ductus sublinguales minores. **sublingual d.**, *major, ductus sublingualis major*. **sublingual d.**, *minor, ductus sublinguales minores*. **submandibular d.**, *submaxillary d.* of Wharton, *ductus submandibularis*. **sudoriferous d.**, *sweat d.*, *ductus sudoriferus*. **tear d.**, the ducts conveying the secretion of the lacrimal glands. **testicular d.**, *ductus deferens*. **thoracic d.**, the canal that ascends from the cisterna chyli to the junction of the left subclavian and left internal jugular vein; called also *ductus thoracicus* [NA]. **alimentary d.**, *chyliferous d.*, *d. of Pecquet*, *left lymphatic d.*, and *Van Hoorne's canal*. **thoracic d.**, *right, ductus thoracicus dexter*. **thyroglossal d.**, *thyrolingual d.*, *ductus thyroglossus*. **umbilical d.**, *yolk stalk*. **urogenital d.**, the ductus paramesonephricus and ductus mesonephricus. **utriculosaccular d.**, *ductus utriculosaccularis*. **d. of Vater**, *ductus thyroglossus*. **vitelline d.**, *vitellointestinal d.*, *yolk stalk*. **Walther's d.**, *ductus sublinguales minores*. **Wharton's d.**, *ductus submandibularis*. **d. of Wirsung**, *ductus pancreaticus*. **d. of Wolff, wolffian d.**, *ductus mesonephricus*.

ductal (duk'tal) pertaining to a duct.

ductile (duk'til) [L. *ductilis*, from *ducere* to draw, to lead] susceptible of being drawn out, as into a wire.

ductless (dukt'les) having no excretory duct.

ductule (dukt'ül) a minute duct, especially that part or branch of a duct which is nearest the alveolus of a gland; called also *ductulus* [NA]. **aberrant d.**, ductules that are not usually present, or that follow an unusual course or direction; see *ductuli aberrantes* [NA]. **aberrant d.**, *superior, ductulus aberrans superior*. **alveolar d.**, *ductuli alveolares*. **bile d.**, *biliary d.*, 1. *ductuli biliferi* [NA]. 2. *cholangioles*. **efferent d.**, *d's of testis, ductuli efferentes testis*. **excretory d.**, *d's of lacrimal gland, ductuli excretorii glandulae lacrimales*. **interlobular d.**, *ductuli interlobulares*. **d's of prostate, ductuli prostatici**. **transverse d.**, *d's of epoophoron, ductuli transversi epoophori*.

ductuli (duk'tu-li) [L.] plural of *ductulus*.

ductulus (duk'tu-lus), pl. *duc'tuli* [L.] [NA] ductule: a general term for a minute duct; applied especially to branches of ducts nearest to the alveoli of a gland, or the smallest beginnings of the duct system of an organ. **duc'tuli aberran'tes** [NA], aberrant ductules: blind vestiges of mesonephric tubules standing in relation to the epididymis. **d. aber'rans supe'rior** [NA], superior aberrant ductule: a narrow tube of variable length that lies in the epididymis and is connected with the rete testis; called also *ductus aberrans*. **duc'tuli alveola'res** [NA], alveolar ductules: small passages connecting the respiratory bronchioles and the alveolar sacs; see Plate XLVI accompanying system. Called also *alveolar ducts*. **duc'tuli bili'feri** [NA], biliary ductules: the small channels that connect the interlobular ductules with the right and left hepatic ducts; called also *bile ductule* and *ductus biliferi*. **duc'tuli efferen'tes tes'tis** [NA], efferent ductules of testis: ductules entering the head of the epididymis from the rete testis. **duc'tuli excreto'rii glan'dulae lacrima'lis** [NA], excretory ductules of lacrimal gland: numerous ductules that traverse the palpebral part of the lacrimal gland and open into the superior fornix of the conjunctiva. **duc'tuli interlobula'res** [NA], interlobular ductules: small channels between the hepatic lobules, draining into the bile ductules; called also *ductus interlobulares*, and *interlobular biliary canals* or *bile ducts*. **duc'tuli prostat'ici** [NA], ductules of prostate gland: minute ducts from the prostate gland that open on either side into or near the prostatic sinuses on the posterior wall of the urethra: called also *ductus prostatici*, *ducts of prostate gland*, and *prostatic ducts*. **duc'tuli transver'si epoo'ph'ori** [NA], transverse ductules of epoo'phoron: the remains of the mesonephric ducts, opening into the longitudinal duct of the epoo'phoron.

ductus (duk'tus), pl. *duc'tus* [L.] [NA] a duct: a general term for a passage with well defined walls, especially such a channel for the passage of excretions or secretions. **d. aber'rans**, ductulus aberrans superior. **d. aber'rans hal'leri**, Haller's aberrant duct. **d. Aran'tii**, d. venosus. **d. arterio'sus** [NA], arterial duct: a fetal blood vessel connecting the pulmonary artery directly to the descending aorta; called also *arterial canal*, *Botallo's duct*, and *pulmoaortic canal*. **d. arteriosus**, patent, abnormal persistence of an open lumen in the ductus arteriosus after birth, the direction of flow being from the aorta to the pulmonary artery, resulting in recirculation of arterial blood through the lungs. **d. arteriosus, reversed**, abnormal persistence of an open lumen in the ductus arteriosus after birth with obstruction of the small vessels of the lungs, the direction of flow being from the pulmonary artery to the aorta, resulting in the return of venous blood to the systemic circulation (the reverse of the normal post-fetal circulation); characterized clinically by cyanosis, especially of the feet. **d. bili'feri**, ductuli biliferi. **d. choled'o-chus** [NA], choledochous duct: the duct formed by union of the common hepatic and the cystic duct which empties into the duodenum at the major duodenal papilla, along with the pancreatic duct; called also *common bile duct*, *hepatic funiculus*, and *hepatocystic duct*. **d. cochlea'ris** [NA], cochlear duct: a spirally arranged membranous tube in the bony canal of the cochlea along its outer wall, lying between the scala tympani below and the scala vestibuli above; called also *cochlear canal*, *membranous cochlea*, *scala media*, and *scala of Löwenberg*. **d. cow'peri**, d. glandulae bulbourethralis. **d. cuvi'eri**, ducts of Cuvier. **d. cys'ticus** [NA], cystic duct: the passage connecting the neck of the gallbladder and the common bile duct; called also *duct of gallbladder*. **d. def'erens** [NA], deferent duct: the excretory duct of the testis, which unites with the excretory duct of the seminal vesicle to form the ejaculatory duct; called also *vas deferens*, *excretory duct of testis*, *spermatis duct*, and *testicular duct*. **d. ejaculato'rius** [NA], ejaculatory duct: the canal formed by union of the ductus deferens and the excretory duct of the seminal vesicle. It enters the prostatic part of the urethra on the colliculus seminalis. **d. endolymphat'icus** [NA], endolymphatic duct: a canal connecting the utriculosaccular duct with the endolymphatic sac; called also *aqueductus vestibuli* [NA alternative], and *aqueductus endolymphaticus*. **d. ep'ididym'idis** [NA], duct of epididymus: the single tube into which the coiled ends of the efferent ductules of the testis open, the convolutions of which make up the greater part of the epididymis; called also *canal of epididymus*. **d. epoo'ph'ori longit'udina'lis** [NA], longitudinal duct of epoo'phoron: a closed rudimentary duct lying parallel to the uterine tube, into which 10 to 15 transverse ducts of the epoo'phoron open; it is a remnant of the part of the mesonephros which participates in formation of the reproductive organs. Called also *duct of epoo'phoron* and *Gartner's canal* or *duct*. **d. excreto'rius glan'dulae bulbourethra'les**, ductus glandulae bulbourethralis. **d. excreto'rius vesic'ulae semina'lis** [NA], excretory duct of seminal vesicle: the duct that drains the seminal vesicle and unites with the ductus deferens to form the ejaculatory duct. **d. glan'dulae bulbourethra'lis** [NA], duct of bulbourethral gland: a duct passing from the bulbourethral gland through the urogenital diaphragm into the bulb of the penis and entering the spongy part of the urethra; called also *d. couperi*, *couperian duct*, and *d. excretorius glandulae bulbourethralis*. **d. hepat'icus commu'nis** [NA], common hepatic duct: the duct which is formed by union of the

right and left hepatic ducts, and in turn joins the cystic duct to form the common bile duct. **d. hepat'icus dex'ter** [NA], right hepatic duct: the duct that drains the right lobe and part of the caudate lobe of the liver. **d. hepat'icus sin'ister** [NA], left hepatic duct: the duct that drains the left and the quadrate lobe and part of the caudate lobe of the liver. **d. inci'sivus** [NA], incisive duct: a passage sometimes found in the incisive canal that interconnects the nasal and oral cavities during embryonic development; it occasionally fails to close. Called also *incisor canaliculus* and *incisor duct*. **d. interlobula'res**, ductuli interlobulares. **d. lacrima'les**, canaliculus lacrimalis. **d. lactif'eri** [NA], lactiferous ducts: channels conveying the milk secreted by the lobes of the breast to and through the nipples; called also *mammary ducts*. **d. lingua'lis**, a depression on the dorsum of the tongue, at the apex of the terminal sulcus. **d. lo'bi cauda'ti dex'ter** [NA], the right duct of the caudate lobe of the liver. **d. lo'bi cauda'ti sinis'ter** [NA], the left duct of the caudate lobe of the liver. **d. lymphat'icus dex'ter** [NA], right lymphatic duct: a vessel draining the lymph from the upper right side of the body, receiving lymph from the right subclavian, jugular, and mediastinal trunks when those vessels do not open independently into the right brachiocephalic vein. **d. mesoneph'ricus** [NA], mesonephric duct: an embryonic duct which initiated in association with rudiments of the pronephric kidney, is taken over as excretory duct by the mesonephros, and develops into the epididymis, the ductus deferens and its ampulla, the seminal vesicles, and the ejaculatory duct in the male and into vestigial structures in the female. Called also *d. Wolffii*, *Wolffian duct*, *duct of Wolff*, *Leydig's duct*, and *canal of Oken*. **d. Muel'leri**, ductus paramesonephricus. **d. naso-lacrima'lis** [NA], nasolacrimal duct: the passage that conveys the tears from the lacrimal sac into the interior nasal meatus; called also *lacrimonasal* or *nasal duct*. **d. pancrea'ticus** [NA], pancreatic duct: the main excretory duct of the pancreas, which usually unites with the common bile duct before entering the duodenum at the major duodenal papilla; called also *duct* or *canal of Wirsung*, and *hepatopancreatic duct*. **d. pancrea'ticus accesso'rius** [NA], accessory pancreatic duct: a small inconstant duct draining a part of the head of the pancreas into the minor duodenal papilla; called also *minor pancreatic duct*, and *duct of Santorini* or *Bernard*. **d. paramesoneph'ricus** [NA], paramesonephric duct: either of the paired embryonic ducts arising as a peritoneal pocket, extending caudally to join the urogenital sinus, and developing into uterine tubes, uterus, and vagina in the female and into a vestigial structure (appendix testis) in the male. Called also *d. Muelleri*, *duct of Müller* or *müllerian duct*, and *gasserian* or *primordial duct*. **d. paraurethra'les** [NA], paraurethral ducts: inconstantly present ducts in the female, which drain a group of the urethral glands into the vestibule; called also *Guérin's glands*, *Schüller's ducts*, *Skene's ducts* or *glands*, and *paraurethral glands*. **d. paroti'deus** [NA], parotid duct: the duct that drains the parotid gland and empties into the oral cavity opposite the second superior molar; called also *Blasius' duct*, *Stensen's canal* or *duct*, and *duct* or *canal of Steno*. **patent d. arteriosus**, see *d. arteriosus*, *patent*. **d. perilymphat'ici** [NA], perilymphatic duct: a small canal that connects the scala tympani with the subarachnoid space. Called also *aqueductus cochleae* [NA alternative]. **d. prostat'ici**, ductuli prostatici. **d. reu'niens** [NA], a small canal leading from the sacculus to the cochlear duct; called also *canalis reuniens*, *Hensen's canal* or *duct*, and *Reichert's canal*. **reversed d. arteriosus**, see *d. arteriosus*, *reversed*. **d. semicircula'res** [NA], semicircular ducts: the long ducts of the membranous labyrinth of the ear, corresponding to the semicircular canals of the bony labyrinth and designated anterior, posterior, and lateral, according to the canal they occupy. Their diameter is only one-fourth that of the bony canals containing them, and each is affixed by one wall to the endosteal lining of the canal. They give information about angular acceleration and deceleration. Called also *membranous semicircular canal*. **d. semicircula'ris ante'rior** [NA], anterior semicircular duct: the semicircular duct occupying the anterior semicircular canal; called also *d. semicircularis superior*, or *superior semicircular duct*. See *ductus semicirculares*. **d. semicircula'ris latera'lis** [NA], lateral semicircular duct: the semicircular duct occupying the lateral semicircular canal; see *ductus semicirculares*. **d. semicircula'ris poste'rior** [NA], posterior semicircular duct: the semicircular duct occupying the posterior semicircular canal; see *ductus semicirculares*. **d. semicircula'ris supe'rior**, *d. semicircularis anterior*. **d. spermat'icus**, d. deferens. **d. sublingua'lis ma'ior** [NA], major sublingual duct: the duct that drains the sublingual gland and opens alongside the submandibular duct on the sublingual caruncle; called also *Bartholin's duct*. **d. sublingua'les mino'res** [NA], minor sublingual ducts: the ducts that drain the sublingual gland and open along the crest of the sublingual fold; called also *canals* or *ducts of Rivinus*, and *Walther's ducts*. **d. submandibula'ris** [NA], *d. submaxilla'ris* [Wharto'ni], submandibular duct: the duct that drains the submandibular gland and opens at the sublingual caruncle; called also *submaxillary duct* of Wharton, and *Wharton's duct*. **d. sudori'ferus** [NA], sudoriferous duct: the duct that leads from the body of a sweat gland to the surface of the skin; called

- also *sweat duct*. **d. thora'cicus** [NA], thoracic duct: the vessel that ascends from the cisterna chyli to the junction of the left subclavian and left internal jugular veins; it acts as a channel for the collection of the lymph from the portions of the body below the diaphragm and from the left side of the body above the diaphragm. Called also *alimentary* or *chyliferous duct*, *left lymphatic duct*, *duct of Pecquet*, and *Van Hoorne's canal*. **d. thora'cicus dext'er** [NA], right thoracic duct: a lymphatic channel formed by union of the right jugular, subclavian, and bronchomediastinal trunks and opening into the right brachiocephalic vein. **d. thyroglos'sus** [NA], thyroglossal duct: a duct in the embryo extending between the thyroid primordium and the posterior part of the tongue; called also *duct of His* or *Vater*, *Bochdalek's duct*, *His' canal*, and *thyrolingual duct*. **d. utriculosaccula'ris** [NA], utriculosaccular duct: a narrow duct uniting the utricle and sacculle of the membranous labyrinth; called also *sacculoutricular duct* or *canal* and *utriculosaccular canal*. **d. veno'sus** [NA], a major blood channel that develops through the embryonic liver from the left umbilical vein to the inferior vena cava; called also *canal* or *duct of Arantius*, *canal of Cuvier*, and *ductus Arantii*. **d. Wolf'fi**, ductus mesonephricus.
- Duddell's membrane** (dud'elz) [Benedict Duddell, English physician of the 18th century] lamina limitans posterior corneae.
- Dugas' test (sign)** (doo'gahz) [Louis Alexander Dugas, American physician, 1806–1884] see under *tests*.
- Duhot's line** (dü-höz') [Robert Duhot, urologist and dermatologist in Brussels, born 1867] see under *line*.
- Duhring's disease** (du'rings) [Louis Adolphus Duhring, dermatologist in Philadelphia, 1845–1913] dermatitis herpetiformis.
- Dührssen's incisions, operation** (dër'senz) [Alfred Dührssen, German gynecologist, 1862–1933] see under *incision* and *operation*.
- Dujarier's clasp** (du-zah-re-az') see under *clasp*.
- Duke's method, test** (düks) [William Waddell Duke, pathologist in Kansas City, Missouri, 1883–1945] see *bleeding time*, under *time*, and see under *tests*.
- Dukes' disease** (düks) [Clement Dukes, English physician, 1845–1925] exanthema subitum.
- Dulbecco** (dül-bäk'o) Renato, Italian-born American (biologist) born 1914; co-winner, with David Baltimore and Howard Temin, of the Nobel prize in medicine and physiology for 1975, for discoveries concerning the interaction between tumor viruses and the genetic material of host cells and the role of reverse transcriptase.
- dulcite, dulcitol** (dul'sit dul'si-tol) [L. *dulcis* sweet] a polyhydric alcohol, $\text{CH}_2\text{OH}(\text{CHOH})\text{CH}_2\text{OH}$, occurring in various plants.
- dulcose** (dul'kös) dulcite.
- dull** (dul) not resonant on percussion.
- dullness, dulness** (dul'nes) diminished resonance on percussion; also a peculiar percussion sound which lacks the normal resonance. **Gerhardt's d.**, see under *triangle*. **Grocco's triangular d.**, Grocco's sign, def. 1. **postcardial d. (obs.)**, dullness on percussion on the back over the site of the heart. **shifting d.**, dullness on abdominal percussion, the level of which shifts as the patient is rolled from side to side; indicative of free fluid in the abdominal cavity. **tympantic d.**, resonance of a dull and diminished quality.
- dulse** (duls) a coarse red seaweed used as a food in Scotland and other northern countries.
- dumas** (du'mas) a native name for tubba in Ceylon.
- dumb** (dum) unable to speak; mute.
- dumbbell** (dum'bel) a dumbbell-shaped body; a mass consisting of two spherical portions connected by a narrow isthmus. **d's of Schäfer**, microscopic bodies found in striated muscular tissue.
- dumbness** (dum'nes) [L. *surditas*] mutism, or aphasia.
- dummy** (dum'e) 1. (Brit.) placebo. 2. pontic.
- Dumontpallier's test** (du'maw-pal-yāz') [Victor Alphonse Amédée Dumontpallier, French physician, 1826–1899] see under *tests*.
- dumping** (dum'ping) see under *syndrome*.
- Dunbar's serum** (dun'barz) [William Phillips Dunbar, American physician, 1863–1922] see under *serum*.
- Duncan's folds, position, ventricle** (dun'kanz) [James Matthews Duncan, British gynecologist, 1826–1890] see under *fold* and *position*, and see *cavum septi pellucidi*.
- Duncan's method** (dun'kanz) [Charles H. Duncan, American physician, born 1880] autotherapy.
- Dunfermline scale** (dun-ferm'lin) [Dunfermline, a city in Scotland where the scheme was devised] see under *scale*.
- Dunham's fans (cones, triangles)** (dun'amz) [Henry Kennon Dunham, American physician, 1872–1944] see under *fan*.
- duodenal** (du'o-de'nal) of, pertaining to, or situated in, the duodenum.
- duodenectomy** (du'o-dē-nek'to-me) [duodenum + Gr. *ektomē* excision] excision of the duodenum, total or partial.
- duodenitis** (du'od-ē-ni'tis) inflammation of the duodenal mucosa.
- duodeno-** (du'o-de'no) [L. *duodeni* twelve] a combining form denoting relationship to the duodenum.
- duodenocholangitis** (du'o-de'no-ko-lan'je-i'tis) inflammation of the duodenum and common bile duct.
- duodenocholecystostomy** (du'o-de'no-ko'le-sis-tos'to-me) surgical creation of a communication between the gallbladder and the duodenum.
- duodenocholedochotomy** (du'o-de'no-ko'led-o-kot'o-me) surgical incision of the duodenum and common bile duct.
- duodenocolic** (du'o-de'no-kol'ik) pertaining to the duodenum and colon.
- duodenocystostomy** (du'o-de'no-sis-tos'to-me) [duodeno- + Gr. *kystis* bladder + *stomoun* to provide with an opening or mouth] surgical formation of a communication between the duodenum and the gallbladder.
- duodenoduodenostomy** (du'o-de'no-du'o-de-nos'to-me) anastomosis of the two portions of a divided duodenum.
- duodenoenterostomy** (du'o-de'no-en'ter-os'to-me) surgical formation of a communication from the duodenum to another part of the small intestine.
- duodenogram** (du-od'ē-no-gram') a roentgenogram of the duodenum.
- duodenohepatic** (du-od'ē-no'hē-pat'ik) pertaining to the duodenum and the liver.
- duodenoileostomy** (du'o-de'no-il'e-os'to-me) surgical formation of a communication between the duodenum and the ileum.
- duodenojejunostomy** (du'o-de'no-jē-joo-nos'to-me) surgical formation of a communication between the duodenum and the jejunum.
- duodenolysis** (du'o-dē-nol'i-sis) the operation of loosening the duodenum from adhesions.
- duodenopancreatectomy** (du'o-de'no-pan'kre-ah-tek'to-me) pancreatoduodenectomy.
- duodenorrhaphy** (du'o-dē-nor'ah-fe) [duodeno- + Gr. *rhaphe* suture] the operation of suturing the duodenum.
- duodenoscope** (du'o-de'no-sköp) an endoscope for examining the duodenum.
- duodenoscopy** (du'od-ē-nos'ko-pe) [duodeno- + Gr. *skochein* to examine] endoscopic examination of the duodenum.
- duodenostomy** (du'od-ē-nos'to-me) [duodeno- + Gr. *stomoun* to provide with an opening or mouth] surgical formation of a permanent orifice into the duodenum.
- duodenotomy** (du'od-ē-not'o-me) [duodeno- + Gr. *tomēa* cutting] incision of the duodenum.
- duodenum** (du'o-de'num, du-od'ē-num) [L. *duode'ni* twelve at a time] [NA] the first or proximal portion of the small intestine, extending from the pylorus to the jejunum; so called because it is about 12 fingerbreadths in length.
- duoparental** (du'o-pah-ren'tal) [L. *duo* two + *parens* parent] pertaining to or derived from two parents or sexual elements.
- Duphalac** (du'fah-lak) trademark for a preparation of lactulose.
- Duphaston** (du-fas'ton) trademark for a preparation of dydrogesterone.
- Duplay's bursitis (disease, syndrome) operation** (doo-plāz') [Simon Emanuel Duplay, French surgeon, 1836–1924] see under *bursitis* and *operation*.
- duplication** (du'pli-ka'shun) a doubling; in genetics, the presence of an extra segment of chromosome existing as a separate fragment or attached to a member of the normal chromosome complement. **incomplete d. of spinal cord**, diastematomyelia.
- duplicitas** (du-plis'i-tas) [L.] a doubling, or duplication. **d. ante'rior**, katadidymus. **d. asym'metros**, heteropagus. **d. comple'ta**, a double monster in which each component is completely or almost completely developed. **d. crucia'ta**, conjoined twins with fused heads, each face being a joint product whose midplane forms a right angle with that of the body. **d. incomple'ta**, a double monster in which the two components are not completely developed. **d. infe'rior**, anadidymus. **d. me'dia**, a double monster in which the duplication is restricted to the middle region of the body. **d. paralle'la**, a double monster consisting of two components united in the sagittal plane. **d. poste'rior**, anadidymus. **d. supe'rior**, katadidymus. **d. sym'metros**, diplopagus.
- duplitzed** (du'pli-tizd) double coated; a term applied to x-ray films.
- dupp** (dup) a syllable used to represent the second sound of the heart in auscultation; it is shorter and higher pitched than the first sound. See *lubb* and *lubb-dupp*.
- Dupré's disease, syndrome** (du-prāz') [Ernest Pierre Dupré, French physician, 1862–1921] meningism, def. 1.
- Dupuy-Dutemps' operation** (du-pue'du-tahm') [Louis Dupuy-Dutemps, Paris ophthalmologist, born 1871] see under *operation*.
- Dupuytren's contracture, etc.** (du-pwe-trahnz') [Baron Guil-

laume *Dupuytren*, a celebrated French surgeon, 1777–1835] see under *amputation*, *contracture*, *enterotome*, *fracture*, *hydrocele*, *sign*, and *splint*.

dura (du'rah) [L. "hard"] *dura mater*.

Durabolin (du-rab'o-lin) trademark for a preparation of nandrolone phenpropionate.

Duracillin (du'rah-sil'in) trademark for preparations of penicillin G procaine.

dural (du'ral) pertaining to the *dura mater*.

dura mater (du'rah ma'ter) [L. "hard mother"] the outermost, toughest, and most fibrous of the three membranes (meninges) covering the brain and spinal cord; called also *pachymeninx*. **d. m. of brain**, **d. m. enceph'ali** [NA], the *dura mater* covering the brain, composed of two mostly fused layers: an endosteal outer layer (endocranium) adherent to the inner aspect of the cranial bones, and an inner, meningeal layer. Venous sinuses and the trigeminal ganglion are located between the layers. **d. m. of spinal cord**, **d. m. spina'lis** [NA], the *dura mater* covering the spinal cord; it is separated from the periosteum of the enclosing vertebrae by an epidural space containing blood vessels and fibrous and areolar tissue.

duramatral (du-rah-ma'tral) (*obs.*) *dural*.

Duran-Reynals' permeability factor [Francisco *Duran-Reynals*, American bacteriologist, 1899–1958] *hyaluronidase*.

Durand's disease (du-ranz') [Paul *Durand*, French physician, born 1895] see under *disease*.

Durand-Nicolas-Favre disease [J. *Durand*, Joseph *Nicolas*, M. *Favre*, French physicians] *lymphogranuloma venereum*.

Duranest (du'rah-nest) trademark for a preparation of etidocaine hydrochloride.

durapatite (dur-ap'ah-tit) chemical name: hydroxylapatite; a prosthetic aid, $\text{Ca}_5\text{HO}_{13}\text{P}_3$.

duraplasty (du'rah-plas-te) [*dura mater* + Gr. *plassein* to form] a plastic operation on the *dura mater*; graft of the *dura*.

Dürk's nodes (derks) [Hermann *Dürk*, Munich pathologist, born 1869] see under *node*.

Dur. dolor. abbreviation for L. *duran'te dolo're*, while the pain lasts.

Duret's lesion (du-rāz) [Henri *Duret*, French neurological surgeon, 1849–1921] see under *lesion*.

Durham decision (dur'ham) see under *decision*.

Durham's tube (dur'hamz) [1. Arthur Edward *Durham*, English surgeon, 1834–1895. 2. Herbert Edward *Durham*, English bacteriologist, 1866–1945] see under *tube*.

duroarachnitis (du'ro-ar'ak-ni'tis) inflammation of the *dura mater* and arachnoid.

Duroziez' disease, murmur (sign) (du-ro'ze-ez') [Paul Louis *Duroziez*, French physician, 1826–1897] see under *disease* and *murmur*.

dust (dust) fine, dry particles of earth or any other substance small enough to be blown by the wind. **blood d. (of Müller)**, hemokonia. **chromatin d.**, small, red granules, smaller than Howell's bodies, sometimes seen at the periphery of stained erythrocytes. **ear d.**, statoconia.

Dutton's disease, relapsing fever, spirochete (dut'unz) [Joseph Everett *Dutton*, English physician, 1877–1905] see *trypanosomiasis* and *Borrelia duttonii*, and see under *fever*.

Duttonella (dut-o-nel'ah) [J. Everett *Dutton*] *Trypanosoma*.

Duval's nucleus (du-valz') [Mathias Marie *Duval*, French anatomist, 1844–1907] see under *nucleus*.

Duverney's foramen, gland (du-ver-nāz') [Joseph Guichard *Duverney*, French anatomist, 1648–1730] see *foramen epiploicum* and *glandula bulbourethralis*.

d.v. double vibrations (a unit for the measurement of the frequency of sound waves).

D.V.M. Doctor of Veterinary Medicine. Also abbreviated V.M.D.

dwale (dwäl) belladonna leaf.

dwarf (dwarf) an abnormally undersized person. **achondroplastic d.**, a type of dwarf, having a relatively large head with saddle nose and brachycephaly, short extremities, and usually lordosis; see also *achondroplasia*. **Amsterdam d.**, a dwarf affected with de Lange's syndrome. **asexual d.**, an adult dwarf with deficient sexual development. **ateliotic d.**, a dwarf whose skeleton is infantile with persistent nonunion between epiphyses and diaphyses. **bird-headed d.**, **bird-headed d. of Seckel**, a dwarf with a proportionately small head, a narrow birdlike face with a beaklike protrusion of the nose, large eyes, antimongoloid slant of the palpebral fissures, and receding lower jaw; called also *nanocephalic d.* **Brissaud's d.**, one with infantile myxedema. **cretin d.**, a thyroid-deficient dwarf; see *cretinism*. Called also *hypothyroid d.* **diastrophic d.**, a dwarf with progressive structural deformities of the bones and joints, including scoliosis, bilateral clubfoot, deformity of the thumb, micromelia, joint contractures and subluxations, malformation of the pinna with calcification of the cartilage, premature calcification of the costal cartilages, and cleft palate. **geleophysic d.**, a dwarf with a peculiar but pleasant facial appearance and bone

dysplasia, especially of the hands and feet. **hypophyseal d.**, pituitary d. **hypothyroid d.**, cretin d. **infantile d.**, a person with marked retardation of mental and physical development. **Levi-Lorain d.**, pituitary d. **micromelic d.**, a dwarf with very small limbs. **nanocephalic d.**, bird-headed d. **normal d.**, a person who is abnormally undersized, but is perfectly formed. **Paltauf's d.**, pituitary d. **phocomelic d.**, a dwarf in whom the diaphyses of the long bones are abnormally short. **physiologic d.**, normal d. **pituitary d.**, a dwarf whose retarded development is due to hypofunction of the anterior pituitary; called also *hypophyseal d.*, *Levi-Lorain d.*, and *Paltauf's d.* **primordial d.**, **pure d.**, normal d. **rachitic d.**, a person dwarfed by rickets, having a high forehead with prominent bosses, bent long bones, and Harrison's sulcus or groove. **renal d.**, a dwarf whose failure to achieve normal bone maturation is due to renal failure. **Russell d.**, see under *syndrome*. **sexual d.**, a dwarf with normal sexual development. **Silver d.**, see under *syndrome*. **thanatophoric d.**, a micromelic dwarf having very short ribs and bones of the extremities, and vertebral bodies that are greatly reduced in height with wide intervertebral spaces; death usually occurs in the first few hours of life. **true d.**, normal d.

dwarism (dwarf'izm) the state of being a dwarf; underdevelopment of body. See various forms under *dwarf*. **deprivation d.**, lack of growth due to psychosocial upset, with resumption of growth when the source of stress is removed; it is believed to be due to cessation of secretion of the growth-hormone releasing factor. Called also *maternal deprivation syndrome*. **Robinow d.**, see under *syndrome*.

Dy chemical symbol for *dysprosium*.

dyad (di'ad) a double chromosome resulting from the halving of a tetrad.

dyaster (di'as-ter) amphister.

Dyclone (di'klōn) trademark for preparations of dyclonine hydrochloride.

dyclonine hydrochloride (di'klo-nēn) [USP] chemical name: 1-(4-butoxyphenyl)-3-(1-piperidinyl)-1-propanone. A local anesthetic having significant bactericidal and fungicidal activity, $\text{C}_{18}\text{H}_{27}\text{NO}_2 \cdot \text{HCl}$, occurring as a white, crystalline powder or as white crystals; applied topically to the skin and mucous membranes.

dydrogesterone (di'dro-jes'ter-ōn) [USP] chemical name: (9 β ,10 α)-pregna-4,6-diene-3,20-dione. An orally effective, synthetic progestin, $\text{C}_{21}\text{H}_{30}\text{O}_2$, occurring as a white to pale yellow, crystalline powder; used mainly in the diagnosis and treatment of primary amenorrhea and severe dysmenorrhea, and in combination with estrogen in dysfunctional menorrhagia.

dye (di) any of various colored substances that contain auxochromes and thus are capable of coloring substances to which they are applied; used for staining and coloring, as test reagents, and as therapeutic agents in medicine. **acid d.**, **acidic d.**, one which is acidic in reaction and usually unites with positively charged ions of the material acted upon; called also *anionic d.* **amphoteric d.**, one containing both reactive basic and reactive acidic groups, and staining both acidic and basic elements. **anionic d.**, acid d. **basic d.**, one which is basic in reaction and unites with negatively charged ions of material acted upon; called also *cationic d.* **cationic d.**, basic d. **metachromatic d.**, a dye that stains tissues two or more colors. **orthochromatic d.**, a dye that stains tissues a single color. **vital d.**, one that penetrates living cells and colors certain structures, without serious injury to the cells.

Dymelor (di'mē-lor) trademark for a preparation of acetohexamide.

dynamic (di-nam'ik) [Gr. *dynamis* power] pertaining to or manifesting force.

dynamics (di-nam'iks) that phase of mechanics which deals with the motions of material bodies taking place under different specific conditions.

dynamization (di'nam-i-za'shun) (*obs.*) the hypothetical increase of medicinal effectiveness by dilution and trituration.

dynamo- (di'nah-mo) [Gr. *dynamis* power] a combining form denoting relationship to power or strength.

dynamogenesis (di'nah-mo-jen'ē-sis) [*dynamo-* + Gr. *genesis* production] the development of energy or force, as in muscle or nerves.

dynamogenic (di'nah-mo-jen'ik) [*dynamo-* + Gr. *gennan* to produce] producing or favoring the development of power; pertaining to the development of power, as in muscle or nerves.

dynamogeny (di-nah-moj'ē-ne) dynamogenesis.

dynamograph (di-nam'o-graf) [*dynamo-* + Gr. *graphein* to write] a self-registering dynamometer.

dynamometer (di'nah-mom'ē-ter) [*dynamo-* + Gr. *metron* measure] an instrument for measuring the force of muscular contraction. **squeeze d.**, one by which the grip of the hand is measured.

dynamoneure (di-nam'o-nūr) [*dynamo-* + Gr. *neuron* nerve] a spinal neuron connected with the muscles; a spinal motoneuron.

dynamopathic (di-nam''o-path'ik) [*dynamo-* + Gr. *pathos* disease] affecting function; functional.

dynamophore (di-nam''o-för) [*dynamo-* + Gr. *phoros* carrying] food or any substance that supplies energy to the body.

dynamoscope (di-nam''o-skop) [*dynamo-* + Gr. *skopein* to examine] a device for performing dynamoscopy.

dynamoscopy (di''nah-mos''ko-pe) the observation of the performance of function by an organ or structure, as of muscle action or of kidney function by ureteral catheterization.

Dynapen (di''nah-pen) trademark for a preparation of dicloxacillin sodium.

dyne (din) the C.G.S. unit of force, being that amount of force which, when acting continuously upon a mass of 1 gram, will impart to it an acceleration of 1 cm. per second per second.

dynein (di''ne-in) a protein from the microtubules of cilia and flagella; which functions as an ATP-splitting enzyme, and is essential to the motility of cilia and flagella.

dyphylline (di-fil'in) chemical name: 7-(2,3-dihydroxypropyl)-3,7-dihydro-1,3-dimethyl-1*H*-purine-2,6-dione. A theophylline derivative, C₁₀H₁₄N₄O₄, occurring as a white, amorphous powder, having the peripheral vasodilator, bronchodilator, diuretic, and myocardial stimulant effects of the parent compound; used chiefly in the treatment of acute bronchial asthma and reversible bronchospasm associated with chronic bronchitis and emphysema; administered orally or intramuscularly. Called also *glyphylline* and *hyphylline*.

Dyrenium (di-ren''i-um) trademark for a preparation of triamterene.

dys- [Gr. *dys-*] a combining form signifying difficult, painful, bad, disordered, abnormal; the opposite of *eu-*.

dysacusia (dis''ah-koo''ze-ah) [*dys-* + Gr. *akousis* hearing + *-ia*] dysacusis.

dysacousis (dis''ah-koo''sis) dysacusis.

dysacousma (dis''ah-kōōs'mah) dysacusis.

dysacusis (dis''ah-koo''sis) [*dys-* + Gr. *akousis* hearing] 1. a hearing impairment in which there is distortion of frequency or intensity. 2. a condition in which certain sounds produce discomfort; called also *auditory dyesthesia*.

dysadaptation (dis''ad-ap-ta'shun) dysaptation.

dysadrenalism (dis''ad-re'nal-izm) any disorder of adrenal function, whether of decreased function (hypoadrenalism, hypoadrenocorticism) or heightened function (hyperadrenalism, hyperadrenocorticism).

dysadrenia (dis''ad-re'ne-ah) dysadrenalism.

dysallilognathia (dis-al''il-lo-na'the-ah) a condition characterized by disproportion of the maxilla and mandible.

dysagnosia (dis''an-ag-no''se-ah) ~ a form of dyslexia in which certain words cannot be recognized.

dysantigraphia (dis''an-te-gra'fe-ah) loss of power to copy writing; it is due to a lesion of the association path between the word-seeing center and the word-writing center.

dysaphia (dis-a''fe-ah) [*dys-* + Gr. *haphē* touch] impairment of the sense of touch.

dysaptation (dis''ap-ta'shun) defective power of accommodation of the iris and retina to light variations.

dysarteriotomy (dis''ar-te're-ot'o-ne) [*dys-* + Gr. *artēria* artery + *tonos* tension] abnormality of blood pressure.

dysarthria (dis-ar''thre-ah) [*dys-* + Gr. *arthron* to utter distinctly + *-ia*] imperfect articulation of speech due to disturbances of muscular control which result from damage to the central or peripheral nervous system. Cf. *anarthria*. **d. litera'lis**, stuttering. **d. syllaba'ris spasmod'ica**, stuttering.

dysarthric (dis-ar''thrik) characterized by or pertaining to dysarthria.

dysarthrosis (dis''ar-thro'sis) [*dys-* + Gr. *arthrōsis* joint] 1. deformity or malformation of a joint. 2. dysarthria.

dysautonomia (dis''aw-to-no'me-ah) [*dys-* + Gr. *autonomia* freedom to use its own laws] a hereditary condition characterized by defective lacrimation, skin blotching, emotional instability, motor incoordination, total absence of pain sensation, and hyporeflexia; seen almost exclusively in Jews, it is transmitted as an autosomal recessive trait. Called also *familial autonomic dysfunction* and *Riley-Day syndrome*.

dysbarism (dis-bar-izm) a general term applied to any clinical syndrome caused by difference between the surrounding atmospheric pressure and the total gas pressure in the various tissues, fluids, and cavities of the body, including such conditions as barotitis media, barosinusitis, or expansion of gases in the hollow viscera.

dysbasia (dis-ba'ze-ah) [*dys-* + Gr. *basis* step] difficulty in walking, especially that due to nervous lesion. **d. angiosclerot'ica**, **d. angiospas'tica**, **d. intermit'tens angiosclerot'ica** (obs.), intermittent claudication. **d. lordot'ica progressi'va**, dystonia musculorum deformans. **d. neurasthen'ica intermit'tens**, distorted walking of psychologic origin.

dysbetalipoproteinemia (dis-ba''tah-lip''o-prō''te-in-e'me-ah) the accumulation of abnormal β -lipoproteins in the blood. **familial d.**, familial hyperlipoproteinemia, type III.

dysbolism (dis''bo-lizm) [*dys-* + *metabolism*] a condition arising from an error in metabolism not necessarily of a disease nature, as in incomplete oxidation of tyrosine, giving a reddish color to the urine.

dysboulia (dis-bu''le-ah) dysbulia.

dysboulie (dis-bu''lik) dysbulic.

dysbulia (dis-bu''le-ah) [*dys-* + Gr. *boulē* will + *-ia*] abnormal weakness or disturbance of the will (volition).

dysbulic (dis-bu''lik) pertaining to or characterized by dysbulia.

dyscalculia (dis''kal-ku''le-ah) impairment of the ability to do mathematical problems because of brain injury or disease.

dyscephaly (dis-sef''ah-le) malformation of the cranium and bones of the face. **mandibulo-oculofacial d.**, oculomandibulofacial syndrome.

dyschesia (dis-ke''se-ah) dyschezia.

dyschezia (dis-ke''ze-ah) [*dys-* + Gr. *chezein* to go to stool + *-ia*] difficult or painful evacuation of feces from the rectum.

dyschiasia (dis-ki-a''se-ah) any disorder of sense localization.

dyschiria (dis-ki're-ah) [*dys-* + Gr. *cheir* hand + *-ia*] derangement of the power to tell which side of the body has been touched; see *achiria*, *allochiria*, and *synchiria*.

dyscholia (dis-ko''le-ah) [*dys-* + Gr. *cholē* bile + *-ia*] a disordered condition of the bile.

dyschondroplasia (dis''kon-dro-pla'ze-ah) [*dys-* + Gr. *chondros* cartilage + *plassein* to form + *-ia*] enchondromatosis.

dyschondrosteosis (dis''kon-dros'te-o'sis) a form of dyschondroplasia that may produce micromelia.

dyschromasia (dis''kro-ma'ze-ah) dyschromatopsia.

dyschromatopsia (dis''kro-mah-top'se-ah) [*dys-* + Gr. *chrōma* color + *opsis* vision + *-ia*] disorder of color vision.

dyschromia (dis-kro'me-ah) [*dys-* + Gr. *chrōma* color] any disorder of pigmentation of the skin or hair.

dyschronism (dis-kro'nizm) separate in time; disturbance of any time relation.

dyschylia (dis-ki''le-ah) disorder of the chyle.

dyscinesia (dis-si-ne'se-ah) dyskinesia.

dyscoimesis (dis''koi-me'sis) dyskoimesis.

dyscoria (dis-ko're-ah) [*dys-* + Gr. *korē* pupil] abnormality of the form or shape of the pupil or in the reaction of the two pupils.

dyscorticism (dis-kor'ti-sizm) disordered functioning of the adrenal cortex.

dyscrasia (dis-kra'ze-ah) [Gr. *dyskrasia* bad temperament] a term formerly used to indicate a depraved state of the humors, now used generally to indicate a morbid condition, especially one which involves an imbalance of component elements. **blood d.**, any abnormal or pathological condition of the blood. **lymphatic d.**, 1. lymphatism (2nd def.). 2. Hodgkin's disease.

dyscrasic (dis-kra'sik) dyscratic.

dyscratic (dis-krat'ik) [Gr. *dyskratos*] pertaining to or characterized by dyscrasia.

dyscrinism (dis-kri'nizm) [*dys-* + Gr. *krinein* to separate] (obs.) endocrine disorder; perversion of the secretion of any endocrine gland or the state resulting from such perversion.

dysdiadochocinesia (dis''di-ad''ō-ko'si-ne'se-ah) dysdiadochokinesia.

dysdiadochocinetism (dis''di-ad''ō-ko-si-net'ik) dysdiadochokinetic.

dysdiadochokinesia (dis''di-ad''ō-ko-si-ne'se-ah) derangement of the function of diadochokinesia.

dysdiadochokinetic (dis''di-ad''ō-ko-si-net'ik) pertaining to or characterized by dysdiadochokinesia.

dysdipsia (dis-dip'se-ah) [*dys-* + Gr. *dipsa* thirst] difficulty in drinking.

dyssecoia (dis''ē-koi'ah) dysacusis.

dysembryoma (dis-em''bre-o'mah) teratoma.

dysembryoplasia (dis-em''bre-o-pla'se-ah) [*dys-* + Gr. *embryon* embryo + *plasis* formation + *-ia*] malformation occurring during embryonic life.

dysemia (dis-e'me-ah) [*dys-* + Gr. *haima* blood + *-ia*] (obs.) disorder of the blood.

dysencephalia splanchnocystica (dis-en''sē-fa'le-ah splank''no-sis'ti-kah) Meckel's syndrome.

dysendocrinia (dis-en''do-krin'e-ah) (obs.) dysendocrinasia.

dysendocriniasis (dis-en''do-krī-ni'ah-sis) (obs.) dysendocrinasia.

dysendocrinism (dis''en-dok'rī-nizm) (obs.) dysendocrinasia.

dysendocrinasia (dis-en''do-krin-i'ah-sis) [*dys-* + Gr. *endon* within + *krinein* to separate] (obs.) disorder of hormonal secretions.

dysenteric (dis''en-ter'ik) pertaining to or of the nature of dysentery.

dysenteriform (dis'en-ter'i-form) resembling dysentery.

dysentery (dis'en-ter'i) [L. *dysenteria*, from Gr. *dys-* + *enteron* intestine] a term given to a number of disorders marked by inflammation of the intestines, especially of the colon, and attended by pain in the abdomen, tenesmus, and frequent stools containing blood and mucus. The causative agent may be chemical irritants, bacteria, protozoa, or parasitic worms. There are two specific varieties, the *amebic* and the *bacillary*. **amebic d.**, dysentery due to ulceration of the bowel caused by invasion of the mucosa by *Entamoeba histolytica*; called also *intestinal amebiasis* and *amebic colitis*. **asylum d.**, dysentery occurring in a closed community. **bacillary d.**, an infectious disease caused by bacteria of the genus *Shigella*, and marked by intestinal pain, tenesmus, diarrhea with mucus and blood in the stools, and more or less toxemia; it is especially prevalent in tropical countries, but it frequently occurs elsewhere. Called also *Flexner's d.* and *Japanese d.* **balantidial d.**, dysentery caused by *Balantidium coli*. **bilharzial d.**, dysentery caused by the parasitic worm *Schistosoma haematobium* (*Bilharzia haematobia*). **catarrhal d.**, sprue, def. 1. **chronic d. of cattle**, Johne's disease. **ciliary d.**, ciliate d., dysentery due to ciliate organisms, such as *Balantidium coli*. **epidemic d.**, a variety that becomes epidemic and is often fatal. **flagellate d.**, dysentery due to a flagellate organism, such as *Giardia lamblia* or *Trichomonas*. **Flexner's d.**, bacillary d. **fulminant d.**, bacillary dysentery marked by collapse and toxemia and followed by death. **giardiasis d.**, giardiasis. **institutional d.**, bacillary dysentery affecting patients in an institution, especially in mental hospitals. **Japanese d.**, bacillary d. **lamb d.**, a highly fatal form of enterotoxemia affecting young lambs, caused by *Clostridium perfringens* type B, and marked by ulcerative inflammation of the intestine and fetid diarrhea, sometimes tinged with blood; it is also frequently seen in young foals and calves. **malarial d.**, that which is complicated with intermittent febrile attacks. **malignant d.**, a form in which the symptoms are all very intense and progress rapidly to a fatal ending. **protozoal d.**, amebic and balantidial dysentery. **schistosomal d.**, dysentery accompanying intestinal schistosomiasis. **scorbatic d.**, that which is an accompaniment of scurvy. **Sonne d.**, bacillary dysentery occurring in temperate regions, caused by group D dysentery bacillus, *Shigella sonnei*. **spirillar d.**, dysentery caused by spirilla in the intestines. **sporadic d.**, dysentery occurring in scattered cases that have apparently no connection. **swine d.**, a contagious form of enteritis due to *Vibrio coli*, marked by grayish feces. **viral d.**, a virus-caused dysentery occurring in epidemics and marked by acute watery diarrhea. **winter d.**, see under *scours*.

dysequilibrium (dis'e-kwi-lib're-um) any derangement of proper balance.

dyserethesia (dis'er-e-the'ze-ah) [dys- + Gr. *erethizein* to irritate] impairment of sensibility to stimuli.

dyserethism (dis'er'e-thizm) dyserethesia.

dysergasia (dis'er-ga'ze-ah) [dys- + Gr. *ergon* work] Meyer's term for a behavior disorder due to defective brain support and including disorientative and hallucinatory states and delirious reactions.

dysergastic (dis'er-gas'tik) Meyer's term for psychic disorders due to inadequate support or metabolism of the brain (disorientation, hallucination, fears, dreamy states, etc.).

dysergia (dis'er'je-ah) [dys- + Gr. *ergon* work] motor incoordination due to defect of efferent nerve impulse.

dysesthesia (dis'es-the'ze-ah) [dys- + Gr. *aisthēsis* perception] 1. impairment of any sense, especially of that of touch. 2. an unpleasant abnormal sensation produced by normal stimuli. **auditory d.**, dysacusis (def. 2).

dysesthetic (dis'es-thet'ik) pertaining to or characterized by dysesthesia.

dysfunction (dis-funk'shun) disturbance, impairment, or abnormality of the functioning of an organ. **constitutional hepatic d.**, Gilbert's disease. **constitutional d. of liver**, Gilbert's disease. **minimal brain d.**, a diagnostic term for children and adolescents who have some central nervous system deficits which affect their behavior and ability to learn; they exhibit hyperkinesis, distractibility, emotional lability, poor coordination, but have normal or above normal intelligence and no signs of major neurologic or psychiatric disturbance. **d. of uterus**, inertia uteri.

dysgalactia (dis'gah-lak'te-ah) [dys- + Gr. *gala* milk] disordered milk secretion.

dysgammaglobulinemia (dis-gam'mah-glob'u-li-ne'me-ah) an immunological deficiency state characterized by selective deficiencies of one or more, but not all, classes of immunoglobulins, resulting in heightened susceptibility to infectious diseases vulnerable to immunoglobulin-associated defense mechanisms. It may result from failure of synthesis or functional abnormality of immunoglobulins. The dysgammaglobulinemias have been classified into seven types. Cf. *agammaglobulinemia*.

dysgenesis (dis'jē-ne'ze-ah) [dys- + Gr. *gennan* to generate + -ia] impairment of the powers of procreation.

dysgenesis (dis-jen'ē-sis) defective development. **epiphys-eal d.**, a condition in which epiphyseal centers may be irregularly formed or appear to be fragmented or stippled. **gonadal d.**, a general term for a variety of gonadal developmental anomalies, including gonadal aplasia, Turner's syndrome, hermaphroditism, and pseudohermaphroditism. **mixed gonadal d.**, a condition in which there is a testis on one side and a streak gonad on the other; those affected typically show some degree of virilization and ambiguous genitalia, and a uterus, vagina, and at least one fallopian tube are usually present. The most common karyotype is a mosaic, 45,XO/46,XY. **seminiferous tubule d.**, Klinefelter's syndrome.

dysgenic (dis-jen'ik) detrimental to the race or tending to counteract race improvement.

dysgenics (dis-jen'iks) [dys- + Gr. *gennan* to produce] the study of racial deterioration. Cf. *eugenics*.

dysgenitalism (dis-jen'i-tal-izm) an abnormality of genital development, as eunuchism.

dysgenopathy (dis'jen-op'ah-the) [dys- + Gr. *gennan* to produce + *pathos* disease] a disorder of bodily development.

dysgerminoma (dis'jer-mi-no'mah) [dys- + *germ* + -oma] a malignant ovarian neoplasm, thought to be derived from primordial germ cells of the sexually undifferentiated embryonic gonad; it is the counterpart of the classical seminoma (q.v.) of the testis, to which it is both grossly and histologically identical. Called also *ovarian seminoma*.

dysgeusia (dis-gu'ze-ah) [dys- + Gr. *geusis* taste] perversion of the sense of taste.

dysglandular (dis-glan'du-lar) due to or marked by disordered functioning of glands, particularly the endocrine glands.

dysglobulinemia (dis-glob'u-lin-e'me-ah) [dys- + *globulin* + Gr. *haima* blood + -ia] any disorder of the blood globulins.

dysglycemia (dis'gli-se'me-ah) [dys- + Gr. *glykys* sweet + *haima* blood + -ia] any derangement of the sugar content of the blood.

dysgnathia (dis-na'the-ah) any oral abnormality extending beyond the teeth to involve the maxilla or mandible, or both, as opposed to eugnathia.

dysgnathic (dis-nath'ik) [dys- + Gr. *gnathos* jaw] pertaining to or characterized by abnormality of the maxilla and mandible.

dysgnosia (dis-no'se-ah) [Gr. *dysgnōsia* difficulty of knowing] any disorder of intellectual function.

dysgonesis (dis'go-ne'sis) [dys- + Gr. *gonē* seed] a functional disorder of the genital organs.

dysgonic (dis-gon'ik) seeding badly; said of bacterial cultures that grow poorly on culture media.

dysgrammatism (dis-gram'ah-tizm) partial impairment of the ability to speak grammatically because of brain injury or disease.

dysgraphia (dis-gra'fe-ah) [dys- + Gr. *graphein* to write] inability to write properly; it may be part of a language disorder caused by a disturbance of the parietal lobe or of the motor system. Called also *status dysgraphicus*.

dyshematopoiesis (dis-hem'ah-to'poi-e'sis) defective blood formation.

dyshematopoietic (dis-hem'ah-to'poi-et'ik) pertaining to or characterized by dyshematopoiesis.

dyshemopoiesis (dis-he'mo'poi-e'sis) dyshematopoiesis.

dyshemopoietic (dis-he'mo'poi-et'ik) dyshematopoietic.

dyshepatia (dis-hē-pa'she-ah) [dys- + Gr. *hēpar* liver] disordered liver function. **lipogenic d.**, a liver disorder of children due to excessive fats in the diet.

dyshesion (dis-he'shun) [dys- + L. *haesio*, from *haerere* to stick] 1. disordered cell adherence. 2. loss of intercellular cohesion, a characteristic of malignancy, as determined by aspiration biopsy cytology.

dyshidrosis (dis-hid-ro'sis) [dys- + Gr. *hidrōsis* a sweating] 1. pompholyx. 2. any disorder of the eccrine sweat glands.

dys hormonal (dis-hōr'mo-nal) due to hormone or endocrine disturbance.

dys hormonalic (dis-hōr-mon'ik) dys hormonal.

dys hormonalism (dis-hōr'mōn-izm) disturbance of the hormone secretions.

dys hidrosis (dis-hid-ro'sis) dys hidrosis.

dys hypophysia (dis'hi-po-fiz'e-ah) (obs.) dys pituitarism.

dys hypophysism (dis'hi-pof'i-sizm) (obs.) dys pituitarism.

dys idrosis (dis-id-ro'sis) dys hidrosis.

dys immunity (dis-i-mu'n'i-te) disordered or misdirected immunity.

dys insulinism (dis-in'su-lin-izm) (obs.) a condition caused by disordered secretion of insulin.

dys insulinosis (dis-in'su-li-no'sis) (obs.) dys insulinism.

dys junction (dis-junk'shun) see *disjunction*.

dys karyosis (dis-kar'e-o'sis) abnormal changes in cell nuclei, such as those observed in epithelial cells of the cervix during pregnancy.

dyskaryotic (dis/'kar-e-ot/'ik) [*dys-* + Gr. *karyon* nucleus] pertaining to, characterized by, or promoting dyskaryosis.

dyskeratoma (dis/'ker-ah-to/'mah) a dyskeratotic tumor.

warty d., a solitary brownish red nodule with a soft, yellowish, central keratotic plug, most commonly occurring on the face, neck, scalp, or axilla, or in the mouth; histologically it resembles an individual lesion of keratosis follicularis.

dyskeratosis (dis/'ker-ah-to/'sis) abnormal, premature, or imperfect keratinization of the keratinocytes. **d. congen/ita**, a rare congenital syndrome, probably transmitted as a sex-linked recessive trait, consisting of atrophy and pigmentation of the skin, nail dystrophy, and leukoplakia; carcinoma may supervene and blood dyscrasias are common. **hereditary benign intra-epithelial d.**, a congenital hereditary disease, transmitted as an autosomal dominant trait, characterized by foamy gelatinous plaques on the conjunctiva and white thickenings resembling leukoplakia on the oral mucosa; photophobia is common in children, and blindness may occur. Called also *Witkop's* or *Witkop-Von Sallmann disease*.

dyskeratotic (dis/'ker-ah-to/'ik) of, relating to, or affected by dyskeratosis.

dyskinesia (dis/'ki-ne/'ze-ah) [Gr. *dyskinēsia* difficulty of moving] impairment of the power of voluntary movement, resulting in fragmentary or incomplete movements. **d. al/gera**, a condition in which movement is painful; seen in hysteria. **biliary d.**, derangement of the filling and emptying mechanism of the gallbladder. **d. intermit/tens**, disability of the limbs, coming on intermittently, and due to impairment of the circulation. **occupational d.**, occupation neurosis. **orofacial d.**, tardive dyskinesia affecting primarily the mouth and face. **d. tar/da**, **tardive d.**, a form marked typically by involuntary repetitive movements of the facial, buccal, oral, and cervical musculature, affecting chiefly the elderly; it is induced by long-term administration of neuroleptic (antipsychotic) agents and may persist after withdrawal of the agent.

dyskinetic (dis/'ki-net/'ik) pertaining to or characterized by dyskinesia.

dyskoimesis (dis/'koi-me/'sis) [*dys-* + Gr. *koimēsis* sleeping] difficulty in getting to sleep.

dyslalia (dis-la/'le-ah) [*dys-* + Gr. *lalein* to talk + *-ia*] impairment of utterance with abnormality of the external speech organs.

dyslexia (dis-lek/'se-ah) [*dys-* + Gr. *lexis* diction] an inability to read understandingly, due to a central lesion.

dyslipidoses (dis/'lip-i-do/'sēz) plural of *dyslipidosis*.

dyslipidosis (dis/'lip-i-do/'sis), pl. *dyslipido'ses*. A general designation applied to a localized or systemic disturbance of fat metabolism.

dyslipoidosis (dis-lip/'oi-do/'sis), pl. *dyslipoido'ses*. Dyslipidosis.

dyslipoproteinemia (dis-lip/'o-pro/'te-in-e/'me-ah) the presence of abnormal lipoproteins in the blood.

dyslochial (dis-lo/'ke-ah) [*dys-* + Gr. *lochial* lochia] disordered lochial discharge.

dyslogia (dis-lo/'je-ah) [*dys-* + Gr. *logos* understanding] impairment of the reasoning power; also impairment of the speech, due to mental disorders.

dysmaturity (dis-mah-tūr/'i-te) placental dysfunction. **pulmonary d.**, Wilson-Mikity syndrome.

dysmegalopsia (dis/'meg-ah-lop/'se-ah) [*dys-* + Gr. *megas* big + *opsis* vision] a disturbance of the visual appreciation of the size of objects, in which they appear larger than they are.

dysmelia (dis-me/'le-ah) [*dys-* + Gr. *melos* limb + *-ia*] malformation of a limb or limbs as a result of a disturbance in embryonic development; the term includes defects of excessive development as well as reduction deformities. See also *amelia* and *phocomelia*.

dysmenorrhea (dis/'men-o-re/'ah) [*dys-* + Gr. *mēn* month + *rhein* to flow] painful menstruation. **acquired d.**, secondary d. **congestive d.**, that which is accompanied by great congestion of the uterus. **essential d.**, painful menstruation for which there is no demonstrable cause; called also *primary d.* **inflammatory d.**, that which comes from or is due to inflammation. **d. intermenstrua/lis**, intermenstrual pain. **mechanical d.**, that which is believed to be due to mechanical interference with the flow, as from clots or flexion of the uterus. **membranous d.**, that which is characterized by membranous exfoliations derived from the uterus. **obstructive d.**, that which is due to mechanical obstruction to the discharge of the menstrual fluid. **ovarian d.**, neuralgic pain which is due to ovarian disease. **primary d.**, essential d. **psychogenic d.**, dysmenorrhea due to disturbance of psychic control. **secondary d.**, dysmenorrhea due to a definite pelvic lesion. **spasmodic d.**, that which is due to spasmodic uterine contractions. **tubal d.**, that which is due to disease of the oviduct, such as chronic salpingitis. **uterine d.**, that which arises from a uterine lesion.

dysmetabolism (dis/'mē-tab/'o-lizm) defective metabolism.

dysmetria (dis-me/'tre-ah) [*dys-* + Gr. *metron* measure] a condition in which there is improper measuring of distance in muscular acts; disturbance of the power to control the range of movement in muscular action. In *hypermetria*, voluntary muscular move-

ment overreaches the intended goal, and in *hypometria*, voluntary muscular movement falls short of reaching the intended goal.

dysmetropsia (dis/'mē-trop/'se-ah) [*dys-* + Gr. *metron* measure + *opsis* vision] defect in the visual appreciation of the measure or size of objects.

dysmimia (dis-mim/'e-ah) [*dys-* + Gr. *mimia* imitation] impairment of the power of expressing thought by gestures.

dysmnnesia (dis-ne/'se-ah) [*dys-* + Gr. *mnēmē* memory] impaired memory.

dysmnestic (dis-ne/'zik) characterized by impairment or disorder of memory.

dysmorphic (dis-mor/'fik) characterized by dysmorphism.

dysmorphism (dis-mor/'fizm) [*dys-* + Gr. *morphē* form] 1. allomorphism. 2. the condition of appearing under different morphologic forms; for example, some fungi grow differently under parasitic and under saprophytic conditions. 3. an abnormality in morphological development, as a congenital malformation.

dysmorphophobia (dis-mor/'fo-'fo-'be-ah) [Gr. *dysmorphos* deformed + *phobia*] morbid fear of deformity or of becoming deformed.

dysmorphopsia (dis/'mor-fop/'se-ah) [Gr. *dysmorphos* deformed + *opsis* vision + *-ia*] defective vision, with distortion of the shape of objects perceived.

dysmorphosis (dis/'mor-'fo-'sis) [Gr. *dysmorphos* deformed] malformation.

dysmyotonia (dis/'mi-o-to/'ne-ah) [*dys-* + Gr. *mys* muscle + *tonos* tension] muscular dystonia; abnormal tonicity of muscle.

dysnomia (dis-no/'me-ah) [*dys-* + Gr. *onoma* name] partial nominal aphasia; cf. *anomia*.

dysodontiasis (dis/'o-don-ti/'ah-sis) [*dys-* + Gr. *odous* tooth + *-iasis*] defective, delayed, or difficult eruption of the teeth.

dysoemia (dis-e/'me-ah) [*dys-* + Gr. *oimos* road, path] a medicolegal term for death from obscure causes, traceable to chronic mineral poisoning.

dysontogenesis (dis/'on-to-jen/'ē-sis) [*dys-* + *ontogenesis*] defective embryonic development.

dysontogenetic (dis/'on-to-jē-net/'ik) pertaining to or characterized by dysontogenesis.

dysopia (dis-o/'pe-ah) [*dys-* + Gr. *ōpē* sight + *-ia*] defective vision. **d. al/gera**, disturbances of vision due to pains in the eyes and head on looking at objects.

dysopsia (dis-op/'se-ah) dysopia.

dysorexia (dis/'o-rek-'se-ah) [*dys-* + Gr. *orexis* appetite] impaired or deranged appetite.

dysorganoplasia (dis-or/'gan-o-pla/'se-ah) [*dys-* + Gr. *organon* organ + *plasis* formation] disordered development of an organ.

dysoria (dis-or/'e-ah) [*dys-* + Gr. *oros* serum] any abnormality of vascular permeability.

dysoric (dis-or/'ik) pertaining to or affected with dysoria.

dysosmia (dis-oz/'me-ah) [*dys-* + Gr. *osmē* smell] defect or impairment of the sense of smell.

dysosteogenesis (dis-os/'te-o-jen/'ē-sis) defective bone formation; dysostosis.

dysostosis (dis/'os-to/'sis) [*dys-* + Gr. *osteon* bone] defective ossification; defect in the normal ossification of fetal cartilages. **cleidocranial d.**, a rare hereditary condition in which there is defective ossification of the cranial bones, with large fontanels and delayed closing of the sutures; complete or partial absence of the clavicles, so that the shoulders may be brought together, or nearly together, in front; and dental and vertebral anomalies. It is transmitted as an autosomal dominant trait. Called also *cleidocranial dysplasia*. **d. cleidocranial/lis congen/ita**, *cleidocranial d.* **craniofacial d.**, a hereditary disorder characterized by acrocephaly, exophthalmos, hypertelorism, strabismus, parrot-beaked nose, and hypoplastic maxilla with relative mandibular prognathism. It is transmitted as an autosomal dominant trait. Called also *Crouzon's disease*. **d. enchondra/lis epiphyseal d.**, dysplasia epiphysealis multiplex. **mandibulofacial d.**, a hereditary disorder occurring in two forms: the complete form (Franceschetti's syndrome) is characterized by antimongoloid slant of the palpebral fissures, coloboma of the lower lid, micrognathia and hypoplasia of the zygomatic arches, and microtia. It is transmitted as an autosomal dominant trait. The incomplete form (Treacher Collins syndrome) is characterized by the same anomalies in less pronounced degree. It occurs sporadically, but an autosomal dominant mode of transmission is suspected. **mandibulofacial d. with epibulbar dermoids**, *oculoauriculovertebral dysplasia*. **metaphyseal d.**, a skeletal abnormality in which the epiphyses are normal, or nearly so, and the metaphyseal tissues are replaced by masses of cartilage, producing interference with enchondral bone formation, and expansion and thinning of the metaphyseal cortices. Called also *Jansen's disease* and *metaphyseal chondrodysplasia*. **d. mul/tiplex**, Hurler's syndrome. **Nager's acrofacial d.**, a congenital condition in which mandibulofacial dysostosis is associated with limb deformities consisting of absence of the radius, radioulnar synostosis, and hypoplasia or absence of the thumbs. **orodigitofacial d.**, orofaciogigital syndrome.

Cleidocranial dysostosis.

dysoxidative (dis-ok'sī-da'tiv) due to deficient oxidation.

dysoxidizable (dis-ok'sī-diz'ah-b'l) [*dys-* + *oxidizable*] not easily oxidizable.

dyspancreatism (dis-pan'kre-ah-tizm") disorder of the function of the pancreas.

dysparathyroidism (dis'par-ah-thi'roid-izm) (*obs.*) disorder of parathyroid function.

dyspareunia (dis'pah-roo'ne-ah) [*Gr. dyspareunos* badly mated] difficult or painful coitus.

dyspepsia (dis-pep'se-ah) [*dys-* + *Gr. peptin* to digest] impairment of the power or function of digestion; usually applied to epigastric discomfort following meals. **acid d.**, a variety associated with excessive acidity of the stomach. **appendicular d.**, dyspeptic symptoms occurring in chronic appendicitis. **atonic d.** (*obs.*), a form ascribed to a lack of tone in the digestive organs; a nonspecific symptom of gastrointestinal dysfunction. **catarrhal d.**, a variety accompanied by gastric inflammation. **chichiko d.**, a condition of farinaceous malnutrition found in badly nourished infants who are fed mostly on solutions of polished rice powder. **cholelithic d.**, the sudden dyspeptic attacks characteristic of gallbladder disturbance. **colon d.**, functional disturbance of the large intestine, giving rise to the symptoms of dyspepsia. **fermentative d.**, that characterized by the fermentation of ingested food. **flatulent d.**, that which is associated with the formation of gas in the stomach, especially upper abdominal discomfort accompanied by frequent belching. **functional d.**, that which is either atonic or of reflex or nervous origin. **gastric d.**, that which originates within the stomach. **intestinal d.**, that which arises in the intestines. **nervous d.**, dyspepsia which is functional in origin. **ovarian d.**, a form of reflex indigestion due to ovarian disease. **reflex d.**, that which is due to reflex influence from some disease of an organ not directly concerned in digestion. **salivary d.** (*obs.*), dyspepsia due to defective or deficient saliva.

dyspeptic (dis-pep'tik) pertaining to or affected with dyspepsia.

dysperistalsis (dis'per-ī-stal'sis) [*dys-* + *peristalsis*] painful or abnormal peristalsis.

dysphagia (dis-fa'je-ah) [*dys-* + *Gr. phagein* to eat] difficulty in swallowing. **contractile ring d.**, dysphagia due to an overactive interior esophageal sphincteric mechanism which gives rise to painful sticking sensations under the lower sternum. **d. inflammato'ria**, dysphagia due to inflammation of the pharynx or esophagus. **d. luso'ria**, dysphagia resulting from compression of the esophagus caused by an anomalous right subclavian artery that arises from the descending aorta and passes behind the esophagus. **d. nervo'sa**, esophagospasm. **d. paralyt'ica**, dysphagia due to paralysis of the pharyngeal or esophageal muscles. **sideropenic d.**, Plummer-Vinson syndrome. **d. spas'tica**, esophagospasm. **tropical d.**, entalacão. **vallecular d.**, dysphagia caused by the lodgment of food in the valleculae. **d. valsalvia'na**, dysphagia due to subluxation of the major cornu of the hyoid bone.

dysphagy (dis'fah-je) dysphagia.

dysphasia (dis-fa'ze-ah) [*dys-* + *Gr. phasis* speech] impairment of speech, consisting in lack of coordination and failure to arrange words in their proper order, due to a central lesion.

dysphemia (dis-fe'me-ah) stuttering or other speech disorder due to psychoneurosis.

dysphonia (dis-fo'ne-ah) [*dys-* + *Gr. phōnē* voice] any impairment of voice; a difficulty in speaking. **d. clerico'rum**, any impairment of voice; a difficulty in speaking, such as that which

may be experienced by those who speak at length, e.g., clergymen. **dysplatic d.**, chronic hoarseness due to malformation of the larynx. **d. pli'cae ventricula'ris**, a condition in which phonation is performed with the false vocal cords (ventricular bands). **d. pu'berum**, the harsh, irregular utterance of puberty, and of the change of voice in youth. **spastic d.**, **d. spas'tica**, difficulty in speaking due to excessively vigorous adduction of the vocal cords against each other, so that the voice is hoarse, soft, and strained.

dysphonic (dis-fon'ik) pertaining to or characterized by dysphonia.

dysphoretic (dis'fo-ret'ik) 1. dysphoric. 2. dysphoriant.

dysphoria (dis-fo're-ah) [*Gr. "excessive pain, anguish, agitation"*] disquiet; restlessness; malaise.

dysphoriant (dis-fo're-ant) 1. producing a condition of dysphoria. 2. an agent that produces dysphoria.

dysphoric (dis-for'ik) pertaining to or characterized by dysphoria.

dysphrasia (dis-fra'ze-ah) [*dys-* + *Gr. phrasis* speech + *-ia*] imperfection of utterance due to a central or cerebral defect.

dysphrenia (dis-fre'ne-ah) [*dys-* + *Gr. phrēn* mind + *-ia*] any secondary (functional) psychosis as distinguished from an idiopathic (organic) brain disease (Kahlbaum).

dysphylaxia (dis'fi-lak'se-ah) [*dys-* + *Gr. phylaxis* watching] a condition marked by too early waking.

dyspigmentation (dis'pig-men-ta'shun) a disorder of pigmentation of the skin or hair.

dyspinealism (dis-pin'e-al-izm) (*obs.*) disordered function of the pineal gland.

dyspituitarism (dis'pī-tu'i-tar-izm") a condition due to disordered activity of the pituitary body. See *hyperpituitarism* and *hypopituitarism*.

dysplasia (dis-pla'se-ah) [*dys-* + *Gr. plassein* to form] abnormality of development; in pathology, alteration in size, shape, and organization of adult cells. **anhidrotic ectodermal d.**, congenital ectodermal defect. **anteroposterior facial d.**, defective development resulting in abnormal anteroposterior relationship of the maxilla and mandible to each other or to the cranial base. **basal d.**, malocclusion involving abnormal relationships of components of the maxilla and mandible, with the teeth reflecting that relationship. **bronchopulmonary d.**, a chronic lung disease of infants, possibly related to oxygen toxicity or barotrauma, characterized by bronchiolar metaplasia and interstitial fibrosis. **d. of cervix**, cellular deviations from the normal in the epithelium of the uterine cervix, which may begin as basal cell hyperplasia and progress to anaplasia; its relationship to cervical carcinoma has not been established. **chondroectodermal d.**, achondroplasia occurring in association with defective development of skin, hair, and teeth, polydactyly, and defect of the cardiac septum. **cleidocranial d.**, see under *dysostosis*. **congenital alveolar d.**, respiratory distress syndrome of newborn; see under *syndrome*. **craniocarpotarsal d.**, see under *dystrophy*. **craniodiaphyseal d.**, a hereditary condition transmitted as an autosomal recessive trait, in which progressive cranial and facial hyperostosis results in striking distortion. **craniometaphyseal d.**, metaphyseal dysplasia associated with overgrowth of the head bones, leontiasis ossea, and hypertelorism. **cretinoid d.**, abnormality of development characteristic of cretinism, consisting of retarded ossification and smallness of the internal and sex organs. **dental d.**, abnormality of development producing abnormal relationship of a varying number of teeth with their opposing members. **dentin d.**, **dentinal d.**, a condition affecting both primary and secondary dentition, in which the teeth have short distorted roots, many with periapical rarefactions, no pulp chambers or small demilune-shaped chambers, and normal dentin in the upper crown with atypical osteodentin and tubular dentin in the lower crown; the affected teeth are normal in color or slightly brown to blue-brown and are commonly malaligned in the arch. Called also *rootless teeth*. **diaphyseal d.**, a condition characterized by thickening of the cortex of the mid-shaft area of the long bones, progressing toward the epiphyses, the thickening sometimes occurring also in the flat bones; excessive growth in length of bones of the extremities usually results in abnormal stature. Called also *diaphyseal sclerosis* and *Engelmann's disease*. **ectodermal d.**, congenital ectodermal defect. **encephalo-ophthalmic d.**, a developmental structural defect of the eye related to faulty development of the brain. **epiphyseal d.**, faulty growth and ossification of the epiphyses, with roentgenographically apparent stippling and decreased stature, not associated with thyroid disease. Called also *stippled epiphyses*. See *d. epiphysealis hemimelica*, *d. epiphysealis multiplex*, and *d. epiphysealis punctata*. **d. epiphyseal'is hemimel'ica**, a rare condition characterized by swellings in the extremities, usually on the inner and outer aspects of the ankles and knees, made up of bone covered with epiphyseal cartilage, and leading to limitation of motion of the joints. Called also *tarsoepiphyseal aclasis* and *Trevor's disease*. **d. epiphyseal'is mul'tiplex**, a developmental abnormality of various epiphyses, which appear late and are mottled, flattened, fragmented, and usually hypoplastic; the digits are short and

thick, with blunt ends, and stature may be diminished owing to flattening deformities at the hips, knees, and ankles. Called also *dystosis enchondralis epiphysaria*. **d. epiphysea/lis puncta/ta**, a rare hereditary condition marked by radiographic appearance of multiple punctate opacities (stippling) in the epiphyses, usually present at birth, and by dwarfism, flexion contractures, cataract, dulled intellect, short blunt fingers, and general weakness. Frequently infants are stillborn or die of associated anomalies in the first year. Called also *Conradi's disease*, *chondrodystrophia calcificans congenita*, *chondrodystrophia congenita punctata*, *chondrodystrophia fetalis calcificans*, and *stippled epiphyses*. **faciogenital d.**, Aarskog's syndrome. **fibrous d. (of bone)**, a disease of bone marked by thinning of the cortex and replacement of bone marrow by gritty fibrous tissue containing bony spicules, producing pain, disability, and gradually increasing deformity. Only one bone may be involved (*monostotic fibrous d.*), with the process later affecting several or many bones (*polyostotic fibrous d.*). When associated with melanotic pigmentation of the skin and endocrine disorders, it is known as *Albright's syndrome*. **fibrous d. of jaw**, cherubism. **hereditary bone d.**, a condition characterized by kyphoscoliosis, generalized osteopenia without fractures, slender long bones, arachnodactyly, congenital contractures, underdeveloped musculature, and abnormally formed ears; it appears to be inherited as an autosomal dominant. **hidrotic ectodermal d.**, a hereditary condition, transmitted as an autosomal dominant trait, marked by generalized hypotrichosis, dystrophy of the nails, and hyperpigmentation; hyperkeratosis of the palms and soles and mental deficiency may also occur. Called also *Clouston's syndrome*. Cf. *congenital ectodermal defect*. **d. linguofacia/lis**, orodigitofacial dysostosis. **metaphyseal d.**, a disturbance in enchondral bone growth, failure of modeling causing the ends of the shafts to remain larger than normal in circumference; called also *Pyle's disease*. See also *cranio-metaphyseal d.* **multiple epiphyseal d.**, d. epiphysealis-multiplex. **oculoauricular d.**, oculoauriculovertebral d. **oculoauriculovertebral (OAV) d.**, a congenital condition in which colobomas of the upper eyelid, epibulbar dermoids, bilateral accessory auricular appendages anterior to the ears, and vertebral anomalies are frequently associated with characteristic facies, consisting of asymmetry of the skull, prominent frontal bossing, low hairline, mandibular hypoplasia, low set ears, and, sometimes, hemifacial microstomia. Called also *Goldenhar's syndrome*, *oculoauricular d.*, *mandibulofacial dysostosis with epibulbar dermoids*, and *OAV syndrome*. **oculodentodigital (ODD) d.**, a rare hereditary condition transmitted as an autosomal dominant trait, characterized by bilateral microphthalmos, abnormally small nose with anteverted nostrils, hypotrichosis, dental anomalies, camptodactyly, syndactyly, and missing phalanges of the toes. Called also *dysplasia oculodentodigitalis syndrome*, *Meyer-Schwickerath* and *Weyers syndrome*, *oculodento-osseous syndrome*, and *ODD syndrome*. **oculovertebral d.**, a congenital syndrome consisting of microphthalmia, anophthalmia, cryptophthalmia, or coloboma with small orbit; unilateral maxillary dysplasia and dysplastic soft tissue causing facial scoliosis and dental malocclusion, macrostomia, and alveolar malformations; and vertebral malformations and costal anomalies. Called also *Weyers-Thier syndrome*. **ophthalmomandibulomelic d.**, a hereditary syndrome transmitted as an autosomal dominant trait, consisting of blindness caused by corneal opacities, temporo-mandibular fusion, absent coronoid process, obtuse mandibular angle, radiohumeral and radioulnar dislocations, and aplasia of the lateral condyle of the humerus, radial head, and distal ulna. **progressive diaphyseal d.**, diaphyseal d. **skeletodental d.**, abnormality of development producing not only abnormal relationship of varying numbers of opposing teeth, but also abnormal relationship of the maxilla and mandible to each other or to the base of the skull. **spondyloepiphyseal d.**, a hereditary dysplasia of the vertebrae and extremities resulting in dwarfism of the short-trunk type, often with shortened limbs due to epiphyseal abnormalities. In the delayed onset form, the principal feature is precocious osteoarthritis. There are several forms, including autosomal dominant, autosomal recessive, and X-linked forms, the dominant form often being associated with such ocular anomalies as myopia and detached retina. **thymic d.**, any of a group of hereditary disorders, some transmitted as an autosomal recessive trait and others as an X-linked recessive trait, characterized by faulty development of the thymus, which may be associated with (a) normal serum immunoglobulin levels and impaired cell-mediated immunity (Nezelof's syndrome), (b) Swiss type agammaglobulinemia and impairment of both cell-mediated and humoral immunity, or (c) variable deficiencies of immunoglobulins, the severity being dependent on the degree of the deficiency. **ureteral neuromuscular d.**, megaloureter.

dysplastic (dis-plas'tik) 1. marked by dysplasia. 2. having a body form which does not belong to one of the three main classes, athletic, asthenic, or pyknic.

dyspnea (disp'ne-ah) [Gr. *dyspnoia* difficulty of breathing] difficult or labored breathing. **cardiac d.**, distressful breathing caused by heart disease. **exertional d.**, dyspnea provoked by physical effort or exertion. **expiratory d.**, difficulty in breathing caused by hindrance to the free egress of air from the lungs. **functional d.**, respiratory distress not caused by or-

ganic disease and unrelated to exertion but associated with anxiety states; see also *sighing d.* **inspiratory d.**, difficulty in breathing caused by hindrance to the free ingress of air into the lungs. **nocturnal d.**, respiratory distress that is minimal in the morning, and may gradually progress until it becomes quite disturbing at night. **nonexpansional d.**, difficulty in breathing caused by inadequate expansion of the chest. **orthostatic d.**, difficulty in breathing experienced when in the erect position. **paroxysmal nocturnal d.**, a form of respiratory distress related to posture (especially reclining at night) and usually attributed to congestive heart failure with pulmonary edema. **renal d.**, difficulty in breathing attributable to kidney disease. **sighing d.**, a syndrome characterized by intermittent deep sighing respirations, the depth of inspiration being greatly increased, without significant alteration in the respiratory rate and without wheezing; it is associated with functional or emotional rather than organic disorders, and is characteristic of functional dyspnea.

dyspneic (disp-ne'ik) pertaining to or characterized by dyspnea.

dyspoiesis (dis'poi-e'sis) a disorder of formation, as of blood cells.

dysponderal (dis-pon'der-al) [*dys-* + L. *pondus* weight] pertaining to disorder of weight, either obesity or underweight.

dysponesis (dis'po-ne'sis) [*dys-* + Gr. *ponēsis* toil, exertion] a reversible physiopathologic state consisting of unnoticed, misdirected neurophysiologic reactions to various agents (environmental events, bodily sensations, emotions, and thoughts) and the repercussions of these reactions throughout the organism. These errors in energy expenditure, which are capable of producing functional disorders, consist mainly of covert errors in action-potential output from the motor and premotor areas of the cortex and the consequences of that output.

dyspragia (dis-pra'je-ah) [Gr. *dyspragia* ill success] painful performance of any function. **d. intermit'tens angioscleroti'ca intestina/lis**, intestinal (abdominal) angina.

dyspraxia (dis-prak'se-ah) [Gr. *dyspraxia* ill success] partial loss of ability to perform coordinated acts.

dysprosium (dis-pro'se-um) one of the rare earth elements, atomic number 66, atomic weight 162.50, symbol Dy.

dysprosody (dis-pros'o-de) disturbance of stress, pitch, and rhythm of speech.

dysproteinemia (dis-pro'te-in-e'me-ah) [*dys-* + *protein* + Gr. *haima* blood + *-ia*] derangement of the protein content of the blood.

dysraphia, dysraphism (dis-ra'fe-ah; dis'rah-fizm) [*dys-* + Gr. *raphē* seam] incomplete closure of a raphe; defective fusion, e.g., of the neural tube.

dysrhapia, dysrhapism (dis-ra'fe-ah; dis'rah-fizm) dysraphia.

dysrhythmia (dis-rith'me-ah) [*dys-* + Gr. *rhythmos* any regularly recurring motion + *-ia*] disturbance of rhythm, as abnormality of rhythm in speech: *d. pneumophras'ia* is defective breath grouping; *d. prosodia* is defective placement of stress; *d. tonia* is defective inflection. **cerebral d.**, disturbance or irregularity in the rhythm of the brain waves as recorded by electroencephalography; called also *electroencephalographic d.* **electroencephalographic d.**, cerebral d. **esophageal d.**, diffuse esophageal spasm.

dyssebacea (dis'se-ba'she-ah) [*dys-* + *sebum*] disorder of sebaceous follicles; specifically a condition seen (but not exclusively) in riboflavin deficiency, marked by greasy, branny seborrhea on the midface, with erythema in the nasal folds, canthi, or other folds of the skin, or in all three.

dyssocial (dis-so'shal) denoting a personality disorder that is not antisocial, but is characterized by disregard for social codes, by predation, and by more or less criminality. See *dysocial personality*, under *personality*.

dysomnia (dis-som'ne-ah) [*dys-* + L. *somnus* sleep] any disorder of sleep.

dyspermia (dis-sper'me-ah) [*dys-* + Gr. *sperma* seed + *-ia*] impairment of the spermatozoa, or of the semen.

dysstasia (dis-sta'se-ah) [*dys-* + Gr. *stasis* standing] difficulty in standing.

dysstatic (dis-stat'ik) pertaining to or characterized by dysstasia.

dyssymbolia (dis'sim-bo'le-ah) failure of conceptual thinking so that thoughts can not be intelligently formulated in language.

dyssymboly (dis-sim'bo-le) dyssymbolia.

dyssymmetry (dis-sim'ē-tre) a condition characterized by absence of symmetry.

dyssynergia (dis'sin-er'je-ah) [*dys-* + Gr. *synergia* cooperation] disturbance of muscular coordination. **biliary d.**, failure of coordinated action of the different parts of the biliary system. **d. cerebella'ris myocloni'ca**, dyssynergia cerebellaris progressiva associated with myoclonus epilepsy; called also *Hunt's disease*. **d. cerebella'ris progressi'va**, a condition marked by generalized intention tremors associated with distur-

bance of muscle tone and of muscular coordination; due to disorder of cerebellar function. Called also *Ramsay Hunt syndrome*.

dysystole (dis-sis'to-le) [*dys-* + *systole*] (*obs.*) abnormal cardiac systole, especially astyole.

dystaxia (dis-tak'se-ah) [*dys-* + Gr. *taxis* arrangement] difficulty in controlling voluntary movements; partial ataxia.

dystectia (dis-tek'she-ah) [*dys-* + L. *tectum* roof] defective closure of the neural tube, resulting in such malformations as anencephaly, pencephaly, meningocele, spina bifida, etc.

dysteleology (dis'te-le-o'l-o-je) 1. the study of apparently useless organs or parts. 2. lack of purposefulness, or of contribution to the final result.

dysthymia (dis-thim'e-ah) 1. [*dys-* + Gr. *thymos* mind] mental depression; also, any intellectual anomaly. 2. [*dys-* + Gr. *thymos* thymus] the condition allegedly produced by disordered thymus secretion in childhood.

dysthymiac (dis-thi'me-ak) an individual exhibiting dysthymia.

dysthyreosis (dis'thi-re-o'sis) dysthyroidism.

dysthyroid, dysthyroidal (dis-thi'roid; dis'thi-roid'al) denoting defective functioning of the thyroid gland.

dysthyroidea (dis'thi-roi'de-ah) dysthyroidism.

dysthyroidism (dis-thi'roid-izm) imperfect development and function of the thyroid gland.

dystimbria (dis-tim'bre-ah) defect in quality or resonance of the voice.

dystithia (dis-tith'e-ah) [*dys-* + Gr. *tithēnē* a nurse + *-ia*] difficulty in breast feeding.

dystocia (dis-to'se-ah) [*dys-* + Gr. *tokos* birth] abnormal labor or childbirth. **cervical d.**, dystocia caused by mechanical obstruction at the ostium uteri. **constriction ring d.**, **contraction ring d.**, difficult labor caused by contraction of an area of circular muscle fibers, which may occur at various levels of the parturient uterus. **fetal d.**, that which is due to the shape, size, or position of the fetus. **maternal d.**, that which is due to some condition inherent in the mother. **placental d.**, difficulty in delivering the placenta.

dystonia (dis-to'ne-ah) [*dys-* + Gr. *tonos*] disordered tonicity of muscle. **d. deformans progressiva**, **d. musculorum deformans**. **d. lenticularis**, dystonia due to a lesion of the lenticular nucleus. **d. musculo'rum deformans**, a rare, chronic, hereditary disease marked by involuntary, irregular, clonic contortions of the muscles of the trunk and extremities. The symptoms appear chiefly on walking, at which time the contortions twist the body forward and sideways in a grotesque fashion (tortipelvis). An autosomal recessive form occurs before puberty, principally among Jews; the autosomal dominant form has a later onset and is not as consistent in severity. Called also *Ziehen-Oppenheim disease*, *dystonia deformans progressiva*, *dysbasia lordotica progressiva*, and *torsion dystonia* or *neurosis*. **torsion d.**, **d. musculorum deformans**.

dystonic (dis-ton'ik) pertaining to or characterized by dystonia.

dystopia (dis-to'pē-ah) [*dys-* + Gr. *topos* place] malposition; faulty placement of an organ.

dystopic (dis-top'ik) misplaced; out of its normal place.

dystopy (dis'to-pe) dystopia.

dystrophia (dis-tro'fe-ah) [L. *dystrophia*, from *dys-* + Gr. *trephein* to nourish] any disorder arising from defective or faulty nutrition, especially the muscular dystrophies. **adiposogenital d.**, a condition characterized by adiposity of the feminine type, genital hypoplasia, changes in secondary sex characters, and metabolic disturbances; seen with lesions of the hypothalamus. Called also *Fröhlich's syndrome*. **Albright's d.**, pseudopseudohypoparathyroidism. **asphyxiating thoracic d.**, a congenital hereditary syndrome transmitted as an autosomal recessive trait, in which chondrodystrophy of the rib cage, usually causing asphyxia early in the newborn period, occurs in association with defects of the phalanges and pelvis; called also *Jeune's syndrome* and *thoracic-pelvic-phalangeal dystrophy*. **Becker's d.**, **Becker's muscular d.**, a form closely resembling pseudohypertrophic muscular dystrophy but having a late onset and slowly progressive course; it is transmitted as an X-linked recessive trait. **Biber-Haab-Dimmer d.**, lattice d. **corneal d.**, see *granular corneal d.*, *lattice d.*, *macular corneal d.*, *Salzmann's nodular corneal d.*, *cornea guttata*, *dystrophia epithelialis corneae*, and *dystrophia adiposa cornea*. **craniocarpotarsal d.**, a congenital anomaly transmitted as an autosomal dominant trait, consisting of characteristic flattened, masklike facies; microstomia, the lips protruding as in whistling; deep-set eyes with hypertelorism; camptodactyly with ulnar deviation of the fingers; and talipes equinovarus. Called also *Freeman-Sheldon syndrome*, *whistling face syndrome*, and *whistling face-windmill vane hand syndrome*. **Dejerine-Landouzy d.**, *Landouzy-Dejerine d.* **distal muscular d.**, late distal hereditary myopathy. **Duchenne type muscular d.**, pseudohypertrophic muscular d. **Duchenne-Landouzy d.**, *Landouzy-Dejerine d.* **Erb's d.**, pseudohypertrophic muscular d. **facioscapulohumeral muscular d.**, *Landouzy-Dejerine d.* **familial osseous d.**, Morquio's syndrome. **Fuchs' d.**, dystrophia epithelialis corneae. **Gowers type muscular d.**, late distal hereditary myopathy. **granular corneal d.** (*Groenouw's type I*), a dominantly transmitted form of corneal dystrophy occurring during the first decade and characterized by the presence of small opacities in the superficial layers of the cornea, which form a granular disk. **hypophyseal d.**, hypopituitarism. **infantile neuroaxonal d.**, progressive hereditary degenerative encephalopathy transmitted as an autosomal recessive trait, beginning in infancy with muscular hypotonia and arrest of development in late infancy, followed by dementia, blindness, spasticity, and ataxia. Pathologically it is characterized by widespread focal swellings and degeneration of the axons with scattered spheroids in the brain. Called also *Seitelberger's disease* and *spastic amaurotic axonal idiocy*. **Landouzy's d.**, *Landouzy-Dejerine d.* **Landouzy-Dejerine d.**, a relatively benign form of muscular dystrophy in which there is marked atrophy of the muscles of the face, shoulder girdle, and arm, producing a facial expression called myopathic face. Most patients enjoy a normal life-span. The disorder is transmitted as an autosomal dominant. Called also *facioscapulohumeral muscular d.* or *atrophy*. **lattice d. (of cornea)**, hereditary dystrophy of the cornea marked clinically by linear lesions having a filamentous interwoven appearance and histologically by fusiform areas of hyaline degeneration and dense deposits of hyalin between the epithelium and Bowman's membrane; called also *Biber-Haab-Dimmer d.* **Leyden-Moebius d.**, limb-girdle muscular d. **limb-girdle muscular d.**, a slowly progressive form of muscular dystrophy affecting either sex and usually beginning in childhood, sometimes in maturity or later; it is characterized by weakness and wasting in the shoulder or pelvic girdle. Called also *Leyden-Moebius d.* or *type*. **macular corneal d.** (*Groenouw's type II*), a recessively transmitted form of corneal dystrophy occurring during the first or second decade and characterized by the presence of macular opacities with indistinct irregular borders, between which the stroma is cloudy. **median canaliform d. of the nail**, dystrophia unguis mediana canaliformis. **muscular d.**, a group of genetically determined, painless, degenerative myopathies characterized by weakness and atrophy of muscle without involvement of the nervous system. There are three main types: pseudohypertrophic muscular dystrophy, *Landouzy-Dejerine dystrophy*, and limb-girdle muscular dystrophy. Rarer forms are distal muscular dystrophy, ocular myopathy, and myotonic dystrophy. Called also *Erb's* or *Erb-Landouzy disease*, *idiopathic muscular atrophy*, and *myodystrophia*. **myotonic d.**, a rare, slowly progressive, hereditary disease transmitted as an autosomal dominant trait, characterized by myotonia followed by atrophy of the muscles (especially those of the face and neck), cataracts, hypogonadism, frontal balding, and cardiac abnormalities; called also *dystrophia myotonica*, *myotonia atrophica*, and *Steinert's disease*. **oculocerebrorenal d.**, see under *syndrome*. **papillary and pigmentary d.** (*Darier*) (*obs.*), acanthosis nigricans. **progressive muscular d.**, muscular d. **progressive tapetochoroidal d.**, choroideremia. **pseudohypertrophic muscular d.**, a chronic progressive disease affecting the shoulder and pelvic girdles, commencing in early childhood. It is characterized by increasing weakness, pseudohypertrophy of the muscles followed by atrophy,

tion. 2. impairment of nutrition which is caused by nervous disorder.

dystrophy (dis'tro-fe) [L. *dystrophia*, from *dys-* + Gr. *trephein* to nourish] any disorder arising from defective or faulty nutrition, especially the muscular dystrophies. **adiposogenital d.**, a condition characterized by adiposity of the feminine type, genital hypoplasia, changes in secondary sex characters, and metabolic disturbances; seen with lesions of the hypothalamus. Called also *Fröhlich's syndrome*. **Albright's d.**, pseudopseudohypoparathyroidism. **asphyxiating thoracic d.**, a congenital hereditary syndrome transmitted as an autosomal recessive trait, in which chondrodystrophy of the rib cage, usually causing asphyxia early in the newborn period, occurs in association with defects of the phalanges and pelvis; called also *Jeune's syndrome* and *thoracic-pelvic-phalangeal dystrophy*. **Becker's d.**, **Becker's muscular d.**, a form closely resembling pseudohypertrophic muscular dystrophy but having a late onset and slowly progressive course; it is transmitted as an X-linked recessive trait. **Biber-Haab-Dimmer d.**, lattice d. **corneal d.**, see *granular corneal d.*, *lattice d.*, *macular corneal d.*, *Salzmann's nodular corneal d.*, *cornea guttata*, *dystrophia epithelialis corneae*, and *dystrophia adiposa cornea*. **craniocarpotarsal d.**, a congenital anomaly transmitted as an autosomal dominant trait, consisting of characteristic flattened, masklike facies; microstomia, the lips protruding as in whistling; deep-set eyes with hypertelorism; camptodactyly with ulnar deviation of the fingers; and talipes equinovarus. Called also *Freeman-Sheldon syndrome*, *whistling face syndrome*, and *whistling face-windmill vane hand syndrome*. **Dejerine-Landouzy d.**, *Landouzy-Dejerine d.* **distal muscular d.**, late distal hereditary myopathy. **Duchenne type muscular d.**, pseudohypertrophic muscular d. **Duchenne-Landouzy d.**, *Landouzy-Dejerine d.* **Erb's d.**, pseudohypertrophic muscular d. **facioscapulohumeral muscular d.**, *Landouzy-Dejerine d.* **familial osseous d.**, Morquio's syndrome. **Fuchs' d.**, dystrophia epithelialis corneae. **Gowers type muscular d.**, late distal hereditary myopathy. **granular corneal d.** (*Groenouw's type I*), a dominantly transmitted form of corneal dystrophy occurring during the first decade and characterized by the presence of small opacities in the superficial layers of the cornea, which form a granular disk. **hypophyseal d.**, hypopituitarism. **infantile neuroaxonal d.**, progressive hereditary degenerative encephalopathy transmitted as an autosomal recessive trait, beginning in infancy with muscular hypotonia and arrest of development in late infancy, followed by dementia, blindness, spasticity, and ataxia. Pathologically it is characterized by widespread focal swellings and degeneration of the axons with scattered spheroids in the brain. Called also *Seitelberger's disease* and *spastic amaurotic axonal idiocy*. **Landouzy's d.**, *Landouzy-Dejerine d.* **Landouzy-Dejerine d.**, a relatively benign form of muscular dystrophy in which there is marked atrophy of the muscles of the face, shoulder girdle, and arm, producing a facial expression called myopathic face. Most patients enjoy a normal life-span. The disorder is transmitted as an autosomal dominant. Called also *facioscapulohumeral muscular d.* or *atrophy*. **lattice d. (of cornea)**, hereditary dystrophy of the cornea marked clinically by linear lesions having a filamentous interwoven appearance and histologically by fusiform areas of hyaline degeneration and dense deposits of hyalin between the epithelium and Bowman's membrane; called also *Biber-Haab-Dimmer d.* **Leyden-Moebius d.**, limb-girdle muscular d. **limb-girdle muscular d.**, a slowly progressive form of muscular dystrophy affecting either sex and usually beginning in childhood, sometimes in maturity or later; it is characterized by weakness and wasting in the shoulder or pelvic girdle. Called also *Leyden-Moebius d.* or *type*. **macular corneal d.** (*Groenouw's type II*), a recessively transmitted form of corneal dystrophy occurring during the first or second decade and characterized by the presence of macular opacities with indistinct irregular borders, between which the stroma is cloudy. **median canaliform d. of the nail**, dystrophia unguis mediana canaliformis. **muscular d.**, a group of genetically determined, painless, degenerative myopathies characterized by weakness and atrophy of muscle without involvement of the nervous system. There are three main types: pseudohypertrophic muscular dystrophy, *Landouzy-Dejerine dystrophy*, and limb-girdle muscular dystrophy. Rarer forms are distal muscular dystrophy, ocular myopathy, and myotonic dystrophy. Called also *Erb's* or *Erb-Landouzy disease*, *idiopathic muscular atrophy*, and *myodystrophia*. **myotonic d.**, a rare, slowly progressive, hereditary disease transmitted as an autosomal dominant trait, characterized by myotonia followed by atrophy of the muscles (especially those of the face and neck), cataracts, hypogonadism, frontal balding, and cardiac abnormalities; called also *dystrophia myotonica*, *myotonia atrophica*, and *Steinert's disease*. **oculocerebrorenal d.**, see under *syndrome*. **papillary and pigmentary d.** (*Darier*) (*obs.*), acanthosis nigricans. **progressive muscular d.**, muscular d. **progressive tapetochoroidal d.**, choroideremia. **pseudohypertrophic muscular d.**, a chronic progressive disease affecting the shoulder and pelvic girdles, commencing in early childhood. It is characterized by increasing weakness, pseudohypertrophy of the muscles followed by atrophy,

lordosis, and a peculiar swaying gait with the legs kept wide apart. The disorder is transmitted as a sex-linked recessive trait, and affected individuals, predominantly males, rarely survive to maturity; death is usually due to respiratory weakness or heart failure. Called also *Duchenne's muscular d.* or *type*, *Erb's d.* or *paralysis*, *pseudohypertrophic muscular atrophy* or *paralysis*, and *Zimmerlin's d.* or *type*. **reflex sympathetic d.**, a disturbance of the sympathetic nervous system marked by pallor or rubor, pain, sweating, edema, or skin atrophy following sprain, fracture or injury to nerves or blood vessels. **Salzmann's nodular corneal d.**, a progressive hypertrophic degeneration of the epithelial layer of the cornea, Bowman's membrane, and the outer portion of the corneal stroma. **Simmerlin's d.**, limb-girdle muscular d. **tapetochoroidal d.**, choroideremia. **thoracic-pelvic-phalangeal d.**, asphyxiating thoracic d. **thyronaural d.**, a condition marked by chorea, athetosis, rigidity, ataxia, and other indications of disturbed function of the autonomic nervous system with mental and thyroid defects. **wound d.**, a syndrome of defective protein metabolism (hypoproteinemia) that sometimes develops after severe injury.

dystropic (dis-tro'pik) [*dys-* + Gr. *tropos* a turning] characterized by abnormal behavior.

dystrophy (dis'tro-pe) abnormal behavior.

dystrypsia (dis-trip'se-ah) [*dys-* + *trypsin* + *-ia*] derangement of intestinal or pancreatic digestion due to lack of trypsin.

dysuresia (dis-u-re'se-ah) dysuria.

dysuria (dis-u're-ah) [*dys-* + Gr. *ouron* urine + *-ia*] painful or difficult urination. **psychic d.**, difficulty in passing the urine in the presence of other persons. **spastic d.**, difficult urination due to spasm of the bladder.

dysuric (dis-u're-ak) an individual exhibiting dysuria.

dysuric (dis-u'rik) pertaining to dysuria.

dysvitaminosis (dis'vi-tah-min-o'sis) a disorder due to an excess or deficiency of a vitamin.

dyszoospermia (dis-zo-o-sper'me-ah) [*dys-* + *zoospermia*] a disorder of spermatozoon formation.

E

E. emmetropia; eye; electromotive force; experimenter.

Ea a god of the Babylonians and Assyrians, said to be the earliest deity associated with the art of healing.

EAC an abbreviation used in studies of complement in which E represents erythrocyte, A antibody, and C complement.

EACA epsilon-aminocaproic acid; see *ε-aminocaproic acid*, under *acid*.

ead. abbreviation for *L. ea'dem*, the same.

Eagle test (e'gl) [Harry Eagle, American physician, born 1905] see under *test*.

EAHF eczema, asthma, hay fever; see *EAHF complex*, under *complex*.

Eales' disease (ēlz) [Henry Eales, British physician, 1852-1913] see under *disease*.

EAP epiallopregnanolone.

Ea. R. abbreviation for Ger. *Entartungs-Reaktion*, reaction of degeneration.

ear (ēr) [L. *auris*; Gr. *ous*] the organ of hearing and of equilibrium, consisting of the external ear, the middle ear, and the internal ear; called also *auris* [NA]. See Plate XVI. **acute e.**, acute middle ear catarrh, otitis media catarrhalis acuta. **aviator's e.**, barotitis media. **Aztec e.**, an ear in which the lobule is wanting, the whole ear looking as if it were pushed forward and downward. **bat e.**, lop e. **beach e.**, maceration and inflammation of the auditory canal as a result of ocean bathing. **Blainville e's**, asymmetry of the two ears. **Cagot e.**, an ear in which the lobule is wanting. **cat's e.**, an ear that is folded over on itself. **cauliflower e.**, a partially deformed auricle caused by injury and subsequent perichondritis. **cup e.**, a protruding ear which in its milder form presents a poorly developed or unformed antihelical crus with deficient or faulty development of the superior helix, and exaggerated overdevelopment of its deep "cup-shaped," concave concha. In the severe forms, the ear is smaller than normal and the helical rim is shortened to such an extent that the helix margin, or fold, cups forward and over the scapha as a hood. **Darwin's e.**, an ear having an eminence on the edge of the helix. **diabetic e.**, mastoiditis complicating diabetes. **external e.**, the pinna and external meatus together (*auris externa* [NA]). **glue e.**, a chronic condition marked by a collection of fluid of high viscosity in the middle ear, due to obstruction of the eustachian tube. **hairy e's**, hypertrichosis pinnae auris. **Hong Kong e.**, otomycosis. **hot weather e.**, an otitis externa, especially of the meatus, which is rather common in the hot and humid tropics and is often caused by *Pseudomonas aeruginosa*. **inner e.**, **internal e.**, the labyrinth, comprising the vestibule, cochlea, and semicircular canals (*auris interna* [NA]). **insane e.** (*obs.*), hematoma of the ear. **lop e.**, deformity of the external ear in which the conchal process grows at a right angle to the head; called also *bat e.* **middle e.**, the space medial to the tympanic membrane (mesotympanum), the epitympanum, and the hypotympanum; *auris media* [NA]. It contains the auditory ossicles and connects with the mastoid cells and auditory tubes. Called also *drum*, *eardrum*, *tympanic cavity*, *cavum tympani*, and *tympanum*. **Morel e.**, a deformed ear marked by abnormal development of the helix, anthelix, and scaphoid fossa, so that the folds of the ear seem obliterated, and the ear is smooth, large, and often prominent, with a thin edge. **Mozart e.**, congenital fusion of the crura of the anthelix and the helix. **outer e.**, external e. **prizefighter e.**, cauliflower e. **satyr e.**, one with a pointed pinna. **scroll e.**, one in which the pinna is rolled up. **Singapore e.**, otomycosis. **Stahl e., No. 1**, a deformed ear in which the helix is broad and coalesces with the anthelix; the fossa ovalis and fossa scaphoidea are

scarcely to be seen, and the lower portion of the helix is obliterated. **Stahl e., No. 2**, a deformed ear in which there are three instead of two crura anthelicalis. **swimmer's e.**, otitis externa. **tank e.**, a condition like beach ear from bathing in swimming pools. **tropical e.**, a local infection of the external auditory meatus prevalent in tropical and semitropical countries. **Wildermuth's e.**, a deformed ear with prominent anthelix and poorly developed helix.

earache (ēr'āk) pain in the ear; otalgia.

eardrum (ēr'drum) 1. the middle ear (*auris media* [NA]). 2. membrana tympani.

ear-minded (ēr-mind'ed) remembering chiefly the impressions perceived by hearing. Cf. *audile*.

earth (erth) 1. the soil and other pulverulent substances forming the ground. 2. any amorphous, easily pulverizable mineral. **alkaline e.**, any oxide of the alkaline earth metals. **diatomaceous e.**, infusorial earth. **fuller's e.**, an impure aluminum silicate having decolorizing and purifying properties. **infusorial e.**, a silicious earth composed mostly of the frustules and fragments of diatoms. By boiling with dilute hydrochloric acid, washing, and calcining, it can be so purified as to be a very pure form of silica, SiO₂ (*terra silicea purificata*). It is often mixed with clay and used in various industries. Called also *diatomaceous e.* **silicious e., purified** [NF], a form of silica (*infusorial e.*), SiO₂, purified by boiling with acid, washing, and calcining; used as a pharmaceutical filtering agent.

earwax (ēr'waks) cerumen.

E.B. elementary body.

Ebbinghaus test (eb'ing-hows) [Hermann Ebbinghaus, psychologist in Halle, 1850-1909] see under *tests*.

Eberth's lines (ā'berts) [Karl Joseph Eberth, pathologist in Halle, 1835-1926] see under *line*.

Eberthella (e'ber-thel'ah) [K. J. Eberth] a former genus name applied to bacteria now included in the genus *Salmonella*; see *Salmonella typhosa*.

Ebner's fibrils, glands, reticulum (eb'nerz) [Victor Ebner von Rofenstein, histologist in Vienna, 1842-1925] see under the nouns.

ebonation (e'bo-na'shun) [L. *e* out + *bone*] the removal of fragments of bone after injury.

ébranlement (a-brahnl-maw') [Fr.] removal of a polyp by twisting the pedicle of the tumor.

ebrietas (e-bri'ē-tas) [L.] drunkenness; inebriety.

ebriety (e-bri'ē-te) drunkenness; inebriety.

Ebstein's angle, anomaly, disease (eb'stinz) [Wilhelm Ebstein, physician in Göttingen, 1836-1912] see *cardiohepatic angle*, under *angle*, and see under *anomaly* and *disease*.

ebullition (eb-u-lish'un) [L. *ebullire* to boil] 1. the process or condition of boiling. 2. the motion of a boiling liquid.

ebur (e'bur) [L.] ivory. **e. den'tis**, dentin.

eburnation (e'bur-na'shun) [L. *ebur* ivory] the conversion of a bone into an ivory-like mass. In osteoarthritis, the thinning of the articular cartilage due to disorganization and fragmentation of the superficial tissue and extension of degenerative changes to the deeper part of the cartilage, resulting in exposure of the subchondral bone, which becomes denser and the surface of which becomes worn and polished. In dentistry, a condition of exposed dentin which is hard, and yellow, brown or black in color, with a polished look.

eburneous (e-bur'ne-us) resembling ivory.

EXTERNAL AND INTERNAL STRUCTURES OF EAR

eburnitis (e/'bur-ni/'tis) [L. *eburnus* of ivory + *-itis*] increased hardness and density of dentin.

EBV Epstein-Barr virus.

écarteur (ā-kar-ter') [Fr.] a retractor.

ecaudeate (e-kaw/'dāt) [L. *e* without + *cauda* tail] without a tail.

ecbolic (ek-bol/'ik) [Gr. *ekbolikos* throwing out] oxytocic.

ecbovirus (ek/'bo-vi/'rus) [from enteric cytopathic bovine orphan + *virus*] an enteric orphan virus isolated from cattle; also written *ECBO virus*.

eccentric (ek-sen/'trik) 1. situated or occurring away from a center. 2. proceeding from a center.

eccentrochondroplasia (ek-sen/'tro-kon/'dro-pla/'se-ah) Morquio's syndrome.

eccentro-osteochondrodysplasia (ek-sen/'tro-os/'te-o-kon/'dro-dis-pla/'se-ah) [Gr. *ekkentros* from the center + *osteon* bone + *chondros* cartilage + *dys-* + *plassein* to form] Morquio's syndrome.

eccephalosis (ek/'sef-ah-lo/'sis) [Gr. *ek* out + *kephalē* head] craniotomy.

ecchondroma (ek/'kon-dro/'mah) [Gr. *ek* out + *chondros* cartilage + *-oma*] a hyperplastic growth of cartilage tissue developing on the surface of a cartilage or projecting under the periosteum of a bone; called also *ecchondrosia*.

ecchondrosis (ek/'kon-dro/'sis) ecchondroma.

ecchondrotome (ek-kon/'dro-tōm) [Gr. *ek* out + *chondros* cartilage + *tomē* a cutting] a knife for excising cartilaginous tissue.

ecchordosis physaliphora (ek/'kor-do/'sis fis/'ah-lif'o-'rah) gelatinous nodules of heterotopic notochordal tissue projecting from the clivus or dorsum sellae. True tumors (chordomas) may arise from these or from intraosseous remnants of the notochord.

ecchymoma (ek-i-mo/'mah) a swelling due to a bruise and formed by subcutaneous extravasation of blood.

ecchymosed (ek/i-mōsd) characterized by ecchymosis.

ecchymoses (ek/i-mo'sēz) [Gr.] plural of *ecchymosis*.

ecchymosis (ek/i-mo'sis), pl. *ecchymo'ses* [Gr. *ekchymōsis*] a small hemorrhagic spot, larger than a petechia, in the skin or mucous membrane forming a nonelevated, rounded or irregular, blue or purplish patch. **cadaveric e's**, stains seen on the more dependent portions of the body after death, giving the appearance of bruises.

ecchymotic (ek-ī-mot/'ik) pertaining to or of the nature of an ecchymosis.

Eccles (ek/'k'lz), John Carew. Australian physiologist, born 1903; co-winner, with Alan Lloyd Hodgkin and Andrew Fielding Huxley, of the Nobel prize in medicine and physiology for 1963, for discoveries concerning the ionic mechanisms involved in excitation and inhibition in the peripheral and central portions of the nerve cell membrane.

eccoprotic (ek/'o-prot/'ik) [Gr. *ek* out + *kopros* dung] cathartic.

eccrine (ek/'rin) exocrine, with special reference to ordinary sweat glands.

eccrinology (ek-rī-nol'o-'je) [Gr. *ekkrinein* to secrete + *-logy*] the study or science of secretions and excretions.

eccrisiology (ek-kris/'e-ol'o-'je) eccrinology.

eccrisis (ek/'ri-sis) [Gr. *ek* out + *krisis* separation] the excretion or expulsion of waste products.

eccritic (ek-krit/'ik) [Gr. *ekkritikos*] 1. promoting excretion. 2. an agent that promotes excretion.

eccyesis (ek/'si-e/'sis) [Gr. *ek* out + *kyēsis* pregnancy] ectopic pregnancy.

ecdemic (ek-dem/'ik) [Gr. *ekdēmos* gone on a journey] not endemic; applied to a disease caused by a factor originating far from the place in which the disease is observed.

ecdovirus (ek/'do-vi/'rus) [from enteric cytopathic dog orphan + *virus*] an enteric orphan virus isolated from dogs; also written *ECDO virus*.

ecdysiasm (ek-di/'si-azm) [Gr. *ekdyein* to strip off one's clothes] an abnormal tendency to take off one's clothes.

ecdysis (ek/'di-sis) [Gr. *ekdysis* a getting out] desquamation or sloughing; especially the shedding of an outer covering and the development of a new one such as occurs in certain arthropods, crustaceans, lizards, and snakes. Called also *molting*.

ecdysone (ek-di/'son) [Gr. *edkysis* a getting out] the hormone produced in the prothoracic glands of arthropods that induces molting (ecdysis) and metamorphosis.

ECF extracellular fluid.

ECF-A abbreviation for eosinophil chemotactic factor of anaphylaxis, a primary mediator of Type I anaphylactic hypersensitivity. It is an acidic peptide (molecular weight 500) released by mast cells, which attracts eosinophils to areas where it is present.

ECG electrocardiogram.

ecgonine (ek/go-'nin) chemical name: 3β-hydroxy-2β-tropane-carboxylic acid. The final basic product, C₈H₁₅NO₃, obtained by hydrolysis of cocaine and several related alkaloids.

echesis (ek/'e-o/'sis) [Gr. *ēchē* loud sound] a neurosis produced by continuous loud or harassing noises.

echidnase (e-kid/'nās) [Gr. *echidna* viper + *-ase*] an enzyme found in the venom of vipers.

echidnin (e-kid/'nin) [Gr. *echidna* viper] serpent venom, or a nitrogenous poisonous principle from it.

Echidnophaga (ek/'id-not/'ah-gah) a genus of fleas. **E. galina'cea**, the sticktight flea, which collects in dense masses on the heads of chickens, in the ears of other animals, and which may also parasitize man.

echidnotoxin (e-kid/'no-tok/'sin) a poisonous principle in the venom of vipers.

echidnovaccine (e-kid/'no-vak/'sēn) [Gr. *echidna* viper + *vaccine*] viper venom that has been deprived of its poisonous power by heating; it is used as a vaccine against venom.

Echinacea (ek/'i-na/'se-ah) [Gr. *echinos* hedgehog] a genus of composite plants, the cone flowers. The dried rhizome and roots of *E. angustifo'lia* and *E. purpu'rea* have tonic properties.

echinate (ek/i-nāt) echinulate.

echinenone (e-kin/'ē-nōn) a carotenoid provitamin prepared from the sex glands of sea urchins and which in the body becomes vitamin A.

echino- (e-ki/'no) [Gr. *echinos* a prickly husk; hedgehog] a combining form denoting relationship to spines, or spiny.

Echinochasmus (e-ki/'no-kaz/'mus) [*echino-* + Gr. *chasma* open mouth] a genus of parasitic intestinal flukes. **E. perfolia'tus**, the causative agent of echinostomiasis in Japan.

echinochrome (e-ki/'no-krōm) a brown respiratory pigment found in sea urchins.

echinococciasis (e-ki/'no-kok-ki/'ah-sis) hydatid disease.

echinococcosis (e-ki/'no-kok-o/'sis) hydatid disease.

echinococcotomy (e-ki/'no-kok-kot/'o-me) [*echinococcus* + Gr. *tomē* a cutting] evacuation of an echinococcus (hydatid) cyst.

Echinococcus (e-ki/'no-kok/'us) [*echino-* + Gr. *kokkos* berry] a genus of small tapeworms of the family Taeniidae. **E. alveola'ris**, *E. multilocularis*. **E. granulo'sus**, a small tapeworm parasitic in dogs and wolves and occasionally in cats. Its larva, known as the hydatid, may develop in nearly all mammals, forming hydatid tumors or cysts in the liver, lungs, kidneys, and other organs. See *hydatid disease*, *unilocular*, under *disease*. **E. multilocula'ris**, a species whose adults usually parasitize the fox and wild rodents, although man is sporadically infected. It resembles *E. granulosus*, but the larvae form alveolar or multilocular cysts rather than unilocular cysts. See *hydatid disease*, *alveolar*, under *disease*.

echinocyte (e-ki/'no-sit) [*echino-* + Gr. *kytos* hollow vessel] a burr cell.

echinoderm (e-kin/'o-derm) one of the Echinodermata.

Echinodermata (e-ki/'no-der/'mah-tah) [*echino-* + Gr. *derma* skin] a phylum of the animal kingdom, including starfishes, sea urchins, etc.

Echinolaelaps (e-ki/'no-le/'laps) a genus of mites found on rats and in stable litter; its bite causes intense itching. Called also *Laelaps* or *Lelaps*. **E. echidni'nus**, a mite that acts as an intermediate host of *Hepatozoon muris* and *H. perniciosum*.

echinophthalmia (e-kin/'of-thal/'me-ah) [*echino-* + *ophthalmia*] inflammation of the eyelids marked by projection of the lashes.

Echinorhynchus (e-ki/'no-ring/'kus) [*echino-* + Gr. *rhynchos* beak] a former genus of parasitic worms. **E. gi'gas**, **E. hom'inis**, *Macracanthorhynchus hirudinaceus*. **E. monilifor'mis**, *Moniliformis moniliformis*.

echinosis (ek/'i-no/'sis) [Gr. *echinos* hedgehog + *-osis*] irregularity in the form of an erythrocyte, giving it a spiny appearance. Cf. *crenation*.

Echinostoma (ek/'i-nos/'to-mah) [*echino-* + Gr. *stoma* mouth] a genus of parasitic flukes. *E. revolutum* is found in the intestines of ducks and geese and has been reported in man in Taiwan and Indonesia. *E. iloca'num* has been found in the feces of natives of Java and the Philippine Islands. *E. lindoen'sis* occurs in Celebes; *E. perfolia'tum* in Japan.

echinostomiasis (e-kin/'o-sto-mi/'ah-sis) infection by flukes of the genus *Echinostoma* or of related genera of the family Echinostomatidae.

echinulate (e-kin/'u-lāt) [L. *echinus* hedgehog] having small prickles or spines; applied in bacteriology to cultures showing toothed or pointed outgrowths.

Echis (e/'kis) a genus of small venomous vipers ranging from India to North Africa.

echo (ek/'o) [Gr. *ēchō* a returned sound] repetition of a sound as a result of reverberation of sound waves; also the reflection of ultrasonic, radio, and radar waves. Sometimes used to refer to repetition of movement. **amphoric e.**, a resonant repetition of a sound heard on auscultation of the chest, occurring at an appreciable interval after the vocal sound. **metallic e.**, a peculiar ringing repetition of the heart sounds sometimes heard in patients with pneumopericardium and pneumothorax.

echoacousia (ek/'o-ah-koo/'ze-ah) [*echo* + Gr. *akousis* hearing +

-ia] the subjective experience of hearing echoes after normally heard sounds.

echocardiogram (ek'o-kar'de-o-gram") the record produced by echocardiography.

echocardiography (ek'o-kar'de-og'rah-fe) a method of graphically recording the position and motion of the heart walls or the internal structures of the heart and neighboring tissue by the echo obtained from beams of ultrasonic waves directed through the chest wall. Called also *ultrasonic cardiography*.

echoencephalogram (ek'o-en-sef'ah-lo-gram") the record produced by echoencephalography.

echoencephalograph (ek'o-en-sef'ah-lo-graf) the instrument used in echoencephalography.

echoencephalography (ek'o-en-sef'ah-log'rah-fe) a diagnostic technique in which pulses of ultrasonic waves are beamed through the head from both sides, and echoes from the midline structures of the brain are recorded as graphic tracings; shifts from the midline may indicate a centrally placed mass.

echogenic (ek'o-jen'ik) in ultrasonography, giving rise to reflections (echoes) of ultrasound waves.

echogram (ek'o-gram) the record made by echography.

echographia (ek-o-gra'fe-ah) [echo + Gr. *graphein* to write + -ia] an aphasic condition in which the patient can copy writing, but cannot write to express ideas.

echography (ě-kog'rah-fe) ultrasonography; the use of ultrasound as a diagnostic aid. Ultrasound waves are directed at the tissues, and a record is made, as on an oscilloscope, of the waves reflected back through the tissues, which indicate interfaces of different acoustic densities and thus differentiate between solid and cystic structures.

echokinesis (ek'o-ki-ne'sis) [echo + Gr. *kinesis* motion] echopraxia.

echolalia (ek'o-la'le-ah) [echo + Gr. *lalia* speech, babble] the repetition by a patient of words addressed to him; called also *echophrasia*. **delayed e.**, echolalia, the onset of which does not follow immediately after the stimulus; it may occur days or weeks later.

echolalus (ek'o-la'lus), pl. *echola'li* [L.] a person who in a hypnotized state repeats meaninglessly the words he hears.

echolucent (ek'o-loo'sent) permitting the passage of ultrasonic waves without giving rise to echoes, the representative areas appearing black on the sonogram.

echomimia (ek'o-mim'e-ah) [echo + Gr. *mimia* imitation] echopraxia.

echomotism (ek'o-mo'tizm) [echo + L. *motio* movement] echopraxia.

echopathy (ek-op'ah-the) [echo + Gr. *pathos* disease] a neurosis marked by the senseless repetition of words or actions of others.

echophonocardiography (ek'o-fo'no-kar'de-og'rah-fe) the combined use of echocardiography and phonocardiography.

echophony (ek-of'o-ne) [echo + Gr. *phōne* voice] an echo-like sound heard immediately after a vocal sound on auscultation of the chest.

echophotony (ek'o-fot'o-ne) [echo + Gr. *phōs* light + *tonos* tone] the association of certain colors with certain sounds.

echophrasia (ek'o-fra'se-ah) echolalia.

echopraxia (ek'o-prak'se-ah) the spasmodic and involuntary imitation of the movements of another.

echopraxis (ek'o-prak'sis) [echo + Gr. *prassein* to perform] echopraxia.

echo-ranging (ek'o-rānj'ing) in ultrasonography, the determining of the position or depth of a body structure on the basis of the time interval between the moment an ultrasonic pulse is transmitted and the moment its echo is received.

echothiophate iodide (ek'o-thi'o-fāt) [USP] chemical name: 2-[(diethoxyphosphoryl)thio]-N,N,N-trimethylethaniminium iodide. A cholinergic, C₉H₂₃INO₃PS, occurring as a white, crystalline solid; used as a miotic in certain forms of glaucoma, applied topically to the conjunctiva.

echovirus (ek'o-vi'rus) [enteric cytopathic human orphan + *virus*] an enteric orphan RNA virus isolated from man, separable into many serotypes, certain of which are associated with human disease, especially aseptic meningitis; also written *ECHO virus*. **e. 28**, a serotype isolated from patients with mild respiratory disease, pathogenic for man but not for conventional laboratory animals, including the suckling mouse and monkey, by the intracerebral route; also written *ECHO 28 virus*.

Eck's fistula (eks) [Nicolai Vladimirovich *Eck*, Russian physiologist, 1847-1908] see under *fistula*.

Ecker's fissure (ek'erz) [Alexander *Ecker*, German anatomist, 1816-1887] see under *convolution* and *fissure*.

Ecker's fluid (ek'erz) [Enrique E. *Ecker*, American bacteriologist, born 1859] Rees and Ecker diluting fluid; see under *fluid*.

ecclabium (ek-la'be-um) [Gr. *ek out* + L. *labium* lip] eversion of the lips or of a lip.

Eclabron (ek'lah-bron) trademark for preparations of guaithylline.

eclampsia (ě-klamp'se-ah) [Gr. *eklampein* to shine forth] convulsions and coma occurring in a pregnant or puerperal woman, associated with preeclampsia, i.e., with hypertension, edema, and/or proteinuria. **puerperal e.**, that occurring after childbirth. **uremic e.**, eclampsia due to uremia.

eclampsism (ě-klamp'sizm) preeclampsia.

eclamptic (ě-klamp'tik) pertaining to or of the nature of eclampsia.

eclamptism (ě-klamp'tizm) the condition due to the autointoxication incident to pregnancy, and marked by headache, visual impairment, and sometimes by convulsions.

eclamptogenic (ě-klamp'to-jen'ik) causing convulsions.

eclectic (ě-klek'tik) [Gr. *eklektikos* selecting] designating a sect or school which professes to select what is best from all other systems of medicine. See *eclecticism*.

eclecticism (ě-klek'ti-sizm) [Gr. *eklegein* to pick out] a once popular system of medicine which treats diseases by the application of single remedies to known pathologic conditions, without reference to nosology, special attention being given to developing indigenous plant remedies.

eclipse (e-klips') in virology, that period of the infective cycle during which infected bacterial cells contain no detectable infective bacteriophage.

eclysis (ek'li-sis) mild syncope.

ecmnnesia (ek-ne'ze-ah) [Gr. *ek out of* + *mnēmē* memory] forgetfulness of recent events with normal memory for more remote ones.

ecmavirus (ek'mo-vi'rus) [from enteric cytopathic monkey orphan + *virus*] an enteric orphan virus isolated from monkeys; also written *ECMO virus*.

ecochleation (e-kok'le-a'shun) 1. excision of the cochlea. 2. enucleation.

ecogenetics (ek'o-jē-net'iks) the study of the relationship between genetic factors and the nature of response to an environmental agent.

ecoid (e'koid) (*obs.*) the colorless framework of a red blood corpuscle.

ecologist (e-kol'o-jist) an individual skilled in ecology.

ecology (e-kol'o-je) [Gr. *oikos* house + *-logy*] the science of organisms as affected by the factors of their environments; study of the environment and life history of organisms. **human e.**, application of the ecologic approach to the study of human societies.

ecomania (e'ko-ma'ne-ah) [Gr. *oikos* house + *mania* madness] an attitude of mind that is dominating toward members of the family but humble toward those in authority.

econazole nitrate (ě-kon'ah-zōl) chemical name: 1-[2-[(4-chlorophenyl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole. A broad-spectrum antifungal with some antibacterial activity, C₁₈H₁₅Cl₃N₂O·HNO₃; used topically in the treatment of infections due to susceptible organisms, including dermatophytes, and in vaginal candidiasis.

Economo's disease (encephalitis) (a-kon'o-mōz) [Constantin von *Economo*, Austrian neurologist, 1876-1931] encephalitis lethargica.

economy (e-kon'o-me) [Gr. *oikos* house + *nomos* law] the management of domestic affairs. **animal e.**, the system of operation of the bodily processes in organic bodies; also the body as an organized whole. **token e.**, a program of treatment in behavior therapy, usually conducted in a hospital setting, in which the patient may earn tokens by engaging in appropriate personal and social behavior, or lose tokens by inappropriate or antisocial behavior; tokens may be exchanged for tangible rewards (food snacks, clothing, etc.) or for special privileges (watching television, passes to leave the hospital, etc.).

ecoparasite (e'ko-par'ah-sit) ecosite.

écorché (a'kor-sha') [Fr.] a painting or sculpture of a man or other animal exhibited as deprived of its skin, so that the muscles are exposed for study.

ecostate (e-kos'tāt) [L. *e* without + *costa* rib] ribless; without ribs.

ecosystem (ek'o-sis'tem) the fundamental unit in ecology, comprising the living organisms and the nonliving elements interacting in a certain defined area.

ecotaxis (ek'o-tak'sis) [Gr. *oikos* house + *taxis* arrangement] the movement or "homing" of a circulating cell, e.g., a lymphocyte, to a specific anatomical compartment.

ecotone (ek'o tōn) a transition region where adjacent biomes blend, containing some organisms from each of the adjacent biomes plus some that are characteristic of, and perhaps restricted to, the ecotone; this region tends to have more species and to be more densely populated than either adjacent biome.

Ecotrin (ek'o-trin) trademark for a preparation of aspirin.

écouvillon (a-koo've-yaw') [Fr.] a stiff brush or swab used for swabbing cavities and inflammatory lesions.

écouvillonnage (a-koo/'ve-yō-nahzh') [Fr.] the scrubbing of a cavity or an infected area.

ecphoria (ek-'fo-'re-ah) [Gr. *ekphoros* to be made known + *-ia*] the revival of an engram, or memory trace.

ecphorize (ek-'fo-'rīz) to revive an engram, or memory trace, and bring it into the consciousness.

ecphory (ek-'fo-'re) ecphoria.

ecphyadectomy (ek-'fi-ah-dek-'to-me) [Gr. *ekphyas* appendix + *ektomē* excision] (*obs.*) appendectomy.

ecphyaditis (ek-'fi-ah-di-'tis) [Gr. *ekphyas* appendix + *-itis*] appendicitis.

ecphylactic (ek-'fi-lak-'tik) pertaining to or marked by ecphylaxis.

ecphylaxis (ek-'fi-lak-'sis) [Gr. *ek* out of + *phylaxis* a guarding] a condition of impotency of the antibodies in the blood.

écrasement (a-krahz-maw') [Fr.] removal by means of the *écraseur*.

écraseur (e-krah-zer') [Fr. "crusher"] an instrument containing a chain or cord to be looped about a part and then tightened in order to transect the portion enclosed within the loop.

ECS electroconvulsive shock; see *shock therapy*, under *therapy*.

ecsomatics (ek-'so-mat-'iks) [Gr. *ek* out + *sōma* body] the study by laboratory methods of the materials removed from the body.

ecsovirus (ek-'so-vi-'rus) [from enteric cytopathic swine orphan + *virus*] an enteric orphan virus isolated from swine; also written *ECSO virus*.

ecstasy (ek-'stah-se) [Gr. *ekstasis*] a kind of trance or state of fixed contemplation with mental exaltation, partial abeyance of most of the functions, and rapt expression of countenance.

ecstatic (ek-stat-'ik) pertaining to or characterized by ecstasy.

ectrophy (ek-'stro-fe) [Gr. *ekstrephēin* to turn inside out] *ectrophy*.

E.C.T. electroconvulsive therapy.

ectacolia (ek-'tah-ko-'le-ah) ectasia of a portion of the colon.

ectad (ek-'tad) [Gr. *ektos* without] outward; the reverse of inward.

ectal (ek-'tal) [Gr. *ektos* without] superficial or external.

ectasia (ek-'ta-'ze-ah) [Gr. *ektasis* + *-ia*] dilatation, expansion, or distention. **alveolar e.**, overdistention of the pulmonary alveoli. **annuloaortic e.**, dilatation of the proximal aorta and the fibrous ring of the heart at the aortic orifice, marked by aortic regurgitation and, when severe, by dissecting aneurysm; it is often associated with Marfan's syndrome. **corneal e.**, keratectasia. **diffuse arterial e.**, racemose aneurysm. **hypostatic e.**, dilatation of a blood vessel from the effect of gravity on the blood. **mammary duct e.**, a condition characterized chiefly by dilatation of the collecting ducts of the mammary gland, inspissation of breast secretion, intraductal inflammation, and marked periductal and interstitial chronic inflammatory reaction in which plasma cells are prominent; a benign process associated with atrophy of the duct epithelium, it generally occurs during or after the menopause. **papillary e.**, a circumscribed dilatation of the capillaries, forming a red spot on the skin. **scleral e.**, see under *staphyloma*. **tubular e.**, a congenital, usually bilateral and diffuse condition of the renal medulla characterized by dilated collecting tubules and medullary cysts.

ectasis (ek-'tah-sis) ectasia.

ectasy (ek-'tah-se) ectasia.

ectatic (ek-tat-'ik) distended or stretched; distensible.

ectental (ek-ten-'tal) [Gr. *ektos* without + *entos* within] pertaining to the ectoderm and endoderm, and to their line of junction.

ecterograph (ek-'ter-o-'graf) [Gr. *ektos* outside + *graphein* to write] an apparatus for recording graphically the movements of the intestines.

ectethmoid (ek-teth-'moid) [Gr. *ektos* without + *ethmoid*] one of the paired lateral masses of the ethmoid bone.

ecthyma (ek-thi-'mah) [Gr. *ekthyma*] a shallowly ulcerative form of impetigo, usually on the shins or forearms; it is usually secondary to minor trauma and often results in scarring. **e. contagio'sum**, contagious pustular dermatitis of sheep caused by a virus, which sometimes infects human beings; orf. **e. gangreno'sum**, a *Pseudomonas* infection in the newborn resembling dermatitis gangrenosa infantum (q.v.). **e. infecti'o'sum**, orf. **e. syphiliti'cum**, an ecthymiform eruption in tertiary syphilis.

ecthymiform (ek-thi-'mī-form) resembling ecthyma.

ecthyreosis (ek-thi-'re-o-'sis) [Gr. *ek* out + *thyroid*] absence of the thyroid gland or loss of the function of the gland.

ecto- [Gr. *ektos* outside] a prefix denoting situated on, without, or on the outside.

ectoantigen (ek-'to-an-'te-jen) an antigen which seems to be loosely attached to the outside of bacteria so that it can be readily removed by shaking them in physiological sodium chloride solution; also an antigen formed in the ectoplasm of a bacterium.

ectobiology (ek-'to-bi-ol-'o-je) the study of the properties and

biochemical constitution of the cell surface and the specific enzymes at the surface.

ectoblast (ek-'to-blast) [*ecto-* + Gr. *blastos* germ] 1. the ectoderm. 2. an external membrane; a cell wall.

ectocardia (ek-to-kar-'de-ah) [*ecto-* + Gr. *kardia* heart] congenital displacement of the heart, either inside or outside the thorax.

ectocervical (ek-'to-ser-'vi-kal) of or pertaining to the ectocervix.

ectocervix (ek-'to-ser-'viks) the portio vaginalis cervicis, the part of the uterine cervix lined with stratified squamous epithelium; called also *exocervix*.

ectocinerea (ek-'to-si-ne-'re-ah) [*ecto-* + *cinerea*] (*obs.*) the cortical gray matter of the brain.

ectocinereal (ek-'to-si-ne-'re-al) (*obs.*) relating to the ectocinerea.

ectocolon (ek-'to-ko-'lon) [Gr. *ektasis* dilatation + *kolon* colon] dilatation of the colon.

ectocolostomy (ek-'to-ko-'los-'to-me) [*ecto-* + *colostomy*] (*obs.*) the surgical formation of an opening into the colon through the abdominal wall.

ectocommensal (ek-'to-kom-men-'sal) a commensal organism that lives outside the body of its symbiotic companion, but cannot be separated from it.

ectocondyle (ek-'to-kon-'dil) the external condyle of a bone.

ectocuneiform (ek-'to-ku-ne-'i-form) the lateral cuneiform bone.

ectocytic (ek-'to-si-'tik) [*ecto-* + Gr. *kytos* hollow vessel] outside the cell.

ectoderm (ek-'to-derm) [*ecto-* + Gr. *derma* skin] the outermost of the three primary germ layers of the embryo. From it are developed the epidermis and the epidermal tissues, such as the nails, hair, and glands of the skin, the nervous system, the external sense organs, as the ear, eye, etc., and the mucous membrane of the mouth and anus. Cf. *entoderm* and *mesoderm*. **amniotic e.**, the inner layer of the amnion (and covering of the umbilical cord) that is continuous with body ectoderm. **basal e.**, trophoblast covering the eroded uterine tissue that faces the placental sinuses. **blastodermic e.**, the external layer of a blastula or blastodisk; called also *primitive e.* **chorionic e.**, the trophoblast. **extraembryonic e.**, a derivative of epiblast or ectoderm located outside the body of the embryo. **neural e.**, the region of the ectoderm destined to become the neural tube; neuroderm. **primitive e.**, blastodermic e.

ectodermal (ek-'to-der-'mal) [*ecto-* + Gr. *derma* skin] pertaining to or derived from the ectoderm.

ectodermatosis (ek-'to-der-'mah-to-'sis) ectodermosis.

ectodermic (ek-'to-der-'mik) ectodermal.

ectodermoidal (ek-'to-der-moid-'al) of the nature of or resembling the ectoderm.

ectodermosis (ek-'to-der-mo-'sis) a disorder based on congenital maldevelopment of the organs of ectodermal derivation, i.e., nervous system, retina, eyeball, and skin. **e. erosi'va pluri-orificia'lis**, Stevens-Johnson syndrome.

ectoentad (ek-'to-en-'tad) from without inward.

ectoenzyme (ek-'to-en-'zim) an enzyme secreted from a cell into the surrounding medium; an extracellular enzyme. Cf. *endoenzyme*.

ectogenic (ek-'to-jen-'ik) ectogenous.

ectogenous (ek-toj'ē-nus) [*ecto-* + Gr. *gennan* to produce] introduced from without; arising from causes outside the organism, as an infectious disease.

ectoglia (ek-tog-'le-ah) [*ecto-* + Gr. *glia* glue] the thin, external marginal layer of the early medullary tube of the embryo.

ectoglobular (ek-'to-glob-'u-lar) [*ecto-* + *globule*] (*obs.*) formed outside the blood cells.

ectogony (ek-tog-'o-ne) the influence exerted on the mother by the developing embryo. Improperly called *metaxenia*.

ectohormone (ek-'to-hor-'mōn) a hormone secreted to the outside of the body, as a pheromone.

ectolecithal (ek-'to-les-'i-thal) [*ecto-* + Gr. *lekithos* yolk] having the yolk situated peripherally; see under *ovum*.

ectolysis (ek-tol-'i-sis) [*ectoplasm* + *lysis*] lysis of the ectoplasm.

ectomere (ek-'to-mēr) [*ecto-* + Gr. *meros* part] any of the blastomeres which share in the formation of the ectoderm.

ectomesoblast (ek-'to-mes-'o-blast) the layer of cells which has not yet become differentiated into ectoblast and mesoblast.

-ectomize (ek-'to-mīz) [Gr. *ektomē* excision + *-izein* to render] a word termination meaning to deprive by excision, as in *thyroidectomize*, *adrenalectomize*, etc. By extension, used in terms to designate destruction or deprivation by other methods as well.

ectomorph (ek-'to-morf) an individual having a type of body build in which tissues derived from the ectoderm predominate; there is a preponderance of linearity and fragility, with large surface area, thin muscles and subcutaneous tissue, and slightly developed digestive viscera, as contrasted with endomorph and mesomorph.

ectomorphic (ek/'to-mor/'fik) pertaining to or characteristic of an ectomorph.

ectomorphy (ek/'to-mor/'fe) [ectoblast + Gr. *morphē* form] the condition of being an ectomorph.

ectomy (ek/'to-me) [Gr. *ektomē*] excision of an organ or part. Used as a word termination to indicate excision of the structure or organ designated by the root to which it is affixed, as *appendectomy*, *tonsillectomy*, etc. By extension, used in terms to designate destruction or deprivation by other methods as well.

ectonuclear (ek/'to-nu/'kle-ar) outside the nucleus of a cell.

ectopagus (ek-top/'ah-gus) [ecto- + Gr. *pagos* something fixed] a double monster connected along the side of the body, so that the components are definitely right and left, the inner arms and/or legs being represented by a bilateral median limb.

ectoparasite (ek/'to-par/'ah-sit) [ecto- + *parasitē*] a parasite that lives on the outside of the body of the host.

ectopectoralis (ek/'to-pek/'to-ra/'lis) *musculus pectoralis major*.

ectoperitoneal (ek/'to-per/'i-to-ne/'al) relating to the external or abdominal surface of the peritoneum.

ectoperitonitis (ek/'to-per/'i-to-ni/'tis) [ecto- + *peritonitis*] inflammation of the external or abdominal side of the peritoneum.

ectophyte (ek/'to-fit) [ecto- + Gr. *phyton* plant] a vegetable parasite or species living on the outside of the body of its host.

ectopia (ek-to/'pe-ah) [Gr. *ektōpos* displaced + *-ia*] displacement or malposition, especially if congenital. **e. cloa'cae**, extrophy of cloaca. **e. cor'dis**, congenital displacement of the heart outside the thoracic cavity. **e. cor'dis, pectoral**, location of the heart outside the chest wall, through a fissure in the lower sternum. **e. cor'dis abdominalis**, location of the heart in the abdominal cavity. **crossed renal e.**, a condition in which the two kidneys are on the same side of the body, one ureter crossing the midline. **e. i'ridis**, displacement of the iris, with resultant abnormal smallness of the pupil. **e. len'tis**, displacement of the crystalline lens of the eye. **e. pupil'lae congen'ita**, congenital displacement of the pupil. **renal e.**, **e. re'nis**, displacement of the kidney. **e. tes'tis**, dislocation of the testicle. **e. ves'i'cae**, extrophy of the bladder.

ectopic (ek-top/'ik) 1. pertaining to or characterized by ectopia. 2. located away from normal position, as in ectopic pregnancy. 3. arising from an abnormal site or tissue.

ectopism (ek/'to-pizm) anatopism.

ectoplacenta (ek-to-plah-sen/'tah) [ecto- + Gr. *placenta* cake] the actively growing trophoblast that becomes the placenta in rodents.

ectoplasm (ek/'to-plazm) [ecto- + Gr. *plasma* a thing formed] plasma membrane.

ectoplasmatic (ek/'to-plaz-mat/'ik) pertaining to ectoplasm.

ectoplast (ek/'to-plast) cell membrane.

ectoplastic (ek/'to-plas/'tik) [ecto- + Gr. *plassein* to shape] having a formative power on the surface, as *ectoplastic* cells.

ectopotomy (ek/'to-pot/'o-me) [Gr. *ektōpos* displaced + Gr. *tomē* a cutting] operation for extrauterine pregnancy.

ectopterygoid (ek/'to-ter/'i-goid) *musculus pterygoideus lateralis*.

ectopy (ek/'to-pe) ectopia.

ectosarc (ek/'to-sark) [ecto- + Gr. *sarx* flesh] plasma membrane.

ectoscopy (ek-tos/'ko-pe) [ecto- + Gr. *skopein* to examine] a diagnostic method based on observation of chest and abdominal movements, and said to be capable of determining the outlines of the lungs and of localized internal conditions.

ectosite (ek/'to-sit) (obs.) ectoparasite.

ectoskeleton (ek/'to-skel/'ē-ton) exoskeleton.

ectosphere (ek/'to-sfēr) the outer zone of the centrosome.

ectosteal (ek-tos/'te-al) pertaining to or situated on the outside of a bone.

ectostosis (ek/'to-sto/'sis) [ecto- + Gr. *osteon* bone] ossification beneath the perichondrium of a cartilage or the periosteum of a bone.

ectosuggestion (ek/'to-sug-jes/'chun) a suggestion originating from outside. Cf. *autosuggestion*.

ectosymbiont (ek/'to-sim/'be-ont) a symbiont that lives outside the body of the organism with which it is biologically related.

ectothrix (ek/'to-thriks) [ecto- + Gr. *thrix* hair] a fungus which grows inside the hair shaft but also produces a sheath of arthrospores on the outside of the hair. Such fungi include *Trichophyton verrucosum* (large-spored e.) and *T. mentagrophytes*, *Microsporum audouinii*, *M. canis*, and *M. gypseum* (small-spored e's).

ectotoxemia (ek/'to-tok-se/'me-ah) [ecto- + *toxemia*] (obs.) toxemia produced by a substance introduced from outside the body.

ectotoxin (ek/'to-tok/'sin) (obs.) exotoxin.

Ectotrichophyton (ek/'to-tri-kof/'i-ton) [ecto- + Gr. *thrix* hair + *phyton* plant] former name for a genus of fungi, now included in the genus *Trichophyton*.

ectozoa (ek/'to-zo/'ah) [Gr.] plural of *ectozoon*.

ectozool (ek/'to-zo/'al) pertaining to or caused by ectozoa.

ectozoon (ek/'to-zo/'on), pl. *ectozōa* [ectō- + Gr. *zōon* animal] ectoparasite.

ectro- [Gr. *ektrōsis* miscarriage] a combining form signifying congenital absence of a part.

ectrodactylia (ek/'tro-dak-'til'e-ah) ectrodactyly.

ectrodactylism (ek/'tro-dak-'ti-lism) ectrodactyly.

ectrodactyly (ek/'tro-dak-'ti-le) [Gr. *ektrōsis* abortion + *daktylos* finger] congenital absence of all or of only part of a digit (*par-tial e.*).

ectrogenic (ek/'tro-jen/'ik) pertaining to or characterized by ectrogeny.

ectrogeny (ek-troj/'ē-ne) [Gr. *ektrōsis* abortion + *gennan* to produce] congenital absence or defect of a part.

ectromelia (ek/'tro-me/'le-ah) [ecto- + Gr. *melos* limb + *-ia*] gross hypoplasia or aplasia of one or more long bones of one or more limbs; the term includes amelia, hemimelia, and phocomelia. **infectious e.**, a disease of mice caused by a poxvirus and characterized by gangrene and often loss of one or more of the feet and sometimes of other external parts, and by necrotic areas in the liver, spleen, and other organs; called also *mousepox*.

ectromelic (ek/'tro-mel/'ik) pertaining to or characterized by ectromelia.

ectromelus (ek-trom/'ē-lus) [Gr. *ektrōsis* abortion + *melos* limb] an individual exhibiting ectromelia.

ectrometacarpia (ek/'tro-met/'ah-kar/'pe-ah) [Gr. *ektrōsis* abortion + *metacarpus* + *-ia*] congenital absence of a metacarpal bone.

ectrometatarsia (ek/'tro-met/'ah-tar/'se-ah) [Gr. *ektrōsis* abortion + *metatarsus* + *-ia*] congenital absence of a metatarsal bone.

ectrophalangia (ek/'tro-fah-lan/'je-ah) congenital absence of one or more phalanges of a digit.

ectropion (ek-tro/'pe-on) [Gr. "an everted eyelid"; *ektropēa* turning aside] the turning outward (eversion) of an edge or margin, as of the eyelid, resulting in exposure of the palpebral conjunctiva. **cervical e.**, eversion of uterine cervix. **e. cicatri'ceum, cicatricial e.**, eversion of the margin of an eyelid caused by contraction of scar tissue in the lid or by contraction of the skin. **flaccid e.**, ectropion of the lower lid resulting from reduced tone of the orbicularis oculi muscle. **e. luxu'rians, e. sarcomato'sum, paralytic e., e. paralyt'icum**, eversion of the margin of the lower eyelid as a result of paralysis of the facial nerve, and loss of contractile power of the orbicularis oculi muscle. **e. of pigment layer**, proliferation of the cells in the posteriorly situated pigment layer of the iris, leading to their migration around the pupillary margin to encroach upon the anterior surface of the iris. **e. sarcomato'sum**, eversion of an eyelid resulting from chronic thickening of the palpebral conjunctiva; called also *e. luxurians*. **senile e., e. seni'lis**, eversion of the lower eyelid associated with relaxation of the fibers of the palpebral portion of the orbicularis oculi muscle as a concomitant of age, or occurring as a result of atrophic changes in the skin. **spastic e., e. spas'ticum**, ectropion caused by tonic spasm of the orbicularis oculi muscle. **e. u'veae**, eversion of the margin of the pupil, often congenital (*e. u'veae congen'itum*), and frequently due to the presence of a newly formed membrane on the anterior layer of the iris, or to the formation of connective tissue in the stroma, particularly in diabetes. Called also *iridectropium*.

ectropionize (ek-tro/'pe-ō-niz/'o) to put into a state of eversion.

ectropium (ek-tro/'pe-um) ectropion.

ectrosis (ek-tro/'sis) [Gr. *ektrōsis*] 1. abortion. 2. treatment that arrests the development of disease.

ectrosyndactylia (ek/'tro-sin/'dak-'til'e-ah) ectrosyndactyly.

ectrosyndactyly (ek/'tro-sin-dak-'ti-le) [Gr. *ektrōsis* abortion + *syn* together + *daktylos* finger] a condition in which some of the digits are missing and those that remain are webbed, so that they are more or less attached.

ectrotic (ek-trot/'ik) 1. pertaining to or producing abortion. 2. arresting the development of a disease.

ectylurea (ek/'til-u-re/'ah) chemical name: cis-(2-ethylcrotonyl)-urea. A white crystalline powder, C₈H₁₂N₂O₂, used as a sedative.

ectyonin (ek/'ti-on/'in) an antimicrobial substance obtained from the sponge *Microciona prolifera*.

ectype (ek/'tip) an unusual type of physical or mental constitution.

ectypia (ek-ti/'pe-ah) deviation from type; the possession of an unusual type of constitution.

eczema (ek/'zē-mah) [Gr. *ekzein* to boil out] 1. a superficial inflammatory process involving primarily the epidermis, characterized early by redness, itching, minute papules and vesicles, weeping, oozing, and crusting, and later by scaling, lichenification, and often pigmentation. It is not a disease entity or an acceptable diagnosis. 2. atopic dermatitis. **allergic e. (obs.)**, allergic dermatitis. **atopic e. (obs.)**, 1. see under *dermatitis*. 2. atopic dermatitis. **e. cap'itis (obs.)**, seborrheic dermatitis or allergic contact dermatitis of the scalp. **contact e.**, contact dermatitis (def. 1). **e. ep'ilans (obs.)**, eczema with loss of hair. **facial**

e. of ruminants, a photosensitive disease of ruminants, particularly in New Zealand, due to ingestion of the spores of the mold *Pithomyces chartarum* (class Deuteromycetes), which contain sporidesmin. **flexural e.**, atopic dermatitis. **e. herpetiformis**, disseminated herpes simplex; see also *Kaposi's varicelliform eruption*. **impetiginous e.**, infectious eczematoid dermatitis. **infantile e.**, atopic dermatitis in infants. Called also *Besnier's prurigo* (in Britain). **e. intertrigo**, intertrigo. **e. marginatum**, tinea cruris. **nummular e.**, **e. nummularis**, eczema in which the patches are coin shaped; it may be a form of neurodermatitis. **orbicular e.**, nummular e. **seborrhoeic e.**, **e. seborrhoeica** (obs.), seborrheic dermatitis. **solar e.**, **e. solaris** (obs.), polymorphous light eruption. **stasis e.**, stasis dermatitis. **e. vaccina**, a serious and generalized vesiculopustular eruption caused by the vaccinia virus, superimposed upon a preexisting chronic dermatitis, usually atopic dermatitis. See also *Kaposi's varicelliform eruption*.

eczematid, **eczematide** (ek-zem'ah-tid) loosely, an eczematous lesion not caused by external contact-type allergy, or by infection in the involved area; the term has different uses in different countries and little currency in the United States.

eczematization (ek-zem'ah-ti-zah'shun) persistent eczema-like lesions of the skin, usually due to the continued trauma of scratching.

eczematogenic (ek-zem'ah-to-jen'ik) causing eczema.

eczematoid (ek-zem'ah-toid) resembling eczema.

eczematous (ek-zem'ah-tus) affected with or of the nature of eczema.

E.D. erythema dose; effective dose.

ED₅₀ median effective dose; a dose that produces the desired effect in 50 per cent of a population.

edathamil (ē-dath'ah-mil) edetate. **calcium disodium e.**, edetate calcium disodium. **e. disodium**, edetate disodium.

Eddowes' syndrome (disease) (ed'ōz) [Alfred Eddowes, British physician, 1850-1946] see under *syndrome*.

Edebohls' operation, position (ed'e-bōlz) [George Michael Edebohls, New York surgeon, 1853-1908] see under *operation* and *position*.

Edocrin (ē-dek'krin) trademark for preparations of ethacrynic acid.

Edelman, Gerald Maurice. American biochemist, born 1929, co-winner, with Rodney Porter, of the Nobel prize in physiology and medicine for 1972, for his work on the chemical structure of antibodies.

Edelmann's anemia, cell (a'del-manz) [Adolf Edelmann, physician in Vienna, 1885-1939] see under *anemia*, and see *kinocyte*.

edema (ē-de'mah) [Gr. *oīdēma* swelling] the presence of abnormally large amounts of fluid in the intercellular tissue spaces of the body; usually applied to demonstrable accumulation of excessive fluid in the subcutaneous tissues. Edema may be localized, due to venous or lymphatic obstruction or to increased vascular permeability, or it may be systemic due to heart failure or renal disease. Collections of edema fluid are designated according to the site, e.g., ascites (peritoneal cavity), hydrothorax (pleural cavity), and hydropericardium (pericardial sac). Massive generalized edema is called *anasarca*. **acute circumscribed e.**, **acute essential e.**, angioneurotic e. **alimentary e.**, nutritional edema. **ambulant e.** (obs.), Calabar swelling; see under *swelling*. **angioneurotic e.**, recurring attacks of transient edema suddenly appearing in areas of the skin or mucous membranes and occasionally of the viscera, often associated with dermatographism, urticaria, erythema, and purpura. In the hereditary form, transmitted as an autosomal dominant trait, it tends to involve more visceral lesions than the sporadic form, especially of the respiratory and gastrointestinal tracts; two types of the familial form have been identified: one involves failure of synthesis of the inhibitor of complement component C1, the other involves the synthesis of an abnormal protein. Called also *acute circumscribed e.*, *Milton's e.*, *Quincke's e.*, *wandering e.*, *angioedema*, and *giant urticaria*. **e. artefactum**, edema that is artificially produced. **Berlin's e.**, commotio retinae. **blue e.**, a puffed, bluish appearance of a limb in hysterical paralysis. **brain e.**, an excessive accumulation of fluid in the brain substance (*wet brain*); it may be due to various causes, including trauma, tumor, and increased permeability of the capillaries occurring as a result of anoxia or exposure to toxic substances. **brown e.**, hardening and infiltration of the lung with a brownish fluid. **e. bullosum vesicae**, a condition of the mucous lining of the bladder marked by the formation of clear vesicles with small white particles floating between them. **Calabar e.**, Calabar swellings. **e. calidum**, inflammatory e. **cardiac e.**, a manifestation of congestive heart failure, caused by increased venous and capillary pressures and often associated with the retention of sodium by the kidneys. **circumscribed e.**, angioneurotic e. **dependent e.**, edema affecting most seriously the lowermost or dependent parts of the body. **famine e.**, nutritional e. **fingerprint e.**, edema in which the whorls of the fingerprint are clearly visible after circumferential manipulation of a pressure point on the forehead or sternum, considered indicative of

intracellular fluid excess. **e. frig'idum**, noninflammatory e. **e. fu'gax**, transient accumulation of fluid in a specific region. **gaseous e.**, edema accompanied with gas formation, as in gas bacillus infection and subcutaneous emphysema. **giant e.**, angioneurotic e. **hepatic e.**, edema due to faulty functioning of the liver. **high-altitude pulmonary e.**, pulmonary edema caused by hypoxia that develops as a result of prolonged exertion after ascending quickly to high altitudes without the benefit of acclimatization; seen especially in mountain climbers. **Hu-guenin's e.**, acute congestive edema of the brain. **hunger e.**, nutritional e. **hydremic e.**, edema in conditions marked by hydremia. **hysterical e.**, blue e. **idiopathic e.**, edema of unknown cause affecting women, occurring intermittently over a period of years and usually worse during the premenstrual phase; it is associated with increased aldosterone secretion. **inflammatory e.**, a form due to inflammation, and attended with redness and pain. **insulin e.**, edema which sometimes follows the injection of insulin. **invisible e.**, the accumulation of a considerable amount of fluid in the subcutaneous tissues before it becomes demonstrable. **local intracutaneous e.**, urticaria. **e. of lung**, pulmonary e. **lymphatic e.**, edema associated with obstruction of the lymph vessels. **malignant e.**, edema marked by rapid extension, with destruction of tissue and formation of a gas. **migratory e.**, angioneurotic e. **Milroy's e.**, see under *disease*. **Milton's e.**, angioneurotic e. **mucous e.**, myxedema. **e. neonato'rum**, a disease of premature and feeble infants that resembles sclerema and is marked by spreading edema with cold, livid skin. **nephrotic e.**, edema occurring in nephrosis and in the intermediate stage of diffuse nephritis. **neuropathic e.**, pseudolipoma. **noninflammatory e.**, edema without redness and pain, occurring from passive congestion or from lowered serum osmolarity. **nonpitting e.**, edema in which the tissues cannot be pitted by pressure. **nutritional e.**, a disorder of nutrition due to long-continued diet deficiency of protein and/or calories, and marked by anasarca and edema; called also *alimentary e.*, *famine e.*, *war e.*, *hunger e.*, and *nutritional, famine, or war dropsy*. **paroxysmal pulmonary e.**, pulmonary edema marked by nocturnal attacks of difficult respiration, audible rales, wheezes, and cough, caused by acute left ventricular failure, usually associated with hypertensive heart disease. **passive e.**, edema occurring because of obstruction to vascular or lymphatic drainage from the area. **periodic e.**, angioneurotic e. **periretinal e.**, central serous retinopathy. **Pirogoff's e.**, malignant e. **pitting e.**, edema in which the tissues show prolonged existence of the pits produced by pressure. **placental e.**, the presence of fluid in the villi of the placenta, the villi being club-shaped and irregularly swollen. **prehepatic e.**, edema occurring in prehepatic hypoproteinemia. **pulmonary e.**, abnormal, diffuse, extravascular accumulation of fluid in the pulmonary tissues and air spaces due to changes in hydrostatic forces in the capillaries or to increased capillary permeability; it is characterized clinically by intense dyspnea and, in the intra-alveolar form, by voluminous expectoration of frothy pink serous fluid and, if severe, by cyanosis. **purulent e.**, a swelling due to the effusion of a purulent fluid. **Quincke's e.**, angioneurotic e. **renal e.**, edema due to nephritis and the consequent hypoproteinemia. **rheumatismal e.**, painful red edematous swellings on the limbs in rheumatism, due to subcutaneous exudation. **salt e.**, edema produced by an increase of sodium chloride in the diet. **solid e.**, myxedema. **solid e. of lungs**, a rubbery consistency and gelatinous appearance of the lungs sometimes associated with hypertensive left ventricular failure and uremia. **terminal e.**, pulmonary edema which frequently develops as an agonal event from circulatory failure. **toxic e.**, edema caused by a poison. **vasogenic e.**, edema characterized by increased permeability of capillary endothelial cells; the most common form of brain edema. **venous e.**, edema in which the effused liquid comes from the blood. **vernal e. of lung**, edema of the lung occurring in spring and considered to be allergic. **wandering e.**, angioneurotic e. **war e.**, nutritional e.

edemagen (ē-de'mah-jen) an irritant that elicits edema by causing capillary damage but not the cellular response of true inflammation. Cf. *inflammagen*.

edematogenous (ē-dem'ah-tij'ē-nus) edematogenic.

edematization (ē-dem'ah-ti-zah'shun) the process of becoming or of making edematous.

edematogenic (ē-dem'ah-to-jen'ik) producing or causing edema.

edematous (ē-dem'ah-tus) pertaining to or affected by edema.

Edentata (ē'den-ta'tah) an order of mammals including armadillos, tree sloths, and anteaters.

edentate (ē-den'tāt) edentulous.

edentia (ē-den'she-ah) [L. *e* without + *dens* tooth] absence of the teeth.

edentulate (ē-den'tu-lāt) edentulous.

edentulous (ē-den'tu-lus) [L. *e* without + *dens* tooth] without teeth; having lost the natural teeth.

edetate (ed'ē-tāt) any salt or ester of edetic acid (ethylenediaminetetraacetic acid, EDTA). Formerly called *edathamil*. **e.**

- calcium disodium** [USP], **calcium disodium e.**, chemical name: disodium $[N,N',1,2\text{-ethanediylbis}[N\text{-(carboxymethyl)glycinate}]](4-)-N,N',O,O',O^N\text{calcate}$ (2-). A metal complexing agent, $C_{10}H_{12}CaNa_2O_8 \cdot xH_2O$, consisting of a mixture of the dihydrate and tetrahydrate calcium disodium salt of edetic acid, used intramuscularly or intravenously in the diagnosis and treatment of lead poisoning. Called also *calcium disodium edathamil*, *calcium EDTA*, *sodium calcium edetate*, and *sodium calcium edetate e.* **disodium** [USP], **disodium e.**, chemical name: $N,N',1,2\text{-ethanediylbis}[N\text{-(carboxymethyl)glycine}]$ disodium salt. A metal complexing agent, $C_{10}H_{14}N_2Na_2O_8 \cdot 2H_2O$, used as a chelating pharmaceutical aid. It is also used in poisoning with lead and other heavy metals and, because of its affinity for calcium, in the treatment of hypercalcemia. Called also *edathamil disodium*. **e. sodium**, the tetrasodium salt of edetic acid, $C_{10}H_{12}N_2Na_4O_8$, used as a chelating agent. **e. trisodium**, the trisodium salt of edetic acid, $C_{10}H_{13}N_2Na_3O_8$, sometimes used similarly to edetate disodium.
- edge** (ej) a thin side or border. **cutting e.**, the angle formed by the merging of two flat surfaces, by which something may be cut, such as the blade of a knife, or the incisal surface of an anterior tooth. **denture e.**, see under *border*. **incisal e.**, the junction of the labial surface of an anterior tooth with a flattened linguoincisor surface created by occlusal wear.
- edge-strength** (ej' strength) the resistance offered by an edge to a fracturing force, applied especially in dentistry to such resistance offered by the edge of an amalgam restoration.
- Edinger's law, nucleus** (ed'ing-gerz) [Ludwig Edinger, German neurologist, 1855-1918] see under *law* and *nucleus*.
- Edinger-Westphal nucleus** (ed'ing-ger-vest'fahl) [L. Edinger; Carl Friedrich Otto Westphal, German neurologist, 1833-1890] nucleus accessorius.
- edipism** (ed'i-pizm) [from *Oedipus*, King of Thebes. See *Oedipus complex*] intentional injury of one's own eyes.
- edisylate** (ē-dis'i-lāt) USAN contraction for 1,2-ethanedisulfonate.
- Edleisen's reagent test** (ed'lef-senz) [Gustav J. J. F. Edleisen, German physician, 1842-1910] see under *reagent*.
- EDR** effective direct radiation; electrodermal response.
- edrophonium chloride** (ed'ro-fō-ne-um) [USP] chemical name: *N*-ethyl-3-hydroxy-*N,N*-dimethylbenzenaminium chloride. A cholinergic, $C_{10}H_{16}ClNO$, occurring as a white, crystalline powder; used as an antidote for curare principles, as a diagnostic aid in myasthenia gravis, and in the treatment of myasthenic crises, administered intramuscularly and intravenously.
- Edsall's disease** (ed'salz) [David Linn Edsall, American physician, 1869-1945] heat cramp.
- EDTA** see *edetate*.
- educable** (edj'u-kah-b'l) capable of being educated; the term is used with special reference to persons with mild mental retardation (I.Q. approximately 52-67) who are capable of achieving an academic level of the fourth to fifth grade and may be able to be self-supporting. Cf. *trainable*.
- education** (e-duk'shun) [L. *e(ex)* from + *ducere* to lead] the process of leading out from or the dissipation of a former state, as the restoration to normal physiological state of an anesthetized patient.
- edulcorant** (e-dul'ko-rant) sweetening.
- edulcorate** (e-dul'ko-rāt) to sweeten.
- EEE** eastern equine encephalomyelitis.
- EEG** electroencephalogram.
- eelworm** (ēl'wurm) (obs.) any roundworm, such as ascaris.
- E.E.N.T.** eye-ear-nose-throat.
- EFA** essential fatty acids.
- effacement** (ē-fās'ment) the obliteration of the cervix in labor when it is so changed that only the thin external os remains.
- effect** (ē-fekt') the result produced by an action. **additive e.**, the combined effect produced by the action of two or more agents, being equal to the sum of their separate effects. **anachoretic e.**, see *anachoresis*. **Anrep e.**, augmented resistance to outflow in the heart. **Blinks e's**, brief enhancement in photosynthesis which follows shifts from a long wavelength to a shorter wavelength. **Bohr e.**, displacement of the oxyhemoglobin dissociation curve by a change in partial pressure of carbon dioxide or in pH. **Braid e.**, in hypnosis, alternating pupillary size (constriction then dilation), wavy pupil motion, eyelid closure, general tonic rigidity, specific catalepsies associated with rises in pulse rate, hypersuggestibility, and stupor. **Bruce e.**, the blocking of pregnancy in a newly impregnated female mouse by a pheromone (the odor of a strange male). **clasp-knife e.**, a sudden complete flexion of the limb in the lengthening reaction. **Compton e.**, the change in the wavelength of x- or gamma-radiation due to the interaction of an incident photon with an orbital electron of an atom, which produces a recoil electron and a scattered photon of reduced energy. **contrary e.**, Hata's phenomenon. **Crabtree e.**, the inhibition of oxygen consumption on the addition of glucose to tissues or microorganisms having a high rate of aerobic glycolysis; the converse of the Pasteur effect.
- Danysz e.**, see under *phenomenon*. **Deelman e.**, scarification of the skin in artificial carcinogenesis tends to localize the subsequent carcinomata at the scarified area. **Doppler e.**, the relationship of the apparent frequency of waves, as of sound, light, and radio waves, to the relative motion of the source of the waves and the observer, the frequency increasing as the two approach each other and decreasing as they move apart. **Emerson e.**, the photosynthetic efficiency of a long wavelength of light is enhanced by simultaneous exposure of plant cells to shorter wavelengths of light. **experimenter e's**, demand characteristics, see under *characteristic*. **Fahraeus-Lindqvist e.**, the marked fall in blood viscosity when the diameter of the tube used in measuring is less than 1 mm. **Hallberg e.**, the crests and troughs of ultrashort standing-wave field have opposite electrical signs. **Hallwachs e.**, photoelectrical e. **heel e.**, a variation in roentgen ray intensity output along the longitudinal tube axes in relation to the film. **interpolator e.**, the effect of an electric current throughout the whole region of the body between the two electrodes or poles, as contrasted with polar effects. **isomorphic e.**, Koebner phenomenon. **Mierzejewski e.**, the disharmonious development of gray and white matter of the brain, the gray being in excess. **Nagler e.**, gas-filled tubes, placed in high frequency fields, will act as rectifiers, causing a unidirectional current. **Orbeli e.**, see under *phenomenon*. **Pasteur e.**, the decrease in the rate of glucose utilization glycolysis and the suppression of lactate accumulation by tissues or microorganisms in the presence of oxygen. Cf. *Crabtree e.* **photoelectric e.**, Russell e. **photoelectrical e.**, the ejection of electrons from matter when light of short wavelengths falls upon it; called also *Hallwachs e.* **placebo e.**, the nonspecific psychologic or psychophysiologic effect produced by a placebo. **polar e.**, the effect of the electric current which is manifested at one of the poles. **position e.**, in genetics, the changed effect produced by alteration of the relative positions of various genes on the chromosomes. **pressure e.**, the sum of the changes that are due to obstruction of tissue drainage by pressure. **Raman e.**, when a substance is irradiated with monochromatic light, the spectrum which the substance scatters contains, in addition to a line of the same wavelength as the incident radiation, lines which are satellites of the primary line moving with it when the wavelength of the primary radiation is altered. **Russell e.**, the rendering of a photographic plate developable by agents other than light; called also *photoelectric effect*. **side e.**, see under *S.* **Somogyi e.**, a rebound phenomenon occurring in diabetes: overtreatment with insulin induces hypoglycemia, which initiates the release of epinephrine, ACTH, glucagon, and growth hormone, which stimulate lipolysis, gluconeogenesis, and glycogenolysis, which, in turn, result in a rebound hyperglycemia and ketosis. **Soret e.**, when a solution is maintained for some time in a temperature gradient, a difference in concentration develops along the temperature gradient. **specific dynamic e.**, see under *action*. **Staub-Traugott e.**, a second dose of dextrose by mouth to a normal person one hour after a first dose does not elevate the blood sugar level. **Tyndall e.**, see under *phenomenon*. **Whitten e.**, initiation and synchronization of the estrous cycles and reduction of the frequency of reproductive abnormalities in female mice by the odor (pheromone) of a male mouse placed among them; when more than four female mice are placed together in a cage their estrous cycles become very erratic. **Wolff-Chaikoff e.**, the inhibition of the synthesis of thyroid hormone after administration of large doses of iodide, first demonstrated in the rat. **Zeeman e.**, separation of a single line in the spectrum by suitable magnetic fields.
- effectiveness** (ē-fek'tiv-nes) the ability to produce a specific result or to exert a specific measurable influence. **relative biological e.**, an expression of the effectiveness of other types of radiation in comparison with that of gamma or roentgen rays. Abbreviated RBE.
- effector** (ef-fek'tor) a muscle or gland which contracts or secretes, respectively, in direct response to nerve impulses. **allosteric e.**, an enzyme inhibitor or activator that has its effect at a site other than the catalytic site of the enzyme; see also under *site*, and see *allosteric*.
- effemination** (ē-fem'i-na'shun) feminization.
- efferent** (ef'er-ent) [L. *ex* out + *ferre* to bear] centrifugal; conveying away from a center, as an efferent nerve.
- efferential** (ef'er-en'shal) efferent.
- effervescent** (ef'er-ves'ent) [L. *effervescens*] bubbling; sparkling; giving off gas bubbles.
- efficiency** (e-fish'en-se) ability to accomplish a desired effect or to perform a certain action. **visual e.**, the ratio of the resolving power of the eye that is being tested to that of a normal eye.
- effleurage** (ef-loo-rahzh') [Fr.] stroking movement in massage; frottagé.
- efflorescence** (ef'lo-res'ens) [L. *efflorescentia*] a rash or eruption; any skin lesions, especially numerous and conspicuous lesions.
- efflorescent** (ef'lo-res'ent) [L. *efflorescere* to bloom] becoming powdery in consequence of losing water of crystallization.

effluve (ef-lōōv') a conductive discharge of a high voltage current through a dielectric.

effluvia (ef-floo've-ah) plural of *effluvium*.

effluvium (ef-floo've-um), pl. *efflu'via* [L. "a flowing out"] 1. an outflowing, or shedding, especially of the hair. 2. an exhalation or emanation, applied especially to one of noxious character. **anagen e.**, abnormal loss of hair in the anagen phase, sometimes resulting from administration of cytotoxic drugs, as in chemotherapy of cancer, or from administration of colchicine or methotrexate. **telluric e.**, an emanation arising from the earth; see *mi-asma* and *tellurium*. **telogen e.**, falling out of the hair resulting from the mass precipitation of telogen, caused by a variety of stresses such as parturition, surgical shock, febrile illness, or severe emotional stress.

effraction (ef-frak'shun) a breaking open; a weakening.

effumability (ef'u-mah-bil'i-te) [L. *ex* out + *fumus* smoke] the property of being easily volatilized.

effuse [L. *effusus*, from *ex* out + *fundere* to pour] 1. (ē-fūs') spread out, profuse; said of bacterial growth that is thin, veily, and unusually widely spread. 2. (ē-fūz') to pour out and spread widely.

effusion (ē-fu'zhun) [L. *effusio* a pouring out] 1. the escape of fluid into a part or tissue, as an exudation or a transudation. 2. an effused material, which may be classified according to protein content as an exudate or transudate. **hemorrhagic e.**, an effusion of bloody liquid. **pleural e.**, the presence of liquid in the pleural space.

Efudex (ef'u-deks) trademark for a preparation of fluorouracil.

egagropilus (e'gah-grop'i-lus) [Gr. *aigagros* wild goat + *pilos* felt] trichobezoar.

egersimeter (e'ger-sim'ē-ter) an instrument for testing the electric excitability of nerves and muscles and for measuring chronaxia.

egersis (e-ger'sis) [Gr.] abnormal wakefulness; insomnia.

egesta (e-jes'tah) [L. *e* out + *gerere* to bear] undigested material thrown out from the body.

egestion (e-jes'chun) the casting out of material which is indigestible.

egg (eg) [L. *ovum*] 1. an ovum; a female gamete. 2. an oocyte. 3. a female reproductive cell at any stage before fertilization and its derivatives after fertilization and even after some development.

Eggleston's method (eg'el-stunz) [Cary *Eggleston*, New York physician, 1884–1966] see under *method*.

egilops (e'jī-lops) [Gr. *aix* goat + *ōps* eye] perforating abscess at the inner canthus of the eye.

eglandulous (e-gland'u-lus) [L. *e* without + *glandula* glandule] having no glands.

ego (e'go) [L. *ego* I] that portion of the psyche which possesses consciousness, maintains its identity, and recognizes and tests reality; the conscious sense of the self.

ego-alien (e'go-āl'yen) ego-dystonic.

egobronchophony (e'go-bron-kof'o-ne) [Gr. *aix* goat + *bronchophony*] increased vocal resonance with high-pitched bleating quality of the transmitted voice, detected by auscultation of the lungs, especially over lung tissue compressed by pleural effusion.

egocentric (e'go-sen'trik) [L. *ego* I + *centric*] having all one's ideas centered on one's self. Cf. *allocentric*.

ego-dystonic (e'go-dis-ton'ik) denoting any impulse, idea, or the like, that is repugnant to and inconsistent with an individual's conception of himself. Called also *ego-alien*. Cf. *ego-syntonic*.

egoism (e'go-izm) a self-seeking for advantage at the expense of others; overevaluation of the self.

egomania (e'go-ma'ne-ah) [Gr. *egō* I + *mania* madness] morbid self-esteem.

egophony (e-gof'o-ne) [Gr. *aix* goat + *phōnē* voice] egobronchophony.

ego-syntonic (e'go-sin-ton'ik) denoting any impulse, idea, or the like, that is in harmony with an individual's conception of himself. Cf. *ego-dystonic*.

egotism (e'go-tizm) overevaluation of one's self.

egotropic (e'go-trop'ik) [Gr. *egō* I + *tropos* a turning] egocentric.

EHBF estimated hepatic blood flow.

Ehlers-Danlos syndrome (disease) (a'lerz-dan'los) [Edvard *Ehlers*, Danish dermatologist, 1863–1937; Henri Alexandre *Danlos*] see under *syndrome*.

Ehrenritter's ganglion (er'en-rit'erz) [Johann *Ehrenritter*, Austrian anatomist, died 1790] ganglion superius nervi glosso-pharyngei.

Ehrlich's reaction, etc. (ār'lik) [Paul *Ehrlich*, German bacteriologist, 1854–1915; co-winner, with Elie Metchnikoff, of the Nobel prize for medicine and physiology in 1908, in recognition of his work in immunity] see under *body*, *granule*, *reaction*, *stain*, *test*, and *theory*, and see *arsphenamine*.

Ehrlich-Hata preparation, remedy, treatment [Paul *Ehr-*

lich; Sahachiro *Hata*, Japanese physician, 1872–1938] arsphenamine.

Ehrlich-Heinz granules (ār'lik hints) [Paul *Ehrlich*; Robert *Heinz*, German pathologist, 1865–1924] Ehrlich's granules.

Ehrlichia (ār-lik'e-ah) [Paul *Ehrlich*] a genus of the tribe Ehrlichieae, family Rickettsiales, order Rickettsiales. Three species, *E. ca'nis*, *E. bo'vis*, and *E. ovi'na*, produce disease in dogs, cattle, and sheep, respectively, but are nonpathogenic for man.

Ehrlichieae (ār'li-ki'e-e) a tribe of the family Rickettsiaceae, order Rickettsiales, class Microtobiotae, made up of rickettsia-like organisms adapted to existence in invertebrates, chiefly arthropods, and pathogenic for certain vertebrates, but not for man. It includes three genera, *Coudria*, *Ehrlichia*, and *Neorickettsia*.

Eichhorst's atrophy (type), corpuscles (ik'horsts) [Hermann Ludwig *Eichhorst*, Swiss physician, 1849–1921] see under *atrophy* and *corpuscle*.

Eichstedt's disease (ik'stets) [Karl Ferdinand *Eichstedt*, physician in Greifswald, 1816–1892] *tinea versicolor*.

Eicken's method (i'kenz) [Carl von *Eicken*, German laryngologist and otologist, 1873–1960] see under *method*.

eiconometer (i'ko-nom'ē-ter) eikonometer.

eicosanoate (i-ko'sah-no'āt) systematic name for arachidate, denoting that it has twenty (*eicos* twenty) carbon atoms in a straight chain.

eidetic (i-det'ik) [Gr. *eidos* that which is seen; form or shape] pertaining to or characterized by exact visualization of events or of objects previously seen. By extension, sometimes used to designate an individual possessing such an ability.

eidogen (i'do-jen) [Gr. *eidos* form + *genesthai* produced] a substance elaborated by a second grade inductor, which is capable of modifying the form of an embryonic organ already in the process of formation.

eidoptometry (i'dop-tom'ē-tre) [Gr. *eidos* form + *optos* seen + *metron* measure] measurement of the acuteness of vision for the perception of form.

Eijkman's test (ik'manz) [Christiaan *Eijkman*, Dutch physiologist, 1858–1930; discoverer of the causative agent in beriberi, proponent of the vitamin theory, and co-winner, with F. G. Hopkins, of the Nobel prize for medicine in 1929 for his discovery of the antineuritic vitamin] see under *tests*.

Eikenella (i'ken-el'ah) a genus of facultative gram-negative, rod-shaped bacteria which inhabit the oral cavity and upper respiratory tract; *E. corrodens* can cause abscess formation.

eikonometer (i'ko-nom'ē-ter) [Gr. *eikōn* image + *metron* measure] an instrument used in making an examination for aniseikonia.

eiloid (i'loid) [Gr. *eilein* to roll up + *eidos* form] having a coiled appearance.

Eimeria (i-me're-ah) [Gustav Heinrich Theodor *Eimer*, German zoologist, 1843–1898] a genus of sporozoan parasites of the order Coccidia in which an oocyst contains four spores and each spore two sporozoites; various species are parasitic in the epithelial cells of man and animals, the oocysts being found in the feces.

E. a'vium, *E. tenella*. **E. caviae**, a species found in guinea pigs. **E. clu'pea'rum**, a species found almost constantly in the livers of herrings (*Clupea harengus*) and to a lesser extent in the livers of sprat (young herring) and mackerel (*Scomber scomber*). **E. falci'for'mis**, a species found in mice. **E. max'ima**, a species that infects the small intestine of fowl. **E. meleagri'dis**, a species found in the intestines of turkeys. **E. mieschul'zi**, a species found in feces of laboratory rats. **E. nec'atrix**, a species that causes a chronic coccidiosis of fowl. **E. per'forans**, a species causing intestinal coccidiosis in rabbits. **E. sardi'nae**, a species found in large numbers in the testes of sprats (young herrings), to some extent in the "soft roes" of adult herrings (*Clupea harengus*), and in tinned sardines. **E. sti'edae**, a species found in the liver of rabbits. **E. tenel'la**, a species causing bloody diarrhea in fowls; see *white diarrhea*, under *diarrhea*. **E. zur'ni**, a species causing intestinal coccidiosis in cattle and severe diarrhea in calves.

Einhorn's saccharimeter (in'hornz) [Max *Einhorn*, physician in New York, 1862–1953] see under *saccharimeter*.

einsteinium (in-sti'ne-um) [Albert *Einstein*, theoretical physicist, born in Germany, became a naturalized citizen of Switzerland, then of the United States, 1879–1955; winner of Nobel prize for physics in 1921] the chemical element of atomic number 99, atomic weight 254, symbol Es, originally discovered in debris from a thermonuclear explosion in 1952.

Einthoven's formula, galvanometer, triangle (in'to-venz) [Willem *Einthoven*, Dutch physiologist, 1860–1927; winner of the Nobel prize for medicine in 1924 for his discovery of the mechanism of the electrocardiogram] see under *formula*, *galvanometer*, and *triangle*.

eisanthema (is-an'the-mah) [Gr. *eis* into + *anthēin* to bloom] an eruption on a mucous membrane.

Eisenia (i-se'ne-ah) a genus of chaetopod worms. *E. foe'tida*, a species reportedly found in the urine of man.

Eisenmenger's complex (i'sen-meng'arz) [Victor Eisenmenger, German physician, 1864-1932] see under *complex*.

eisodic (i-sod'ik) [Gr. *eis* into + *hodos* way] afferent or centripetal.

Eitelberg's test (i'tel-bergz) [Abraham Eitelberg, Austrian physician, born 1847] see under *tests*.

eiweissmilch (i'vis-milkh) [Ger.] albumin milk; see under *milk*.

ejaculate (e-jak'u-lāt) 1. to expel suddenly, especially semen. 2. the semen expelled in a single ejaculation; ejaculum.

ejaculatio (e-jak'u-la'she-o) [L.] ejaculation. **e. defi'ciens**, defective ejaculation. **e. prae'cox**, ejaculation of the semen immediately after the beginning of the sexual act. **e. retarda'ta**, unduly delayed ejaculation.

ejaculation (e-jak'u-la'shun) [L. *ejaculatio*] a sudden act of expulsion, as of the semen. **premature e.**, ejaculatio praecox.

ejaculator (e-jak'u-la'tor) [L.] that which or one who ejaculates. **e. sem'inis**, musculus bulbospongiosus.

ejaculatory (e-jak'u-lah-to're) [L. *ejaculatorius*] pertaining to ejaculation.

ejaculum (e-jak'u-lum) the semen discharged in a single ejaculation in the male, consisting of the secretions of Cowper's gland, epididymis, ductus deferens, seminal vesicles, and prostate, and containing the spermatozoa. Called also *ejaculate*.

ejecta (e-jek'tah) [L. pl.; from *e* out + *jacere* to cast] materials which have been cast out from the body. Excrementitious material; refuse.

ejection (e-jek'shun) 1. the act of ejecting or the state of being ejected. 2. something ejected. **milk e.**, let-down reflex.

ejector (e-jek'tor) an apparatus for effecting the forcible expulsion or removal of a material or body. **saliva e.**, an apparatus for removal of saliva and water from the mouth of the patient during operations on the teeth.

EjUSD. abbreviation for *L. ejusdem*, of the same.

eka- (e'kah) [Sanskrit, "one" or "first"] a prefix added to the name of a known chemical element as a provisional designation of the unknown element which should occur next in the same group in the periodic system.

eka-iodine (e'kah i'o-din) the name formerly used to designate element 85, now officially known as astatine.

EKG electrocardiogram.

ekiri (e-ki'ri) an acute cerebral and cardiovascular disorder occurring in children with shigellosis in Japan.

ekphorize (ek'fo-riz) ecphorize.

EKY elektrokymogram.

elaborate (e-lab'o-rāt) [L. *elabora're* to work out] to produce complex substances out of simpler materials.

elaboration (e-lab'o-ra'shun) 1. the process of producing complex substances out of simpler materials. 2. in psychiatry, an unconscious mental process of expansion and embellishment of detail, especially of a symbol or representation in a dream; called also *secondary e.*

elacin (el'ah-sin) degenerated elastic tissue.

elaeo- for words beginning thus, see those beginning *eleo-*.

elaioma (e-le-o'mah) eleoma.

elaiometer (e'la-om'ē-ter) eleometer.

elaiopathy (e'la-o-path'e-ah) elaiopathy.

elaiopathy (e'la-op'ah-the) [Gr. *elaion* oil + *pathos* disease] a diffuse fatty edema, usually attacking the joints of the lower extremities, the effect of contusions or distortions incurred in war, and attributed to the formation of an irritating oily substance and its action upon the subcutaneous cellular tissue (C. Blondi, 1917). **pathomimic e.**, the simulation of disease produced by the injection of liquid petrolatum subcutaneously.

elaioplast (e-la'o-plast) [Gr. *elaion* oil + *plassein* to form] a fat-producing plastid.

elantrine (el'an-trēn) chemical name: 3-(5,6-dihydro-5-methyl)-11-*H*-dibenz[*b,e*]azepin-11-ylidene-*N,N*-dimethyl-1-propanamine. An anticholinergic, C₂₀H₂₄N₂, which has been used in the treatment of drug-induced extrapyramidal syndrome.

elapid (el'ah-pid) 1. any snake of the family Elapidae. 2. of or pertaining to the family Elapidae.

Elapidae (e-lap'i-de) a family of usually terrestrial, venomous snakes, which have cylindrical tails and front fangs that are short, stout, immovable, and grooved. It includes cobras, kraits, coral snakes, copperheads, blacksnakes, brown snakes, tiger snakes, death adders, and mambas.

Elaps (el'laps) *Micrurus*.

elasmobranch (e-las'mo-brank) [Gr. *elasma* plate + *L. branchia* gill] 1. any cartilaginous fish having platelike gills, each gill slit opening independently on the body surface, such as sharks, skates, rays, and sawfish. 2. of or pertaining to elasmobranchs.

elassosis (el'ah-so'sis) [Gr. *elassōn* smaller, less] a diminutive type of mitosis characteristic of the small cells of the thymus.

elastance (e-las'tans) the quality of recoiling on removal of

pressure without disruption, or an expression of the measure of the ability to do so, as an expression of the recoil of an air- or fluid-filled organ, e.g., the lung or urinary bladder, in terms of unit of pressure change per unit of volume change. It is the reciprocal of compliance.

elastase (e-las'tās) an enzyme of the protease class formed from the zymogen proelastase, which is secreted by the pancreas; it catalyzes the hydrolysis of peptide bonds; it is so named because it was once thought to attack elastin preferentially.

elastic (e-las'tik) [L. *elasticus*] 1. susceptible of being stretched, compressed, or distorted, and then tending to assume its original shape; resilient. 2. an elastic band, as that placed around a tooth in dental procedures. **intermaxillary e.**, elastic material used to produce traction between the upper and lower teeth as one element of the corrective process. **intramaxillary e.**, elastic material applied within the same dental arch to achieve space closure. **vertical e.**, elastic material applied in a direction perpendicular to the occlusal plane, connecting one arch wire to the other, usually for approximating teeth to improve intercuspation.

elastica (e-las'ti-kah) [L.] 1. gum elastic or caoutchouc. 2. a general term for elastic tissue of the body, such as that found in the tunica media of blood vessels. 3. tunica media.

elastacin (e-las'ti-sin) elastin.

elasticity (e'las-tis'i-te) the quality or condition of being elastic. **physical e. of muscle**, the physical quality of muscle of being elastic, of yielding to passive physical stretch. **physiologic e. of muscle**, the biologic quality, unique to muscle, of being able to change and resume size under neuromuscular control. **total e. of muscle**, the combined effect of physical and physiologic elasticity of muscle.

elastin (e-las'tin) a yellow scleroprotein, the essential constituent of yellow elastic connective tissue: it is brittle when dry, but when moist is flexible and elastic.

elastinase (e-las'tin-ās) elastase.

elastofibroma (e-las'to-fi-brō'mah) a tumor consisting of both elastin and fibrous elements. **e. dor'si**, a tumor-like nodule of subscapular soft tissue, occurring in old age, consisting of an elastin-filled central core and a surrounding elastase-resistant matrix impregnated with elastin.

elastogel (e-las'to-jel) a gel which possesses great elasticity.

elastoid (e-las'toid) a substance formed by the hyaline degeneration of the internal elastic lamina of blood vessels; seen in the vessels of the uterus after delivery.

elastoidosis, nodular (e-las'toi-do'sis) a condition characterized by comedones and yellowish, circumscribed, thickened plaques around the orbits or nose, or the nape. Called also *Favre-Racouchot syndrome*.

elastolysis (e'las-to-li'sis) the digestion of elastic substance or tissue. **perifollicular e.**, a form of anetoderma occurring around hair follicles and caused by elastase produced by staphylococci within the follicles.

elastolytic (e-las'to-lit'ik) capable of catalyzing the digestion of elastic tissue.

elastoma (e'las-to'mah) a tumor or focal excess of elastic tissue fibers or abnormal collagen fibers of the skin. **juvenile e.**, a form of connective tissue nevi (q.v.) characterized by hyperplasia of the elastic tissue of the skin. **Miescher's e.**, elastosis perforans serpiginosa.

elastomer (e-las'to-mer) a soft rubber-like material; synthetic rubber. A rubber base impression material, e.g., silicone and mercaptan.

elastometer (e'las-tom'ē-ter) an instrument for determining the elasticity of tissues, and thus measuring the degree of edema.

elastometry (e'las-tom'ē-tre) the measurement of elasticity.

elastomucin (e-las'to-mu'sin) a polysaccharide component of elastic tissue.

elastopathy (e'las-top'ah-the) deficiency of elastic tissue.

Elastoplast (e-las'to-plast) trademark for an elastic bandage.

elastorrhesis (e-las'to-rek'sis) rupture of fibers composing elastic tissue.

elastose (e-las'tōs) an albumose formed by treating elastin with ferments, acids, or alkalis.

elastosis (e'las-to'sis) 1. degeneration of elastic tissue. 2. degenerative changes in the dermal connective tissue with increased amounts of elastotic material having the staining properties of elastin. 3. any disturbance of the dermal connective tissue.

actinic e., degeneration of the elastic tissue of the dermis due to constant exposure to sunlight; called also *solar e.* **e. intrapapilla're**, *e. perforans serpiginosa*. **e. perfo'rans serpiginosa**, *perforating e.*, an elastic tissue defect, occurring alone or in association with various other disorders, including Down's syndrome, pseudoxanthoma elasticum, Ehlers-Danlos syndrome, Marfan's syndrome, and acrogeria, in which elastomas are extruded through small keratotic papules in the epidermis; the lesions are usually arranged in arcuate serpiginous clusters on the sides of the nape, face, or arms. Called also *e. intrapapillare*, *Miescher's disease* or *elastoma*, and *reactive perforating e. re-*

active perforating e., *e. perforans serpinigosa*. **senile e.**, *e. seni/lis*, a dermatosis marked by degeneration in the elastic and collagen fibers of the skin in old age. **solar e.**, actinic *e.*

elastotic (e'lās-tō'tik) 1. pertaining to or characterized by elastosis. 2. resembling elastic tissue; having the staining properties of elastin.

elater (e'l'ah-ter) a specialized structure of certain plants, such as liverworts and slime molds, which aids in the distribution of spores.

elation (e-la'shun) emotional excitement marked by speeding up of mental and bodily activity.

Elavil (e'l'ah-vil) trademark for preparation of amitriptyline hydrochloride.

elbow (e'l'bo) [*L. cubitus*] 1. the bend of the arm; the joint that connects the arm and forearm; called also *cubitus* [NA]. 2. any angular bend. **baseball pitchers' e.**, a disorder of the elbow in baseball pitchers due to a piece of cartilage or bone torn from the head of the radius. **capped e.**, hygroma of the elbow; a swelling of the bursa or a hard, fibrous mass on the point of the elbow in horses or cattle. Called also *shoe boil*. **dropped e.**, radial paralysis (def. 2). **golfer's e.**, pain due to medical epicondylitis, the lesion being in the origin of the flexor muscles. **little leaguer's e.**, medial epicondylitis of the elbow due to repeated stress on the flexor muscles of the forearm, a frequent problem of adolescent ballplayers. **miners' e.**, enlargement of the bursa over the point of the elbow (olecranon bursitis) caused by resting the weight of the body on the elbow as in mining. **nursemaids' e.**, pulled *e.* **pulled e.**, subluxation of the head of the radius distally under the annular ligament; called also *nursemaid's e.* and *Goyrand's injury*. **tennis e.**, a painful condition localized to the outer aspect of the elbow, due to inflammation or irritation of the extensor tendon attachment to the lateral humeral condyle; called also *external humeral epicondylitis*, and *radiohumeral bursitis* or *epicondylitis*.

elcosis (el-ko'sis) helcosis.

Eldadryl (e'l'dah-dril) trademark for a preparation of diphenhydramine hydrochloride.

El debab the native name in Algeria for surra.

Eldecort (e'l'dē-kort) trademark for preparations of hydrocortisone.

elder (e'l'der) the plants, *Sambucus nigra* L., of Europe, *S. canadensis*, L. (Caprifoliaceae), of America, and other congeneric species; the flowers, which contain a volatile oil, have been used in dressing wounds, burns, ulcers, etc., and as a diaphoretic, laxative and diuretic.

Eldodram (e'l'do-dram) trademark for a preparation of dimenhydrinate.

Eldopaque (e'l'do-pāk) trademark for preparations of hydroquinone.

Eldoquin (e'l'do-kwin) trademark for a preparation of hydroquinone.

eldrin (e'l'drin) rutin.

elective (e-lek'tiv) 1. tending to combine with or act on one substance rather than another. 2. subject to the choice or decision of the patient or physician; applied to procedures that are advantageous to the patient but not urgent.

Electra complex (e-lek-tra'h) see under *complex*.

electro- [Gr. *ēlektron* amber] a combining form denoting relationship to electricity.

electroacupuncture (e-lek'tro-ak'u-pung'cher) acupuncture in which the needles are stimulated electrically.

electroaffinity (e-lek'tro-ah-fin'i-te) electronegativity.

electroanalgesia (e-lek'tro-an'al-je'ze-ah) the reduction of pain by electrical stimulation of a peripheral nerve or the dorsal column of the spinal cord.

electroanalysis (e-lek'tro-ah-nal'i-sis) chemical analysis performed by the aid of the electric current.

electroanesthesia (e-lek'tro-an'es-the'ze-ah) anesthesia, either local or general, induced by electricity.

electroappendectomy (e-lek'tro-ap'en-dek'to-me) excision of the appendix by transection of its base by electrosurgical means.

electroaugmentation (e-lek'tro-awg'men-ta'shun) electrical pacing of the heart.

electrobasograph (e-lek'tro-ba'so-graf) [*electro-* + Gr. *basis* step + *graphein* to record] an apparatus for recording the duration of weight bearing on the respective part while walking, i.e., a record of the gait.

electrobiolgy (e-lek'tro-bi-ol'o-je) [*electro-* + *biology*] the study of electric phenomena in living tissue.

electrobioscopy (e-lek'tro-bi-os'ko-pe) [*electro-* + Gr. *bios* life + *skopein* to examine] the determination of the presence or absence of life by means of an electric current.

electrocardiogram (e-lek'tro-kar'de-o-gram) [*electro-* + Gr. *kardia* heart + *gramma* mark] a graphic tracing of the variations in electrical potential caused by the excitation of the heart muscle and detected at the body surface. The normal electrocardiogram shows deflections resulting from atrial and ventricular

activity. The first deflection, P, is due to excitation of the atria. The QRS deflections are due to excitation (depolarization) of the ventricles. The T wave is due to recovery of the ventricles (repolarization). The U wave is a potential undulation of unknown origin immediately following the T wave, seen in normal electrocardiograms and accentuated in hypokalemia. Abbreviated ECG or EKG. See also *lead*². **scalar e.**, a conventional tracing

Normal electrocardiogram (Guyton).

showing only changes in magnitude of voltage and polarity (positive and negative) with time.

electrocardiograph (e-lek'tro-kar'de-o-graf) an instrument for performing electrocardiography, i.e., for making electrocardiograms.

electrocardiography (e-lek'tro-kar'de-og'rah-fe) the making of graphic records of the variations in electrical potential caused by electrical activity of the heart muscle and detected at the body surface, as a method for studying the action of the heart muscle; see *electrocardiogram*. **intracardiac e.**, that performed by introducing an electrode through a cardiac catheter. **precordial e.**, an electrocardiographic technique in which potentials over the chest wall near the surface of the heart are recorded; see *precordial leads*, under *lead*².

electrocardiophonogram (e-lek'tro-kar'de-o-fo'no-gram) (*obs.*) a record of the heart sounds made by an electrocardiophonograph.

electrocardiophonograph (e-lek'tro-kar'de-o-fo'no-graf) (*obs.*) an apparatus for recording electrically the heart sounds.

electrocardioscopy (e-lek'tro-kar-de-os'ko-pe) [*electro-* + Gr. *kardia* heart + *skopein* to examine] (*obs.*) electrocardiography by means of a cathode-ray oscillograph which throws a record on a luminous screen.

electrocatalysis (e-lek'tro-kah-tal'i-sis) the catalytic effect produced by electricity on the bodily processes.

electrocautery (e-lek'tro-kaw'ter-e) an apparatus for cauterizing tissue, consisting of a platinum wire in a holder which is heated to a red or white heat when the instrument is activated by an electric current.

electrochemistry (e-lek'tro-kem'is-tre) study of chemical changes produced by electric action.

electrocholecystectomy (e-lek'tro-ko'-le-sis-tek'to-me) excision of the gallbladder by electrosurgical means.

electrocholecystocauterization (e-lek'tro-ko'-le-sis'to-kaw'sis) electrosurgical cauterization of the gallbladder.

electrochromatography (e-lek'tro-kro'mah-tog'rah-fe) electrophoresis.

electrocision (e-lek'tro-sizh'un) excision of malignant growths after the application to them of oscillatory electricity.

electrocoagulation (e-lek'tro-ko-ag'u-la'shun) coagulation of tissue usually accomplished by means of a biterminal high frequency electric current.

electrocochleogram (e-lek'tro-kok'le-o-gram) the record obtained by electrocochleography.

electrocochleograph (e-lek'tro-kok'le-o-graf) the instrument used in electrocochleography.

electrocochleographic (e-lek'tro-kok'le-o-graf'ik) pertaining to or accomplished by electrocochleography.

electrocochleography (e-lek'tro-kok'le-o-graf'rah-fe) measurement of electrical potentials (cochlear microphonics and action potentials of the eighth cranial nerve) in response to acoustic stimuli applied by an electrode to the external acoustic canal or to the promontory or the round window through the tympanic membrane.

electrocontractility (e-lek'tro-kon-trak-til'i-te) contractility in response to electric stimulation.

electroconvulsive (e-lek'tro-con-vul'siv) inducing convulsions by means of electric shock; see under *therapy*.

electrocorticogram (e-lek'tro-kor'ti-ko-gram) the record obtained by electrocorticography.

electrocorticography (e-lek'tro-kor'ti-kog'rah-fe) electroen-

cephalography with the electrodes applied directly to the cortex of the brain.

electrocryptectomy (e-lek''tro-krip-tek'to-me) diathermic destruction of tonsillar crypts.

electrocution (e-lek''tro-ku'shun) the taking of life by passage of electric current through the body.

electrocystography (e-lek''tro-sis-tog'rah-fe) the recording of changes of electric potential in the human urinary bladder.

electrocystoscope (e-lek''tro-sis'to-sköp) a cystoscope equipped with an electric light.

electrode (e-lek'tröd) [Gr. *ēlektron* amber + *hodos* way] a medium used between an electric conductor and the object to which the current is to be applied. In electrotherapy, an instrument with a point or surface from which to transmit an electric current to the body of a patient or to another instrument. **active e.**, one smaller in size than an indifferent electrode, and producing electrical stimulation in a concentrated area. **calomel e.**, an electrode capable of both collecting and giving up chloride ions in neutral or acidic aqueous media, consisting of mercury in contact with mercurous chloride; used as a reference electrode in pH measurements. **depolarizing e.**, one which has a resistance greater than that of the portion of the body inclosed in the circuit. **dispensing e.**, indifferent e. **exciting e.**, active e. **impregnated e.**, one with an absorbent tip impregnated with prescribed medicament. **indifferent e.**, one larger in size than an active electrode, and dispersing electrical stimulation over a larger area. **localizing e.**, active e. **multiple point e.**, an electrode possessing multiple contact points. **point e.**, an electrode with a metallic point for use in applying an electric current to a small area. **silent e.**, indifferent e. **therapeutic e.**, active e.

electrodeposition (e-lek''tro-de'po-zish'un) the deposition of metal by electric action (electroplating), sometimes employed in dentistry for the copper coating of inlay impressions, etc.

electrodermal (e-lek''tro-der'mal) pertaining to the electrical properties of the skin, especially to changes in its resistance.

electrodermatome (e-lek''tro-der'mah-tōm) an electrical dermatome for cutting off even layers of large areas of skin in a short time; used in skin grafting, shaving scars, etc.

electrodesiccation (e-lek''tro-des'i-ka'shun) dehydration of tissue by the use of a high frequency electric current; see *fulguration*.

electrodiagnosis (e-lek''tro-di'ag-no'sis) the use of electrical devices in the diagnosis of pathologic conditions.

electrodiagnostics (e-lek''tro-di'ag-nos'tiks) the science and practice of electrodiagnosis.

electrodialysis (e-lek''tro-di-al'i-sis) dialysis under the influence of an electric field.

electrodialyzer (e-lek''tro-di'ah-li'zer) a blood dialyzer utilizing an applied electric field and semipermeable membranes for separating the colloids from the solution.

electrodiaphane (e-lek''tro-di-af'ah-ke) an instrument for removing the lens by diathermy.

electrodiaphane (e-lek''tro-di'ah-fān) diaphanoscope.

electrodiaphanoscope (e-lek''tro-di-af'ah-no-sköp') diaphanoscope.

electrodiaphany (e-lek''tro-di-af'ah-ne) [*electro-* + Gr. *diaphainein* to show through] diaphanoscopia.

electroencephalogram (e-lek''tro-en-sef'ah-lo-gram'') a re-

cording of the potentials on the skull generated by currents emanating spontaneously from nerve cells in the brain. The dominant frequency of these potentials is about 8 to 10 cycles per second and the amplitude about 10 to 100 microvolts. Variations in wave characteristics correlate well with neurological conditions and so have been useful as diagnostic criteria. Abbreviated EEG. **flat e.**, **isoelectric e.**, one in which no brain waves are recorded, indicating a complete lack of brain activity.

electroencephalograph (e-lek''tro-en-sef'ah-lo-graf'') an instrument for performing electroencephalography.

electroencephalography (e-lek''tro-en-sef'ah-log'rah-fe) the recording of the electric currents developed in the brain, by means of electrodes applied to the scalp, to the surface of the brain (*intracranial e.*), or placed within the substance of the brain (*depth e.*). See *electroencephalogram*.

electroencephaloscope (e-lek''tro-en-sef'ah-lo-sköp) an instrument for detecting brain potentials at many different sections of the brain and displaying them on a cathode-ray tube.

electroendosmosis (e-lek''tro-en'dos-mo'sis) endosmosis under the influence of an electric field.

electroenterostomy (e-lek''tro-en'ter-os'to-me) enterostomy performed by electrosurgical technique.

electroexcision (e-lek''tro-ek-siz'zhun) excision performed by electrosurgical means.

electrofluoroscopy (e-lek''tro-floo'o-ro-s'ko-pe) (*obs.*) fluoroscopic electrocardiography.

electrofocusing (e-lek''tro-fo'kus-ing) ~ isoelectric focusing.

electrogastroenterostomy (e-lek''tro-gas'tro-en-ter-os'to-me) gastroenterostomy performed by electrosurgical means.

electrogastrogram (e-lek''tro-gas'tro-gram) the graphic record obtained by electrogastrography.

electrogastrograph (e-lek''tro-gas'tro-graf) an instrument for recording the electrical activity of the stomach by means of swallowed gastric electrodes.

electrogastrography (e-lek''tro-gas-trog'rah-fe) the recording of the electrical activity of the stomach as measured between its lumen and the surface of the body.

electrogoniometer (e-lek''tro-go'ne-om'ē-ter) an instrument for measuring angular positions, as of a finger, arm, limb.

electrogram (e-lek'tro-gram) any record produced by changes in electric potential. **His bundle e.**, an intracardiac electrocardiogram of potentials in the bundle of His, done through a cardiac catheter.

electrograph (e-lek'tro-graf) electrogram.

electrography (e-lek'trog'rah-fe) [*electro-* + Gr. *graphein* to record] the graphic recording of changes in electric potential, as in electrocardiography, electroencephalography, etc.

electrogustometry (e-lek''tro-gus-tom'ē-tre) the testing of the sense of taste by application of galvanic stimuli to the tongue.

electrohemostasis (e-lek''tro-he-mos'tah-sis) [*electro-* + *hemo-stasis*] the arrest of hemorrhage by the application of a high frequency current to coagulate the bleeding point or surface.

electrohysterogram (e-lek''tro-his'ter-o-gram) the graphic record obtained by electrohysterography.

electrohysterography (e-lek''tro-his'ter-og'rah-fe) the recording of the changes in electric potential associated with contractions of the uterine muscle.

electroimmunodiffusion (e-lek''tro-im'u-no-dif-u'zhun) immunodiffusion accelerated by application of an electric current; serum proteins in an alkaline medium, having a negative charge, move toward the positive pole, whereas gamma globulins, having a lesser negative charge, move toward the negative pole through the action of osmosis. Called also *immuno-electro-osmophoresis* and *counterimmuno-electro-osmophoresis*.

electrokinetic (e-lek''tro-ki-net'ik) pertaining to motion produced by an electric current.

electrokymogram (e-lek''tro-ki'mo-gram) the graphic record produced by electrokymography; abbreviated EKY.

electrokymograph (e-lek''tro-ki'mo-graf) an instrument for graphically recording motion of or changes in density of organs by recording variations in intensity of a small beam of roentgen rays; it consists of three essential parts—a fluoroscope, a pick-up unit, and a recording instrument; used especially for showing motion of the cardiac silhouette.

electrokymography (e-lek''tro-ki-mog'rah-fe) the photography on x-ray film of the motion of the heart or of other moving structures which can be visualized radiologically. See *electrokymograph*.

electrolepsy (e-lek'tro-lep'se) electric chorea.

electrolithotripsy (e-lek''tro-li-thot'ri-te) the disintegration of calculi by the application of electric current.

electrolysis (e-lek'trol'i-sis) [*electro-* + Gr. *lysis* dissolution] destruction by passage of a galvanic electric current, as in disintegration of a chemical compound in solution or removal of excessive hair from the body.

electrolyte (e-lek'tro-lit) [*electro-* + Gr. *lytos* that may be dis-

Electroencephalogram

Recordings made while the subject was excited, relaxed, and in various stages of sleep. During excitement the brain waves are rapid and of small amplitude, whereas in sleep they are much slower and of greater amplitude. The regular waves characteristic of the relaxed state are called alpha waves. (From Jasper, in *Epilepsy and Cerebral Localization*, by Penfield and Erickson.)

solved] a substance that dissociates into ions when fused or in solution, and thus becomes capable of conducting electricity; an ionic solute. **amphoteric e.**, a compound which dissociates into both hydrogen (H^+) and hydroxyl (OH^-) ions; called also *ampholyte*. **colloidal e.**, an electrolyte in which one or more of the ionic components is of macromolecular dimensions.

electrolytic (e-lek'tro-lit'ik) pertaining to or characterized by electrolysis.

electrolyzable (e-lek'tro-liz'ah-bl) susceptible of being decomposed by electric current.

electromagnet (e-lek'tro-mag'net) a temporary magnet made by passing an electric current through a coil of wire, surrounding a core of soft iron.

electromagnetism (e-lek'tro-mag'net-izm) magnetism produced by an electric current.

electromanometer (e-lek'tro-man-om'ē-ter) an instrument for measuring the pressure of gases or liquids by electronic methods.

electrometer (e'lek-trom'ē-ter) [*electro-* + Gr. *metron* measure] an electrostatic instrument for measuring the difference in potential between two points. In radiology, it is used to measure changes in the potential of charged electrodes due to ionization occasioned by radiation.

electrometrogram (e-lek'tro-met'ro-gram) [*electro-* + Gr. *mētra* uterus + *gramma* mark] an apparatus for recording changes in electric potential associated with contraction of the uterine muscle.

electromigratory (e-lek'tro-mi'grah-to're) moving under the influence of electric current.

electromotive (e-lek'tro-mō'tiv) causing electric activity to be propagated along a conductor.

electromyogram (e-lek'tro-mi'o-gram) the record obtained by electromyography.

electromyograph (e-lek'tro-mi'o-graf) the instrument used in electromyography.

electromyography (e-lek'tro-mi-og'rah-fe) [*electro-* + *myogra-* *phy*] the recording and study of the intrinsic electrical properties of skeletal muscle (1) by means of surface or needle electrodes to determine merely whether the muscle is contracting or not (useful in kinesiology) or (2) by insertion of a needle electrode into the muscle and observing by cathode-ray oscilloscope and loud-speaker the action potentials spontaneously present in a muscle (abnormal) or induced by voluntary contractions, as a means of detecting the nature and location of motor unit lesions; or (3) recording the electrical activity evoked in a muscle by electrical stimulation of its nerve (called also *electroneuromyography*), a procedure useful for study of several aspects of neuromuscular function, neuromuscular conduction, extent of nerve lesion, reflex responses, etc. Abbreviated EMG. **ureteral e.**, recording of the action potentials produced by peristalsis of the ureter.

electron (e-lek'tron) the unit or "atom" of negative electricity. It is equivalent to 4.77×10^{-10} absolute electrostatic units or 1.59×10^{-20} absolute electromagnetic units, and its mass when moving at moderate speed is $\frac{1}{1836}$ that of a hydrogen atom or 9×10^{-28} grams. Electrons flowing in a conductor constitute an electric current; when ejected from a radioactive substance, the beta rays; and when revolving about the nucleus of an atom they determine all of its physical and chemical properties except mass and radioactivity. Cf. *atom*. **emission e.**, one of the electrons which give radioactivity to the atom. **free e.**, an electron which is not bound to the nucleus of an atom but may move from one atom nucleus to another. **valency e.**, one of the electrons involved in the binding of an atom to other atoms.

electronarcosis (e-lek'tro-nar-ko'sis) anesthesia produced by passing an electric current through the brain by electrodes placed on the temples; used in treating a wide variety of psychiatric disorders in the U.S.S.R. It differs from electroconvulsive therapy in not producing convulsions.

electron-dense (e-lek'tron-dens") in electron microscopy, having a density that prevents electrons from penetrating.

electronegative (e-lek'tro-neg'ah-tiv) bearing a negative electric charge.

electronegativity (e-lek'tro-neg'ah-tiv'i-te) the relative power of an atom to attract electrons.

electroneurography (e-lek'tro-nu-rog'rah-fe) the measurement of the conduction velocity and latency of peripheral nerves.

electroneurolysis (e-lek'tro-nu-rol'i-sis) neurolysis by means of the electric needle.

electroneuromyography (e-lek'tro-nu'ro-mi-og'rah-fe) electromyography in which the nerve of the muscle under study is stimulated by application of an electric current.

electronic (e'lek-tron'ik) pertaining to or carrying electrons.

electronics (e'lek-tron'iks) the science which treats of the conduction of electricity through gases, solids, or a vacuum.

electron-microscopic (e-lek'tron-mi-kro-skop'ik) visible under the electron microscope.

electron-microscopical (e-lek'tron-mi'kro-skop'i-kal) observable with the aid of an electron microscope; of such size as to be so observed.

electronograph (e'lek-tron'o-graf) electron micrograph.

electronystagmogram (e-lek'tro-nis-tag'mo-gram) the record obtained by electronystagmography.

electronystagmograph (e-lek'tro-nis-tag'mo-graf) an instrument for recording eye movements induced by electrical stimulation; abbreviated ENG.

electronystagmography (e-lek'tro-nis'tag-mog'rah-fe) the recording of changes in the corneoretinal potential due to eye movements that provide objective documentation of induced and spontaneous nystagmus.

electro-oculogram (e-lek'tro-ok'u-lo-gram") the electroencephalographic tracings made by moving the eyes a constant distance between two fixation points, inducing a deflection of fairly constant amplitude; abbreviated EOG.

electro-oculography (e-lek'tro-ok'u-log'rah-fe) the production and interpretation of electro-oculograms.

electro-olfactogram (e-lek'tro-ol-fak'to-gram) a recording of electrical potential changes detected by an electrode placed on the surface of the olfactory mucosa as the mucosa is subjected to an odorous stimulus. Abbreviated EOG.

electro-osmosis (e-lek'tro-oz-mō'sis) the movement of a solution past a stationary colloid material when an electric potential is applied; see also *iontophoresis*.

electroparacentesis (e-lek'tro-par'ah-sen-te'sis) puncture of the eyeball with a needle, using galvanic current and holding the needle in position until bubbles of hydrogen appear in the aqueous humor.

electropathology (e-lek'tro-pah-thol'o-je) [*electro-* + Gr. *pathos* disease + *-logy*] the study of pathologic conditions of the body as revealed by electricity.

electropherogram (e-lek'tro-fer'o-gram) electrophoretogram.

electrophile (e-lek'tro-fil) an electron acceptor that is covalently bonded to a nucleophile.

electrophilic (e-lek'tro-fil'ik) having an affinity for electrons; serving as an electrophile.

electrophoregram (e-lek'tro-fo'rē-gram) electrophoretogram.

electrophoresis (e-lek'tro-fo-re'sis) the movement of charged particles suspended in a liquid under the influence of an applied electric field. Also, the technique of separating materials that utilizes this phenomenon. **counter e.**, counterimmunoelectrophoresis. **disc e.**, gel electrophoresis in which a discontinuity of pH or gel pore size is introduced near the point of origin, producing a very thin starting zone and sharp separations. **gel e.**, that in which a gel, such as agar gel, is the diffusion medium. **moving boundary e.**, electrophoresis in which the number of distinct moving boundaries in a suspension and their rates of spread are monitored by an optical system. **paper e.**, that in which ions migrate along a strip of porous filter paper saturated with an electrolyte when a potential gradient is applied across the length of the strip. **thin-layer e.**, that in which the particles migrate through a thin layer of inert material (cellulose acetate, agar gel, etc.) under the influence of an electric field. **zone e.**, electrophoresis in which a supporting medium such as paper or starch granules immobilizes the solvent. This allows complete separation of components of different electrophoretic mobility, which is ordinarily not possible in moving boundary electrophoresis because of convective mixing.

electrophoretic (e-lek'tro-fo-ret'ik) pertaining to electrophoresis.

electrophoretogram (e-lek'tro-fo-ret'o-gram) the record produced on or in a supporting medium by bands of material which have been separated by the process of electrophoresis. Called also *electropherogram* and *electrophoregram*.

electrophorus (e-lek'tro-fō'o-rus) [*electro-* + Gr. *phoros* bearing] an instrument for obtaining static electricity by means of induction.

electrophotometer (e-lek'tro-fo-tom'ē-ter) an instrument equipped with a photoelectric sensor for colorimetric determinations.

electrophysiologic (e-lek'tro-fis'i-o-loj'ik) pertaining to electrophysiology.

electrophysiology (e-lek'tro-fiz'e-ol'o-je) the science of physiology in its relations to electricity; the study of the mechanisms of the production of electrical phenomena, and their consequences, in the living organism; the electrical phenomena involved in physiological processes.

electroplax (e-lek'tro-plaks) the electric units of the specialized organs in the muscle fibers of electric fish.

electroplexy (e-lek'tro-plek'se) [*electro-* + Gr. *plēgē* stroke] electric shock.

electropositive (e-lek'tro-poz'i-tiv) [*electro-* + *positive*] bearing a positive electric charge.

electroradiometer (e-lek'tro-ra-de-om'ē-ter) an electroscope for measuring radiant energy.

electroresection (e-lek''tro-re-sek'shun) excision by electro-surgical means.

electroretinogram (e-lek''tro-ret'i-no-gram) the record obtained by electroretinography; abbreviated ERG.

electroretinograph (e-lek''tro-ret'in-o-graf) an instrument for measuring the electrical response of the retina to light stimulation; abbreviated ERG.

electroretinography (e-lek''tro-ret'i-nog'rah-fe) the recording of the changes in electric potential in the retina after stimulation by light.

electrosalivogram (e-lek''tro-sah-li'vo-gram) a graphic record or curve showing the action potential of the salivary glands.

electroscission (e-lek''tro-sizh'un) cutting tissue by use of the electric cautery.

electroscope (e-lek''tro-sköp) [*electro-* + Gr. *skopein* to examine] an instrument for measuring the intensity of radiation by detecting the motion imparted to charged strips suspended from a conductor.

electrosection (e-lek''tro-sek'shun) an incision made by electro-surgical means.

electroselenium (e-lek''tro-sē-le'ne-um) a form of colloidal selenium.

electroshock (e-lek''tro-shok) shock produced by application of electric current to the brain; see *electroconvulsive therapy*, under *therapy*.

electrosleep (e-lek''tro-slēp) see *cerebral electrotherapy* under *electrotherapy*.

electrosol (e-lek''tro-sol) a colloidal solution of a metal obtained by passing electric sparks through distilled water between poles formed of the metal.

electrosome (e-lek''tro-sōm) (*obs.*) a chondriosome considered as a center of chemical activity.

electrospectrogram (e-lek''tro-spek'tro-gram) a record produced in electrospectrography.

electrospectrography (e-lek''tro-spek-trog'rah-fe) the isolation and recording of the constituent wave systems that are merged in an electroencephalogram.

electrospinogram (e-lek''tro-spi'no-gram) a tracing of the action potential of the spinal cord.

electrostatic (e-lek''tro-stat'ik) pertaining to static electricity.

electrostenolysis (e-lek''tro-stē-nol'i-sis) the oxidation and reduction which occur on opposite surfaces of a high resistance membrane in a solution when there is a steep electric potential gradient across the membrane, reduction occurring on the surface facing the anode.

electrostethograph (e-lek''tro-steth'o-graf) (*obs.*) an apparatus for recording the amplified heart sounds over the chest.

electrostimulation (e-lek''tro-stim'u-la'shun) electrical stimulation of tissues, as for therapeutic or experimental purposes.

electrostriatogram (e-lek''tro-stri-āt'o-gram) a record of waves derived by the bipolar technique from the several structures of the corpus striatum.

electrosurgery (e-lek''tro-sur'jer-e) surgery performed by electrical methods; the active electrode may be a needle, bulb, or disk.

electrosyneresis (e-lek''tro-sin-ē-re'sis) immunofiltration.

electrosynthesis (e-lek''tro-sin'thē-sis) chemical reactions effected by means of electricity.

electrotaxis (e-lek''tro-tak'sis) [*electro-* + Gr. *taxis* arrangement] the movement of organisms or cells under the influence of electric currents.

electrothanasia (e-lek''tro-thah-na'ze-ah) [*electro-* + Gr. *thanatos* death] death by electricity; electrocution.

electrotherapeutics (e-lek''tro-ther-ah-pu'tiks) treatment of disease by means of electricity.

electrotherapeutist (e-lek''tro-ther-ah-pu'tist) a physician who specializes in the therapeutic use of electricity.

electrotherapist (e-lek''tro-ther'ah-pist) a person trained in using electricity for therapeutic purposes.

electrotherapy (e-lek''tro-ther'ah-pe) electrotherapeutics. **cerebral e.**, the use of low intensity electricity, usually employing positive pulses or direct current, in the treatment of insomnia, anxiety, and neurotic depression. It has been called *electrosleep*, a misleading term because the treatment does not induce sleep.

electrotherm (e-lek''tro-therm) [*electro-* + Gr. *thermē* heat] an electrosurgical appliance used for cutting.

electrotome (e-lek''tro-tōm) [*electro-* + Gr. *tomē* a cut] an electric surgical cutting instrument.

electrotomy (e-lek''tro'o-me) electroexcision with low current, high voltage, and high frequency; a procedure in which the tissues are not coagulated.

electrotonic (e-lek''tro-ton'ik) 1. pertaining to electrotonus. 2. denoting the direct spread of current in tissues by electrical conduction, without the generation of new current by action potentials.

electrotonus (e-lek''tro-tō'o-nus) the altered electrical state of a nerve or muscle cell when a constant electric current is passed through it.

electrotrepine (e-lek''tro-tre'fin) a form of trephine operated by electricity.

electrotropism (e''lek-trot'ro-pizm) [*electro-* + Gr. *tropos* a turning, change] the tendency of a cell or organism to react in a definite manner in response to an electric stimulus. **negative e.**, the tendency of a cell to be repelled by an electric stimulus. **positive e.**, the tendency of a cell to be attracted by an electric stimulus.

electroultrafiltration (e-lek''tro-ul'trah-fil-tra'shun) ultrafiltration in an electric field.

electroureterogram (e-lek''tro-u-re'ter-o-gram) the record obtained by electroureterography.

electroureterography (e-lek''tro-u-re'ter-og'rah-fe) electromyography in which the action potentials produced by peristalsis of the ureter are recorded.

electrovagogram (e-lek''tro-va'go-gram) vagogram.

electrovalence (e-lek''tro-va'lens) 1. the number of charges an atom acquires by the gain or loss of electrons in forming an ionic bond. 2. the bonding resulting from such a transfer of electrons.

electrovalent (e-lek''tro-va'lent) pertaining to electrovalence or to an electrovalent (ionic) bond.

electroversion (e-lek''tro-ver'zhun) the act of electrically terminating a cardiac dysrhythmia.

electrovert (e-lek''tro-vert) to apply electricity to the heart or precordium to depolarize the heart and terminate a cardiac dysrhythmia.

electuary (e-lek''tu-a-re) [L. *electuarium*, from *e* out + *legere* to select] a medicinal preparation consisting of a powdered drug made into a paste with honey or syrup; a confection. Called also *lincture* and *linctus*. **e. of senna**, a mixture of senna, syrup, and tamarind pulp.

eledoisin (el-ē-doi'sin) chemical name: L-pyroglyutamyl-L-prolyl-L-seryl-L-lysyl-L-aspartyl-L-alanyl-L-phenylalanyl-L-isoleucylglycyl-L-leucyl-L-methioninamide. An endecapeptide, C₅₄H₈₅N₁₃O₁₃S, from the posterior salivary gland of a species of small octopus (*Eledone*), which is a precursor of a large group of biologically active peptides. It has vasodilator, hypotensive, and extravascular smooth muscle stimulant properties.

eleidin (el-e'i-din) a substance of peculiar nature, allied to keratin and protoplasm, found in the cells of the stratum lucidum of the skin.

element (el'ē-ment) [L. *elementum*] 1. any of the primary parts or constituents of a thing. 2. in chemistry, a simple substance which cannot be decomposed by chemical means and which is made up of atoms which are alike in their peripheral electronic configurations and so in their chemical properties, and also in the number of protons in their nuclei, but which may differ in the number of neutrons in their nuclei and so in their atomic weight and in their radioactive properties. [See accompanying *Table of Elements*.] **anatomic e.**, morphological e. **appendicular e's**, a set of cartilaginous rods attached to the chondral skull of the embryo; from them are developed the ear bones, the hyoid, and the styloid process. **electronegative e.**, any chemical element that adds electrons (or tends to add electrons) during chemical combination. **electropositive e.**, a chemical element that loses electrons (or tends to lose electrons) during chemical combination. **F e.**, see under *factor*. **formed e's (of the blood)**, erythrocytes, leukocytes, and platelets. **labile e.**, tissue cells which continue to multiply during the life of the individual. **morphological e.**, any cell, fiber, or other of the ultimate structures which go to make up tissues and organs. **radioactive e.**, a chemical element which spontaneously transmutes into another element with emission of corpuscular or electromagnetic radiations. The natural radioactive elements are all those with atomic number above 83, and some other elements, such as potassium (at. no. 19) and rubidium (at. no. 37), which are very weakly radioactive. **rare earth e's**, elements of the lanthanum series, comprising elements with atomic numbers 57 to 71. **sarcous e.**, any of the elementary granules into which the primitive fibril of an elementary muscle fiber is divisible. **stable e.**, 1. a chemical element which does not spontaneously transmute into another element with emission of corpuscular or electromagnetic radiations; the stable elements are those with atomic number below 84, except for a few, such as potassium and rubidium, which are weakly radioactive. 2. a tissue cell of mature tissues which does not alter by mitosis. **tissue e.**, morphological e. **trace e's**, chemical elements that are distributed throughout the tissues in very small amounts and are either essential in nutrition, such as cobalt, copper, magnesium, manganese, and zinc, or may be harmful, such as selenium. **tracer e's**, see *radioactive tracer*, under *tracer*. **transcalifornium e's**, the elements with atomic numbers higher than that of californium, and discovered subsequent to its discovery in 1950. They are einsteinium 99, fermium 100, mendelevium 101, nobelium 102, and lawrencium 103. **transuranic e's**, **transuranium e's**, the elements with atomic numbers higher than that of uranium. Applied originally to neptunium 93, plutonium 94, americium 95,

TABLE OF ELEMENTS

NAME	SYMBOL	AT. NO.	AT. WT.*	NAME	SYMBOL	AT. NO.	AT. WT.*
Actinium	Ac	89	(227)	Mercury	Hg	80	200.59

* Atomic weights are corrected to conform with the 1961 values of the Commission on Atomic Weights, expressed to the fourth decimal point, rounded off to the nearest thousandth. The numbers in parentheses are the mass numbers of the most stable or most common isotope.

curium 96, berkelium 97, and californium 98, the term now, by definition, includes the transcalifornium elements as well.

elementary (el'ē-men'tah-re) not resolvable or divisible into simpler parts or components; see also under *particle*.

elemi (el'ē-me) [Turkish *elme* hand picked] a resinous substance, of extremely various origin, the best coming from *Canarium commune*, of the Philippine Islands. It furnishes a volatile oil, and was formerly used externally, generally in an ointment, for ulcers and sores.

eleo- (el'e-o) [Gr. *elaion* oil] combining form denoting relationship to oil.

eleoma (el'e-o'mah) [*eleo-* + *-oma*] a tumor or swelling caused by the injection of oil into the tissues.

eleometer (el'e-om'ē-ter) [*eleo-* + Gr. *metron* measure] an instrument for determining percentage of oil in a mixture, also specific gravity of oils.

eleopathy (el'e-op'ah-the) elaiopathy.

eleoplast (el'e-o-plast) [*eleo-* + Gr. *plastos* formed] a globular body made up of granular protoplasm and containing drops of oil.

eleopten (el'e-op'ten) [*eleo-* + Gr. *ptēnos* volatile] the more volatile constituent of a volatile oil, as distinguished from its stearopten.

eleosaccharum (el'e-o-sak'ah-rum), pl. *eleosacch'ara* [Gr. *elaion* oil + *sakcharon* sugar] a mixture of sugar with a volatile oil; an oil sugar. Called also *oleosaccharum*.

eleotherapy (el'e-o-ther'ah-pe) [*eleo-* + *therapy*] oleotherapy.

elephantiasic (el'ē-fan'te-as'ik) pertaining to elephantiasis.

elephantiasis (el'ē-fan-ti'ah-sis) ["elephant disease"] a chronic filarial disease due to infection of the lymphatic channels with the nematode *Wuchereria bancrofti* or *Brugia malayi*, and characterized by inflammation and obstruction of the lymphatics and hypertrophy of the skin and subcutaneous tissues. The legs and external genitals are principally affected, the disease beginning in attacks of dermatitis, with enlargement of the part, attended by chills and fever (elephantoid fever) and followed by the formation of ulcers and tubercles, with thickening, discoloration, and fissuring of the skin. The disease is most common in tropical regions. The term elephantiasis is often applied to hypertrophy and

thickening of the tissues from any cause. **e. arab'icum**, elephantiasis. **e. chirur'gica**, Halsted's name for massive edema of the arm after mastectomy. **congenital e.**, Milroy's disease. **e. filarien'sis**, true elephantiasis due to filariasis. **e. gingi'vae**, fibromatosis gingivae. **e. graeco'rum** (*obs.*), leprosy. **e. leishmania'na**, the edema and hypertrophy of tissues caused by leishmaniasis. **lymphangiectatic e.**, elephantiasis of a part due to lymphangiectasis. **e. neuro-mato'sa**, neurofibroma. **nevoid e.**, a variety marked by great dilatation of the lymph vessels. **e. nos'tras**, that due to either chronic recurrent streptococcal erysipelas or chronic recurrent cellulitis. **e. oc'uli**, thickening and protrusion of the eyelids. **e. scro'ti**, that in which the scrotum is the principal seat of the disease; called also *parasitic chylocele*, and *lymph scrotum*.

Elephantiasis of the legs and of the scrotum.

elephantoid (el'f-fan'toid) relating to or resembling elephantiasis.

Elettaria cardamomum (L.) Maton (Zingiberaceae) (el'f-ta're-ah kar'dah-mo'mum) a species of plants of tropical areas of the Old World, which afford cardamom and grains of paradise.

eleutheromania (e-lu'ther-o-ma'ne-ah) [Gr. *eletheria* freedom] abnormal enthusiasm for freedom.

elevation (el'f-fa'shun) a raised area, or point of greater height. **dicrotic e.** (obs.), the secondary rise of a dicrotic pulse wave in the sphygmogram. **tactile e's**, toruli tactiles.

elevator (el'f-fa'tor) [L. *elevar* to lift] an instrument for elevating tissues, for removing osseous fragments, or roots of teeth. **Cryer's e.**, a dental instrument for removing the roots of molar teeth; furnished in pairs, one for mesial and one for distal roots, which are reversed for use on opposite sides of the jaw. **malar e.**, an instrument used to elevate or reposition the zygomatic bone and/or arch. **periosteum e.**, a flat steel bar for separating the attachments of the periosteum to bone. **screw e.**, a dental instrument designed to be screwed into a root canal for subsequent removal of the root, usually of the apical third.

elfazepam (el-faz'f-pam) chemical name: 7-chloro-1-[2-(ethylsulfonyl)ethyl]-5-(2-fluorophenyl)-1,3-dihydro-2H-1,4-benzodiazepin-2-one; a veterinary appetite stimulant, C₁₉H₁₈ClFN₂O₂S.

eliminant (e-lim'i-nant) 1. causing an evacuation. 2. an agent that promotes evacuation.

elimination (e-lim'i-na'shun) [L. *eliminatio*, from *e* out + *limen* threshold] 1. the act of expulsion or of extrusion, especially of expulsion from the body. 2. omission or exclusion, as in an elimination diet. Cf. *excretion*. **immune e.**, the period of accelerated degradation of antigen (e.g., foreign gamma globulin) as a result of its removal and destruction by antibodies. Also, a technique for determining antibody response by measuring the rate of removal of labeled antigen from the circulation of an immunized animal. Called also *immune clearance*.

elinguation (el'lin-gwa'shun) [L. *e* out + *lingua* tongue] the removal of the tongue.

elinin (el'i-nin) a lipoprotein fraction of red cells containing the Rh and A and B factors.

Elipten (e-lip'ten) trademark for a preparation of aminoglutethimide.

elixir (e-lik'ser) [L., from Arabic] a clear, sweetened, usually hydroalcoholic liquid containing flavoring substances and sometimes active medicinal agents, used orally as a vehicle or for the effect of the medicinal agent contained. **acetaminophen e.** [USP], an elixir containing not less than 95 per cent and not more than 105 per cent of the labeled amount of acetaminophen, C₉H₉NO₂; used as an analgesic and antipyretic. **amobarbital e.** [USP], an elixir containing not less than 95.0 per cent and not more than 105.0 per cent of the labeled amount of amobarbital; used as a sedative and hypnotic. **aprobarbital e.**, an elixir containing not less than 92.5 per cent and not more than 107.5 per cent of aprobarbital; used as a sedative. **aromatic e.** [NF], a preparation containing orange, lemon, coriander, and anise oils, syrup, talc, and alcohol in purified water; used as a flavored vehicle for pharmaceutical preparations. **aromatic e., red**, aromatic elixir colored by addition of amaranth solution. **benzaldehyde e., compound**, a preparation of benzaldehyde, vanillin, orange flower water, alcohol, simple syrup, and water; used as a vehicle for pharmaceutical preparations. **bromodiphenhydramine hydrochloride e.** [USP], an elixir containing not less than 93 per cent and not more than 107 per cent of the labeled amount of bromodiphenhydramine hydrochloride; used as an antihistaminic. **brompheniramine maleate e.** [USP], an elixir containing not less than 95 per cent and not more than 105 per cent of the labeled amount of brompheniramine maleate; used as an antihistaminic. **butabarbital sodium e.** [USP], an elixir containing not less than 95 per cent and not more than 105 per cent of the labeled amount of sodium butabarbital; used as a sedative. **carbinoxamine maleate e.** [USP], an elixir containing not less than 95 per cent and not more than 105 per cent of the labeled amount of carbinoxamine maleate; used as an antihistaminic. **chlorpheniramine maleate e.**, see under *syrup*. **dexamethasone e.** [USP], an elixir containing not less than 90 per cent and not more than 110 per cent of the labeled amount of dexamethasone; used as a glucocorticoid. **dextroamphetamine sulfate e.** [USP], a preparation containing, in each 100 ml., between 90 and 110 mg. of dextroamphetamine sulfate; used as a central nervous system stimulant. **digoxin e.** [USP], an elixir containing, in each 100 ml., not less than 4.60 mg. and not more than 5.40 mg. of digoxin; used as a cardiotonic. **diphenhydramine hydrochloride e.** [USP], a preparation containing 94 to 106 per cent of the labeled amount of diphenhydramine hydrochloride; used as an antihistaminic, antiemetic, antitussive, and antispasmodic. **fluphenazine hydrochloride e.** [USP], a preparation containing 95 to 105 per cent of the labeled amount of fluphenazine hydrochloride; used as a tranquilizer in the treatment of the manifestations of psychotic disorders, and as an antiemetic. **gentian e., glycerinated**, a preparation of gentian and taraxacum fluidextracts, compound cardamon tincture, raspberry syrup, sweet orange peel tincture, phosphoric

acid, ethyl acetate, glycerin, sucrose, and alcohol, in purified water; used as a flavored vehicle for drugs. **high-alcoholic e.**, see *iso-alcoholic e.* **homatropine methylbromide e.**, a preparation containing 90 to 110 per cent of the labeled amount of homatropine methylbromide; used as an anticholinergic to reduce spasms and inhibit secretions, especially in gastrointestinal disorders. **e. I. Q. & S., iron, quinine, and strychnine e.**, a preparation of iron, quinine, and strychnine, with compound orange spirit, alcohol, glycerin, and purified water; used as a bitter tonic. **iso-alcoholic e.** [NF], a mixture of low-alcoholic elixir and high-alcoholic elixir to produce a solution whose strength is suitable for the medicament for which it serves as a vehicle. **Low-alcoholic e.**: compound orange spirit 10 ml., alcohol 100 ml., glycerin 200 ml., sucrose 320 gm., and sufficient purified water to make a total of 1000 ml. **High-alcoholic e.**: compound orange spirit 4 ml., saccharin 3 gm., glycerin 200 ml., and sufficient alcohol to make a total of 1000 ml. **low-alcoholic e.**, see *iso-alcoholic e.* **methenamine e.** [USP] an elixir containing 90 to 110 per cent of the labeled amount of methenamine; used as a urinary antibacterial. **oxtriphylline e.** [USP], an elixir containing between 90 and 110 per cent of the labeled amount of oxtriphylline; used as a bronchodilator. **pentobarbital e.** [USP], an elixir containing between 92.5 and 107.5 per cent of the labeled amount of pentobarbital; used as a sedative and hypnotic. **pentobarbital sodium e.** [USP], pentobarbital sodium 4.0 gm., glycerin 450.0 ml., alcohol 150.0 ml., orange oil 0.75 ml., caramel 2 gm., syrup 150.0 ml., diluted hydrochloric acid 6.0 ml., and sufficient purified water to make a total of 1000 ml.; used as a sedative and hypnotic. **pepsin e., lactated**, a water preparation containing a proteolytic enzyme from the glandular layer of the fresh stomach of the hog, with lactic acid, glycerin, alcohol, orange oil, and amaranth solution. **phenobarbital e.** [USP], an elixir containing between 92.5 and 107.5 per cent of the labeled amount of phenobarbital; used as a sedative, hypnotic, and anticonvulsant. **potassium chloride e.** [USP], an elixir containing between 90 and 110 per cent of the labeled amount of potassium chloride, KCl; used as an electrolyte replenisher. **potassium gluconate e.** [USP], an elixir containing 97 to 103 per cent of the labeled amount of potassium gluconate; used as an electrolyte replenisher in the prophylaxis and treatment of hypokalemia. **reserpine e.**, [USP], an elixir containing between 90 and 110 per cent of the labeled amount of reserpine; used as an antihypertensive agent. **secobarbital e.** [USP], an elixir containing, in each 100 ml., not less than 417 mg. and not more than 461 mg. of secobarbital in a suitable, flavored vehicle; used as a hypnotic. **terpin hydrate e.** [USP], terpin hydrate 17 gm., sweet orange peel tincture 20 ml., benzaldehyde 50 µl., glycerin 400 ml., alcohol 430 ml., syrup 100 ml., and sufficient purified water to make 1000 ml.; used as an expectorant. **terpin hydrate and codeine e.** [USP], 2 gm. of codeine dissolved in a sufficient quantity of terpin hydrate elixir to make 1000 ml.; used as an expectorant and antitussive. **terpin hydrate and dextromethorphan hydrobromide e.** [USP], 2 gm. of dextromethorphan hydrobromide dissolved in a sufficient quantity of terpin hydrate elixir to make 1000 ml.; used as an expectorant and antitussive. **theophylline sodium glycinate e.** [USP], an elixir containing an amount of theophylline between 47 and 54 per cent of the labeled amount of theophylline sodium glycinate; used as a bronchodilator and smooth muscle relaxant. **three bromides e.**, a mixture of ammonium, potassium, and sodium bromides, amaranth solution and compound benzaldehyde elixir; occasionally used as a sedative in grand mal seizures. See also *bromide*. **trihexphenidyl hydrochloride e.** [USP], an elixir containing, in each 100 ml., not less than 37.2 mg. and not more than 42.8 mg. of trihexphenidyl hydrochloride; used as an antiparkinsonian agent. **tripelennamine citrate e.** [USP], an elixir containing, in each 100 ml., not less than 705 mg. and not more than 795 mg. of tripelennamine citrate; used as an antihistaminic in the symptomatic treatment of allergic disorders.

Elixophyllin (e-lik'so-fil'in) trademark for preparations of theophylline.

Elkosin (el'ko-sin) trademark for preparations of sulfisomidine.

elkosis (el'ko-sis) helcosis.

Ellermann-Erlandsen test (method) (el'er-mahn-är'land-sen) [Vilhelm Ellermann, Copenhagen pathologist, 1871-1924; Alfred Wilhelm Erland Erlandsen, Copenhagen hygienist, 1878-1918] tuberculin titer test; see under *test*.

Elliot's operation (el'i-ots) [Col. Robert Henry Elliot, of the Indian Medical Service, 1864-1936] see under *operation*.

Elliot's position [John Wheelock Elliot, American surgeon, 1852-1925] see under *position*.

Elliot's sign [George T. Elliot, American dermatologist, 1851-1935] see under *sign*.

ellipsin (e-lip'sin) the insoluble constituents of cells which remain after the removal of the soluble proteins.

ellipsis (e-lip'sis) [Gr. "a leaving out"] in psychiatry, the omission of words or of ideas by a patient in the course of psychoanalysis.

ellipsoid (e-lip'soid) any structure having a spindle shape, espe-

cially (a) any of the spindle-shaped masses of cells surrounding the second portion of the arterioles of the spleen (see *sheathed artery*, under *artery*) or (b) the outer refractile portion of the inner section of the retinal rods and cones.

elliptocytary (e-lip/'to-si'tah-re) pertaining to elliptocytes.

elliptocyte (e-lip/'to-sit) an elliptical erythrocyte.

elliptocytosis (e-lip/'to-si-to'sis) a hereditary disorder in which the greater proportion of erythrocytes are elliptical in shape, and which is characterized by varying degrees of increased red cell destruction and anemia.

elliptocytotic (e-lip/'to-si-tot'ik) pertaining to or characterized by elliptocytosis.

Ellis's line (curve), sign (el'i-sez) [Calvin *Ellis*, Boston physician, 1826-1883] see under *line* and *sign*.

Ellis-Garland line (el'is-gar'land) [Calvin *Ellis*; George Minot *Garland*, American physician, 1849-1926] *Ellis' line*.

Eloesser flap (el-es'er) [Leo *Eloesser*, San Francisco surgeon, born 1881] see under *flap*.

elongation (e'long-ga'shun) the process or condition of increasing in length.

Elorine (el'o-rēn) trademark for a preparation of tricyclamol chloride.

Elsberg's test (els'bergz) [Charles Albert *Elsberg*, New York surgeon, 1871-1948] see under *solution* and *test*.

Elschnig's bodies (pearls) (elsh'nig) [Anton *Elschnig*, German ophthalmologist, 1863-1939] see under *body*.

Elsner's asthma (els'nerz) [Christoph Friedrich *Elsner*, German physician, 1749-1820] *angina pectoris*.

eluate (el'u-āt) the substance separated out by, or the product of, elution or elutriation.

elucaine (ē-lu'kān) chemical name: α-(diethylamino)methyl]-benzenemethanol benzoate (ester); an anticholinergic (gastric), C₁₅H₂₃NO₂.

eluent (e-lu'ent) a solution used in elution.

elurophobia (e-lu'ro-fo-be-ah) (*obs.*) ailurophobia.

elution (e-lu'shun) [L. *e* out + *luere* to wash] in chemistry, the separation of material by washing, as in the freeing of an enzyme from its absorbent. **membrane e.**, a method of selecting cells in which a culture of cells is collected on a membrane filter, over which a fresh warm culture fluid is then slowly passed, washing off excess cells and leaving only adsorbed cells at a particular developmental stage.

elutriation (e-lu'tre-a'shun) [L. *elutriare* to wash out] the operation of pulverizing substances and mixing them with water in order to separate the heavier constituents, which settle out in solution, from the lighter constituents.

Ely's operation (e'lēz) [Edward Talbot *Ely*, American otologist, 1850-1885] see under *operation*.

Ely's test (sign) (e'lēz) [Leonard Wheeler *Ely*, American orthopedic surgeon, 1868-1944] see under *test*.

elytro- (el'i-tro) [Gr. *elytron* a covering, sheath] a combining form denoting relationship to the vagina or to a sheath; for words beginning thus, see those beginning *colpo-*.

Elzholz's bodies, mixture (elts'holts-ez) [Adolf *Elzholz*, alienist in Vienna, 1863-1925] see under *body* and *mixture*.

Em. *emmetropia*.

emaciation (e-ma'se-a'shun) [L. *emaciare* to make lean] excessive leanness; a wasted condition of the body.

emailloblast (e-māl'o-blast) [Fr. *email* enamel + Gr. *blastos* germ] ameloblast.

eman (em'an) a unit for expressing the concentration of radium emanation in solution: it is the concentration present when one tenth of a millimicrocurie of radium emanation is dissolved in 1 liter of air or water, or 10⁻¹⁰ curie.

emanation (em-ah-na'shun) [L. *e* out + *manare* to flow] that which is given off, such as a gaseous disintegration product given off from radioactive substances or an effluvium. **actinium e.**, one member of the radioactive series derived from actinium. It is produced from actinium X, has an atomic weight of 218, its atomic number is 86, and by the loss of alpha particles it becomes actinium A. Called also *actinon*. **radium e.**, radon. **thorium e.**, one member of the radio-active series derived from thorium. It is produced from thorium X, has an atomic weight of 220, its atomic number is 86, and by the loss of alpha particles it changes into thorium A. Called also *thoron*.

emanator (em'ah-na'tor) an instrument for giving off and applying to the body radioactive emanations.

emanatorium (em'ah-na-to're-um) an institute for treating diseases by radioactive emanations.

emancipation (e-man'si-pa'shun) [L. *emancipare* to release, give up] the establishment of local autonomy within restricted fields of a developing embryo.

emasculation (e-mas'ku-la'shun) [L. *emasculare* to castrate] 1. excision of the penis. 2. castration.

Embadomonas (em'bah-dom'o-nas) *Retortamonas*.

embalming (em-bahm'ing) the treatment of the dead body with antiseptics and preservatives, to prevent putrefaction.

embarrass (em-bar'as) to impede the function of; to obstruct.

embedding (em-bed'ing) the fixation of a tissue specimen in a firm medium, in order to keep it intact during the cutting of thin sections.

Embelia (em-be'le-ah) a genus of myrtaceous East Indian climbing plants. **E. ri'bes**, **E. robus'ta**, species whose fruit has been used for its anthelmintic and cathartic principles.

embelin (em'bē-lin) chemical name: 2,5-dihydroxy-3-undecyl-p-benzoquinone. An active principle, CH₃(CH₂)₁₀·C₆H₂(OH)₂, from *Embelia ribes*, formerly used as a tennicide.

emboitement (aw-bwat'maw) [Fr. "encasement"] the supposed encasement of miniature individuals within the germ cells of predecessors, advanced as one theory of preformation.

embolalia (em'bo-la'le-ah) embololalia.

embole (em'bo-le) [Gr. *embolē* a throwing in] 1. the reducing of a dislocated limb. 2. emboly.

embolotomy (em'bo-lek'to-me) [*embolus* + Gr. *ektomē* excision] surgical removal of an embolus from a blood vessel.

embolemia (em'bo-le'me-ah) [*embolus* + Gr. *haima* blood + *-ia*] (*obs.*) the presence of emboli in the blood.

emboli (em'bo-li) [L.] plural of *embolus*.

embolia (em-bo'le-ah) embole.

embolic (em-bol'ik) pertaining to an embolus or to embolism.

emboliform (em-bol'i-form) 1. shaped like a wedge. 2. resembling an embolus.

embolism (em'bo-lizm) [L. *embolismus*, from Gr. *en* in + *ballein* to throw] the sudden blocking of an artery by a clot or foreign material which has been brought to its site of lodgment by the blood current. **air e.**, that due to air bubbles entering the veins after trauma or surgical procedures. **amniotic fluid e.**, embolism due to amniotic fluid forced into the maternal circulation near the end of normal pregnancy by strong uterine contractions. **bacillary e.**, obstruction of a vessel by an aggregation of bacilli. **bland e.**, that in which the thrombotic plug is composed of nonseptic material. **bone marrow e.**, embolism caused by material from a fractured long bone. **capillary e.**, blocking of the capillaries with bacteria. **cerebral e.**, embolism of a cerebral artery. **coronary e.**, embolism of one of the coronary arteries. **crossed e.**, paradoxical e. **direct e.**, embolism occurring in the direction of the blood stream. **fat e.**, embolism of fat that has entered the circulation, especially after fractures of large bones. **infective e.**, embolism in which the embolus is infective. **lymph e.**, **lymphogenous e.**, embolism of a lymph vessel. **miliary e.**, that which affects at the same time many small blood vessels. **multiple e.**, embolism by a number of small emboli. **oil e.**, fat e. **pantaloon e.**, saddle e. **paradoxical e.**, blockage of a systemic artery by a thrombus originating in a systemic vein, which has passed through a defect that permits direct communication between the right and the left side of the heart, notably an open foramen ovale; called also *crossed e.* **plasmodium e.**, the occlusion of a coronary artery by *Plasmodium falciparum*. **pulmonary e.**, the closure of the pulmonary artery or one of its branches by an embolus, sometimes associated with infarction of the lung. **pyemic e.** (*obs.*), infective e. **retinal e.**, embolism of the central artery of the retina. **saddle e.**, an embolism lodging at the bifurcation of the aorta, causing sudden severe pain of the legs, abdomen, and back, with numbing and coldness. Called also *pantaloon e.* **spinal e.**, embolism of an artery in the spinal cord. **trichinosis e.**, embolism due to trichinae. **tumor e.**, embolism due to tumor fragments, especially from cancer of the stomach. **venous e.**, embolism in which the clot or plug originates in the veins.

embolization (em'bo-li-za'shun) 1. the process or condition of becoming an embolus. 2. therapeutic introduction of a substance into a vessel in order to occlude it. **poppet e.**, the embolization of the ball of a poppet valve used as a heart valve prosthesis.

embololalia (em'bō-lo-la'le-ah) [Gr. *emballein* to insert + *lalia* babble] the interpolation of meaningless words or phrases into the speech; called also *embolophrasia*.

embolomycotic (em'bō-lo-mi-ko'tik) pertaining to or marked by an infectious embolus.

embolophrasia (em'bō-lo-fra'ze-ah) [Gr. *emballein* to insert + *phrasia* utterance] embololalia.

embolus (em'bo-lus), pl. *em'boli* [Gr. *embolos* plug] 1. a clot or other plug brought by the blood from another vessel and forced into a smaller one, thus obstructing the circulation. 2. the emboliform nucleus of the cerebellum. See illustration on following page. **air e.**, a bubble of air obstructing a blood vessel. **cancer e.**, a small mass of cells detached from a cancer and carried by the blood stream to lodge in a distant location. **cellular e.**, one consisting of tissue cells of various kinds. **fat e.**, one composed of oil or fat. **foam e.**, one formed by a mixture of a gas and blood. **obturating e.**, one completely blocking a vessel. **riding e.**, **saddle e.**, **straddling e.**, one at the bifurcation of an artery, blocking both branches.

Embolus impacted at site of branching of an artery.

emboly (em'bo-le) [Gr. *embolē* a throwing in] the invagination of the blastula by which the gastrula is formed.

embouchment (aw-boosh-maw') [Fr.] the opening of one vessel into another.

embrasure (em-bra'zhur) the interproximal space occlusal to the area of contact of adjacent teeth in the same dental arch. Cf. *interproximal space*. **buccal e.**, the embrasure opening out toward the cheek between molar and premolar teeth. **labial**

e., the embrasure opening toward the lips between canine and incisor teeth. **lingual e.**, one of the embrasure openings on the lingual sides of the teeth. **occlusal e.**, the space between the marginal ridges of approximating teeth, mesially and distally, and the point of contact and the occlusal plane.

embrocation (em-bro-ka'shun) [L. *embrocatio*] 1. the application of a liquid medicament to the surface of the body. 2. a liquid medicine for external use.

embryectomy (em'bre-ek'to-me) [*embryo* + Gr. *ektomē* excision] excision of the embryo in extrauterine pregnancy.

embryo (em'bre-o) [Gr. *embryon*] 1. in plants, the element of the seed that develops into a new individual. 2. in animals, those derivatives of the fertilized ovum that eventually become the offspring, during their period of most rapid development, i.e., after the long axis appears until all major structures are represented. In man, the developing organism is an embryo from about two weeks after fertilization to the end of seventh or eighth week. **hexacanth e.**, the six-hooked embryo, or onchosphere, characteristic of most tapeworms of man and domestic animals. **Janosik's e.**, a human embryo having three aortic arches and two gill pouches. **presomite e.**, the embryo at any stage prior to the appearance of the first somite. **previllous e.**, the conceptus before the chorionic villi develop. **somite e.**, the embryo at any stage between the appearances of the first and the last somites. **Spee's e.**, a 1.5 mm. human embryo, horizon IX, about 20 days old as described by Spee.

embryoblast (em'bre-o-blast') [*embryo* + Gr. *blastos* germ] inner cell mass.

embryocardia (em'bre-o-kar'de-ah) [*embryo* + Gr. *kardia* heart] a symptom in which the sounds of the heart resemble those of fetal life, there being very little difference in the quality of the first and second sounds.

embryoctony (em'bre-ok'tō-ne) [*embryo* + Gr. *kteinēin* to kill] the artificial destruction of the living embryo, or fetus.

embryogenesis (em'bre-o-jen'ē-sis) [*embryo* + *genesis*] the development of a new individual by means of sexual reproduction, that is, from a fertilized ovum; the process of embryo formation.

embryogenetic (em'bre-o-jē-net'ik) embryogenic.

embryogenic (em'bre-o-jen'ik) 1. pertaining to the development of the embryo. 2. producing an embryo.

(A) 22 ± 1 day

(B) 24 ± 1 day

(C) 26 days

(D) 28 days

(E) Late 5th week

(F) Middle of 6th week

(G) 7 weeks

(H) 56 days

Human embryo at various stages of development, as indicated. The relative size has been distorted to better show correspondence of parts. (Adapted as follows: A and D, from photograph by Nislimura; B, from a drawing by Key; C, E, F, G, from Carnegie Collection.)

embryogeny (em'bre-ōj'ē-ne) [*embryo* + Gr. *gennan* to produce] the production or origin of the embryo.

embryograph (em'bre-ō-graf) [*embryo* + Gr. *graphein* to write] a combination of a microscope and a camera lucida; used in drawing figures of the embryo.

embryography (em'bre-ōg'rah-fe) [*embryo* + Gr. *graphein* to write] 1. a treatise or description of the embryo. 2. the drawing of an embryo by means of the embryograph.

embryoid (em'bre-oid) [*embryo* + Gr. *eidos* form] resembling an embryo.

embryoism (em'bre-ō-izm) the condition of being an embryo.

embryologist (em'bre-ōl'ō-jist) an expert in embryology.

embryology (em'bre-ōl'ō-je) [*embryo* + *-logy*] the science of the development of the individual during the embryonic stage and, by extension, in several or even all preceding and subsequent stages of the life cycle. **causal e.**, experimental e. **comparative e.**, embryology applied with a comparative view to various species studied with reference to their taxonomy and the principle that ontogeny recapitulates phylogeny. **descriptive e.**, the study of embryos and fetuses and their components with reference to anatomical and chronological sequence so as to define stages and report the course of development. **experimental e.**, analysis of the factors and relations in development, obtained by subjecting embryos to experimental procedures; called also *causal embryology*.

embryoma (em'bre-ō'mah) 1. a general term applied to neoplasms thought to be derived from embryonic cells or tissues, including dermoid cysts, teratomas, embryonal carcinomas and sarcomas, nephroblastomas, hepatoblastomas, etc. 2. a former term for neoplasms once thought to be derived from cells of a blighted ovum. **e. of kidney**, Wilms' tumor.

embryomorphous (em'bre-ō-mor'fus) [*embryo* + Gr. *morphe* form] having a form suggestive of an embryo; said of certain abnormal tissue elements supposed to be relics of a conceptus.

embryonal (em'bre-ō-nal) pertaining to the embryo.

embryonate (em'bre-ō-nāt) 1. pertaining to or resembling an embryo. 2. containing an embryo. 3. impregnated; fecundated.

embryonic (em'bre-ōn'ik) of or pertaining to the embryo.

embryoniform (em'bre-ōn'i-form) resembling an embryo.

embryonism (em'bre-ō-nizm) embryoism.

embryonization (em'bre-ō-ni-za'shun) reversion to the embryonic form on the part of a tissue or cell.

embryonoid (em'bre-ō-noid") resembling an embryo.

embryony (em'bre-ō-ne) the production of an embryo.

embryopathia (em'bre-ō-path'e-ah) embryopathy. **e. rubeola'ris**, developmental anomalies observed in infants of mothers who had rubeola during pregnancy.

embryopathology (em'bre-ō-pah-thol'ō-je) the study of abnormal embryos or of defective development.

embryopathy (em'bre-ōp'ah-the) [*embryo* + Gr. *pathos* disease] a morbid condition of the embryo or a disorder resulting from abnormal embryonic development. **rubella e.**, congenital deformities in an infant due to rubella in the mother during early pregnancy.

embryophore (em'bre-ō-fōr) the inner egg shell surrounding the embryo, as seen in the eggs of *Taenia* found in the feces.

embryoplastic (em'bre-ō-plas'tik) [*embryo* + Gr. *plassein* to shape.] pertaining to or concerned in the formation of an embryo.

embryoscope (em'bre-ō-skōp) [*embryo* + Gr. *skochein* to examine] an instrument for observing the embryo.

embryotocia (em'bre-ō-to'se-ah) [*embryo* + Gr. *tokos* birth.] abortion.

embryotome (em'bre-ō-tōm) a cutting instrument used in embryotomy.

embryotomy (em'bre-ōt'ō-me) [*embryo* + Gr. *tomē* a cutting] 1. the dismemberment of a fetus in the uterus or vagina to facilitate delivery. 2. the dissection of embryos and fetuses.

embryotoxon (em'bre-ō-tok'son) [*embryo* + Gr. *toxos* a bow, or anything arched] a ringlike opacity of the margin of the cornea. **anterior e.**, embryotoxon. **posterior e.**, a developmental anomaly in which there is a ringlike opacity at Schwalbe's ring, with thickening and anterior displacement of the latter; it is seen in Axenfeld's syndrome and Rieger's syndrome.

embryotroph (em'bre-ō-trōf") [*embryo* + Gr. *trophē* nourishment] the total nutriment (histotroph and hemotroph) made available to the embryo.

embryotrophy (em'bre-ōt'ro-fe) [*embryo* + Gr. *trophē* nourishment] the nutrition of the embryo.

embryulcia (em'bre-ōl'ē-ah) [Gr. *embryoulkia*] the instrumental removal of the fetus from the uterus.

embryulcus (em'bre-ōl'kus) [Gr. *embryoulkos*] a blunt hook for use in embryulcia.

EMC encephalomyocarditis (virus).

emedullate (e-med'ū-lāt) [L. *e* out + *medulla* marrow] to remove bone marrow.

emeiocytosis (e'me-ō-si-to'sis) emiocytosis.

emergency (e-mer'jen-se) [L. *emergere* to raise up] an unlooked for or sudden occasion; an accident; an urgent or pressing need.

emergent (e-mer'jent) 1. pertaining to an emergency. 2. coming into being through consecutive stages of development, as in emergent evolution.

emery (em'er-e) an abrasive substance consisting of corundum and various impurities, such as iron oxide.

emesia (ē-me'ze-ah) emesis.

emesis (em'ē-sis) [Gr. *emein* to vomit] vomiting; an act of vomiting. Also used as a word termination, as in *hematemesis*. **e. grāvīda'rum**, the vomiting of pregnancy.

emetatrophia (em'ē-tah-tro'fe-ah) [Gr. *emetos* vomiting + *atrophia* atrophy] atrophy or wasting due to persistent vomiting.

emetic (ē-met'ik) [Gr. *emetikos*; L. *emeticus*] 1. bringing on or causing the act of vomiting. 2. an agent that causes vomiting. **central e.**, one carried by the blood stream to the vomiting center, upon which it acts; called also *indirect e.* and *systemic e.* **direct e.**, one that acts directly on the stomach; called also *mechanical e.* **indirect e.**, central e. **mechanical e.**, direct e. **systemic e.**, central e. **tartar e.**, antimony potassium tartrate.

emetology (ē-met'ī-kol'ō-je) the sum of knowledge regarding emetics.

emetine (em'ē-tin) chemical name: 6',7',10-11-tetramethoxyemetan; an alkaloid, $C_{29}H_{40}N_2O_4$, obtained from ipecac or prepared by methylation of cephaeline. **e. and bismuth iodide**, a complex iodide of emetine and bismuth, occurring as a reddish-orange powder; used as an antiamebic in amebic dysentery, administered orally. **e. hydrochloride** [USP], the dihydrochloride salt of emetine, $C_{29}H_{40}N_2O_4 \cdot HCl$, occurring as a white or very slightly yellowish, crystalline powder; used as an antiamebic, administered subcutaneously or intramuscularly.

emetocathartic (em'ē-to-kah-thar'tik) 1. both emetic and cathartic. 2. an agent that is both emetic and cathartic.

emetology (em'ē-tol'ō-je) emeticology.

E.M.F. electromotive force; erythrocyte maturation factor.

EMG electromyogram.

emigration (em'ī-gra'shun) [L. *e* out + *migrare* to wander] the escape of leukocytes through the walls of small blood vessels; diapedesis.

emilium tosylate (ē-mil'e-um) chemical name: *N*-ethyl-3-methoxy-*N,N*-dimethylbenzenemethanaminium salt with 4-methylbenzenesulfonic acid (1:1); a cardiac depressant with antiarrhythmic action, $C_{16}H_{27}NO_4S$.

eminence (em'ī-nens) a prominence or projection, especially one upon the surface of a bone; called also *eminentia* [NA]. **an'tithenar e.**, hypothernar. **arcuate e.**, eminentia arcuata. **articular e. of temporal bone**, tuberculum articulare ossis temporalis. **bicipital e.**, tuberositas radii. **canine e.**, a prominent bony ridge overlying the root of either canine tooth on the labial surface of both the maxilla and the mandible. **capitate e.**, capitulum humeri. **e. of cartilage of Santorini**, tuberculum corniculatum. **caudate e. of liver**, processus caudatus hepatis. **coccygeal e.**, cornu sacrale. **cochlear e. of sacral bone**, promontorium ossis sacri. **collateral e. of lateral ventricle**, eminentia collateralis ventriculi lateralis. **e. of concha**, eminentia conchae. **cruciate e.**, cruciform e. of occipital bone, eminentia cruciformis. **cuneiform e. of head of rib**, crista capitis costae. **deltoid e.**, tuberositas deltoidea humeri. **Doyère's e.**, the papilla marking the entrance of a nerve filament into a muscle fiber; called also *Doyère's hillock*. **facial e. of eminentia teres**, colliculus facialis. **frontal e.**, tuber frontale. **genital e.**, genital tubercle. **gluteal e. of femur**, tuberositas glutea femoris. **hypobranchial e.**, copula linguae. **hypothernar e.**, hypothernar. **e. of humerus**, capitulum humeri. **iliopectineal e.**, iliopubic e., eminentia iliopubica. **intercondylar e.**, intercondyloid e., intermediate e., eminentia intercondylaris. **jugular e.**, tuberculum jugulare ossis occipitalis. **mamillary e.**, corpus mamillare. **medial e. of rhomboid fossa**, eminentia medialis fossae rhomboideae. **median e. (of hypothalamus)**, a raised area on the infundibulum at the floor of third ventricle of the brain. Continuous below with the infundibular stem or stalk, it contains the primary capillary network of the hypophyseal portal system. **nasal e.**, the prominence above the root of the nose. **oblique e. of cuboid bone**, tuberositas ossis cuboidei. **occipital e.**, a ridge a lateral ventricle of the embryonic brain, corresponding to the occipital fissure in the adult. **olivary e. of sphenoid bone**, tuberculum sellae turcicae. **parietal e.**, tuber parietale. **postchiasmatic e.**, an inconstant protuberance on the floor of the third ventricle posterior to the optic chiasm; called also *postfundibular e.* **postfundibular e.**, postchiasmatic e. **pyramidal e.**, eminentia pyramidalis. **radial e. of wrist**, eminentia carpi radialis. **e. of scapha**, eminentia scaphae. **e. of superior semicircular canal**, eminentia arcuata. **terete e.**, eminentia medialis fossae rhomboideae. **thenar e.**, thenar. **thyroid e.**, prominentia laryngea. **triangular**

- e., e. of triangular fossa of auricle**, eminentia fossa triangularis auriculæ. **e. of triquetral fossa**, eminentia fossae triangularis auriculæ. **trochlear e.**, trochlea humeri. **ulnar e. of wrist**, eminentia carpi ulnaris. **vagal e.**, trigonum nervi vagi.
- eminentia** (em'i-nen'she-ah), pl. *eminen'tiae* [L.] [NA] an eminence: a general term for a prominence or projection, especially one on the surface of a bone. **e. abducent's** (*obs.*), colliculus facialis. **e. arcua'ta** [NA], arcuate eminence: an arched prominence on the internal surface of the petrous part of the temporal bone in the floor of the middle cranial fossa, marking the position of the superior semicircular canal. It is particularly prominent in young skulls. Called also *eminence of superior semicircular canal*. **e. articula'ris os'sis tempora'lis**, tuberculum articulare ossis temporalis. **e. capita'ta**, capitulum humeri. **e. car'pi radia'lis**, an eminence on the palmar surface of the radial side of the wrist, formed by the tubercles on the scaphoid and trapezium bones; called also *radial eminence of wrist*. **e. car'pi ulna'ris**, an eminence on the palmar surface of the ulnar side of the wrist, formed by the pisiform bone and the hook of the hamate bone; called also *ulnar eminence of wrist*. **e. ciner'ea cuneifor'mis**, trigonum nervi vagi. **e. collatera'lis ventric'uli latera'lis** [NA], collateral eminence of lateral ventricle: an elevation in the floor of the inferior horn of the lateral ventricle, produced by the collateral sulcus. **e. con'chae** [NA], eminence of concha: the projection on the medial surface of the auricle that corresponds to the concha on the lateral surface. **e. crucia'ta**, *e. cruciformis*. **e. crucifor'mis** [NA], cruciform eminence of occipital bone: the cross-shaped bony prominence on the internal surface of the squama of the occipital bone, at the intersection of the ridges associated with the sulci of the superior sagittal sinus and the transverse sinuses. Called also *e. cruciata*, *internal occipital crest*, and *cruciate line*. **e. facia'lis**, colliculus facialis. **e. fallo'pii**, a ridge on the inner wall of the tympanum, showing the position of the facial nerve. **e. fos'sae triangu'laris auric'ulae** [NA], eminence of triangular fossa of auricle: the protuberance on the medial surface of the auricle of the ear that corresponds to the triangular fossa on the lateral surface. Called also *agger perpendicularis*, *e. triangularis*, *eminence of triquetral fossa*, and *triangular eminence*. **e. grac'ilis**, fasciculus gracilis medullae oblongatae. **e. hypo-glos'si**, trigonum nervi hypoglossi. **e. iliopectin'ea**, *e. ilio-pubica*. **e. iliopu'bica** [NA], ilio-epubic eminence: a diffuse enlargement just anterior to the acetabulum, marking the junction of the ilium with the superior ramus of the pubis; called also *e. iliopectinea*, *iliopectinal eminence*, *ilio-epubic tuber' or tubercle*, and *iliopectinal tubercle or crest of pubis*. **e. intercondyla'ris** [NA], **e. intercondylo'i'dea**, **e. interme'dia**, intercondylar eminence: an eminence on the proximal extremity of the tibia, surmounted on either side by a prominent tubercle, on to the sides of which the articular facets are prolonged; called also *intermediate eminence* and *tuberculum intercondyloideum*. **e. jugula'ris**, tuberculum jugulare ossis occipitalis. **e. latera'lis cartilag'inis crico'i'deae**, facies articularis thyroidea. **e. media'lis fos'sae rhombo'i'deae** [NA], medial eminence of rhomboid fossa: an eminence in the medial part of the floor of the fourth ventricle, bounded laterally by the sulcus limitans and produced by the facial colliculus and the trigone of the hypoglossal nerve. Called also *e. teres* and *terete eminence*. **e. papilla'ris**, *e. pyramidalis*. **e. pyramida'lis** [NA], pyramidal eminence: the hollow elevation in the posterior wall of the middle ear, which contains the stapedius muscle; called also *e. papillaris*. **e. sca'phae** [NA], eminence of scapha: the prominence on the medial side of the auricle of the external ear that corresponds to the scapha on the lateral side. **e. stylo'i'dea**, prominentia styloidea. **e. sym'physis**, the prominent lower border of the middle of the chin. **e. te'res**, *e. medialis fossae rhomboideae*. **e. triangu'laris**, *e. fossae triangularis auriculæ*. **e. tri-gem'ina**, **e. trigem'ini**, tuberculum eminentia. **e. va'gi**, trigonum nervi vagi.
- emiocytosis** (e'me-o-si-to'sis) the ejection of material from a cell, as the process in which beta granules of the pancreas, which store insulin, are ejected into the extracellular fluid when appropriate stimuli for insulin secretion are applied.
- emissaria** (em'i-sa're-ah) [L.] plural of *emissarium*.
- emissarium** (em'i-sa're-um), pl. *emissaria* [L.] an emissary vein; see *venae emissariae*. **e. condylo'i'deum**, vena emissaria condyloidea. **e. mastoi'deum**, vena emissaria mastoidea. **e. occipita'le**, vena emissaria occipitalis. **e. parietale**, vena emissaria parietalis.
- emissary** (em'i-sa're) [L. *emissarium* drain] affording an outlet, referring especially to the venous outlets from the dural sinuses through the skull.
- emission** (e-mish'un) [L. *emissio*, a sending out] a discharge; specifically an involuntary discharge of semen. **nocturnal e.**, reflex emission of the semen during sleep. **thermionic e.**, the emission of electrons and ions by incandescent bodies.
- emissivity** (e'mis-siv'i-te) the ratio of emissive power (of radiant energy) of a surface to that of a black surface having the same temperature.
- emmenagogue** (ë-men'ah-gog) [Gr. *emmēna* menses + *agōgos* leading] an agent or measure that induces menstruation. **direct e.**, an agent that induces menstruation by acting directly upon the reproductive organs. **indirect e.**, an agent or measure that acts to induce menstruation by relieving another condition of which amenorrhea is a secondary result.
- emmenia** (ë-me'ne-ah) [Gr. *emmēna*] the menses.
- emmenic** (ë-men'ik) pertaining to the menses; menstrual.
- emmeniotherapy** (ë-me'ne-op'ah-the) [Gr. *emmēnios* menses + *pathos* disease] any disorder of menstruation.
- emmenology** (em'ë-nol'o-je) [Gr. *emmēna* menses + *-logy*] the sum of knowledge regarding menstruation and its disorders.
- Emmert-Gellhorn pessary** (em'ert-gel'horn) [Frederick Victor Emmert, St. Louis surgeon, born 1897; George Gellhorn, St. Louis gynecologist, 1870-1936] see under *pessary*.
- Emmet's operation** (em'ets) [Thomas Addis Emmet, gynecologist in New York, 1818-1919] see under *operation*.
- emmetrope** (em'ë-trōp) an individual who has no refractive error of vision (emmetropic).
- emmetropia** (em-ë-trō'pe-ah) [Gr. *emmetros* in proper measure + *ōpē* sight + *-ia*] a state of proper correlation between the refractive system of the eye and the axial length of the eyeball, rays of light entering the eye parallel to the optic axis being brought to a focus exactly on the retina.
- emmetropic** (em'ë-trōp'ik) pertaining to or characterized by emmetropia.
- Emmonsia** (ë-mon'se-ah) a genus of imperfect, saprophytic, soil fungi of the order Moniliales, family Moniliaceae. Two species, *E. cres'cens* and *E. par'va*, cause adiospiromycosis in rodents and man. Called also *Haplosporangium*.
- emodin** (em'o-din) [from *Rheum emodi*, a Himalayan rhubarb] a purgative compound, trihydroxymethyl anthraquinone, from rhubarb, aloes, senna, and cascara sagrada.
- emollient** (e-mol'e-ent) [L. *emolliens* softening, from *e* out + *mol-lis* soft] 1. softening or soothing; called also *malactic*. 2. an agent which softens or soothes the skin, or soothes an irritated internal surface; called also *malagma*.
- emotimetabolic** (e-mo'she-o-met'ah-bol'ik) inducing metabolic activity as a result of emotion.
- emotiomotor** (e-mo'she-o-mo'tor) inducing some activity as a result of emotion.
- emotiomuscular** (e-mo'she-o-mus'ku-lar) pertaining to muscular activity due to emotion.
- emotion** (e-mo'tion) [L. *emovere* to disturb] a state of mental excitement characterized by alteration of feeling tone and by physiological behavioral changes.
- emotional** (e-mo'shun-al) pertaining to the emotions.
- emotiovascular** (e-mo'she-o-vas'ku-lar) producing a vascular change as a result of emotion.
- emotive** (e-mo'tiv) marked by emotion; exciting emotion.
- emotivity** (e'mo-tiv'i-te) the capacity for emotion; the capacity for reacting to a stimulus.
- Emp.** abbreviation for *L. emplastrum*, a plaster.
- empacho** (em-pah'cho) a Mexican term for chronic indigestion in children with diarrhea.
- empasma** (em-paz'mah) [Gr. *en* in + *passein* to sprinkle] a powder for external use.
- empathic** (em-path'ik) pertaining to or characterized by empathy.
- empathize** (em'pah-thiz) to experience or feel empathy; to enter into another person's feelings.
- empathy** (em'pah-the) [Gr. *en* into + *pathos* feeling] the recognition of and entering into the feelings of another person.
- emperipolesis** (em-per'i-po-le'sis) [Gr. *en* + *peripolēsis* a going about] lymphocytic penetration of and movement within another cell. Cf. *peripolēsis*.
- emphlysis** (em'fli-sis) [Gr. *en* in + *phlysis* eruption] (*obs.*) an exanthematous disease in which the lesions become scabby.
- emphraxis** (em-frak'sis) [Gr.] a stoppage or obstruction.
- emphysatherapy** (em'fiz-ah-ther'ah-pe) [Gr. *emphysan* to inflate + *therapeia* treatment] the injection of gas into an organ or bodily cavity for therapeutic purposes.
- emphysema** (em'fi-se'mah, em'fi-ze'mah) [Gr. "an inflation"] a pathological accumulation of air in tissues or organs; applied especially to such a condition of the lungs (see *pulmonary e.*). **alveolar e.**, overdistention of the alveolar spaces in the lungs. **alveolar duct e.**, distention of the alveolar ducts as seen in elderly individuals, often producing little or no functional disturbance. **atrophic e.**, overdistention and stretching of lung tissues due to atrophic changes, especially loss of elastic tissue. **bullous e.**, single or multiple large cystic alveolar dilatations of lung tissue; see also *paraseptal e.* **centriacinar e.**, **centri-lobular e.**, focal dilatations of air spaces distributed throughout the lung in the midst of grossly normal lung tissue; the dilatations affect respiratory bronchioles rather than alveoli. **chronic hypertrophic e.**, panacinar *e.* **compensating e.**, com-

pensatory e., overdistention of lung tissue which fills a void produced by contraction, atelectasis, surgical resection, fibrosis, or otherwise reduced volume of another part of the lung. **cutaneous e.**, subcutaneous e. **cystic e.**, dilatations of lung tissue characterized by multiple alveolar cysts. **diffuse e.**, panacinar e. **ectatic e.**, vesicular e. **false e.**, deformity of the thoracic cage which simulates the form associated with pulmonary emphysema (increased anterior-posterior diameter, elevated rib angle, etc.); the lungs may or may not be normal. Called also *skeletal e.* **focal-dust e.**, a form of pulmonary emphysema associated with inhalation of environmental dusts, producing dilatation of the terminal and respiratory bronchioles. **gangrenous e.**, a malignant emphysema of microbic origin. **generalized e.**, pulmonary emphysema affecting all portions of both lungs in a similar manner. **glass blower's e.**, emphysema of the lungs attributed to overstrain in glass blowers. **hypertrophic e.**, a discarded term for chronic obstructive pulmonary edema (atrophy rather than hypertrophy is involved). **hypoplastic e.**, pulmonary emphysema due to a developmental abnormality resulting in reduced number of alveoli, which are abnormally large; it may affect a pulmonary segment, lobe, or an entire lung. **idiopathic unilobar e.**, a syndrome characterized by emphysematous expansion of one lobe of the lung, with the production of dyspnea and cyanosis. **interlobular e.**, accumulation of air in interlobar spaces, between the lobes of lungs. **interstitial e.**, presence of air in the peribronchial and interstitial tissues of the lungs; called also *Hamman's disease*. **intestinal e.**, a condition marked by accumulation of gas under the serous tunic of the intestine. **lobar e.**, emphysema involving fewer than all the lobes of the affected lung. **lobar e., infantile**, a condition characterized by overinflation, commonly affecting one of the upper lobes and causing respiratory distress in early life; called also *congenital lobar e.* **e. of lungs**, pulmonary e. **mediastinal e.**, pneumomediastinum. **obstructive e.**, overinflation of the lungs associated with partial bronchial obstruction which interferes with exhalation. **obstructive e., localized**, overinflation of a lobe or segment of lung, often due to partial bronchial obstruction; called also *obstructive pulmonary overinflation*. **panacinar e., panlobular e.**, generalized obstructive emphysema affecting all lung segments, with atrophy and dilatation of the alveoli and destruction of the vascular bed. **paracatricial e.**, alveolar distention occurring in the vicinity of pulmonary scars. **paraseptal e.**, alveolar distention localized to the lung periphery, including the interlobar septa; a form of bullous emphysema. **pulmonary e.**, a condition of the lung characterized by increase beyond normal in the size of air spaces distal to the terminal bronchioles, either from dilatation of the alveoli (*panacinar e.*), or from destruction (*interstitial e.*) of their walls. **pulmonary e. of cattle**, acute, fog fever. **senile e.**, pulmonary emphysema due to dilatation of the alveoli occurring with age. **skeletal e.**, false e. **small-lunged e.**, atrophic e. **subcutaneous e.**, the presence of air or gas in the subcutaneous tissues of the body. **surgical e.**, subcutaneous emphysema following surgical operation. **traumatic e.**, subcutaneous, interstitial, or mediastinal emphysema due to trauma. **unilateral e.**, emphysema affecting only one lung, frequently due to congenital defects in circulation; called also *hyperlucent lung*. **vesicular e.**, panlobular e.

emphysematous (em'fi-sem'ah-tus) of the nature of or affected with emphysema.

Empiric (em-pir'ik) [Gr. *empeirikos* experienced] 1. the second of the post-hippocratic schools of medicine, which arose in the second century, B.C., under the leadership of Philinos of Cos and Serapion of Alexandria. As opposed to the Dogmatists, the Empirics declared that the search for the ultimate causes of phenomena was vain, but they were active in endeavoring to discover the immediate causes. They paid particular attention to the totality of symptoms. In their search for a line of treatment to benefit a particular set of symptoms they employed the "tripod of the Empirics": (1) their own chance observations—their own experience; (2) learning obtained from contemporaries and predecessors—the experience of others; and (3), in cases of new diseases, the formation of conclusions from other diseases which they resembled—analogy. The Empirics paid great attention to clinical observation, and were guided in their methods of treatment almost entirely by experience. 2. a believer in or practitioner of the Empiric school of medicine.

empiric (em-pir'ik) 1. empirical. 2. a practitioner whose skill is based on experience.

empirical (em-pir'e-kal) based on experience.

empiricism (em-pir'i-sizm) [Gr. *empeirikos*, experienced] 1. the method of the Empiric school of medicine; opposed to rational medicine. 2. reliance on mere experience; empirical practice. 3. quackery.

Empirin (em-pi-rin) trademark for tablets containing acetylsalicylic acid, phenacetin, and caffeine.

emplastastic (em-plas'tik) [Gr. *emplastikos* stopping up] 1. adhesive or glutinous. 2. a constipating medicine.

emplastum (em-plas'trum) [L.; Gr. *emplastron*] resin plaster; adhesive plaster. See *plaster*.

emporiatics (em-po're-at'riks) [Gr. *emporos* one who goes on shipboard as a passenger + *iatrikē* medicine] that branch of medicine which treats of the health problems of travelers about the world.

emprosthonotos (em'pros-thot'o-nos) [Gr. *emprothen* forward + *tonos* tension] a form of tetanic spasm in which the head and feet are brought forward and the body is rendered tense; called also *episthotonos*.

emprosthonotus (em'pros-thot'o-nus) emprosthonotos.

emptysis (em'pti-sis) [Gr.] expectoration, especially of blood.

Empusa (em-pu'sah) former name for *Entomophora*.

empyema (em'pi-e'mah) [Gr. *empyema*] accumulation of pus in a cavity of the body; when used without a descriptive qualifier, it refers to thoracic empyema (q.v.). **e. articuli**, acute suppurative synovitis. **e. benignum**, thoracic empyema in which fever is absent and there is a fair condition of general health. **e. of the chest**, thoracic e. **e. of gallbladder**, cholecystitis in which the contents of the acutely inflamed gallbladder are turbid, or appear to be frankly purulent. **interlobar e.**, empyema situated between two lobes of the lung. **latent e.**, empyema unaccompanied by any symptoms. **located e.**, pus in a group of loculi. **mastoid e.**, suppurative inflammation of the mucous lining of the cavities of the mastoid process. **metapneumonic e.**, empyema developing some time after the subsidence of the pneumonia; cf. *synpneumonic e.* **e. necessitatis**, empyema in which the pus can make a spontaneous escape. **e. of pericardium**, purulent pericarditis. **pneumococcal e.**, that which is due to the pneumococcus, *Streptococcus pneumoniae*. **pulsating e.**, thoracic empyema in which the movements of the heart produce a visible vibration of the chest wall. **putrid e.**, empyema in which the pus has become more or less decomposed. **streptococcal e.**, a form due to *Streptococcus pyogenes*. **synpneumonic e.**, empyema which arises during the course of pulmonary inflammation. Cf. *metapneumonic e.* **thoracic e.**, suppurative inflammation of the pleural space; called also *pyothorax*. **tuberculous e.**, a form of empyema due to *Mycobacterium tuberculosis*.

empyemic (em'pi-e'mik) pertaining to or of the nature of empyema.

empyema (em'pi-e'sis) [Gr. *empyēsis* suppuration] 1. an accumulation of pus, as one behind the iris, or in the anterior chamber of the eye. 2. any disease characterized by phlegmonous vesicles becoming filled with purulent fluid.

empyocoele (em'pi-o-sēl) [Gr. *empyein* to suppurate + *kēlē* tumor] a collection of pus at the umbilicus.

empyreuma (em'pi-roo'mah) [Gr. *empyreuma* a live coal] the peculiar odor of animal or vegetable matter when charred in a closed vessel.

empyreumatic (em'pi-roo-mat'ik) pertaining to empyreuma; pertaining to or produced by destructive distillation of organic matter.

E.M.S. Emergency Medical Service (British).

emul. abbreviation for *L. emul'sum* emulsion.

emulgent (e-mul'jent) [L. *emulgere* to milk or drain out] 1. effecting a straining or purifying process. 2. a renal artery or vein. 3. a medicine that stimulates the flow of bile or urine.

emulsifier (e-mul'si-fi'er) an agent used to produce an emulsion.

emulsify (e-mul'si-fi) to convert or to be converted into an emulsion.

emulsin (e-mul'sin) a hydrolyzing enzyme which splits amygdalin and other beta glycosides; called also *beta glucosidase*.

emulsion (e-mul'shun) [L. *emulsio*, emulsum] a preparation of one liquid distributed in small globules throughout the body of a second liquid. The dispersed liquid is the discontinuous phase, and the dispersion medium is the continuous phase. When oil is the dispersed liquid and an aqueous solution is the continuous phase, it is known as an oil-in-water emulsion, whereas when water or aqueous solution is the dispersed phase and oil or oleaginous substance is the continuous phase, it is known as a water-in-oil emulsion. Pharmaceutical emulsions for which official standards have been promulgated include cod liver oil emulsion, cod liver oil emulsion with malt, liquid petrolatum emulsion, and phenolphthalein in liquid petrolatum emulsion. **bacillary e.**, New tuberculin in which the pulverized tubercle bacilli are permitted to settle as much as they will, but are not removed by centrifugation; the supernatant is then mixed with equal parts of glycerin. **Butschli's e.**, a preparation of potassium carbonate and rancid olive oil, used in microscopical work. **chylomicron e.**, the finely dispersed emulsion of fat which is found in the blood. **hexachlorophene cleansing e.** [USP], an emulsion containing between 90 and 110 per cent of the labeled amount of hexachlorophene in a suitable aqueous vehicle; used as a topical anti-infective and detergent. **kerosene e.**, an emulsion of kerosene in soap solution, used as an insecticide. **liquid petrolatum e.**, mineral oil e. **mineral oil e.** [USP], an emulsion of mineral oil, acacia, syrup, vanillin, and alcohol in purified water, used as a cathartic; called also *liquid petrolatum e.* **photographic e.**, a light- and radiation-sensitive gelatinous

coating incorporating silver halide which is applied to film.
Pusey's e., a preparation of powdered tragacanth, glycerin, phenol, oil of bergamot, and olive oil in water, used in infantile eczema.

emulsive (e-mul'siv) 1. capable of emulsifying a substance. 2. susceptible of being emulsified. 3. affording an oil on pressure.

emulsoid (e-mul'soid) an emulsion colloid.

emulsum (e-mul'sum), pl. *emul'sa* [L.] an emulsion.

emunctory (e-munk'to-re) [L. *emungere* to cleanse] 1. excretory or depurant. 2. any excretory organ or duct.

E-Mycin (e-mi'sin) trademark for a preparation of erythromycin.

emylcamate (e-mil'kah-māt) chemical name: 3-methyl-3-pentanol carbamate. A white crystalline powder, $C_7H_{15}NO_2$, freely soluble in alcohol, used as a tranquilizer.

enamel (en-am'el) the white, compact, and very hard substance that covers and protects the dentin of the crown of a tooth; called also *enamelum* [NA] and *substantia adamantina dentis*. **brown e.**, hereditary, amelogenesis imperfecta. **curled e.**, enamel in which the columns are bent. **dwarfed e.**, enamel that is less thick than normal; called also *nanoid e.* **gnarled e.**, enamel in which the rods run in bundles, each bundle having a different direction and intertwining with its neighbors. Cf. *straight e.* **hypoplastic e.**, incomplete or defective development of the enamel of the teeth. **mottled e.**, dental fluorosis. **nanoid e.**, dwarfed e. **straight e.**, enamel in which the rods pursue an almost straight course. Cf. *gnarled e.*

enameloblast (en-am'el-o-blast) ameloblast.

enameloblastoma (en-am'el-o-blas-to'mah) ameloblastoma.

enameloma (en-am'el-o'mah) [*enamel* + *-oma*] a tiny globule of enamel, firmly adherent to a tooth, most frequently found near or in the bifurcation or trifurcation of the roots, or on the root surface near the cemento-enamel junction.

enamelum (e-nam'el-um) [NA] enamel: the white, compact, and very hard substance that covers and protects the dentin of the crown of a tooth; called also *substantia adamantina dentis* and *adamantine layer*.

enanthate (en-an-thāt) USAN contraction for heptanoate.

enanthem (en-an'them) enanthema.

enanthema (en'an-the'ma), pl. *enanthemas*, *enanthem'ata* [Gr. *en* in + *anthema* a blossoming] an eruption upon a mucous surface.

enanthematous (en'an-them'ah-tus) pertaining to or of the nature of an enanthema.

enanthrope (en-an'thrōp) [Gr. *en* in + *anthrōpos* man] any source of disease situated within the human body.

enantiobiosis (en-an'te-o-bi-o'sis) [Gr. *enantios* opposite + *bios* life] the condition in which organisms living together antagonize one another's development. Cf. *symbiosis*, def. 1.

enantiomer (en-an'te-o-mer) one of a pair of compounds showing mirror-image isomerism, an enantiomorph.

enantiomorph (en-an'te-o-mor'f) [Gr. *enantios* opposite + *morphē* form] a compound exhibiting, or capable of exhibiting, enantiomorphism; an enantiomorphic isomer.

enantiomorphic (en-an'te-o-mor'fik) pertaining to or exhibiting enantiomorphism.

enantiomorphism (en-an'te-o-mor'fiz'm) [Gr. *enantios* opposite + *morphē* form] a special type of optical isomerism in which a nonsuperimposable, mirror-image relationship exists at all times between the respective molecules of the compounds. Enantiomorphic isomers always rotate the plane of polarized light to the same degree but in opposite directions; otherwise most of their chemical and physical properties are identical, the principal exceptions being biological reactions catalyzed by enzymes. The molecules are always asymmetric, very often as the result of possession of one or more asymmetric carbon atoms. Thus lactic acid, $CH_3-CHOHCOOH$, possessing one such carbon atom, exists in a *dextro* and a *levo* form. The molecules of some enantiomorphic compounds (e.g., certain biphenyl or spirane compounds) are asymmetric as a whole, but do not possess any asymmetric carbon atoms. Cf. *diastereoisomerism*.

enantiopathia (en-an'te-o-path'e-ah) [Gr. *enantios* opposite + *pathos* suffering] 1. any disease or morbid process antagonistic to or curative of another. 2. the curing of one disease by inducing another of an opposite kind.

enantiopathic (en-an'te-o-path'ik) inducing opposite feelings.

enantiopathy (en-an'te-op'ah-the) enantiopathia.

Enanthothamnus (en-an'te-o-tham'nus) a former genus of yeastlike imperfect fungi. *E. braulti* was once isolated in Algeria from pyogenic nodules with a central opening.

enarkyochrome (en-ar'ke-o-krōm') [Gr. *en* in + *arkys* network + *chrōma* color] an arkyochrome nerve cell containing a single network of chromatin substance.

enarthrititis (en'ar-thri'tis) inflammation of an enarthrosis.

enarthrodial (en'ar-thro'de-al) of or pertaining to an enarthrosis.

enarthrosis (en'ar-thro'sis) [Gr. *en* in + *arthrosis* joint] a joint in which the globular head of one bone is received into a socket in another, as in the hip joint.

en bloc (aw blok') [Fr.] in a lump; as a whole.

encanthis (en-kan'this) [Gr. *en* in + *kanthos* the angle of the eye] a small red excrescence on the semilunar fold of the conjunctiva and inner lacrimal caruncle.

encapsulated (en-kap'su-lāt-ed) [Gr. *en* in + L. *capsula* a little box] enclosed within a capsule.

encapsulation (en-kap'su-la'shun) 1. any act of inclosing in a capsule. 2. a physiologic process of inclosure in a sheath made up of a substance not normal to the part.

encapsuled (en-kap'suld) encapsulated.

encarditis (en'kar-di'tis) endocarditis.

encatarrhaphy (en'kat-ar'ah-fe) encatarrhaphy.

enceinte (aw-sawt') [Fr.] pregnant; with child.

encelialgia (en'se-le-al'je-ah) [Gr. *en* in + *koilia* belly + *-algia* pain] pain in an abdominal viscus.

enceliitis (en-se'le-i'tis) [Gr. *en* in + *koilia* belly + *-itis*] inflammation of an intra-abdominal organ.

encelitis (en'se-li'tis) enceliitis.

encephalgia (en-sef'ah-lal'je-ah) [*encephalo-* + *-algia*] pain within the head.

encephalasthenia (en-sef'al-as-the'ne-ah) [*encephalo-* + Gr. *astheneia* weakness] (*obs.*) mental fatigue; psychasthenia.

encephalatrophy (en-sef'ah-lat'ro-fe) [*encephalo-* + *atrophy*] atrophy of the brain.

encephalaxe (en'sef-ah-lawk'se) [*encephalo-* + Gr. *auxē* increase] hypertrophy of the brain.

encephalemia (en-sef'ah-le'me-ah) [*encephalo-* + Gr. *haima* blood + *-ia*] congestion of the brain.

encephalic (en'se-fal'ik) 1. pertaining to the encephalon. 2. within the skull.

encephalitic (en'sef-ah-lit'ik) pertaining to or affected with encephalitis.

encephalitides (en'sef-ah-lit'i-dēz) [Gr.] plural of *encephalitis*.

encephalitis (en'sef-ah-li'tis), pl. *encephalit'ides* [*encephalo-* + *-itis*] inflammation of the brain. **e. A.**, lethargic e. **acute disseminated e.**, postinfection e. **acute necrotizing e.**, morphological term for encephalitis characterized by a particularly destructive reaction in the brain. **Australian X e.**, see under *disease*. **e. B.**, Japanese B e. **benign myalgic e.**, see under *encephalomyelitis*. **Binswanger's e.**, see under *dementia*. **bovine e.**, encephalitis of cows caused by microorganisms of the psittacosis-lymphogranuloma venereum group (*Chlamydia*). **buffalo e.**, a viral encephalitis of the Asiatic water buffalo. **e. C.**, St. Louis e. **California e.**, an acute viral encephalitis caused by an arbovirus, primarily a disease of children. **Central European e.**, Russian spring-summer e. **chronic subcortical e.**, Binswanger's dementia. **cortical e.**, **e. corticalis**, encephalitis affecting the cortex of the brain only. **Dawson's e.**, subacute sclerosing panencephalitis. **eastern equine e.**, see under *encephalomyelitis*. **Economo's e.**, lethargic e. **enzootic e. of horses**, Borna disease. **epidemic e.**, **e. epidemica**, a viral encephalitis occurring epidemically in several types (see *influenza e.*, *Japanese B e.*, *lethargic e.*, *Russian spring-summer e.*, and *St. Louis e.*). **equine e.**, see *equine encephalomyelitis*, under *encephalomyelitis*, and *Borna disease*, under *disease*. **forest-spring e.**, Russian spring-summer e. **fox e.**, a viral disease of foxes, raccoons, and coyotes. **Hayem's e.**, e. hyperplastica. **hemorrhagic e.**, herpes encephalitis in which there is inflammation of the brain with hemorrhagic foci and perivascular exudate; called also *Strümpell-Leichtenstern type of encephalitis*. **hemorrhagic arsphenamine e.**, a rapidly progressive form which sometimes follows the administration of arsphenamine. **e. hemorrhagica superior**, Wernicke's encephalopathy. **herpes e.**, **herpes simplex e.**, **herpetic e.**, a disease caused by herpesvirus, resembling equine encephalomyelitis. See *hemorrhagic e.* **e. hyperplastica**, an acute nonsuppurating form of encephalitis; called also *Hayem's encephalitis*. **Ilheus e.**, a viral encephalitis transmitted by mosquitoes in Brazil. See also under *virus*. **infantile e.**, inflammation of the brain in children from infectious disease. **influenzal e.**, encephalitis occurring as a complication of influenza. **Japanese B e.**, a form of epidemic encephalitis occurring in Japan and other Pacific islands, China, Manchuria, U.S.S.R., and probably much of the Far East; it may occur as a symptomless, subclinical infection, or an acute meningoencephalomyelitis with cortical damage and cord lesions resembling those of poliomyelitis. Called also *e. B.* and *Russian autumnal e.* See also under *virus*. **lead e.**, encephalitis with marked cerebral edema, caused by lead poisoning. **Leichtenstern's e.**, hemorrhagic e. **lethargic e.**, **e. lethargica**, a form of epidemic encephalitis, the original type described by von Economo, characterized by increasing languor, apathy, and drowsiness, passing into lethargy; observed in various parts of the world between 1915 and 1926. Called also *e. A.*, *Economo's e. or disease*, and *Vienna e.* **Murray Valley e.**, a

viral encephalitis that occurred epidemically in 1950 and 1951 in the Murray Valley, Victoria, Australia, believed to be a recrudescence of Australian X disease; a few cases occurred in 1956 and it has been reported in New Guinea. **e. neonato'rum**, encephalitis in the newborn. **e. periaxia'lis concen'trica**, Baló's disease. **e. periaxia'lis diffu'sa**, Schilder's disease. **post-infection e.**, an acute disease of the central nervous system seen in persons who are convalescing from infectious diseases, usually one of viral origin; called also *acute disseminated e.*, *acute disseminated encephalomyelitis*, *acute demyelinating disease*, and *acute perivascular myelinolysis*. **postvaccinal e.**, acute encephalitis sometimes occurring after vaccination; called also *vaccinal e.* **Powassan e.**, a form reported from Canada, caused by a tickborne virus and closely resembling Russian spring-summer encephalitis. **purulent e.**, **pyogenic e.**, suppurative e. **Russian autumnal e.**, Japanese B e. **Russian endemic e.**, **Russian forest-spring e.**, Russian spring-summer e. **Russian spring-summer e.**, a form of epidemic encephalitis which is acquired in forests from infected ticks (*Ixodes persulcatus*), but is also transmitted in other ways, as by ingestion of the flesh of infected mammals and birds, or milk of infected goats. It ranges in severity from mild to fatal cases, with degenerative changes in organs other than those of the nervous system. See also under *virus*. **Russian tick-borne e.**, **Russian vernal e.**, Russian spring-summer e. **St. Louis e.**, a viral disease first observed in Illinois in 1932, closely similar to western equine encephalomyelitis clinically, occurring in late summer and early fall and transmitted usually by mosquitoes of the genus *Culex*; it ranges from an abortive type of infection to severe disease. Called also *e. C.* see also under *virus*. **Schilder's e.**, see under *disease*. **Semliki Forest e.**, a form due to a virus transmitted by mosquitoes in the Semliki Forest of western Uganda. See also under *virus*. **e. sid'erans**, a form of epidemic encephalitis terminating fatally in a few hours. **subacute inclusion body e.**, subacute sclerosing panencephalitis. **e. subcortica'lis chron'ica**, Binswanger's dementia. **summer e.**, Japanese B e. **suppurative e.**, encephalitis accompanied by suppuration and abscess formation; called also *purulent e.* and *pyogenic e.* **toxoplasmic e.**, encephalitis due to infection with *Toxoplasma*. **vaccinal e.**, postvaccinal e. **van Bogaert e.**, subacute sclerosing panencephalitis. **Venezuelan equine e.**, see under *encephalomyelitis*. **vernal e.**, Russian spring-summer e. **vernoestival e.**, Russian spring-summer e. **Vienna e.**, lethargic e. **von Economo's e.**, lethargic e. **western equine e.**, see under *encephalomyelitis*. **West Nile e.**, a mild, febrile, sporadic disease of viral origin, probably transmitted by the mosquito *Culex univittatus*, occurring chiefly in the summer; frequently, infection does not lead to encephalitis. It may be of sudden onset, and symptoms may include drowsiness, severe frontal headache, maculopapular rash, abdominal pain, loss of appetite, nausea, and generalized lymphadenopathy. It was first reported in Uganda, but is widespread in Africa and has been reported in Israel. See also under *virus*. **woodcutter's e.**, Russian spring-summer e.

encephalitogen (en-sef'ah-lit'o-jen) any agent that causes encephalitis.

encephalitogenic (en-sef'ah-lit-o-jen'ik) [*encephalitis* + Gr. *gennan* to produce] causing encephalitis.

Encephalitozoon (en'sē-fal'i-to-zō'on) [*encephalitis* + Gr. *zōon* animal] *Nosema*. **E. cunic'uli**, *Nosema cuniculi*. **E. rabi'bi/ei**, Negri bodies.

encephalization (en-sef'ah-li-zah'shun) the developmental process by which the cerebral cortex has taken over the functions of the lower (spinal) centers.

encephalo- (en-sef'ah-lo) [Gr. *enkephalos* brain] a combining form denoting relationship to the brain.

encephalo-arteriography (en-sef'ah-lo-ar-te're-og'rah-fe) a combination of encephalography and arteriography for examining the blood supply of the brain.

encephalocoele (en-sef'ah-lo-sē'l') [*encephalo-* + Gr. *kēlē* hernia] hernia of the brain, manifested by protrusion of brain substance through a congenital or traumatic opening of the skull.

encephaloclastic (en-sef'ah-lo-klas'tik) [*encephalo-* + Gr. *klástōs* broken] exhibiting the residues of a destructive lesion in the brain; see under *porencephaly*, def. 2.

encephalocoele (en-sef'ah-lo-se'l'e) [*encephalo-* + Gr. *kōilos* hollow] 1. the entire cavity of the cranium. 2. the ventricles and other spaces of the brain.

encephalocystocoele (en-sef'ah-lo-sis'to-sē'l') [*encephalo-* + Gr. *kystis* sac, bladder + *kēlē* hernia] hernia of the brain, the protrusion being distended by a collection of fluid communicating with the ventricle; called also *hydrencephalocoele*.

Encephalocytozoon (en-sef'ah-lo-si'to-zō'on) [*encephalo-* + Gr. *kytos* hollow vessel + *zōon* animal] *Nosema*.

encephalodialysis (en-sef'ah-lo-di-al'i-sis) [*encephalo-* + Gr. *di-lysis* loosening] softening of the brain.

encephalodysplasia (en-sef'ah-lo-dis-pla'se-ah) any congenital anomaly of the brain.

encephalogram (en-sef'ah-lo-gram') the film made by encephalography.

Encephalocoele (after Netter).

encephalography (en-sef'ah-log'rah-fe) [*encephalo-* + Gr. *graphein* to write] roentgenography demonstrating the intracranial fluid-containing spaces after the withdrawal of cerebrospinal fluid and introduction of air or other gas; it includes pneumoencephalography and ventriculography.

encephaloid (en-sef'ah-lo'id) [*encephalo-* + Gr. *eidos* form] 1. resembling the brain or brain substance. 2. medullary carcinoma.

encephalolith (en-sef'ah-lo-lith') [*encephalo-* + Gr. *lithos* stone] a brain calculus.

encephalology (en'sef-ah-lol'o-je) [*encephalo-* + *-logy*] the sum of knowledge regarding the brain, its functions, and its diseases.

encephaloma (en'sef-ah-lo'mah) 1. any swelling or tumor of the brain. 2. medullary carcinoma.

encephalomalacia (en-sef'ah-lo-mah-la'she-ah) [*encephalo-* + Gr. *malakia* softness] softening of the brain. **avian e.**, a disease of young chickens due to vitamin E deficiency, in which there is ataxia, incoordination, paralysis, and severe encephalomalacia in several areas of the brain, especially the cerebellum. It must be differentiated from avian encephalomyelitis. Called also *crazy chick disease*.

encephalomeningitis (en-sef'ah-lo-men'in-jit'is) [*encephalo-* + *meningitis*] meningoencephalitis.

encephalomeningocoele (en-sef'ah-lo-me-ning'go-sē'l') [*encephalo-* + Gr. *mēnix* membrane + *kēlē* hernia] meningoencephalocoele.

encephalomeningopathy (en-sef'ah-lo-men'in-gop'ah-the) meningoencephalopathy.

encephalomere (en-sef'ah-lo-mēr') [*encephalo-* + Gr. *meros* part] any one of the succession of segments which make up the embryonic brain.

encephalometer (en-sef'ah-lom'ē-ter) [*encephalo-* + Gr. *metron* measure] an instrument used in locating certain of the regions of the brain.

encephalomyelitis (en-sef'ah-lo-mi'ē-li'tis) inflammation involving both the brain and the spinal cord. **acute disseminated e.**, postinfection encephalitis. **avian e.**, a viral disease of chickens under six weeks old, marked by weakness of the legs followed by partial or complete paralysis of the legs, trembling of the head and neck, and degeneration of the neurons in the pons, medulla, and anterior horns of the spinal cord. Clinically, it resembles avian encephalomalacia and must be differentiated from that condition. Called also *crazy chick disease* and *epidemic tremor*. **benign myalgic e.**, a disease, usually occurring in epidemics, characterized by headache, unusual muscular pain, lymphadenopathy, low-grade fever, and fatigability; paresthesias are common, sensory loss less so. Called also *epidemic neuromyos-thenia* and *Iceland (or Icelandic) disease*. **equine e.**, a viral disease of horses and mules, communicable to man, occurring as summer epizootics in the Western Hemisphere. Three forms are recognized: *eastern equine e.*, *western equine e.*, and *Venezuelan equine e.* Called also *equine encephalitis*. See also under *virus*. **equine e., eastern**, a viral disease similar to western equine encephalomyelitis, but occurring in the United States in a region extending from New Hampshire to Texas and as far west as Wisconsin, and in Canada, Mexico, the Caribbean, and parts of Central and South America. Abbreviated EEE. **equine e., Venezuelan**, a viral disease of horses and mules first observed in Colombia in 1935, the causative agent being isolated in Venezuela in 1938. It has since been reported in other South American countries and in Mexico, Texas, and Florida. The infection in man resembles influenza, with little or no indication of central nervous system involvement. Abbreviated VEE.

equine e., western, a viral disease of horses and mules, communicable to man, occurring chiefly as a meningoencephalitis, with little involvement of the medulla or spinal cord; observed west of the Mississippi River in the United States, but present also along the Gulf and Atlantic coasts. Abbreviated WEE. **experimental allergic e.**, acute encephalomyelitis marked by perivascular accumulation of lymphocytes and macrophages accompanied by demyelination and occurring about 10 days after repeated injections of brain or spinal cord tissue incorporated into Freund's complete adjuvant. It resembles postvaccination encephalomyelitis in man. T-cells rather than B-cell products appear to be responsible for this autoimmune disease process. **granulomatous e.**, a disease marked by granulomas and necrosis of the walls of the cerebral and spinal ventricles. **infectious porcine e.**, a highly fatal encephalomyelitis of swine, caused by a picornavirus, and characterized by a flaccid ascending paralysis, similar in character to the paralysis of human poliomyelitis. First reported in the Teschen district of Czechoslovakia, it occurs throughout Europe. Called also *porcine encephalomyelitis*, *porcine poliomyelitis*, *Talfan disease*, and *Teschen disease*. **Mengo e.**, a form of encephalomyelitis the virus of which was first isolated from animals in the Mengo region of Uganda. See also under *virus*. **mouse e., murine e.**, Theiler's disease. **porcine e.**, infectious porcine e. **postinfectious e., postvaccinal e.**, inflammation of the brain and spinal cord following vaccination or infection, as with vaccinia virus. **sporadic bovine e.**, Buss disease. **Theiler's mouse e.**, Theiler's disease. **toxoplasmic e.**, encephalomyelitis due to infection with *Toxoplasma*. **viral e., virus e.**, encephalomyelitis caused by a virus. See *equine e.*

encephalomyelocoele (en-sef'ah-lo-mi-el'o-sēl) [*encephalo-* + Gr. *myelon* spinal cord + *kēlē hernia*] abnormality of the foramen magnum and absence of the laminae and spinal processes of the cervical vertebrae, with herniation of meninges, brain substance, and spinal cord.

encephalomyeloneuropathy (en-sef'ah-lo-mi'ē-lo-nu-rop'-ah-the) disease involving the brain, spinal cord, and peripheral nerves.

encephalomyelopathy (en-sef'ah-lo-mi'ē-lop'-ah-the) [*encephalo-* + Gr. *myelos* marrow + *pathos* disease] any disease or diseased condition of the brain and spinal cord. — **postinfection e.**, demyelination secondary to common viral diseases such as measles, varicella, rubella, mumps, and influenza. **postvaccinal e.**, demyelination complicating the reaction to vaccination against smallpox.

encephalomyeloradiculitis (en-sef'ah-lo-mi'ē-lo-rah-dik'ul-i-tis) inflammation of the brain, spinal cord, and spinal nerve roots.

encephalomyeloradiculoneuritis (en-sef'ah-lo-mi'ē-lo-rah-dik'ul-lo-nu-ri'tis) acute febrile polyneuritis.

encephalomyeloradiculopathy (en-sef'ah-lo-mi'ē-lo-rah-dik'ul-lop'-ah-the) disease involving the brain, spinal cord, and spinal nerve roots.

encephalomyocarditis (en-sef'ah-lo-mi'o-kar-di'tis) a viral disease characterized by degenerative and inflammatory changes in skeletal and cardiac muscle, and lesions of the central nervous system resembling those of poliomyelitis.

encephalon (en-sef'ah-lon) [Gr. *enkephalos*] [NA] the brain: that part of the central nervous system contained within the cranium, comprising the prosencephalon, mesencephalon, and rhombencephalon; it is derived (developed) from the anterior part of the embryonic neural tube. See illustration accompanying *brain*. See also *cerebrum*.

encephalonicarcosis (en-sef'ah-lo-nar-ko'sis) [*encephalo-* + Gr. *narkē* stupor] stupor due to brain disease.

encephalopathia (en-sef'ah-lo-path'e-ah) encephalopathy. **e. alcoholica**, *polioencephalitis haemorrhagica superior*.

encephalopathic (en-sef'ah-lo-path'ik) pertaining to encephalopathy.

encephalopathy (en-sef'ah-lop'-ah-the) [*encephalo-* + Gr. *pathos* illness] any degenerative disease of the brain. **biliary e.**, kernicterus. **bilirubin e.**, kernicterus. **boxer's e.**, traumatic e. **demyelinating e.**, a degenerative disease of the brain characterized by demyelination; see *Schilder's disease*, under *disease*. **dialysis e.**, a degenerative disease of the brain associated with long-term use of hemodialysis, marked by speech disorders and constant myoclonic jerks, progressing to global dementia, with associated psychological changes; it is probably due to high levels of aluminum in the water used in the dialysis fluid. Called also *progressive dialysis e.* **hepatic e.**, a condition usually occurring secondarily to advanced disease of the liver but also seen in the course of any severe disease or in patients with portacaval shunts. It is marked by disturbances of consciousness which may progress to deep coma (hepatic coma), psychiatric changes of varying degree, flapping tremor, and fetor hepaticus. Called also *portal-systemic encephalopathy*. **hypernatremic e.**, a severe hemorrhagic encephalopathy induced by the hyperosmolarity accompanying hypernatremia and dehydration. **hypertensive e.**, a complex of cerebral phenomena (headache, convulsions, coma, etc.) occurring in the course of malignant

hypertension. **hypoglycemic e.**, metabolic encephalopathy induced by severe hypoglycemia, as in glycogen storage disease, oversecretion or overdose of insulin, etc. **lead e.**, brain disorder caused by lead poisoning; called also *saturnine e.* **metabolic e.**, neuropsychiatric disturbances due to metabolic brain disease. It may occur primarily as a result of hypoxia, ischemia, or hypoglycemia, or secondarily to disease of other organs, such as the kidney, lung, or liver. **mink e.**, a progressive viral disease of the central nervous system of mink, characterized by locomotor incoordination, progressing to semicomatose and death within three to eight weeks. **myoclonic e. of childhood**, a neurologic disorder of unknown etiology with onset between ages one and three, characterized by titubation of trunk and limbs and by opsoclonus, with ataxia of gait, and intention tremor; some cases have been associated with occult neuroblastoma. Called also *Kinsbourne syndrome*. **portal-systemic e., portasystemic e., hepatic e.** **progressive dialysis e., dialysis e.** **progressive subcortical e.**, Schilder's disease; see under *disease*. **saturnine e., lead e.** **spongiform e.**, encephalopathy involving extensive vacuolization of the cerebral cortex; the term embraces Creutzfeldt-Jakob syndrome, kuru, scrapie of sheep, and mink encephalopathy. Called also *status spongiosus*. **subacute spongiform e.**, transmissible spongiform e. **transmissible spongiform e., transmissible spongiform virus e.**, any of a group of transmissible infections of the nervous system caused by a slow virus, including Creutzfeldt-Jakob syndrome, kuru, scrapie, and mink encephalopathy, characterized pathologically by neuronal loss, astrogliosis, and extensive vacuolization of the cerebral cortex. Called also *subacute spongiform e.* **traumatic e.**, a syndrome due to cumulative punishment absorbed in the boxing ring, characterized by the general slowing of mental functions, occasional bouts of confusion, and scattered memory loss. **Wernicke's e.**, an inflammatory hemorrhagic form of encephalopathy with lesions of the hypothalamus, mamillary bodies, and periventricular and periaqueductal regions, caused by a thiamine deficiency with chronic alcoholism as a contributing factor, but also occurring as a complication of disease of the gastrointestinal tract and sometimes of hyperemesis gravidarum. It is characterized by paralysis of the eye muscles (chiefly the external recti), diplopia, nystagmus, ataxia, and mental changes ranging from deterioration and forgetfulness to delirium tremens and Korsakoff's psychosis. Called also *polioencephalitis hemorrhagica superior*.

encephalophyma (en-sef'ah-lo-fi'mah) [*encephalo-* + Gr. *phyma* growth] (*obs.*) any tumor of the brain.

encephalopsy (en-sef'ah-lop'se) [*encephalo-* + Gr. *opsis* vision] a condition in which the patient associates certain colors with certain words, numbers, flavors, etc.

encephalopuncture (en-sef'ah-lo-punk'tūr) surgical puncture of the brain.

encephalopyosis (en-sef'ah-lo-pi-o'sis) [*encephalo-* + Gr. *pyōsis* suppuration] suppuration or abscess of the brain.

encephalorachidian (en-sef'ah-lo-rah-kid'e-an) [*encephalo-* + Gr. *rhachis* spine] cerebrospinal.

encephaloradiculitis (en-sef'ah-lo-rah-dik'ul-i'tis) inflammation of the roots of spinal nerves and of the brain.

encephalorrhagia (en-sef'ah-lo-ra'je-ah) [*encephalo-* + Gr. *rhēgnynai* to burst out] hemorrhage within the brain or from the brain, especially cerebral pericapillary hemorrhage.

encephalosclerosis (en-sef'ah-lo-skle-ro'sis) [*encephalo-* + Gr. *sklērōsis* hardness] hardening of the brain.

encephaloscope (en-sef'ah-lo-skōp) a speculum for examining cavities (such as abscess cavities) in the brain.

encephaloscopy (en-sef'ah-lo-skō-pe) [*encephalo-* + Gr. *skopein* to examine] inspection or examination of the brain.

encephalosepsis (en-sef'ah-lo-sep'sis) [*encephalo-* + Gr. *sēpsis* decay] gangrene of brain tissue.

encephalosis (en-sef'ah-lo'sis) [*encephalo-* + *-osis*] any organic brain disease; as used by Winkelman, the term indicates a degenerative process as distinguished from true encephalitis.

encephalospinal (en-sef'ah-lo-spi'nal) pertaining to the brain and spinal column.

encephalothlipsis (en-sef'ah-lo-thlip'sis) [*encephalo-* + Gr. *thlipsis* pressure] compression of the brain.

encephalotome (en-sef'ah-lo-tōm) an instrument for performing encephalotomy.

encephalotomy (en-sef'ah-lo-tō-me) [*encephalo-* + Gr. *tomē* a cutting] 1. the destruction of the head of a fetus in order to facilitate delivery. 2. the dissection or anatomy of the brain.

encheiresis (en'ki-re'sis) [Gr. *en* in + *cheir* hand] any manipulation, especially the introduction of a bougie, sound, or catheter.

enchondral (en-kon'dral) endochondral.

enchondroma (en'kon-dro'mah) [Gr. *en* in + *chondros* cartilage + *-oma*] a benign growth of cartilage arising in the metaphysis of a bone; called also *true chondroma* and *enchondrosis*. When multiple bones are involved, the condition is called *enchondromatosis*. **multiple congenital e.**, enchondromatosis.

enchondromatosis (en-kon'dro-mah-to'sis) a condition char-

acterized by hamartomatous proliferation of cartilage cells within the metaphysis of several bones, causing thinning of the overlying cortex and distortion of the growth in length; called also *multiple* or *skeletal e.*, *dyschondroplasia*, and *Ollier's disease*. In combination with multiple cutaneous or visceral hemangiomas, the disorder is known as *Maffucci's syndrome*. **multiple e., skeletal e.,** enchondromatosis.

enchondromatous (en''kon-dro'mah-tus) of the nature of or pertaining to enchondroma.

enchondrosarcoma (en-kon''dro-sar-ko'mah) central chondrosarcoma.

enchondrosis (en''kon-dro'sis) 1. an outgrowth from cartilage. 2. an enchondroma.

enchylema (en''ki-le'mah) [Gr. *en* in + *chylos* juice] hyaloplasm, def. 1.

enchyma (en''ki-mah) [Gr. *en* in + *chymos* juice] the substance elaborated from absorbed nutritive materials; the formative juice of the tissues.

enclave (en'klāv, aw-klahv') [Fr.] a tissue detached from its normal connection and enclosed within another organ or tissue.

enclitic (en-kli'tik) [Gr. *enklīnein* to incline] having the planes of the fetal head inclined to those of the maternal pelvis; not synclitic.

enclomiphene (en-klo'mī-fēn) chemical name: (*E*)-2-[4-(2-chloro-1,2-diphenylethenyl)phenoxy]-*N,N*-diethylethanamine; the *cis*-isomer of the gonad-stimulating principle clomiphene citrate (q.v.), $C_{26}H_{28}ClNO$. Called also *cisclomiphene*. Cf. *zuclomiphene*.

encolpism (en-kol'pizm) [Gr. *en* in + *kolpos* vagina] medication administered via the vagina.

encopresis (en-ko-pre'sis) incontinence of feces not due to organic defect or illness.

en Cranial (en-kra'ne-al) (*obs.*) situated within the cranium.

en Cranial (en-kra'ne-us) [Gr. *en* in + *kranion* skull] a teratoid parasitic twin located within the cranium of the autosite.

encyesis (en''si-e'sis) [Gr. *en* in + *kyēsis* pregnancy] normal uterine pregnancy.

encyclopelitis (en-si''o-pi''ē-li'tis) [*encyesis* + *pyelitis*] dilatation of the ureters and/or renal pelvis during normal pregnancy with associated edema, but seldom with all the classical signs of inflammation.

encysted (en-sist'ed) [Gr. *en* in + *kystis* sac, bladder] enclosed in a sac, bladder, or cyst.

encystment (en-sist'ment) the process or condition of being or becoming encysted.

end- see *endo-*.

endadelphos (en''ah-del'fos) [*end-* + Gr. *adelphos* brother] a monster in which a parasitic twin is inclosed within the body of the autosite, or within a tumor upon the larger twin.

Entamoeba (en''dah-me'bah) a genus of amebae of the order Amoebida, class Rhizopoda, parasitic in the intestines of invertebrates, having a large central area of the nucleus devoid of chromatic material, surrounded by a wide zone of chromatin granules and a thick nuclear membrane. Cf. *Entamoeba*. **E. blat'tae**, a species found in the intestine of the cockroach.

endangiitis (en''dan-je-i'tis) inflammation of the endangium; intimitis.

endangium (en''dan'je-um) [*end-* + Gr. *angeion* vessel] the innermost coat of a blood vessel (tunica intima vasorum [NA]).

endaortic (en''da-or'tik) pertaining to the interior of the aorta.

endaortitis (en''a-or-ti'tis) inflammation of the lining membrane of the aorta. **bacterial e.**, the formation of bacterial vegetations on the endothelial surface of the aorta.

endarterectomize (en''ar-ter-ek'to-miz) to subject to endarterectomy.

endarterectomy (en''ar-ter-ek'to-me) excision of the thickened, atheromatous tunica intima of an artery. **gas e.**, endarterectomy performed by utilizing high-pressure carbon dioxide to remove plaque deposits from the coronary blood vessels in the treatment of atherosclerosis.

endarterial (en''ar-te're-al) within an artery.

endarteritis (en''ar-te-re-i'tis) [*end-* + Gr. *arteria* artery + *-itis*] inflammation of the tunica intima of an artery; intimitis. Cf. *arteritis* and *periarteritis*. **e. defor'mans** (*obs.*), chronic endarteritis characterized by fatty degeneration of the arterial tissues, with the formation of deposits of lime salts. **Heubner's specific e.**, see under *disease*. **e. oblit'erans**, endarteritis in which the lumina of the smaller vessels become narrowed or obliterated as a result of proliferation of the tissue of the intimal layer; called also *arteritis obliterans* and *Friedländer's disease*. **e. prolif'erans**, overgrowth of fibrous tissue in the internal layers of the aorta.

endarterium (en''ar-te-re-um) [*end-* + Gr. *arteria* artery] the tunica intima of an artery.

endarteropathy (en''ar-ter-op'ah-the) disorder of the innermost coat (tunica intima) of an artery. **digital e.**, disorder of the tunica intima of the arteries of the digits, associated with

Raynaud's phenomenon and nutritional lesions of the pulp of the fingers.

end-artery (end'ar-ter-e) an artery that does not anastomose with other arteries.

endastral (end-aw'ral) within the ear.

end-body (end'bod-e) end-piece.

endbrain (end'brān) telencephalon.

end-brush (end'brush) the brushlike or tufted arrangement sometimes forming the termination of the process of a nerve cell.

end-bud (end'bud) 1. an ovoid or spheroid body located at the termination of a nerve fiber, and dispersed in the skin, mucous membranes, muscles, joints, and connective tissue of the internal organs. End-buds show a wide diversity, from simple end knobs to complex sensory end organs with connective tissue sheaths. Called also *end-bulb*. For names of specific types see under *corpuscle*. 2. tail bud (def. 1); see under *bud*.

end-bulb (end'bulb) end-bud, def. 1.

endchondral (end-kon'dral) endochondral.

endeictic (en-dik'tik) [Gr. *endeixis* a pointing out] symptomatic.

endemial (en-de'me-ah) any endemic disease.

endemial (en-de'me-al) endemic.

endemic (en-dem'ik) [Gr. *endēmos* dwelling in a place] 1. present in a community at all times. 2. a disease of low morbidity that is constantly present in a human community, but clinically recognizable in only a few.

endemiology (en-de'me-o'l'o-je) [*endemic* + *-logy*] the field of science dealing with all the factors relating to the occurrence of endemic disease.

endemoepidemic (en''dē-mo-ep''i-dem'ik) endemic, but occasionally becoming epidemic.

endemy (en'dē-me) any endemic disease.

endepidermis (end'ep-i-der'mis) the epithelium or internal epidermis.

endergic (end-er'jik) [*end-* + Gr. *ergon* work] taking in work: a term applied to chemical reactions in which the products have a higher free energy than the reactants.

endergonic (end'er-gon'ik) [*end(o)-* + Gr. *ergon* work] characterized by or accompanied by the absorption of energy; said of chemical reactions that require energy in order to proceed, so that the products have a higher free energy than the reactants. Opposed to *exergonic*.

enderon (en'der-on) [Gr. *en* in + *deros* skin] the deeper part of the skin or mucous membrane, as distinguished from the epithelium or epidermis.

enderonic (en'der-on'ik) pertaining to the enderon or derived from it.

Enders (en'derz), John Franklin. United States microbiologist, born 1897; co-winner, with Thomas H. Weller and Frederick C. Robbins, of the Nobel prize in medicine and physiology for 1954, for the discovery that poliomyelitis viruses multiply in human tissue.

end-feet button-like or knoblike terminal enlargements of naked nerve fibers which end in relation to the dendrite of another cell; called also *terminal buttons*, *boutons terminaux*, and *synaptic knobs*. **e. of Held**, end-feet.

end-flake (end'flāk) end-plate.

ending (end'ing) a termination or finish, especially the peripheral termination of a nerve or nerve fiber. **annulospiral e's**, wide, ribbon-like sensory nerve endings which are wrapped around the fibers of a muscle spindle. **club e. of Bartelmez**, a type of nerve fiber ending in the vertebrate central nervous system, terminating abruptly on the dendrite of another neuron. **encapsulated nerve e's**, corpuscula nervosa terminalia. **epilemmal e's**, sensory nerve endings in striated muscle in which the nerve endings are in close contact with the muscle fibers but do not penetrate the sarcolemma. **flower-spray e's**, branched, slender sensory nerve endings on the sarcolemma of muscle spindles. **free nerve e's**, terminations nervorum liberae. **grape e's**, sensory nerve endings in muscle which have the form of terminal swellings. **nerve e's**, the fine branchlike terminations of axons.

end-nuclei (end-nu'kle-i) terminal nuclei; see under *nucleus*.

endo-, end- [Gr. *endon* within] prefix denoting an inward situation, within.

endoabdominal (en''do-ab-dom'i-nal) pertaining to the interior of the abdomen.

endoaneurysmorrhaphy (en''do-an''u-riz-mor'ah-fe) [*endo-* + Gr. *aneurysma* aneurysm + *rhaphe* suture] Matas' operation for aneurysm by opening the aneurysmal sac and closing the internal orifices by suture.

endoangiitis (en''do-an-je-i'tis) endangiitis.

endoantitoxin (en''do-an-te-tok'sin) (*obs.*) an antitoxin contained within the elaborating cell.

endoaortitis (en''do-a''or-ti'tis) endoaortitis.

endoappendicitis (en''do-ah-pen''dī-si'tis) inflammation of the mucous membrane lining the vermiform appendix.

endoarteritis (en''do-ar''ter-i'tis) endarteritis.

endoauscultation (en''do-aws''kul-ta'shun) auscultation of the stomach and thoracic organs by means of a tube passed into the stomach.

endobacillary (en''do-bas''fī-lār-e) contained within a bacillus.

endobiotic (en''do-bi-ot'ik) [*endo* + Gr. *biosis* living] living parasitically within the tissues of the host.

endoblast (en''do-blast) [*endo* + Gr. *blastos* germ] entoderm.

endoblastic (en''do-blas'tik) entodermic.

endobronchitis (en''do-brong-ki'tis) inflammation of the epithelial lining of the bronchi.

endocardial (en''do-kar'de-al) [*endo* + Gr. *kardia* heart] 1. situated or occurring within the heart. 2. pertaining to the endocardium.

endocardiopathy (en''do-kar'de-op'ah-the) any noninflammatory disease of the endocardium.

endocarditic (en''do-kar-di'tik) pertaining to endocarditis.

endocarditis (en''do-kar-di'tis) exudative and proliferative inflammatory alterations of the endocardium, characterized by the presence of vegetations on the surface of the endocardium or in the endocardium itself, and most commonly involving a heart valve, but sometimes affecting the inner lining of the cardiac chambers or the endocardium elsewhere. It may occur as a primary disorder, or as a complication of or in association with another disease.

atypical verrucous e., nonbacterial endocarditis found in association with systemic lupus erythematosus, in which the vegetations consist of necrotic debris, fibrinoid material, and trapped, disintegrating, fibroblastic and inflammatory cells. Called also *Libman-Sacks e. or disease*, *e. benigna*, and *nonbacterial verrucous e.* **bacterial e.**, infectious endocarditis (q.v.), acute or subacute, caused by various bacteria, including streptococci, staphylococci, enterococci, gonococci, gram-negative bacilli, etc. **e. benigna**, atypical verrucous e. **e. chorda'lis**, endocarditis affecting particularly the chordae tendineae. **chronic e.**, chronic deforming disease of the heart valves. **constrictive e.**, Löffler's e. **fungal e.**, mycotic e. **infectious e.**, infective e., endocarditis caused by infection with microorganisms, especially bacteria and fungi, and sometimes other organisms, such as spirochetes, rickettsiae, and the etiologic agent of psittacosis. It has been classified according to course as acute and subacute: the *acute* form, which may be due to staphylococci, pneumococci, gonococci, streptococci, and other bacteria and other microorganisms, usually involves a normal heart valve, has a high mortality rate with or without treatment, and causes rapid destruction and metastases; the *subacute* form, which may be caused by viridans streptococci, fungi, or other organisms, usually affects a previously damaged heart valve, produces additional damage slowly, and responds well to therapy. **e. len'ta**, the subacute form of infectious endocarditis. **Libman-Sacks e.**, atypical verrucous e. **Löffler's e.**, Löffler's parietal fibroplastic e., endocarditis associated with eosinophilia, marked by fibroplastic thickening of the endocardium, and resulting in congestive heart failure, persistent tachycardia, hepatomegaly, splenomegaly, serous effusions into the pleural cavity, edema of the legs, and edema and ascites of the arms; called also *constrictive e.* and *eosinophilic endomyocardial disease*. **malignant e.**, a term sometimes applied to a rapidly fatal form of acute infectious endocarditis marked by ulcerated valvular lesions (*ulcerative e.*); called also *septic e.* **marantic e.**, nonbacterial thrombotic e. **mural e.**, a form affecting the lining of the walls of the heart chambers, as distinguished from *valvular e.*; called also *parietal e.* **mycotic e.**, infectious endocarditis (q.v.), usually subacute, due to various fungi, most commonly *Candida* (especially *C. albicans*), *Aspergillus* and *Histoplasma*. Called also *fungal e.* **nonbacterial thrombotic e.**, endocarditis in which the vegetations, single or multiple, consist of fibrin and other blood elements. **nonbacterial verrucous e.**, atypical verrucous e. **parietal e.**, mural e. **prosthetic valve e.**, infective endocarditis as a complication of implantation of a prosthetic valve in the heart; the vegetations usually occur along the line of suture. **pulmonic e.**, endocarditis involving the pulmonic valve. **rheumatic e.**, endocarditis associated with rheumatic fever; called also *Bouillaud's disease*. **rickettsial e.**, endocarditis caused by invasion of the heart valves with *Coxiella burnetii*; it is a sequela of Q fever, usually occurring in persons who have had rheumatic fever. **right-side e.**, primary acute endocarditis of the right side of the heart. **septic e.**, malignant e. **syphilitic e.**, endocarditis resulting from extension of syphilitic infection from the aorta. **tuberculous e.**, a rare form of endocarditis in which the endocardium is involved by extension of a tuberculous perimyocarditis or of miliary tuberculosis. **ulcerative e.**, see *malignant e.* **valvular e.**, endocarditis affecting the membrane over the valves of the heart only, as distinguished from *mural e.* **vegetative e.**, **verrucous e.**, endocarditis, infectious or noninfectious, the characteristic lesions of which are vegetations or verrucae on the endocardium. **viridans e.**, the subacute form of infectious endocarditis due to infection with viridans streptococci.

endocardium (en''do-kar'de-um) [*endo* + Gr. *kardia* heart] [NA]

the endothelial lining membrane of the cavities of the heart and the connective tissue bed on which it lies.

endoceliac (en''do-se''le-ak) [*endo* + Gr. *koilia* cavity] inside one of the body cavities.

endocellular (en''do-sel''u-lar) within a cell.

endocervical (en''do-ser''vi-kal) pertaining to the interior of the cervix uteri.

endocervicitis (en''do-ser''vi-si'tis) [*endo* + L. *cervix* neck] inflammation of the mucous membrane of the cervix uteri; called also *endotrachelitis*.

endocervix (en''do-ser''viks) 1. the mucous membrane lining the canal of the cervix uteri. 2. the region of the opening of the uterine cervix into the uterine cavity.

endochondral (en''do-kon'dral) situated, formed, or occurring within cartilage.

endochorion (en''do-ko're-on) [*endo* + Gr. *chorion* chorion] the inner chorionic layer.

endochrome (en''do-krōm) [*endo* + Gr. *chrōma* color] the coloring matter within a cell.

endocolitis (en''do-ko-li'tis) inflammation of the mucous membrane of the colon.

endocommensal (en''do-kom-men'sal) a commensal organism which lives inside the body of its symbiotic companion.

endoconidiotoxicosis (en''do-ko-nid''e-o-tok''si-ko'sis) a form of mycotoxicosis caused by a fungus of the genus *Endoconidium*.

endocorpuscular (en''do-kor-pus'ku-lar) situated within a corpuscle.

endocranial (en''do-kra'ne-al) situated within the cranium.

endocraniosis (en''do-kra'ne-o'sis) intracranial hyperostosis described by Morgagni.

endocranitis (en''do-kra-ni'tis) inflammation of the endocranium.

endocranium (en''do-kra'ne-um) [*endo* + Gr. *kranion* skull] the endosteal outer layer of the dura mater of the brain.

endocrinasthenia (en''do-krin''as-the'ne-ah) a hormonal imbalance resulting in a psychosis or psychoneurosis.

endocrinasthenic (en''do-krin''as-then'ik) pertaining to or marked by endocrinasthenia.

endocrine (en''do-krin, en''do-krin) [*endo* + Gr. *krinein* to separate] 1. secreting internally; applied to organs and structures whose function is to secrete into the blood or lymph a substance (hormone) that has a specific effect on another organ or part. See also under *system*. 2. pertaining to internal secretions; hormonal. Cf. *exocrine*.

endocrinic (en''do-krin'ik) endocrinous.

endocrinism (en-dok'ri-nism) endocrinopathy.

endocrinium (en''do-krin'e-um) the endocrine system.

endocrinologist (en''do-krī-nol'o-jist) an individual skilled in endocrinology, and in the diagnosis and treatment of disorders of the glands of internal secretion, i.e., the endocrine glands.

endocrinology (en''do-krī-nol'o-je) [*endocrine* + *-logy*] the study of the endocrine system and its role in the physiology of the body.

endocrinopath (en''do-krin'o-path) a person with a disorder of the endocrine system.

endocrinopathic (en''do-krin''o-path'ik) pertaining to or characterized by endocrinopathy.

endocrinopathy (en''do-krī-nop'ah-the) [*endocrine* + Gr. *pathos* disease] any disease due to disorder of the endocrine system; hormonal imbalance.

endocrinosis (en''do-krī-no'sis) a disordered condition due to dysfunction of the endocrine system.

endocrinosity (en''do-krī-nos'i-te) the quality or state of secreting internally, or of being endocrine.

endocrinotherapy (en''do-krī-no-ther'ah-pe) treatment of disease by the administration of endocrine preparations; hormone therapy.

endocrinotropic (en''do-krī-no-trop'ik) having an endocrine tendency.

endocrinous (en-dok'ri-nus) of or pertaining to an internal secretion or to a gland producing such a secretion, i.e., to an endocrine gland.

endocritic (en''do-krit'ik) endocrine.

endocuticle (en''do-ku'ti-kl) [*endo* + L. *cuticula*] the inner layer of the procuticle in certain crustaceans and arthropods, which is almost entirely composed of protein and chitin.

endocyclic (en''do-sik'lik) a term applied to cyclic compounds in which the bond occurs in the ring.

endocyst (en''do-sist) the inner, germinative, or embryonic membrane of the hydatid cyst.

endocystitis (en''do-sis-ti'tis) inflammation of the lining membrane of the bladder.

endocyte (en''do-sit) [*endo* + Gr. *kytos* hollow vessel] any cell inclusion.

endocytosis (en''do-si-to'sis) [*endo-* + Gr. *kytos* a hollow vessel] the uptake by a cell of material from the environment by invagination of its plasma membrane; it includes both phagocytosis and pinocytosis.

endoderm (en''do-derm) [*endo-* + Gr. *derma* skin] endoderm.

endodermal (en''do-der'mal) endodermal.

Endodermophyton (en''do-der-mof'i-ton) [*endo-* + Gr. *derma* skin + *phyton* a growth] the former name of a genus of fungi, now called *Trichophyton*.

endodermoreaction (en''do-der''mo-re-ak'shun) Trambusti's reaction.

endodiascope (en''do-di'ah-skōp) a roentgen-ray tube which may be placed inside a body cavity for roentgenography and radiotherapy.

endodiascopy (en''do-di-as'ko-pe) [*endo-* + Gr. *dia* through + *skopein* to examine] roentgenoscopic examination of a body cavity by means of an endodiascope.

endodontia (en''do-don'she-ah) endodontics.

endodontics (en''do-don'tiks) [*end-* + Gr. *odous* tooth + *-ics*] that branch of dentistry which is concerned with the etiology, prevention, diagnosis, and treatment of diseases and injuries that affect the tooth pulp, root, and periapical tissue. Called also *endodontology*.

endodontist (en''do-don'tist) a dentist who specializes in endodontics; called also *endodontologist*.

endodontitis (en''do-don-ti'tis) [*endo-* + Gr. *odous* tooth] pulpitis.

endodontium (en''do-don'she-um) the dental pulp.

endodontologist (en''do-don-tol'o-jist) endodontist.

endodontology (en''do-don-tol'o-je) endodontics.

endodyogeny (en''do-di-oi'ē-ne) reproduction by the formation of two daughter cells within the wall of the mother cell (internal budding), the progeny being released by rupture of the mother cell, as in the protozoan *Toxoplasma*.

endoectothrix (en''do-ek'to-thriks) a ringworm fungus which produces spores both on the interior and exterior of the hairs.

endoenteritis (en''do-en'ter-i'tis) inflammation of the mucous membrane of the intestine.

endoenzyme (en''do-en'zim) an intracellular enzyme; an enzyme that is retained in a cell and does not normally diffuse out of the cell into the surrounding medium. Cf. *ectoenzyme*.

endoeipidermal (en''do-ep'i-der'mal) within the epidermis.

endoeipithelial (en''do-ep'i-the'le-al) within the epithelium.

endoergic (en''do-er'jik) characterized by or accompanied by the absorption of free energy; requiring energy for its completion, as a chemical reaction to which energy must be supplied if it is to proceed. Cf. *exoergic* and *exothermic*.

endoesophagitis (en''do-e-sof'ah-ji'tis) inflammation of the lining membrane of the esophagus.

endoeuteric (en''do-ek'so-ter'ik) [*endo-* + Gr. *exōterikos* pertaining to the outside] resulting from certain causes internal to the body, and from others of external origin.

endofaradism (en''do-far'ah-dizm) the application of alternating current to an internal organ, as to the stomach.

endogalvanism (en''do-gal'vah-nizm) the application of direct current to an internal organ, as to the stomach.

endogamous (en-dog'ah-mus) characterized by endogamy.

endogamy (en-dog'ah-me) [*endo-* + Gr. *gamos* marriage] 1. fertilization by the union of separate cells having the same chromatin ancestry; called also *pedogamy*. Cf. *autogamy* (def. 1) and *exogamy* (def. 1). 2. restricting marriage to persons within the community; inbreeding.

endogastric (en''do-gas'trik) pertaining to the interior of the stomach.

endogastritis (en''do-gas-tri'tis) inflammation of the mucous membrane of the stomach.

endogenetic (en''do-jē-net'ik) endogenous.

endogenic (en''do-jen'ik) endogenous.

endogenote (en''do-je'nōt) in bacterial genetics, the recipient cell's own complement of genetic information, as opposed to the exogenote introduced by transduction.

endogenous (en-doi'ē-nus) [*endo-* + Gr. *gennan* to produce] 1. growing from within. 2. developing or originating within the organism, or arising from causes within the organism.

endoglobal (en''do-glo'bar) endoglobular.

endoglobular (en''do-glob'u-lar) situated or occurring within the blood corpuscles.

endognathion (en''do-na'the-on) [*endo-* + Gr. *gnathos* jaw] the inner segment of the incisive bone.

endogonidium (en''do-go-nid'e-um) a gonidium developed within a cell, especially in the algal component of a lichen.

endoherniorrhaphy (en''do-her'ne-or'ah-fe) an operation for the repair of hernia similar in technic to endoaneurysmorrhaphy.

endointoxication (en''do-in-tok'si-ka'shun) poisoning caused by an endogenous toxin.

endolabyrinthitis (en''do-lab''i-rin-thi'tis) inflammation of the membranous labyrinth.

endolaryngeal (en''do-lah-rin'je-al) [*endo-* + Gr. *larynx*] situated on or occurring within the larynx.

endolarynx (en''do-lar'inks) the interior or cavity of the larynx.

Endolimax (en''do-li'maks) [*endo-* + Gr. *leimax* a snail] a genus of small amebae of the order Amoebida, class Rhizopoda, distinguished by a vesicular nucleus containing a comparatively large irregular endosome, and by the absence of chromatin granules lining the nuclear membrane; found in the colon of man and other mammals, birds, amphibians, and cockroaches. Cf. *Entamoeba* and *Entamoeba*. **E. na'na**, a commensal common in the intestine of man and in lower animals.

endolymph (en''do-limf) [*endo-* + *lymph*] the fluid contained in the membranous labyrinth of the ear; it is entirely separate from the perilymph. Called also *endolympha* [NA], *liquor scarpae*, *liquor of Scarpa*, and *Scarpa's fluid*.

endolympha (en''do-lim'fah) [NA] the endolymph.

endolymphatic (en''do-lim-fat'ik) pertaining to the endolymph.

endolysin (en-dol'i-sin) [*endo-* + *lysin*] a bactericidal substance existing in cells, acting directly on bacteria. **leukocytic e.**, leukin, def. 1.

endolysis (en-dol'i-sis) [*endo-* + Gr. *lysis* dissolution] dissolution or breaking up of the cytoplasm of a cell.

endomastoiditis (en''do-mas'toi-di'tis) inflammation within the mastoid cavity and cells.

endomesoderm (en''do-mes'o-derm) [*endo-* + Gr. *mesos* middle + *derma* skin] mesoderm originating from the endoderm of the two-layered blastodisk.

endometrectomy (en''do-mē-trek'to-me) [*endo-* + Gr. *mētra* womb + *ektomē* excision] extirpation of the uterine mucosa.

endometria (en''do-me'tre-ah) [Gr.] plural of *endometrium*.

endometrial (en''do-me'tre-al) pertaining to the endometrium.

endometrioid (en''do-me'tre-oid) resembling endometrium.

endometrioma (en''do-me'tre-o'mah) a solitary, non-neoplastic mass containing endometrial tissue.

endometriosis (en''do-me'tre-o'sis) [*endometrium* + *-osis*] a condition in which tissue more or less perfectly resembling the uterine mucous membrane (the endometrium) and containing typical endometrial granular and stromal elements occurs aberrantly in various locations in the pelvic cavity; called also *adenomyosis externa* and *endometriosis externa*. **e. exter'na**, *endometriosis*. **e. inter'na**, *adenomyosis*. **ovarian e.**, *e. ova'rii*, occurrence in the ovary of tissue resembling the uterine mucous membrane, either in the form of small superficial islands or in the form of endometrial ("chocolate") cysts of various sizes; called also *adenoma endometrioides ovarii*. **stromal e.**, *adenomyosis* in which all or nearly all of the tissue infiltrating the myometrium consists of stroma. **e. uteri'na**, *adenomyosis*. **e. ves'icae**, *endometriosis* involving the bladder.

endometriotic (en''do-me'tre-ot'ik) pertaining to or characterized by endometriosis.

endometritis (en''do-mē-tri'tis) [*endometrium* + *-itis*] inflammation of the endometrium. **bacteriotoxic e.**, *endometritis* caused by the toxins of bacteria, as distinguished from that caused by the presence of the organisms themselves. **decidual e.**, inflammation of the decidua of pregnancy. **exfoliative e.**, *endometritis* with the casting off of portions of the membrane. **glandular e.**, *endometritis* of the uterine glands. **membranous e.**, *endometritis* with an exudate which forms a false membrane. **puerperal e.**, *endometritis* following childbirth. **syncytial e.**, a benign tumor-like lesion with infiltration of the uterine wall by large syncytial trophoblastic cells; called also *syncytioma*. **tuberculous e.**, inflammation of the endometrium due to infection by *Mycobacterium tuberculosis*, with the presence of tubercles; usually the uterine tubes are also involved. **e. tubero'sa papulo'sa**, a cast of the uterine cavity expelled at abortion.

endometrium (en-do-me'tre-um), pl. *endome'tria* [*endo-* + Gr. *metra* uterus] the inner mucous membrane of the uterus, the thickness and structure of which vary with the phase of the menstrual cycle. It is functionally divisible into three layers: the stratum basale, stratum spongiosum, and stratum compactum; the latter two layers together form the *stratum functionale*. Accepted by NA as an alternative term for *tunica mucosa uteri*. **Swiss-cheese e.**, hyperplasia of the endometrium, under the influence of progesterone, in which the glands vary in size and shape, producing an appearance like that of Swiss cheese, with its large and small holes.

endometry (en-dom'ē-tre) [*endo-* + Gr. *metron* measure] the measurement of the capacity of a cavity.

endomitosis (en''do-mi-to'sis) reproduction of nuclear elements not followed by chromosome movements and cytoplasmic division; called also *endopolyploidy*.

endomitotic (en''do-mi-to't'ik) pertaining to or characterized by endomitosis.

endomixis (en''do-miks''is) [*endo-* + Gr. *mixis* mixture] the disintegration of the macronucleus and its subsequent reorganization following the division of the micronucleus, occasionally observed in a protozoan organism. It may to some extent take the place of conjugation.

endomorph (en''do-morf) an individual having the type of body build in which tissues derived from the endoderm predominate. There is relative preponderance of soft roundness throughout the body, with large digestive viscera and accumulations of fat, and with large trunk and thighs and tapering extremities, as contrasted with ectomorph and mesomorph (def. 1).

endomorph (en''do-mor''fik) pertaining to or characterized by endomorphy.

endomorphy (en''do-mor''fe) [*endo* + Gr. *morphē* form] the condition of being an endomorph.

Endomyces (en''do-mi''sēz) [*endo-* + Gr. *mykēs* fungus] a genus of ascomycetous fungi of the order Endomycetales, which includes a number of yeasts from soil, nectar, and decaying fruit. **E. albicans**, former name for *Candida albicans*. **E. capsula'tus**, **E. epidermat'idis**, **E. epider'midis**, former name for *Blastomyces dermatitidis*.

Endomycetales (en''do-mi''sē-ta'lēz) an order of mostly saprophytic ascomycetous fungi of the subclass Hemiascomycetidae in which the zygote results from fusion of two cells and immediately forms an ascus; it includes the family Saccharomycetaceae.

endomyocarditis (en''do-mi''o-kar-di'tis) [*endo-* + Gr. *mys* muscle + *kardia* heart] inflammation of the endocardium and myocardium.

endomysium (en''do-mis''e-um) [*endo-* + Gr. *mys* muscle] the sheath of delicate reticular fibrils which surrounds each muscle fiber.

endonasal (en''do-na''zal) within the nose.

endoneural (en''do-nu''ral) pertaining to or situated within a nerve.

endoneurial (en''do-nu''re-al) pertaining to the endoneurium.

endoneuritis (en''do-nu-ri'tis) inflammation of the endoneurium.

endoneurium (en''do-nu''re-um) [*endo-* + Gr. *neuron* nerve] the interstitial connective tissue in a peripheral nerve, separating the individual nerve fibers; called also *epilemma*.

endoneurolysis (en''do-nu-rol'i-sis) [*endo-* + Gr. *neuron* nerve + *lysis* dissolution] heresage.

endonuclear (en''do-nu''kle-ar) within a cell nucleus.

endonuclease (en''do-nu''kle-ās) a nuclease that cleaves internal bonds of polynucleotides (nucleic acids). **restriction e's**, enzymes that cleave large DNA molecules into discrete fragments at particular sites in specific sequences of four to six nucleotides.

endonucleolus (en''do-nu-kle'o-lus) a nonstaining spot near the center of the nucleolus of a cell.

endo-oxidase (en''do-ok''sī-dās) oxidase occurring within a cell, such as a bacterium.

endoparasite (en''do-par''ah-sīt) [*endo-* + *parasite*] a parasite that lives within the body of its host.

endopelvic (en''do-pel''vik) within the pelvis.

endopeptidase (en''do-pep''tī-dās) a proteolytic enzyme that is capable of hydrolyzing peptide linkages initially in the interior of the peptide chain, as well as terminal linkages.

endoperiarthritis (en''do-per''i-ar''ter-i'tis) (*obs.*) inflammation involving both the internal and the external coat of an artery.

endopericardial (en''do-per''i-kar-de-al) pertaining to the endocardium and pericardium.

endopericarditis (en''do-per''i-kar-di'tis) inflammation involving both the endocardium and pericardium.

endoperimyocarditis (en''do-per''i-mi''o-kar-di'tis) inflammation of the endocardium, pericardium, and myocardium.

endoperineuritis (en''do-per''i-nu-ri'tis) inflammation of the endoneurium and perineurium.

endoperitoneal (en''do-per''i-to-ne'al) within the peritoneum.

endoperitonitis (en''do-per''i-to-ni'tis) inflammation of the serous lining of the peritoneal cavity.

endophasia (en''do-fa''ze-ah) the silent reproduction of a word or words; see also *aphasia*.

endophlebitis (en''do-fle-bi'tis) [*endo-* + Gr. *phleps* vein + *-itis*] inflammation of the intima of a vein. **e. hepat'ica oblit'erans**, Budd-Chiari syndrome. **proliferative e.**, phlebosclerosis.

endophthalmitis (en''dof-thal-mi'tis) [*endo-* + *ophthalmitis*] inflammation involving the ocular cavities and their adjacent structures. **e. phaco-aller'gica**, **e. phaco-anaphylac'tica**, **e. phacogenet'ica**, endophthalmitis occurring as a reaction to lens material which has escaped through the lens capsule.

endophylaxination (en''do-fi-lak''si-na'shun) resistance to infection developed entirely within the body of the animal possessing it.

endophyte (en''do-fit) [*endo-* + Gr. *phyton* plant] a parasitic plant organism living within the body of its host.

endophytic (en''do-fit''ik) [*endo-* + Gr. *phyein* to grow] 1. pertaining to an endophyte. 2. growing inward; proliferating on the interior or inside of an organ or other structure, as a tumor.

endoplasm (en''do-plazm) [*endo-* + Gr. *plasma* something formed] the central portion of the cytoplasm of a cell. Cf. *ectoplasm*.

endoplasmic (en''do-plas''mik) composed of or pertaining to endoplasm; see under *reticulum*.

endoplast (en''do-plast) [*endo-* + Gr. *plassein* to form] the nucleus of a cell; see *nucleus*, def. 1.

endoplastic (en''do-plas''tik) entoplastic.

endopolyploid (en''do-pol'e-ploid) having reduplicated chromatin within an intact nucleus, with or without an increase in the number of chromosomes (applied only to cells and tissues); see also *endomitosis*.

endopolyploidy (en''do-pol'e-ploi'de) [*endo-* + *polyploidy*] 1. endomitosis. 2. polysomaty. 3. autopolyploidy resulting from a previous endomitotic cycle. See also *polysomaty*.

endopredator (en''do-pred''ah-tor) an individual or species that lives within the body of an organism of another species which it feeds upon and destroys.

endoradiography (en''do-ra''de-og'rah-fe) the radiographic demonstration of the condition of internal organs and cavities by means of radiopaque materials.

endoradiosonde (en''do-ra''de-o-sond') a small radio transmitter inserted within a body cavity or tube, as within the intestinal lumen to measure the pressure.

endoreduplication (en''do-re-du''plī-ka'shun) replication of the chromosomes without subsequent cell division.

end-organ (end''or-gan) one of the larger, encapsulated endings of the sensory nerves; for names of specific types, see under *corpusele*.

endorrhinitis (en''do-ri-ni'tis) [*endo-* + Gr. *rhis* nose] inflammation of the lining membrane of the nasal passages.

endorphin (en-dor''fin, en''dor-fin) [*endogenous* + *morphine*] a group of endogenous brain substances (polypeptides) that bind to opiate receptors in various areas of the brain and thereby raise the pain threshold; they occur in various forms, including α -, β -, and γ -endorphin (β -endorphin being the most potent) and the enkephalins.

endosalpingitis (en''do-sal''pin-ji'tis) [*endosalpinx* + *-itis*] inflammation of the endosalpinx.

endosalpingoma (en''do-sal''pin-go'mah) adenomyoma of the uterine tube.

endosalpingosis (en''do-sal''pin-go'sis) 1. endometriosis of the uterine tube. 2. ovarian endometriosis in which the abnormal mucosa resembles tubal mucosa rather than endometrial mucosa.

endosalpinx (en''do-sal''pinks) [*endo-* + Gr. *salpinx* tube] the mucous membrane lining the uterine tube, arranged in longitudinal rugae, or folds, and continuous with the mucous lining of the uterus (*tunica mucosa tubae uterinae* [NA]).

endosarc (en''do-sark) endoplasm.

endoscope (en''do-skōp) [*endo-* + Gr. *skopein* to examine] an instrument for the examination of the interior of a hollow viscus, such as the bladder.

endoscopic (en''do-skop''ik) performed by means of an endoscope; pertaining to endoscopy.

endoscopy (en-dos''ko-pe) visual inspection of any cavity of the body by means of an endoscope. **peroral e.**, examination of organs accessible to observation through an endoscope passed through the mouth. **transcolonic e.**, examination of the lumen of the colon by means of an endoscope inserted through an incision in its wall.

endosecretory (en-do-se''kre-to-re) [*endo-* + *secretory*] pertaining to the internal secretions; secreting internally; endocrine.

endosepsis (en''do-sep''sis) septicemia originating within the organism.

endosite (en''do-sīt) (*obs.*) an endoparasite.

endoskeleton (en''do-skel''ē-ton) [*endo-* + Gr. *skeleton*] the bony and cartilaginous skeleton of the body, exclusive of that part of the skeleton which is of dermal origin; called also *neuroskeleton*.

endosmometer (en''dos-mom''ē-ter) [*endosmosis* + Gr. *metron* measure] an instrument for determining the rate and extent of endosmosis.

endosmosis (en''dos-mo''sis) [*endo-* + Gr. *ōsmos* impulsion] a movement in liquids separated by a membranous or porous septum, by which one fluid passes through the septum into the cavity which contains another fluid of a different density. Cf. *exosmosis*.

endosmotic (en''dos-mot''ik) of the nature of endosmosis.

endosome (en''do-sōm) a body thought to consist of deoxyribonucleic acid, observed in the vesicular nucleus of certain protozoan cells.

endosperm (en''do-sperm) a substance containing reserve food materials, formed within the embryo sac of plants.

endospore (en'do-spōr) [*endo-* + Gr. *sporos* seed] 1. a spore produced in the hyphae or cell, as in a spherule of *Coccidioides immitis*. 2. the inner wall of a spore. 3. a thick-walled body formed within certain bacteria which is able to withstand for prolonged periods various adverse environmental conditions; under favorable conditions, it will quickly germinate to form a vegetative bacterium. See also *spore*.

endosporium (en'do-spōr'e-um) the inner layer of the envelope of a spore.

endosteal (en-dos'te-al) pertaining to the endosteum; occurring or located within a bone.

endosteitis (en-dos'te-i'tis) inflammation of the endosteum.

endosteoma (en-dos'te-o'mah) [*endo-* + Gr. *osteon* bone + *-oma*] a tumor in the medullary cavity of a bone.

endostethoscope (en'do-steth'o-skōp) a stethoscope passed into the esophagus for auscultating the heart.

endosteum (en-dos'te-um) [*endo-* + Gr. *osteon* bone] the tissue lining the medullary cavity of a bone.

endostitis (en'dos-ti'tis) endosteitis.

endostoma (en'dos-to'mah) endosteoma.

endosymbiont (en'do-sim'be-ont) [*endo-* + *symbiont*] a symbiont which lives within the cells of its partner.

endosymbiosis (en'do-sim'bi-o'sis) the state achieved between a virus and its host cell in which cellular division is inhibited but the cell is not immediately destroyed.

endotendineum (en'do-ten-din'e-um) [*endo-* + L. *tendo*, *tendines*, after Gr. *tenon*] the delicate connective tissue separating the secondary bundles (fascicles) of a tendon.

endonion (en'do-ten'on) [*endo-* + Gr. *tenōn* tendon] endotendineum.

endothelia (en'do-the'le-ah) [Gr.] plural of *endothelium*.

endothelial (en'do-the'le-al) pertaining to or made up of endothelium.

endothelialization (en'do-the'le-al-i-za'shun) the healing of the inner surfaces of vessels or grafts by endothelial cells.

endotheliitis (en'do-the-le-i'tis) inflammation of the endothelium.

endothelioblastoma (en'do-the'le-o-blas-to'mah) [*endothelium* + Gr. *blastos* germ + *-oma*] a tumor derived from primitive vasoformative tissue with formation of usually small and slit-like vascular spaces lined by prominent endothelial cells; the term, which now includes hemangioendothelioma, angiosarcoma, lymphangioendothelioma, and lymphangiosarcoma, was applied formerly to such tumors arising from mesothelial tissue as well.

endotheliochorial (en'do-the'le-o-ko're-al) [*endothelium* + *chorion*] denoting a type of placenta in which syncytial trophoblast embeds maternal vessels bared to their endothelial lining.

endotheliocyte (en'do-the'le-o-sit') [*endothelia* + Gr. *kytos* hollow vessel] a term for the large mononuclear phagocytic wandering cells of the circulating blood and tissues which are supposed by some to be derived from proliferating vascular endothelium. Called also *endothelial phagocyte*.

endotheliocytosis (en-do-the'le-o-si-to'sis) an abnormal increase in the number of endotheliocytes.

endothelioid (en'do-the'le-oid) resembling endothelium.

endotheliolysin (en'do-the'le-ol'i-sin) an antibody capable of causing disintegration of endothelial tissue.

endotheliolytic (en'do-the'le-o-lit'ik) capable of destroying endothelial tissue.

endothelioma (en'do-the'le-o-mah) [*endothelium* + *-oma*] a tumor which originates from the endothelial linings of blood vessels (*hemangioendothelioma*), lymphatics (*lymphangioendothelioma*), or serous cavities (mesothelioma). **e. cap'itis**, a large multiple hemangioma on the scalp. **e. cu'tis**, endothelioma of the skin, manifested as violaceous papules. **dural e.**, meningioma.

endotheliomatosis (en'do-the'le-o-mah-to'sis) the formation of multiple and diffuse endotheliomas in a tissue.

endotheliomyoma (en'do-the'le-o-mi-o'mah) (*obs.*) a vascular leiomyoma.

endotheliosarcoma (en'do-the'le-o-sar-ko'mah) Kaposi's sarcoma.

endotheliosis (en'do-the'le-o'sis) proliferation of endothelium.

endotheliotoxin (en'do-the'le-o-tok'sin) a specific toxin which acts on the endothelium of capillaries and small veins, producing hemorrhage. Cf. *hemorrhagin*.

endothelium (en'do-the'le-um), pl. *endothē'lia* [*endo-* + Gr. *thēlē* nipple] [NA] the layer of epithelial cells that lines the cavities of the heart and of the blood and lymph vessels, and the serous cavities of the body, originating from the mesoderm. **e. cam'erae anterio'ris bul'bi** [NA], **e. cam'erae anterio'ris oc'uli**, the mesothelial layer covering the posterior surface of the posterior limiting lamina of the cornea; it was once believed to extend to the anterior surface of the stroma of the iris. **cor-neal e.**, the portion of the endothelium of the anterior chamber of the eye that covers the posterior surface of the cornea. **ex-**

traembryonic e., endothelium which arises outside of the body of the embryo, such as that lining the vitelline vessels.

endothermal (en'do-ther'mal) endothermic.

endothermic (en'do-ther'mik) characterized by or accompanied by the absorption of heat, as a chemical reaction accompanied by absorption of heat and to which heat must be supplied if it is to proceed; storing up heat or energy in a potential form. Cf. *endoergic* and *exothermic*.

endothermy (en'do-ther'me) [*endo-* + Gr. *thermē* heat] diathermy.

endothoracic (en'do-tho-ras'ik) within the thorax; situated internal to the ribs.

endothrix (en'do-thriks) [*endo-* + Gr. *thrix* hair] a dermatophyte whose growth and spore production are confined chiefly within the shaft of the hair, without formation of conspicuous external spores; such fungi include *Trichophyton tonsurans* and *T. violaceum*.

endothyroidopexy (en'do-thi-roi'do-pek'se) endothyropepy.

endothyropepy (en-do-thi'ro-pek-se) the operation of freeing the thyroid from the trachea, dislocating it forward, and fixing it to one side in a pocket between the sternocleidomastoid muscle and the skin.

endotoxemia (en'do-toks-e'me-ah) the presence of endotoxins in the blood, which may result in shock.

endotoxic (en'do-tok'sik) pertaining to or possessing endotoxin.

endotoxiosis (en'do-tok'si-ko'sis) (*obs.*) poisoning caused by an endotoxin.

endotoxin (en'do-tok'sin) a heat-stable toxin present in the bacterial cell but not in cell-free filtrates of cultures of intact bacteria. They are found primarily in gram-negative organisms, in which they are identical with the somatic antigen. They occur in the cell wall as a lipopolysaccharide complex extractable in trichloroacetic acid and glycols. The endotoxins are pyrogenic and increase capillary permeability, the activity being substantially the same regardless of the species of bacteria from which they are derived. Called also *bacterial pyrogen*.

endotoxoid (en'do-tok'soid) a toxoid prepared from endotoxin.

endotracheal (en'do-tra'ke-al) [*endo-* + *trachea*] 1. within or through the trachea. 2. performed by passage through the lumen of the trachea.

endotracheitis (en'do-tra-ke-i'tis) inflammation of the mucosa of the trachea.

endotrachelitis (en'do-tra-kel-i'tis) [*endo-* + Gr. *trachēlos* neck] endocervicitis.

endotrypsin (en'do-trip'sin) [*endo-* + *trypsin*] a digestive ferment derived from yeast and resembling trypsin in its action.

endourethral (en'do-u-re'thral) within the urethra.

endouterine (en'do-u'ter-in) within the uterus.

endovaccination (en'do-vak'si-na'shun) [*endo-* + *vaccination*] the administration of vaccines by the mouth.

endovascularitis (en'do-vas'ku-li'tis) [*endo-* + L. *vasculum* vessel] endangiitis.

endovenitis (en'do-ve-ni'tis) endophlebitis.

endovenous (en'do-ve'nus) intravenous.

Endoxan (en-dok'san) trademark for a preparation of cyclophosphamide.

end-piece (end'pēs) in early immunological theory, the pseudoglobulin fraction of guinea pig serum, which corresponds to the C2 component of complement.

end-plate (end'plāt) a flattened discoid expansion at the neuromuscular junction, where a myelinated motor nerve fiber joins a skeletal muscle fiber. It contains two kinds of receptors, one that combines with acetylcholine and another that combines with acetylcholinesterase, which inactivates acetylcholine.

end-pleasure (end'plezh-er) the pleasure produced by the sexual orgasm, as contrasted with the fore-pleasure which precedes it.

end point (end' point) in titration, the highest dilution of a substance that produces a reaction with a given volume of another substance.

end product (end prod'ukt) the chemical compound resulting from the completion of a sequence of metabolic reactions.

Endrate (en'drāt) trademark for preparations of edetate disodium.

endrin (en'drin) chemical name: 1,2,3,4,4,10,10-hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4,5,8-endo-endo-dimethanonaphthalene; a highly toxic insecticide of the chlorinated hydrocarbon group.

endrysone (en'dri-sōn) chemical name: 11β-hydroxy-6α-methylpregna-1,4-diene-3,20-dione; a topical anti-inflammatory for use in ophthalmology, C₂₂H₃₀O₃.

Enduron (en'du-ron) trademark for a preparation of methyclothiazide.

endyma (en'di-mah) ependyma.

-ene a suffix used in chemistry to indicate an unsaturated hydrocarbon containing one double bond.

enema (en'e-mah), pl. *enemas* or *enemata* [Gr.] a clyster or injection; a liquid injected or to be injected into the rectum. **analeptic e.**, an enema consisting of a pint of tepid water containing $\frac{1}{2}$ teaspoonful of salt; called also *thirst e.* **barium e.**, a suspension of barium administered as a clyster and retained in the intestines during roentgenologic examination, the presence of deformities of the intestine, produced by neoplasm or other abnormality, being demonstrated by filling defects revealed by the column of radiopaque barium. Called also *contrast e.* **blind e.**, the insertion of a soft-rubber tube into the rectum to aid in the expulsion of flatus. **contrast e.**, barium e. **double contrast e.**, injection and evacuation of a suspension of barium, followed by inflation of the intestines with air under light pressure; used in mucosal relief roentgenography. **flatus e.**, an enema made of $\frac{1}{2}$ oz. of magnesium sulfate, 1 oz. of glycerin, and 4 oz. of warm water. **Fleet e.**, trademark for an enema containing, in each 100 ml., 16 gm. sodium biphosphate and 6 gm. sodium phosphate, packaged in a plastic squeeze bottle fitted with a 2-inch, prelubricated rectal tube. **hydrocortisone e.** [USP], a suspension containing 100 mg. of hydroxycortisone per 60 ml.; used in the treatment of various conditions responsive to the anti-inflammatory action of glucocorticoids. **nutrient e.**, **nutritive e.**, an enema of predigested nutrient matter. **pancreatic e.**, an enema containing pancreatin. **soapsuds e.**, an enema made by dissolving 2 oz. of soap in a pint of warm water. **sodium phosphate and biphosphate e.**, **sodium phosphate e.** [USP], a solution of sodium phosphate and sodium biphosphate, or sodium phosphate and phosphoric acid in purified water, containing in each 100 ml., 5.7 to 6.3 gm. of sodium phosphate and 15.2 to 16.8 gm. of sodium biphosphate; used as a cathartic. **theophylline olamine e.** [USP], an enema containing an amount of anhydrous theophylline equivalent to 72 to 78 per cent of the labeled amount of theophylline olamine and an amount of monethanolamine equivalent to 22 to 28 per cent of the labeled amount of theophylline olamine. **thirst e.**, analeptic enema. **turpentine e.**, an enema of 1 pint of soapsuds containing 2 oz. olive oil and 1 oz. turpentine.

enemator (en'ē-ma'tor) an apparatus for giving enemas.

energetics (en'er-jet'iks) the study of energy; the science of energy.

energid (en'er-jid) living, active protoplasm, as distinguished from deuteroplasm.

energizer (en'er-jiz'er) that which gives energy to, activates, or charges. **psychic e.**, a popular term for an antidepressant agent.

energometer (en'er-gom'ē-ter) an apparatus for studying the pulse.

energy (en'er-je) [Gr. *energeia*] the capacity to operate or work; power to produce motion, to overcome resistance, and to effect physical changes. **atomic e.**, energy that can be liberated by changes in the nucleus of an atom (as by fission of a heavy nucleus or fusion of light nuclei into heavier ones with accompanying loss of mass). **binding e.**, energy equal to the difference between the weight of the nucleus of an atom and the sum of the weights of its constituent particles. **biologic e.**, **biotic e.**, the form of energy peculiar to living matter; i.e., energy produced by biologic processes. **chemical e.**, energy which shows itself in chemical transformations. **free e.**, the energy equal to the maximum amount of work that can be obtained from a process occurring under conditions of fixed temperature and pressure. **kinetic e.**, energy in action or engaged in producing work or motion. **nuclear e.**, atomic e. **e. of position**, **potential e.**, energy at rest or not manifested in actual work. **radiant e.**, the energy of electromagnetic waves, such as radio waves, visible light, x-rays, and gamma rays.

enervation (en'er-va'shun) [L. *enervatio*] 1. lack of nervous energy; languor. 2. removal of a nerve or a section of a nerve.

enflagellation (en'flaj-el-la'shun) the formation of flagella.

enflurane (en'flo-rān) [USP] chemical name: 2-chloro-1-(difluoromethoxy)-1,1,2-trifluoroethane; a stable nonflammable liquid, $C_2H_2ClF_3O$, used as an inhalation anesthetic.

ENG electrystagmography.

engagement (en-gāj'ment) in obstetrics, the entrance of the fetal head, or presenting part, into the superior pelvic strait and beginning descent through the pelvic canal.

engastrius (en-gas'tre-us) [Gr. *en* in + *gastēr* belly] a monster in which a parasitic twin is contained within the abdomen of the autosite.

Engel's alkalimetry (eng'elz) [Rodolphe Charles Engel, Alsatian chemist, 1850-1916] see under *alkalimetry*.

Engelmann's disease (eng'el-mahnz) [Guido Engelmann, German surgeon, born 1876] diaphyseal dysplasia.

Engelmann's disk (eng'el-mahnz) [Theodor Wilhelm Engelmann, a German physiologist, 1843-1909] H band; see under *band*.

engine (en'jin) a machine by which energy is converted into mechanical motion. **dental e.**, a machine operated by elec-

tricity, water, or compressed air, for activating burs (drills), burnishers, or other instruments held in the handpiece and used by dentists in procedures on the teeth. **high-speed e.**, originally, a dental engine capable of turning the bur in the handpiece at a rate of more than 10,000 revolutions per minute; now often used to denote an engine (sometimes called *ultraspeed e.*) that turns the bur more than 100,000 revolutions per minute. **surgical e.**, a machine similar to the dental engine, used in surgery. **ultraspeed e.**, a dental engine that turns burs at a rate of more than 100,000 revolutions per minute; see also *high-speed e.*

englobe (en-glōb') phagocytize; to absorb within the substance of a globe.

Engman's disease (eng'manz) [Martin Feeney Engman, dermatologist in St. Louis, 1869-1953] dermatitis infectiosa eczematoides.

engorged (en-gorjd') distended or swollen with fluids.

engorgement (en-gorj'ment) hyperemia; local congestion; excessive fullness of any organ, vessel, or tissue due to accumulation of fluids, especially that due to accumulation of blood.

engram (en'gram) [Gr. *en* in + *gramma* mark] a lasting mark or trace. The term is applied to the definite and permanent trace left by a stimulus in nerve tissue. See *engraphia*. In psychology it is the lasting trace left in the psyche by anything that has been experienced psychically; a latent memory picture.

engraphia (en-graf'e-ah) the process hypothesized in the theory that stimuli leave definite traces (engrams) on the protoplasm which, when regularly repeated, induce a habit that persists after the stimuli cease.

enhancement (en-hans'ment) in immunology, (1) the successful establishment and prolonged survival (or delayed rejection) of a tumor allograft in the host as a consequence of contact with specific antibody, or (2) various specific and nonspecific means to increase the level of an immune response (immunoenhancement).

enhematospore (en-hem'ah-to-spōr') [Gr. *en* in + *haima* blood + *sporos* spore] (*obs.*) merozoite.

enhemospore (en-hem'o-spōr) merozoite.

enhexymal (en-hek'si-mal) hexobarbital.

Enhydrina (en'hi-dri'nah) a genus of sea snakes. **E. schistos**, a venomous sea snake commonly found in Indo-Pacific waters.

eniotypy (en'i-o-ti'pe) [Gr. *enioi* some + *typos* type] polymorphism in which a macromolecular gene-product is present in some individuals of a species and not in others; it is detectable since the isologous antibody has wide cross-reactivity, whereas the heterologous antibody has no reactivity, with the serum of deficient animals.

enkatarrhaphy (en'kah-tar'ah-fe) [Gr. *enkatarrhaptēin* to sew in] the operation of burying a structure by suturing together the sides of the tissues adjacent to it.

enkephalin (en-kef'ah-lin) either of two naturally occurring pentapeptides (methionine enkephalin and leucine enkephalin) isolated from the brain, that have potent opiate-like effects and probably serve as neurotransmitters; classified as endorphins, they occur in nerve endings of brain tissue, spinal cord, and the gastrointestinal tract and bind to the same receptor sites as do the opiates.

enlargement (en-larj'ment) an increase in the size of an organ or part; see *hypertrophy* and *hyperplasia*. **cardiac e.**, dilatation or hypertrophy of the heart, due to compensatory mechanisms or secondary to disease. **gingival e.**, an increase in size of the gingiva due to hypertrophy or hyperplasia. **e. of heart**, cardiac e.

enol (e'no'l) one of two tautomeric forms of a substance, the other being the keto form. The enol is formed from the keto by migration of hydrogen from the adjacent carbon atom to the carbonyl group:

enolase (e'no-lās) an enzyme in glycolytic systems that changes phosphoglyceric acid into phosphopyruvic acid.

enology (e-nol'o-je) [Gr. *oinos* wine + *-logy*] the scientific study of the production and composition of wine.

enophthalmos (en-of-thal'mos) [Gr. *en* in + *ophthalmos* eye] a backward displacement of the eyeball into the orbit.

enophthalmus (en'of-thal'mús) enophthalmos.

enorganic (en-or-gan'ik) existing as a permanent quality of the organism.

enostosis (en'os-to'sis) [Gr. *en* in + *osteon* bone] a morbid bony growth developed within the cavity of a bone or on the internal surface of the bone cortex.

Enovid (en-o'vid) trademark for preparations of mestranol and norethynodrel.

enoxidase (e-nok/'sī-dās) [Gr. *oinos* wine + *oxidase*] an oxidizing ferment found in spoiled wines.

en plaque (ahn-plak') [Fr.] in the form of a plaque or plate.

enpromate (en/'pro-māt) chemical name: 1,1-diphenyl-2-propynyl cyclohexanecarboxylate; an antineoplastic agent, $C_{22}H_{20}NO_2$.

enrichment (en-rich/'ment) the addition of nutrients, as to culture media; the medium resulting from such addition. **Fildes e.**, a sterile enzymatic digest of sheep blood added to liquid or solid culture media for the cultivation of *Hemophilus* species; called also *Fildes culture medium*.

ens (enz) [L.] a thing. **e. mor'bi**, the nature or essential principle of a disease considered apart from its causation; the pathology of a disease as distinguished from its etiology.

ensiform (en/'sī-form) [L. *ensis* sword + *forma* form] shaped like a sword; xiphoid.

ensisternum (en/'sis-ter-'num) [L. *ensis* sword + *sternum*] xiphoid process (processus xiphoides) [NA].

ensomphalus (en-som/'fah-lus) [Gr. *en* in + *sōma* a body + *omphalos* navel] a double monster with blended bodies, two separate navels, and two umbilical cords.

enstrophe (en/'stro-fe) [Gr. *enstrophein* to turn in] inversion, especially of the margin of the eyelids.

E.N.T. ear, nose, and throat.

ent- see *ento-*.

entad (en/'tad) toward the center; inwardly.

ental (en/'tal) [Gr. *entos* within] inner; central.

entalção (en/'tah-lah-sah-'yo) a complication of Chagas' disease in which megasophagus with severe dysphagia occurs as a result of involvement of the intramural nervous plexus of the esophagus; it may be due to direct action of *Trypanosoma cruzi* on the ganglion cells or to a toxic substance elaborated by the parasite. The intramural nervous plexuses of the colon, duodenum, and other tubular organs may also be affected and result in pathologic dilatation. Called also *tropical cardiospasm* and *tropical dysphagia*.

entamebiasis (en/'tah-me-bi-'ah-sis) infection with *Entamoeba*.

Entamoeba (en/'tah-me-'bah) a genus of amebae of the order Amoebida, class Rhizopoda, parasitic in the intestine of vertebrates. They are distinguished by a more or less spherical nucleus with a relatively small chromosome near its center, and numerous chromatic granules lining the nuclear membrane. Several species, including *E. coli*, *E. gingiva'lis*, *E. hartman'ni*, and *E. histolytica*, are commonly parasitic in man. Cf. *Endamoeba*. **E. bucca'lis**, *E. gingivalis*. **E. buetsch'lii**, *Iodamoeba buetschlii*. **E. coli**, a nonpathogenic form found in the intestinal tract of

1, *Entamoeba coli*. 2, *E. histolytica*. (de Rivas.)

man; called also *Amoeba coli*. **E. gingiva'lis**, a species found in the mouth, about the gums, and in the tartar of the teeth; called also *E. buccalis*, and *Amoeba buccalis* or *dentalis*. **E. hartman'ni**, a nonpathogenic form found in the intestinal tract of man; it is similar in appearance to *E. histolytica*, but smaller. **E. histolytica**, the only species with pathogenic potential for man, causing amebic dysentery and amebic abscess of the liver; it invades the bowel mucosa, causing ulceration and may be carried to other organs by the blood stream. **E. inva'dens**, a tissue-invading pathogenic parasite of snakes. **E. na'na**, *Endolimax nana*. **E. polec'ki**, an intestinal parasite of hogs, sheep, monkeys, and cattle; it has rarely been found in man. **E. tetra'ge'na** (obs.), *E. histolytica*. **E. tropica'lis** (obs.), *E. histolytica*.

entasia (en-ta/'ze-ah) [Gr. *entasis*] a constrictive spasm; spasmic muscular action.

entasis (en/'tah-sis) entasia.

entelechy (en-tel/'ē-ke) [Gr. *entelecheia* actuality] 1. completion; full development or realization; the complete expression of some function. 2. a supposed vital principle operating in living creatures as a directive spirit.

entepicondyle (en-tep/'i-kon'dil) the internal epicondyle of the humerus.

enteque (en-ta/'ka) chronic hemorrhagic septicemia of unknown etiology affecting chiefly cattle and sometimes horses and sheep in the Argentine. It occurs in two forms: the *intestinal* form, marked by wasting, diarrhea, and death within three to four months, and a *wasting* form, (*e. seca*), marked by progressive emaciation, anemia, inflammation of the joints, and calcification of the lungs.

enter- see *entero-*.

enteraden (en-ter/'ad-en) [enter- + Gr. *adēn* gland] any intestinal gland.

enteradenitis (en/'ter-ad-'ē-ni'tis) [enteraden + -itis] inflammation of the intestinal glands.

enteral (en/'ter-al) [Gr. *enteron* intestine] within, by way of, or pertaining to the small intestine.

enteralgia (en/'ter-al/'je-ah) [enter- + -algia] pain or neuralgia of the intestine.

enteramine (en/'ter-am'in) serotonin.

enterangiemphraxis (en/'ter-an/'je-em-frak'sis) [enter- + Gr. *angeion* vessel + *emphraxis* stoppage] (obs.) obstruction of the intestinal blood vessels.

enterauxe (en/'ter-awk'se) [enter- + Gr. *auxē* increase] (obs.) hypertrophy of the intestinal wall.

enterectasis (en/'ter-ek'tah-sis) [enter- + Gr. *ektasis* extension] distention of the intestines.

enterectomy (en/'ter-ek'to-me) [enter- + Gr. *ektomē* excision] excision of a part of the intestine; resection of the intestine.

entercolosis (en/'ter-el-ko'sis) [enter- + Gr. *helkōsis* ulceration] (obs.) ulceration of the intestine.

enteropiplocele (en/'ter-e-pip'lo-sēl) enteroepiplocele.

enteric (en-ter/'ik) [Gr. *enterikos* intestinal] pertaining to the small intestine.

enteric-coated (en-ter/'ik-kōt'ed) a term designating a special coating applied to tablets or capsules which prevents release and absorption of their contents until they reach the intestines.

entericoid (en-ter/'i-koid) resembling enteric or typhoid fever.

enteritis (en/'ter-i'tis) [enter- + -itis] inflammation of the intestine, applied chiefly to inflammation of the small intestine; see also *enterocolitis*.

e. anaphylac'tica, hemorrhagic inflammation of both the large and the small intestine following a second dose of anaphylactogen in sensitized dogs. **cat e.**, panleukopenia. **cholericform e.**, an acute, cholera-like diarrheal disease with a high case fatality rate, prevalent in epidemic and endemic form in the Western Pacific area since 1938, caused by the El Tor or Celebes vibrio, immunologically identical with the cholera vibrio. **chronic cicatrizing e.**, Crohn's disease.

e. cys'tica chron'ica, a form marked by cystic dilatation of the intestinal glands, due to closure of the openings of their ducts.

diphtheritic e., enteritis characterized by the presence of a false membrane and severe ulceration of the mucosa beneath the membrane.

feline e., panleukopenia. **e. gra'vis**, an often fatal disease characterized by acute onset of severe abdominal pain, nausea, vomiting, and bloody diarrhea, with mucosal necrosis and hemorrhage and edema of the submucosa, most prominent in the jejunum and proximal ileum.

infectious feline e., panleukopenia. **e. membrana'cea**, membranous e., mucocommembranous e., mucous e., myxomembranous e., mucous colitis.

e. necrot'icans, an inflammation of the intestines in man, caused by *Clostridium perfringens* type F, and characterized by necrosis.

e. nodula'ris, enteritis with enlargement of the lymph nodes. **pellicular e.**, mucous colitis.

phlegmonous e., a condition with symptoms resembling those of peritonitis; it may be secondary to other intestinal diseases, as chronic obstruction, strangulated hernia, carcinoma, etc.

e. polypo'sa, enteritis marked by polypoid growths in the intestine, due to proliferation of the connective tissue.

protozoan e., enteritis in which the intestine is infested with protozoan organisms of various species.

pseudomembranous e., pseudomembranous enterocolitis. **regional e.**, segmental e., Crohn's disease.

specific feline e., panleukopenia. **streptococcus e.**, primary phlegmonous enteritis, due to *Streptococcus pyogenes*.

terminal e., Crohn's disease. **tuberculous e.**, enteritis secondary to advance pulmonary tuberculosis, believed to be caused by the swallowing of large amounts of positive sputum; now rare due to antibiotic tuberculosis therapy.

entero-, enter- [Gr. *enteron* intestine] a combining form denoting relationship to the intestines.

enteroanastomosis (en/'ter-o-ah-nas'to-mo'sis) the surgical formation of an anastomosis between two portions of the intestine.

enteroantigen (en/'ter-o-an'ti-jen) an antigen derived from the intestine.

enteroapokleisis (en/'ter-o-ap'o-kli'sis) [entero- + Gr. *apokleisis* a shutting out] the surgical exclusion of a segment of the intestine.

Enterobacteriaceae (en/'ter-o-bak-te're-a'se-e) a family of Schizomycetes, order Eubacteriales, made up of gram-negative rod-shaped organisms, occurring as plant or animal parasites, or as saprophytes. It includes five tribes, Erwiniaceae, Escherichiaceae, Proteaceae, Salmonellaceae, and Serratiaeae.

enterobacteriotherapy (en/'ter-o-bak-te're-o-ther'ah-pe) treatment by vaccine made from intestinal bacteria.

enterobiasis (en/'ter-o-bi'ah-sis) infection with nematode worms of the genus *Enterobius*, especially *E. vermicularis*.

enterobiliary (en/'ter-o-bil'e-er-e) pertaining to the small intestine and the bile passages.

Enterobius (en/'ter-o-be-us) [entero- + Gr. *bios* life] a genus of intestinal nematode worms of the superfamily Oxyuroidea.

E. vermicula'ris, the seatworm, threadworm, or pinworm, a small white worm parasitic in the upper part of the large intestine, and occasionally in the female genitals and bladder. Infection is

frequent in children, sometimes causing itching. Formerly called *Ascaris vermicularis* or *Oxyuris vermicularis*.

enterocele (en'ter-o-sel') [entero- + Gr. *kēlē* hernia] 1. any hernia of the intestine through intact vaginal mucosa. 2. posterior vaginal hernia.

enterocentesis (en'ter-o-sen-te'sis) [entero- + Gr. *kentēsis* puncture] surgical puncture of the intestine.

enterochirurgia (en'ter-o-ki-rur'je-ah) [entero- + Gr. *chei-rourgia* surgery] surgery of the intestine.

enterocholecystostomy (en'ter-o-ko'le-sis-tos'to-me) [entero- + Gr. *cholē* bile + *kystis* bladder + *stoma* mouth] formation of an opening from the gallbladder into the small intestine; it may be created surgically or occur spontaneously by rupture due to an impacted stone.

enterocholecystotomy (en'ter-o-ko'lo-sis-tot'o-me) [entero- + *cholecystotomy*] incision into the gallbladder and the intestine.

enterocinesia (en'ter-o-si-ne'ze-ah) [entero- + Gr. *kinēsis* motion] peristalsis.

enterocinetic (en'ter-o-si-net'ik) pertaining to or stimulating peristalsis.

enterocleisis (en'ter-o-kli'sis) [entero- + Gr. *kleisis* closure] 1. closure of a wound in the intestine. 2. occlusion of the lumen of the intestine. **omental e.**, closure of an intestinal perforation by suturing the omentum over the defect.

enteroclysis (en'ter-ok'li-sis) [entero- + Gr. *klysis* a drenching] the injection of a nutrient or medicinal liquid into the bowel.

enteroclysm (en'ter-o-klizm) [entero- + Gr. *klysmos* a clyster] enteroclysis.

enterococcemia (en'ter-o-kok-se'me-ah) [enterococcus + Gr. *haima* blood + *-ia*] the presence of enterococci in the blood.

enterococci (en'ter-o-kok'si) [Gr.] plural of *enterococcus*.

enterococcus (en'ter-o-kok'us), pl. *enterococ'ci* [entero- + *coccus*] any streptococcus of the human intestine; the enterococcus group includes *Streptococcus faecalis*, *S. durans*, *S. liquefaciens*, and *S. zymogenes*.

enterocoel (en'ter-o-sil) enterocoele.

enterocoele (en'ter-o-se'le) [entero- + Gr. *koilia* belly] the body cavity formed by the outpouchings from the archenteron, typically found in echinoderms and chordates. Cf. *schizocoele*.

enterocoelom (en'ter-o-se'lom) enterocoele.

enterocoelomate (en'ter-o-sē'l'o-māt) 1. having an enterocoele. 2. any of a group of animals, such as echinoderms and chordates, having a body cavity (enterocoele) derived from the archenteron.

enterocolectomy (en'ter-o-ko-lek'to-me) resection of the intestines, including the ileum, cecum, and ascending colon.

enterocolitis (en'ter-o-ko-li'tis) [entero- + *colitis*] inflammation involving both the small intestine and the colon; see also *enteritis*. **antibiotic-associated e.**, that in which treatment with antibiotics alters the bowel flora and results in diarrhea or pseudomembranous enterocolitis. Called also *antibiotic-associated colitis*. **hemorrhagic e.**, an inflammation of the small intestine and colon, characterized by hemorrhagic breakdown of the intestinal mucosa with inflammatory-cell infiltration. **necrotizing e.**, pseudomembranous e. **pseudomembranous e.**, an acute inflammation of the bowel mucosa with the formation of pseudomembranous plaques overlying an area of superficial ulceration, and the passage of the pseudomembranous material in the feces; it may result from shock and ischemia or be associated with antibiotic therapy. Called also *necrotizing e.* and *pseudomembranous colitis* or *enteritis*. **regional e.**, Crohn's disease.

enterocolostomy (en'ter-o-ko-los'to-me) [entero- + Gr. *kolon* colon + *stomoun* to provide with an opening, or mouth] the surgical formation of a communication between the small intestine and the colon; also, the opening so constructed.

enterocrinin (en'ter-ok'rī-nin) an extract of the mucosa of the small intestine, said to be a physiological hormone, which stimulates the intestine to secretory activity.

enterocutaneous (en'ter-o-ku-ta'ne-us) pertaining to or communicating with the intestine and the cutaneous surface of the body, as an enterocutaneous fistula.

enterocyst (en'ter-o-sist') [entero- + Gr. *kystis* sac, bladder] a benign cyst proceeding from the subperitoneal tissue.

enterocystocele (en'ter-o-sis'to-sēl) [entero- + Gr. *kystis* bladder + *kēlē* hernia] hernia of the bladder and intestine.

enterocystoma (en'ter-o-sis-to'mah) [entero- + Gr. *kystis* cyst + *-oma*] vitelline cyst.

enterocyte (en'ter-o-sit') an intestinal epithelial cell.

enterodynia (en'ter-o-din'e-ah) [entero- + Gr. *odynē* pain] pain in the intestine.

enteroenterostomy (en'ter-o-en'ter-os'to-me) surgical anastomosis between two segments of the intestine.

enteroepiplocele (en'ter-o-e-pip'lo-sēl) [entero- + Gr. *epiploon* omentum + *kēlē* hernia] hernia of the small intestine and omentum.

enterogastric (en'ter-o-gas'trik) of or pertaining to the intestine and stomach.

enterogastritis (en'ter-o-gas-tri'tis) [entero- + Gr. *gastēr* stomach + *-itis*] gastroenteritis.

enterogastrone (en'ter-o-gas'trōn) [entero- + *gastro* + *chalone*] a hormone of the duodenum which mediates the humoral inhibition of gastric secretion and motility produced by the ingestion of fat; called also *anthelone E*.

enterogenous (en'ter-oj'ē-nus) [entero- + Gr. *gennan* to produce] 1. arising from the primitive foregut. 2. originating within the small intestine.

enteroglucagon (en'ter-o-gloo'kah-gon) [entero- + *glucagon*] a glucagon-like hyperglycemic agent released by the mucosa of the upper intestine in response to the ingestion of glucose, and believed by some to be synthesized and secreted by the L cells. It is immunologically distinct from pancreatic glucagon but has similar activities. Called also *intestinal glucagon*.

enterogram (en'ter-o-gram') a tracing made by an instrument of the movements of the intestine.

enterograph (en'ter-o-graf) [entero- + Gr. *graphein* to write] an instrument for recording the intestinal movements.

enterography (en'ter-og'rah-fe) 1. recording of the intestinal movements by means of an enterograph. 2. a description of the intestines.

enterohepatitis (en'ter-o-hep-ah-ti'tis) [entero- + Gr. *hēpar* liver + *-itis*] 1. inflammation of the bowel and liver. 2. histomoniasis of turkeys.

enterohepatocoele (en'ter-o-hep'ah-to-sēl') an infantile umbilical hernia which contains intestines and liver.

enterohepatopexy (en'ter-o-hep'ah-to-pek'se) fixation to the liver of a seromuscular flap of a defunctionalized loop of the proximal small intestine, a step in autotransplantation of the liver.

enterohydrocele (en'ter-o-hi'dro-sēl) [entero- + *hydrocele*] hernia with hydrocele.

enteroidea (en'ter-oi'de-ah) the intestinal fevers; the fevers caused by intestinal bacteria, including typhoid fever, paratyphoid fever, etc.

enterointestinal (en'ter-o-in-tes'ti-nal) [entero- + *intestine*] intestino-intestinal.

enterokinase (en'ter-o-ki'nās) enteropeptidase.

enterokinesia (en'ter-o-ki'ne'se-ah) peristalsis.

enterokinetic (en'ter-o-ki-net'ik) pertaining to or stimulating peristalsis.

enterokinin (en'ter-o-ki'nin) an extract of the mucosa of the small intestine, said to be a physiological hormone, which stimulates intestinal motility.

enterolith (en'ter-o-lith') [entero- + Gr. *lithos* stone] an intestinal calculus; any concretion found in the intestine.

enterolithiasis (en'ter-o-lī-thi'ah-sis) [entero- + *lithiasis*] a condition characterized by the presence of intestinal calculi.

enterology (en'ter-ol'o-je) [entero- + *-logy*] the sum of what is known regarding the intestines.

enterolysis (en'ter-ol'i'sis) [entero- + Gr. *lysis* dissolution] the operative division of adhesions between loops of intestine or between the intestine and abdominal wall.

enteromegalia (en'ter-o-mē-ga'le-ah) enteromegaly.

enteromegaly (en'ter-o-meg'ah-le) [entero- + Gr. *megaleia* bigness] enlargement of the intestine.

enteromere (en'ter-o-mēr') [entero- + Gr. *meros* part] any segment of the embryonic alimentary tract.

enteromerocele (en'ter-o-me'ro-sēl) [entero- + Gr. *mēros* thigh + *kēlē* hernia] femoral hernia.

Enteromonas (en'ter-o-mo'nas) a genus of extremely small, spherical or piriform protozoa of the order Polymastigida, class Zoomastigophora, having three anterior flagella and a fourth trailing from the posterior end of the body. *Tricomonas* is believed to be identical with this organism. **E. hom'inis**, a species found as a commensal in the human intestine.

enteromycodermatitis (en'ter-o-mi'ko-der-mi'tis) [entero- + Gr. *myxa* mucus + *derma* skin] endoenteritis.

enteromycosis (en'ter-o-mi-ko'sis) [entero- + Gr. *mykēs* fungus + *-osis*] disease of the intestine due to bacteria or fungi. **e. bacteria/cea**, a general name for certain infections of the intestine due to nonspecific bacteria.

enteromyiasis (en'ter-o-mi-i'ah-sis) [entero- + Gr. *myia* fly] presence of larvae of flies in the intestine.

enteron (en'ter-on) [Gr.] the gut or alimentary canal; usually used in medicine with specific reference to the small intestine.

enteroneuritis (en'ter-o-nu-ri'tis) inflammation of the nerves of the intestine.

enteronitis (en'ter-o-ni'tis) enteritis. **polytropic e. (obs.)**, acute infectious gastroenteritis.

enteroparesis (en'ter-o-par'e-sis) [entero- + Gr. *paresis* relaxation] relaxation of the intestine resulting in dilatation.

enteropathogen (en''ter-o-path'o-jen) a microorganism which causes a disease of the intestines.

enteropathogenesis (en''ter-o-path'o-jen'ě-sis) the production of disease or disorder of the intestines.

enteropathogenic (en''ter-o-path'o-jen'ik) pertaining to or effective in production of disease of the intestines.

enteropathy (en''ter-op'ah-the) [*entero-* + Gr. *pathos* illness] any disease of the intestine. **gluten e.**, nontropical sprue. **protein-losing e.**, a nonspecific term referring to conditions associated with excessive enteric loss of plasma protein. It occurs in extensive ulceration (e.g., inflammatory bowel disease), diffuse mucosal disease (e.g., adult celiac disease) in which there is more rapid desquamation of mucosal epithelial cells, and in intestinal lymphatic obstruction (intestinal lymphangiectasia).

enteropeptidase (en''ter-o-pep'ti-dās) an enzyme of the intestinal juice which activates the proteolytic enzyme of the pancreatic juice by converting trypsinogen into trypsin. Called also *enterokinase*.

enteropexy (en''ter-o-pek'se) [*entero-* + Gr. *pēxis* fixation] surgical fixation of the intestine to the anterior or posterior abdominal wall, or occasionally of one segment to another.

enteroplasty (en''ter-o-plas'te) [*entero-* + Gr. *plassein* to mold] plastic surgery of the intestine, especially to enlarge the caliber of a constricted segment or area of bowel.

enteroplegia (en''ter-o-ple'je-ah) [*entero-* + Gr. *plēgē* stroke] adynamic ileus.

enteroproctia (en''ter-o-prok'she-ah) [*entero-* + Gr. *prōktos* anus] the condition of having an artificial anus.

enteroptosis (en''ter-op-to'se-ah) enteroptosis.

enteroptosis (en''ter-op-to'sis) [*entero-* + Gr. *ptōsis* fall] descent or downward displacement of the intestine in the abdominal cavity; a term based on the outmoded concept that variation of position of abdominal organs are pathological.

enteroptotic (en''ter-op-tot'ik) pertaining to or characterized by enteroptosis.

enteroptychia, enteroptychy (en''ter-o-ti'ke-ah; en''ter-o-ti'ke) [*entero-* + Gr. *ptychē* a fold] plication of the intestine, an operation for the prevention of intestinal adhesions.

enterorenal (en''ter-o-re'nal) pertaining to the intestine and the kidney.

enterorrhagia (en''ter-o-ra'je-ah) [*entero-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the intestine.

enterorrhaphy (en''ter-or'ah-fe) [*entero-* + Gr. *rhaphe* suture] repair or suture of the intestine. **circular e.**, the suturing of two completely divided portions of intestine after invaginating one segment over the other so that they are joined end to end.

enterorrhea (en''ter-o-re'ah) diarrhea.

enterorrhesis (en''ter-o-rek'sis) [*entero-* + Gr. *rhēxis* rupture] rupture of the intestine.

enteroscope (en''ter-o-skōp'') [*entero-* + Gr. *skochein* to examine] an endoscope for examining the lumen of the intestine.

enterosepsis (en''ter-o-sep'sis) [*entero-* + Gr. *sēpsis* putrefaction] intestinal sepsis due to putrefaction of the contents of the intestines.

enterosite (en''ter-o-sit'') (*obs.*) an intestinal parasite.

enterosorption (en''ter-o-sorp'shun) accumulation of a substance in the bowel by virtue of its passage from the circulating blood; occurring when its exsorption exceeds its insorption.

enterospasm (en''ter-o-spazm'') [*entero-* + Gr. *spasmos* spasm] a spasm of the intestine.

enterostasis (en''ter-o-sta'sis) [*entero-* + Gr. *stasis* stoppage] intestinal stasis.

enterostaxis (en''ter-o-stak'sis) [*entero-* + Gr. *staxis* dripping] slow hemorrhage through the intestinal mucous membrane.

enterostenosis (en''ter-o-stē-no'sis) [*entero-* + Gr. *stenōsis* contraction] narrowing or stricture of the intestine.

enterostomal (en''ter-o-sto'mal) relating to or having undergone enterostomy.

enterostomy (en''ter-os'to-me) [*entero-* + Gr. *stomoun* to provide with an opening, or mouth] the formation of a permanent opening into the intestine through the abdominal wall, usually by surgical means; also, the opening so created. **gun-barrel e.**, enterostomy in which the two segments of the divided intestine are parallel to one another as they emerge through the abdominal wall, like the tubes of a double-barreled shotgun.

enterotome (en''ter-o-tōm'') [*entero-* + Gr. *tomē* a cutting] an instrument for cutting the intestine. **Dupuytren's e.**, a cutting forceps used in making an artificial anus.

enterotomy (en''ter-ot'o-me) [*entero-* + Gr. *tomē* a cutting] incision into the intestine.

enterotoxemia (en''ter-o-tok-se'me-ah) a condition characterized by presence in the blood of toxins produced in the intestines. **hemorrhagic e.**, struck. **infectious e. of sheep**, pulpy kidney disease (q.v., under *disease*) of sheep.

enterotoxigenic (en''ter-o-tok'si-ka'shun) enterotoxism.

enterotoxigenic (en''ter-o-tok'si-jen'ik) producing or containing a toxin specific for the cells of the intestinal mucosa.

enterotoxin (en''ter-o-tok'sin) 1. a toxin specific for the cells of the intestinal mucosa. 2. a toxin arising in the intestine. 3. an exotoxin that is protein in nature and relatively heat stable, produced by staphylococci, primarily by coagulase-positive *Staphylococcus pyogenes* var. *aureus*. Enterotoxin, which on ingestion produces violent vomiting and diarrhea, is the primary factor in staphylococcal food poisoning.

enterotoxism (en''ter-o-tok'sizm) autointoxication of enteric origin.

enterotropic (en''ter-o-trop'ik) [*entero-* + Gr. *tropos* a turning] having a special affinity for or exerting its principal effect upon the intestines.

enterotyphus (en''ter-o-ti'fus) typhoid fever.

enterovaginal (en''ter-o-vaj'i-nal) pertaining to or communicating with the intestine and the vagina, as an enterovaginal fistula.

enterovenous (en''ter-o-ve'nus) communicating between the intestinal lumen and the lumen of a vein.

enterovesical (en''ter-o-ves'i-kal) pertaining to or communicating with the intestine and urinary bladder, as an enterovesical fistula.

Entero-Vioform (en''ter-o-vi'o-form) trademark for a preparation of iodochlorhydroxyquin.

enteroviral (en''ter-o-vi'ral) pertaining to or caused by enteroviruses.

enterovirus (en''ter-o-vi'rus) one of a subgroup of the picornaviruses infecting the gastrointestinal tract and discharged in the excreta, including poliovirus, the coxsackieviruses, and the echoviruses.

enterozoic (en''ter-o-zo'ik) relating to or caused by an enterozoon.

enterozoon (en''ter-o-zo'on), pl. *enterozo'a* [*entero-* + Gr. *zōon* animal] an animal parasite or species inhabiting or infecting the intestinal canal.

enteruria (en''ter-u're-ah) [*entero-* + Gr. *ouron* urine + *-ia*] the presence of fecal constituents in the urine.

enthalpy (en'thal-pe) [Gr. *en* within + *thalpein* to warm] the heat content or chemical energy of a physical system; it is a thermodynamic function equal to the internal energy plus the product of the pressure and volume.

enthesis (en'the-sis) [Gr. "a putting in; insertion"] 1. the use of artificial material in the repair of a defect or deformity of the body. 2. the site of attachment of a muscle or ligament to bone.

enthesitis (en-thē-si'tis) inflammation of the muscular or tendinous attachment to bone.

enthetic (en-thet'ik) [Gr. *enthetikos* fit for implanting] 1. pertaining to enthesitis. 2. introduced from without.

enthetobiosis (en-thet'o-bi-o'sis) [Gr. *enthesi* a putting in + *biōsis* way of life] dependency on a mechanical implant, as on an artificial cardiac pacemaker.

enthlasia (en'thlah-sis) [Gr. "a dent caused by pressure"] comminuted fracture of the skull, with depression of the bony fragments.

entiris (en-ti'ris) [Gr. *entos* within + *iris* iris] the posterior pigment layer of the iris.

entity (en'ti-te) [L. *ens* being] an independently existing thing; a reality.

ento-, ent- [Gr. *entos* inside] a prefix signifying within, or inner.

entoblast (en'to-blast) [*ento-* + Gr. *blastos* germ] 1. entoderm. 2. a cell nucleolus.

entocoele (en'to-sēl) [*ento-* + Gr. *kēlē* hernia] an internal hernia.

entochondrostosis (en'to-kon'dros-to'sis) [*ento-* + Gr. *chondros* cartilage + *osteon* bone] the development of bone taking place within cartilage.

entochoroidea (en'to-ko-roid'e-ah) [*ento-* + Gr. *chorioeidēs* chorioid] the inner layer of the choroid coat of the eye.

entocnemial (en'tok-ne'me-al) on the inner side of the tibia.

entocone (en'to-kōn) [*ento-* + Gr. *kōnos* cone] the medial posterior cusp of a maxillary molar.

entocoid (en'to-ko'nid) [*ento-* + Gr. *kōnos* cone] the medial posterior cusp of a mandibular molar.

entocornea (en'to-kor'ne-ah) [*ento-* + *cornea*] lamina limitans posterior cornea.

entocranial (en'to-kra'ne-al) endocranial.

entocuneiform (en'to-ku'ne-i-form) os cuneiform mediale.

entocyte (en'to-sit) [*ento-* + Gr. *kytos* hollow vessel] the cell contents.

entoderm (en'to-derm) [*ento-* + Gr. *derma* skin] the innermost of the three primary germ layers of the embryo; from it are derived the epithelium of the pharynx, respiratory tract (except the nose), the digestive tract, bladder and urethra. Called also *endoderm*, *endoblast*, *entoblast*, and *hypoblast*. Cf. *ectoderm* and *mesoderm*.

primitive e., the primary internal layer of the gastrula that becomes both gut and yolk sac. **yolk-sac e.**, the epithelial lining of the yolk sac.

entodermal (en'to-der'mal) pertaining to or derived from the entoderm.

entodermic (en'to-der'mik) entodermal.

entoectad (en'to-ek'tad) [ento- + Gr. *ektos* without] directed or proceeding from within outward.

entome (en'tōm) [Gr. *entemnein* to cut in] an instrument for cutting urethral strictures.

entomere (en'to-mēr) [ento- + Gr. *meros* part] a blastomere destined to become entoderm.

entomesoderm (en'to-mes'o-derm) endomesoderm.

entomion (en'to-me-on) [Gr. *entomē* notch] the point at the tip of the mastoid angle of the parietal bone in the parietal notch of the temporal bone.

entomo- (en'to-mo) [Gr. *entomon* insect] a combining form denoting relationship to an insect, or to insects.

Entomobrya (en'to-mo-bri'ah) a genus of insects, the spring tails, of the order Collembola, Australian species of which cause irritation by their bite.

entomogenous (en'to-moj'ē-nus) [entomo- + Gr. *gennan* to produce] 1. derived from insects, their bites, emanations, etc. 2. growing in the body of an insect.

entomologist (en'to-mol'o-jist) an expert in entomology.

entomology (en'to-mol'o-je) [entomo- + -logy] that branch of zoology which deals with the study of insects. **medical e.**, that concerned with insects that cause disease or serve as vectors of microorganisms that cause disease in man.

entomophilous (en'to-mof'i-lus) [entomo- + Gr. *philein* to love] fertilized by insect-borne pollen; said of certain flowers.

Entomophthora (en'to-mof'thor-ah) [entomo- + Gr. *phthora* destruction, death] a genus of phycomycetous fungi of the order Entomophthorales, which comprises pathogens of insects and spiders. Formerly called *Empusa*. **E. corona'ta**, a parasite of spiders, termites, and other insects, which causes a subcutaneous infection of the nose (rhinoentomophthoromycosis) in man, and has been isolated from nasal polyps in horses. **E. mus'cae**, a species developing in the bodies of flies, thus destroying them.

Entomophthoraceae (en'to-mof'tho-ra'se-e) a family of fungi of the order Entomophthorales, subclass Zygomycetes, found as parasites on man, horses, and insects; it includes the genera *Basidiobolus* and *Entomophthora*.

Entomophthorales (en'to-mof'tho-ra'lēz) an order of phycomycetous fungi of the subclass Zygomycetes, which are typically parasites of insects, but may cause entomophthoromycosis in man; it includes the family Entomophthoraceae.

entomophthoromycosis (en'to-mof'tho-ro-mi-ko'sis) any disease caused by phycomycetous fungi of the order Entomophthorales, such as rhinoentomophthoromycosis and subcutaneous phycomycosis.

Entomospira (en'to-mo-spi'rah) [entomo- + Gr. *speira* coil] a genus name formerly given certain spirochetal microorganisms, now included in the genus *Borrelia*.

entophthalmia (en'tof-thal'me-ah) inflammation of the inner parts of the eyeball.

entophyte (en'to-fit) [ento- + Gr. *phyton* plant] endophyte.

entopic (en-top'ik) [Gr. *en* in + *topos* place] occurring in the proper place, as opposed to ectopic.

entoplasm (en'to-plazm) [ento- + Gr. *plasma* something formed] 1. endoplasm. 2. (obs.) the blue-staining, or nonchromatinic, portion of certain bacteria.

entoplastic (en'to-plas'ik) [ento- + Gr. *plastikos* formative] having a formative power lodged within.

entoptic (en-top'tik) [ento- + Gr. *optikos* seeing] denoting visual phenomena which have their seat within the eye.

entoptoscope (en-top'to-skōp) an instrument for examining the media of the eyes, to ascertain their transparency.

entoptoscopy (en'top-tos'ko-pe) [ento- + Gr. *ōpsēye* + *skopein* to examine] the observation of the interior of the eye and its light and shadows.

entoretina (en'to-ret'i-nah) [ento- + *retina*] the internal or nervous portion of the retina, disposed in five layers, which are named respectively outer molecular, inner nuclear, inner molecular, ganglion, and nerve fiber layers.

entorganism (ent-or'gan-izm) [ento- + *organism*] endoparasite.

entosarc (en'to-sark) [ento- + Gr. *sarx* flesh] endoplasm.

entostoblast (en-tos'tho-blast) [Gr. *entosthen* from within + *blastos* germ] the hypothetical nucleus of the nucleolus.

entostosis (en'tos-to'sis) [ento- + Gr. *osteon* bone] enostosis.

entotympanic (en'to-tim-pan'ik) within the tympanum of the ear.

entozoa (en'to-zo'ah) [Gr.] plural of *entozoon*.

entozoal (en'to-zo'al) pertaining to or caused by entozoa.

entozoon (en'to-zo'on, pl. *entozo'a* [ento- + Gr. *zōon* animal] a parasitic animal organism living within the body of its host.

entripsis (en-trip'sis) [Gr. *en* in + *tripsis* rubbing] inunction.

entropion (en-tro'pe-on) [Gr. *en* in + *tropein* to turn] the turning inward (inversion) of an edge or margin, as of the margin of the eyelid, with the tarsal cartilage turned inward toward the eyeball; called also *blepharolosis*. **e. cicatric'eum**, **cicatric'ial e.**, inversion of the margin of an eyelid caused by contraction of scar tissue in the palpebral conjunctiva or underlying tarsus. **spastic e.**, **e. spas'ticum**, inversion of the eyelid caused by tonic spasm of the orbicularis oculi muscle. **e. u'veae**, inversion of the margin of the pupil, usually the result of an iritis attended with exudate, and occurring rarely as a congenital condition.

entropionize (en-tro'pe-o-nīz') to put into a state of entropion or inversion; to turn inward.

entropium (en-tro'pe-um) entropion.

entropy (en'tro-pe) [Gr. *entropē* a turning inward] 1. diminished capacity for spontaneous change, as occurs in aging. 2. the measure of that part of the heat or energy of a system which is not available to perform work; entropy increases in all natural (spontaneous and irreversible) processes.

entsulfon sodium (en'tsul-fon) chemical name: 2-[2-[4-(1,1,3,3-tetramethylbutyl)phenoxy]ethoxy]ethanesulfonic acid sodium salt; a detergent, C₂₀H₃₃NaO₆S.

entwicklungsmechanik (en'twik-lungs'mē-kan'ik) [Ger. "developmental mechanics"] mechanisms of embryological development, as revealed by experimental study.

entypy (en'ti-pe) [Gr. *entypē* pattern] a method of gastrulation in which the entoderm lies external to the amniotic ectoderm.

enucleate (e-nu'kle-āt) [L. *enucleare*] to remove whole and clean, as a tumor from its envelope or the eyeball; see *enucleation*.

enucleated (e-nu'kle-āt'ed) removed; said of an organ, tumor, or cell nucleus.

enucleation (e-nu'kle-a'shun) [L. *e* out + *nucleus* kernel] the removal of an organ, of a tumor, or of another body in such a way that it comes out clean and whole, like a nut from its shell. Used in connection with the eye, it denotes removal of the eyeball after the eye muscles and optic nerve have been severed.

enuresis (en'u-re'sis) [Gr. *enourein* to void urine] involuntary discharge of the urine; often used alone with specific reference to involuntary discharge of urine occurring during sleep at night (*bed-wetting*; *nocturnal enuresis*).

enuretic (en'u-ret'ik) 1. pertaining to enuresis. 2. an agent which causes enuresis. 3. a person who exhibits enuresis.

envelope (en've-lōp) an encompassing structure or membrane. In virology, a coat surrounding the capsid and usually furnished at least partially by the host cell. In bacteriology, the cell wall and the plasma membrane considered together. **cell e.**, the plasma membrane and the cell wall considered together. **egg e.**, egg membrane; see under *membrane*. **nuclear e.**, the condensed double layer of lipids and proteins enclosing the cell nucleus and separating it from the cytoplasm; its two concentric membranes, inner and outer, are separated by a perinuclear space. Called also *nuclear membrane*.

envenomation (en-ven'o-ma'shun) the poisonous effects caused by the bites, stings, or effluvia of insects and other arthropods, or the bites of snakes.

environment (en-vi'ron-ment) [Fr. *environner* to surround, to encircle] the sum total of all the conditions and elements which make up the surroundings and influence the development of an individual.

envy (en've) a desire to have another's possessions or qualities for oneself. **penis e.**, in psychoanalytic theory, the desire of the female to possess a penis; more generally, the female wish for male attributes.

Enzactin (en-zak'tin) trademark for preparations of triacetin.

enzootic (en'zo-ot'ik) [Gr. *en* in + *zōon* animal] 1. present in an animal community at all times, but occurring in only small numbers of cases. 2. a disease of low morbidity which is constantly present in an animal community.

Enzopride (en'zo-prid) trademark for a preparation of nadide.

enzogotic (en'zi-got'ik) developed from the same fertilized ovum.

enzymatic (en'zi-mat'ik) relating to, caused by, or of the nature of an enzyme.

enzyme (en'zīm) [Gr. *en* in + *zymē* leaven] a protein produced in a cell and capable of greatly accelerating by its catalytic action the chemical reaction of a substance (the substrate) for which it is often specific. Enzymes perform this function without being destroyed or altered. They are divided into six main groups: oxidoreductases, transferases, hydrolases, lyases, isomerases, and ligases. **activating e.**, an enzyme that activates a given amino acid by attaching it to the corresponding transfer ribonucleic acid (t-RNA). **adaptive e.**, induced e. **adding e.**, enzymes that catalyze the addition of a fragment to a molecule, e.g., the addition of CO₂ to a molecule, with the formation of a new carboxyl group. **allosteric e.**, one containing an allosteric

site; see under *site*. **amylolytic e.**, one that catalyzes the conversion of starch into sugar. **autolytic e.**, one that produces autolysis or digestion of the cell in which it exists. **bacterial e.**, an enzyme existing in or secreted by a bacterium. **brancher e.**, **branching e.**, α -glucan-branching glycosyltransferase; see under *glycosyltransferase*. **catheptic e.**, cathepsin. **clotting e.**, **coagulating e.**, an enzyme, such as rennin and fibrin ferment, that catalyzes the conversion of soluble into insoluble proteins; called also *curdling e.* **constitutive e.**, one produced by a microorganism regardless of the presence or absence of the specific substrate. Cf. *induced e.* **converting e.**, an enzyme that catalyzes the conversion of angiotensin I to angiotensin II; it occurs in the blood plasma and in high concentrations in the lungs. **curdling e.**, clotting e. **debrancher e.**, **debranching e.**, dextrin-1-6-glucosidase. **digestive e.**, a substance that catalyzes the process of digestion. **extracellular e.**, one that exists outside of the cell secreting it. **fat-splitting e.**, lipolytic e. **glycolytic e.**, one that catalyzes the conversion of sugar to pyruvic acid. **hydrolytic e.**, one that catalyzes hydrolysis; a hydrolase. **induced e.**, one whose production requires or is markedly stimulated by a specific small molecule, the *inducer*, which is the substrate of the enzyme or a compound structurally related to it. The inducers studied first were substrates whose utilization thus became possible; hence these enzymes were known earlier as *adaptive enzymes*. Cf. *constitutive e.* **inducible e.**, induced e. **inhibitory e.**, one whose action blocks another reaction or a reaction sequence. **intracellular e.**, one that is contained within the cell secreting it. **inverting e.**, one that catalyzes the hydrolysis of sucrose. **lipolytic e.**, one that catalyzes the hydrolysis of fat; called also *fat-splitting e.* and *steatolytic e.* **malic e.**, an enzyme that catalyzes the decarboxylation of malate to pyruvate with the accompanying conversion of NADP to NADP and H^+ . **microsomal e's**, enzymes associated with the thin tubular network of endoplasmic reticulum (or microsomes) of cells, especially such enzymes of the liver. **milk-curdling e.**, rennin. **mucolytic e.**, one that catalyzes the hydrolytic depolymerization of mucopolysaccharides. **old yellow e.**, a flavoprotein found in yeast, reduced NADP dehydrogenase, that catalyzes the oxidation of NADP by cytochrome C. **oxidation e.**, oxidase. **proteolytic e.**, one that catalyzes the hydrolysis of proteins and various split products of protein, the final product being small peptides and amino acids. **Q e.**, α -glucan-branching glycosyltransferase; see under *glycosyltransferase*. **receptor-destroying e.**, one that renders red cells insusceptible to viral hemolysis by destroying its receptors. **redox e.**, one that catalyzes oxidation-reduction reactions. **reducing e.**, reductase. **repressible e.**, one whose rate of production is decreased as the concentration of certain metabolites is increased. **respiratory e.**, an enzyme system that catalyzes the oxidation of a substrate by oxygen of the air. **restriction e.**, any of the enzymes that catalyze the splitting of a gene from the DNA molecule; specific enzymes split off specific genes. **Schardinger's e.**, xanthine oxidase. **splitting e.**, one that catalyzes the splitting of a fragment from a molecule, e.g., the splitting out of CO_2 from a carboxyl group (decarboxylation). **steatolytic e.**, lipolytic e. **transferring e.**, one which catalyzes the transfer of various radicals between molecules; a transferase. **urea e.**, urease. **uricolytic e.**, one that catalyzes the conversion of uric acid into urea. **yellow e's**, a number of flavoproteins which have been isolated from various sources and which take part in oxidations and reductions.

enzymic (en-zim'ik) enzymatic.

enzymoelectrophoresis (en'zi-mo-im'mu-no-e-lek'tro-fō-re'sis) immunoelectrophoresis for the detection and identification of proteins with enzymatic activity, utilizing selective stains for enzymes, rather than a protein stain such as amido black.

enzymology (en'zi-moi'o-je) the study of enzymes and enzymatic action.

enzymolysis (en'zi-mol'i-sis) [enzyme + Gr. *lysis* dissolution] the disintegrative action or reaction produced by an enzyme.

enzymopathy (en'zi-mop'ah-the) an inborn error of metabolism consisting of defective or absent enzymes, as in the glycogen storage diseases or the mucopolysaccharidoses. **lysosomal e.**, lysosomal storage disease.

enzymosis (en'zi-mo'sis) [enzyme + -osis] (obs.) fermentation induced by an enzyme.

enzymuria (en'zi-mu're-ah) [enzyme + *urine*] the presence of enzymes in the urine.

EOG electro-olfactogram.

EOM extraocular movement.

eonism (e'o-nizm) [Chevalier d'Eon, French political adventurer, 1728-1810; having adopted woman's dress when sent on a secret mission to Russia in 1755, he was later forced by decree of Louis XVI to wear such apparel to the end of his life] transvestism in the male.

eopsia (e-op'se-ah) [Gr. *ēōs* dawn + *opsis* vision] orthopsia.

eosin (e'o-sin) [Gr. *ēōs* dawn] a rose-colored stain or dye; typically the sodium salt of tetrabromfluorescein, $C_{20}H_6Br_4Na_2O_6$, C.I.

45380. Commercially, several other red coal tar dyes are called eosin. All the eosins are bromine derivatives of fluorescein. Eosin is an important plasma stain, used especially with hematoxylin, methylene blue, and methyl green. **e. B.**, **e. I** bluish, dibromodinitrofluorescein, a dye having staining properties similar to eosin, but of a distinctly bluer shade. **ethyl e.**, the ethyl ester of eosin. **water-soluble e.**, **e. W** or **W S**, yellowish **e.**, **e. Y**, eosin.

eosinocyte (e'o-sin'o-sit) eosinophil.

eosinopenia (e'o-sin-o-pe'ne-ah) [eosinophil + Gr. *penia* poverty] abnormal deficiency of eosinophilic leukocytes in the blood.

eosinophil (e'o-sin'o-fil) [eosin + Gr. *philein* to love] a structure, cell, or histologic element readily stained by eosin, especially a granular leukocyte with a nucleus that usually has two lobes connected by a slender thread of chromatin, and cytoplasm containing coarse, round granules that are uniform in size; called also *acidocyte*, *eosinocyte*, *eosinophilic leukocyte*, and *Rindfleisch's cell*.

eosinophile (e'o-sin'o-fil) 1. eosinophil. 2. eosinophilic.

eosinophilia (e'o-sin'o-fil'e-ah) [eosin + Gr. *philein* to love] 1. the formation and accumulation of an abnormally large number of eosinophils in the blood. 2. the condition of being readily stained with eosin. **Löffler's e.**, see under *syndrome*. **pulmonary infiltration e.**, infiltration of the pulmonary parenchyma by eosinophils, as in Löffler's syndrome. **tropical e.**, **tropical pulmonary e.**, a disease occurring in certain parts of India, characterized clinically by anorexia, malaise, cough, leukocytosis, and an absolute increase in eosinophils; called also *Weingarten's disease* or *syndrome*, *eosinophilic lung*, and *Frimodt-Möller and Barton disease*.

eosinophilic (e'o-sin'o-fil'ik) readily stainable with eosin.

eosinophilopietin (e'o-sin'o-fil'o-poi'tē-tin) a peptide of low molecular weight that induces production of eosinophils.

eosinophilosis (e'o-sin'o-fi-lo'sis) eosinophilia, def. 1. **pulmonary e.**, **tropical e.**, tropical eosinophilia.

eosinophilotactic (e'o-sin'o-fil'o-tak'tik) having the power of attracting eosinophils; chemotactic for eosinophils.

eosinophilous (e'o-sin-of'i-lus) eosinophilic.

eosinotactic (e'o-sin'o-tak'tik) [eosinophil + Gr. *taktikos* regulating] exhibiting an influence on eosinophilic cells, either repelling them (*negatively e.*) or attracting them (*positively e.*).

eosolate (e-o'so-lāt) acetyl guaiacol trisulfonate; the silver salt is used as an antiseptic.

ep- see *epi-*.

epacmastic (ep'ak-mas'tik) pertaining to the epacme.

epacme (ep-ak'me) [Gr. *epakmazein* to come to its height] in evolution, the stage or period of development.

epactal (ep-ak'tal) [Gr. *epaktos* brought in] 1. supernumerary 2. a wormian bone; see *ossa suturarum*.

epallobiosis (ep-al'lo-bi-o'sis) [epi + Gr. *allo-* other + *biōsis* way of life] dependency on an external life-support system, as on a heart-lung machine or hemodialyzer.

eparsalgia (ep'ar-sal'je-ah) [Gr. *epairein* to lift + *-algia*] any painful disorder due to overstrain of a part, including dilatation of the heart, hernia, enteroptosis, coughing, etc.

eparterial (ep'ar-te're-al) [Gr. *epi* upon + *arteria* artery] over an artery; applied especially to the first branch of the right primary bronchus which is so situated.

epaxial (ep-ak'se-al) [Gr. *epi* upon + *axis*] situated upon or above an axis.

epencephal (ep'en-sef'al) epencephalon.

epencephalic (ep'en-se-fal'ik) pertaining to the epencephalon.

epencephalon (ep'en-sef'ah-lon) [Gr. *epi* upon + *enkephalos* brain] 1. cerebellum. 2. metencephalon.

ependopathy (ep'en-dop'ah-the) ependymopathy.

ependyma (ē-pen'di-mah) [Gr. *ependyma* upper garment] [NA] the lining membrane of the ventricles of the brain and of the central canal of the spinal cord.

ependymal (ē-pen'di-mal) pertaining to or composed of ependyma.

ependymitis (ē-pen'di-mi'tis) inflammation of the ependyma.

ependymoblast (ē-pen'di-mo-blast) an embryonic ependymal cell; an ependymal spongioblast.

ependymoblastoma (ē-pen'di-mo-blas-to'mah) a malignant tumor composed of primitive ependymal cells; some neuropathologists classify such tumors as malignant ependymoma.

ependymocyte (ē-pen'di-mo-sit') [ependyma + Gr. *kytos* hollow vessel] an ependymal cell.

ependymocytoma (ē-pen'di-mo-si-to'mah) ependymoma.

ependymoma (ē-pen'di-mo'mah) a neoplasm composed of differentiated ependymal cells; most ependymomas are slow growing and benign, but malignant varieties occur.

ependymopathy (ē-pen'di-mop'ah-the) disease of the ependyma.

eperythrozoön (ep'ē-rith'ro-zō'on) [Gr. *epi* upon + *erythros* red + *zōon* animal] a genus of microorganisms of the family

Bartonellaceae, order Rickettsiales, occurring as seven species, of limited pathogenicity, which infect rodents, cattle, sheep, and swine.

eperythrozoosis (ep/'rith/'ro-zo/'o-no'sis) infection with organisms of the genus *Eperythrozoon*.

ephapse (e-faps') [Gr. *ephapsis* a touching] a point of lateral contact (other than a synapse) between nerve fibers across which impulses are conducted directly through the nerve membranes from one fiber to the other. Cf. *synapse*.

ephaptic (e-fap'tik) denoting the conduction of a nerve impulse across an ephapse, as opposed to synaptic conduction.

epharmony (ep-har/'mo-ne) development in complete harmony with environment; harmonic relation between structure and environment.

ephebiatics (ē-fe/'be-at/'riks) [Gr. *ephēbos* one arrived at puberty + *iatrikē* surgery, medicine] that department of medicine which deals especially with the diagnosis and treatment of the diseases of youth (18–25 years).

ephebic (ē-feb'ik) [Gr. *ephēbikos* pertaining to puberty] pertaining to youth or the period of puberty and adolescence.

ephebogenesis (ef/'ē-bo-jen/'ē-sis) [Gr. *ephēbos* one arrived at puberty + *genesis*] the bodily changes occurring at puberty.

ephebogenic (ef/'ē-bo-jen/'ik) pertaining to or caused by ephebogenesis.

ephebology (ef/'ē-bol/'o-je) [Gr. *ephēbos* one arrived at puberty + *-logy*] the study of puberty.

Ephedra (e-fed/'rah) [Gr. *epi* upon + *hedra* seat] a genus of low, branching, gnetaceous shrubs indigenous to China and India. *E. equisetina*, *E. sinica*, *E. vulgaris*, and other species, known as *ma huang* in China, furnish ephedrine.

ephedrine (ē-fed/'rin, ef/'ē-drin) [USP] chemical name: [R-(R*, S*)]-α-[1-(methylamino)ethyl]benzenemethanol. An adrenergic, C₁₀H₁₅NO, obtained from *Ephedra* species or prepared synthetically, occurring as an unctuous, almost colorless solid or white crystals or granules. Its principal uses, in the form of the hydrochloride or sulfate salt, are: to decongest the nasal mucosa in allergic states and to relax bronchiolar muscles in bronchial asthma; to stimulate the central nervous system in narcolepsy and in poisoning by central nervous system depressants; to prevent hypotension during spinal and infiltration anesthesia; and as a mydriatic. **e. hydrochloride** [USP], the hydrochloride salt of ephedrine, C₁₀H₁₅NO·HCl, occurring as fine, white crystals or as a powder, having the same actions, uses, and routes of administration as the sulfate salt. **e. sulfate** [USP], the sulfate salt of ephedrine, (C₁₀H₁₅NO)₂H₂SO₄, occurring as fine, white crystals or powder, having the same actions as the base; administered orally, parenterally, or intranasally.

ephelides (ē-fel/'ī-dēz) [Gr.] plural of *ephelis*.

ephelis (ē-fe/'lis), pl. *ephel'ides* [Gr. *ephēlis*] a freckle.

ephemera (ē-fem/'er-ah) [Gr. *ephēmeros* short-lived] a transitory condition or thing.

ephemeral (ē-fem/'er-al) short-lived; transient.

Ephemerida (e/'fē-mer/'i-dah) a family of flies (class Insecta), the exuviae of which may cause sensitization and severe asthmatic paroxysms when inhaled.

ephippium (ep-'hip/'e-um) [Gr. *epi* upon + *hippos* horse] (*obs.*) sella turcica.

Ephynal (ef/'i-nal) trademark for a preparation of vitamin E; see *tocopherol*.

epi-, ep- [Gr. *epi* on] a prefix denoting on, upon, or over.

epiallopregnanolone (ep/'i-al/'o-preg-nan/'o-lōn) a male sex hormone extracted from pregnancy urine, which aids in the development of male sex characteristics; abbreviated EAP.

epiandrosterone (ep/'i-an-dros/'ter-ōn) chemical name: 3β-hydroxy-17-androstanone. An androgenic steroid, one of the urinary 17-ketosteroids, less active than androsterone and excreted in small amounts in normal human urine. Called also *isoandrosterone*.

epiblast (ep/'i-blast) [*epi-* + Gr. *blastos* germ] 1. ectoderm. 2. ectoderm, except for the neural plate.

epiblastic (ep/'i-blas/'tik) pertaining to or arising from the epiblast; ectodermal.

epiblepharon (ep/'i-blef/'ah-ron) [*epi-* + Gr. *blepharon* eyelid] a developmental anomaly in which a horizontal fold of skin stretches across the border of the eyelid, pressing the eyelashes inward against the eyelid.

epibole (e-pib/'o-le) epiboly.

epiboly (e-pib/'o-le) [Gr. *epibolē* cover] a method of gastrulation by which the smaller blastomeres at the animal pole of the fertilized ovum grow over and enclose the cells of the vegetal hemisphere.

epibulbar (ep/'i-bul/'bar) upon the eyeball.

epicanthal, epicanthic (ep/'i-kan/'thal; ep/'i-kan/'thik) 1. pertaining to the epicanthus. 2. overlying the canthus.

epicanthine (ep/'i-kan/'thin) epicanthal.

epicanthus (ep/'i-kan/'thus) [*epi-* + Gr. *kanthos* canthus] a ver-

tical fold of skin on either side of the nose, sometimes covering the inner canthus. It is present as a normal characteristic in persons of certain races and sometimes occurs as a congenital anomaly in others. Called also *epicanthic fold*, *palpebronasal fold*, and *plica palpebronasalis* [NA].

Epicanthus.

epicarcinogen (ep/'i-kar-sin/'o-jen) an agent that increases the effect of a carcinogen.

epicardia (ep/'i-kar/'de-ah) the lower portion of the esophagus, extending from the hiatus esophagi to the cardia.

epicardial (ep/'i-kar/'de-al) pertaining to the epicardium or to the epicardia.

epicardiectomy (ep/'i-kar/'de-ek/'to-me) surgical removal of the epicardium, usually performed in constrictive pericarditis to permit greater diastolic filling of the heart.

epicardiolysis (ep/'i-kar-'de-ol/'i-sis) [*epicardium* + Gr. *lysis* dissolution] the operation of separating the visceral layer of the pericardium (epicardium) from the myocardium.

epicardium (ep/'i-kar/'de-um) [*epi-* + Gr. *kardia* heart] NA alternative for *lamina visceralis pericardii*, the layer of serous pericardium on the surface of the heart.

epicauma (ep/'i-kaw/'mah) [Gr. *epikauma*] a spot on the cornea of the eye.

Epicauta (ep/'i-kaw/'tah) a genus of blister beetles that secrete cantharidin, which if rubbed into the skin, causes severe vesicular dermatitis. *E. pennsylvanica* and *E. vittata* are found in eastern United States, *E. cine'rea* in southwestern United States, and *E. tormento'sa* and *E. sapphiri'na* in Africa.

epicele (ep/'i-sēl) (*obs.*) epicoele.

epicentral (ep/'i-sen/'tral) attached to the centrum of a vertebra.

epichitosamine (ep/'i-ke-'to/'sah-min) D-2-aminomannose: a hexosamine homologous with glucosamine, but containing mannose instead of D-glucose.

epichordal (ep/'i-ko/'dal) situated dorsad of the notochord.

epichorion (ep/'i-ko/'re-on) [*epi-* + *chorion*] that part of the uterine mucosa which incloses the implanted conceptus.

epicillin (ep-'i-sil/'in) chemical name: [2S-[2α,5α,6β(S*)]]-6-[[amino-1,4-cyclohexadien-1-ylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. An antibacterial, C₁₈H₂₁N₃O₄S, effective against various gram-negative and gram-positive organisms.

epicoele (ep/'i-sēl) [*epi-* + Gr. *koilia* hollow] (*obs.*) the cavity of the myelencephalon.

epicoeloma (ep/'i-se-'lo/'mah) the portion of the coeloma nearest the notochord.

epicomus (e-pik/'o-mus) [*epi-* + Gr. *komē* hair] a monster with a parasitic twin joined at the summit of the head.

epicondylalgia (ep/'i-kon-dī-'lal/'je-ah) [*epicondyle* + *-algia*] pain in the muscles or tendons attached to the epicondyle of the humerus; see also *tennis elbow*, under *elbow*.

epicondyle (ep/'i-kon-'dīl) [*epi-* + Gr. *kondylos* condyle] an eminence upon a bone, above its condyle; called also *epicondylus* [NA].

external e. of femur, epicondylus lateralis femoris. **external e. of humerus**, epicondylus lateralis humeri. **internal e. of femur**, epicondylus medialis femoris. **internal e. of humerus**, epicondylus medialis humeri. **lateral e. of femur**, epicondylus lateralis femoris. **lateral e. of humerus**, epicondylus lateralis humeri. **medial e. of femur**, epicondylus medialis femoris. **medial e. of humerus**, epicondylus medialis humeri.

epicondylia (ep/'i-kon-'dī-li) [L.] plural of *epicondylus*.

epicondylar, epicondylaric (ep/'i-kon-dī-'le-an; ep/'i-kon-dī-'lik) pertaining to an epicondyle.

epicondylitis (ep/'i-kon-'dī-li-'tis) inflammation of the epicondyle or of the tissues adjoining the epicondyle of the humerus. **external humeral e.**, **radiohumeral e.**, **tennis elbow**.

epicondylus (ep/'i-kon-'dī-lus), pl. *epicon'dyli* [L.] [NA] epicondyle: a general term for an eminence upon a bone, above its condyle. **e. latera'lis fem'oris** [NA], lateral epicondyle of femur: a projection from the distal end of the femur, above the lateral condyle, for the attachment of collateral ligaments of the knee. Called also *external epicondyle of femur*. **e. latera'lis**

hu'meri [NA], lateral epicondyle of humerus: a projection from the distal end of the humerus, giving attachment to a common tendon of origin of the extensor carpi radialis brevis, extensor digitorum communis, extensor digiti quinti proprius, extensor carpi ulnaris, and supinator muscles. Called also *external epicondyle of humerus*, *external, extensor, lateral, or radial condyle of humerus*, and *condylus lateralis humeri*. **e. media'lis fem'o-ris** [NA], medial epicondyle of femur: a projection from the distal end of the femur, above the medial condyle, for the attachment of collateral ligaments of the knee; called also *internal epicondyle of femur*. **e. media'lis hu'meri** [NA], medial epicondyle of humerus: a projection from the distal end of the humerus, giving attachment to the pronator teres above; a common tendon of origin of the flexor carpi radialis, palmaris longus, flexor digitorum sublimis, and flexor carpi ulnaris muscles in the middle, and the ulnar collateral ligament below. Called also *condylus medialis humeri*, *internal epicondyle of humerus*, and *flexor, internal, medial, or ulnar condyle of humerus*.

epicoracoid (ep'i-kor'ah-koid) situated above the coracoid process.

epicorneascleritis (ep'i-kor'ne-ah-skle-ri'tis) a chronic inflammatory condition affecting the cornea and sclera.

epicostal (ep'i-kos'tal) [epi- + L. *costa* rib] situated upon a rib.

epicotyl (ep'i-kot'il) the part of the stem of a plant embryo or seedling above the cotyledons and below the leaves.

epicranium (ep'i-kra'ne-um) [epi- + Gr. *kranion* skull] the integument, aponeurosis, and muscular expansions of the scalp.

epicrisis (ep'i-kri'sis) [epi- + *crisis*] 1. a second or supplementary crisis. 2. a critical analysis or discussion of a case of disease after its termination.

epicritic (ep'i-krit'ik) [Gr. *epikrisis* determination] relating to or serving the purpose of accurate determination; applied to cutaneous nerve fibers that serve the purpose of perceiving fine variations of touch or temperature. See under *sensibility*.

epicuticle (ep'i-ku'ti-kl) [epi- + L. *cuticula*] the thin, flexible, colorless, outermost layer of the exoskeleton of certain crustaceans and arthropods, composed of wax and cuticulin.

epicystitis (ep'i-sis-ti'tis) [epi- + Gr. *kystis* bladder] inflammation of the structures above the bladder.

epicystotomy (ep'i-sis-to'to-me) [epi- + Gr. *kystis* bladder + *tomē* a cutting] suprapubic operation for stone in the bladder.

epicyte (ep'i-sit) [epi- + Gr. *kytos* hollow vessel] 1. see *cell membrane*, under *membrane*. 2. alveolar cell.

epidemic (ep'i-dem'ik) [Gr. *epidēmios* prevalent] 1. attacking many people in any region at the same time; widely diffused and rapidly spreading. 2. a disease of high morbidity which is only occasionally present in a human community. 3. a season of the extensive prevalence of any particular disease.

epidemicity (ep'i-dē-mis'i-te) the quality of being widely diffused and rapidly spreading throughout a community.

epidemiogenesis (ep'i-de'me-o-jen'e-sis) the spread of a communicable disease to epidemic proportions.

epidemiography (ep'i-de'me-og'rah-fe) [epidemic + Gr. *graphein* to write.] a treatise upon or an account of epidemics.

epidemiology (ep'i-de'me-ol'o-je) [epidemic + -logy] 1. the study of the relationships of the various factors determining the frequency and distribution of diseases in a human community. 2. the field of medicine concerned with the determination of the specific causes of localized outbreaks of infection, such as hepatitis, of toxic disorders, such as lead poisoning, or any other disease of recognized etiology.

epiderm (ep'i-derm) epidermis.

epidermal (ep'i-der'mal) pertaining to the epidermis.

epidermatitis (ep'i-der-mah-ti'tis) a term sometimes used to denote an inflammation restricted to the epidermis; in actuality the inflammation also invariably affects the dermis.

epidermatoplasty (ep'i-der-mat'o-plas'te) [epidermis + Gr. *plassein* to form] skin grafting done with pieces of epidermis with the underlying outer layer of the corium.

epidermicula (ep'i-der-mik'u-lah) a very thin membrane or cuticula, such as that covering a hair.

epidermidalization (ep'i-der'mid-ah-li-za'shun) development of epidermic cells (stratified epithelium) from mucous cells (columnar epithelium).

epidermides (ep'i-der'mi-dēz) [Gr.] plural of *epidermis*.

epidermidolysis (ep'i-der'mi-dol'i-sis) (*obs.*) epidermolysis.

epidermis (ep'i-der'mis), pl. *epider'mides* [epi- + Gr. *derma* skin] [NA] the outermost and nonvascular layer of the skin, derived from the embryonic ectoderm, varying in thickness from 0.07 to 0.12 mm., except on the palms and soles where it may be 0.8 and 1.4 mm., respectively. On the palmar and plantar surfaces, it exhibits maximal cellular differentiation and layering, and comprises, from within outward, five layers: (1) a *basal layer* (stratum basale epidermidis), composed of columnar cells arranged perpendicularly; (2) a *prickle-cell or spinous layer* (stratum spinosum epidermidis), composed of flattened polyhedral cells with short processes or spines; (3) a *granular layer* (stratum granulosum

epidermidis), composed of flattened granular cells; (4) a *clear layer* (stratum lucidum epidermidis), composed of several layers of clear, transparent cells in which the nuclei are indistinct or absent; and (5) a *horny layer* (stratum corneum epidermidis), composed of flattened, cornified, non-nucleated cells. In the thinner epidermis of the general body surface, the basal, prickle-cell, and horny layers are constantly present and the granular layer is usually identifiable, but the clear layer is usually absent. Called also *cuticle*.

Section of epidermis.

epidermitis (ep'i-der-mi'tis) epidermatitis.

epidermization (ep'i-der'mi-za'shun) 1. the process of covering or of becoming covered with epidermis. 2. skin grafting.

epidermodysplasia (ep'i-der'mo-dis-pla'se-ah) faulty development of the epidermis. **e. verruciformis**, a condition once believed to be a precancerous genodermatosis, but now known to be caused by a virus identical with or closely related to the virus of common warts; the lesions resemble those of verruca plana in appearance and morphology, but are red or red-violet and widespread, and have a tendency to become malignant. Called also *Lewandowsky-Lutz disease*.

epidermoid (ep'i-der'moid) 1. resembling the epidermis. 2. any tumor occurring in a noncutaneous site (such as the skull, brain, or meninges) and formed by inclusion of epidermal elements, e.g., an intracranial cholesteatoma.

epidermoidoma (ep'i-der'moi-do'mah) a cerebral or meningeal tumor formed by inclusion of ectodermal elements at the time of closure of the neural groove.

epidermolysis (ep'i-der-mol'i-sis) [epidermis + Gr. *lysis* dissolution] a loosened state of the epidermis, with formation of blebs and bullae either spontaneously or after trauma. **e. acquisi'ta**, e. *acquisita* bullosa. **e. bullo'sa**, a group of genetically transmitted diseases of the skin, marked by the development of bullae and vesicles, often at the site of trauma; the group includes *e. bullosa dystrophica*, *e. bullosa simplex*, and probably other variants. Called also *e. bullosa hereditaria*. **e. bullo'sa acquisi'ta**, a nonhereditary condition marked by blisters at sites of trauma and by milia, involvement of mucous membranes, and usually nail dystrophy. **e. bullo'sa dystroph'ica**, epidermolysis bullosa marked by severe scarring after healing of the lesions, occurring in three forms. In the *dominantly inherited form*, the lesions develop over the joints and may involve the mucous membranes of the mouth, tongue, esophagus, and pharynx; the scarring may be associated with loss of the nails, adhesions between the digits, contractures, clawlike hands, dwarfism, and baldness. In the *recessively inherited form*, the clinical manifestations are similar to those in the dominantly inherited form, but more severe, and the lesions may develop spontaneously or following mild irritation. In the *recessively inherited lethal form*, numerous large lesions are present at birth, which soon rupture, leaving extensive denuded areas; death usually occurs no later than three months of age. **e. bullo'sa heredita'ria**, e. *bullosa*. **e. bullo'sa leta'lis**, polydysplastic e. *bullosa*. **e. bullo'sa sim'plex**, a relatively mild form of epidermolysis bullosa, transmitted as an autosomal dominant trait, in which the lesions are superficial, develop on any part of the skin subject to repeated trauma, and usually heal without scarring. **dysplastic e. bullosa**, polydysplastic e. *bullosa*. **hyperplastic e. bullo'sa**, a syndrome transmitted as an autosomal dominant trait, with onset of both traumatic and spontaneous bullae at any age through puberty, which heal with scarring, often severe. **polydysplastic e. bullo'sa**, a recessively inherited disorder in which bullae are present at birth or soon after, scarring is severe,

mucous membranes are often involved, and death from inanition or infection by the age of 30 is the usual result. Called also *Hallopeau-Siemens syndrome*, *dysplastic e. bullosa dystrophica*, and *e. bullosa letalis*. **toxic bullous e.**, bullous epidermolytic in which the epidermis peels off in large sheets; it has been attributed to an allergic response to drugs.

epidermolytic (ep'i-der-mo-lit'ik) pertaining to or characterized by epidermolysis.

epidermomycosis (ep'i-der-mo-mi-ko'sis) dermatophytosis.

epidermophytid (ep'i-der-mof'i-tid) dermatophytid.

epidermophytin (ep'i-der-mof'i-tin) a filtrate of *Epidermophyton* cultures that induces a hypersensitivity reaction of the tuberculin type; employed in the treatment of epidermophytosis.

Epidermophyton (ep'i-der-mof'i-ton) [*epidermis* + Gr. *phyton* plant] a monotypic genus of imperfect fungi (dermatophytes) of the order Moniliales, family Moniliaceae. **E. floccosum**, a species that attacks both skin and nails but not hair, and one of the causative organisms of tinea cruris, tinea pedis (athlete's foot), and onychomycosis; formerly called *Acrothesium floccosum*.

epidermophytosis (ep'i-der'mo-fi-to'sis) infection by fungi, especially of the genus *Epidermophyton*; dermatophytosis.

epidermopoiesis (ep'i-der'mo-poi-e'sis) the formation of epidermis, as in the embryo or during wound healing.

epidermotropic (ep'i-der-mo-trop'ik) having a special affinity for or exerting a particular effect upon the epidermis.

epididymal (ep'i-did'i-mal) pertaining to the epididymis.

epididymectomy (ep'i-did'i-mek'to-me) [*epididymis* + Gr. *ektomē* excision] surgical removal of the epididymis.

epididymis (ep'i-did'i-mis), pl. *epididym'ides* [*epi-* + Gr. *didymos* testis] [NA] the elongated cordlike structure along the posterior border of the testis, whose elongated coiled duct provides for storage, transit, and maturation of spermatozoa and is continuous with the ductus deferens. It consists of a head (caput epididymis), body (corpus epididymis), and tail (cauda epididymis). Called also *parorchis*.

epididymitis (ep'i-did'i-mi'tis) inflammation of the epididymis. **spermatogenic e.**, an inflammatory reaction to spermatozoa that have escaped from the lumen of the epididymal tubules into the tissues of the epididymis.

epididymodeferentectomy (ep'i-did'i-mo-def'er-en-tek'to-me) excision of the epididymis and ductus deferens.

epididymodeferential (ep'i-did'i-mo-def'er-en'shal) pertaining to the epididymis and ductus deferens.

epididymo-orchitis (ep'i-did'i-mo-or-ki'tis) inflammation of the epididymis and testis.

epididymotomy (ep'i-did'i-mot'o-me) [*epididymis* + Gr. *tomē* a cut] incision of the epididymis.

epididymovasectomy (ep'i-did'i-mo-vaz-ek'to-me) excision of the epididymis and a large portion of the ductus deferens.

epididymovasostomy (ep-e-did'i-mo-vaz-os'to-me) [*epididymos* + *vas* vessel + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of a new communication between the epididymis and a formerly distal portion of the vas (ductus) deferens.

epidural (ep'i-du'ral) situated upon or outside the dura mater.

epidurography (ep'i-du-rog'rah-fe) radiography of the spine after a radiopaque medium has been injected into the epidural space.

epiestriol (ep'i-es'tre-ol) an estrogenic steroid found in pregnant women.

epifascial (ep'i-fash'e-al) upon a fascia.

epigamous (ē-pig'ah-mus) [*epi-* + Gr. *gamos* marriage] occurring after fertilization; a term descriptive of the erroneous theory that the sex of an embryo is determined by external factors acting on the embryo during its development.

epigaster (ep'i-gas'ter) [*epi-* + Gr. *gastēr* belly] the hindgut: the embryonic structure from which the large intestine is formed.

epigastralgia (ep'i-gas'tral'je-ah) [*epigastrium* + *-algia*] pain in the epigastrium.

epigastric (ep'i-gas'trik) [*epi-* + Gr. *gastēr* belly] pertaining to the epigastrium.

epigastrium (ep'i-gas'tre-um) [Gr. *epigastriōn*] the upper middle region of the abdomen, located within the sternal angle; called also *regio epigastrica* [NA].

epigastrius (ep'i-gas'tre-us) [*epi-* + Gr. *gastēr* belly] a double monster in which the parasite is small and forms a tumor upon the epigastrium of the autosite.

epigastrocele (ep'i-gas'tro-sēl) [*epigastrium* + Gr. *kēlē* hernia] hernia in the epigastric region.

epigenesis (ep'i-jen'ē-sis) [*epi-* + *genesis*] the development of an organism from an undifferentiated cell, consisting in the successive formation and development of organs and parts that do not preexist in the fertilized egg; opposed to the erroneous theory of preformation.

epigenetic (ep'i-jē-net'ik) pertaining to epigenesis.

epigenetics (ep'i-jē-net'iks) the science concerned with the analysis of development.

epiglottectomy (ep'i-glot-tek'to-me) epiglottidectomy.

epiglottic (ep'i-glot'ik) pertaining to the epiglottis.

epiglottidean (ep'i-glo-tid'e-an) pertaining to the epiglottis.

epiglottidectomy (ep'i-glot'i-dek'to-me) [*epiglottis* + Gr. *ektomē* excision] excision of the epiglottis.

epiglottiditis (ep'i-glot'i-di'tis) inflammation of the epiglottis.

epiglottis (ep'i-glot'is) [*epi-* + Gr. *glōttis* glottis] [NA] the lid-like cartilaginous structure overhanging the entrance to the larynx and serving to prevent food from entering the larynx and trachea while swallowing.

epiglottitis (ep'i-glot-ti'tis) epiglottiditis.

epignathous (ē-pig'nah-thus) of the nature of an epignathus.

epignathus (ē-pig'nah-thus) [*epi-* + Gr. *gnathos* jaw] a fetal tumor arising from the soft or hard palate in the region of Rathke's pouch, filling the buccal cavity and protruding from the mouth. Because the tumor sometimes shows a certain degree of organization, it has been considered a parasitic fetus.

Epignathus (Gould and Pyle).

epigonal (ē-pig'o-nal) [*epi-* + Gr. *gonē* seed] situated on an embryonic gonad.

epiguanine (ep'i-gwan'in) one of the purine bodies found in the urine after the ingestion of theobromine (cocoa). It is 7-methyl-2-amino-6-oxypurine, C₈H₇N₅O.

epihydrinaldehyde (ep'i-hi'drin-al'dē-hīd) a chemical compound, one of the substances that give rancid fats their disagreeable odor.

epihyoid (ep'i-hi'oid) situated upon the hyoid bone.

epilamellar (ep'i-lah-mel'ar) situated upon the basement membrane.

epilate (ep'i-lāt) to remove hair by the roots.

epilation (ep'i-la'shun) [L. *e* out + *pilus* hair] the removal of hair by the roots.

epilemma (ep'i-lem'ah) [*epi-* + Gr. *lemma* scale] the endoneurium.

epilemmal (ep'i-lem'al) pertaining to the epilemma (endoneurium).

epilepsia (ep'i-lep'se-ah) [L.; Gr. *epilēpsia*] epilepsy. **e. cursi'va**, cursive epilepsy. **e. gra'vior**, **e. major**, grand mal epilepsy. **e. minor**, **e. mit'ior**, minor epilepsy. **e. nu'tans**, head nodding attacks in children, a minor form of astatic seizure. **e. partia'lis contin'ua**, continuous clonic movements of a limited part of the body, due to an abnormal neuronal discharge. **e. procursi'va**, cursive epilepsy. **e. rotato'ria**, an epileptic seizure in which the body rotates. **e. tar'da**, epilepsy beginning in middle age or later.

epilepsy (ep'i-lep'se) [Gr. *epilēpsia* seizure] paroxysmal transient disturbances of brain function that may be manifested as episodic impairment or loss of consciousness, abnormal motor phenomena, psychic or sensory disturbances, or perturbation of the autonomic nervous system. Symptoms are due to paroxysmal disturbance of the electrical activity of the brain. On the basis of origin, epilepsy is idiopathic (cryptogenic, essential, genetic) or symptomatic (acquired, organic). On the basis of clinical and electroencephalographic phenomenon, four subdivisions are recognized: (1) *grand mal e.* (major e., *haut mal e.*)—subgroups: generalized, focal (localized), jacksonian (rolandic), (2) *petit mal e.*, (3) *psychomotor e.* (temporal lobe e., psychic, psychic equivalent, or variant)—subgroups: psychomotor proper (tonic with adversive or torsion movements or masticatory phenomena), automatic (with amnesia), and sensory (hallucinations, or dream states or déjà vu), (4) *autonomic e.* (diencephalic), with flushing, pallor, tachycardia, hypertension, perspiration, or other visceral symptoms. Called also *epilepsia*. **abdominal e.**, paroxysmal abdominal pain, the expression of an abnormal neuronal discharge from the brain. **acquired e.**, epilepsy due to cerebral disease acquired after birth; see *symptomatic e.* **activated e.**, epileptic seizures induced by electrical or drug stimulation for the purpose of observing the pattern of clinical and electroencephalographic response. **automatic e.**, automatisms, often ambulatory with quasipurposive acts, but with amnesia for the events. **Bravais-jacksonian e.**, jacksonian e. **cortical e.**, seizure phenomena originating in the cerebral cortex. **cryptogenic e.**, idiopathic e. **cursive e.**, psychomotor epilepsy manifested by running. **diurnal e.**, epileptic attacks occurring in the

daytime or when the patient is awake. **essential e.**, idiopathic e. **focal e.**, minor epileptic seizures in which the seizures are predominantly one-sided or local, or present localized features. **focal e., chronic**, epilepsy partialis continua. **focal e., minor**, an epileptic attack consisting of the aura without convulsions; called also *paraepilepsy*. **gelastic e.**, epilepsy in which there are episodes of uncontrollable mirthless laughter. **generalized e.**, epilepsy in which the seizures are generalized; they may have a focal onset or be generalized from the beginning. **generalized flexion e.**, hypsarrhythmia. **grand mal e.**, epilepsy, frequently preceded by an aura, in which a sudden loss of consciousness is immediately followed by generalized convulsions; called also *grand mal*, *major e.*, and *haut mal e.* Cf. *petit mal e.* **haut mal e.**, grand mal e. **hysterical e.**, seizures associated with hysteria, which may mimic epilepsy. **idiopathic e.**, epilepsy of unknown origin, possibly associated with some inherited predisposition for seizures; called also *cryptogenic e.*, *essential e.*, and *genetic e.* **jacksonian e.**, epilepsy characterized by unilateral clonic movements that start in one group of muscles and spread systematically to adjacent groups, reflecting the march of the epileptic activity through the motor cortex. The seizures are due to a discharging focus in the contralateral motor cortex; called also *Bravais-jacksonian e.* and *rolandic e.* **Koshevnikoff's (Koschewnikow's, Kozhevnikov's) e.**, epilepsy partialis continua. **larval e.**, unruptured epileptic seizures, represented only by characteristic waves in the electroencephalogram; called also *latent e.* **laryngeal e.**, tussive syncope. **latent e.**, larval e. **localized e.**, focal e. **major e.**, grand mal e. **matutinal e.**, epileptic seizures occurring in the morning on awakening. **menstrual e.**, epileptic seizures associated with menstruation. **minor e.**, slight epileptic attacks consisting of brief impairment or loss of consciousness, or localized motor or sensory symptoms, as in *petit mal* epilepsy and psychomotor epilepsy. Called also *epilepsia minor* or *epilepsia mitior*. **musicogenic e.**, reflex epilepsy occurring in response to a musical stimulus. **myoclonus e.**, slowly progressive hereditary epilepsy beginning in childhood and characterized by attacks of intermittent or continuous clonus of muscle groups, resulting in difficulties in voluntary movement; there is mental deterioration, sometimes progressing to complete dementia, and the presence of Lafora bodies in various cells, including those of the nervous system, retina, heart, muscle, and liver. It is transmitted as an autosomal recessive trait. Called also *Lafora's disease*, *progressive familial myoclonic e.*, *Unverricht's disease* or *syndrome*, and *myoclonia epileptica*. **nocturnal e.**, epileptic attacks occurring at night or while the patient is asleep. **organic e.**, symptomatic e. **petit mal e.**, epilepsy in which there is sudden momentary loss of consciousness with only minor myoclonic jerks, seen especially in children, and accompanied by 3-c.p.s. spike and wave discharges on the electroencephalogram; called also *petit mal* and *absence seizure*. Cf. *grand mal e.* **photogenic e.**, epilepsy in which seizures are induced by a flickering light. **physiologic e.**, biologic or electrobilologic seizures based on physiologic and not on organic or structural abnormalities of the brain. **post-traumatic e.**, recurring convulsions due to head injury. **procursive e.**, cursive e. **progressive familial myoclonic e.**, myoclonus e. **psychic e.**, a seizure manifested by a predominance of psychic or psychotic features; called also *psychic equivalent*. **psychomotor e.**, epileptic seizures associated with disease of the temporal lobe and characterized by variable degrees of impairment of consciousness, the patient performing a series of coordinated acts which are out of place, bizarre, and serve no useful purpose and for which he is amnesic. **reflex e.**, an epileptic seizure occurring in response to a sensory (tactile, visual, auditory, or musical) stimulus. **rolandic e.**, see *jacksonian e.* **sensory e.**, seizures manifested by hallucinations of sight, smell, or taste. **serial e.**, seizures occurring in series, with return of consciousness between the individual attacks. **sleep e.**, narcolepsy. **spinal e.**, a succession of clonic and tonic spasms in spastic paraplegia. **symptomatic e.**, acquired epileptic seizures caused by disease of the central nervous system itself, a generalized systemic disorder, such as hypoglycemia or uremia, or poisoning, as with lead or pentylene-tetrazol; called also *organic e.* **tardy e.**, epilepsy tarda. **temporal lobe e.**, psychomotor e. **thalamic e.**, epilepsy ascribed to disease of the thalamus. **tonic e.**, a seizure characterized by generalized rigidity. **traumatic e.**, epileptic seizures occurring as the result of trauma (gunshot wound or other injury) to the brain. **uncinate e.**, epileptic seizures originating in the uncinate region of the temporal lobe, associated with hallucinations of smell and taste.

epileptic (ep/'i-lep/'tik) [Gr. *epileptikos*] 1. pertaining to or affected with epilepsy. 2. a person affected with epilepsy.
epileptiform (ep/'i-lep/'ti-form) [Gr. *epileptikos* + [L.] *formashape*] 1. resembling epilepsy or its manifestations. 2. occurring in severe or sudden paroxysms.
epileptogenic (ep/'i-lep-to-jen/'ik) [epilepsy + Gr. *gennan* to produce] producing epileptic attacks.
epileptogenous (ep/'i-lep-toj/'ē-nus) epileptogenic.
epileptoid (ep/'i-lep/'toid) epileptiform.

epileptologist (ep/'i-lep-to/'o-jist) a practitioner who makes a special study of epilepsy.
epileptology (ep/'i-lep-to/'o-je) the study of epilepsy.
epilesional (ep/'i-le/'zhun-al) occurring on or introduced on the surface of a lesion, as epilesional scarification.
epiloia (ep/'i-loi/'ah) tuberous sclerosis.
epimandibular (ep/'i-man-dib/'u-lar) [epi- + L. *mandibulum* jaw] situated upon the lower jaw.
epimastigote (ep/'i-mas/'tī-gōt) [epi- + Gr. *mastix* whip] the morphologic stage in the development of certain protozoa of the family Trypanosomatidae, characterized by a flagellum arising from a blepharoplast situated just in front of the nucleus and resembling the typical adult form of *Crithidia*; called also *crithridial stage* or *form*. Cf. *amastigote*, *promastigote*, and *trypomastigote*.
epimenorrhagia (ep/'i-men/'o-ra/'je-ah) too frequent and too excessive menstruation.
epimenorrhea (ep/'i-men/'o-re/'ah) abnormally frequent menstruation; menstrual irregularity in which the patient has a menstrual cycle less than the normal twenty-eight days.
epimer (ep/'i-mer) either of two diastereomers that differ in the configuration around one asymmetric carbon atom.
epimerase (ē-pim/'er-āse/'n) an isomerase that catalyzes the inversion of asymmetric groups in substrates (epimers) having more than one center of asymmetry. **aldose 1-e.**, an enzyme that catalyzes the conversion of α-D- to β-D-glucose; called also *mutarotase* and *aldose mutarotase*. **diaminopimelate e.**, an enzyme that catalyzes the conversion of 2-6-LL-diaminopimelate to meso-diaminopimelate. **3-hydroxybutyryl-CoA e.**, an enzyme that catalyzes the conversion of L-3- to D-3-hydroxybutyryl-CoA. **hydroxyproline e.**, an enzyme that catalyzes the conversion of L-hydroxyproline to D-allohydroxyproline. **ribulosephosphate 3-e.**, an enzyme of the liver that catalyzes the conversion of D-ribulose-5-phosphate to D-xylulose-5-phosphate. **UDP-arabinose e.**, an enzyme that catalyzes the conversion of UDP-L-arabinose to UDP-D-xylose. **UDP-glucose e.**, an enzyme that catalyzes the conversion of UDP-glucose to UDP-galactose by inverting the H and OH groups. **UDP-glucuronate e.**, an enzyme that catalyzes the isomerization of UDP-D-glucuronate to UDP-D-galacturonate.
epimere (ep/'i-mēr) [epi- + Gr. *meros* a part] the dorsal portion of a somite, from which is formed muscles innervated by the dorsal ramus of a spinal nerve.
epimerite (ep/'i-mer/'it) [epi- + Gr. *meros* part] an organelle of certain gregarine protozoa by which they attach to epithelial cells.
epimerization (ē-pim/'er-i-za/'shun) the changing of one epimeric form of a compound into another, as by enzymatic action.
epimestrol (ep/'i-mes/'trōl) chemical name: 3-methoxyestra-1,3,5(10)-triene-16α,17α-diol; an anterior pituitary activator, C₁₈H₂₆O₃.
epimicroscope (ep/'i-mī/'kro-skōp) (obs.) a microscope in which the specimen is illuminated by light passing through a condenser built around the objective.
epimorphic (ep/'i-mor/'fik) pertaining to or characterized by epimorphosis.
epimorphosis (ep/'i-mor-'fo'sis) [epi- + Gr. *morphē* form] the regeneration of a part of an organism by proliferation at the cut surface.
Epimys (ep/'i-mis) [epi- + Gr. *mys* mouse] *Rattus*.
epimysium (ep/'i-mis/'e-um) [epi- + Gr. *mys* muscle] the fibrous sheath about an entire muscle; called also *perimysium externum* or *external perimysium*.
Epinal (ep/'i-nal) trademark for a preparation of epinephryl borate.
epinephrectomy (ep/'i-nē-'fref/'to-me) adrenalectomy.
epinephrine (ep/'i-nef/'rin) chemical name: 4-[1-hydroxy-2-(methylamino)ethyl]-1,2-benzenediol. A hormone, C₉H₁₃NO₃, secreted by the adrenal medulla in response to splanchnic stimulation, and stored in the chromaffin granules; it is released also in response to hypoglycemia. It is a potent stimulator of the sympathetic nervous system (adrenergic receptors), and a powerful vasopressor, increasing blood pressure, stimulating the heart muscle, accelerating the heart rate, and increasing cardiac output. It also increases such metabolic activities as glycogenolysis and glucose release. The official preparation [USP], produced synthetically as the levorotatory form (l-form), occurs as white to nearly white, microcrystalline powder or granules, and is used chiefly as a topical vasoconstrictor, cardiac stimulant, and bronchodilator; administered intranasally, orally, and parenterally, or by inhalation. Called also *adrenaline* (Great Britain). **e. bitartrate** [USP], the bitartrate salt of epinephrine, C₉H₁₃NO₃·C₄H₄O₆, occurring as a white, or grayish white or light brownish gray, crystalline powder, having the same actions as the base; applied topically to the conjunctiva to reduce intraocular pressure in the management of chronic simple (open-angle) glaucoma and administered by inhalation as a bronchodilator.
epinephrinemia (ep/'i-nef/'ri-ne/'me-ah) the presence of epinephrine in the blood.

epinephritis (ep/'i-nē-fri'tis) [epi- + Gr. *nephros* kidney] inflammation of an adrenal gland.

epinephroma (ep/'i-nē-fro'mah) (*obs.*) renal cell carcinoma.

epinephros (ep/'i-nē-fros) [epi- + Gr. *nephros* kidney] an adrenal gland [glandula suprarenalis [NA]].

epinephryl borate (ep-i-nēf'ril) chemical name: (S)-2-hydroxy- α -[(methylamino)methyl]-1,3,2-benzodioxaborole-5-methanol. A compound containing epinephrine as a borate complex, $C_8H_{12}BNO_4$; used as an adrenergic in ophthalmology.

epineural (ep/'i-nu'ral) situated upon a neural arch.

epineurial (ep/'i-nu're-al) pertaining to the epineurium.

epineurium (ep/'i-nu're-um) [epi- + Gr. *neuron* nerve] the connective tissue covering of a peripheral nerve.

epinosic (ep/'i-no'sik) [epi- + Gr. *nosos* disease] pertaining to some secondary advantage because of illness.

epinosis (ep/'i-no'sis) a psychic or imaginary state of illness secondary to an original illness. Cf. *paranosis*.

epionychium (ep/'e-o-nik'e-um) eponychium.

epiorchium (ep/'e-or'ke-um) lamina visceralis tunicae vaginalis testis.

epiotic (ep/'e-ot'ik) [epi- + Gr. *ous* ear] situated on or above the ear.

epipastic (ep/'i-pas'tik) [epi- + Gr. *passein* to sprinkle] 1. suitable for use as a dusting powder. 2. a powder to be sprinkled upon the surface of the body.

epipharyngeal (ep/'i-fah-rin'je-al) nasopharyngeal.

epipharyngitis (ep/'i-far'in-ji'tis) nasopharyngitis.

epipharynx (ep/'i-far'inks) nasopharynx.

epiphenomenon (ep/'i-fē-nom'ē-non) [epi- + Gr. *phainomenon* phenomenon] an accessory, exceptional, or accidental occurrence in the course of an attack of any disease.

epiphora (ē-pif'o-ra) [Gr. *epiphora* sudden burst] an abnormal overflow of tears down the cheek, mainly due to stricture of the lacrimal passages; called also *illacrimation*.

epiphyseal (ep/'i-fiz'e-al) pertaining to or of the nature of an epiphysis.

epiphyses (ē-pif'i-sēz) [Gr.] plural of *epiphysis*.

epiphysial (ep/'i-fiz'e-al) epiphyseal.

epiphysiodesis (ep/'i-fiz'e-od'ē-sis) [epiphysis + Gr. *desis* a binding] the operation of fixing a separated epiphysis to its diaphysis to produce healing and fusion of the epiphyseal plate.

epiphysoid (ep/'i-fiz'e-oid) resembling epiphyses; a term applied to carpal and tarsal bones which develop like epiphyses from centers of ossification.

epiphysiolysis (ep/'i-fiz'e-ol'i-sis) [epiphysis + Gr. *lysis* loosening] separation of an epiphysis from its bone; especially slipping of the upper femoral epiphysis.

epiphysiometer (ep/'i-fis'i-om'ē-ter) an instrument for measuring the epiphyses, used in the diagnosis of rickets.

epiphysiopathy (ep/'i-fiz'e-op'ah-the) [epiphysis + Gr. *pathos* disease] 1. any disease of the pineal body. 2. any disease of an epiphysis of a bone.

epiphysis (ē-pif'i-sis), pl. *epiphyses* [Gr. "an ongrowth; excrescence"] [NA] 1. the end of a long bone, usually wider than the shaft, and either entirely cartilaginous or separated from the shaft by a cartilaginous disk. 2. part of a bone formed from a secondary center of ossification, commonly found at the ends of long bones, on the margins of flat bones, and at tubercles and processes; during the period of growth, epiphyses are separated from the main portion of the bone by cartilage. Called also *apophysis ossium*. **capital e.**, the epiphysis at the head of a long bone. **e. cer'ebri**, pineal body. **slipped e.**, dislocation of the epiphysis of a bone, as of the epiphysis of the head of the femur. **stippled epiphyses**, 1. dysplasia epiphysealis punctata. 2. epiphyseal dysplasia.

epiphysitis (ē-pif'i-si'tis) inflammation of an epiphysis or of the cartilage that separates it from the main bone. **vertebral e.**, osteochondrosis (q.v.) of the vertebra.

epiphyte (ep/'i-fit) [epi- + Gr. *phyton* plant] 1. a plant organism growing upon another plant. 2. a plant organism parasitic upon the exterior of the human or an animal body.

epiphytic (ep/'i-fit'ik) 1. pertaining to or caused by epiphytes. 2. a widely diffused outbreak of an infectious disease in plants.

epipial (ep/'i-pi'al) situated on the pia mater.

epipleural (ep/'i-plōo'ral) situated on a pleural element, or pleurapophysis.

epiplo- [Gr. *epiploon*] a combining form denoting relationship to the epiploon (omentum).

epiplocele (ē-pip'lo-sēl) [epiplo- + Gr. *kēlē* hernia] a hernia that contains omentum.

epiploectomy (ep/'i-plō-ek'to-me) [epiplo- + Gr. *ektomē* excision] omentectomy; excision of the omentum.

epiploenterocele (ē-pip'lo-en'ter-o-sēl) [epiplo- + Gr. *enteron* intestine + *kēlē* hernia] hernia containing intestine and omentum.

epiploic (ep/'i-plō'ik) omental.

epiploitis (ē-pip'lo-i'tis) omentitis.

epiplomerocele (ē-pip'lo-me'ro-sēl) [epiplo- + Gr. *mēros* thigh + *kēlē* hernia] femoral hernia containing omentum.

epiplomphalocoele (ep/'i-plom-fal'o-sēl') [epiplo- + Gr. *omphalos* navel + *kēlē* hernia] umbilical hernia containing omentum.

epiploon (ē-pip'lo-on) [Gr.] the omentum. **great e.**, omentum majus. **lesser e.**, omentum minus.

epiploexy (ē-pip'lo-pek'se) [epiplo- + Gr. *pēxis* fixation] omentopexy.

epiploplasty (ē-pip'lo-plas'te) [epiplo- + Gr. *plassein* to form] utilization of the epiploon (omentum) to cover raw surfaces in abdominal surgery; omentoplasty.

epiplorrhaphy (e'pip'lor'ah-fe) [epiplo- + Gr. *rhaphe* suture] omentorrhaphy; suture of the omentum.

epiplosarcomphalocoele (ē-pip'lo-sar'kom-fal'o-sēl) [epiplo- + Gr. *sarx* flesh + *omphalos* navel + *kēlē* hernia] an umbilical hernia complicated with a local fleshy excrescence.

epiploscheocoele (e'pip'los'ke-o-sēl') [epiplo- + Gr. *oscheon* scrotum + *kēlē* hernia] scrotal hernia containing omentum.

epipygus (ep/'i-pi'gus) pygmelus.

epipyramis (ep/'i-pir'ah-mis) a small supernumerary carpal bone sometimes found between the triquetrum, lunate, hamate, and capitate bones; called also *epitriquetrum*.

epirizole (ē-pēr'i-zōl) chemical name: 4-methoxy-2-(5-methoxy-3-methyl-1H-pyrazol-1-yl)-6-methylpyrimidine; an analgesic and anti-inflammatory, $C_{11}H_{14}N_4O_2$.

epirotulian (ep/'i-ro-tu'le-an) [epi- + L. *rotula* patella] upon the patella.

episarkin (ep/'i-sar'kin) one of the alloxur bases, $C_4H_6N_3O$, occurring in the normal urine and in excess in the urine of leukemia.

episclera (ep/'i-skle'rah) the loose connective tissue forming the external surface of the sclera.

episcleral (ep/'i-skle'ral) 1. overlying the sclera. 2. of or pertaining to the episclera.

episcleritis (ep/'i-skle-ri'tis) inflammation of tissues overlying the sclera; also inflammation of the outermost layers of the sclera.

e. partialis fulgax, sudden hyperemia of the sclera and overlying conjunctiva, lasting a short time.

episclerotitis (ep/'i-skle'ro-ti'tis) episcleritis.

episio- (ē-piz'e-o) [Gr. *epision* the region of the pubes] a combining form denoting relationship to the vulva.

episioclisia (ē-piz'e-o-kli'se-ah) [episio- + Gr. *kleisis* closure] (*obs.*) surgical closure of the vulva.

episioelytrorrhaphy (ē-piz'e-o-el'ē-tror'ah-fe) [episio- + *elytrorrhaphy*] (*obs.*) the operation of narrowing the vulva and vagina to support a prolapsed uterus.

episioperineoplasty (ē-piz'e-o-per'i-ne'o-plas'te) [episio- + *perineum* + Gr. *plassein* to form] plastic repair of the vulva and perineum.

episioperineorrhaphy (ē-piz'e-o-per'i-ne-or'ah-fe) the suturing of the vulva and perineum for the support of a prolapsed uterus.

episioplasty (ē-piz'e-o-plas'te) [episio- + Gr. *plassein* to shape] plastic repair of the vulva.

episiorrhaphy (ē-piz'e-or'ah-fe) [episio- + Gr. *rhaphe* suture] 1. the suturing of the labia majora. 2. the sewing up of a lacerated perineum.

episiostenosis (ē-piz'e-o-stē-no'sis) [episio- + Gr. *stenōsis* contraction] the narrowing of the vulvar orifice.

episiotomy (ē-piz'e-o-t'o-me) [episio- + Gr. *tomē* a cutting] surgical incision into the perineum and vagina for obstetrical purposes.

episode (ep/'i-sōd) a noteworthy happening or series of happenings occurring in the course of continuous events, as an episode of illness; a separate but not unrelated incident. **acute schizophrenic e.**, the acute onset of schizophrenic symptoms, often associated with confusion, perplexity, ideas of reference, emotional turmoil, excitement, fear, depression, or dreamlike dissociation. **psycholeptic e.**, a sudden and vivid psychic experience to which a patient attributes the beginning of his illness, and which so possesses his mind that he is unable to shake it off.

episome (ep/'i-sōm) in bacterial genetics, any accessory extrachromosomal replicating genetic element that can exist either autonomously or integrated with the chromosome, e.g., the F factor, colicinogens, conjugons, and (drug) resistance transfer factor.

epispadia (ep/'i-spa'de-ah) epispadias.

epispadiac (ep/'i-spa'de-ak) pertaining to or exhibiting epispadias; by extension, sometimes used to designate an individual exhibiting epispadias.

epispadial (ep/'i-spa'de-al) pertaining to epispadias.

epispadias (ep/'i-spa'de-as) [epi- + Gr. *spadōn* a rent] congenital absence of the upper wall of the urethra, occurring in various degrees of severity in both sexes, but affecting males more commonly, the urethral opening being anywhere on the dorsum of

the penis, and manifested as a groove or cleft without a covering. **balanic e.**, **balanitic e.**, incomplete epispadias in which the

Epispadias (after Netter).

urethral opening is above and behind the glans, the dorsum of the penis usually being indented to its tip, but the opening may end at the corona or proximal to it. Called also *glandular e.* **clitoric e.**, incomplete epispadias in which the urethra opens cephalad to the clitoris or into it. **complete e.**, epispadias in which the urethra is entirely open to the bladder neck in males, and there may be complete failure of fusion of the anterior urethral wall in the female; it is frequently associated with exstrophy of the bladder. **glandular e.**, balanic e. **incomplete e.**, epispadias in which the bladder does not entirely open to the outside; designated according to the location of urethral opening in the male as *balanic* and *penile*, and in the female as *clitoric* and *subsymphyseal*. **penile e.**, incomplete epispadias in which the urethral orifice is somewhere between the postglandular sulcus and the suspensory ligament, but is usually at the base of the penis. **penopubic e.**, complete epispadias in which the urethral opening is at the junction of the penis and pubis; unless associated with exstrophy of the bladder, the urethral passage emerges between the corpora cavernosa under the pubic symphysis. **subsymphyseal e.**, incomplete epispadias in which the urethral opening is beneath the symphysis.

epispastic (ep'i-spas'tik) [epi- + Gr. *span* to draw] (obs.) vesicant.

epispinal (ep'i-spi'nal) situated upon the spinal cord or the spinal column.

episplenitis (ep'i-splē-ni'tis) [epi- + Gr. *splēn* spleen + *-itis*] inflammation of the capsule of the spleen.

epistasis (ē-pis'tah-sis) [epi- + Gr. *stasis* a standing] 1. suppression of a secretion or excretion, as of blood, menses, or lochia. 2. a scum or pellicle on the surface of urine. 3. the interaction between genes at different loci, as a result of which one hereditary character is unexpressed, or is masked by the superimposition of another upon it. Cf. *dominance*.

epistasy (e-pis'tah-se) [epi- + Gr. *stasis* a standing] epistasis.

epistatic (ep'i-stat'ik) 1. pertaining to or characterized by epistasis. 2. superimposed.

epistaxis (ep'i-stak'sis) [Gr.] nosebleed; hemorrhage from the nose. **Gull's renal e.**, essential hematuria.

epistemology (ep'i-stē-mol'o-je) [Gr. *epistēmē* knowledge + *-logy*] the science of the methods and validity of knowledge.

episternal (ep'i-ster'nal) 1. situated on or over the sternum. 2. pertaining to the episternum.

episternum (ep'i-ster'num) [epi- + Gr. *sternon* sternum] a bone present in reptiles and monotremes that may be represented as part of the manubrium, or first piece of the sternum.

episthotonos (e'pis-thot'o-nos) emprosthotonos.

epistropheus (ep'i-stro'fe-us) [Gr. "the pivot"] the second cervical vertebra (axis [NA]).

epitarsus (ep'i-tar'sus) [epi- + *tarsus*] a congenital anomaly of the eye consisting of a fold of conjunctiva passing from the fornix to near the lid border; called also congenital *pterygium*.

epitaxy (ep'i-tak'se) the oriented growth and binding of a crystalline substance on a substrate of another crystalline compound, as in the embryonic formation of bone.

epitela (ep'i-te'lah) [epi- + L. *tela* web] the delicate tissue of Viessens's valve (velum medullare superius).

epitendineum (ep'i-ten-din'e-um) the fibrous sheath covering a tendon.

epitenon (ep'i-te'non) [epi- + Gr. *tenōn* tendon] the connective tissue covering a tendon within its sheath.

epithalamic (ep'i-thah-lam'ik) 1. overlying the thalamus. 2. pertaining to the epithalamus.

epithalamus (ep'i-thal'ah-mus) [NA] the part of the diencephalon just superior and posterior to the thalamus, comprising the pineal body, the habenula, and habenular trigone; the stria medullaris thalami is sometimes considered to belong to it.

epithalaxia (ep'i-thah-lak'se-ah) [epithelium + Gr. *allaxis* ex-

change] desquamation of the epithelium, especially of the intestinal mucosa.

epithelia (ep'i-the'le-ah) plural of *epithelium*.

epithelial (ep'i-the'le-al) pertaining to or composed of epithelium.

epithelialization (ep'i-the'le-al-i-za'shun) healing by the growth of epithelium over a denuded surface.

epithelialize (ep'i-the'le-al-iz") to cover with epithelium.

epitheliitis (ep'i-the'le-i'tis) inflammation of epithelium.

epithelio- (ep'i-the'le-o) a combining form denoting relationship to the epithelium.

epithelioblastoma (ep'i-the'le-o-blas-to'mah) [epithelio- + Gr. *blastos* cell + *-oma*] (obs.) an undifferentiated carcinoma.

epithelioceptor (ep'i-the'le-o-sep'tor) the region in a gland cell which receives a nerve stimulus from the end-organ of the nerve fibril.

epitheliochorial (ep'i-the'le-o-ko're-al) [epithelium + *chorion*] denoting a type of placenta in which the chorion is apposed to the uterine epithelium but does not erode it.

epitheliofibril (ep'i-the'le-o-fi'bril) one of the fibrils which run through the cytoplasm of epithelial cells.

epitheliogenetic (ep'i-the'le-o-jē-net'ik) [epithelio- + Gr. *gennan* to produce] due to epithelial proliferation.

epitheliogenic (ep'i-the'le-o-jen'ik) tending to produce epithelium.

epithelioglandular (ep'i-the'le-o-glan'du-lar) pertaining to the epithelial cells of a gland.

epithelioid (ep'i-the'le-oid) resembling epithelium.

epitheliolysin (ep'i-the-le-ol'i-sin) a cytolyisin formed in the serum of an animal when epithelial cells from an animal of a different species are injected. The epitheliolysin has the power of destroying epithelial cells of an animal of the same species as that from which the epithelial cells were originally taken.

epitheliolysis (ep'i-the'le-ol'i-sis) [epithelio- + Gr. *lysis* dissolution] destruction of epithelial cells.

epitheliolytic (ep'i-the'le-o-lit'ik) pertaining to, characterized by, or causing epitheliolysis.

epithelioma (ep'i-the'le-o'mah) any tumor derived from epithelium; formerly a synonym of carcinoma. **e. adamantinum**, ameloblastoma. **e. adenoides cysticum**, trichoe-pithelioma. **basal cell e.**, basal cell carcinoma. **benign calcifying e.**, pilomatricoma. **calcified e.**, calcifying e., calcifying e. of Malherbe, pilomatricoma. **chorionic e.**, choriocarcinoma. **columnar e.**, **cylindrical e.**, one composed of columnar cells arranged in glandlike tubules; when benign, it is *adenoma*, and when malignant, *adenocarcinoma*. **e. contagiosum**, fowlpox. **diffuse e.**, infiltrating carcinoma. **glandular e.**, a variety consisting of gland cells and affecting mucous surfaces; when benign, it is *adenoma*, and when malignant, *adenocarcinoma*. **Malherbe's e.**, **Malherbe's calcifying e.**, pilomatricoma. **malignant e.**, carcinoma. **multiple benign cystic e.**, trichoe-pithelioma. **multiple self-healing squamous e.**, multiple keratoacanthoma. **suprarenal e.** (obs.), renal cell carcinoma.

epitheliomatosis (ep'i-the'le-o-mah-to'sis) the state of being subject to or afflicted with epitheliomas.

epitheliomatous (ep'i-the'le-o-mah-tus) pertaining to or of the nature of epithelioma.

epitheliomuscular (ep'i-the'le-o-mus'ku-lar) composed of epithelium and muscle.

epitheliosis (ep'i-the'le-o'sis) 1. proliferation of the epithelium of the conjunctiva. 2. Borrel's name for a disease in which the causative agent is a virus which exhibits a special affinity for the epithelial structures of the body, including variola, vaccinia, sheeppox, molluscum contagiosum, and contagious epithelioma of birds. **e. desquamati'va conjunctivae**, a condition resembling trachoma occurring in the Samoan Islands.

epitheliotoxin (ep'i-the'le-o-tok'sin) a cytotoxin which destroys epithelial cells.

epitheliotropic (ep'i-the'le-o-trop'ik) having a special affinity for epithelial cells.

epithelite (ep'i-the'lit) a lesion produced as a reaction to irradiation, in which the epithelium is replaced by a fibrous exudate.

epithelium (ep'i-the'le-um), pl. *epithe'lia* [epi- + Gr. *thēlē* nipple] [NA] the covering of internal and external surfaces of the body, including the lining of vessels and other small cavities. It consists of cells joined by small amounts of cementing substances. Epithelium is classified into types on the basis of the number of layers deep and the shape of the superficial cells. **e. anterior cor'neae** [NA], **anterior e. of cornea**, the outer epithelial layer of the cornea, consisting of stratified squamous epithelium continuous with that of the conjunctiva; called also *e. corneae* or *corneal e.* **Barrett's e.**, the columnar epithelium of the esophagus seen in Barrett's syndrome. **capsular e.**, the outer, or parietal, layer of the renal glomerular capsule, composed of simple squamous epithelium, and separated from the inner, or visceral, layer by the capsular (Bowman's) space. Cf. *glomerular e.*

Epithelium of different types (after Colard Keene, in Bloom and Fawcett).

ciliated e., any type bearing vibratile cilia on the free surface. **columnar e.**, a type composed of tall prismatic cells. **e. cor'neae, corneal e.**, e. anterior corneae. **cubical e., cuboidal e.**, a type composed of cells which have a cubical shape. **e. duc'tus semicircula'ris** [NA], the inner, simple, low epithelium lining the semicircular ducts. **enamel e.**, in the developing tooth, the inner or internal layer of cells (ameloblasts) of the enamel organ that deposit the organic matrix of enamel, plus the outer or external layer of cuboidal cells. The reduced enamel epithelium is the remains of both layers after enamel formation is complete. **false e.**, the lining of joint cavities. **germinal e.**, thickened peritoneal epithelium covering the gonad from earliest development; formerly thought to give rise to the germ cells, hence the name. **gingival e.**, the stratified squamous epithelial covering of the gingival tissues, varying in architecture according to location, functional demands, and adaptation. **glandular e.**, epithelium made up of glandular or secreting cells. **glomerular e.**, the inner, or visceral, layer of the renal glomerular capsule, overlying the capillaries, composed of podocytes, and separated from the outer, or parietal, layer by the capsular (Bowman's) space. Cf. **capsular e.** **laminated e.**, stratified e. **e. of lens, e. len'tis** [NA], the cuboidal epithelium on the front of the lens; called also **subcapsular e.** **mesenchymal e.**, the epithelium which lines the subdural and subarachnoid spaces, the perilymphatic spaces in the inner ear, and the chamber of the eye. **olfactory e.**, pseudostratified epithelium lining the olfactory region of the nasal cavity, and containing the receptors for the sense of smell. **pavement e.**, epithelium composed of a single layer of flat cells. **pigmentary e., pigmented e.**, epithelium containing granules of pigment. **protective e.**, epithelium that forms a protective covering, as the epidermis. **pseudostratified e.**, a type of epithelium which occurs in the large excretory ducts of the parotid and several other glands and in the male urethra. The nuclei are spaced at different levels and the cells are quite variable in shape, giving the appearance of a stratified epithelium. **pyramidal e.**, columnar epithelium whose cells have been modified by pressure into truncated pyramids. **respiratory e.**, the pseudostratified epithelium that lines all but the finer divisions of the respiratory tract. **rod e.**, epithelium the cells of which are rod-shaped. **seminiferous e.**, stratified epithelium lining the seminiferous tubules of the testis. **sense e., sensory e.**, epithelium having relation with a special sense organ; neuroepithelium. **simple e.**, a type composed of a single layer of cells. **squamous e.**, epithelium composed of flattened platelike cells. **stratified e.**, epithelium in which the cells are arranged in several layers; called also **laminated e.** **subcapsular e.**, 1. the epithelioid lining of the capsule of ganglia. 2. epithelium lentis.

sulcular e., the stratified squamous epithelium forming the covering of the soft tissue wall of the gingival sulcus or crevice. **tessellated e.**, simple squamous epithelium. **transitional e.**, epithelium that was originally thought to represent a transitional form between stratified squamous and columnar epithelium, found characteristically in the mucous membrane of the excretory passages of the urinary system; in the contracted condition it consists of many cell layers, whereas in the stretched condition usually only two layers can be distinguished.

epithelization (ep'i-the'li-za'shun) epithelialization.

epithelize (ep'i-the'liz) epithelialize.

epithesis (ē-pith'ē-sis) [Gr. "a laying on"] 1. the surgical correction of deformity or of crooked limbs. 2. a splint or other appliance to be worn.

epithiazide (ep'i-thi'ah-zīd) chemical name: 6-chloro-3,4-dihydro-3-[(2,2,2-trifluoroethyl)thio]-methyl-2H,1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide; an antihypertensive and diuretic, $C_{10}H_{11}ClF_3N_3O_4S_3$.

epitonic (ep'i-ton'ik) [Gr. *epitono*s strained] abnormally tense or tonic; exhibiting an abnormal degree of tension or of tone.

epitope (ep'i-tōp) an antigenic determinant (see under *determinant*) of known structure. Cf. *paratope*.

epitoxoid (ep'i-tok'soid) (*obs.*) any toxoid that has less affinity for an antitoxin than does the corresponding toxin.

epitoxonoid (ep'i-tok'so-noid) (*obs.*) a toxonoid which has the least affinity for its corresponding antitoxin.

Epitrate (ep'i-trāt) trademark for a preparation of epinephrine bitartrate.

epitrichium (ep'i-trik'e-um) [*epi-* + Gr. *trichion* hair] periderm, def. 1.

epitriquetrum (ep'i-tri-kwe'trum) epipyramis.

epitrochlea (ep'i-trok'le-ah) [*epi-* + Gr. *trochilia*, L. *trochlea* pulley] the inner condyle of the humerus.

epituberculosis (ep'i-tu-ber'ku-lo'sis) a form of primary tuberculosis in children, producing mild symptoms despite large, usually lobar, consolidations as seen roentgenographically; probably due to bronchial compression by enlarged hilar lymph nodes, with atelectasis.

epiturbinate (ep'i-ter'bī-nāt) the soft tissue covering a nasal concha (turbinate bone).

epitympanic (ep'i-tim-pan'ik) 1. situated upon or over the tympanum. 2. pertaining to the epitympanum (recessus epitympanicus [NA]).

epitympanum (ep'i-tim'pah-num) recessus epitympanicus.

epitype (ep'i-tīp) a group of related epitopes.

epityphlitis (ep'i-tif-li'tis) [*epi-* + Gr. *typhlon* cecum + *-itis*] 1. appendicitis. 2. paratyphlitis.

epityphlon (ep'i-ti'flon) [*epi-* + Gr. *typhlon* cecum] the vermiform appendix.

epivaginitis (ep'i-vaj'i-ni'tis) a venereal disease of cattle, probably of viral origin, in Kenya, southern Africa, and the United States, marked in cows by vaginal inflammation and discharge and by sterility. In bulls it is marked by epididymitis.

epizoa (ep'i-zo'ah) [Gr.] plural of *epizoon*.

epizoic (ep'i-zo'ik) pertaining to or caused by epizoa.

epizoicide (ep'i-zo'ī-sīd) [*epizoon* + L. *caedere* to kill] an agent that destroys epizoa.

epizoon (ep'i-zo'on), pl. *epizo'a* [*epi-* + Gr. *zōon* animal] an animal parasite living upon the exterior of the body of the host.

epizootic (ep'i-zo-ot'ik) 1. attacking many animals in any region at the same time; widely diffused and rapidly spreading. 2. a disease of high morbidity which is only occasionally present in an animal community.

epizootiology (ep'i-zo-ot'e-ol'o-je) the study of epizootics; the field of science dealing with the relationships of the various factors which determine the frequencies and distributions of infectious diseases among animals.

épluchage (a'plo-shahzh') [Fr. "cleaning," "picking"] removal of the contused and contaminated tissues of a wound. Cf. *débridement*.

epontic (ē-pon'tik) growing on any surface, plant, animal, or mineral.

eponychia (ep'o-nik'e-ah) [*eponychium* + *-ia*] (*obs.*) a purulent blister, involving the epidermis at the groove of the nail. Cf. *felon* and *paronychia*.

eponychium (ep'o-nik'e-um) [*epi-* + Gr. *onyx* nail] 1. [NA] the narrow band of epidermis that extends from the nail wall onto the nail surface; commonly called *cuticle*. 2. the horny fetal epidermis at the site of the future nail.

eponym (ep'o-nim) [Gr. *epōnymos* named after] a name or phrase formed from or including the name of a person, as Hodgkin's disease.

eponymic, eponymous (ep'o-nim'ik; ē-pon'fī-mus) named for some person; pertaining to an eponym.

epoophorectomy (ep'o-of'o-rek'to-me) [*epi-* + Gr. *ōphoron* ovary + *ektomē* excision] surgical removal of the epoophoron.

epoophoron (ep'ō-ō'ron) [*epi-* + Gr. *ōphoron* ovary] [NA] a vestigial structure associated with the ovary, consisting of a more cranial group of mesonephric tubules and a corresponding portion of the mesonephric duct; called also *corpus pampiniforme*, *pampiniform body*, *parovarium*, and *Rosenmüller's body* or *organ*.

epornithology (ep-or'ni-thol'o-je) the scientific study of diseases of high morbidity which are only occasionally present in a bird community.

epornitic (ep'or-nit'ik) [*epi-* + Gr. *ornis* bird] 1. attacking many birds in any region at the same time. 2. a disease of high morbidity which is only occasionally present in a bird population.

epoxy (ē-pok'se) 1. containing one atom of oxygen bound to two different carbon atoms. 2. a resin composed of epoxy polymers and characterized by adhesiveness, flexibility, and resistance to chemical actions.

epoxytropine tropate (e-pok'se-tro'pēn tro'pāt) methscopolamine.

Eppy (ep'e) trademark for a preparation of epinephryl borate.

EPR electrophrenic respiration.

Eprolin (ep'ro-lin) trademark for a preparation of vitamin E, consisting of a concentrate of distilled natural tocopherols.

EPS exophthalmos-producing substance.

EPSP excitatory postsynaptic potential.

Epstein's disease, pearls (ep'stinz) [Alois *Epstein*, a pediatrician in Prague, 1849-1918] see *pseudodiphtheria*, and see under *pearl*.

Epstein's nephrosis, syndrome (ep'stinz) [Albert Arthur *Epstein*, New York physician, 1880-1965] see under *nephrosis*, and see *nephrotic syndrome*, under *syndrome*.

Epstein-Barr virus (ep'stin-bar') [Michael Anthony *Epstein*, English physician, born 1921; Y. *Barr*] see under *virus*.

eptatretin (ep'tah-tre'tin) a potent cardiostimulant obtained from the branchial heart of the Pacific hagfish *Eptatretus stouti* and reported to be a highly unstable aromatic amine. Its chemical structure has not been fully defined, but it is not a catecholamine or other commonly occurring biochemical.

epulides (ep-u'li-dēz) [Gr.] plural of *epulis*.

epulis (ep-u'lis), pl. *epulides* [Gr. *epoulis* a gumboil] a generic term applied to any tumor of the gingiva. **congenital e. of newborn**, a pedunculated lesion of the gingiva, present at birth, arising on the crest of the alveolar ridge or process, and usually occurring in the incisor region. **e. fibromato'sa**, a fibroma arising from the alveolar periosteum and the periodontal ligament. **e. fissura'ta**, granuloma fissuratum. **giant cell e.**, **e. gigantocellula'ris**, peripheral giant cell reparative granuloma of gingiva. **e. granulomato'sa**, a small growth on the gingiva resulting from mechanical irritation or infection.

epuloerectile (ep'u-lo'e-rek'til) both epuloid and erectile.

epulofibroma (ep'u-lo'fi-bro'mah) a fibroma of the gingiva.

epuloid (ep'u-loid) resembling an epulis.

epulosis (ep'u-lo'sis) [Gr. *epoulōsis*] cicatrization.

epulotic (ep'u-lot'ik) [Gr. *epoulōtikos*] pertaining to, characterized by, or promoting cicatrization.

Equanil (ek'wah-nil) trademark for preparations of meprobramate.

equate (ē'kwāt) to make equal or equivalent. In color vision, the physiologic faculty of combining two colors to match a third, as to combine red and green to make a homogeneous yellow.

equation (e-kwa'zhun) [L. *aequatio*, from *aequare* to make equal] an expression made up of two members connected by the sign of equality, =. **Ambard's e.**, see under *formula*. **Arrhenius' e.**, an equation describing the temperature dependence of a reaction rate constant, $k = Ae^{-E_a/RT}$, where k is the rate constant, E_a the activation energy, R the gas constant, T the absolute temperature, A the preexponential factor. **Ayala's e.**, see under *quotient*. **chemical e.**, an equation that expresses a chemical reaction, the symbols on the left of the equation denoting the substances before, and those on the right those after, the reaction. **Harden and Young e.**, an equation showing the chemical reaction in the fermentation of glucose to carbon dioxide, alcohol, and hexose diphosphate. **Henderson-Hasselbalch e.**, a formula for calculating the pH of a buffer solution such as blood

plasma, $pH = pK' + \log \frac{(BA)}{(HA)}$. (HA) is the concentration of a weak

acid; (BA) the concentration of a weak salt of this acid; pK' the buffer system. **Nernst e.**, an equation for determining the value of a transmembrane potential at ionic equilibrium. **personal e.**, the more or less constant difference in the results of observation depending upon the personal qualities of observers. **Poiseuille e.**, (**Hagenbach extension**) an equation for the volume flow (V) of a fluid through a capillary tube in terms of the

pressure drop P , the radius R , and the length L of the system, and the viscosity η , of the fluid:

$$V = \frac{P\pi R^4}{8\eta L}$$

Ussing e., a method for determining active transport across a biologic membrane, by considering the unidirectional fluxes.

equator (e-kwa'tor) [L. *aequator* equalizer] an imaginary line encircling a globe, equidistant from the poles. Used in anatomical nomenclature to designate such a line on a spherical organ, dividing the surface into two approximately equal parts. Called also *aequator*. **e. bul'bi oc'uli** [NA], an imaginary line encircling the eyeball equidistant from the anterior and the posterior poles, dividing the eye into anterior and posterior halves. Called also *e. of eyeball*. **e. of cell**, the boundary of the plane of separation of a dividing cell. **e. of crystalline lens**, *e. lentis*. **e. of eyeball**, *e. bulbi oculi*. **e. of lens**, *e. len'tis* [NA], the rounded peripheral margin of the lens at which the anterior and posterior surfaces meet.

equatorial (ē'kwah-to're-al) pertaining to an equator; occurring at the same distance from each extremity of an axis.

equiaxial (ē'kwe-ak'se-al) having axes of the same length.

equicaloric (ē'kwi-kah-lōr'ik) isocaloric.

Equidae (ek'wī-de) [L. *equus* horse] a family of perissodactyl mammals containing a single living genus, *Equus*, which includes horses, asses, zebras, and onagers.

equilateral (ē'kwī-lat'er-al) having sides that are equal or identical; called also *isolateral*.

equilibration (ē'kwī-lī-bra'shun) the achievement of a balance between opposing elements or forces. **mandibular e.**, 1. the act or acts performed to place the mandible in equilibrium. 2. a condition in which all of the forces acting upon the mandible are neutralized. 3. a term applied to adjustive grinding of an interfering tooth structure during the functional stroke. **occlusal e.**, a modification of the occlusal forms of teeth to equalize occlusal stress, to produce simultaneous occlusal contacts, or to achieve harmonious occlusion.

equilibrator (ē'kwī-lī-bra'tor) an apparatus used to produce or maintain a state of balance between opposing forces.

equilibrium (ē'kwī-lib're-um) [L. *aequus* equal + *libra* balance] a state of balance or equipoise; a condition in which opposing forces exactly counteract each other. **acid-base e.**, see under *balance*. **body e.**, the condition in which the materials taken into the body are balanced by corresponding excretions. **carbon e.**, the condition in which the total carbon of the excreta is balanced by the carbon of the food. **colloid e.**, a stable condition of the colloids of the body fluids; disturbance of such equilibrium produces colloidoclastic shock or anaphylactoid crisis. **Donnan's e.**, the conditions which exist at equilibrium when two solutions are separated by a membrane which is permeable to some of the ions of the solutions, but not to all of them. There is a complex distribution of the ions between the two solutions, an electrical potential develops between the two sides of the membrane and the two solutions vary in osmotic pressure. Called also *Gibbs-Donnan e.* **dynamic e.**, the condition of balance between varying, shifting, and opposing forces which is characteristic of living processes. **fluid e.**, see under *balance*. **genetic e.**, the condition that exists when the gene pool in a population is constant in successive generations (unless altered by selection or mutation); i.e., the frequency of each allele in the population remains unchanged in successive generations. **Gibbs-Donnan e.**, *Donnan e.* **Hardy-Weinberg e.**, the stabilizing point at which all the factors of the sex ratio are present in a theoretically ideal genotype frequency. **nitrogen e.**, **nitrogenous e.**, the condition in which the body is metabolizing and excreting as much nitrogen as it is receiving in the food; called also *protein e.* **nutritive e.**, physiologic *e.* **physiologic e.**, the condition in which the amount of material taken into the body exactly equals the amount discharged. **protein e.**, nitrogen *e.* **radioactive e.**, the fixed ratio between a radioactive element and one of its disintegration products that results after the lapse of a suitable time, owing to their half value periods. That of uranium and radium is as 2,380,000 to 1. **water e.**, fluid balance.

equilin (ek'wil-in) chemical name: 3-hydroxyestra-1,3,5(10),7-tetraen-17-one. A conjugated estrogen, $C_{18}H_{26}O_2$, isolated from urine of pregnant horses.

equimolar (ē'kwī-mo'lar) containing the same number of moles, or having the same molarity.

equimolecular (ē'kwī-mo-lek'u-lar) containing the same number of molecules; said of solutions.

equination (ē'kwī-na'shun) [L. *equinus* equine] inoculation with the virus of horsepox.

equine (ē'kwīn) [L. *equus* a horse] pertaining to, characteristic of, or derived from the horse.

equinophobia (ē'kwī'no-fō-be-ah) [L. *equinus* relating to horses + Gr. *phobos* fear + *-ia*] (*obs.*) morbid fear of horses.

equinovarus (e-kwi/'no-va/'rus) talipes equinovarus.

equinus (e-kwi/'nus) talipes equinus.

equipotential (e/'kwi-po-ten/'shal) [L. *aequus* equal + *potentia* ability, power] possessed of similar and equal power; capable of developing in the same way and to the same extent.

equipotentiality (e/'kwe-po-ten/'she-al/'i-te) the quality or state of having similar and equal power; the capacity for developing in the same way and to the same extent.

equisetosis (ek/'wi-sē-to/'sis) poisoning of horses from eating equisetum.

equisetum (ek/'wi-se/'tum) a common weed, *E. arvense*, horse-tail or jointed rush, that causes a form of poisoning in horses that eat it with hay. It is used as a diuretic drug in eclectic practice.

equivalence (e-kwi/'ah-lens) 1. the condition of being equivalent. In immunology, the ratio of antigen to antibody concentration at which maximal antigen-antibody combination takes place, yielding a precipitate or aggregate. 2. see *equivalent weight*, under *weight*.

equivalent (e-kwi/'ah-lent) [L. *aequivalens*, from *aequus* equal + *valere* to be worth] 1. having the same value; neutralizing or counterbalancing each other. 2. chemical equivalent. 3. in medicine, a symptom that replaces one that is usual in a given disease. **aluminum e.**, the thickness of pure aluminum affording the same radiation attenuation, under specified conditions, as the material or materials being considered. **bursa e.**, see under *bursa*. **bursal e. tissue**, see under *tissue*.

chemical e., that weight in grams of a substance which will produce or react with one mole of hydrogen ion or one mole of electrons; called also *gram e.* **combustion e.**, the heat value of a gram of fat or carbohydrate burned outside the body. It measures the amount of potential energy of the substance available, in the form of food, for the production of heat or the supply of energy. **concrete e.**, the thickness of concrete having a density of 2.35 gm./cm.³ which would afford the same radiation attenuation, under specified conditions, as the material or materials being considered. **dose e.**, in radiation biology, the product of absorbed dose in rads and the modifying factors, namely the quality factor (QF), distribution factor (DF), and any other necessary factors. The unit of dose equivalent is the rem.

endosmotic e., the number which represents the quantity of water that will pass through a diaphragm by endosmosis in the same time that a unit of any other given substance will pass in the other direction by exosmosis. **epileptic e.**, a disturbance, mental or bodily, that may take the place of an epileptic attack. **gold e.**, the amount of protective colloid, expressed in milligrams, which is just enough to prevent the precipitation of 10 ml. of a 0.0055 per cent gold solution by 1 ml. of a 10 per cent sodium chloride solution. **gram e.**, chemical e. **isodynamic e.**, the ratio, from a food-energy standpoint, between carbohydrate and fat. It is 9.3 to 4.1, or 2.3 to 1; that is, one part of fat is equivalent to 2.3 parts of sugar or starch. **Joule's e.**, the mechanical equivalent of heat or the amount of work expended in raising a pound of water through 1° F.; 772 foot-pounds. Symbol J.

lead e., the thickness of pure lead which would afford the same radiation attenuation, under specified conditions, as the material or materials under consideration. **lethal e.**, a gene carried in the heterozygous state which, if homozygous, would be lethal, or any combination of genes which would be lethal to 100 percent of homozygotes; for example, a combination of two genes in the heterozygous state either of which in the homozygous state would be lethal to 50 per cent of the carriers. **neutralization e.**, the equivalent weight of an acid as determined by neutralization with a base regarded as a primary standard. **protein e.**, the protein content of a food plus the nonprotein content that can be converted into protein in the animal body. **psychic e.**, psychic epilepsy. **starch e.**, a number (nearly 2.4) expressing the amount of oxygen which a given weight of fat will require for its complete combustion as compared with the amount required by the same weight of starch. **toxic e.**, the amount of poison per kilogram of body weight necessary to kill an animal. **ventilation e.**, 1. the ratio of the total volume of ventilation to the volume of expired carbon dioxide per unit of time. 2. the ratio of the total volume of ventilation to the volume of oxygen absorbed by the lungs per unit of time. **water e.**, the product of the weight of an animal by its specific heat, it being also the number which represents the specific thermal capacity of an equal weight of water.

equulosis (ek/'kwoo-lo/'sis) [L. *equulus* a foal + *-osis*] a purulent arthritis, synovitis, and enteritis, often with formation of kidney abscesses, affecting primarily young foals but occasionally mature horses and caused by *Actinobacillus equuli*. When manifested as extreme prostration, it is known as *sleepy foal disease* (q.v.).

Equus (ek/'wus) the single living genus of the family Equidae, including horses, asses, and zebras.

Er chemical symbol for erbium.

E.R.A. Electroshock Research Association.

erabutoxin (ē-rab/'u-tok/'sin) the active toxic principle of the venom of the sea snake *Laticauda semifasciata*.

eration (e-ra/'zhun) [L. *erasio*] removal by scraping, or curet-tage. **e. of a joint**, arthroctomy.

Erasistratus (er/'ah-sis/'trah-tus) of Chios (c. 300 B.C.) a celebrated Greek anatomist and physician who practiced chiefly in Alexandria. He dissected the human body, and observed the association between ascites and hepatic cirrhosis. He also made many physiological observations, and has been called "The Father of Physiology."

Eratyrus (er/'ah-ti/'rus) a genus of reduviid bugs that transmit Chagas' disease.

Erb (erb), Wilhelm Heinrich. A celebrated German internist (1840–1921). See *progressive muscular dystrophy* and *pseudohypertrophic muscular dystrophy*, under *dystrophy*, *Erb's spastic paraplegia*, under *paraplegia*, *Erb-Duchenne paralysis*, under *paralysis*, and see under *point*, *sclerosis*, *sign*, and *syndrome*.

Erb-Charcot disease (erb/'shar-ko') [W. H. Erb; Jean Martin Charcot, French neurologist, 1825–1893] Erb's spastic paraplegia.

Erb-Duchenne paralysis (erb/'du-shen') [Willhelm Heinrich Erb; Guillaume Benjamin Amand Duchenne, French neurologist, 1806–1875] see under *paralysis*.

Erb-Goldflam disease (erb/'golt/'flahm) [W. H. Erb; Samuel V. Goldflam, Polish neurologist, 1825–1932] myasthenia gravis.

Erben's phenomenon, reflex (sign) (er/'benz) [Sigmund Erben, neurologist in Vienna, born 1863] see under *phenomenon* and *reflex*.

ERBF effective renal blood flow; see under *flow*.

erbium (er/'be-um) a rare metallic element: symbol, Er; atomic number, 68; atomic weight, 167.26.

Erdmann's reagent (erd/'manz) [Hugo Erdmann, German chemist, 1862–1910] see under *reagent*.

erectile (ē-rek/'til) capable of erection; see under *tissue*.

erection (ē-rek/'shun) [L. *erectio*] the condition of being made rigid and elevated; as *erectile tissue* when filled with blood.

erector (ē-rek/'tor) [L.] [NA] a general term for a structure that erects, as a muscle which raises or holds up a part.

eremacausis (er/'ē-mah-kaw/'sis) [Gr. *ēremagently* + *kausis* burning] the slow oxidation, combustion, or decay of organic matter.

eremophobia (er/'ē-mo-fō/'be-ah) [Gr. *ērēmos* solitary + *phobein* to be affrighted by + *ia*] (*obs.*) morbid fear of being alone.

erepsin (e-rep/'sin) [Gr. *ereptesthai* to feed on] former term for a group of enzymes (peptidases) in the small intestines which catalyze the hydrolysis of partially digested proteins to produce amino acids.

erethism (er/'ē-thizm) [Gr. *erethisma* stimulation] excessive irritability or sensibility to stimulation, particularly with reference to the sexual organs but including any body parts. Also a psychic disturbance marked by irritability, emotional instability, depression, shyness, and fatigue, as in chronic mercury poisoning.

erethismic (er/'ē-thiz/'mik) erethistic.

erethisophrenia (er/'ē-thiz/'o-fre/'ne-ah) [Gr. *erethizein* to irritate + *phrēn* mind] exaggerated mental excitability.

erethistic (er/'ē-this/'tik) [Gr. *erethistikos*] pertaining to, characterized by, or producing erethism.

erethitic (er/'ē-thit/'ik) Hunt's term for the excitatory temperament, marked by great activity of mind and body, i.e., responsive, impulsive, emotional, quick tempered, and restless. Cf. *kolytic*.

Erethmapodites (ē-reth/'mah-pod/'i-tēz) a genus of mosquitoes, species of which transmit Rift Valley fever.

ereuth- for words beginning thus, see those beginning *eryth-*.

ERG electroretinogram.

erg (erg) [Gr. *ergon* work] a unit of work or energy, being the work performed when a force of 1 dyne moves its point of operation through a distance of 1 centimeter; equivalent to 2.4×10^{-8} gram calories, or to 0.624×10^{12} electron volts.

ergasia (er-'ga-se-ah) [Gr. "work"] 1. a hypothetical substance which stimulates the activity of body cells. 2. Meyer's term for any mentally integrated function, activity, reaction, or attitude of the individual; psychobiological functioning.

ergasiatrics, ergasiatry (er-'ga-'ze-at/'riks; er/'gah-si/'ah-tre) Meyer's term for psychiatry.

ergasiology (er-'ga-'se-ol-'o-je) [ergasia + *-logy*] objective psychobiology.

ergasiomania (er-'ga-'se-o-ma-'ne-ah) [ergasia + Gr. *mania* madness] (*obs.*) 1. an insane desire to be continually at work. 2. undue eagerness to perform surgical operations.

ergasiophobia (er-'ga-'se-o-fō-'be-ah) [ergasia + Gr. *phobein* to be affrighted by + *ia*] 1. (*obs.*) morbid aversion to work. 2. undue fear of performing surgical operations.

ergasthenia (er-'gas-the-'ne-ah) [Gr. *ergon* work + *astheneia* weakness] (*obs.*) a condition of debility from overwork.

ergastic (er-'gas/'tik) [Gr. *ergastikos*] 1. having potential energy; a term applied to passive material formed or stored by a cell, such as starch, fat, and cellulose. 2. pertaining to ergasia.

ergastoplasm (er-'gas-'to-plazm) [ergasia + *plasm*] 1. granular

endoplasmic reticulum. 2. (*obs.*) Garnier's concept of cytoplasm, the fibrillar or flocculent masses found in many gland cells and elsewhere.

ergo- (er'go) [Gr. *ergon* work] a combining form denoting relationship to work.

ergobasine (er'go-ba'sin) ergonovine.

ergocalciferol (er-go-kal-sif'er-ol) [USP] chemical name: 9,10-secoergosta-5,7,10(19),22-tetraen-3 β -ol. An activation product, C₂₈H₄₄O, of ergosterol, produced by ultraviolet irradiation or electronic bombardment, occurring in white odorless crystals, insoluble in water but soluble in alcohol, chloroform, ether, and fatty oils; used chiefly as an oral antirachitic vitamin. Called also *calciferol*, *activated ergosterol*, *viosterol*, and *vitamin D₂*.

ergocardiogram (er'go-kar'de-o-gram) the graphic record obtained by ergocardiography.

ergocardiography (er'go-kar'de-og'rah-fe) the recording of moment-to-moment electromotive forces of the heart while the subject is engaging in muscular activity.

ergocornine (er'go-kor'nēn) an alkaloid, C₃₁H₃₉N₅O₅, from ergot, once used in peripheral vascular disorders.

ergocristine (er'go-kris'tēn) an alkaloid, C₃₅H₃₉N₅O₅, from ergot, once used in peripheral vascular disorders.

ergocryptine (er'go-krip'tēn) an alkaloid, C₃₂H₄₁N₅O₅, from ergot, once used in peripheral vascular disorders.

ergodynamograph (er'go-di-nam'o-graf) [*ergo* + Gr. *dynamis* force + *graphein* to record] an apparatus for recording the force exhibited and the work done in muscular contraction.

ergoesthesiograph (er'go-es-the'se-o-graf) [*ergo* + Gr. *aisthēsis* sensation + *graphein* to record] an apparatus for recording graphically muscular reactions to various stimuli.

ergogenic (er'go-jen'ik) [*ergo* + Gr. *gennan* to produce] tending to increase work output.

ergogram (er'go-gram) [*ergo* + Gr. *gramma* a mark] a tracing made by an ergograph.

ergograph (er'go-graf) [*ergo* + Gr. *graphein* to record] an instrument for recording work done in muscular exertion. **Mosso's e.** (1890), an apparatus for recording the force and frequency of flexion of the fingers.

ergographic (er'go-graf'ik) pertaining to the ergograph.

ergomaniac (er'go-ma'ne-ak) [*ergo* + Gr. *mania* madness] a person morbidly desirous of being continually at work.

Ergomar (er'go-mar) trademark for a preparation of ergotamine tartrate.

ergometer (er-gom'ē-ter) [*ergo* + Gr. *metron* measure] a dynamometer. **bicycle e.**, an apparatus for measuring the muscular, metabolic, and respiratory effects of exercise.

ergometrine (er'go-met'rin) ergonovine.

ergon (er'gon) a unit representing the stability of a particular gene throughout a lifetime; it is a function of the ratio of the adenine-thymine to guanine-cytosine content of the gene and is reflected in the persistence of the resultant phenotypical trait. Cf. *chronon*.

ergonomics (er'go-nom'iks) [*ergo* + Gr. *nomos* law] the science relating to man and his work, embodying the anatomic, physiologic, psychologic, and mechanical principles affecting the efficient use of human energy.

ergonovine (er'go-no'vin) chemical name: D-lysergic acid 1-hydroxy-methylethylamide. A water-soluble alkaloid, C₁₈H₂₃N₃O₂, from ergot or produced synthetically; used as an oxytocic and to relieve migraine headache. Called also *ergobasine*, *ergometrine*, *ergostetrine*, and *ergotocine*. **e. maleate** [USP], the bimaleate salt of ergonovine, C₁₈H₂₃N₃O₂·C₄H₄O₄, occurring as a grayish white to faintly yellow odorless powder; used as an oxytocic, administered orally, intramuscularly, or intravenously. It is also used in the treatment of migraine.

ergophore (er'go-fōr) [*ergo* + Gr. *phoros* bearing] in Ehrlich's side-chain theory, the group of atoms in a molecule that brings about the specific activity of the substance, as of a toxin, agglutinin, or the like, after the molecule has been properly anchored by the haptophore.

ergoplasm (er'go-plazm) ergastoplasm.

ergosome (er'go-sōm) polyribosome.

ergostat (er'go-stat) a machine to be worked for muscular exercise.

ergosterol (er-gos'tē-rol) a sterol, C₂₈H₄₄O, occurring in animal and plant tissues which, on irradiation with ultraviolet rays, becomes a potent antirachitic substance, ergocalciferol (vitamin D₂). The substance was originally isolated by Tanret from ergot and named accordingly. **activated e.**, **irradiated e.**, **ergocalciferol**.

ergostetrine (er'go-stet'rin) ergonovine.

ergot (er'got) [Fr.; L. *ergota*] 1. the dried sclerotium of *Claviceps purpurea*, which is developed on rye plants (*Secale cereale*); ergot alkaloids are used as oxytocics and in the treatment of migraine. 2. (*obs.*) calcar avis. 3. a small mass of horn in the tuft of hair at the flexion surface of the fetlock in horses.

ergotamine (er-got'ah-min) an alkaloid derived from ergot, consisting of lysergic acid, ammonia, proline, phenylalanine, and pyruvic acid combined in amide linkages; used in the treatment of migraine. **e. tartrate** [USP], the tartrate salt of ergotamine, (C₃₃H₃₅H₂O₈)₂·C₄H₆O₆, occurring as colorless crystals or as a yellowish crystalline powder; used as an analgesic in the treatment of migraine.

ergotamine (er'go-tam'i-nēn) an isomer, C₃₃H₃₅N₅O₅, of ergotamine.

ergotherapy (er'go-ther'ah-pe) [*ergo* + Gr. *therapeia* treatment] treatment of disease by physical effort.

ergothioneine (er'go-thi'o-ne'in) the trimethylbetaine of thiohistidine, C₃H₉N₂(SH)·CH₂·CH·CO·ON(CH₃)₃·2H₂O, found in ergot and in the blood and in abnormal amounts in the urine of cancer patients; called also *thioneine* and *erythrothioneine*.

ergotism (er'got-izm) chronic poisoning from excessive or misdirected use of ergot as a medicine, or from eating ergotized grain; it is marked by cerebrospinal symptoms, spasms, and cramps, or by a kind of dry gangrene.

ergotized (er'got-izd) diseased or otherwise affected by ergot.

ergotocine (er'go-to'sēn) ergonovine.

ergotoxycosis (er'go-tok'si-ko'sis) a form of mycotoxicosis caused by one of the ergot (*Claviceps*) species.

ergotoxine (er'go-tok'sēn) a toxic crystalline alkaloid originally isolated from ergot (*Claviceps purpurea*), consisting of a mixture of ergocornine, ergocristine, and ergocryptine, which exert both oxytocic and adrenergic blocking effects. Because of the variability of these effects, neither ergotoxine nor its constituents are currently used in medicine.

Ergotrate (er'go-trāt) trademark for preparations of ergonovine maleate.

ergusia (er-ju'se-ah) a hypothetical lipid substance which, liberated from a cell, reduces surface tension and enables the cell to migrate.

Erichsen's ligature, sign (test) (er'ik-senz) [Sir John Eric Erichsen, English surgeon, 1818-1896] see under *ligature* and *spine*.

Eriodictyon (er'e-o-dik'te-on) [Gr. *erion* wool + *diktyon* net] a genus of hydrophyllaceous plants. *E. californicum* H. & A. Greene (*E. glutinosum*), also known as yerba santa or mountain balm, was once used in bronchitis. See *eriodictyon*.

eriodictyon (er'e-o-dik'te-on) [NF] the dried leaf of *Eriodictyon californicum*; its fluidextract is used as a flavor and its aromatic syrup as a vehicle for dispensing drugs.

erisiphake (er-is'i-fāk) erysiphake.

Eristalis (er-is'tah-lis) a genus of flies, the hover flies, of the family Syrphidae. **E. tenax**, the "drone fly," the "rat-tail" maggots (larvae), which occasionally cause intestinal and nasal myiasis.

Erlanger's sphygmomanometer (er'lang-erz) [Joseph Erlanger, American physiologist, 1874-1965, noted for his work on the nervous system; co-winner, with Herbert Spencer Gasser, of the Nobel prize for medicine in 1944] see under *sphygmomanometer*.

Erlenmeyer flask (är'len-mi'er) [Emil Richard August Carl Erlenmeyer, German chemist, 1825-1909] see under *flask*.

Erni's sign (er'nēz) [H. Erni, Swiss physician, 1859-1937] see under *sign*.

erntefieber (ern'te-fe'ber) [Ger. "harvest-fever"] schlammbfieber.

erode (e-rōd') to wear away.

erogenous (ē-roj'ē-nus) erotogenic; arousing erotic feelings; see also under *zone*.

erose (e-rōs') [L. *erodere* to gnaw off] having an irregularly toothed edge.

erosio (e-ro'se-o) [L.] erosion. **e. interdigita'lis blastomycet'ica** or **saccharomycet'ica**, an eroded lesion occurring in the interdigital webs of the fingers, almost always between the third and fourth fingers, especially in cannery workers, housewives, or waitresses, caused by *Candida* (*Monilia*) *albicans*.

erosion (e-ro'zhun) [L. *erosio*, from *erodere* to eat out] an eating or gnawing away; a kind of ulceration. In dentistry, the wasting away or loss of substance of a tooth by a chemical process that does not involve known bacterial action. In dermatology, a gradual breakdown or very shallow ulceration of the skin which involves only the epidermis and heals without scarring. **cervical e.**, a condition caused by irritation and characterized by destruction of the squamous epithelium of the vaginal portion of the cervix; the eroded area is covered by columnar epithelium. **dental e.**, the disintegration of tooth substance on surfaces free from attrition by mastication.

erosive (e-ro'siv) 1. causing, characterized by, or producing erosion. 2. an agent that produces erosion.

erotic (ē-rot'ik) [Gr. *erōtikos*] pertaining to sexual love or to lust.

eroticism (e-rot'f-i-sizm) erotism.

eroticize (ē-rot'f-i-siz) erotize.

eroticomania (ě-rot/'i-ko-ma'ne-ah) erotomania.

erotism (er'o-tizm) a sexual instinct or desire; the expression of one's instinctual energy or drive, especially the sex drive.

anal e., fixation of libido at (or regression to) the anal phase of infantile development, said in psychoanalytic theory to produce erotistic, dogmatic, stubborn, miserly character. **muscle e.**, erotism stimulated by muscular exercise. **oral e.**, 1. fixation of libido at (or regression to) the oral phase of infantile development, said in psychoanalytic theory to produce passive, insecure, sensitive character. 2. the pleasure derived from the use of the mouth for other than nutritional satisfactions.

erotize (er'o-tiz) to endow with erotic or libidinous instinct or energy.

eroto- (e-ro'to) [Gr. *erōs* love] a combining form denoting relationship to love or sexual desire.

erotogenesis (ě-ro'to-jen'ě-sis) the formation or production of erotic feeling.

erotogenic (ě-ro'to-jen'ik) [*eroto-* + Gr. *gennan* to produce] producing erotic feelings;rogenous. See also under *zone*.

erotology (er'o-tol'o-je) [*eroto-* + *-logy*] the study of love.

erotomania (ě-rot/'to-ma'ne-ah) [*eroto-* + Gr. *mania* madness] morbid exaggeration of sexual behavior or reaction; preoccupation with sexuality.

erotomaniac (ě-ro'to-ma'ne-ak) a person exhibiting erotomania.

erotopath (ě-ro'to-path) a person exhibiting erotopathy.

erotopathy (er'o-top'ah-the) [*eroto-* + Gr. *pathos* disease] disorder of the sexual impulse.

erotophobia (ě-ro'to-fō-be-ah) [*eroto-* + Gr. *phobein* to be frightened by + *ia*] morbid dislike of sexual love.

erotosexual (ě-ro'to-seks'u-al) pertaining to sexual love.

ERPF effective renal plasma flow; see under *flow*.

erratic (ě-rat'ik) [L. *errare* to wander] 1. roving or wandering. 2. eccentric; deviating from an accepted course of thought or conduct.

errhine (er'in) [Gr. *en* in + *rhis* nose] 1. promoting a nasal discharge. 2. a medicine that promotes nasal discharge or secretion.

error (er'or) a defect in structure or function; a deviation. **inborn e. of metabolism**, see under *metabolism*.

Ertron (er'tron) trademark for preparations of ergocalciferol (vitamin D₂).

eructatio (er'ruk-ta'she-o) [L., from *eructare* to belch] eructation. **e. nervo'sa**, nervous eructation.

eructation (ě-ruk-ta'shun) [L. *eructatio*] the act of belching, or of casting up wind from the stomach through the mouth. **nervous e.**, a gastric neurosis marked by air swallowing followed by belching.

eruption (e-rup'shun) [L. *eruptio* a breaking out] 1. the act of breaking out, appearing, or becoming visible, as eruption of the teeth. 2. visible efflorescence lesions of the skin due to disease, and marked by redness, prominence, or both; a rash. See also *exanthem*. **bullous e.**, an eruption of large blebs or blisters. **continuous e.**, eruption of a tooth beyond the normal so that the length of the clinical crown may be increased or the periodontium may be extruded with the tooth. **creeping e.**, a dermatitis caused by the burrowing of nematodes or larvae in the deeper layers of the skin; see *larva migrans*. **drug e.**, an eruption or a solitary skin lesion caused by a drug taken internally; called also *drug rash* and *dermatitis medicamentosa*. **fixed e.**, a circumscribed inflammatory skin lesion(s) that recurs at the same site(s) over a period of months or years; each attack lasts only a few days but leaves residual pigmentation which is cumulative. **fixed drug e.**, a drug eruption that recurs at the same site; see *fixed e.* **Kaposi's varicelliform e.**, a generalized and serious vesiculopustular eruption of viral origin, superimposed upon a preexisting atopic dermatitis; it may be caused by the virus of herpes simplex (eczema herpeticum) or vaccinia (eczema vaccinatum). Called also *pustulosis vacciniiformis* (or *varioliiformis acuta*). **macular e.**, an eruption in the form of spots, due to hemorrhage, congestion, or increased or diminished pigmentation. **maculopapular e.**, an eruption consisting of both macules and papules; sometimes used loosely when only one or the other is present. **passive e.**, the apparent continued eruption of the teeth that is actually due to gingival recession. **petechial e.**, an eruption in the form of very minute spots, due to hemorrhage; a purpura. **polymorphous e.**, an eruption characterized by lesions in many different stages of evolution, from incipient through mature to healing. **polymorphous light e.**, a rather uniform skin eruption, though highly variable in different patients, confined to sun-exposed surfaces of the skin, not attributable to photosensitizing applications or medications, or to systemic disease, and typically initiated and aggravated by exposure to sunlight. **sandworm e.**, larva migrans. **seabather's e.**, marine dermatitis. **serum e.**, an eruption or exanthem accompanying serum sickness. **surgical e.**, the uncovering of a partially erupted tooth to permit its further eruption into the oral cavity by surgically removing overlying tissue, teeth, and/or bone.

eruptive (e-rup'tiv) pertaining to or characterized by eruption.

ERV expiratory reserve volume; see under *volume*.

Erwinia (er-win'e-ah) [Erwin F. Smith, American bacteriologist, 1854-1927] a genus of microorganisms of the tribe Erwiniaceae, family Enterobacteriaceae, order Eubacteriales. The 16 described species are pathogenic for plants, causing dry necroses, galls, or wilts, or soft rots.

Erwiniaceae (er'wī-ni'e-e) a tribe of the family Enterobacteriaceae, order Eubacteriales, made up of motile rods normally not requiring organic nitrogen compounds for growth and producing acid, with or without visible gas, from a variety of sugars. It includes a single genus, *Erwinia*.

erysipelas (er'ī-sip'ě-las) [Gr. *erythros* red + *pella* skin] a contagious disease of skin and subcutaneous tissue due to infection with *Streptococcus pyogenes* and marked by redness and swelling of affected areas, with constitutional symptoms; sometimes accompanied by vesicular and bullous lesions. **coast e.** (erisipela de la costa), onchocerciasis. **gangrenous e.**, a variety characterized by sloughing; it is fatal if not treated early with penicillin or other antibiotics. **e. gra've inter'num**, erysipelas in the vagina, uterus, and peritoneum; a form of puerperal fever. **malignant e.**, one of the forms of puerperal fever. **surgical e.**, erysipelas that occurs following a surgical operation. **swine e.**, a contagious disease affecting young swine in Europe, caused by *Erysipelothrix insidiosa*. Of great economic importance, it occurs in four clinical forms: An *acute septicemic form*, marked by high fever, lesions of the internal organs and viscera, and a high mortality rate. An *urticarial form*, marked by sudden onset, high fever, general debility, formation of reddish to purplish quadrangular or rhomboid blotches on the neck and body and sometimes by involvement of the viscera; this is the mildest form and is rarely fatal. Called also *diamonds*, *diamond skin disease*, *rose disease*, and *rouget du porc*. A *chronic form*, marked by difficulty in breathing, vegetative endocarditis, and ultimately death. An *arthritic form*, marked by stunting of growth; this form may occur alone or may complicate other forms of the disease, and is not usually fatal. **traumatic e.**, erysipelas that starts in a wound. **zoonotic e. (obs.)**, erysipeloid.

erysipelatous (er'ī-sī-pel'ah-tus) pertaining to or of the nature of erysipelas.

erysipeloid (er'ī-sip'ě-loid) [erysipelas + Gr. *eidos* form] 1. an infective dermatitis or cellulitis due to infection with *Erysipelothrix rhusiopathiae*; it usually begins in a wound (often the result of a prick by a fish bone) and remains localized, rarely becoming generalized and septicemic. Called also *fish-handler's disease*. 2. loosely used to mean erysipelas-like.

Erysipelothrix (er'ī-sip'ě-lo-thriks'') [erysipelas + Gr. *thrix* hair] a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, containing a single species, *E. insidiosa* (*E. rhusiopathiae*). This species, occurring as gram-positive rods and filaments, is the causative agent of swine erysipelas, and also infects sheep, turkeys, and rats. An erythematous-edematous lesion, commonly on the hand, resulting from contact with infected meat, hides, or bones, represents the usual type of infection in man (see *erysipeloid*). Called also *swine rotlauf bacillus*.

erysipelotoxin (er'ī-sip'ě-lo-tok'sin) the toxin of erysipelas.

Erysiphaceae (er-is'ī-fa'se-e) a family of fungi of the order Erysiphales, series Pyrenomycetes, which are plant pathogens and include the genus *Erysiphe*.

erysiphake (er-is'ī-fāk) [Gr. *erysis* a drawing + *phakos* lentil] an instrument for removing the lens in cataract by suction. Cf. *phacoerystis*.

Erysiphales (er-is'ī-fa'lēz) the powdery mildews, an order of ascomycetous fungi of the series Pyrenomycetes, subclass Euascomycetidae, which are parasitic on higher plants and usually have closed ascocarps and large spherical stalked asci; it includes the family Erysiphaceae.

Erysiphe (er-is'ī-fe) a genus of ascomycetous fungi of the family Erysiphaceae, order Erysiphales, including *E. polygoni*, the powdery mildew; its imperfect (sexual) stage is *Oidium*.

erythema (er'ī-the'mah) [Gr. *erythema* flush upon the skin] a name applied to redness of the skin produced by congestion of the capillaries, which may result from a variety of causes, the etiology or a specific type of lesion often being indicated by a modifying term. **e. ab igne**, redness of the skin caused by exposure to radiant heat; called also *e. calore* and *e. caloricum*. **e. a calore**, *e. ab igne*. **acrodynic e.**, a condition characterized by reddened painful areas on the palms and soles. **e. annula're**, a type of erythema multiforme in which the areas of redness are ring shaped; see also *e. annulare centrifugum*. **e. annula're centrifugum**, a chronic variant of erythema multiforme, with single or multiple edematous and erythematous papules, occurring usually on the thighs and lower legs, the lesions enlarging peripherally and clearing in the center, to produce annular lesions, which may coalesce; the condition may persist for years, with incomplete remissions and exacerbations. Called also *e. gyratum* (*perstans* or *repens*) and *e. figuratum* (*perstans*). **e. annula're rheumat'icum**, an exanthem associated with rheumatic endocarditis, characterized by red or bluish red semicircles

or rings over the abdomen, the sides of the thorax, and the back; called also *e. marginatum rheumaticum*. **e. arthrit/icum epidem/icum**, Haverhill fever. **e. calor/icum**, *e. ab igne*. **e. chron/icum mi/grans**, an annular erythema caused by the bite of a tick (*Ixodes*); it begins as an erythematous plaque several weeks after the bite and spreads peripherally with central clearing. **diaper e.**, see under *dermatitis*. **e. dyschro/micum per/stans**, a chronic, progressive, pigmenting dermatosis which has a predilection for the folds and creases, reported chiefly from South America and Texas and consisting of transient erythema followed by ashen or brownish gray pigmentation, with small islands of hypopigmentation in pigmented areas. Called also *dermatosis cinicienta*, *ashy dermatitis*, *ashy dermatosis of Ramirez*, and *dermatosis cinera perstans*. **e. eleva/tum di-u/tinum**, firm, red, persistent, nodular elevations that are symmetrically distributed on the skin. Affected areas may include the backs of the hands, wrists, elbows, and rarely the ankles and buttocks. **epidemic e.**, acrodynia. **epidemic Arthritic e.**, Haverhill fever. **e. figura/tum (perstans)**, *e. annulare centrifugum*. **e. fu/gax**, redness of the skin that comes and goes quickly. **gluteal e.**, diaper dermatitis. **e. gya/rum (perstans or repens)**, *e. annulare centrifugum*. **e. in-dura/tum**, a chronic necrotizing vasculitis, usually occurring on the calves of young women, which was thought to be a form of tuberculosis of the skin complicated by vasculitis, but now the role of tuberculosis is in dispute; called also *Bazin's disease*, *tuberculosis cutis indurativa*, and *tuberculosis indurativa*. **e. infecti-o/sum**, a mildly contagious disease, sometimes occurring in epidemics, and marked by a rose-colored, coarsely lace-like macular rash; it occurs chiefly in children between the ages of four and twelve. Called also *fifth disease*. **e. i/ris**, a type of erythema multiforme in which the lesions form concentric rings, producing a target-like appearance. **Jacquet's e.**, diaper dermatitis. **e. margina/tum**, a type of erythema multiforme in which the reddened areas are disk shaped, with elevated edges. **e. margina/tum rheumat/icum**, *e. annulare rheumaticum*. **e. mi/grans**, geographic tongue. **Milian's e.**, a scarlatiniform eruption with malaise and fever, occurring seven to nine days after injection of arsphenamine, or as a toxic reaction to other drugs; called also *ninth-day e.* **e. multifo/rme**, a symptom complex characterized by vivid erythematous, urticarial, bullous, more or less purpuric lesions which appear suddenly in a symmetrical distribution, usually on the face, neck, forearms, legs, and dorsal surfaces of the hands and feet. The lesions may appear as separate rings (*e. annulare*), as vesicles or bullae (*e. bullosum*), as concentric rings (*e. iris*), in round patches with elevated edges (*e. margina-tum*), or in variously figured arrangements (*e. figuratum*). The disease has also been classified according to severity as a mild form (*Hebra's disease*) and the severe form (*Stevens-Johnson syndrome*), with constitutional symptoms, involvement of the oronasal and anogenital mucosa and the eyes, and visceral involvement. Individual attacks are usually self-limited, but recurrences are the rule. The severe form may be fatal. **e. multiforme ex-udati/vum (obs.)**, *e. multiforme*. **napkin e.**, diaper dermatitis. **e. neonato/rum**, a usually temporary diffuse redness of the skin of a newborn infant. **e. neonato/rum tox/icum**, erythema of a toxic origin in a newborn infant. **nine-day e.**, Milian's e. **e. nodo/sum**, an acute inflammatory skin disease marked by tender red nodules, usually on the shins, more rarely on the arms and face, due to exudation of blood and serum; the lesions may appear in successive patches during a period of several weeks. The disorder is thought to be an allergic reaction, sometimes to tuberculin, streptococcal infection, drugs, psittacosis, or coccidioidomycosis. **e. nodo/sum lepro/sum**, a form of lepra reaction occurring in lepromatous and sometimes borderline leprosy, marked by the occurrence of tender, inflamed subcutaneous nodules, usually in crops. The reactions resemble multifocal Arthus reactions. When severe, such reactions may lead to ulcerations of the skin, acute neuritis, acute iridocyclitis, and orchitis. **e. nodo/sum syphilit/icum**, erythema nodosum occurring in congenital and in secondary syphilis. **palmar e.**, redness of the palms, occurring in certain disease states, including cirrhosis of the liver, tuberculosis, and nutritional deficiencies; during pregnancy; and rarely as a hereditary condition. **e. papulo/sum**, reddish or violaceous macules or papules. **e. paratrim'ma (obs.)**, a skin inflammation, the first stage of an incipient decubitus ulcer. **e. per/nio**, chilblain. **e. strep-tog/enes**, pityriasis alba. **symptomatic e.**, erythema occurring secondarily to some systemic condition. **toxic e.**, **e. tox/icum**, a generalized, diffuse erythematous eruption or a widespread erythematomacular eruption occurring as a result of administration of a drug, or caused by bacterial toxins or other toxic substances; called also *e. venenatum*. **e. tox/icum neonato/rum**, a self-limited urticarial condition affecting infants in the first few days of life. **e. traumat/icum**, redness of the skin caused by friction, pressure, or a blow. **e. venena/tum**, toxic e.

erythematopultaceous (er-i-the'mah-to-pul-ta'shus) characterized by redness of the skin or mucous membrane, a condition caused by capillary congestion.

erythematous (er'i-the'mah-tus) characterized by erythema.

erythemogenic (er'i-the'mo-jen'ik) causing erythema.

erythremalgia (er'i-ther-mal'je-ah) erythromelalgia.

Erythraea (er'i-thre'ah) [Gr. *erythraios* red] a genus of red-flowered gentianaceous plants. *E. centa'rium*, the lesser centaury, and various other species are tonic and stomachic.

erythralgia (er'i-thral'je-ah) [*erythro-* + *-algia*] erythromelalgia.

erythrasma (er'i-thraz'mah) a chronic bacterial infection of major folds of the skin, marked by red or brownish patches on the skin. Affected areas may include the inner thighs, the scrotum, the axilla, and the area between the toes. The condition is caused by *Corynebacterium minutissimum*.

erythredema polynuropathy (ë-rith'rë-de'mah pol'e-nu-ro-p'ah-the) [*erythro-* + Gr. *oidëma* swelling] acrodynia.

erythremia (er'i-thre'me-ah) [*erythro-* + Gr. *haima* blood] polycythemia vera.

erythremomelalgia (er-ith'rë-mo-mel-al'je-ah) [Gr. *erythrëma* redness + *melos* limb + *-algia*] erythromelalgia.

erythrin (er'ith-rin) a depside chromogen C₂₀H₂₂O₁₁, from *Roc-cella tinctoria* and other lichens.

Erythrina (er'i-thri'nah) a genus of tropical shrubs and trees of the legume family, long used in native medicines. Several species yield the alkaloids α -erythroidine and β -erythroidine.

erythrism (ë-rith'rizm) redness of the hair and beard with a ruddy complexion.

erythristic (er'i-thris'tik) characterized by erythrism.

erythritol (ë-rith'ri-tol) chemical name: tetrahydroxybutane. A polyhydric alcohol, CH₂OH(CHOH)₂CH₂OH, occurring in algae, lichens, grasses, and several fungi; it is about twice as sweet as sucrose. Called also *erythrol*. See also *erythrityl*.

erythrityl (ë-rith'ri-til) the univalent radical C₄H₉ from erythritol. **e. tetranitrate**, chemical name: erythrityl tetranitrate. A synthetic compound, C₄H₉(NO₃)₄, with actions similar to those of nitroglycerin. Percussion or excessive heat can cause undiluted erythrityl tetranitrate to explode. The official pharmaceutical preparations, prepared in accordance with USP standards, are used as a coronary vasodilator in the prophylaxis of angina pectoris and in long-term treatment of coronary insufficiency, administered orally or sublingually.

erythro- (ë-rith'ro) [Gr. *erythros* red] a combining form meaning red, or denoting a relationship to red.

Erythrobacillus (ë-rith'ro-bah-sil'us) a genus of small aerobic nonpathogenic bacterial organisms which produce red or pink pigments; it has been replaced by the genus *Serratia*.

erythroblast (ë-rith'ro-blast) [*erythro-* + Gr. *blastos* germ] a term used by Ehrlich to indicate any type of nucleated erythrocyte, but now more generally, and somewhat inaccurately, used to designate an immature cell from which a red corpuscle develops. The precise position assigned to it in the red cell lineage varies with the specific theory of blood maturation being propounded. **acidophilic e.**, orthochromatic normoblast. **basophilic e.**, basophilic normoblast. **early e.**, basophilic normoblast. **definitive e's**, basophil cells in the primordium of the liver that give rise to the mature non-nucleated erythrocytes; cf. *primitive e's*. **eosinophilic e.**, orthochromatic normoblast. **inter-mediate e.**, polychromatic normoblast. **late e.**, orthochromatic normoblast. **orthochromatic e.**, orthochromatic normoblast. **oxyphilic e.**, orthochromatic normoblast. **polychromatic e.**, polychromatic normoblast. **primitive e's**, cells arising from the blood islands of the yolk sac which are the precursors of the nucleated erythrocytes characteristic of the early embryo; cf. *definitive e's*.

erythroblastemia (ë-rith'ro-blas-te'me-ah) the presence in the peripheral blood of abnormally large numbers of nucleated red cells; erythroblastosis.

erythroblastic (ë-rith'ro-blas'tik) of, or relating to, erythroblasts.

erythroblastoma (ë-rith'ro-blas-to'mah) a tumor-like mass composed of nucleated red blood corpuscles.

erythroblastomatosis (ë-rith'ro-blas'to-mah-to'sis) a condition marked by the formation of erythroblastomas.

erythroblastopenia (ë-rith'ro-blas'to-pe'ne-ah) abnormal deficiency of the erythroblasts; see *aplastic crisis*, under *crisis*.

erythroblastosis (ë-rith'ro-blas-to'sis) 1. the presence of erythroblasts in the circulating blood; erythroblastemia. 2. a disease of fowl classified in the avian leukosis complex, marked by an increase in the number of immature red blood cells in the circulating blood; called also *erythroleukosis*. **e. feta/lis**, **e. neonato/rum**, hemolytic anemia of the fetus or newborn infant, caused by the transplacental transmission of maternally formed antibody, usually secondary to an incompatibility between the blood group of the mother and that of her offspring, characterized by accelerated destruction of erythrocytes and consequent jaundice and by increased red cell regeneration (nucleated red cells in the blood) and hepatosplenomegaly. In infants with severe jaundice, kernicterus may result. The most severe form is *hydrops fetalis*. Called also *hemolytic disease of newborn*.

erythroblastotic (ë-rith'ro-blas-tot'ik) pertaining to or characterized by erythroblastosis.

erythrocatylsis (ě-rith/'ro-kah-tal'i-sis) erythrocatylsis.

erythrochloropia (ě-rith/'ro-klo-ro'pe-ah) [*erythro-* + Gr. *chlōros* green + *ōps* eye] ability to distinguish red and green, but not blue or yellow.

erythrochloropsia (ě-rith/'ro-klo-rop'se-ah) erythrochloropia.

erythrochromia (ě-rith/'ro-kro'me-ah) [*erythro-* + Gr. *chrōma*, color] hemorrhagic pigmentation of the spinal fluid, giving it a red color.

Erythrocin (ě-rith/'ro-sin) trademark for a preparation of erythromycin.

erythroclasis (er/'ě-throk'lāh-sis) [*erythro-* + Gr. *klasis* a breaking] fragmentation or splitting up of red blood cells.

erythroclastic (ě-rith/'ro-klas'tik) pertaining to, characterized by, or producing erythroclasis.

erythrocuorin (ě-rith/'ro-kroo'o-rin) a respiratory protein from the blood of the marine worm, *Spirographis spallanzanii*, and certain other worms.

erythrocuprein (ě-rith/'ro-koo'prin) a copper-protein compound, contained in the erythrocytes, the function of which is unknown.

erythrocyanogenia (ě-rith/'ro-si'ah-no-je'ne-ah) (obs.) erythrocyanosis.

erythrocyanosis (ě-rith/'ro-si'ah-no'sis) [*erythro-* + Gr. *kyanōsis* dark blue color] coarsely mottled bluish red discoloration on the legs and thighs of adolescent girls, or sometimes older women or fat, prepubertal boys; the condition is worse in winter, when chilblains may appear. Treatment is ineffective. Called also *e. crurum puellaris*, *e. crurum puellarum*, and *e. supramalleolaris*.

erythrocytapheresis (ě-rith/'ro-si'tah-fer'ě-sis) [*erythrocyte* + Gr. *aphairesis* removal] the withdrawal of blood, separation and retention of red blood cells, and retransfusion of the remainder into the donor.

erythrocyte (ě-rith/'ro-sit) [*erythro-* + Gr. *kytos* hollow vessel] one of the elements found in peripheral blood; called also *red blood cell* or *corpuscle*. Normally, in the human, the mature form is a non-nucleated, yellowish, biconcave disk, adapted, by virtue of its configuration and its hemoglobin content, to transport oxygen. For immature forms in the erythrocytic series, see *normoblast*. **achromic e.**, a colorless erythrocyte; see *achromocyte*. **basophilic e.**, one that takes the basic stain; see *basophilia* (def. 1). **burr e.**, burr cell. **crenated e.**, an erythrocyte that shows a scalloped border. **hypochromic e.**, one that contains less than the normal concentration of hemoglobin and as a result appears paler than normal; it is usually also microcytic. Cf. *normochromic e.* **immature e.**, any erythrocyte prior to achievement of its complete development; see *normoblast* and *rubicyte*. **"Mexican hat" e.**, target cell. **normochromic e.**, one of normal color with a normal concentration of hemoglobin; cf. *hypochromic e.* **nucleated e.**, any of the immature forms of an erythrocyte, e.g., a normoblast. **orthochromatic e.**, one that takes only the acid stain. **polychromatic e.**, **polychromatophilic e.**, an erythrocyte that, on staining, shows various shades of blue, combined with tinges of pink. **target e.**, see under *cell*.

erythrocythemia (ě-rith/'ro-si-the'me-ah) an increase in the number of erythrocytes in the blood, as in erythrocytosis and polycythemia vera.

erythrocytic (ě-rith/'ro-sit'ik) 1. pertaining to, characterized by, or of the nature of erythrocytes. 2. pertaining to the erythrocytic series; see under *series*.

erythrocytoblast (ě-rith/'ro-si'to-blast) erythroblast.

erythrocytolysin (ě-rith/'ro-si-to'l'i-sin) a substance that causes dissolution of erythrocytes and escape of hemoglobin.

erythrocytolysis (ě-rith/'ro-si-to'l'i-sis) [*erythrocyte* + Gr. *lysis* dissolution] dissolution of erythrocytes and escape of the hemoglobin.

erythrocytometer (ě-rith/'ro-si-tom'ě-ter) [*erythrocyte* + Gr. *metron* measure] a device for measuring or counting erythrocytes.

erythrocytometry (ě-rith/'ro-si-tom'ě-tre) the measurement or counting of erythrocytes.

erythrocyto-opsonin (ě-rith/'ro-si'to-op-so'nin) [*erythrocyte* + *opsonin*] hemopsonin.

erythrocytopenia (ě-rith/'ro-si'to-pe'ne-ah) erythropenia.

erythrocytophagous (ě-rith/'ro-si-tof'ah-gus) pertaining to or characterized by erythrocytophagy.

erythrocytophagy (ě-rith/'ro-si-tof'ah-je) [*erythrocyte* + Gr. *phagēin* to devour] the engulfment or consumption of erythrocytes by other cells, such as the histiocytes of the reticuloendothelial system.

erythrocytopoiesis (ě-rith/'ro-si'to-poi-e'sis) erythropoiesis.

erythrocytorrhesis (ě-rith/'ro-si'to-rek'sis) [*erythrocyte* + Gr. *rhēxis* rending] a morphological change in erythrocytes, consisting in the escape from the cells of round, shiny granules and the splitting off of particles.

erythrocytoschisis (ě-rith/'ro-si-tos'ki-sis) [*erythrocyte* + Gr. *schisis* division] a morphological change in erythrocytes, con-

sisting in the degeneration of the cells into disklike bodies similar to the blood platelets.

erythrocytosis (ě-rith/'ro-si-to'sis) increase in the total red cell mass secondary to any of a number of nonhematopoietic systemic disorders in response to a known stimulus (*secondary polycythemia* [q.v.]), in contrast to erythremic or primary polycythemia (*polycythemia vera*). **leukemic e.**, **e. megalosplen'ica**, *polycythemia vera*. **stress e.**, see under *polycythemia*.

erythrocyturia (ě-rith/'ro-si-tu're-ah) hematuria.

erythrodegenerative (ě-rith/'ro-de-je'n'er-a'tiv) characterized by degeneration of erythrocytes.

erythroderma (ě-rith/'ro-der'mah) [*erythro-* + Gr. *derma* skin] abnormal redness of the skin, usually applied to a condition of abnormal redness over widespread areas of the body, a phase of exfoliative dermatitis. **congenital ichthyosiform e.**, a condition now recognized as two distinct diseases, one bullous (with dominant inheritance) and the other nonbullous (with recessive inheritance); see *epidermolytic hyperkeratosis* (the bullous form) and *lamellar ichthyosis* (the nonbullous form). Called also *e. ichthyosiforme congenitum*. **e. desquamati'vum**, a condition affecting chiefly newborn breast-fed infants, resembling and probably identical with severe seborrheic dermatitis, and characterized by generalized exfoliative dermatitis and marked erythroderma; called also *Leiner's disease*. **e. ichthyosifor'me congen'itum**, congenital ichthyosiform *e. lymphomatous e.*, widespread redness of the skin occurring as a manifestation of lymphoma. **maculopapular e.**, a reddish eruption composed of macules and papules. **e. psoriat'icum**, a generalized psoriasis vulgaris, showing the clinical characteristics of exfoliative dermatitis. **Sézary e.**, see under *syndrome*.

erythrodermia (ě-rith/'ro-der'me-ah) erythroderma.

erythrodextrin (ě-rith/'ro-dek'strin) a dextrin, *e*-dextrin, which is turned red by iodine and changed by various digestive enzymes into maltose.

erythrodontia (ě-rith/'ro-don'she-ah) [*erythro-* + Gr. *odont* tooth] reddish brown pigmentation of the teeth.

erythrogen (ě-rith/'ro-je'n) a fatty, crystalline compound from diseased bile.

erythrogenesis (ě-rith/'ro-je'n'ě-sis) the production of erythrocytes. **e. imperfec'ta**, congenital hypoplastic anemia, def. 1.

erythrogenic (ě-rith/'ro-je'n'ik) [*erythro-* + Gr. *gennan* to produce] 1. producing erythrocytes. 2. producing a sensation of red. 3. producing or causing erythema.

erythrogone (ě-rith/'ro-gōn) promegaloblast.

erythrogonium (ě-rith/'ro-go'ne-um) [*erythrocyte* + Gr. *gonē* seed] promegaloblast.

erythrogranulose (ě-rith/'ro-gran'u-lōs) an amyloextrin colored red by iodine.

erythroid (er/'i-throid) 1. of a red color; reddish. 2. pertaining to the developmental series of cells ending in erythrocytes.

β-erythroidine (ě-rith/'roi-din) an alkaloid, C₁₆H₁₉NO₃ from *Erythrina americana*; it has a curare-like action.

erythrocatylsis (ě-rith/'ro-kah-tal'i-sis) [*erythro-* + Gr. *katalysis* dissolution] the dissolution of erythrocytes; erythrocytolysis.

erythrokeratoderma (ě-rith/'ro-ker'ah-to-der'me-ah) a reddening and hyperkeratosis of the skin. **e. figura'ta varia'bilis**, **e. varia'bilis**, a rare hereditary disorder transmitted as an autosomal dominant trait and characterized by circumscribed erythematous and hyperkeratotic plaques on the skin which vary in size and shape within hours or days. They appear shortly after birth and persist into adolescence or adulthood.

erythrokinetics (ě-rith/'ro-ki-net'iks) [*erythrocyte* + Gr. *kinētikos* of or for putting in motion] the quantitative, dynamic study of *in vivo* production and destruction of erythrocytes.

erythrol (er/'i-throl) erythritol. **e. tetranitrate**, erythrityl tetranitrate.

erythrolabe (ě-rith/'ro-lāb) [*erythro-* + Gr. *lambanein* to take] name proposed for the pigment in retinal cones that is more sensitive to the red range of the spectrum than are the other pigments (chlorolabe and cyanolabe).

erythrolein (er/'i-thro'le-in) the ether-soluble fraction of the acid-precipitable part of the water-soluble pigments of litmus, occurring as a red oily substance.

erythroleukemia (ě-rith/'ro-lu-ke'me-ah) a malignant blood dyscrasia, one of the myeloproliferative disorders, characterized by neoplastic proliferation of erythroblastic and myeloblastic elements, with atypical erythroblasts and myeloblasts in the peripheral blood, and showing a variable (acute or chronic) clinical course. Called also *di Guglielmo's disease* or *syndrome*. Cf. *erythremic myelosis*.

erythroleukoblastosis (ě-rith/'ro-lu'ko-blas-to'sis) icterus gravis neonatorum.

erythroleukosis (ě-rith/'ro-lu-ko'sis) 1. a condition seen in malaria in which the erythrocytes are changed into brassy bodies. 2. erythroblastosis, def. 2.

erythroleukothrombocythemia (ě-rith/'ro-lu/'ko-throm/'bo-si-the'me-ah) di Guglielmo's term for hyperplasia of the erythroblastic, leukoblastic, and megakaryocytic tissue, with the appearance of immature cells in the blood.

erythrolitmin (e-rith/'ro-lit'min) the alcohol-soluble fraction of the acid-precipitable part of the water-soluble pigments of litmus, occurring as a bright red powder.

erythrolysin (er/'i-thro/'i-sin) erythrocytolysin.

erythrolysis (er/'i-thro/'i-sis) erythrocytolysis.

erythromania (ě-rith/'ro-ma/'ne-ah) [erythro- + Gr. *mania* madness] excessive and uncontrollable blushing.

erythromelalgia (ě-rith/'ro-mel-al/'je-ah) [erythro- + Gr. *melos* limb + *-algia*] a disease affecting chiefly the extremities of the body, the feet more often than the hands, and marked by paroxysmal, bilateral vasodilatation, particularly of the extremities, with burning pain, and increased skin temperature and redness; called also *erythromelgia*, *acromelalgia*, and *Gerhardt's*, *Mitchell's*, or *Weir Mitchell's disease*. **e. of the head**, a severe recurring headache caused by vascular dilatation, both induced by and cured by doses of histamine.

erythrometer (er/'i-throm/'ē-ter) [erythro- + Gr. *metron* measure] 1. an instrument or color scale for measuring degrees of redness. 2. erythrocytometer.

erythrometry (er/'i-throm/'ē-tre) 1. the measurement of the degree of redness. 2. erythrocytometry.

erythromycin (ě-rith/'ro-mi/'sin) [USP] an intermediate spectrum macrolide antibiotic, C₃₇H₆₇NO₁₃, produced by *Streptomyces erythreus*, occurring as a slightly yellow, crystalline powder, effective against most gram-positive and certain gram-negative bacteria, such as *Neisseria* and *Hemophilus influenzae*, and against spirochetes, some rickettsias, and *Entamoeba*, and highly effective against *Mycoplasma pneumoniae*; used in the treatment of infections due to susceptible organisms, especially in patients allergic to penicillin, in penicillin-resistant infections, and in legionnaire's disease, administered orally or topically. **e. B**, berythromycin. **e. estolate** [USP], the lauryl sulfate ester of propionyl erythromycin, C₄₀H₇₁NO₁₄·C₁₂H₂₅O₄S, occurring as a white, crystalline powder, having the same actions and uses as the base; administered orally. **e. ethylcarbonate**, a salt of erythromycin, C₄₀H₇₁NO₁₅, used for oral administration. **e. ethylsuccinate** [USP], a salt of erythromycin, C₄₃H₇₅NO₁₆, occurring as a white or slightly yellow crystalline powder, having the same actions and uses as the base; administered orally or intramuscularly. **e. gluceptate** [USP], a salt of erythromycin, C₃₇H₆₇NO₁₃·C₇H₁₅O₈, occurring as a white powder, having the same actions and uses as the base; administered by intravenous infusion. **e. lactobionate** [USP], a salt of erythromycin, C₃₇H₆₇NO₁₃·C₁₂H₂₂O₁₂, occurring as white or slightly yellow crystals or powder, having the same actions and uses as the base; administered by intravenous infusion. **e. propionate**, a salt of erythromycin, C₄₀H₇₁NO₁₄, suitable for oral use. **e. propionate lauryl sulfate**, former name for *e. estolate*. **e. stearate** [USP], a salt of erythromycin, C₃₇H₆₇NO₁₃·C₁₈H₃₅O₂, suitable for oral use.

erythromyeloblastosis (ě-rith/'ro-mi/'ē-lo-blas-to/'sis) a neoplastic disease of chickens caused by a fowl tumor virus.

erythron (er/'i-thron) [Gr. *erythros* red] the circulating erythrocytes in the blood, their precursors, and all the elements of the body concerned in their production; it is the counterpart of the leukon and thrombon.

erythroneocytosis (ě-rith/'ro-ne/'o-si-to/'sis) [erythro- + Gr. *neos* new + *kytos* hollow vessel] the presence of immature erythrocytes in the blood.

erythronoclastic (ě-rith/'ro-no-klas/'tik) causing lysis or destruction of erythron.

erythrophagocyte (ě-rith/'ro-par/'ah-sit) a parasite of erythrocytes.

erythropathy (er/'i-throp/'ah-the) [erythro- + Gr. *pathos* disease] an archaic term for any disorder of the erythrocytes.

erythropenia (ě-rith/'ro-pe/'ne-ah) [erythro- + Gr. *penia* poverty] deficiency in the number of erythrocytes; called also *erythrocytopenia*.

erythrophage (ě-rith/'ro-faj) [erythro- + Gr. *phagein* to eat] a phagocyte that takes up erythrocytes and blood pigments.

erythrophagia (ě-rith/'ro-fa/'je-ah) erythrocytophagy.

erythrophagocytosis (ě-rith/'ro-fag/'o-si-to/'sis) erythrocytophagy.

erythrophagous (er/'i-throf/'ah-gus) erythrocytophagous.

erythropheresis (ě-rith/'ro-fē-re/'sis) [erythro- + Gr. *aphairesis* removal] erythrocytapheresis.

erythrophil (ě-rith/'ro-fil) [erythro- + Gr. *philein* to love] 1. a cell or other element that is easily stained red. 2. erythrophilous.

erythrophilous (er/'i-throf/'i-lus) easily stained with red.

Erythrophloeum (ě-rith/'ro-fle/'um) [erythro- + Gr. *phloios* bark] a genus of leguminous trees. *E. guineen'se* affords casca or Mancona bark, an African ordeal poison.

erythrophobia (ě-rith/'ro-fo/'be-ah) [erythro- + *phobia*] 1. a neurotic manifestation marked by blushing on the slightest provocation. 2. morbid fear of blushing. 3. morbid aversion to red.

erythrophobic (ě-rith/'ro-fo/'bik) having no affinity for red dye (acid fuchsin).

erythrophore (ě-rith/'ro-fōr) [erythro- + Gr. *phoros* bearing] a chromatophore containing granules of a red or brown alcohol-resistant pigment; called also *allophore*.

erythrophose (ě-rith/'ro-fōz) [erythro- + Gr. *phōs* light] any red phase.

erythrophyll (ě-rith/'ro-fil) [erythro- + Gr. *phyllon* leaf] a red coloring matter occurring in plants.

erythropia (er/'i-thro/'pe-ah) erythroptosis.

erythroplasia (ě-rith/'ro-pla/'ze-ah) a condition of the mucous membrane characterized by erythematous papular lesions. **e. of Queyrat**, squamous cell carcinoma in situ that manifests as a circumscribed, velvety, erythematous papular lesion on the glans penis, coronal sulcus, or prepuce, leading to scaling and superficial ulceration. **Zoon's e.**, a benign condition similar to erythroplasia of Queyrat, occurring on the mucosal and cutaneous surfaces of the glans penis (plasma cell balanitis) or vulva (plasma cell vulvitis); it is characterized by epidermal atrophy, spongiosis, and plasma cell infiltration of the dermis.

erythroplastid (ě-rith/'ro-plas/'tid) a red blood cell of mammalian animals, characterized by having no nucleus.

erythropoiesis (ě-rith/'ro-poi-e/'sis) [erythro- + Gr. *poiēsis* making] the production of erythrocytes.

erythropoietic (ě-rith/'ro-poi-e/'ik) pertaining to, characterized by, or promoting erythropoiesis.

erythropoietin (ě-rith/'ro-poi/'ē-tin) a glycoprotein hormone secreted chiefly by the kidney in the adult and by the liver in the fetus, which acts on stem cells of the bone marrow to stimulate red blood cell production (erythropoiesis).

erythroprosopalgia (ě-rith/'ro-pros/'o-pal/'je-ah) [erythro- + Gr. *prosōpon* face + *-algia*] a nervous disorder, analogous to erythromelalgia, marked by redness and pain in the face.

erythroptosis (er/'i-throp/'se-ah) [erythro- + Gr. *opsis* vision + *-ia*] a visual defect in which all objects appear to have a red tinge.

erythroptsin (er/'i-throp/'sin) [erythro- + Gr. *opsis* vision] rhodopsin.

erythroptknosis (ě-rith/'ro-pik-no/'sis) [erythro- + *pyknosis*] pyknosis.

erythrorrhesis (ě-rith/'ro-rek/'sis) [erythro- + Gr. *rhēxis* rupture] erythrocytorrhesis.

erythrose (er/'i-thrōs) one of the aldotetroses. **e. péríbuc-calc pigmentaire**, Brocq's name for a condition marked by erythema and brownish pigmentation around the mouth and on the chin and cheeks, developing in apparently normal girls at puberty, and waxing and waning with each menstrual period. A photodynamic substance in cosmetics is suspected to be the causative agent. Called also *erythrosis pigmentata faciei*.

erythrosedimentation (ě-rith/'ro-sed/'i-men-ta/'shun) the sedimentation of erythrocytes.

erythrosin (ě-rith/'ro-sin) a red compound, C₁₃H₁₈O₆N₂, used as a histologic stain.

erythrosine sodium (ě-rith/'ro-sin) [USP] chemical name: 3',6'-dihydroxy-2',4',5',7'-tetraiodospiro [isobenzofuran-1(3*H*),9'-[9*H*]xanthene]-3-one disodium salt monohydrate. A coloring agent, C₂₀H₆I₄Na₂O₅·H₂O, occurring as a red or brownish red powder; used to disclose plaque on teeth; applied topically in solution, or tablets containing erythrosine sodium are chewed, after which the mouth is rinsed with water.

erythrosis (er/'i-thro/'sis) 1. a reddish or purplish discoloration of the skin and mucous membranes seen in polycythemia vera. 2. hyperplasia of the hematopoietic tissue. **e. pigmenta'ia fa'ciei**, erythrose peribuccale pigmentaire.

erythrostatics (e-rith/'ro-sta/'sis) the stoppage of erythrocytes in the capillaries, as in sickle cell anemia.

erythrothioneine (ě-rith/'ro-thi/'o-ne/'in) ergothioneine.

erythrulose (ě-rith/'roo-lōs) a ketose sugar, C₄H₈O₄, formed by the oxidation of erythrol.

erythruria (er/'i-throo/'re-ah) [erythro- + Gr. *ouron* urine + *-ia*] the passing of red urine.

Es chemical symbol for einsteinium.

es (es) [L. *esse* to be] Nietzsche's term for the metaphysical incomprehensible something at the very bottom of human nature, being lower than the conscious ego and even lower than the freudian subconscious.

Esbach's method, reagent (test) (es/'bahks) [Georges Hubert Esbach, a physician in Paris, 1843-1890] see under *method* and *reagent*.

escape (es-kāp') the act of becoming free. **nodal e.**, extrasystole in which the atrioventricular node is the pacemaker. **vagal e.**, the exhaustion of or adaptation to neural chemical mediators in the regulation of systemic arterial pressure. **ventricular e.**, extrasystole in which a ventricular pacemaker be-

comes effective before the sinoatrial pacemaker; it usually occurs with slow sinus rates and often, but not necessarily, with increased vagal tone.

escarronodulaire (es'kar-ro'nod'u-lār') [Fr.] boutonneuse fever.

eschar (es'kar) [Gr. *eschara* scab] 1. a slough produced by a thermal burn, by a corrosive application, or by gangrene. 2. the lesion seen in certain rickettsioses; see *tache noire*. **neuropathic e.** (*obs.*), a decubitus ulcer in disease of the spinal cord.

escharotic (es-kah-rot'ik) [Gr. *escharōtikos*] 1. corrosive; capable of producing an eschar. 2. a corrosive or caustic agent.

Escherich's bacillus, sign (reflex), test (esh'er-iks) [Theodor Escherich, German physician, 1857-1911] see *Escherichia coli*, and under *sign* and *tests*.

Escherichia (esh'er-i'ke-a) a genus of microorganisms of the tribe Escherichieae, family Enterobacteriaceae, order Eubacteriales, made up of gram-negative, motile or nonmotile short rods, widely distributed in nature, and occasionally pathogenic for man. **E. aurescens**, a species of organisms isolated from human feces, from an infected eye, and from contaminated water supplies, characterized by the ability to produce yellow-orange carotenoid pigments. **E. coli**, a species of organisms constituting the greater part of the intestinal flora of man and other animals. Characteristically positive to indol and methyl red tests, and negative to the Voges-Proskauer and citrate tests. Divided into physiological types on the basis of sucrose and salicin fermentation by some workers. Separable into serotypes on the basis of distribution of heat-stable O antigens, envelope antigens of varying heat stability, and flagellar antigens that are heat labile. Usually nonpathogenic, but pathogenic strains, often hemolytic, and predominantly certain serotypes are common. Pathogenic strains are the cause of scours in calves and the hemorrhagic septicemia Winckel's disease in newborn children, are one of the most frequently encountered causes of urinary tract infection and of epidemic diarrheal disease, especially in children, and are found infrequently in localized suppurative processes. They often become the predominant bacteria in the flora of the mouth and throat during antibiotic therapy. See Plate VII, accompanying *bacterium*. Called also *colibacillus* or *colon bacillus*, and *Escherich's bacillus*. **E. freundi**, a species normally found in soil and water, as well as in the intestinal tract of man and other animals; certain strains have been confused with salmonellas. **E. intermedia**, a species widely distributed in nature, being found, like others of the genus, in soil, water, and the intestinal tract of man and other animals.

Escherichieae (esh'ē-rik'e-e) a tribe of the family Enterobacteriaceae, order Eubacteriales, made up of motile or nonmotile rods that ferment glucose and lactose with the production of acid and visible gas. It comprises the coliform bacteria and includes five genera, *Aerobacter*, *Alginobacter*, *Escherichia*, *Klebsiella*, and *Paracolibaculum*.

eschrolalia (es-kro-la'le-ah) [Gr. *aischros* shameful + *lalia* babble] coprolalia.

Eschscholtzia (esh-skōlt'ze-ah) a genus of papaveraceous plants. *E. californica* Cham. (California poppy) is a hypnotic and anodyne.

escin (es'kin) a strongly hemolytic saponin derived from horse-chestnut.

escorcin (es-kor'sin) a brown powder, C₆H₆O₄, prepared from a substance extracted from the horse chestnut; used in detecting corneal and conjunctival lesions.

Escudero's test (es-koo-da'rōz) [Pedro Escudero, Buenos Aires physician, born 1877] see under *test*.

esculapian (es'ku-la'pe-an) aesculapian.

esculent (es'ku-lent) edible; fit for eating.

esculin (es'ku-lin) [L. *aesculus* horse-chestnut] a coumarin glycoside, C₆H₁₁O₆·C₆H₄O(OH)·OH, from *Aesculus hippocastanum* L. (Hippocastanaceae) (horse-chestnut) bark, having febrifuge properties.

escutcheon (es-kuch'an) [L. *scutum* a shield] the pattern of distribution of the pubic hair.

eseptate (e-sep'tāt) having no septa.

eserine (es'er-in) [*esere*, an African name of the Calabar bean] physostigmine.

E.S.F. erythropoietic stimulating factor.

Esidrix (es'i-driks) trademark for a preparation of hydrochlorothiazide.

-esis (e'sis) a word termination denoting state or condition; see *-sis*.

Eskabarb (es'kah-barb) trademark for a preparation of phenobarbital.

Eskadiazine (es'kah-di'ah-zēn) trademark for a preparation of sulfadiazine.

Eskalith (es'kah-lith) trademark for a preparation of lithium carbonate.

esmarch (es'mark) an Esmarch bandage.

Esmarch's bandage, tourniquet, tube (es'marks) [Johann

Friedrich August von Esmarch, German surgeon, 1823-1908] see under *bandage*, *tourniquet*, and *tube*.

eso- [Gr. *esō* inward] a combining form meaning within.

esocataphoria (es'o-kat-ah-fo're-ah) [*eso-* + *cataphoria*] the condition in which the visual axis turns downward and inward.

esocine (es'o-sin) a protamine from the sperm of the pike, *Esox lucius*.

esodeviation (e'so-de've-a'shun) a turning inward.

esodic (ē-sod'ik) [Gr. *es* toward + *hodos* way] (*obs.*) afferent, as esodic nerves.

esoethmoiditis (es'o-eth'moi-di'tis) [*eso-* + *ethmoiditis*] inflammation within the sinuses of the ethmoid bone.

esogastritis (es'o-gas-tri'tis) [*eso-* + *gastritis*] inflammation of the mucous membrane of the stomach.

esophagalga (ē-sof'ah-gal'je-ah) [*esophagus* + *-algia*] pain in the esophagus.

esophageal (ē-sof'ah-je'al, ē-so-fa'je-al) pertaining to or belonging to the esophagus.

esophagectasia (ē-sof'ah-jek-ta'se-ah) [*esophagus* + Gr. *ektasis* distention + *-ia*] dilatation of the esophagus.

esophagectasis (ē-sof'ah-jek'tah-sis) esophagectasia.

esophagectomy (ē-sof'ah-jek'to-me) [*esophagus* + Gr. *ektomē* excision] excision of a portion of the esophagus.

esophagism (ē-sof'ah-jism) esophagospasm. **hiatal e.**, cardi-spasm.

esophagismus (ē-sof'ah-jiz'mus) esophagospasm.

esophagitis (ē-sof'ah-jit'is) [*esophagus* + *-itis*] inflammation of the esophagus. **e. dissecans superficialis**, infection of the esophagus, with sloughing of the squamous epithelial lining in the form of a tubular cast. **peptic e.**, inflammation of the esophagus caused by a reflux of acid and pepsin from the stomach; usually associated with hiatus hernia, duodenal ulcer, indwelling tubes, or prolonged vomiting. **reflux e.**, peptic e. **thrush e.**, esophagitis due to extension of oral thrush.

esophagobronchial (ē-sof'ah-go-brong'ke-al) pertaining to or communicating with the esophagus and a bronchus.

esophagocardiomyotomy (ē-sof'ah-go-kar'de-o-mi-ot'o-me) incision through the muscular coats of the esophagus and cardiac part of the stomach, the incision extending equal distances above and below the esophagogastric junction; done in achalasia of the esophagus. Called also *cardiomyotomy*.

esophagocele (ē-sof'ah-go-sēl') [*esophagus* + Gr. *kēlē* hernia] abnormal distention of the esophagus; hernia of the esophagus: protrusion of the mucous and submucous coats of the esophagus through a rupture in the muscular coat, producing a pouch or diverticulum.

esophagocologastrostomy (ē-sof'ah-go-ko'lo-gas-tros'to-me) surgical creation of a new communication between the esophagus and stomach, with interposition of a segment of colon.

esophagocoloplasty (ē-sof'ah-go-ko'lo-plas'te) excision of a portion of the esophagus and its replacement by a segment of the colon.

esophagoduodenostomy (ē-sof'ah-go-du'o-de-nos'to-me) surgical anastomosis between the esophagus and the duodenum.

esophagodynia (ē-sof'ah-go-din'e-ah) [*esophagus* + Gr. *odynē* pain] pain in the esophagus.

esophagoenterostomy (ē-sof'ah-go-en'ter-os'to-me) [*esophagus* + Gr. *enteron* intestine + *stomoun* to provide with an opening, or mouth] formation of an anastomosis between the esophagus and small intestine, usually by surgical means following total gastrectomy.

esophagoesophagostomy (ē-sof'ah-go-ē-sof'ah-gos'to-me) anastomosis between two formerly remote parts of the esophagus.

esophagofundopexy (ē-sof'ah-go-fun'do-pek'se) surgical fixation of the fundus of the stomach to the esophagus.

esophagogastratomy (ē-sof'ah-go-gas-trek'to-me) excision of the esophagus and stomach, usually the distal portion of the esophagus and the entire stomach.

esophagogastric (ē-sof'ah-go-gas'trik) pertaining to the esophagus and the stomach.

esophagogastric anastomosis (ē-sof'ah-go-gas'tro-ah-nas'to-mo'sis) surgical formation of an anastomosis between the esophagus and the stomach.

esophagogastromyotomy (ē-sof'ah-go-gas'tro-mi-ot'o-me) incision through the muscular coats of the esophagus and stomach.

esophagogastroplasty (ē-sof'ah-go-gas'tro-plas'te) plastic repair of the esophagus and stomach; cardioplasty.

esophagogastriscopy (ē-sof'ah-go-gas-tros'ko-pe) [*esophagus* + Gr. *gastēr* stomach + *skopein* to examine] endoscopic examination of the esophagus and the stomach.

esophagogastrostomy (ē-sof'ah-go-gas-tros'to-me) [*esophagus* + Gr. *gastēr* stomach + *stomoun* to provide with an opening, or mouth] surgical creation of an artificial communication between the stomach and esophagus.

esophagogram (ē-sof'ah-go-gram) a roentgenogram of the esophagus.

esophagography (ě-sof''ah-gog''rah-fe) roentgenography of the esophagus.

esophagojejuno-gastrostomosis (ě-sof''ah-go-je''ju-no-gas''-tros-to-mo'sus) the operation of mobilizing a loop of jejunum and implanting its proximal end in the esophagus and its distal end in the stomach; done in cases of esophageal stricture.

esophagojejuno-gastrostomy (ě-sof''ah-go-je-ju''no-gas-tros'-to-me) esophagojejuno-gastrostomosis.

esophagojejunoplasty (ě-sof''ah-go-je-joo''no-plas''te) restoration of the esophagus with a segment of jejunum.

esophagojejunostomy (ě-sof''ah-go-je-jun-os'to-me) surgical anastomosis between the esophagus and the jejunum.

esophagolaryngectomy (ě-sof''ah-go-lar''in-jek'to-me) en bloc excision of the upper cervical esophagus and larynx.

esophagology (ě-sof''ah-gol'o-je) the study and treatment of diseases of the esophagus.

esophagomalacia (ě-sof''ah-go-mah-la'she-ah) [esophagus + Gr. *malakia* softness] softening of the walls of the esophagus.

esophagometer (ě-sof''ah-gom''ē-ter) [esophagus + Gr. *metron* measure] an instrument for measuring the length of the esophagus.

esophagomycosis (ě-sof''ah-go-mi-ko'sis) [esophagus + Gr. *mykēs* fungus] any disease of the esophagus caused by fungi.

esophagomyotomy (ě-sof''ah-go-mi-ot'o-me) incision through the muscular coat of the esophagus, the term usually referring clinically to incision through the muscular coat of the distal part of the esophagus.

esophagopharynx (ě-sof''ah-go-fār'inks) the distal portion of the pharynx where the fibers of the inferior constrictor are arranged in circular form.

esophagoplasty (ě-sof''ah-go-plas''te) [esophagus + Gr. *plassein* to form] a plastic operation on the esophagus.

esophagoplication (ě-sof''ah-go-pli-ka'shun) the operation of narrowing the esophagus by folding in its wall.

esophagoptosis (ě-sof''ah-gop-to'sis) [esophagus + Gr. *ptōsis* falling] prolapse of the esophagus.

esophagorespiratory (ě-sof''ah-go-rě-spir'ah-to're) pertaining to or communicating with the esophagus and respiratory tract (the trachea or a bronchus).

esophagoscope (ě-sof''ah-go-skōp) [esophagus + Gr. *skopein* to examine] an instrument for inspecting the lumen of the esophagus and carrying out diagnostic and therapeutic maneuvers such as taking biopsy specimens and removing foreign bodies.

esophagoscopy (ě-sof''ah-gos'ko-pe) endoscopic examination of the esophagus.

esophagospasm (ě-sof''ah-go-spazm'') [esophagus + *spasm*] spasm of the esophagus.

esophagostenosis (ě-sof''ah-go-stě-no'sis) [esophagus + Gr. *stenōsis* constriction] stricture or constriction of the esophagus.

esophagostoma (ě-sof''ah-gos'to-mah) [esophagus + Gr. *stoma* mouth] the external opening of an artificial passage leading into the esophagus.

esophagostomiasis (ě-sof''ah-go-sto-mi'ah-sis) infestation with nematodes of the genus *Oesophagostomum*.

esophagostomy (ě-sof''ah-gos'to-me) [esophagus + Gr. *stomoun* to provide with an opening, or mouth] the creation of an opening into the esophagus.

esophagotome (ě-sof''ah-got'o-tōm) a cutting instrument for use in esophagotomy.

esophagotomy (ě-sof''ah-got'o-me) [esophagus + Gr. *tomē* a cutting] incision of the esophagus.

esophagotracheal (ě-sof''ah-go-tra'ke-al) pertaining to or communicating with esophagus and trachea.

esophagram (ě-sof''ah-gram) esophagogram.

esophagus (ě-sof''ah-gus) [Gr. *oisophagos*, from *oisein* to carry + *phagēma* food] [NA] the musculomembranous passage extending from the pharynx to the stomach. Called also *gullet*. **Barrett's e.**, see under *syndrome*.

esophoria (es'o-fo're-ah) [eso- + Gr. *phorein* to bear] a form of heterophoria in which there is a deviation of the visual axis of an eye toward that of the other eye after the visual fusional stimuli have been eliminated; called also *esodeviation*.

esophoric (es'o-for'ik) pertaining to or characterized by esophoria.

esosphenoiditis (es'o-sfe''noi-di'tis) [eso- + *sphenoid* + -itis] osteomyelitis of the sphenoid bone.

esotoxin (es'o-tok'sin) (*obs.*) endotoxin.

esotropia (es'o-tro'pe-ah) [eso- + Gr. *trepein* to turn] strabismus in which there is manifest deviation of the visual axis of an eye toward that of the other eye, resulting in diplopia. Called also *cross-eye* and *convergent* or *internal strabismus*.

esotropic (es'o-trop'ik) pertaining to or characterized by esotropia.

ESP extrasensory perception.

espnoc (esp-no'ik) [Gr. *es* into + *pnoē* vapor, blast] pertaining to the injection of vapors or gases.

esponja (es-pong'ah) cutaneous habronemiasis.

esproquin hydrochloride (es'pro-kwin) chemical name: 2-[3-(ethylsulfinyl)propyl]-1,2,3,4-tetrahydroisoquinoline hydrochloride; an adrenergic, C₁₄H₂₁NOS·HCl.

espundia (es-poon'de-ah) mucocutaneous leishmaniasis.

esquillectomy (es'kwil-lek'to-me) [Fr. *esquille* fragment + Gr. *ektomē* excision] excision of fragments of bone following fractures caused by projectiles.

E.S.R. erythrocyte sedimentation rate.

essence (es'ens) [L. *essentia* quality or being] 1. that which is or necessarily exists as the cause of the properties of a body. 2. a solution of a volatile oil in alcohol. **e. of peppermint**, peppermint spirit; see under *spirit*.

essentia (ě-sen'she-ah) [L.] essence.

essential (ě-sen'shal) [L. *essentialis*] 1. constituting the necessary or inherent part of a thing; giving a substance its peculiar and necessary qualities. 2. idiopathic; self-existing; having no obvious external exciting cause; said of a disease. 3. indispensable; required in the diet, as essential fatty acids.

Esser's graft, operation (es'erz) [Johannes Fredericus Samuel Esser, Holland surgeon, 1878-1946] see under *graft*, and see *epithelial inlay*, under *inlay*.

E.S.T. electroshock therapy; see *electroconvulsive therapy*, under *therapy*.

ester (es'ter) any compound formed from an alcohol and an acid by the removal of water; the esters are named as if they were salts of the acid. Called also *compound ether*. **acetoacetic e.**, the ethyl ester of acetoacetic acid, CH₃·CO·CH₂·CO·O·C₂H₅, a colorless liquid used for synthesis of a great variety of compounds. **Cori e.**, glucose 1-phosphate; a glucopyranose 1-monophosphate, CH₂·OH·CH(OH)₃·CHO·PO(OH)₂. See *hexosephosphoric esters*.

Emlden e., glucopyranose 6-phosphoric acid; see *hexosephosphate*. **Harden-Young e.**, fructofuranose diphosphate, (OH)₂PO·CH₂O·CHO(CHOH)₂CH·CH₂O·PO(OH)₂; called

also *hexose diphosphate*. See *hexosephosphoric esters*. **hexosephosphoric e's**, esters concerned in the chemical processes of muscle contraction and the fermentation of glucose by yeast; they are the Cori ester, the Harden-Young ester, the Neuberg ester, and the Robison ester. **Neuberg e.**, fructose 6-phosphate, a fructofuranose monophosphate, CH₂OH·CHO·(CHOH)₂CH·

CH₂O·PO(OH)₂. See *hexosephosphoric e's*. **Robison e.**, glucose 6-phosphate; a glucopyranose 6-monophosphate, CHOH(CHOH)₃·CH·CH₂O·PO(OH)₂. See *hexosephosphoric e's*.

esterapenia (es'ter-ah-pe'ne-ah) [*esterase* + Gr. *penia* poverty] deficiency in the cholinesterase content of the blood.

esterase (es'ter-ās) an enzyme that catalyzes the hydrolysis of an ester into its alcohol and acid. **C1 e.**, the activated form of complement component C1, which acts on components C4 and C2 to form C3 convertase.

esterification (es-ter''fi-fi-ka'shun) the process of converting an acid into an ester.

esterify (es-ter'fi-fi) to combine with an alcohol with elimination of a molecule of water, forming an ester.

esterize (es'ter-iz) to convert, or be converted, into an ester.

esterolysis (es'ter-ol'i-sis) [*ester* + Gr. *lysis* dissolution] the hydrolysis of an ester into its alcohol and acid.

esterolytic (es'ter-o-lit'ik) effecting or pertaining to esterolysis.

Estes' operation (es'tēz) [William Lawrence Estes, Jr., American surgeon, 1885-1940] see under *operation*.

esthematology (es'them-ah-tol'o-je) [Gr. *aisthēma* sensation + -logy] the science of the senses and sense organs.

esthesia (es-the'ze-ah) [Gr. *aisthēsis* perception] perception, feeling, or sensation.

esthetic (es-the'sik) [Gr. *aisthēsis* perception] pertaining to the mental perception of sensations.

esthesio- (es-the'ze-o) [Gr. *aisthēsis* perception, sensation] a combining form denoting relationship to feeling or to the perceptive faculties. Also spelled *aesthesio-*.

esthesioblast (es-the'ze-o-blast'') [*esthesio-* + Gr. *blastos* germ] a ganglioblast; an embryonic cell of the spinal ganglia.

esthesiodic (es-the'ze-od'ik) esthesodic.

esthesiogen (es-the'ze-o-jen) [*esthesio-* + Gr. *gennan* to produce] a substance which is supposed to produce symptoms of excitation when brought near or into a sensory zone.

esthesiogenic (es-the'ze-o-jen'ik) producing sensation.

esthesiology (es-the'ze-ol'o-je) [*esthesio-* + -logy] the science of sensation and the senses.

esthesiomene (es-the'ze-om'ē-ne) esthiomene.

esthesiometer (es-the'ze-om'ē-ter) [*esthesio-* + Gr. *metron* mea-

sure] an instrument for measuring tactile sensibility; tactometer.

esthesioneure (es-the'ze-o-nūr) [*esthesio-* + Gr. *neuron* nerve] a sensory neuron.

esthesioneuroblastoma (es-the'ze-o-nu'ro-blas-to'mah) a radiosensitive glioma occurring in the nasal cavity.

esthesioneurosis (es-the'ze-o-nu-ro'sis) [*esthesio-* + *neurosis*] any disorder of the sensory nerves.

esthionosus (es-the'ze-on'o-sus) [*esthesio-* + Gr. *nosos* disease] esthesioneurosis.

esthesiophysiology (es-the'ze-o-fiz'e-o'l'o-je) the physiology of sensation and the sense organs.

esthesodic (es'thē-zod'ik) [*esthesio-* + Gr. *hodos* path] conducting or pertaining to the conduction of sensory impulses.

esthetic (es-thet'ik) [Gr. *aisthēsis* sensation] 1. pertaining to sensation. 2. pertaining to beauty, or the improvement of appearance. Also spelled *aesthetic*.

esthetics (es-thet'iks) the branch of philosophy dealing with beauty. In dentistry, a philosophy concerned especially with the appearance of a dental restoration, as achieved through its color and/or form. Also spelled *aesthetics*.

esthiomene (es'the-om'ē-ne) [Gr. *esthiomenos* eroded] a chronic ulceration and elephantiasis of the labia and clitoris due to lymphogranuloma venereum.

Estinyl (es'ti-nil) trademark for a preparation of ethinyl estradiol.

estival (es'ti-val, ē-sti'val) [L. *aestivus*, from *aestas* summer] pertaining to or occurring in summer.

estivation (es'ti-va'shun) [L. *aestivus*, from *aestas* summer] the dormant state of decreased metabolism in which certain animal species, as some tropical amphibians, survive a hot, dry summer; summer dormancy. Cf. *hibernation*.

estivoautumnal (es'ti-vo-aw-tum'nal) pertaining to the summer and autumn; formerly applied, in the United States, to a form of malaria; see *falciparum malaria*, under *malaria*.

Estlander's operation (est'land-erz) [Jakob August Estlander, Finnish surgeon, 1831-1881] see under *operation*.

estolate (es'to-lāt) USAN contraction for propionate lauryl sulfate.

eston (es'ton) aluminum acetate.

Estrace (es'trās) trademark for a preparation of estradiol.

estradiol (es'trah-di'ol, es-tra'de-ol) chemical name: *estra-1,3,5(10)-triene-3,17β-diol*. The most potent naturally occurring ovarian and placental estrogen in human subjects, $C_{18}H_{24}O_2$, the chief functions of which are to prepare the uterus for implantation of the fertilized ovum and to induce and maintain the female secondary sex characteristics; it has also been isolated from hog ovaries and the urine of pregnant mares and has been produced semisynthetically. Estradiol exists in two isomeric forms: the most active isomer is *estradiol-17β* (formerly called β -estradiol), much less active *estradiol-17α* (formerly called α -estradiol). The official preparation [NF], occurring as white or creamy white, small crystals or crystalline powder, is administered by intramuscular injection or implanted subcutaneously in pellets. For functions and uses, see *estrogen*. Called also (rarely) *dihydroxyestrin*, *dihydrofolliculin*, and *dihydrotheelin*. **e. benzoate** [NF], an ester of estradiol, $C_{25}H_{28}O_3$, occurring as a white to creamy white, crystalline powder; injected intramuscularly in oil solution. **e. cypionate** [NF], chemical name: estradiol 17-cyclopentanepropionate. A white to practically white, crystalline powder, $C_{28}H_{36}O_3$, used intramuscularly as an estrogen. **e. dipropionate**, the dipropionyl ester of estradiol, which is said to be absorbed slowly. **e. enanthate**, an ester of estradiol, $C_{28}H_{36}O_3$, administered intramuscularly. **ethinyl e.** [USP], chemical name: 19-norpregna-1,3,5(10)-trien-20-yne-3,17α-diol. An orally effective semisynthetic derivative of estradiol, $C_{20}H_{24}O_2$, occurring as a white to creamy white, crystalline powder, which is one of the most potent estrogens. It is also used as the estrogen component in combination with progestins in many oral contraceptives. **e. undecylate**, an ester of estradiol, $C_{28}H_{44}O_3$, injected intramuscularly in oil solution. **e. valerate** [USP], an ester of estradiol, $C_{23}H_{32}O_3$, occurring as a white, crystalline powder; injected intramuscularly in oil solution.

estramustine (es'trah-mus'tēn) chemical name: 3-[bis(2-chloroethyl)carbamate]estra-1,3,5(10)-triene-3,17β-diol; an antineoplastic, $C_{23}H_{31}Cl_2NO_3$.

estrane (es'trān) the parent hydrocarbon, $C_{18}H_{30}$, of the estrogenic steroids.

estraptene (es'trah-pen'tah-ēn) a steroid nucleus with five double bonds and one methyl group, $C_{18}H_{20}$.

estratetraene (es'trah-tet'rah-ēn) a steroid nucleus with four double bonds and one methyl group, $C_{18}H_{22}$.

estratriene (es'trah-tri'ēn) a steroid nucleus with three double bonds and one methyl group, $C_{18}H_{24}$.

Estraval (es-trah-val) trademark for preparations of estradiol valerate.

estrazinol hydrobromide (es-trah'zi-nōl) chemical name:

(+)-3-methoxy-8-aza-19-nor-17α-1,3,5(10)-trien-20-yn-17-ol hydrobromide; an estrogen, $C_{20}H_{25}NO_2 \cdot HBr$.

estrenol (es'trē-nōl) a crystalline estrogenic steroid, $C_{18}H_{24}O$, 3-hydroxy $\Delta^{1,3,5}$ -estratriene.

estriasis (es-tri'ah-sis) oestriasis.

Estridae (es'tri-de) Oestridae.

estrin (es'trin) estrogen.

estrinization (es'trin-i-za'shun) production of the cellular changes in the vaginal epithelium characteristic of estrus.

estriol (es'tre-ol) chemical name: *estra-1,3,5(10)-triene-3,16α,17β-triol*. A reduction product of estradiol and estrone, $C_{18}H_{24}O_3$, having relatively weak estrogenic activity and detectable in high concentrations in the urine, especially human pregnancy urine. The official preparation [USP], rarely used clinically, occurring as a white, microcrystalline powder, is administered orally. For uses, see *estrogen*. Called also *trihydroxyestrin*.

estofurate (es-tro-fūr'āt) chemical name: 21,23-epoxy-19,24-dinorchola-1,3,5(10),7,20,22-hexaene-3,17α-diol 3-acetate; an estrogen, $C_{24}H_{26}O_4$.

estrogen (es'tro-jen) a generic term for estrus-producing steroid compounds; the female sex hormones. In humans, estrogen is formed in the ovary, the adrenal cortex, the testis, and the fetoplacental unit, and it has various functions in both sexes. It is responsible for the development of the female secondary sex characteristics, and during the menstrual cycle it acts on the female genitalia to produce an environment suitable for the fertilization, implantation, and nutrition of the early embryo. Estrogen is used in oral contraceptives and as a palliative in cancer of the breast after menopause, and of the prostate; other uses include the relief of the discomforts of menopause, inhibition of lactation, and treatment of osteoporosis, threatened abortion, ovarian disease, and severe menorrhagia. See also *estradiol*, *estrone*, and *estriol*. **conjugated e's** [USP], a mixture of the sodium salts of the sulfate esters of estrogenic substances, principally estrone and equilin, that are of the type excreted by pregnant mares, occurring as a buff-colored, amorphous powder; the actions and uses are those of estrogens (q.v.), administered orally. **esterified e's** [USP], a mixture of the sodium salts of esters of estrogenic substances, principally estrone, that are of the type excreted by pregnant mares, occurring as a white or buff-colored, amorphous powder; the actions and uses are those of estrogens (q.v.), administered orally.

estrogenic (es-tro-jen'ik) producing estrus; having the properties of, or similar to, an estrogen.

estrogenicity (es'tro-jē-nis'i-te) the quality of exerting or the ability to exert an estrus-producing or an estrogenic effect.

estrogenous (es-troj'ē-nus) estrogenic.

estrone (es'trōn) chemical name: 3-hydroxyestra-1,3,5(10)-triene-17-one. An oxidation product of estradiol, $C_{18}H_{22}O_2$, the first of the estrogens isolated in pure form, found in human pregnancy urine, male human urine, human plasma, mare pregnancy urine, stallion urine, human ovarian follicular fluid and placenta, and palm kernel oil; also produced synthetically. Less potent than estradiol but more so than estriol, it is secreted by the ovary but circulating estrone is for the most part derived from peripheral metabolism of estradiol and especially androstenedione. The official preparation [NF], occurring as small, white crystals or as a white to creamy white, crystalline powder, is administered by intramuscular injection. For uses, see *estrogen*. Called also *folliculin*, *ketohydroxyestrone*, *ketohydroxyestrin*, and *thelykinin*. **piperazine e. sulfate** [USP], chemical name: 3-(sulfooxy)estra-1,3,5(10)-trien-17-one compound with piperazine (1:1). A preparation of pure crystalline estrone, solubilized as the sulfate and stabilized with piperazine, occurring as a white to yellowish white, fine crystalline powder; for uses see *estrogen*.

estrophilin (es'tro-fil'in) a cell protein that acts as a receptor for estrogen, found in estrogenic target tissue and in estrogen-dependent tumors and metastases.

estrostilben (es'tro-stil'ben) diethylstilbestrol.

estrous (es'trus) pertaining to estrus.

estrua (es'troo-al) pertaining to estrus.

estruation (es'troo-a'shun) estrus.

Estrugenone (es'troo-jen'on) trademark for a preparation of estrone.

estrum (es'trum) estrus.

estrus (es'trus) [L. *oestros* gadfly; Gr. *oistros* anything that drives mad, any vehement desire] the recurrent, restricted period of sexual receptivity in female mammals other than human females, marked by intense sexual urge. See also *estrous cycle*, under *cycle*.

estuarium (es'tu-a're-um) [L.] a vapor bath.

e.s.u. electrostatic unit.

esylate (es'i-lāt) USAN contraction for ethanesulfonate.

Et ethyl group.

etafedrine hydrochloride (et-ah-fed'rīn) chemical name: α -[1-(ethylmethylamino)ethyl]benzylmethanol hydrochloride; an adrenergic, $C_{12}H_{19}NO \cdot HCl$, administered orally in the treatment of bronchial asthma.

etafilcon A (et/'ah-fil/'kon) chemical name: 2-hydroxyethyl methacrylate polymer with sodium methacrylate and 2-ethyl-2-(hydroxymethyl)-1,3-propanediol trimethacrylate; a hydrophilic contact lens material, $(C_6H_{10}O_5)_x \cdot (C_4H_8NaO_2)_y \cdot (C_{18}H_{26}O_6)_z$.

Etamon (et/'ah-mon) trademark for a preparation of tetraethylammonium chloride.

état (a-tah') [Fr.] state, condition. **é. criblé** (a-tah' krêb-la'), 1. a condition in which the necrotic Peyer's patches in typhoid fever are riddled with small, irregular perforations. 2. status cribralis. **é. lacunaire** (a-tah' lah-ku-nâr'), status lacunaris. **é. mammeloné** (a-tah' mah-mel-un-a'), hyperplasia of the mucous membrane of the stomach in chronic gastritis, resulting in the formation of small elevations. **é. marbré** (a-tah' mar-brâ'), status marmoratus. **é. vermoulu** (a-tah' vâ-moo-lu') ["worm-eaten state"], an irregularly ulcerated condition of the surface of the brain, sometimes seen in advanced arteriosclerosis.

etazolate hydrochloride (ê-taz/'o-lât) chemical name: 1-ethyl-4-[(1-methylethylidene) hydrazino]-1*H*-pyrazolo [3,4-*b*] pyridine-5-carboxylic acid ethyl ester monohydrochloride; a tranquilizer, $C_{14}H_{16}N_4O_2 \cdot HCl$.

Eternod's sinus (a-ter-nôz') [Auguste François Charles Eternod, Swiss histologist, 1854-1932] see under *sinus*.

eterobarb (ê-têr'o-barb) chemical name: 5-ethyl-1,3-bis(methoxymethyl)-5-phenyl-2,4,6(1*H*, 3*H*, 5*H*)-pyrimidinetrione; a barbiturate with anticonvulsant properties, $C_{16}H_{20}N_2O_5$.

ethacrynate sodium (eth-ah-kri/'nât) [USP], chemical name: [2,3-dichloro-4-(2-methylene-1-oxobutyl)phenoxy] acetic acid sodium salt. The sodium salt of ethacrynic acid, $C_{13}H_{11}Cl_2NaO_4$, used intravenously as a diuretic.

ethal (eth'al) cetyl alcohol.

ethambutol hydrochloride (ê-tham/'bu-tôl) [USP] chemical name: [*R*-(*R'*,*R'*)-2,2'-(1,2-ethanediyldiimino) bis-1-butanol dihydrochloride. An antibacterial, $C_{10}H_{24}N_2O_2 \cdot 2HCl$, occurring as a white crystalline powder, specifically effective against *Mycobacterium*, including *M. tuberculosis*; used in conjunction with one or more other antituberculous drugs in the treatment of pulmonary tuberculosis, administered orally.

Ethamide (eth/'ah-mid) trademark for a preparation of ethoxzolamide.

ethamivan (eth-am/'i-van') [USP] chemical name: *N,N*-diethyl-4-hydroxy-3-methoxybenzamide. A central nervous system stimulant and analeptic, $C_{12}H_{17}NO_3$, occurring as a white or practically white, crystalline powder; used as a respiratory stimulant, administered intravenously.

ethamsylate (ê-tham/'sî-lât) chemical name: 2,5-dihydroxybenzenesulfonic acid compound with *N*-ethylethanamine; a hemostatic agent, $C_6H_6O_5S \cdot C_4H_{11}N$.

ethanal (eth/'ah-nal) acetaldehyde.

ethane (eth/'ân) a hydrocarbon of the methane series, C_2H_6 , forming a constituent of natural gas, which occurs as a colorless, odorless, flammable gas.

ethanedial (eth-ân-di'al) glyoxal.

ethanol (eth/'ah-nol) alcohol.

ethanolamine (eth/'ah-nol/'ah-mên) monoethanolamine.

ethanolism (eth/'ah-nol/'izm) ethanol-induced hypoglycemia.

ethaverine hydrochloride (eth/'ah-ver/'ên) chemical name: 1-[(3,4-diethoxyphenyl)methyl]-6,7-diethoxyisoquinoline. The tetrahydroxy analogue of papaverine, $C_{24}H_{29}NO_4 \cdot HCl$, used as an antispasmodic in peripheral and vascular insufficiency associated with arterial spasm and as a smooth muscle relaxant in spasticity of the gastrointestinal and genitourinary tracts; administered orally.

ethchlorvynol (eth-klôr/'vî-nol) [USP] chemical name: 1-chloro-3-ethyl-1-penten-4-yn-3-ol. A nonbarbiturate sedative and hypnotic, C_7H_9ClO , occurring as a colorless to yellow, slightly viscous liquid; administered orally.

ethene (eth-ên') ethylene.

ethenoid (eth/'ê-noid) containing an ethylene linkage.

etheogenesis (e/'thê-o-jen/'ê-sis) [Gr. *êtheos* bachelor + *genesis* production] nonsexual reproduction in male gametes of protozoa.

ether (e/'ther) [L. *aether*, Gr. *aithēr* "the upper and purer air"] 1. [USP] chemical name: diethyl ether. A colorless, transparent, mobile, very volatile liquid, $C_2H_5 \cdot O \cdot C_2H_5$, with a characteristic odor, and highly inflammable; used by inhalation as a general anesthetic. Called also *ethyl ether* and *ethyl oxide*. 2. any of a class of organic compounds characterized by the linkage of hydrocarbon groups by an oxygen atom bonded to two carbon atoms. 3. a hypothetical fluid of the utmost tenuity which was once thought to fill all space and to serve as a medium for the transmission of waves of heat and light. **acetic e.**, ethyl acetate. **anesthetic e.**, 1. an organic oxide, usually aliphatic or alicyclic, or mixed, that vaporizes freely and whose vapors induce unconsciousness and surgical anesthesia when inhaled. 2. the British term for ethyl ether. **chloric e.** (obs.), a mixture of chloroform and alcohol. **complex e.**, a chemical compound derived from two different alcohol radicals by the elimination of water. **compound e.**, ester. **dibromomethyl e.**, a war

gas, $BrCH_2OCH_2Br$, that irritates the lungs and affects the functioning of the semicircular canals. **dichloromethyl e.**, a form of mustard gas, $(CH_2Cl)_2O$. **diethyl e.**, ether (def. 2). **dimethyl e.**, a liquid, $CH_3 \cdot O \cdot CH_3$, used as a solvent and refrigerant. **enanthic e.**, pelargonic e. **ethyl e.**, ether (def. 2). **ethyl-vinyl e.**, an aliphatic organic oxide, $CH_3 \cdot CH_2 \cdot O \cdot CH \cdot CH_2$, whose vapors produce surgical anesthesia when inhaled. **formic e.**, ethyl formate. **hydriodic e.**, ethyl iodide. **hydrobromic e.**, ethyl bromide. **hydrochloric e.**, ethyl chloride. **luminiferous e.**, ether (def. 1). **mixed e.**, complex e. **nitrofurfuryl methyl e.**, 2-(methoxymethyl)-5-nitrofurane; used as a topical fungicide and sporicide in skin infections. **nitrous e.**, ethyl nitrite. **oenanthic e.**, pelargonic e. **pelargonic e.**, an ether of pelargonic acid; it is an oily liquid with the odor of quinces. **petroleum e.**, petroleum benzin. **pyroacetic e.**, acetone. **simple e.**, a chemical compound derived from two identical alcohol radicals by the elimination of water. **sulfuric e.**, see *ether* (def. 2). **thio e.**, an ether in which sulfur replaces oxygen. **thioallylic e.**, allyl sulfide. **vinyl e.** [USP], a clear colorless liquid, $CH_2 \cdot CH \cdot O \cdot CH \cdot CH_2$, with a characteristic odor, administered by inhalation to produce general anesthesia. Called also *divinyl oxide*.

ethereal (e-the/'re-al) 1. pertaining to, prepared with, containing, or resembling ether. 2. evanescent; delicate.

etherification (e/'ther-î-fi-ka'shun) the formation of an ether from alcohol.

etherion (e-the/'re-on) (obs.) 1. a gas said to have been discovered in 1898 in the atmosphere; said to be about $\frac{1}{1000}$ part as dense as hydrogen, and to exist in less than $\frac{1}{1000000}$ part of its proportion in the air. 2. Mathews' name for one of the minute spheres once believed to make up the ether.

etherism (e/'ther-izm) etheromania.

etherization (e/'ther-i-za'shun) the administration of ether by inhalation, and the consequent production of anesthesia.

etherize (e/'ther-iz) to put under the anesthetic influence of ether.

etheromania (e/'ther-o-ma'ne-ah) uncontrollable addiction to the use of ether as a stimulant.

etherometer (e/'ther-om/'ê-ter) [*ether* + Gr. *metron* measure] a device for administering ether by which the number of drops per minute can be accurately controlled.

etherrausch (a/'ter-rowsh) [Ger.] (obs.) see *rausch*.

ethical (eth/'i-kal) in accordance with the principles which govern right conduct.

ethics (eth/'iks) [Gr. *êthos* the manner and habits of man or of animals] the rules or principles which govern right conduct. **medical e.**, the values and guidelines that should govern decisions in medicine.

ethidene (eth/'i-dên) ethylidene. **e. chloride**, ethylene dichloride. **e. diamine**, a harmful ptomaine, $C_2H_5N_2$, from fish.

ethidium (ê-thid/'e-um) homidium.

ethinamate (ê-thin/'ah-mât) [USP] chemical name: 1-ethynylcyclohexanol carbamate. A short-acting nonbarbiturate sedative, $C_9H_{13}NO_2$, occurring as a white powder; used as a hypnotic, administered orally.

ethinyl (eth/'i-nil) ethynyl. **e. estradiol**, see under *estradiol*. **e. trichloride**, trichloroethylene.

Ethiodol (ê-thi/'o-dol) trademark for a preparation of ethiodized oil, used as a contrast medium.

ethionamide (ê-thi/'on-am'id) [USP] chemical name: 2-ethyl-4-pyridine-carbothioamide. An antibacterial, $C_8H_{10}N_2S$, occurring as a bright yellow powder, effective against *Mycobacterium tuberculosis*; used in conjunction with one or more other antituberculous drugs in the treatment of pulmonary tuberculosis, administered orally.

ethionine (ê-thi/'o-nin) the ethyl homologue of methionine.

ethisterone (ê-this/'ter-ôn) chemical name: 17 α -hydroxy-pregn-4-en-20-yn-3-one; a semisynthetic progestin, $C_{21}H_{28}O_2$, which may be considered a derivative of both progesterone and of testosterone. Called also *anhydrohydroxyprogesterone*, *pregneninone*, and *ethinyl testosterone*.

ethmocarditis (eth/'mo-kar-di'tis) [Gr. *êthmos* sieve + *kardia* heart + *-itis*] inflammation of the connective tissue of the heart.

ethmocephalus (eth/'mo-sef/'ah-lus) [Gr. *êthmos* sieve + *kephalê* head] a monster with an imperfect head, more or less union of the eyes, and a rudimentary nose, which may often be displaced upward.

ethmofrontal (eth/'mo-fron'tal) pertaining to the ethmoid and frontal bones.

ethmoid (eth/'moid) [Gr. *êthmos* sieve + *eidos* form] cribriform; sieve-like.

ethmoidal (eth-'moi'dal) of or pertaining to the ethmoid bone.

ethmoidectomy (eth-'moi-dek'to-me) [*ethmoid* + Gr. *ektomê* excision] excision of the ethmoid cells or of a portion of the ethmoid bone.

ethmoiditis (eth-'moi-di'tis) inflammation of the ethmoid bone.

ethmoidotomy (eth''moi-dot'o-me) surgical incision into the ethmoid sinus.

ethmolacrima (eth''mo-lak'rī-mal) pertaining to the ethmoid and the lacrimal bones.

ethmomaxillary (eth''mo-mak'sī-lār-e) pertaining to the ethmoid and maxillary bones.

ethmonasal (eth''mo-na'zal) pertaining to the ethmoid and nasal bones.

ethmopalatal (eth''mo-pal'ah-tal) pertaining to the ethmoid and palatine bones.

ethmosphenoid (eth''mo-sfe'noid) pertaining to the ethmoid and sphenoid bones.

ethmoturbinal (eth''mo-tur'bi-nal) pertaining to the superior and middle nasal conchae.

ethmovomerine (eth''mo-vo'mer-in) pertaining to the ethmoid bone and the vomer.

ethmyphitis (eth''mē-fi'tis) [Gr. *ēthmos* sieve + *hyphē* tissue] inflammation of the cellular tissue; cellulitis.

ethnic (eth''nik) [Gr. *ethnikos* of a nation; national] pertaining to a social group who share cultural bonds (religious, national, etc.) or physical (racial) characteristics.

ethnics (eth''niks) [Gr. *ethnikos* of a nation; national] ethnology.

ethnobiology (eth''no-bi-ol'o-je) the scientific study of physical characteristics of different races of mankind.

ethnography (eth-nog'rah-fe) [Gr. *ethnos* race + *graphein* to write] a description of the races of men. Cf. *anthropography*.

ethnology (eth-nol'o-je) [Gr. *ethnos* race + *-logy*] the science which deals with the races of men, their descent, relationship, etc.

ethobrom (eth'o-brōm) tribromoethanol.

ethocaine (eth'o-kān) procaine hydrochloride.

ethoglucid (eth'o-glu'sid) chemical name: triethylene glycol diglycidyl ether. A clear colorless viscous liquid, $C_{12}H_{22}O_6$, with antineoplastic properties.

ethoheptazine citrate (eth'o-hep'tah-zēn) chemical name: ethylhexahydro-1-methyl-4-phenyl-1*H*-azepine-4-carboxylate dihydrogen citrate. An analgesic, $C_{16}H_{23}NO_2 \cdot C_6H_8O_7$, used to control mild or moderate pain; administered orally.

ethohexadiol (eth'o-heks-a'de-ol) chemical name: 2-ethyl-1,3-hexanediol. An arthropod repellent, $C_8H_{18}O_2$, applied topically to the skin and clothing.

ethological (eth'o-loj'i-kal) pertaining to ethology.

ethologist (eth-thol'o-jist) an individual skilled in ethology.

ethology (eth-thol'o-je) [Gr. *ēthos* the manners and habits of man, or of animals + *-logy*] The scientific study of animal behavior, particularly in the natural state, the evolution of behavior, and its biologic significance.

ethomoxane hydrochloride (eth''o-moks'ān) chemical name: *N*-butyl-8-ethoxy-2,3-dihydro-1,4-benzodioxin-2-methanamine hydrochloride; a tranquilizer, $C_{15}H_{23}NO_3 \cdot HCl$.

ethonam nitrate (eth'o-nam) chemical name: 1-(1,2,3,4-tetrahydro-1-naphthalenyl)-1*H*-imidazole-5-carboxylic acid ethyl ester mononitrate; an antifungal agent, $C_{16}H_{19}N_3O_2 \cdot HNO_3$.

ethopropazine hydrochloride (eth''o-pro'pah-zēn) [USP] chemical name: *N,N*-diethyl- α -methyl-10*H*-phenothiazine-10-ethanamine monohydrochloride. A phenothiazine derivative, $C_{19}H_{21}N_3S \cdot HCl$, occurring as a white to slightly off-white, crystalline powder, having anticholinergic, antihistaminic, adrenergic-blocking, ganglion-blocking, local anesthetic, and central nervous system depressant effects; used as an antiparkinsonian agent, administered orally. Called also *isothiazine hydrochloride* and *phenopropazine hydrochloride*.

ethosuximide (eth'o-suk'sī-mid) [USP] chemical name: 3-ethyl-3-methyl-2,5-pyrrolidinedione. An anticonvulsant, $C_7H_{11}NO_3$, occurring as a white to off-white crystalline powder or waxy solid; used in the treatment of petit mal epilepsy, administered orally.

ethotoin (ē-tho'to-in) chemical name: 3-ethyl-5-phenyl-2,4-imidazolidinedione. An anticonvulsant, $C_{11}H_{12}N_2O_2$, occurring as a white, crystalline powder; used in the treatment of grand mal epilepsy and psychomotor seizures, administered orally. Called also *ethylphenylhydantoin*.

ethoxazene hydrochloride (ē-thok'sah-zēn) chemical name: 4-[(4-ethoxyphenyl)azo]-1,3-benzenediamine hydrochloride. A local analgesic, $C_{14}H_{16}N_4O \cdot HCl$, occurring as a reddish powder; used to relieve pain associated with urinary tract infections, administered orally.

ethoxzolamide (eth'oks-zol'ah-mid) [USP] chemical name: 6-ethoxy-2-benzothiazolesulfonamide. A carbonic anhydrase inhibitor, $C_9H_{10}N_2O_3S_2$, occurring as a white to slightly yellow, crystalline powder; used as a diuretic in mild to moderate congestive heart failure and as an adjunct in the treatment of glaucoma and epilepsy, administered orally.

Ethrane (eth'rān) trademark for a preparation of enflurane.

Ethril (eth'rīl) trademark for preparations of erythromycin stearate.

ethylbenztropine (eth''i-benz-tro'pēn) chemical name: *endo*-3-(diphenylmethoxy)-8-ethyl-8-azabicyclo[3.2.1]octane. An anti-

cholinergic with high antihistaminic action, $C_{22}H_{27}NO$, which has been used as an antiparkinsonian agent and in the treatment of drug-induced extrapyramidal syndrome.

ethyl (eth'il) [ether + Gr. *hylē* matter] the univalent alcohol radical, $CH_3 \cdot CH_2$. Symbol Et.

e. acetate [NF], a transparent, colorless liquid, $CH_3COOC_2H_5$, used as a flavoring agent in pharmaceutical preparations. Called also *acetic ether*, *naphtha aceti*, and *vinegar naphtha*.

e. aminobenzoate, benzocaine.

e. biscoumacetate, chemical name: 4-hydroxy- α -(4-hydroxy-2-oxo-2*H*-1-benzopyran-3-yl)-2-oxo-2*H*-1-benzopyran-3-acetic acid ethyl ester. One of the synthetic, orally effective coumarin anticoagulants, $C_{22}H_{16}O_8$.

e. bromide, a colorless volatile liquid, C_2H_5Br , of sweetish taste and ethereal odor, used as an inhalation anesthetic; called also *hydrobromic ether*.

e. butyrate, the butyric acid ester of ethyl alcohol, $C_3H_7 \cdot CO \cdot O \cdot C_2H_5$, with the odor of pineapple.

e. carbamate, urethan.

e. carbinol, propyl alcohol.

e. chaulmoograte, a mixture of the ethyl esters of the unsaturated fatty acids—chaulmoogric and hydnicarpic—of chaulmoogra oil, used in the treatment of leprosy and sarcoidosis.

e. chloride [USP], chemical name: chloroethane. A colorless, mobile, extremely volatile liquid, C_2H_5Cl ; used as a local anesthetic, applied topically as a spray on intact skin. Called also *chelen* and *hydrochloric ether*.

e. cyanide, a colorless liquid, C_2H_5CN ; called also *propionitril*.

e. diacetate, a substance which has been used in urinary tests.

e. dibunate, chemical name: 3,6-bis(1,1-dimethylethyl)naphthalenesulfonic acid ethyl ester; an antitussive $C_{20}H_{24}O_3S$.

e. ether, see *ether* (def. 2).

e. formate, a volatile liquid, $HCOOC_2H_5$, used as a solvent and flavoring agent, and formerly as an anesthetic. Called also *formic ether*.

e. iodide, a colorless liquid, CH_3CH_2I , used as a reagent; called also *hydriodic ether*.

e. linoleate, ethyl, (9,12)-cis, *cis*-octadecadienoate; a lipid occurring on the skin of warm-blooded animals and responsible for its passive water-holding capacity; also prepared synthetically.

e. mercaptan, a thioalcohol, C_2H_5SH , which has a revolting odor and contributes to the odor of feces.

e. nitrate, a compound, $CH_3 \cdot CH_2 \cdot NO_3$, formerly used as a vasodilator.

e. nitrite, $C_2H_5NO_2$, a liquid which is mixed with alcohol to form ethyl nitrite spirit. Called also *nitrous ether*.

e. oleate [NF], chemical name: (Z)-9-octadecenoic acid ethyl ester. A mobile, practically colorless liquid, $C_{20}H_{38}O_2$, consisting of esters of ethyl alcohol and high-molecular-weight fatty acids; used as a vehicle for pharmaceutical preparations.

e. orange, a dye, the sodium salt of diethylaniline-azo-benzene-sulfonic acid, $C_6H_4 \cdot N(C_2H_5)_2 \cdot N_2 \cdot C_6H_4 \cdot SO_2 \cdot ONa$; used as an indicator, being turned red by acids and yellow by alkalis.

e. oxide, ether, def. 1.

e. pelargonate, the pelargonic acid ester of ethyl alcohol, $C_8H_{17} \cdot CO \cdot O \cdot C_2H_5$.

e. phenylcinchoninate, a yellowish powder once used in gout.

e. phenylephrine, see *ethylphenylephrine*.

e. salicylate, the salicylic acid ester of ethyl alcohol, $CH_3 \cdot CH_2 \cdot O \cdot CO \cdot C_6H_4OH$, formerly used internally for rheumatism and as a counterirritant.

e. urethan, a compound which inhibits cellular respiration and interferes with a large number of enzymes in the cell.

ethylaldehyde (eth''il-al'dē-hid) acetaldehyde.

ethylamine (eth''il-am'in) a liquid ptomaine, $CH_3CH_2NH_2$, from decaying plant tissue, possessing many of the properties of ammonia.

e. sulfonic acid, taurine.

e. urate, a remedy formerly employed in the treatment of gout and gravel.

ethylate (eth'il-āt) any compound of ethyl alcohol in which the hydrogen of the hydroxyl is replaced by a base.

ethylation (eth''il-a'shun) the act of combining or causing to combine with the ethyl radical.

ethylcellulose (eth''il-sel'u-lōs) [NF] chemical name: cellulose ethyl ester. A free-flowing, white to light tan powder, used as a tablet binder in pharmaceutical preparations.

ethylene (eth'i-lēn) a colorless gas, $CH_2=CH_2$, somewhat lighter than air, and having a slightly sweet taste and odor; used for inducing general anesthesia. Called also *aethylenum*, *ethene*, and *olefiant gas*.

e. dichloride, a colorless heavy liquid, $C_2H_4Cl_2$, with a pungent odor, used as a solvent; called also *ethidine chloride*.

e. oxide, a bactericidal agent, occurring as a colorless gas with a pleasant ethereal odor; used as a disinfectant, especially for disposable equipment.

ethylenediamine (eth''i-lēn-di'ah-mēn) [USP] chemical name: 1,2-ethanediamine. A clear, colorless or slightly yellow liquid, $C_2H_8N_2$, having an ammonia-like odor and a strong alkaline reaction; used as a component of aminophylline injection.

ethylenediaminetetraacetate (eth''i-lēn-di'ah-mēn-tet-ras'ē-tāt) edetate.

ethylestrenol (eth''il-es'trē-nōl) chemical name: 19-nor-17 α -pregn-4-en-17 β -ol; an anabolic-androgenic steroid, $C_{20}H_{32}O$.

ethylic (ē-thil'ik) pertaining to or derived from ethyl.

ethylidene (eth'il-ī-dēn) the bivalent radical, $CH_3 \cdot CH$; called also *ethidene*.

ethylmorphine hydrochloride (eth''il-mor'-fen) chemical name: 7,8-didehydro-4,5 α -epoxy-3-ethoxy-17-methylmorphinan-6 α -ol hydrochloride. The chloride salt of the ethyl ester of morphine, $C_{16}H_{19}NO_3 \cdot HCl$, having some of the actions of morphine and codeine; used as a chemotic in the treatment of

glaucoma, iritis, and corneal ulcers, applied topically to the conjunctiva. It has also been used as an antitussive.

ethylnoradrenaline (eth'il-nor-ah-dren'ah-lin) ethylnorepinephrine.

ethylnorepinephrine hydrochloride (eth'il-nor-ep'i-nef'-rin) [USP] chemical name: 4-(2-amino-1-hydroxybutyl)-1,2-benzendiol hydrochloride. A synthetic adrenergic, $C_{10}H_{15}NO_3 \cdot HCl$, used for the relief of bronchospasm in bronchial asthma; administered intramuscularly or subcutaneously.

ethylnorsuprarenin (eth'il-nor-su'prah-ren'in) ethylnorepinephrine.

ethylparaben (eth'il-par'ah-ben) [NF] chemical name: 4-hydroxybenzoic acid ethyl ester. An antifungal agent, $C_9H_{10}O_3$, occurring as small, colorless crystals or white powder; used as a preservative in pharmaceutical preparations.

ethylphenylhydantoin (eth'il-fen'il-hi-dan'to-in) ethotoin.

ethylstibamine (eth'il-sti'bah-mën) neostibosan.

ethynodiol diacetate (ë-thi'no-di'öl) [USP] chemical name: 19-norpregn-4-en-20-yne-3 β ,17 α -diol diacetate. A progestin, $C_{24}H_{32}O_4$, occurring as a white, crystalline powder; used in combination with an estrogen as an oral contraceptive.

ethynyl (eth'i-nil) the radical $-C\equiv CH$, when it occurs in organic compounds; called also *ethinyl*.

etidocaine hydrochloride (ë-ti'do-kän) chemical name: (+)-N-(2,6-dimethylphenyl)-2-(ethylpropylamino)butanamide hydrochloride. A local anesthetic of the amide type, $C_{17}H_{28}N_2O \cdot HCl$, used for percutaneous infiltration anesthesia, peripheral nerve blocks, and caudal and epidural blocks.

etidronate disodium (ë-ti-dro'nät) chemical name: (1-hydroxyethylidene) bisphosphoric acid disodium dihydrogen salt; a bone calcium regulator, $C_2H_6Na_2O_7P_2$, used orally in the symptomatic treatment of osteitis deformans and as a pharmaceutical aid.

etiocholanolone (e'te-o-ko-lan'o-lön) a reduced form of testosterone excreted in the urine.

etiogenic (e'te-o-jen'ik) [Gr. *aitia* cause + *gennan* to produce] causative.

etioloation (e'te-o-la'shun) [Fr. *étioier* to blanch]. 1. a blanching or paleness of color in a plant due to lack of chlorophyll when grown in the dark. 2. the process by which the skin becomes pale when deprived of sunlight.

etiologic, etioloical (e'te-o-loj'ik; e'te-o-loj'e-kal) pertaining to etiology, or to the causes of disease.

etiology (e'te-o-l'o-je) [Gr. *aitia* cause + *-logy*] the study or theory of the factors that cause disease and the method of their introduction to the host; the cause(s) or origin of a disease. Cf. *pathogenesis*.

etiopathology (e'te-o-pah-thol'o-je) pathogenesis.

etioporphyrin (e'te-o-por'fir-in) a porphyrin, $C_{32}H_{38}N_4$, obtained from hematoporphyrin; a tetramethyl-tetraethylporphine.

etiotropic (e'te-o-trop'ik) [Gr. *aitia* cause + *tropos* turning] directed against the cause of a disease.

etioformin hydrochloride (et'o-for'min) chemical name: N-butyl-N''ethylimidodicarbonimidic diamide monohydrochloride; an antidiabetic, $C_8H_{16}N_6 \cdot HCl$.

etomidate (ë-tom'i-dät) chemical name: (+)-1-(1-phenylethyl)-1H-imidazole-5-carboxylic acid ethyl ester; a hypnotic, $C_{14}H_{18}N_2 \cdot O_2$.

etoprine (et'o-prën) chemical name: 5-(3,4-dichlorophenyl)-6-ethyl-2,4-pyrimidinediamine; an antineoplastic, $C_{12}H_{12}Cl_2N_4$.

etoxadrol hydrochloride (ë-toks'ah-dröl) chemical name: (+)-2-(2-ethyl-2-phenyl-1,3-dioxolan-4-yl) piperidine hydrochloride; an anesthetic, $C_{16}H_{23}NO_3 \cdot HCl$.

etozolin (et'o-zo'lin) chemical name: [3-methyl-4-oxo-5-(1-piperidinyl)-2-thiazolidinylidene]acetic acid ethyl ester; a diuretic, $C_{13}H_{20}N_2O_5S$.

etrohysterectomy (e'tro-his-ter-ek'to-me) [Gr. *ëtron* hypogastrium + *hysterectomy*] (obs.) hypogastric excision of uterus.

etrotomy (e-trot'o-me) [Gr. *ëtron* hypogastrium + *temnein* to cut] suprapubic incision.

etryptamine acetate (e-trip'tah-min) chemical name: 3-(2-aminobutyl) indole acetate. A compound, $C_{12}H_{16}N_2 \cdot C_2H_4O_2$, formerly used as a central stimulant, now removed from the market because of serious toxic reactions.

Eu chemical symbol for *europium*.

eu- (u) [Gr. *eu* well] a combining form meaning well, easily, or good; the opposite of *dys-*.

euallele (u-ah-läl') a mutation occurring in the same codon of a particular cistron in two homologous chromosomes.

euallelic (u-ah-le'lik) pertaining to a euallele.

euangiotic (u'an-je-ot'ik) [*eu-* + Gr. *angeion* vessel] well supplied with blood vessels.

Euascomycetidae (u-as'ko-mi-se'ti-de) a subclass of ascomycetous fungi in which the asci most commonly develop from hyphae, and functional sex organs are usually present; it includes the series Plectomycetes, Pyrenomycetes, and Discomycetes.

Eubacteriales (u'bäc-te're-a'lëz) an order of Schizomycetes, comprising the true bacteria, which are simple, undifferentiated, rigid, spherical or rod-shaped cells. It includes 13 families, *Achromobacteraceae*, *Azotobacteraceae*, *Bacillaceae*, *Bacteroidaceae*, *Brevibacteriaceae*, *Brucellaceae*, *Corynebacteriaceae*, *Enterobacteriaceae*, *Lactobacillaceae*, *Micrococcaceae*, *Neisseriaceae*, *Protonibacteriaceae*, and *Rhizobiaceae*.

Eubacterium (u'bäc-te're-um) a genus of microorganisms of the tribe Lactobacillae, family Lactobacillaceae, order Eubacteriales, nonsporulating, gram-positive anaerobic bacilli found in the intestinal tract as parasites and as saprophytes in soil and water. Occasionally found in purulent lesions but of questionable primary pathogenicity.

eubiotics (u'bi-ot'iks) [*eu-* + Gr. *bios* life] the science of healthy living.

eucaïne (u'kän) chemical name: 2,2,6-trimethyl-4-piperidinol benzoate ester. A substance, $C_{15}H_{21}NO_2$, closely resembling cocaine in action and composition, but less depressant to the heart; formerly used as a local anesthetic. In veterinary medicine, the hydrochloride is used as a substitute for cocaine. Called also *benzamine*.

eucalyptol (u'kah-lip'tol) a colorless liquid with a characteristic aromatic, camphoraceous odor, and a cooling, pungent, spicy taste, obtained from eucalyptus oil and other sources, used as a flavoring agent, expectorant, and local antiseptic, and formerly as a vermifuge. Used in veterinary medicine as an inhalant in bronchitis and as an expectorant.

Eucalyptus (u'kah-lip'tus) [*eu-* + Gr. *kalyptos* covered] a genus of myrtaceous trees and shrubs, chiefly Australian, of many species; on distillation, the leaves yield eucalyptus oil, the major constituent of which is eucalyptol. Called also *blue gum*.

eucapnia (u-kap'ne-ah) [*eu-* + Gr. *karnos* smoke] the condition in which the carbon dioxide tension of the blood is normal.

eucaryon (u-kar'e-on) eukaryon.

eucaryosis (u'kar-e-o'sis) eukaryosis.

Eucaryotae (u-kar'e-o'te) [*eu-* + Gr. *karyon* nucleus] in some systems of classification, a kingdom of microorganisms that includes higher plants and animals, fungi, protozoa, and most algae (except blue-green algae), which are made up of eukaryotic cells, i.e., which have a true nucleus. Also written *Eukaryotae*. Cf. *Prokaryotae*.

eucaryote (u-kar'e-öt) eukaryote.

eucaryotic (u'kar-e-ot'ik) eukaryotic.

eucatapine hydrochloride (u-kat'ro-pën) [USP] chemical name: α -hydroxybenzeneacetic acid 1,2,2,6-tetramethyl-4-piperidinyl ester hydrochloride. An anticholinergic, $C_{17}H_{25}NO_3 \cdot HCl$, occurring as a white, granular powder; used as a mydriatic, applied topically to the eye.

Eucestoda (u-ses-to'dah) Cestoda.

euchlorhydria (u'klör-hi'dre-ah) [*eu-* + *chlorhydric acid*] the presence of the normal proportion of free hydrochloric acid in the gastric juice.

eucholia (u-ko'le-ah) [*eu-* + Gr. *cholē* bile] normal condition of the bile.

euchromatic (u-kro-mat'ic) of or relating to euchromatin.

euchromatin (u-kro'mah-tin) that state of chromatin (q.v.) in which it stains lightly, is genetically active, and is considered to be partially or fully uncoiled; cf. *heterochromatin*.

euchromatopsy (u-kro'mah-top'si) [*eu-* + Gr. *chrōma* color + *opsis* vision] normal color vision.

euchromosome (u-kro'mo-sōm) [*eu-* + *chromosome*] autosome.

euchylia (u-kil'e-ah) [*eu-* + Gr. *chylos* chyle] a normal condition of the chyle.

Euciliatia (u-sil'e-a'she-ah) a subclass of protozoa of the class Ciliata, subphylum Ciliophora; they are usually free-living, but some are commensalistic, endosymbiotic, or epizoic, and a few are parasitic, including the intestinal ciliates of warm-blooded animals. It includes the genera *Balantidium*, *Nyctotherus*, *Ichthyophthirius*, *Tetrahymena*, and *Paramecium*.

eucoelom (u-se'lom) [*eu-* + *coelom*] coelom.

Eucoelomata (u'se-lo-ma'tah) the major division of the higher invertebrates, the coelomates, including mollusks, annelids, arthropods, echinoderms, and chordates, which all have a separate mouth and anus, a true coelom, and a well-developed circulatory system. It is divided into two series, the Deuterostomia and the Protostomia.

eucoelomate (u-sël'o-mät') any member of the Eucoelomata; a coelomate.

eucolloid (u-kol'oid) a colloid in which each dispersed particle consists of a single large molecule.

eucrasia (u-kra'se-ah) [*eu-* + Gr. *krasis* mixture] 1. a state of health; proper balance of different factors constituting a healthy state. 2. a state in which there is a decreased bodily reaction to ingested or injected drugs, proteins, etc.

eudiaphoresis (u-di'ah-fo-re'sis) [*eu-* + *diaphoresis*] (obs.) an easy, natural, or comforting escape of perspiration.

eudiemorrhysis (u'di-ë-mor'f-i-sis) [*eu-* + Gr. *dia* through +

haima blood + *rhyis* flow] the normal flow of blood through the capillaries.

eudiometer (u'de-om'ē-ter) [Gr. *eudia* fine weather + *metron* measure] an instrument used in testing the purity of the air.

eudipsia (u-dip'se-ah) [*eu* + Gr. *dipsa* thirst + *-ia*] ordinary, mild thirst.

euergasis (u'er-ga'ze-ah) [*eu* + *ergasia*] normal psychobiological functioning.

euesthesia (u'es-the'ze-ah) [*eu* + Gr. *aisthēsis* perception] a normal state of the senses.

Euflagellata (u-flaj'ē-la'tah) Mastigophora.

euflavine (u-fla'vin) acriflavine.

eugamy (u'gah-me) [Gr. *eu* well + *gamos* marriage] the union of gametes, each of which contains the proper (haploid) complement of chromosomes.

eugenetics (u'jē-net'iks) eugenics.

Eugenia (u-jē'ne-ah) an extensive genus of myrtaceous trees and shrubs. *E. caryophyllata* Thunb. furnishes clove, clove oil.

eugenicist (u-jen'i-sist) a person who is versed in eugenics.

eugenics (u-jen'iks) [*eu* + Gr. *gennan* to generate] the study and control of procreation as a means of improving the hereditary characteristics of a race; called also *orthogenics*. Cf. *dysgenics*.

negative e., that concerned with prevention of reproduction (procreation) by individuals possessing inferior or undesirable traits. **positive e.**, that concerned with promotion of optimal mating of individuals possessing superior or desirable traits.

eugenism (u-jen-izm) that condition of heredity and environment which tends to produce healthy and happy existence.

eugenist (u-jen'ist) eugenicist.

eugenol (u-jen-ol) [USP] chemical name: 2-methoxy-4-(2-propenyl)phenol. A dental analgesic, C₁₀H₁₂O₂, occurring as a colorless or pale yellow liquid, obtained from clove oil or other natural sources; applied topically to dental cavities and also used as a component of dental protectives. Called also *allylguaiacol*, *caryophyllid acid*, and *eugenic acid*.

eugenotherics (u-jē'no-then'iks) the study of race improvement by the regulation of both heredity and environment.

Euglena (u-gle'nah) [*eu* + Gr. *glēnē* pupil of the eye] a genus of green flagellate protozoa of the order Euglenoidina, class Phytomastigophora, commonly found in great abundance in stagnant water. They have a pellicle usually marked by spiral or longitudinal striations; those with a thin pellicle are very plastic. *E. viridis* and *E. gracilis* are common species.

euglenoid (u-gle'noid) 1. pertaining to the order Euglenoidina. 2. any individual of the order Euglenoidina.

Euglenoidina (u-gle'noi-di'nah) an order of plantlike flagellate protozoa of the subclass Phytomastigophora, class Mastigophora, which typically have green chromatophores, one flagellum protruding from an anterior gullet, and a small stigma located anteriorly; they are usually found in fresh water, although some inhabit salt or brackish water, and a few are parasitic. It includes the genera *Euglena* and *Copromonas*. In botany, these difficult to classify organisms, are assigned to the algae.

euglobulin (u-glob'u-lin) one of a class of globulins characterized by being insoluble in water but soluble in saline solutions; see also under *globulin*.

euglycemia (u'gli-se'me-ah) a normal level of glucose in the blood.

euglycemic (u'gli-se'mik) pertaining to, characterized by, or conducive to euglycemia.

eugnathia (u-na'the-ah) any oral abnormality limited to the teeth and their immediate alveolar supports.

eugnathic (u-nath'ik) [*eu* + Gr. *gnathos* jaw] pertaining to or characterized by a normal state of the maxilla and mandible.

eugnosia (u-no'se-ah) [*eu* + Gr. *gnōsis* perception] ability to recognize and synthesize sensory stimuli into a normal perception.

eugnostic (u-nos'tik) pertaining to eugnosia.

eugonic (u-gon'ik) [*eu* + Gr. *gonē* seed] growing luxuriantly; said of bacterial cultures.

euhydration (u-hi-dra'shun) a normal state of body water content; absence of absolute or relative hydration or of dehydration.

eukaryon (u-kar'e-on) [*eu* + Gr. *karyon* nucleus] 1. a highly organized nucleus bounded by a nuclear membrane, a characteristic of cells of higher organisms. Cf. *prokaryon*. 2. eukaryote.

eukaryosis (u'kar-e-o'sis) [*eu* + Gr. *karyon* nucleus + *-osis*] the state of having a true nucleus, the nuclear material being surrounded by a membrane and the cytoplasm containing organelles; generally a characteristic of all cell types except bacteria and blue-green algae. Cf. *prokaryosis*.

Eukaryotae (u-kar'e-o'te) Eucaryotae.

eukaryote (u-kar'e-ōt) an organism whose cells have a true nucleus, i.e., one bounded by a nuclear membrane, within which lie the chromosomes combined with proteins, and that exhibit mitosis; eukaryotic cells also contain many membrane-bound compartments (organelles) in which cellular functions are per-

formed. The cells of higher plants and animals, fungi, protozoa, and most algae are eukaryotic. Cf. *prokaryote*.

eukaryotic (u'kar-e-ōt'ik) pertaining to a eukaryon or a eukaryote or to eukaryosis.

eukeratin (u-ker'ah-tin) a true keratin found in hair, nails, feathers, and horns.

eukinesia (u'ki-ne'se-ah) [Gr. *eu* well + *kinēsis* movement + *-ia*] the state of possessing normal or proper motor function or activity; normal or proper mobility.

eukinesis (u'ki-ne'sis) eukinesia.

eukinetic (u'ki-net'ik) pertaining to or characterized by eukinesia.

eulachon (u'lah-kon) the candle-fish, *Thaleichthys pacificus*; its oil is used like cod liver oil.

eulamine (u-lam'i-nāt) having the normal number of lamina, as certain areas of the cerebral cortex.

Eulenburg's disease (oil'en-burgz) [Albert Eulenburg, German neurologist, 1840–1917] myotonia congenita.

eumenorrhea (u'men-o-re'ah) [*eu* + Gr. *mēn* menses + *rhoia* flow] normal menstruation.

Eumetazoa (u-met'ah-zo'ah) in some classifications, a subdivision of the Metazoa comprising all multicellular animals with organ systems, a mouth, and a digestive cavity. Cf. *Parazoa*.

eumetria (u-me'tre-ah) [Gr. "good measure," "good proportion"] a normal condition of nerve impulse, so that a voluntary movement just reaches the intended goal; the proper range of movement.

eumorphics (u-mor'fiks) a branch of orthopedics which deals with the reestablishment of normal or proper form.

eumorphism (u-mor'fizm) [*eu* + Gr. *morphē* form] retention of the normal form of a cell.

Eumycetes (u'mi-se'tēz) a taxonomic division comprising the true or proper fungi. It includes three classes of perfect fungi (Ascomycetes, Phycomycetes, and Basidiomycetes) and all the imperfect fungi (Deuteromycetes, or Fungi Imperfecti). Called also *Eumycophyta*.

eumycin (u-mi'sin) an antibiotic isolated from *Bacillus subtilis* which has *in vitro* activity against diphtheria and tubercle bacilli and some fungi.

Eumycophyta (u-mi'ko-fi'tah) Eumycetes.

eunoia (u-noi'ah) [*eu* + Gr. *nous* mind] alertness of mind and will.

eunuch (u'nuk) [Gr. *eunouchos* a castrated person, employed in Asia, and later in Greece, to take charge of the women and act as a chamberlain] a man or boy deprived of the testes or the external genital organs, especially one castrated before puberty (so that male secondary sex characteristics fail to develop).

eunuchism (u'nuk-izm) [Gr. *eunouchismos* castration] the condition of being a eunuch or of undeveloped sexual organs in which testicular hormones are not produced. **pituitary e.**, loss of sexual power due to derangement of the pituitary secretion.

eunuchoid (u'nū-koid) [Gr. *eunouchoidēs*] 1. resembling a eunuch; having the characteristics of a eunuch. 2. a cryptorchid person with defective masculinity of appearance, causing him to resemble a eunuch.

eunuchoidism (u'nū-koi'dizm) a deficiency of the testes or of the testicular secretion, with impaired sexual power and eunuch-like symptoms. **female e.**, hypogonadism in which the ovaries fail to function at puberty, resulting in infertility, absence of development of secondary sex characteristics, infantile sexual organs, and excessive growth of the long bones. **hypergonadotropic e.**, that associated with high levels of gonadotropins, as in Klinefelter's syndrome. **hypogonadotropic e.**, that due to lack of gonadotropin secretion.

euosmia (u-os'me-ah) [*eu* + Gr. *osmē* smell] 1. normal state of the sense of smell. 2. a pleasant odor.

eupancratism (u-pan'kre-ah-tizm") a normal condition of the pancreatic function.

eupatorin (u'pah-to'rin) 3',5'-dihydroxy-4',6,7-trimethoxyflavone; an active (emetic) principle from *Eupatorium perfoliatum*.

Eupatorium (u'pah-to're-um) a genus of composite-flowered plants. The leaves and tops of *E. perfoliatum*, boneset or thoroughwort, are tonic, diuretic, diaphoretic, and stomachic. The ingestion of *E. rugosum* (*E. urticaefolium*), the white snakeroot, which contains the toxic principle tremetol, causes a disease known as trembles in cattle and sheep.

eupepsia (u-pep'se-ah) [*eu* + Gr. *pepsis* digestion + *-ia*] good digestion; particularly the presence of a normal amount of pepsin in the gastric juice. Cf. *dyspepsia*.

eupepsy (u'pep-se) eupepsia.

eupeptic (u-pep'tik) pertaining to, characterized by, or promoting eupepsia. Cf. *dyspeptic*.

euperistalsis (u-per'i-stal'sis) normal or painless peristalsis.

euphenic (u-fen'ik) improving the phenotype; pertaining to euphenics.

euphenics (u-fen'iks) [*eu* + Gr. *phainein* to appear] the im-

provement of phenotype by chemical or surgical means or by manipulation of the environment (e.g., nutrition); analogous to eugenics.

Euphorbia (u-for/be-ah) an extensive genus of euphorbiaceous trees, shrubs, and herbs, the spurge, which are actively poisonous, emetic, and cathartic. including *E. antisiphilitica* Zucca., the source of candelilla wax.

euphoretic (u'fo-ret'ik) 1. pertaining to, characterized by, or producing a condition of euphoria. 2. an agent that produces euphoria.

euphoria (u-fo're-ah) [Gr. "the power of bearing easily"] bodily comfort; well-being; absence of pain or distress. In psychiatry, an abnormal or exaggerated sense of well-being, particularly common in the manic state.

euphoriant (u-fo're-ant) euphoretic.

euphoric (u-fo'rik) characterized by euphoria.

euphorigenic (u-för'i-jen'ik) tending to produce euphoria.

euphoristic (u'fo-ris'tik) causing euphoria.

euphoropsia (u'fö-op'se-ah) [euphoria + Gr. *opsis* vision] comfortable vision.

euplastic (u-plas'tik) [eu- + Gr. *plastikos* plastic] readily becoming organized; adapted to the formation of tissue, as in embryonic development or wound healing.

euploid (u'ploid) [eu- + *-ploid*] 1. having a balanced set or sets of chromosomes, in any number. 2. an individual or cell having a balanced set or sets of chromosomes, in any number.

euploidy (u-ploi'de) the state of having a balanced set or sets of chromosomes, in any number.

eupnea (üp-ne'ah) [eu- + Gr. *pnein* to breathe] easy or normal respiration.

eupneic (üp-ne'ik) pertaining to or characterized by eupnea.

eupractic (u-prak'tic) [eu- + Gr. *praktikos* active, able, effective] pertaining to, characterized by, or promoting eupraxia.

eupraxia (u-prak'se-ah) [Gr. "good conduct"] intactness of reproduction of coordinated movements.

eupraxis (u-prak'sik) 1. concerned in the proper performance of a function. 2. eupractic.

euprocin hydrochloride (u'pro-sin) chemical name: (8 α , 9R)-10,11-dihydro-6'-(3-methylbutoxy) cinchonan-9-ol dihydrochloride; a topical anesthetic, C₂₄H₃₄N₂O₂·2HCl.

Euproctis (u-prok'tis) a genus of moths. **E. chrysorrhoea** (phaeorrhoe'a), the brown-tail moth, which is the cause of brown-tail rash.

eupylene (u-pi'rën) having a normal nucleus or chromatic material; said of certain spermatozoa.

eupyrexia (u'pi-rek'se-ah) a slight fever in the early stage of an infection, regarded as an attempt on the part of the individual to combat the infection.

eupyrous (u'pi-rus) eupylene.

Eurax (u'raks) trademark for preparations of crotamiton.

Euresol (u'rë-sol) trademark for a preparation of resorcinol monoacetate.

eurhythmia (u-rith'me-ah) [Gr. "harmony"] 1. harmonious relationships in body or organ development. 2. regularity of the pulse.

europium (u-ro'pe-um) a rare element, atomic number 63, atomic weight 151.96, symbol Eu.

Eurotiaceae (u-ro'/she-a'se-e) a family of ascomycetous fungi of the order Eurotiales, series Plectomycetes, containing the perfect, or sexual, stages of certain species of *Aspergillus* and *Penicillium*, and also the genus *Allescheria*.

Eurotiales (u-ro'/she-a'lëz) an order of ascomycetous fungi (series Plectomycetes, subclass Euascomycetidae), in which the asci are irregularly arranged within the primitive cleistothecium.

Eurotium (u-ro'she-um) [Gr. *eurös* mold] a genus of ascomycetous fungi or molds of the family Eurotiaceae, order Eurotiales. The imperfect (sexual) stage of these fungi includes some of the aspergilli. **E. malig'num**, former name for *Aspergillus fumigatus*. **E. re'pens**, a species sometimes seen on bread and on preserved fruits, and rarely found in human pulmonary infections. Its imperfect stage is *Aspergillus repens*.

Eurotransplant (u'ro-trans'plant) an international organization for the preservation and transport of organs for use in transplantation in European nations.

eury- (u're) [Gr. *eurys* wide] a combining form meaning wide or broad.

eurycephalic (u're-së-fal'ik) [eury- + Gr. *kephalë* head] having a wide head.

eurycephalous (u're-sef'ah-lus) eurycephalic.

eurycranial (u're-kra'ne-al) eurycephalic.

eurygnathic (u'rig-nath'ik) pertaining to or characterized by eurygnathism.

eurygnathism (u-rig'nah-thizm) [eury- + Gr. *gnathos* jaw] the state of having a wide jaw.

euryon (u're-on) [Gr. *eurys* wide] the point at either end of the greatest transverse diameter of the skull.

euryopia (u're-o'pe-ah) [eury- + Gr. *ōps* eye] abnormally wide opening of the eyes.

Eurypelma (u're-pel'mah) a genus of tarantulas. **E. hent'zii**, an American tarantula.

euryphotic (u're-fo'tik) [eury- + Gr. *phōs* light] able to see in a wide range of light intensity.

eurysonic (u're-so-mat'ik) [eury- + Gr. *sōma* body] having a squat, thick-set body.

eurythermic (u're-ther'mik) [eury- + Gr. *thermē* heat] able to grow through a wide range of temperature; said of bacteria.

Euscorpis (u-skor'pe-us) a genus of scorpions. **E. ital'icus**, the black scorpion of Europe and North Africa.

Eusimulium (u'si-mu'le-um) a genus of flies of the family Simuliidae, various species of which are common hosts of *Onchocerca volvulus*, a filarial worm parasitic in man.

eusitia (u-sit'e-ah) [eu- + Gr. *sitos* food] normal appetite.

eusplanchnia (u-splank'ne-ah) [Gr. *eu* well + *splanchna* viscera + *-ia*] a normal condition of the internal organs.

eusplenia (u-sple'ne-ah) normal splenic function.

Eustace Smith's murmur [Eustace Smith, London physician, 1835-1914] see under *murmur*.

eustachian (u-sta'ke-an) [named after Bartolommeo Eustachio (L. Eustachius), an Italian anatomist, 1524-1574] see under *canal*, *cartilage*, *tube*, and *valve*.

eustachitis (u'sta-ki'tis) inflammation of the eustachian tube.

eustachium (u-sta'ke-um) the eustachian tube (tuba auditiva [NA]).

eusthenia (u-sthen'e-ah) [eu- + Gr. *sthenos* strength] a condition of normal strength and activity.

eusthenuria (u'sthen-u're-ah) [eu + G. *sthenos* strength + *ouron* urine + *-ia*] a normal state of the urine as regards osmolality.

Eustrongylus (u-stron'ji-lus) genus of nematode parasites of aquatic birds. **E. gi'gas**, *Diectophyma renale*.

eusystole (u-sis'to-le) [eu- + *systolē*] a normal state of the systole of the heart.

eusystolic (u'sis-tol'ik) pertaining to or characterized by eusystole.

Eutamias (u-tam'e-as) the western chipmunk, which harbors the plague-infected fleas, *Monopsyllus eumolpi*, and has been found infected with plague.

eutectic (u-tek'tik) [Gr. *eutēktos* easily melted or dissolved] melting readily; said of a mixture that melts at a lower temperature than any of its ingredients.

eutelegensis (u-tel'ē-jen'ē-sis) [eu- + Gr. *tēle* far off + *genesis* reproduction] artificial insemination by semen of a donor selected because of special characteristics for the production of superior offspring.

euteleocithal (u-tel'o-les'i-thal) [eu- + *teleocithal*] having deutoplasm greatly in excess of the cell protoplasm; said of the ova of birds and many reptiles. Cf. *oligolecithal* and *telecithal*.

euthanasia (u'thah-na'zhe-ah) [eu- + Gr. *thanatos* death] 1. an easy or painless death. 2. mercy killing; the deliberate ending of life of a person suffering from an incurable and painful disease.

euthenic (u-then'ik) conducive to race improvement through environment.

euthenics (u-then'iks) [Gr. *euthēnia* well-being] the science of race improvement through the regulation of environment. Cf. *eugenics*.

eutherapeutic (u-ther'ah-pu'tik) [eu- + *therapeutic*] having good therapeutic properties.

Eutheria (u-the'ri-ah) [eu- + Gr. *therion* beast, animal] in some systems of classification, a subclass of the Mammalia and in others an infraclass of the subclass Theria, including all the true placental mammals, and excluding the monotremes and marsupials.

eutharian (u-the'ri-an) any member of the Eutheria.

euthermic (u-ther'mik) [Gr. *euthermos* very warm] characterized by the proper temperature; promoting warmth.

Euthroid (u'throid) trademark for a preparation of liothrix.

euthymism (u-thi'mizm) a normal condition of thymus activity.

Euthyneura (u'thē-nu'rah) a subclass of hermaphroditic mollusks (class Gastropoda) found chiefly in fresh-water or terrestrial habitats; many species are primary or intermediate hosts of various pathogenes.

euthyphoria (u'the-fo're-ah) [Gr. *euthys* straight + *pherein* to bear] normal relationship of the visual axis, without deviation when fusion is prevented.

euthyroid (u-thi'roid) having a normally functioning thyroid gland.

euthyroidism (u-thi'roid-ism) a condition of normal thyroid function.

eutocia (u-to/'se-ah) [Gr. *eutokia*] normal labor, or childbirth.

Eutonil (u'to-nil) trademark for a preparation of pargyline hydrochloride.

eutopic (u-top/'ik) [*eu-* + Gr. *topos* place] situated normally; arising from the normal site or tissue. Cf. *ectopic*.

Eutriatoma (u'tri-at/'o-mah) a genus of reduviid bugs, species of which transmit Chagas' disease.

Eutrichomastix cuniculi (u'trik-o-mas/'tik-s ku-nik-'u-li) a parasitic flagellate protozoan of the order Polymastigida, which resembles a trichomonad; found in rabbits.

Eutrombicula (u'trom-bik-'u-lah) a subgenus of *Trombicula*; see *chigger*. **E. alfreddugesi**, the common chigger of the United States; called also *Trombicula irritans*. **E. splendens**, a troublesome species found in southeastern localities.

eutrophia (u-tro/'fe-ah) [*eu-* + Gr. *trophē* nourishment + *-ia*] a state of normal (good) nutrition.

eutrophic (u-trof/'ik) pertaining to, characterized by, or conducive to good nutrition.

eutrophication (u'tro-fi-ka/'shun) the accidental or deliberate promotion of excessive growth (multiplication) of an organism to the disadvantage of other organisms in the same ecosystem by oversupplying it with nutrients.

euvolia (u-vo/'le-ah) normal water content or volume of a given body compartment, e.g., extracellular evolia.

euxanthon (u-zan/'thon) chemical name: 1,7-dihydroxyxanthone. A ketone, dioxidiphenylene ketone oxide, $\text{CO}(\text{C}_6\text{H}_5\text{OH})_2\text{O}$, obtained from Indian yellow.

eV, ev electron volt.

evacuant (e-vak-'u-ant) [*L. evacans* making empty] 1. emptying; serving to clear the bowels. 2. a remedy which empties any organ; a cathartic, emetic, or diuretic.

evacuation (e-vak-'u-a/'shun) [*L. evacuatio*, from *e* out + *vacuus* empty] 1. an emptying, as of the bowels. 2. a dejection or stool; material discharged from the bowels.

evacuator (e-vak-'u-a-tor) an instrument for removing fluid or small particles from a body cavity or container; formerly applied to one for compelling evacuation of the bowels or bladder.

evagination (e-vaj-'i-na/'shun) an outpouching of a layer or part. **optic e.**, optic vesicle (*vesicula ophthalmica* [NA]).

evanescent (ev-'ah-nes/'ent) [*L. evanescere* to vanish away] vanishing; passing away quickly; unstable; unfixed.

evaporation (e-vap-'o-ra/'shun) [*L. e* out + *vaporare* to steam] conversion of a liquid or solid into vapor.

Eve's method (ēvz) [Frank Cecil *Eve*, English physician, 1871-1952] a method of artificial respiration; see under *respiration*, *artificial*.

eventration (e'ven-tra/'shun) [*L. eventratio* disembowelment, from *e* out + *venter* belly] 1. protrusion of the bowels from the abdomen. 2. removal of the abdominal viscera. **diaphragmatic e.**, elevation of the dome of the diaphragm, usually the result of paralysis of a phrenic nerve. **umbilical e.**, omphalocele.

Eversbusch's operation (a'vārz-boosh/'ez) [Oskar *Eversbusch*, German ophthalmologist, 1853-1912] see under *operation*.

eversion (e-ver/'zhun) [*L. eversio*] a turning inside out; a turning outward, as of the foot.

evert (e-vert') [*L. e* out + *vertere* to turn] to turn inside out; to turn outward.

evertor (e-ver/'tor) a muscle that turns a part outward.

Evex (e'veks) trademark for a preparation of esterified estrogens.

évidement (a-vēd-maw') [Fr.] the operation of scooping out a cavity or diseased portion of an organ.

évideur (a-ve-dur') [Fr.] an instrument for performing évidement.

evil (e'vil) an illness or disease. **poll e.**, an abscess behind the ears of a horse, caused by a dual infection of the supra-atlantal bursa by *Brucella* and *Actinomyces*. **quarter e.**, blackleg. **St. John's e.**, epilepsy. **St. Main's e.**, scabies. **St. Martin's e.**, alcoholism.

Evipal (ev'i-pal) trademark for a preparation of hexobarbital.

eviration (e'vi-ra/'shun) [*L. e* out + *vir* man] 1. castration. 2. a form of paranoia in which the patient believes he is a woman, and assumes feminine qualities (Krafft-Ebing).

evisceration (e-vis'er-a/'shun) [*L. evisceratio*; *e* out + *viscus* the inside of the body] extrusion of the viscera, or internal organs; disembowelment. When used in connection with the eye, it denotes removal of the contents of the eyeball, with the sclera being left intact.

evocation (ev-'o-ka/'shun) [*L. e* out + *vocare* to call] the calling forth of morphogenetic potentialities through contact with organizer material.

evocator (ev-'o-ka/'ter) a chemical substance emitted by an organizer region of an embryo that evokes a specific morphogenetic response from competent embryonic tissue in contact with it.

evolution (ev-'o-lu/'shun) [*L. evolutio*, from *e* out + *volvere* to roll]

1. an unrolling. 2. a process of development in which an organ or organism becomes more and more complex by the differentiation of its parts; a continuous and progressive change according to certain laws and by means of resident forces. 3. preformation. Cf. *devolution*. **bathmic e.**, evolution due to something in the organism itself independent of environment; called also *orthogenic e.* **convergent e.**, the appearance of similar forms and/or functions in two or more lines not sufficiently related phylogenetically to account for the similarity. **Denman's spontaneous e.**, a mechanism of spontaneous version in shoulder presentations in which the head rotates behind, and as the breech descends the shoulder ascends in the pelvis, the breech finally coming down and emerging. Called also *Denman's spontaneous version*. **determinate e.**, orthogenesis, def. 2. **emergent e.**, the assumption that each step in evolution produces something new and something that could not be predicted from its antecedents. **organic e.**, the origin and development of species; the theory that existing organisms are the result of descent with modification from those of past times. **orthogenic e.**, bathmic e. **saltatory e.**, evolution showing sudden changes; mutation or saltation. **spontaneous e.**, the unaided expulsion of a transversely placed fetus without the process of version or turning.

evolutionary (ev-'o-lu/'tiv) relating to evolution; specifically applied to a type of mental defect characterized by retardation of the evolutionary process.

evulsio (e-vul'se-o) [*L.*, from *e* out + *vellere* to pluck] evulsion. **e. ner'vi op'tici**, the tearing out of the optic nerve from the eyeball.

evulsion (e-vul'shun) [*L. evulsio*] extraction by force; see *avulsion*.

Ewart's sign (u'arts) [William *Ewart*, English physician, 1848-1929] see under *sign*.

Ewing's tumor (sarcoma) (u'ingz) [James *Ewing*, New York pathologist, 1866-1943] see under *tumor*.

ex- (eks) [*L. ex*; Gr. *ex* out, away from] a prefix meaning away from, without, or outside; it is sometimes used to denote completely, as in *exacerbation*.

exacerbation (eg-zas'er-ba/'shun) [*ex-* + *L. acerbus* harsh] increase in the severity of a disease or any of its symptoms.

exaeresis (eks-er'ē-sis) [Gr. "a taking out"] exeresis; surgical removal.

exaltation (eg'zawl-ta/'shun) an abnormal mental state, marked by a feeling of great importance and ecstatic spiritual elevation.

examination (eg-zam'i-na/'tion) [*L. examinare*] inspection or investigation, especially as a means of diagnosing disease, qualified according to the methods employed, as physical examination, roentgen examination, cystoscopic examination, etc. **double-contrast e.**, radiologic examination of the stomach using first a high concentration of contrast medium and then (after the stomach empties) a lower concentration of contrast material. The lower concentration is sometimes used first.

exangia (eks-an'je-ah) [*ex-* + Gr. *angeion* vessel] (*obs.*) dilatation of a blood vessel.

exania (ek-sa'ne-ah) [*ex-* + *L. anus*] prolapse of the rectum.

examination (eg-zan'i-ma/'shun) unconsciousness; coma.

exanthem (eg-zan'them) [Gr. *exanthēma*] 1. any eruptive disease or eruptive fever. 2. the eruption which characterizes an eruptive fever; see *eruption*. Called also *rash*. **Boston e.**, a rash associated with echovirus 16, without lymphadenopathy. **e. subitum**, exanthema subitum. **syphilitic e.**, see under *roseola*. **vesicular e.**, a viral disease of swine marked by the formation of vesicles on the snout, lips, tongue, feet, and teats. A local eruption may be produced experimentally in horses by injection into the tongue.

exanthema (eg'zan-the'mah), pl. *exanthēmas*, *exanthem'ata* [Gr. *exanthēma*] exanthem. **e. subitum**, an acute, mild viral disease of infants and young children, marked by high, continuous or remittent fever that lasts for three to four days and then falls by crisis; just before or shortly after the fever subsides, a macular or maculopapular rash starts on the trunk and spreads to other areas of the body. Called also *roseola infantum* or *infantilidis*, and *sixth disease*.

exanthemata (eg'zan'-them'ah-tah) plural of *exanthema*.

exanthematous (eg'zan-them'ah-tus) pertaining to, characterized by, or of the nature of an exanthem.

exanthrope (ek'zan-thrōp) [*ex-* + Gr. *anthrōpos* man] any source of disease not situated within the human body.

exanthropic (ek'zan-thrōp'ik) of the nature of an exanthrope; not situated within the human body.

exarteritis (eks'ar-tē-ri'tis) [*ex-* + *arteritis*] (*obs.*) inflammation of the outer arterial coat.

exarticulation (eks'ar-tik-u-la/'shun) [*ex-* + *L. articulus* joint] amputation at a joint; removal of a portion of a joint.

excalation (eks'kah-la/'shun) absence or exclusion of one member of a normal series, such as a vertebra.

excarnation (eks'kar-na/'shun) [*ex-* + *L. caro, carnis* flesh] removal of superfluous fleshy tissue from a preparation.

excavatio (eks''kah-va'she-o), pl. *excavatio'nes* [L., from *ex* out + *cavus* hollow] excavation: [NA] a general term for a hollowed-out space, or pouchlike cavity. **e. dis'ci** [NA], a depression in the center of the optic disk; called also *optic or physiological cup* and *e. papillae nervi optici*. **e. papil'lae ner'vi op'tici**, e. disci. **e. rectouteri'na** [NA], rectouterine excavation: a sac or recess formed by a fold of the peritoneum dipping down between the rectum and the uterus; called also *cavum douglasi*, *cul-de-sac of Douglas*, *pouch of Douglas*, *Douglas' space*, and *rectouterine, rectovaginal, uterovesical, or vesicouterine pouch*. **e. rectovesica'lis** [NA], rectovesical excavation: the space between the rectum and the bladder in the peritoneal cavity of the male; called also *rectovesical pouch*. **e. vesicouteri'na** [NA], vesicouterine excavation: the space between the bladder and the uterus in the peritoneal cavity; called also *uterovesical or vesicouterine pouch*.

excavation (eks''kah-va'shun) [L. *excavatio*] 1. the act of hollowing out. 2. a hollowed-out space, or pouchlike cavity. **atrophic e.**, the cupping of the optic disk, caused by atrophy of the optic nerve fibers. **dental e.**, removal of carious material from a tooth in preparation for filling. **glaucomatous e.**, marked cupping of the optic disk, due to abnormally high intraocular pressure. **ischio'rectal e.**, fossa ischio'rectalis. **e. of optic disk, physiologic e.**, excavatio papillae nervi optici. **rectoischia'dic e.**, fossa ischio'rectalis. **rectouterine e.**, excavatio rectouterina. **rectovesical e.**, excavatio rectovesicalis. **vesicouterine e.**, excavatio vesicouterina.

excavationes (eks''kah-va'she-o'nēz) [L.] plural of *excavatio*.

excavator (eks''kah-va'tor) a form of scoop or gouge for surgical use. **dental e.**, an instrument for removing carious material from a tooth. **spoon e.**, a dental excavator with a spoon-shaped blade at its end, for removing dental caries.

excelsin (ek-sel'sin) a crystalline globulin from the Brazil nut.

excementosis (ek-se'men-to'sis) hyperplasia of the cementum of the root of a tooth.

excerebration (ek'ser-ē-bra'shun) [*ex* + L. *cerebrum* brain] the removal of the brain, chiefly that of the fetus in embryotomy.

excernent (ek-ser'nent) [L. *excernere* to sift, to separate] causing an evacuation or discharge.

excess (ek-ses', ek'ses) the state of exceeding that which is normal, sufficient, or needed; superfluous. **antigen e.**, the presence of more than enough antigen molecules to bind all available antibody combining sites in a mixture of antigen and homologous antibody molecules. Antigen-antibody complexes formed in conditions of antigen excess have the capacity to induce immunological injury to tissues and cells and constitute part of the pathogenesis of certain immune complex diseases.

exchange (eks-chānj) 1. the substitution of one thing for another. 2. to substitute one thing for another. **plasma e.**, the removal of plasma from withdrawn blood, usually to a greater extent than in plasmapheresis, with retransfusion of the formed elements into the donor; done for removal of circulating antibodies or abnormal plasma constituents. The plasma removed is replaced by type-specific frozen plasma or albumin.

exchanger (eks-chānj'er) an apparatus by which something may be exchanged. **heat e.**, a device which is placed in the circuit of extracorporeal circulation, to induce rapid cooling and rewarming of blood.

exipient (ek-sip'e-ent) [L. *exicipiens*, from *ex* out + *capere* to take] any more or less inert substance added to a prescription in order to confer a suitable consistency or form to the drug; a vehicle.

excise (ek-siz') to cut out or off.

excision (ek-sizh'un) [L. *excisio*, from *ex* out + *caedere* to cut] removal, as of an organ, by cutting.

excitability (ek-sit''ah-bil'i-te) readiness to respond to a stimulus; irritability.

excitable (ek-sit''ah-b'l) [L. *excitabilis*] susceptible of stimulation; responding to a stimulus.

excitant (ek-sit'ant) any agent that produces excitation of the vital functions, or of those of the brain.

excitation (ek'si-ta'shun) [L. *excitatio*, from *ex* out + *citare* to call] an act of irritation or stimulation or of responding to a stimulus; a condition of being excited; the addition of energy, as the excitation of a molecule by absorption of photons. **anomalous atrioventricular e.**, Wolff-Parkinson-White syndrome. **direct e.**, electrostimulation of a muscle by placing the electrode on the muscle itself. **indirect e.**, electrostimulation of a muscle by placing the electrode on its nerve.

excitatory (ek-si'tah-to're) 1. tending to excitation or stimulation. 2. tending to disassimilation.

excitoanabolic (ek-si''to-an''ah-bol'ik) stimulating anabolism.

excitocatabolic (ek-si''to-kat''ah-bol'ik) stimulating catabolism.

excitoglandular (ek-si''to-glan'du-lar) causing glands to secrete.

excitometabolic (ek-si''to-met''ah-bol'ik) producing metabolic changes.

excitomotor (ek-si''to-mo'tor) 1. tending to produce motion or

motor function. 2. an agent that induces motion or functional activity.

excitomotory (ek-si''to-mo'to-re) excitomotor.

excitomuscular (ek-si''to-mus'ku-lar) stimulating muscular activity.

excitonutrient (ek-si''to-nu'tre-ent) exciting or stimulating nutrition.

excitor (ek-si'tor) a nerve, the stimulation of which excites greater action in the part which it supplies.

excitosecretory (ek-si''to-se-kre'to-re) producing increased secretion.

excitovascular (ek-si''to-vas'ku-lar) causing vascular changes.

exclave (eks'klāv) [*ex* + L. *clavis* key, by analogy with *enclave*] a detached part of an organ, as of the pancreas or of some other gland.

exclusion (eks-kloo'zhun) [L. *exclusio*, from *ex* out + *cludere* to shut] elimination, rejection, or extrusion. Specifically, an operation in which a portion of an organ is separated from the remainder but is not removed from the body.

excochleation (eks-kok''le-a'shun) [*ex* + L. *cochlea* spoon] the operation of curetting or scooping out a cavity.

exconjugant (eks-kon'ju-gahnt) [L. *ex* + *conjugare* to unite] a protozoan that has just undergone conjugation.

excoriation (eks-ko're-a'shun) [L. *excoriare* to flay, from *ex* out + *corium* skin] any superficial loss of substance, such as that produced on the skin by scratching. **neurotic e.**, a self-induced skin lesion, inflicted by the fingernails or other physical means.

excrement (eks'krē-ment) [L. *excrementum*, from *ex* out + *cernere* to sift, to separate] fecal matter; matter cast out as waste from the body; called also *ordure*.

excrementitious (eks'krē-men-tish'us) pertaining to or of the nature of excrement; fecal.

excrecence (eks-kres'ens) [*ex* + L. *crecere* to grow] any abnormal outgrowth; a projection of morbid origin. **cauliflower e.** (*obs.*), condyloma acuminatum. **fungating e.**, fungous e., a fungus growth in the umbilicus after separation of the umbilical cord; granuloma of the umbilicus. **Lamb's e's**, small papillary projections on the cardiac valves seen post mortem on many adult hearts.

excrecent (eks-kres'ent) resembling or of the nature of an excrecence.

excreta (eks-kre'tah) [L., pl.] excretion products; waste materials excreted by the body.

excrete (eks-krēt') [L. *excernere*] to throw off or eliminate, as waste matter, by a normal discharge.

excretin (eks'kre-tin) a crystalline compound, C₂₀H₃₆O, derivable from human feces.

excretion (eks-kre'shun) [L. *excretio*] 1. the act, process, or function of excreting. 2. material which is excreted. Cf. *elimination*. **pseudouridine e.**, increased excretion of pseudouridine in the urine of gouty patients, the significance of which remains to be established; a greater turnover of some forms of RNA has been suggested, possibly adding to the hyperuricemia of gout.

excretory (eks'kre-to-re) of, pertaining to, or subserving excretion.

excurrent (eks-kur'ent) excretory; efferent.

excursion (eks-kur'zhun) [L. *excursio*, from *ex* out + *currere* to run] movements occurring from a normal, or rest, position of a movable part in performance of a function, as those of the mandible to attain functional contact between the cusps of the mandibular and maxillary teeth in mastication, or of the chest wall in respiration. **lateral e.**, sideward movement of the mandible between the position of closure and that in which the tips of the cusps of opposing teeth are in vertical proximity. **protrusive e.**, movement of the mandible between the position of closure and that in which the incisal edges of the anterior teeth are in vertical approximation. **retrusive e.**, the slight backward and return movement of the mandible between the position of closure and one slightly posterior, more often present with mandibular overclosure.

excursive (eks-kur'sive) pertaining to or characterized by excursion.

excyclophoria (ek'si-klo-fo're-ah) cyclophoria in which the upper pole of the vertical axis of the eye deviates away from the midline of the face and toward the temple; called also *positive* (or *plus*) *cyclophoria*. Cf. *incyclophoria*.

excyclotropia (ek'si-klo-tro'pe-ah) cyclotropia in which the upper pole of the vertical axis of the eye deviates away from the midline of the face, and toward the temple; called also *positive* (or *plus*) *cyclotropia*.

excystation (ek'sis-ta'shun) escape from a cyst or envelope; especially a stage in the life cycle of parasites occurring after the cystic form has been swallowed by the host.

exelcin (ek-sel'sin) a substance extracted from Brazil nut.

exelcymosis (ek'sel-si-mo'sis) [*ex* + Gr. *helkyein* to draw] ex-traction, as of a tooth.

exemia (ek-se'me-ah) [ex- + Gr. *haima* blood + -ia] loss of fluid from the blood vessels, the red cells being left behind. Cf. *hemoconcentration*.

exencephalia (eks'en-sē-fa'le-ah) exencephaly.

exencephalon (eks'en-sef'ah-lon) exencephalus.

exencephalous (eks'en-sef'ah-lus) characterized by exencephaly.

exencephalus (eks'en-sef'ah-lus) [ex- + Gr. *enkephalos* brain] a monster exhibiting exencephaly.

exencephaly (eks'en-sef'ah-le) [ex- + Gr. *enkephalos* brain] a developmental anomaly characterized by an imperfect cranium, the brain lying outside of the skull.

exenteration (eks-en'ter-a'shun) [ex- + Gr. *enteron* bowel] surgical removal of the inner organs; commonly used to indicate radical excision of the contents of a body cavity, as of the pelvis. Used in connection with the eye, it denotes removal of the entire contents of the orbit. **pelvic e.**, excision of the organs and adjacent structures of the pelvis. **pelvic e., anterior**, excision en masse of the bladder, lower ureters, vagina, adnexa, pelvic lymph nodes, and pelvic peritoneum, with implantation of the ureters into the intact pelvic colon. **pelvic e., posterior**, excision en masse of the pelvic colon, uterus, vagina, and adnexa, with or without pelvic lymph node excision, the lower urinary tract being undisturbed. **pelvic e., total**, excision en masse of the bladder, lower ureters, vagina, uterus, adnexa, and the pelvic and lower sigmoid colon, with excision of the pelvic lymph nodes and removal of all the pelvic peritoneum.

exenterative (eks-en'ter-ah-tiv) pertaining to or requiring exenteration, as exenterative surgery.

exenteritis (eks-en'ter-i'tis) inflammation of the peritoneal covering of the intestine; visceral peritonitis.

exercise (ek'ser-siz) the performance of physical exertion for improvement of health or the correction of physical deformity. **active e.**, motion imparted to a part by voluntary contraction and relaxation of the muscles controlling the part. **active assisted e.**, motion imparted to a part of the body by voluntary contraction of muscles controlling the part, assisted by a therapist or by some other means. **active resistive e.**, that performed voluntarily by the patient against resistance. **corrective e.**, the scientific use of bodily movement to maintain or restore normal function in diseased or injured tissues. **free e.**, active exercise in which no aid is derived from external forces. **isometric e.**, active exercise performed against stable resistance, without change in the length of the muscle. **isotonic e.**, active exercise without appreciable change in the force of muscular contraction, with shortening of the muscle. **muscle-setting e.**, voluntary contraction and relaxation of skeletal muscles without movement of the associated part of the body; called also *static e.* **passive e.**, motion imparted to a segment of the body by another individual, machine, or other outside force, or produced by voluntary effort of another segment of the patient's own body. **static e.**, muscle-setting e. **therapeutic e.**, corrective e. **underwater e.**, exercise performed in a pool or a large tub. Cf. *Hubbard tank*.

exeresis (eks-er'ē-sis) [Gr. *exairesis* a taking out] surgical removal or excision.

exergic (ek-ser'jik) [ex- + Gr. *ergon* work] giving out work; a term applied to chemical reactions which occur with a decrease in free energy. Cf. *endergic*.

exergonic (ek'ser-gon'ik) [ex(o)- + Gr. *ergon* work] characterized or accompanied by the release of energy; said of chemical reactions that release free energy, so that the products have a lower free energy than the reactants. Opposed to *endergonic*.

exesion (eg-ze'zhun) [L. *exedere* to eat out] the gradual destruction of superficial parts of a tissue.

exfetation (eks'fe-ta'shun) [ex- + L. *fetus*] ectopic or extrauterine pregnancy.

exflagellation (eks'flaj-ē-la'shun) [ex- + L. *flagellum*] the protrusion or formation of flagelliform gametes (male gametes) from a microgametocyte in malaria and in some related sporozoans.

exfoliation (eks'fo-le-a'she-o) [L. from ex- + *folium* leaf] exfoliation. **e. area'ta lin'guae**, geographic tongue.

exfoliation (eks'fo-le-a'shun) [L. *exfoliatio*] a falling off in scales or layers. **lamellar e. of the newborn**, a rare congenital disorder transmitted as an autosomal recessive trait, in which the infant (collodion baby) is born completely covered with a collodion- or parchment-like membrane that peels off within twenty-four hours, after which there may be complete healing, or the scales may re-form and the process repeated. In the more severe form, the infant (harlequin fetus) is completely covered with thick, horny, armor-like scales, and is usually stillborn or dies shortly after birth. Some consider the disorder to be a form of lamellar ichthyosis (q.v.). Called also *ichthyosis congenita*, *ichthyosis fetalis*, *lamellar desquamation of the newborn*, and *lamellar ichthyosis of the newborn*.

exfoliative (eks'fo-le-a'tiv) characterized by exfoliation.

exhalation (eks'hah-la'shun) [L. *exhalatio*, from ex out + *halare* to breathe] 1. the giving off of watery or other vapor, or of an

effluvium. 2. a vapor or other substance exhaled or given off. 3. the act of breathing out.

exhale (eks-hāl') [ex- + L. *halare* to breathe] 1. to expel from the lungs by breathing. 2. to give off a watery or other vapor.

exhaustion (eg-zawst'yun) [ex- + L. *haurire* to drain] 1. privation of energy with consequent inability to respond to stimuli; lassitude. 2. withdrawal. 3. condition of emptiness caused by withdrawal. 4. emptying by a process of withdrawal. **heat e.**, an effect of excessive exposure to heat occurring commonly among workers in furnace rooms, foundries, etc., although it may occur from exposure to the sun's heat. It is marked by subnormal temperature, with dizziness, headache, nausea, and sometimes delirium and/or collapse. Distinguished from heat stroke, in which the body temperature may be dangerously elevated. Called also *heat prostration*. Cf. *sunstroke*. **heat e., anhidrotic**, **heat e., type II**, tropical anhidrotic asthenia. **nervous e.**, depression of vital functions due to excessive demands upon the nervous energy; neurasthenia.

Exhib. abbreviation for L. *exhibea'tur*, let it be given.

exhibition (ek'si-bish'un) administration of a drug.

exhibitionism (ek'si-bish'ū-nizm") an abnormal tendency to display one's body or parts for the purpose, conscious or unconscious, of attracting sexual interest; it is most commonly seen in males and when severe leads to exposure of the genitals, sometimes accompanied by sexual gratification.

exhibitionist (ek'si-bish'ū-nist) an individual who is addicted to exhibitionism.

exhilarant (eg-zil'ar-ant) [L. *exhilarare* to gladden] (obs.) 1. causing elevation or gladness. 2. an enlivening or elating agent.

exhumation (eks'hu-ma'shun) [ex- + L. *humus* earth] disinterment; removal of the dead body from the earth after burial.

exitus (ek'si-tus), pl. *exitus* [L. "a going out"] 1. death. 2. an exit or outlet. **e. pel'vis**, *apertura pelvis inferior*.

Exna (eks'nah) trademark for a preparation of benzthiazide.

Exner's plexus (eks'nerz) [Sigmund *Exner*, Austrian physiologist, 1846-1926] see under *plexus*.

exo- (eks'so) [Gr. *exō* outside] a prefix meaning outside, or outward.

exoantigen (ek'so-an'te-jen) ectoantigen.

exobiology (ek'so-bi-ol'o-je) the science concerned with the study of life on planets other than the earth.

exocardia (ek'so-kar'de-ah) ectocardia.

exocardial (ek'so-kar'de-al) situated, occurring, or developed outside the heart.

exocarp (ek'so-karp) the outer layer of the pericarp of a flower.

exocataphoria (ek'so-kat'ah-fo're-ah) [exo- + *cataphoria*] the condition in which the visual axis turns downward and outward.

exocoel (ek'so-sēl) extraembryonic coelom.

exocervix (ek'so-ser'viks) ectocervix.

exochorion (ek'so-ko're-on) that part of the chorion which is derived from the ectoderm, as in those species in which extraembryonic membranes form by folding.

exocoelom (ek'so-se'lom) [exo- + *coelom*] extraembryonic coelom.

exocoeloma (ek'so-se-lo'mah) extraembryonic coelom.

exocolitis (ek'so-ko-li'tis) [exo- + *colitis*] inflammation of the outer coat of the colon.

exocrine (ek'so-krin) [exo- + Gr. *krinein* to separate] 1. secreting outwardly via a duct; the opposite of endocrine. 2. denoting such a gland or its secretion. See also under *gland*.

exocrinology (ek'so-kri-nol'o-je) the study of substances secreted externally by individual organisms which effect integration of a group of organisms.

exocrinosity (ek'so-kri-nos'i-te) the quality or state of secreting externally.

exocuticle (ek'so-ku'ti-kl) [exo- + L. *cuticula*] the outer layer of the procuticle of certain crustaceans and arthropods, which contains cuticulin, chitin, and phenolic substances that are oxidized to produce the dark pigment of the cuticle.

exocyclic (ek-so-si'klik) a term applied to cyclic chemical compounds having their double bond in the side chain.

exocytosis (eks'o-si-to'sis) 1. the discharge from a cell of particles that are too large to diffuse through the wall; the opposite of endocytosis. 2. the aggregation of migrating leukocytes in the epidermis as part of the inflammatory response.

exodeviation (ek'so-de've-a'shun) a turning outward; in ophthalmology, exotropia.

exodic (ek-sod'ik) [ex- + Gr. *hodos* way] centrifugal or efferent.

exodontia (ek'so-don'she-ah) exodontics.

exodontics (ek'so-don'tiks) that branch of dentistry dealing with extraction of the teeth.

exodontist (ek'so-don'tist) a dentist who practices exodontics.

exoenzyme (ek'so-en'zim) an extracellular enzyme; an enzyme that acts outside of the cells in which it originates.

exoergic (ek'so-er'jik) characterized by or accompanied by loss

of free energy; releasing energy, as in a chemical reaction during and by which energy is released; energy releasing. Cf. *endoergic* and *endothermic*.

exoxythrocytic (ek'so-ŝ-rith'ro-si'tik) outside the erythrocyte, a term applied to stages in the development of malarial parasites which takes place in tissue cells instead of in erythrocytes.

exogamy (ek-sog'ah-me) [exo- + Gr. *gamos* marriage] 1. protozoan fertilization by the union of elements that are not derived from the same cell. Cf. *autogamy* (def. 1) and *endogamy* (def. 1). 2. marriage outside a particular group.

exogastric (ek'so-gas'trik) pertaining to the external surface of the stomach.

exogastritis (ek'so-gas-tri'tis) inflammation of the external coat of the stomach.

exogastrula (ek'so-gas'troo-lah) [exo- + *gastrula*] a gastrula in which invagination is hindered and the mesentoderm bulges outward.

exogastrulation (eks'o-gas'troo-la'shun) the evagination to the exterior (or turning inside out) of the gut due to an interference with the normal processes of gastrulation, which can occur if the morula is cut transversely below the equator. It is usually followed by a migration of mesenchyme cells into the interior.

exogenetic (ek'so-jē-net'ik) [exo- + Gr. *gennan* to produce] exogenous.

exogenic (ek'so-jen'ik) exogenous.

exogenote (eks'o-je'nōt) in bacterial genetics, the extra piece of genetic information introduced by transduction into the recipient cell. Cf. *endogenote*.

exogenous (eks-oj'ē-nus) [exo- + Gr. *gennan* to produce] growing by additions to the outside; developed or originating outside the organism, as exogenous disease.

exognathia (ek'sog-na'the-ah) prognathism.

exognathion (ek'sog-na'the-on) [exo- + Gr. *gnathos* jaw] the maxilla exclusive of the premaxilla.

exohemophylaxis (ek'so-he'mo-fi-lak'sis) [exo- + Gr. *haima* blood + *phylaxis* a guarding] a procedure consisting of mixing arphenamine with some of the patient's blood and then injecting the mixture, the object being to reduce the sensitiveness of the blood.

exohysteropexy (ek'so-his'ter-o-pek'se) [exo- + Gr. *hystera* uterus + *pēxis* fixation] (obs.) uterine fixation by implanting the fundus in the abdominal wall.

exolever (ek'so-le'ver) a lever-like instrument for extracting tooth roots.

exometer (eks-om'ē-ter) an apparatus for measuring the fluorescent quality of the roentgen ray in comparison with units of candle power.

exomphalos (eks-om'fah-los) [ex- + Gr. *omphalos* navel] 1. hernia of the abdominal viscera into the umbilical cord. 2. congenital umbilical hernia.

exomysium (eks'o-mis'e-um) perimysium.

exonuclease (ek'so-nu'kle-ās) a nuclease that cleaves single mononucleotides from the end of a polynucleotide chain.

exopathic (ek'so-path'ik) of the nature of an exopathy; originating outside the body.

exopathy (eks-op'ah-the) [exo- + Gr. *pathos* disease] a disease originating in some cause lying outside the organism; exogenous disease.

exopeptidase (ek'so-pep'ti-dās) a proteolytic enzyme the action of which is limited to terminal peptide linkages.

exophoria (ek-so-fō're-ah) [exo- + Gr. *phorein* to bear] a form of heterophoria in which there is deviation of the visual axis of one eye away from that of the other eye in the absence of visual fusional stimuli. Called also *exodeviation*.

exophoric (ek'so-for'ik) pertaining to or characterized by exophoria.

exophthalmic (ek'sof-thal'mik) of or pertaining to or characterized by exophthalmos.

exophthalmogenic (ek'sof-thal'mo-jen'ik) causing or producing exophthalmos.

exophthalmometer (ek'sof-thal-mom'ē-ter) an instrument for measuring the amount of exophthalmos.

exophthalmometric (ek'sof-thal'mo-met'rik) pertaining to exophthalmometry.

exophthalmometry (ek'sof-thal-mom'ē-tre) measurement of the extent of protrusion of the eyeball in exophthalmos.

exophthalmos (ek'sof-thal'mos) [ex- + Gr. *ophthalmos* eye] abnormal protrusion of the eyeball. **endocrine e.**, exophthalmos associated with disorder of an endocrine gland, commonly thyrotoxicosis. **malignant e.**, severe exophthalmos in which there is marked edema and infiltration of the orbital tissues and extraocular muscles, proptosis, and stare. It was formerly attributed to overactivity of thyrotropin, and so is also called *thyrotropic e.* **pulsating e.**, exophthalmos with pulsation and bruit, often due to aneurysm pushing the eye forward. **thyrotoxic**

e., a mild form due to thyrotoxicosis: **thyrotropic e.**, malignant e.

exophthalmus (ek'sof-thal'mus) exophthalmos.

exophytic (ek'so-fit'ik) [exo- + Gr. *phyein* to grow] growing outward; in oncology, proliferating on the exterior or surface epithelium of an organ or other structure, in which the growth originated.

exoplasm (ek'so-plazm) [exo- + Gr. *plasma* something formed] plasma membrane.

exopneumopexy (ek'so-nu'mo-pek'se) [exo- + Gr. *pneumōn* lung + *pēxis* fixation] (obs.) the operation of exteriorization and fixation of the lung.

exorbitism (ek-sor'bī-tizm) exophthalmos.

exormia (ek-sor'me-ah) [ex- + Gr. *hormē* rush] (obs.) any papular disease of the skin.

exosepsis (ek'so-sep'sis) [ex- + Gr. *sēpsis* decay] septic poisoning which does not originate within the organism.

exoserosis (ek'so-se-ro'sis) an oozing of serum or exudate, as in moist skin diseases and edema.

exoskeleton (ek'so-skel'ē-ton) [exo- + *skeleton*] a hard structure developed on the outside of the body, as the shell of a crustacean. In veterinary the term is applied to structures produced by the epidermis, as hair, nails, hoofs, teeth, etc.

exosmose (ek'sos-mōs) to diffuse from within outward.

exosmosis (ek'sos-mō'sis) [ex- + Gr. *ōsmos* impulsion] diffusion or osmosis from within outward; movement outward through a diaphragm or through vessel walls. Cf. *endosmosis*.

exosplenopexy (ek'so-sple'no-pek'se) [exo- + Gr. *splēn* spleen + *pēxis* fixation] suture of the spleen to the outside of the body or within the layers of the wound.

exospore (ek'so-spōr) conidium.

exosporium (ek'so-spo're-um) the external layer of the envelope of a spore.

exostosectomy (ek-sos'to-sek'to-me) excision of an exostosis.

exostosis (ek'sos-to'sis) [ex- + Gr. *osteon* bone] a benign bony growth projecting outward from the surface of a bone, characteristically capped by cartilage. **e. bursa'ta**, an exostosis from the epiphyseal portion of a bone, consisting of bone and cartilaginous tissue covered by a connective-tissue capsule. **e. cartilagin'-ea**, a variety of osteoma consisting of a layer of cartilage developing beneath the periosteum of a bone. **dental e.**, cementosis. **hereditary multiple exostoses**, multiple e. **ivory e.**, a bony growth of great density. **multiple exostoses**, a hereditary disorder characterized by exostoses near the extremities of diaphyses of long bones, which may be cartilaginous or osteocartilaginous growths. Transmitted as an autosomal dominant, it is generally benign, although sarcomatous changes have occurred. Called also *multiple cartilaginous exostoses*. **multiple cartilaginous exostoses**, multiple exostoses. **osteocartilaginous e.**, osteochondroma.

exostotic (ek'sos-tot'ik) pertaining to or of the nature of exostosis.

exoteric (ek'so-ter'ik) [Gr. *exōterikos* outer] generated or developed outside the organism; exogenous.

exothelioma (ek'so-the'le-o'mah) meningioma.

exothermal (ek'so-ther'mal) exothermic.

exothermic (ek'so-ther'mik) [exo- + Gr. *thermē* heat] characterized or accompanied by the evolution of heat, as in a chemical reaction during and by which heat is released; liberating heat or energy from its potential forms. Cf. *endothermic* and *exoergic*.

exothymopexy (ek'so-thi'mo-pek'se) [exo- + *thymus* + Gr. *pēxis* fixation] enucleation of the thymus gland from its fossa and suture to the sternum.

exothyroidopexy (ek'so-thi-ro'i-do-pek'se) exothyropexy.

exothyropexia (ek'so-thi'ro-pek'se-ah) exothyropexy.

exothyropexy (ek'so-thi'ro-pek'se) [exo- + *thyroid* + Gr. *pēxis* fixation] (obs.) the operation of drawing out the enlarged thyroid gland through an incision and letting it shrivel on the outside.

exotic (eg-zot'ik) of foreign origin; not native.

exotoxic (ek'so-tok'sik) [exo- + *toxic*] pertaining to or produced by an exotoxin.

exotoxin (ek'so-tok'sin) [exo- + *toxin*] a toxic substance formed by bacteria that is found outside the bacterial cell, or free in the culture medium. Exotoxins are heat-labile, and protein in nature. They are detoxified with retention of antigenicity by treatment with formaldehyde (formol toxoid), and are the most poisonous substances known to man; the LD₅₀ of crystalline botulinum type A toxin for the mouse is 4.5 × 10⁻⁹ mg.

exotropia (ek'so-tro'pe-ah) [exo- + Gr. *tropos* a turning + *-ia*] strabismus in which there is permanent deviation of the visual axis of one eye away from that of the other, resulting in diplopia; called also *divergent* or *external strabismus*, and *walleys*. **intermittent e.**, a condition alternating between phoria and tropia, with a tendency to shift to exotropia.

exotropic (ek'so-tro'pik) 1. turning outward. 2. pertaining to or characterized by exotropia.

expander (ek-span/'der) [L. *expandere* to spread out] **extender**. **plasma volume e.**, artificial plasma extender.

expansion (ek-span/'shun) [L. *expandere* to spread out] 1. the process or state of being increased in extent, surface, or bulk. 2. a region or area of increased bulk or surface. **e. of the arch**, widening of the dental arch in orthodontics. **clonal e.**, an immunological response in which lymphocytes stimulated by antigen proliferate and amplify the population of relevant cells. **cubical e.**, increase in volume by an increase in all dimensions. **hygroscopic e.**, an increase in dimensions of a body or substance as a result of absorption of moisture. **setting e.**, the increase in dimensions of a material, such as plaster of Paris, which occurs concurrently with its hardening. **thermal e.**, an increase in dimensions of a body or substance as a result of an increase in its temperature. **wax e.**, increase in the dimensions of a wax pattern for a dental restoration to compensate for shrinkage of the gold during the casting process.

expansiveness (ek-span/'siv-nes) behavior marked by euphoria, loquacity, and grandiosity.

expectancy (ek-spek/'tan-se) the probability of occurrence of a specific event. **life e.**, the number of years, based on statistical averages, that a given person of a specific age or class may reasonably expect to continue living.

expectation (ek/'spek-ta'shun) [L. *expectare*, from *ex* out + *specare* to look at] that which may be anticipated, or looked forward to.

expectorant (ek-spek/'to-rant) [*ex* + L. *pectus* breast] 1. promoting the ejection, by spitting, of mucus or other fluids from the lungs and trachea. 2. an agent that promotes the ejection of mucus or exudate from the lungs, bronchi, and trachea; sometimes extended to all remedies that quiet cough (antitussives). **liquefying e.**, an expectorant that promotes the ejection of mucus from the respiratory tract by decreasing its viscosity. **stimulant e.**, an expectorant that stimulates secretion of mucus by the respiratory tract mucosa. **Stokes's e.**, a preparation of ammonium carbonate, fluidextracts of senna and of squill, and camphorated tincture of opium in syrup of tolu.

expectoration (ek-spek/'to-ra'shun) 1. the act of coughing up and spitting out materials from the lungs, bronchi, and trachea. 2. sputum.

experiment (ek-sper/'i-ment) [L. *experimentum* "proof from experience"] a procedure done in order to discover or to demonstrate some fact or general truth. **bulbocapnine e.**, the experimental injection of the alkaloid bulbocapnine into animals, which produces in them the motor phenomena typical of catatonia. **check e.**, crucial e. **control e.**, an experiment that is made under standard conditions, to test the correctness of other observations; see also *control*. **crucial e.**, an experiment so designed and so prepared for by previous work that it will definitely settle some point. **Cyon's e.**, the application of a stimulus to an intact anterior spinal nerve root, which induces a stronger contraction of muscle than the same stimulus to the peripheral end of a divided nerve root. **defect e.**, observation of an embryo, after destruction of a region or part, to ascertain the effect on development. **Goltz's e.**, the striking of a frog on the abdomen, which produces stoppage of the heart's action. **Küss's e.**, injection of a solution of opium or belladonna into the bladder, which produces no symptoms of poisoning and thus proves the impermeability of the bladder epithelium to these substances. **Mariotte's e.**, (to demonstrate the blind spot of the eye), the eye is fixed on the center of a cross marked on a card on which is also marked a large spot; the card is moved to or from the face, and at a certain distance the image of the spot will disappear. **Müller's e.**, the converse of Valsalva's maneuver, i.e., making a forced inspiratory effort with the glottis closed. **Nussbaum's e.**, ligation of the renal arteries of an animal in order to isolate the glomeruli of the kidneys from the circulation. **O'Beirne's e.**, injecting air or water into a loop of intestine passed through a hole in a sheet of paper to demonstrate the causation of strangulated hernia. **Scheiner's e.**, the experiment of looking at an object through two pin holes close together in a card: if the object is in focus, only one image is observed; if it is not, two or more images are seen. **Stensen's e.**, the experiment of cutting off the blood supply from the lumbar region of the spinal cord of an animal by compressing the abdominal aorta; it produces paralysis of the posterior parts of the body. **Toynbee's e.**, the experiment of partially exhausting the air in the tympanic cavity by swallowing while the nose and mouth are closed. **Valsalva's e.**, see under *maneuver*.

expire (eks/'pi-rāt) expired gas (or air); the gas expired in one expiration is called *single expire*.

expiration (eks/'pi-ra'shun) [*ex* + L. *spirare* to breathe] 1. the act of breathing out, or expelling air from the lungs. 2. termination, or death.

expiratory (eks-'pi'rah-to're) subserving or pertaining to expiration.

expire (ek-spīr') 1. to breathe out. 2. to die, or terminate.

expirium (eks-'pi're-um) (*obs.*) an expiration.

expiscation (eks/'pis-ka'shun) (*obs.*) the long-continued study of symptoms for diagnostic purposes.

explant 1. (eks-plant') to take from the body and place in an artificial medium for growth. 2. (eks/'plant) tissue taken from its original site and transferred to an artificial medium for growth.

explode (eks-plōd') [L. *explodere*, from *ex* out + *plaudere* to clap the hands] 1. to undergo sudden and violent decomposition or combustion. 2. to burst; to spread rapidly, as an epidemic.

exploration (eks/'plo-ra'shun) [L. *exploratio*, from *ex* out + *plorare* to cry out] investigation or examination for diagnostic purposes.

exploratory (eks-'plo'rah-to're) [L. *exploratorius*] pertaining to exploration or investigation.

explorer (eks-'plor'er) an instrument for use in exploration, particularly for foreign bodies.

explosion (eks-'plo'zhun) [L. *explosio*] 1. the act of exploding. 2. a sudden and violent outbreak, as of emotion. 3. the discharge of a neural cell.

explosive (eks-'plo'siv) characterized by explosions, or by sudden and violent outbreaks.

exponent (eks-'po-nent) a symbol placed above and at the right of another symbol to indicate the power to which the latter is to be raised, as, x^2 .

exposure (eks-'po'zhur) 1. the act of laying open, as surgical exposure. 2. the condition of being subjected to something, as to infectious agents, extremes of weather or radiation, which may have a harmful effect. 3. in radiology, a measure of the amount of ionizing radiation at the surface of the irradiated object, e.g., the body.

expressate (eks-'pres'āt) the material forced out by expression.

expression (eks-'pres'h'un) [L. *expressio*] 1. the aspect or appearance of the face as determined by the physical or emotional state. 2. the act of squeezing or evacuating by pressure; a term used in pharmacy, surgery, and obstetrics. **early e.**, in obstetrics, manipulation of the uterus so as to exert pressure on the placenta lying in the vagina. **Kristeller e.**, see under *method*.

expressivity (eks-'pres-siv'i-te) [L. *expressus*] the extent to which a heritable trait is manifested by an individual carrying the principal gene or genes that determine it.

expulsive (ek-'spul'siv) [*ex* + L. *pellere* to drive] driving or forcing out; tending to expel.

exsanguinate (eks-sang/'gwī-nāt) [*ex* + L. *sanguis* blood] 1. to deprive of blood. 2. bloodless; anemic.

exsanguination (eks-sang/'wī-na'shun) extensive loss of blood due to internal or external hemorrhage.

exsanguine (eks-sang/'win) bloodless.

exsanguinotransfusion (eks-sang/'gwī-no-trans-fu'zhun) exchange transfusion.

exsect (ek-sekt') to excise; to cut out.

exsection (ek-sek'shun) excision.

exsector (ek-sek'tor) a cutting instrument for use in performing excisions (excisions).

exsiccant (ek-sik'ant) desiccant.

exsiccate (ek'sī-kāt) [L. *exsiccare*, from *ex* out + *siccus* dry] desiccate.

exsiccation (ek'sī-ka'shun) the act of drying; in chemistry, the deprival of a crystalline substance of its water of crystallization.

exsomatize (ek-so'mah-tiz) [*ex* + Gr. *sōma* body] to remove from the body.

exsorption (ek-sorp'shun) the movement of substances out of cells, especially the movement of substances out of the blood, through the intestinal epithelial cells, and into the intestinal lumen.

extrophy (ek'stro-fe) [*ex* + Gr. *strephein* to turn oneself] the congenital eversion or turning inside out of an organ, as the bladder. **e. of the bladder**, a developmental anomaly marked by absence of a portion of the lower abdominal wall and the anterior vesical (urinary bladder) wall, with eversion of the posterior vesical wall through the deficit and with an open pubic arch and widely separated ischia connected by a fibrous band. Called also *ectopia vesicae*. **e. of cloaca, cloacal e.**, a developmental anomaly in which two segments of bladder (hemibladders) are separated by an area of intestine with a mucosal surface, which appears as a large red tumor in the midline of the lower abdomen. Called also *ectopia cloacae*.

exsufflation (ek'suf-fla'shun) [*ex* + L. *sufflatio* a blowing up] the act of exhausting the air content of a cavity by artificial or mechanical means, especially such action upon the lungs by means of an exsufflator.

exsufflator (ek'suf-fla'tor) an apparatus which, by the sudden production of negative pressure, can reproduce in the bronchial tree the effects of a natural, vigorous cough.

ext. extract.

extender (ek-sten/'der) [*ex* + L. *tendere* to stretch] something which enlarges or prolongs. **artificial plasma e.**, a sub-

stance which can be transfused, to maintain fluid volume of the blood in event of great necessity, supplemental to the use of whole blood and plasma.

extension (ek-sten'shun) [L. *extensio*] 1. the movement by which the two ends of any jointed part are drawn away from each other. 2. a movement which brings the members of a limb into or toward a straight condition. **Bardenheuer's e.**, extension for fractured limbs with longitudinal, transverse, and rotary pulls, designed to produce extension in all the directions in which the muscles which cause the displacement act. **Buck's e.**, the extension of a fractured leg by weights, the foot of the bed being raised so that the body makes counterextension. **Codivilla's e.**, extension of a fractured limb in which the attachment to the bone is by means of calipers or a nail passed through the lower end of the bone. **nail e.**, extension exerted on the distal fragment of a fractured bone by means of a nail or pin (Steinmann pin) driven into the fragment. **e. per contiguitatem**, the spreading of a morbid process through one tissue or part into one adjacent to it. **e. per continuitatem**, the spreading of a morbid process throughout a single tissue or part. **e. per saltam**, the spreading of a morbid condition from one part to a part or tissue distant from it, with normal tissues intervening; metastasis. **ridge e.**, an intraoral surgical operation for deepening the labial, buccal, and/or lingual sulci so as to increase the relative intraoral height of the alveolar ridge to facilitate denture retention. **Steinmann's e.**, see *nail e.*

extensometer (eks'ten-som'ē-ter) [L. *extensus* extension + Gr. *metron* measure] an instrument for measuring distortion of specimens under test.

extensor (eks-ten'sor) [L.] [NA] a general term for any muscle that extends a joint.

exterior (eks-te're-or) [L.] situated on or near the outside; outer.

exteriorize (eks-te're-or-iz) 1. to form a correct mental reference of the image of an object seen. 2. in psychiatry, to turn one's interest outward. 3. to transpose an internal organ to the exterior of the body.

extern (eks'tern) a medical student or graduate in medicine who assists in the care of patients in a hospital but does not reside in the hospital.

external (eks-ter'nal) [L. *externus* outside] situated or occurring on the outside; many anatomical structures formerly called external are now more correctly termed lateral.

externalia (eks'ter-na'le-ah) the external genitals.

externalize (eks-ter'nah-liz) to direct outwardly an internal conflict.

externe (eks'tern) extern.

externus (eks-ter'nus) external; [NA] a term denoting a structure farther from the center of a part or cavity.

exteroceptive (eks'ter-o-sep'tiv) Sherrington's term for the external surface field of distribution of receptor organs; see *interoceptive*, *proprioceptive*, and *receptor* (def. 3).

exteroceptor (eks'ter-o-sep'tor) a sensory nerve terminal which is stimulated by the immediate external environment, such as those in the skin and mucous membranes; cf. *interoceptor*, *proprioceptor*, and *receptor* (def. 3).

exterofection (eks'ter-o-fek'shun) the response of the body made to changes in external environment, effected by the cerebrospinal system.

exteroceptive (eks'ter-o-fek'tiv) responding to external stimuli; a term applied by Cannon to the cerebrospinal nervous system.

extrogestate (eks'ter-o-jes'tāt) 1. developing outside the uterus, but still requiring complete care to meet all physical needs. 2. an infant during the period of exterior gestation.

extima (eks'ti-mah) [L.] outermost.

extinction (eks-ting'shun) in psychology, the disappearance of a conditioned response as a result of nonreinforcement; also, the process by which the disappearance is accomplished.

extinguish (eks-ting'gwish) [L. *extinguere*] to render extinct.

extirpation (ek'ster-pa'shun) [L. *extirpare* to root out, from *ex* out + *stirps* root] complete removal or eradication of an organ or tissue. **e. of pulp, pulp e.**, complete removal of the dental pulp from the pulp chamber and root canal of a tooth.

Exton's reagent, test (eks'tonz) [William Gustav Exton, American physician, 1876-1943] see under *reagent* and *tests*.

Exton-Rose glucose tolerance test (eks'ton-rōz') [William Gustav Exton; Anton Richard Rose, American biochemist, born 1877] see under *tests*.

extorsion (eks-tor'shun) [L. *ex* from + *torsio* twisting] tilting of the upper part of the vertical meridian of the eye away from the midline of the face.

extra- (eks'trah) [L.] a prefix meaning outside of, beyond, or in addition.

extra-adrenal (eks'trah-ah-dre'nal) situated or occurring outside the adrenal gland.

extra-anthropic (eks'trah-an-throp'ik) exanthropic.

extra-articular (eks'trah-ar-tik'u-lar) [*extra-* + L. *articulus* joint] situated or occurring outside a joint.

extrabronchial (eks'trah-brong'ke-al) outside or independent of the bronchial tubes; usually used in contrast to intrabronchial.

extrabuccal (eks'trah-buk'al) outside the mouth.

extrabulbar (eks'trah-bul'bar) outside or away from a bulb, as the medulla oblongata or the urethral bulb.

extracapsular (eks'trah-kap'su-lar) situated or occurring outside a capsule.

extracardial (eks'trah-kar'de-al) outside the heart.

extracarpal (eks'trah-kar'pal) just outside the region of the wrist.

extracellular (eks'trah-sel'u-lar) outside a cell or cells.

extracerebral (eks'trah-ser'ē-bral) situated or having its origin outside the cerebrum.

extracorporeal (eks'trah-kor'po-ral) extracorporeal.

extracorporeal (eks'trah-kor-po're-al) [*extra-* + L. *corpus* body] situated or occurring outside the body.

extracorpuscular (eks'trah-kor-pus'ku-lar) outside the corpuscles.

extracorticospinal (eks'trah-kor'ti-ko-spi'nal) outside the corticospinal tract; see under *tract*.

extracranial (eks'trah-kra'ne-al) outside the cranium.

extract (eks'trakt) [L. *extractum*] a concentrated preparation of a vegetable or animal drug obtained by removing the active constituents therefrom with a suitable menstruum, evaporating all or nearly all the solvent, and adjusting the residual mass or powder to a prescribed standard. Extracts are prepared in three forms: semiliquid or of syrupy consistency, pilular or solid, and as dry powder. **allergenic e.**, an extract of the protein of any substance to which a person may be sensitive; used for diagnosis or desensitization therapy in conditions due to hypersensitivity. They are prepared from a great variety of substances, from food to fungi, and from house dust to horse serum. **animal e.**, one prepared from material of animal origin. **beef e.**, a concentrate from beef broth, used in compounding certain prescriptions; called also *extractum carnis*. **belladonna e.** [USP], a preparation, available in pilular and powdered form, containing in each 100 grams, 1.15-1.35 gm. of the alkaloids of belladonna leaf; used as an anticholinergic for the same purposes as atropine and hyoscyamine. **cascara sagrada e.** [USP], a powdered preparation of cascara sagrada, each gram of which represents 3 gm. of cascara sagrada; a cathartic. Called also *Rhamnus purshiana e.* **cell-free e.**, the solution obtained by rupturing cells and removing all particulate matter. **chondodendron tomentosum e.**, an alcoholic extract of a desiccated substance (curare) obtained from the bark and stem of *Chondodendron tomentosum*; used in producing relaxation of skeletal muscle. **chondrus e.**, a tan powder prepared from chondrus, used as a protective; called also *Irish moss e.* **colocynth e.**, a powdered preparation each gram of which represents 4 gm. of colocynth; formerly used as a cathartic. **colocynth e., compound**, a preparation of colocynth extract with finely powdered ipomea, aloe, and cardamon seed; formerly used as a cathartic. **compound e.**, one prepared from more than one drug. **dry e.**, powdered *e. glycyrrhiza e.*, a brown powder prepared from the rhizome and roots of species of *Glycyrrhiza*, used as a flavoring agent; called also *licorice root e.* **glycyrrhiza e., pure**, [USP], a preparation of the dried rhizome and roots of varieties of *Glycyrrhiza glabra*, used in the compounding of aromatic cascara sagrada fluidextract; called also *pure licorice root e.* **Goulard's e.**, lead subacetate solution. **henbane e.**, hyoscyamine. **hyoscyamus e.**, a preparation of hyoscyamus, formerly used as an anticholinergic for the same purposes as atropine. **Irish moss e.**, chondrus *e. licorice root e.*, glycyrrhiza *e. licorice root e., pure*, glycyrrhiza *e., pure*. **liver e.**, a brownish, somewhat hygroscopic powder prepared from mammalian livers; used as a hematopoietic. **liver e., liquid**, liver solution. **e. of male fern**, aspidium oleoresin; see under *oleoresin*. **malt e.**, a product containing dextrin, maltose, a small amount of glucose, and amylolytic enzymes, obtained by extracting the partially and artificially germinated grain of one or more varieties of *Hordeum vulgare* (barley); used as a nutritive and emulsifying agent. **nux vomica e.**, a powder prepared from nux vomica, each 100 gm. of which contains 7-7.75 gm. of strychnine. **ox bile e.**, a brownish to greenish yellow powder or granules, with a characteristic odor and bitter taste, prepared from the fresh bile of the ox and containing not less than 45 per cent of cholic acid; used as a cholagogue. **oxgall e., powdered**, ox bile *e.* **parathyroid e.**, parathyroid injection. **pilular e.**, an extract prepared as a plastic mass, with liquid glucose, malt extract, or glycerin being used as a diluent. **poison ivy e.**, an extract of the fresh leaves of poison ivy, *Rhus (Toxicodendron) radicans* L., used in desensitization for prevention of rhus dermatitis due to poison ivy. **poison ivy e., alum precipitated**, a repository form of a pyridine extract of poison ivy, *Rhus (Toxicodendron) radicans* L., used to counteract rhus dermatitis due to poison ivy. **poison oak e.**, an extract of the fresh leaves of poison oak, *Rhus (Toxicodendron) diversiloba* L., used for desensitization in prevention of rhus dermatitis due to poison oak. **pollen e.**, a preparation of

the pollen of certain plants, such as ragweed, used in the diagnosis and treatment of inhalant allergy. **powdered e.**, an extract prepared in a dry powdered form, with starch, sucrose, lactose, powdered glycyrrhiza, magnesium carbonate, magnesium oxide, or calcium phosphate being used as a diluent. Called also *dry e.* **Rhamnus purshiana e.**, cascara sagrada e. **rice polishings e.**, a preparation of rice polishings, used as a source of vitamin B₁, or thiamine. **semiliquid e.**, one evaporated to a syrupy consistency. **solid e.**, pilular e. **tikitiki e.**, rice polishings e. **trichinella e.**, an aqueous extract of specially treated larvae of *Trichinella spiralis*, usually obtained from inoculated rodents; used as a skin test for trichinella infection. **yeast e.**, a powder prepared from a water-soluble, peptone-like derivative of yeast cells (*Saccharomyces*).

extraction (eks-trak'shun) [L. *ex* out + *trahere* to draw] 1. the process or act of pulling or drawing out. 2. the preparation of an extract. **breech e.**, extraction of the infant from the uterus in breech presentation, i.e., when the buttocks of the fetus is presented in labor. **breech e., partial**, extraction of the remainder of the infant's body after it has been extruded from the uterus by natural forces as far as the umbilicus. **breech e., total**, extraction of the entire body of the infant from the uterus in cases of breech presentation. **e. of a cataract**, the surgical removal of a cataractous lens. **flap e.**, extraction of cataract by an incision which makes a flap of cornea. **serial e.**, the selective extraction of deciduous teeth during an extended period of time to allow autonomous adjustment; this procedure often involves eventual extraction of the first premolar teeth. **tooth e.**, the removal of a tooth. **vacuum e.**, see under *aspiration*.

extractive (eks-trak'tiv) any substance present in an organized tissue, or in a mixture in a small quantity, and requiring to be extracted by a special method.

extractor (eks-trak'tor) an instrument used for removing a calculus or foreign body.

extractum (eks-trak'tum), gen. *extracti*, pl. *extracta* [L., from *ex* out + *trahere* to draw] an extract. **e. car'nis**, beef extract. **e. fel'is bo'vis**, ox bile extract. **e. hep'atis**, liver extract. **e. nu'cis vom'icae**, nux vomica extract. **e. perpoliti'o-num ory'zae**, rice polishings extract.

extracystic (eks'trah-sis'tik) outside a cyst or the bladder.

extradural (eks'trah-du'ral) situated or occurring outside the dura mater.

extraembryonic (eks'trah-em'b're-on'ik) external to the embryo proper, as the extraembryonic coelom or extraembryonic membranes.

extraepiphyseal (eks'trah-ep'i'fiz'e-al) away from, or unconnected with, an epiphysis.

extragenic (eks'trah-jen'ik) occurring outside a gene, or in a gene other than the one in question.

extragenital (eks'trah-jen'i'tal) unrelated to, not originating in, or remote from the genital organs.

extrahepatic (eks'trah-hē-pat'ik) situated or occurring outside the liver.

extraligamentous (eks'trah-lig'ah-men'tus) occurring outside a ligament.

extramalleolus (eks'trah-mal-le'o-lus) the outer malleolus of the ankle joint.

extramarginal (eks'trah-mar'ji-nal) below the limit of consciousness.

extramastoiditis (eks'trah-mas'toi-di'tis) inflammation of the outer surface of the mastoid process and of the superincumbent tissues.

extramedullary (eks'trah-med'u-la're) situated or occurring outside any medulla, especially the medulla oblongata.

extrameningeal (eks'trah-mē-nin'je-al) occurring outside the meninges.

extramural (eks'trah-mu'ral) [L. *extra* + *murus* wall] situated or occurring outside the wall of an organ or structure.

extraneous (eks-tra'ne-us) [L. *extraneus* external] existing or belonging outside the organism.

extranuclear (eks'trah-nu'kle-ar) situated or occurring outside a cell nucleus.

extraocular (eks'trah-ok'u-lar) situated outside the eye.

extraoculogram (eks'trah-ok'u-lo-gram) a graphic representation of the changes in the corneofundal electric potential of the eye, recorded by means of electrodes applied to the skin on either side of the orbit; useful in determining disturbances in the metabolic activity of the eye.

extraosseous (eks'trah-os'e-us) occurring outside a bone or bones.

extraparenchymal (eks'trah-par-en'ki-mal) occurring or formed outside the parenchyma.

extrapelvic (eks'trah-pel'vik) unconnected with the pelvis.

extrapericardial (eks'trah-per'i'kar'de-al) outside the pericardium.

extraperineal (eks'trah-per'i'ne'al) away from the perineum.

extraperiosteal (eks'trah-per'e-os'te-al) outside or independent of the periosteum.

extraperitoneal (eks'trah-per'i-to-ne'al) situated or occurring outside the peritoneal cavity.

extraplacental (eks'trah-plah-sen'tal) outside of or independent of the placenta.

extraplantar (eks'trah-plan'tar) on the outside of the sole of the foot.

extrapleural (eks'trah-ploo'ral) outside the pleural cavity.

extrapolation (eks'trah-o-la'shun) inference of a value(s) on the basis of that which is known or has been observed.

extraprostatic (eks'trah-pros-tat'ik) not connected with the prostate gland.

extraprostatitis (eks'trah-pros'tah-ti'tis) paraprostatitis.

extrapsychic (eks'tra-si'kik) occurring outside the mind; taking place between the mind and the external environment.

extrapulmonary (eks'trah-pul'mo-na're) not connected with the lungs.

extrapyramidal (eks'trah-pi-ram'i-dal) outside of the pyramidal tracts; see under *system*.

extraerectus (eks'trah-rek'tus) musculus rectus lateralis bulbi.

extraserous (eks'trah-se'rus) outside a serous cavity.

extrasomatic (eks'trah-so-mat'ik) unconnected with the body.

extrasuprarenal (eks'trah-su'prah-re'nal) extra-adrenal.

extrasystole (eks'trah-sis'to-le) a premature contraction of the heart that is independent of the normal rhythm and arises in response to an impulse in some part of the heart other than the sinoatrial node; called also *premature beat*. **atrial e.**, an ex-

Tracing of the radial pulse in a patient suffering from occasional extrasystoles. The extrasystole occurs at x. Note the compensatory pause of four fifths of a second and the large pulse wave terminating this pause (Hay).

trasystole in which the stimulus is thought to arise in the atrium elsewhere than at the sinus. **auricular e.**, former name for *atrial e.* **atrioventricular e.**, one in which the stimulus is supposed to arise in the atrioventricular node; called also *nodal e.* **auriculoventricular e.**, former name for *atrioventricular e.* **infranodal e.**, ventricular e. **interpolated e.**, a contraction taking place between two normal heart beats. **nodal e.**, atrioventricular e. **retrograde e.**, a premature ventricular contraction followed by a premature atrial contraction, due to transmission of the stimulus backward, usually over the bundle of His. **ventricular e.**, one in which either a pacemaker or re-entry site is in the ventricular structure.

extrathoracic (eks'trah-tho-ras'ik) outside the thorax.

extratracheal (eks'trah-tra'ke-al) situated or occurring outside the trachea.

extratubal (eks'trah-tu'bal) outside a tube.

extratympanic (eks'trah-tim-pan'ik) outside the tympanum of the ear.

extrauterine (eks'trah-u'ter-in) situated or occurring outside the uterus.

extravaginal (eks'trah-vaj'i-nal) outside the vagina.

extravasation (eks-trav'ah-sa'shun) [*extra* + L. *vas* vessel] 1. a discharge or escape, as of blood, from a vessel into the tissues. 2. the process of being extravasated. 3. blood or other substance which has been extravasated. **punctiform e.**, extravasation which causes a tissue to be covered with minute bloody points.

extravascular (eks'trah-vas'ku-lar) situated or occurring outside a vessel or the vessels.

extraventricular (eks'trah-ven-trik'u-lar) situated or occurring outside a ventricle.

extraversion (eks'trah-ver'zhun) 1. the turning outward or objectifying of personal interests, emotions, or psychic trends. 2. (*obs.*) in orthodontics, an unusually wide dental arch.

extravert (eks'trah-vert) extrovert.

extremal (eks-trem'i-tal) pertaining to or situated at an extremity.

extremities (eks-trem'i-tas), pl. *extremita'tes* [L.] 1. [NA] a general term denoting the distal or terminal portion of elongated or pointed structures. 2. the arm or leg (membrum [NA]). Called also *extremity*. **e. acromia'lis clavic'ulae** [NA], acromial extremity of clavicle; the lateral end of the clavicle, which articulates with the acromion of the scapula; called also *external*

THE EYE AND RELATED STRUCTURES

or *scapular extremity of clavicle*. **e. ante'rior lie'nis** [NA], anterior extremity of spleen: the lower pole of the spleen, which is situated anterior to the upper pole; called also *e. inferior lienis* and *cauda lienis*. **e. infe'rior**, *membrum inferius*. **e. infe'rior lie'nis**, *e. anterior lienis*. **e. infe'rior re'nis** [NA], inferior extremity of kidney: the lower, smaller pole of the kidney; called also *caput lienis* and *head of spleen*. **e. infe'rior tes'tis** [NA], inferior extremity of testis: the lower end of the testis, which is attached to the tail of the epididymis. **e. poste'rior lie'nis** [NA], posterior extremity of spleen: the uppermost pole of the spleen, situated somewhat posterior to the lower pole; called also *e. superior lienis*. **e. sterna'lis clavic'ulae** [NA], sternal extremity of clavicle: the medial end of the clavicle, which articulates with the sternum; called also *internal extremity of clavicle*. **e. supe'rior**, *membrum superius*. **e. supe'rior lie'nis**, *e. posterior lienis*. **e. supe'rior re'nis** [NA], superior extremity of kidney: the upper, larger pole of the kidney. **e. supe'rior tes'tis** [NA], superior extremity of testis: the upper end of the testis, which is attached to the head of the epididymis. **e. tuba'ria ova'rii** [NA], tubal extremity of ovary: the upper end of the ovary, related to the free end of the uterine tube. **e. uteri'na ova'rii** [NA], uterine extremity of ovary: the lower end of the ovary, directed toward the uterus; called also *pelvic extremity*.

extremities (eks-trem'i-ta'tēz) [L.] plural of *extremitas*.

extremity (eks-trem'i-te) 1. a distal or terminal portion; for names of specific anatomical structures, see official terms under *extremitas*. 2. an arm or leg (*membrum* [NA]); sometimes applied specifically to a hand or foot. **cartilaginous e. of rib**, *cartilago costalis*. **external e. of clavicle**, *extremitas acromialis claviculae*. **fimbriated e. of fallopian tube**, *fimbria ovarica*. **internal e. of clavicle**, *extremitas sternalis claviculae*. **lower e.**, *membrum inferius*. **pelvic e. of ovary**, *extremitas uterina ovarii*. **proximal e. of phalanx of finger**, *basis phalangis digitorum manus*. **proximal e. of phalanx of toe**, *basis phalangis digitorum pedis*. **scapular e. of clavicle**, *extremitas acromialis claviculae*. **upper e.**, *membrum superius*. **uterine e. of ovary**, *extremitas uterina ovarii*.

extrinsic (eks-trin'sik) [L. *extrinsecus* situated on the outside] coming from or originating outside; having relation to parts outside the organ or limb in which found.

extro- [L. *extra* outside of, beyond] a prefix meaning outward, outside.

extrogastrulation (eks'tro-gas'troo-la'shun) the formation of an embryonic monster by gastrular evagination instead of invagination.

extrophia (eks-tro'fe-ah) extrophy.

extrospection (eks'tro-spek'shun) [*extra-* + L. *spectare* to look] the continued habit of inspecting one's own skin, associated with mysophobia.

extroversion (eks'tro-ver'zhun) [L. *extroversio*, from *extra* outside + *vertere* to turn] 1. a turning inside out; extrophy. 2. extra-version.

extrovert (eks'tro-vert) a person whose interest is turned outward toward external values.

extrude (eks-trood') 1. to force out, or to occupy a position distal to that normally occupied. 2. in dentistry, to occupy a position occlusal to that normally occupied (said of an over-erupted tooth).

extrudocclusion (eks-troo'do-kloo'zhun) extrusion, def. 2.

extrusion (eks-troo'zhun) 1. a pushing out; a forcing out or expulsion. 2. in dentistry, the condition of a tooth when it extends too far in an occlusal direction.

extubate (eks-tu'bāt) [*ex-* + L. *tuba* tube] to remove a tube from.

extubation (eks'tu-ba'shun) the removal of a previously inserted tube.

exuberant (eg-zu'ber-ant) [L. *exuberare* to be very fruitful] copious or excessive in production; showing excessive proliferation.

exudate (eks'u-dāt) [L. *exsudare* to sweat out] material, such as fluid, cells, or cellular debris, which has escaped from blood vessels and has been deposited in tissues or on tissue surfaces, usually as a result of inflammation. An exudate, in contrast to a transudate, is characterized by a high content of protein, cells, or solid materials derived from cells. **cotton-wool e's**, see under *spot*.

exudation (eks'u-da'shun) 1. the escape of fluid, cells, and cellular debris from blood vessels and their deposition in or on the tissues, usually as the result of inflammation. 2. an exudate.

exudative (eks-coo'dah-tiv) of or pertaining to a process of exudation.

exulcerans (eks-ul'ser-anz) [L.] ulcerating.

exulceratio (eks-ul'ser-a'she-o) [L.] ulceration. **e. sim'plex**, superficial ulceration.

exumbilication (eks'um-bil'i-ka'shun) [*ex-* + *umbilicus*] 1. marked protrusion of the navel. 2. umbilical hernia.

exutory (eks-u'tor-e) [L. *exutum*, from *exuere* to lay aside; remove] (obs.) 1. drawing off. 2. an agent that draws off.

exuviae (eks-u've'e) [L., pl.] (obs.) 1. cast-off epidermis. 2. a slough (def. 1).

exuviation (eks-u've-a'shun) [L. *exuere* to divest oneself of] the shedding of any epithelial structure, as of the deciduous teeth.

ex vivo (eks've'vo) outside the living body; denoting removal of an organ (e.g., the kidney) for reparative surgery, after which it is returned to the original site.

eye (i) [L. *oculus*; Gr. *ophthalmos*] the organ of vision. Called also *oculus* [NA]. In shape the eyeball (*bulbus oculi* [NA]) is of a large sphere, with the segment of a smaller sphere, the *cornea*, in front. It is composed of three coats—the *sclera* and *cornea*, the *choroid*, and the *retina*—each coat being divided into several layers. Within the three coats are the refracting media—namely, the *aqueous humor*, the *crystalline lens*, and the *vitreous humor*. The sclerotic, or external coat, is white and fibrous. Posteriorly the fibers of the optic nerve enter through small perforations in the *lamina cribrosa*. The inner surface is attached to the choroid by delicate connective tissue, the *lamina fusca*. The *cornea* is composed of five layers, the internal layer being a serous membrane, sometimes called *Descemet's membrane*. The uvea, or middle coat, is chiefly composed of blood vessels and pigment. Anteriorly, it terminates near the periphery of the lens in folds called the *ciliary processes*. The *retina*, or internal coat, is chiefly composed of nerve tissue, and is made up of three principal layers. The external layer, or Jacob's membrane, is composed of terminal nerve cells, which, from their shape, are called the *rods* and *cones*. The *iris* is a curtain with a central perforation, the *pupil*, and is composed of smooth muscular fibers arranged both in a circular and in a radiating manner. It varies in color, and is suspended in the aqueous humor in front of the lens. The *ciliary ligament* is a ring of connective tissue fibers surrounding the iris. The *ciliary muscle* surrounds the periphery of the iris and controls the convexity of the lens during accommodation. The *aqueous humor* fills the cavity between the cornea in front and the lens behind. The *vitreous humor* fills the space back of the lens, and is a clear, jelly-like substance containing mucin. It is surrounded by the *hyaloid membrane*. The *lens*, or *crystalline humor*, is a double convex transparent body between the vitreous and aqueous humors, and is held in place by an elastic *capsule* and *suspensory ligament*. The arteries of the eye are the short ciliary, the long ciliary, the anterior ciliary, and the central artery of the retina. The nerves are the optic and the long and short ciliary nerves. See Plate XVII. **blear e.**, *blepharitis ciliaris*. **Bright's e.**, the eye as affected in chronic disease of the kidney. **cinema e.**, Klieg e. **compound e.**, the multifaceted eye of insects. **crab's e's**, concretions from the digestive tract of a crawfish. **crossed e's**, *esotropia*. **cystic e.**, a malformed eye consisting of a cystic structure. **dark-adapted e.**, an eye that has undergone the changes produced by adequate exposure to darkness; it is more sensitive to very weak light. **epiphyseal e.**, a modification of the parapipeal organ of certain lower vertebrates to form an eyelike structure lying subepidermally on the median dorsal aspect of the head; it is a photoreceptor rather than an image forming eye, enabling the organism to respond to darkness or to light. Called also *parietal e.*, *parietal body*, and *pineal e.* **exciting e.**, the eye that is primarily injured and from which the influences start which involve the other eye in sympathetic ophthalmia; called also *primary e.* **fixating e.**, in strabismus, the eye directed toward the object of vision. **hare's e.** (obs.), *lagophthalmos*. **hop e.**, conjunctivitis in hop pickers caused by irritation from the spinelike hairs of the hop plant. **Klieg e.**, a condition marked by conjunctivitis, edema of the eyelids, lacrimation, and photophobia due to exposure to intense lights (Klieg lights); called also *cinema e.* **light-adapted e.**, an eye that has undergone the changes produced by adequate exposure to rather strong light; it is less sensitive to weak light. **median e.**, an organ on the top of the head of many reptiles; it plays an important role in the response to light. **monochromatic e.**, an eye that can perceive only one color. **Nairobi e.**, a form of conjunctivitis in East Africa produced by the juice of crushed blister beetles. **parietal e.**, a modification of the parietal body in some lower vertebrates, to form a second dorsal median eye. Cf. *epiphyseal e.* **pineal e.**, *epiphyseal e.* **pink e.**, acute contagious conjunctivitis. **primary e.**, exciting e. **reduced e.**, *schematic e.*, 1. an apparatus with two refracting elements, one representing the cornea and the other the lens. 2. a diagrammatic illustration of the structure of the eye. **second-ary e.**, sympathizing e. **shipyard e.**, epidemic keratoconjunctivitis. **Snellen's reform e.**, an artificial eye composed of two concavoconvex plates with an empty space between. **squinting e.**, in strabismus, the eye the visual axis of which deviates from the object of vision while the sound eye fixates. **sympathizing e.**, the uninjured eye which becomes secondarily involved in sympathetic ophthalmia; called also *secondary e.* **wall e.**, 1. leukoma of the cornea. 2. *exotropia*.

eyeball (i'bawl) the globe or ball of the eye; called also *bulbus oculi* [NA] and *orb*. See *eye*.

eyebrow (i'brow) 1. the transverse elevation at the junction of the forehead and the upper eyelid, consisting of five layers: skin,

subcutaneous tissue, a layer of interwoven fibers of the orbicularis oculi and occipitofrontalis muscles, a submuscular areolar layer, and pericranium; called also *supercilium* [NA]. 2. the hairs growing on the transverse elevation at the junction of the forehead and the upper eyelid; called also *supercilia* [NA].

eyecup (i'kup) 1. a small vessel for the application of cleansing or medicated solution to the exposed area of the eyeball. 2. physiologic cup. 3. caliculus ophthalmicus.

eyeglass (i'glas) a lens for aiding the sight.

eyeground (i'ground) the fundus of the eye as revealed by ophthalmoscopic examination.

eyelash (i'lash) one of the hairs growing at the edge of an eyelid; collectively called *cilia* [NA].

eyelet (i'let) an orthodontic attachment welded or soldered for better rotational control.

eyelid (i'lid) either of the two movable folds (upper and lower) that protect the anterior surface of the eyeball; called also *palpebra* [NA]. **third e.**, the nictitating membrane; see under *membrane*.

eye-minded (i-mind'ed) remembering chiefly the impressions made on the eye.

eyepiece (i'pēs) the lens or system of lenses in a microscope (or telescope) that is nearest to the eye of the user and that serves to further magnify the image produced by the objective. **com-**

parison e., an eyepiece which presents, as though in juxtaposition, the images of separate objects being transmitted through two different objectives. **compensating e.**, an eyepiece especially designed to correct chromatic and spherical aberrations of the light rays produced by the objective. **demonstration e.**, a device consisting of two eyepieces which may be affixed to the eyepiece tube of a microscope, permitting two observers to see the same field simultaneously. **huygenian e.**, a negative eyepiece consisting of two planoconvex lenses, the convexities being directed toward the objective. **negative e.**, a combination of two lenses, one of which is below the plane in which the real image from the objective is formed. **positive e.**, a single lens combination, consisting of two planoconvex lenses or of an achromatic doublet or triplet, the combination being above the plane in which the real image from the objective is formed. **Ramsden's e.**, a positive eyepiece consisting of two planoconvex lenses with the convexities turned toward each other. **widefield e.**, a positive eyepiece consisting of a doublet and a single element, giving a wider field of view than that afforded by other eyepieces.

eyepoint (i'point) a point above the eyepiece in which all the beams of light emerging from the microscope intersect.

eyespot (i'spot) the light-sensitive pigmented spot of certain invertebrates.

eyestrain (i'strān) fatigue of the eye from overuse or from uncorrected defect in focus of the eye.

F

F chemical symbol for *fluorine*; symbol for *gilbert*.

F. Fahrenheit; fiat; field of vision; French (catheter size); formula.

F₁ 1. the "first filial generation," produced by crossing two individuals. 2. a fluorescent substance found in small amounts in normal urine, and in larger quantities in the urine of pellagrins; said to be present in larger amounts after the ingestion of thiamine.

F₂ 1. the "second filial generation," produced by mating two members of the F₁ generation. 2. a substance in urine which develops fluorescence after alkali is added; it may appear in small amounts in normal urine or in large amounts in the urine of normal persons after the ingestion of nicotinic acid.

FA fatty acid.

F and R force and rhythm (of pulse).

Fab [fragment, antigen-binding] either of two segments of the IgG molecule, obtained by treatment of the antibody molecule with papain, which retain the ability to combine with antigen. See also *Fc*.

Fabc fragment antigen and complement binding; that part of an IgG molecule which remains following removal of pFc' fragment from the Fc fragment region by the enzyme plasmin.

fabella (fah-bel'lah), pl. *fabellae* [L. "little bean"] a sesamoid fibrocartilage occasionally found on the gastrocnemius muscle; it is visible roentgenographically as a small bony shadow behind the knee joint.

fabellae (fah-bel'le) [L.] plural of *fabella*.

Faber's anemia, syndrome (fah'berz) [Knud Helge *Faber*, Danish physician, 1862-1956] see *achylnemia*, and see *hypochromic anemia*, under *anemia*.

fabism (fa'bizm) [L. *faba* bean] favism.

fabrication (fab'rī-ka'shun) the telling of imaginary events or tales as if they were true; confabulation.

Fabricius (fah-bris'e-us) (**of Aquapendente**), Hieronymus [It. Girolamo *Fabrizio*] (1537-1619) an Italian anatomist and surgeon who was the pupil and successor (at Padua) of Gabriele Falloppio. He was the teacher of William Harvey, and the first demonstrator of the valves of the veins.

Fabry's disease (syndrome) (fah'brez) [Johannes *Fabry*, German dermatologist, 1860-1930] see under *disease*.

F.A.C.D. Fellow of the American College of Dentists.

face (fās) [L. *facies*] 1. the anterior, or ventral, aspect of the head from the forehead to the chin, inclusive. 2. any presenting aspect, or surface. See also *facies*. **adenoid f.**, adenoid facies. **bovine f.**, facies bovina. **cleft f.**, macrostomia. **cow f.**, facies bovina. **dish f.**, **dished f.**, a facial deformity characterized by a prominence of the forehead, a recession of the midface and lower half of the nose, a lengthening of the upper lip, and a prognathic chin; called also *facies scaphoidea*. **frog f.**, flatness of the face due to intranasal disease. **hippocratic f.**, facies hippocratica. **moon f.**, **moon-shaped f.**, the peculiar rounded face observed in various conditions, such as Cushing's syndrome, or following administration of adrenal corticoids.

face-bow (fās'bo) a device used in dentistry to record the positional relationship of the maxillary arch to the temporomandibular

lar joints (or opening axis of the jaw) and to orient dental casts in this same relationship to the opening axis of the articulator. **adjustable axis f.-b.**, one that can be adjusted to permit location of the axis of rotation of the mandible. **kinematic f.-b.**, adjustable axis f.-b.

faceometer (fās-om'ē-ter) an instrument for measuring the dimensions of the face.

facet (fas'et) [Fr. *facette*] a small plane surface on a hard body, as on a bone; see also *fovea*. **articular f.**, a small plane surface on a bone at the site where it articulates with another structure; see terms beginning *facies articularis*, under *facies*. **articular f. of atlas, circular**, fovea dentis atlantis. **articular f. of atlas, inferior**, fovea articularis inferior atlantis. **articular f. of atlas, superior**, fovea articularis superior atlantis. **articular f. of axis, anterior**, facies articularis anterior axis. **articular f.'s for rib cartilages**, incisurae costales sterni. **f. of calcaneus, posterior, medial**, facies articularis talaris media calcanei. **clavicular f.**, incisura clavicularis sterni. **costal f., anterior, costal f., inferior**, facies articularis tuberculi costae. **costal f., posterior, costal f., superior**, facies articularis capitis costae. **costal f.'s of sternum**, incisurae costales sterni. **costal f. of vertebra, superior**, fovea costalis superior. **lateral f.'s of sternum**, incisurae costales sterni. **locked f.'s of spine**, dislocation of articular processes of the spine. **malleolar f. of tibia, internal**, facies articularis malleolaris tibiae. **squatting f.**, a smooth area observed on the anterior surface of the lower end of the tibia in races whose members habitually sit in the squatting position. **f. for tubercle of rib**, fovea costalis transversalis.

facetectomy (fas'ē-tek'to-me) [*facet* + Gr. *ektomē* excision] excision of the articular facet of a vertebra.

facette (fah-set') [Fr.] facet.

facial (fa'shal) [L. *facialis*] of or pertaining to the face.

facies (fa'she-ēz), pl. *facies* [L.] 1. a term used in anatomical nomenclature to designate (a) the anterior, or ventral, aspect of the head, from forehead to chin, inclusive, and (b) a specific surface of a body structure, part, or organ. 2. the expression or appearance of the face. **f. abdomina'lis**, the expression of the face characteristic of abdominal disease: it is pinched, anxious, and furrowed, with the nose and upper lip drawn up. **adenoid f.**, the dull expression, with open mouth, sometimes seen in children with adenoid growths. **f. ante'rior antebra'chii** [NA], the ventral, or front, surface of the forearm; called also *f. volaris antibrachii*. **f. ante'rior bra'chii** [NA], the ventral, or front, surface of the upper arm. **f. ante'rior cor'neae** [NA], the anterior surface of the cornea. **f. ante'rior cru'ris** [NA], the ventral, or front, surface of the leg. **f. ante'rior den'tium premola'rium et mola'rium**, the contact surface of the premolar and molar teeth that is directed toward the midline of the dental arch. **f. ante'rior fem'oris** [NA], the ventral, or front, surface of the thigh. **f. ante'rior glan'dulae suprarena'lis** [NA], the anterior, or front, surface of the adrenal gland. **f. ante'rior i'ridis** [NA], the anterior surface of the iris, directed toward the anterior chamber of the eye. **f. ante'rior latera'lis hu'meri** [NA], the anterolateral surface of the humerus, which provides attachment to the deltoid muscle and lateral part of the brachialis muscle. **f. ante'rior len'tis** [NA], the surface of the lens directed toward the anterior

surface of the eye. **f. ante'rior maxil'lae** [NA], the surface of the body of the maxilla that is directed forward and somewhat laterally; it is bounded roughly by the infraorbital margin, root of the frontal process, nasal notch, alveolar process, and zygomatic process. **f. ante'rior media'lis hu'meri** [NA], the surface of the humerus that begins above at the intertubercular groove and spreads out inferiorly to form the wide smooth area for origin of the brachialis muscle; called also *anteromedial surface of humerus*. **f. ante'rior palpebra'rum** [NA], the anterior, or external, surface of the eyelids. **f. ante'rior pancre'atis** [NA], the front, or anterior, surface of the pancreas, directed toward the ventral surface of the body. **f. ante'rior par'tis petro'sae os'sis tempora'lis** [NA], the surface of the petrous part of the temporal bone that forms the posterior portion of the floor of the middle cranial fossa; called also *f. anterior pyramidis ossis temporalis*. **f. ante'rior patel'lae** [NA], the slightly convex, longitudinally striated anterior, or front, surface of the patella, which is perforated by small openings for the nutrient vessels. **f. ante'rior prosta'tae** [NA], the anterior, or ventral, surface of the prostate, separated from the pubic symphysis by the pudendal venous plexus. **f. ante'rior pyram'idis os'sis tempora'lis**, *f. anterior partis petrosae ossis temporalis*. **f. ante'rior ra'dii** [NA], the anterior, or volar, surface of the radius, which gives attachment to the flexor pollicis longus and pronator quadratus muscles; called also *f. volaris radii*. **f. ante'rior re'nis** [NA], the anterior, peritoneum-covered surface of the kidney which is directed toward the viscera. **f. ante'rior ul'nae** [NA], the front, or anterior, surface of the ulna; called also *f. volaris ulnae*. **f. anterolatera'lis cartilag'inis arytenoi'deae** [NA], the external surface of the arytenoid cartilage, which bears the triangular pit, the oblong pit, and the arcuate crest. **f. articula'ris acromia'lis clavic'ulae** [NA], the smooth area on the lateral end of the clavicle for articulation with the acromion of the scapula. **f. articula'ris acro'mii** [NA], a small variable area on the acromion of the scapula, for articulation with the acromial end of the clavicle. **f. articula'ris ante'rior ax'is** [NA], anterior articular facet of axis: an oval facet on the ventral surface of the odontoid process of the axis, articulating with the fovea dentis of the atlas; called also *f. volaris ulnae*. **f. anterolatera'lis cartilag'inis arytenoi'deae** [NA], the external surface of the arytenoid cartilage. **f. articula'ris ante'rior epistroph'ei**, *f. articularis anterior axis*. **f. articula'ris arytenoi'deae cartilag'inis cricoi'deae** [NA], the surface of the cricoid cartilage that articulates with the arytenoid cartilage. **f. articula'ris calca'nea ante'rior ta'li** [NA], the small surface on the head of the talus that rests upon the anterior articular surface of the calcaneus. **f. articula'ris calca'nea me'dia ta'li** [NA], the convex part of the head of the talus that articulates with the sustentaculum tali of the calcaneus. **f. articula'ris calca'nea poste'rior ta'li** [NA], a transverse concavity on the inferior surface of the talus, articulating with the calcaneus. **f. articula'ris cap'itis cos'tae** [NA], the surface on the head of a rib where it articulates with the body of a vertebra. Typically it is divided into two facets by a transverse crest, the lower facet articulating with the corresponding vertebra, and the upper facet with the suprajacent vertebra. The articular surfaces of the heads of the first, tenth, eleventh, and twelfth ribs generally consist of only one facet. Called also *f. articularis capituli costae*, and *posterior or superior costal facet*. **f. articula'ris cap'itis fib'ulae** [NA], the medial surface of the head of the fibula, which articulates with the lateral condyle of the tibia; called also *f. articularis capituli fibulae*. **f. articula'ris cap'ituli cos'tae**, *f. articularis capitis costae*. **f. articula'ris cap'ituli fib'ulae**, *f. articularis capituli fibulae*. **f. articula'ris car'pea ra'dii** [NA], the concave part of the distal end of the radius, which articulates with the lunate and scaphoid carpal bones; called also *carpal articular surface of radius*. **f. articula'ris cartilag'inis arytenoi'deae** [NA], the surface of the arytenoid cartilage that articulates with the cricoid cartilage. **f. articula'ris cuboi'deae calca'nei** [NA], the saddle-shaped area on the anterior surface of the calcaneus where it articulates with the cuboid bone; called also *cuboid articular surface of calcaneus*. **f. articula'ris fibula'ris tib'iae** [NA], the articular surface on the posteroinferior aspect of the lateral condyle of the tibia, which articulates with the head of the fibula. **f. articula'ris fos'sae mandibula'ris**, *f. articularis ossis temporalis*. **f. articula'res inferio'res atlan'tis**, see *fovea articularis inferior atlantis*. **f. articula'ris infe'rior tib'iae** [NA], the surface on the distal end of the tibia where it articulates with the talus. **f. articula'res inferio'res vertebra'rum**, the surfaces on the inferior articular processes of the vertebrae. **f. articula'ris malleola'ris tib'iae** [NA], the lateral aspect of the medial malleolus, which articulates with the talus; called also *fovea of lateral malleolus* and *internal malleolar facet of tibia*. **f. articula'ris malle'oli fib'ulae** [NA], the anterosuperior surface of the lateral malleolus, which articulates with the lateral side of the talus; called also *lateral malleolar fovea of fibula*. **f. articula'ris me'dia calca'nei**, *f. articularis talaris media calcanei*. **f. articula'ris navicula'ris ta'li** [NA], the surface of the head of the talus that articulates with the navicular bone. **f. articula'ris os'sis tempora'lis** [NA], the articular surface

found in the deep part of the mandibular fossa of the temporal bone; called also *f. articularis fossae mandibularis*. **f. articula'ris os'sium** [NA], the surface by which a bone articulates with another; called also *articular surface*. **f. articula'ris patel'lae** [NA], the posterior, or back, surface of the patella, which is largely covered by a thick cartilaginous layer. **f. articula'ris poste'rior ax'is** [NA], a smooth groove on the dorsal surface of the odontoid process of the axis, which lodges the transverse ligament of the atlas; called also *f. articularis posterior epistrophei*. **f. articula'ris poste'rior calca'nei**, *f. articularis talaris posterior calcanei*. **f. articula'ris poste'rior epistroph'ei**, *f. articularis posterior axis*. **f. articula'ris sterna'lis clavic'ulae** [NA], a triangular surface on the medial end of the clavicle for articulation with the sternum. **f. articula'ris supe'rior tib'iae** [NA], the surface on the proximal end of the tibia that articulates with the condyles of the femur; called also *condyloid surface of tibia*. **f. articula'res supe'rio'res vertebra'rum**, the articular facets on the superior articular processes of the vertebrae. **f. articula'ris tala'ris ante'rior calca'nei** [NA], the small area on the superior surface of the calcaneus just anterior to the middle articular surface, which articulates with the talus; called also *f. articularis anterior calcanei*. **f. articula'ris tala'ris me'dia calca'nei** [NA], the area on the superior surface of the calcaneus just in front of the calcaneal sulcus, which articulates with the talus; called also *f. articularis media calcanei* and *medial posterior facet of calcaneus*. **f. articula'ris tala'ris poste'rior calca'nei** [NA], the area on the superior surface of the calcaneus just posterolateral to the calcaneal sulcus, which articulates with the talus; called also *f. articularis posterior calcanei*. **f. articula'ris thyroi'deae cartilag'inis cricoi'deae** [NA], the surface of the cricoid cartilage that articulates with the thyroid cartilage; called also *eminencia lateralis cartilaginis cricoideae*. **f. articula'ris tuber'culi cos'tae** [NA], the convex facet on the costal tubercle that articulates with the transverse process of a vertebra; called also *anterior or inferior costal facet*. **f. auricula'ris os'sis il'i** [NA], *f. auricula'ris os'sis il'ium*, a somewhat ear-shaped area on the sacropelvic surface of the ilium, which articulates with the auricular surface of the sacrum to form the sacroiliac joint. **f. auricula'ris os'sis sa'cri** [NA], the broad irregular surface on the superior half of the lateral aspect of the sacrum, which articulates with the ilium; called also *auricular surface of sacrum*. **f. bovi'na** [L. "cow face"], a term sometimes applied to the appearance of the face in craniofacial dysostosis; called also *bovine* or *cow face*. **f. bucca'lis den'tis**, buccal surface: the surface of a posterior tooth that is directed outward toward the cheek. **f. cerebra'lis a'lae mag'nae**, *f. cerebra'lis a'lae majo'ris* [NA], the smooth, concave part of the great wing of the sphenoid bone that forms the anterior part of the floor of the middle cranial fossa, lying in front of the petrous and squamous parts of the temporal bone. **f. cerebra'lis os'sis fronta'lis**, *f. interna ossis frontalis*. **f. cerebra'lis os'sis parieta'lis**, *f. interna ossis parietalis*. **f. cerebra'lis squa'mae tempora'lis**, *f. cerebra'lis par'tis squamo'sae os'sis tempora'lis* [NA], the inner surface of the squamous part of the temporal bone, forming the lateral wall of the middle cranial fossa. **f. co'lica lie'nis** [NA], the surface of the spleen that is in contact with the colon. **f. contac'tus den'tis** [NA], contact surface: the surface of a tooth that is in contact with an adjacent tooth in the same dental arch. **f. convex'a cer'ebr'i**, *f. superolateralis cerebri*. **f. costa'lis pulmo'nis** [NA], the surface area of each lung adjacent to the rib cage. **f. costa'lis scap'ulae** [NA], the anteromedially facing, concave surface of the scapula; called also *anterior or costal surface of scapula*. **f. diaphragmat'ica cor'dis** [NA], the surface of the heart (within the pericardium) that rests on the diaphragm and is directed inferiorly and somewhat posteriorly; it is formed by the two ventricles, the left ventricle contributing a little more than the right. **f. diaphragmat'ica hep'atis** [NA], the surface of the liver that lies in contact with the diaphragm, being composed of the superior, anterior, right, and posterior aspects. **f. diaphragmat'ica lie'nis** [NA], the convex posterolateral surface of the spleen which is directed toward the diaphragm. **f. diaphragmat'ica pulmo'nis** [NA], the surface area of each lung that is adjacent to the diaphragm. **f. dista'lis den'tis** [NA], distal surface: the proximal or contact surface of a tooth that is farthest from the midline of the dental arch. **f. dolor'sa**, the facial expression of a patient experiencing pain or severe sickness. **f. dorsa'lis antibra'chii**, *f. posterior antebrachii*. **f. dorsa'les digito'rum ma'nus** [NA], the posterior, or back (dorsal), surfaces of the fingers. **f. dorsa'les digito'rum pe'dis** [NA], the superior, or upper (dorsal), surfaces of the toes. **f. dorsa'lis os'sis sac'ri** [NA], the markedly convex and rough posterior, or dorsal, surface of the sacrum, which gives origin to the sacrospinalis and multifidus muscles; called also *posterior surface of sacrum*. **f. dorsa'lis ra'dii**, *f. posterior radii*. **f. dorsa'lis scap'ulae** [NA], the convex posterior surface of the scapula, which is divided into two unequal parts (superior and inferior) by the spine of the scapula; called also *dorsum* or *posterior surface of scapula*. **f. dorsa'lis ul'nae**, *f. posterior ulnae*. **f. exter'na os'sis fronta'lis** [NA], the external surface of the squama of the frontal bone; called also *f. frontalis ossis frontalis*.

f. ex'terna os'sis parietalis [NA], the externally directed surface of the parietal bone; called also *f. parietalis ossis parietalis*. **f. facia'lis den'tis**, NA alternative for *f. vestibularis dentis*. **f. fibula'ris cru'ris**, NA alternative for *f. lateralis cruris*. **f. fronta'lis os'sis fronta'lis**, *f. externa ossis frontalis*. **f. gas'trica lie'nis** [NA], the surface of the spleen that is in contact with the stomach. **f. glu'tea os'sis il'i** [NA], the large external, or dorsal, surface of the ala of the ilium, on which are located the three gluteal lines; called also *gluteal surface of ilium*. **f. hepatic'a**, a thin face with sunken eyeballs, sal-low complexion, and yellow conjunctivae, characteristic of certain chronic disorders of the liver. **f. hippocrat'ica**, a drawn, pinched, and pale appearance of the face, indicative of approaching death. **Hutchinson's f.**, a peculiar appearance in ophthalmoplegia externa, the eyeballs being fixed, the eyebrows raised, and the lids drooping. **f. infe'rior cer'ebri** [NA], the lower, or inferior, surface of the cerebrum; called also *basis cerebri* and *basis encephali*. **f. infe'rior hemisphe'rii cerebel'li** [NA], the inferior surface of the cerebellar hemisphere, formed by the inferior semilunar lobule, the biventral lobule, the tonsilla, and the flocculus. **f. infe'rior hemisphe'rii cer'ebri** [NA], the part of the cerebral hemisphere that rests on the tentorium and in the anterior and middle cranial fossae. **f. infe'rior hep'atis**, *f. visceralis hepatis*. **f. infe'rior lin'guae** [NA], the under surface of the body of the tongue. **f. infe'rior pancre'atis** [NA], the inferior surface of the pancreas. **f. infe'rior par'tis petro'sae os'sis tempora'lis** [NA], **f. infe'rior pyram'idis os'sis tempora'lis**, that surface of the petrous part of the temporal bone which appears on the external surface of the base of the cranium. **f. inferolatera'lis prosta'tae** [NA], the convex inferolateral surface of the prostate, separated from the superior fascia of the pelvic diaphragm by a venous plexus. **f. infratempora'lis maxil'lae** [NA], the posterior convex surface of the body of the maxilla, bounded roughly by the inferior orbital fissure, the zygomatic process and associated ridge, maxillary tuberosity, and posterior margin of the nasal surface. **f. interloba'res pulmo'nis** [NA], the surface area of each lung lying within the oblique and horizontal fissures. **f. inter'na os'sis fronta'lis** [NA], the vertically situated, concave cerebral surface of the frontal bone; in its midline the sagittal sulcus is seen superiorly and the frontal crest inferiorly. Called also *f. cerebri ossis frontalis*. **f. inter'na os'sis parietalis** [NA], the internal, or cerebral, surface of the parietal bone; called also *f. cerebri ossis parietalis*. **f. intes'tina'lis u'teri** [NA], the convex posterior surface of the uterus, adjacent to the intestine. **f. labia'lis den'tis**, labial surface: the surface of an anterior tooth that is directed outward toward the lip. **f. latera'lis bra'chii** [NA], the outer, or lateral, surface of the upper arm. **f. latera'lis cru'ris** [NA], the outer, or lateral, surface of the leg; called also *f. fibularis cruris* [NA alternative]. **f. latera'lis den'tium incisivo'rum et canino'rum**, the contact surface of the incisor and canine teeth that is directed away from the midline of the dental arch. **f. latera'les digito'rum ma'nus** [NA], the lateral surfaces of the fingers; called also *facies radiales digitorum manus* [NA alternative], *marginis radiales digitorum manus*, and *radial margins of fingers*. **f. latera'les digito'rum pe'dis** [NA], the lateral surfaces of the toes; called also *marginis laterales digitorum pedis*. **f. latera'lis fem'oris** [NA], the outer, or lateral, surface of the thigh. **f. latera'lis fib'ulae** [NA], the area between the anterior and posterior borders of the body of the fibula. **f. latera'lis os'sis zygomatic'i** [NA], the anterior convex surface of the zygomatic bone; called also *f. malaris ossis zygomatici*. **f. latera'lis ova'rii** [NA], the surface of the ovary in contact with the lateral pelvic wall. **f. latera'lis ra'dii** [NA], the surface of the radius that gives attachment to the supinator and pronator teres muscles proximally, and underlies the tendons of the extensor carpi radialis longus and brevis muscles distally. **f. latera'lis tes'tis** [NA], the surface of the testis that is directed away from its fellow of the opposite side. **f. latera'lis tib'iae** [NA], the surface of the body of the tibia between the interosseous and anterior borders; called also *external border of tibia*. **leonine f.**, **f. leonti'na** [L. "lion's face"], a peculiar, deeply furrowed, lion-like appearance of the face, seen in certain cases of advanced lepromatous leprosy; see *leontiasis*. **f. lingua'lis den'tis** [NA], lingual surface: the surface of a tooth that faces inward toward the tongue. **f. luna'ta acetab'uli** [NA], the articular portion of the acetabulum. **f. mala'ris os'sis zygomatic'i**, *f. lateralis ossis zygomatici*. **f. malleola'ris latera'lis ta'li** [NA], the large triangular facet on the talus that articulates with the lateral malleolus. **f. malleola'ris media'lis ta'li** [NA], the narrow facet on the talus continuous with the superior surface; it articulates with the medial malleolus. **Marshall Hall's f.**, the facies of hydrocephalus: a triangular face with a broad forehead and prominent frontal bones. **f. masticato'ria den'tis**, masticatory surface: 1. *f. occlusalis dentis*. 2. the occlusal surface of a tooth upon which mastication can occur; called also *working occlusal surface*. **f. maxilla'ris a'lae majo'ris** [NA], a small surface on the inferior part of the great wing of the sphenoid bone above the pterygoid processes; it is perforated by the foramen rotundum. Called also *f. sphenomaxillaris alae magnae*. **f.**

maxilla'ris lam'inae perpendicular'ris os'sis palati'ni [NA], **f. maxilla'ris par'tis perpendicular'ris os'sis palati'ni**, the lateral surface of the perpendicular plate of the palatine bone, which is in relation to the maxilla. Posteriorly and inferiorly it contains the greater palatine sulcus, which forms the greater palatine canal with a corresponding groove on the maxilla. **f. media'lis bra'chii** [NA], the inner, or medial, surface of the upper arm. **f. media'lis cartilag'inis arytеноi'deae** [NA], the surface of the arytenoid cartilage that faces medially, toward the opposite arytenoid cartilage. **f. media'lis cer'e-bri** [NA], the surface of the cerebrum parallel to and facing the median plane. **f. media'lis cru'ris** [NA], the inner, or medial, surface of the leg; called also *f. tibialis cruris* [NA alternative]. **f. media'lis den'tium incisivo'rum et canino'rum**, the contact surface of the incisor and canine teeth that is directed toward the midline of the dental arch. **f. media'les digito'rum ma'nus** [NA], the medial surfaces of the fingers; called also *facies ulnares digitorum manus* [NA alternative], *marginis ulnares digitorum manus*, and *ulnar margins of fingers*. **f. media'les digito'rum pe'dis** [NA], the medial surfaces of the toes; called also *marginis mediales digitorum pedis*. **f. media'lis fem'oris** [NA], the inner, or medial, surface of the thigh. **f. media'lis fib'ulae** [NA], the narrow area on the body of the fibula between the interosseous and anterior borders. **f. media'lis hemisphe'rii cer'ebri** [NA], the surface of the cerebral hemisphere parallel to and facing both the median plane and the corresponding surface of the opposite hemisphere. **f. media'lis ova'rii** [NA], the side of the ovary in contact with the fimbriated end of the uterine tube and the intestine. **f. media'lis pulmo'nis** [NA], the surface area of each lung lying medially next to the vertebral column and mediastinum; called also *f. mediastinalis pulmonis*. **f. media'lis tes'tis** [NA], the surface of the testis that is directed toward its fellow of the opposite side. **f. media'lis tib'iae** [NA], the slightly convex surface of the body of the tibia between the anterior and medial borders. **f. media'lis ul'nae** [NA], the smooth, rounded, internal surface of the ulna. **f. mediastina'lis pulmo'nis**, *f. mediastis pulmonis*. **f. mesia'lis den'tis** [NA], mesial surface: the contact or proximal surface of the incisor or canine tooth that is closest to the midline of the dental arch. **mitral f.**, **mitro-tricuspid f.**, the appearance of the face of some patients with mitral disease of long duration, marked by rosy, flushed cheeks and dilated capillaries. **moon f.**, see under *face*. **myas-thenic f.**, the characteristic facial expression in myasthenia gravis, caused by ptosis and weakness of the facial muscles. **myo-pathic f.**, the peculiar facial expression produced by relaxation of the facial muscles, as in Landouzy-Dejerine dystrophy. **f. nasa'lis lam'inae horizonta'lis os'sis palati'ni** [NA], the superior surface of the horizontal part of the palatine bone; it forms the posterior part of the floor of the nasal cavity. Called also *f. nasalis partis horizontalis ossis palatini*. **f. nasa'lis lam'i-nae perpendicular'ris os'sis palati'ni** [NA], the medial surface of the perpendicular plate of the palatine bone; it articulates with the middle and inferior nasal conchae. Called also *f. nasalis partis perpendicularis ossis palatini*. **f. nasa'lis maxil'lae** [NA], the surface of the body of the maxilla that helps form the lateral wall of the nasal cavity; it is bounded roughly by the following: medial margin of the orbital surface, medial margin of the infratemporal surface, the palatine process, and the nasal notch. **f. nasa'lis par'tis horizonta'lis os'sis palati'ni**, *f. nasalis laminae horizontalis ossis palatini*. **f. nasa'lis par'tis perpendicular'ris os'sis palati'ni**, *f. nasalis laminae perpendicularis ossis palatini*. **f. occlusa'lis den'tis** [NA], occlusal surface: the surface of a posterior tooth which comes in contact with structures of the opposite jaw when the jaws are closed. **f. orbita'lis a'lae mag'nae**, **f. orbita'lis a'lae majo'ris** [NA], the quadrilateral surface on the great wing of the sphenoid bone that forms the major part of the lateral wall of the orbit; called also *orbital border* or *surface of sphenoid bone*. **f. orbita'lis maxil'lae** [NA], a triangular surface on the body of the maxilla that forms the greater part of the floor of the orbit. **f. orbita'lis os'sis fronta'lis** [NA], the triangularly shaped plates of the frontal bone that form most of the roof of each orbit and the floor of the anterior cranial fossa; they are separated by the ethmoidal notch. **f. orbita'lis os'sis zygomatic'i** [NA], the part of the zygomatic bone that helps form the lateral wall of the orbit. **f. [os'sea] cra'nii**, the bony skeleton of the face. **f. palati'na lam'inae horizonta'lis os'sis palati'ni** [NA], **f. palati'na par'tis horizonta'lis os'sis palati'ni**, the inferior surface of the horizontal part of the palatine bone; it forms the posterior part of the hard palate. **f. palma'res digito'rum ma'nus** [NA], the ventral, or front (palmar), surfaces of the fingers; called also *f. volares digitorum manus*. **f. parietalis os'sis parietalis**, *f. externa ossis parietalis*. **Parkinson's f.**, **parkinsonian f.**, a stolid masklike expression of the face, with infrequent blinking, pathognomonic of parkinsonism; see also *parkinsonian syndrome*, under *syndrome*, and see *paralysis agitans*. **f. patella'ris fem'oris**, the smooth anterior continuation of the condyles that forms the surface of the femur articulating with the patella; called also *anterior intercondylar fossa of femur*, and *patellar fossa of femur*. **f. pelvi'na os'sis sac'ri** [NA], the smooth, concave,

ventrocaudally directed surface of the sacrum that helps form the posterior wall of the pelvis; called also *anterior surface of sacrum*. **f. planta/res digito/rum pe/dis** [NA], the inferior, or lower (plantar), surfaces of the toes. **f. poplit/ea fem/oris** [NA], the triangular area forming the superior part of the floor of the popliteal fossa; called also *planum popliteum femoris*. **f. poste'rior antebrachii** [NA], the dorsal, or back, surface of the forearm; called also *f. dorsalis antibrachii*. **f. poste'rior brachii** [NA], the dorsal, or back, surface of the upper arm. **f. poste'rior cartilag/inis arytenoi/deae** [NA], the concave dorsal surface of the arytenoid cartilage, to which various laryngeal muscles are attached. **f. poste'rior cor'neae** [NA], the posterior surface of the cornea, which forms the anterior boundary of the anterior chamber. **f. poste'rior cru'ris** [NA], the dorsal, or back, surface of the leg. **f. poste'rior den'tium premola'rium et mola'rium**, posterior surface of premolar and molar teeth: the contact surface of the premolar and the molar teeth that is directed away from the midline of the dental arch. **f. poste'rior fem/oris** [NA], the dorsal, or back, surface of the thigh. **f. poste'rior fib'ulae** [NA], the large area between the posterior and interosseous borders of the body of the fibula, presenting the medial crest. **f. poste'rior glan'dulae sup'rarena'lis** [NA], the portion of the adrenal gland that is directed toward the posterior body wall. **f. poste'rior hep'a'tis**, pars posterior facies diaphragmaticae hepatis. **f. poste'rior hu'meri** [NA], the surface of the humerus that is subdivided obliquely by the radial groove to give attachment to the lateral and medial heads of the triceps muscle. **f. poste'rior i'ridis** [NA], the posterior surface of the iris, directed toward the posterior chamber of the eye. **f. poste'rior len'tis** [NA], the posterior surface of the lens, directed toward the vitreous body of the eye. **f. poste'rior palpebra'rum** [NA], the internal surface of the eyelids in contact with the eyeball and covered by the conjunctiva. **f. poste'rior pancre'atis** [NA], the posterior surface of the pancreas. **f. poste'rior par'tis petro'sae os/sis tempora'lis** [NA], the surface of the petrous part of the temporal bone that forms part of the anterior portion of the floor of the posterior cranial fossa; called also *f. posterior pyramidis ossis temporalis*. **f. poste'rior prosta'tae** [NA], the dorsal surface of the prostate, separated by fascia from the anterior wall of the rectum. **f. poste'rior pyram'idis os/sis tempora'lis**, *f. posterior partis petrosae ossis temporalis*. **f. poste'rior ra'dii** [NA], the posterior surface of the radius, which gives attachment to the supinator, abductor pollicis longus, and extensor pollicis brevis muscles; called also *f. dorsalis radii*. **f. poste'rior re'nis** [NA], the dorsal surface of the kidney, directed toward the posterior body wall, and not covered by peritoneum. **f. poste'rior tib'iae** [NA], the surface of the body of the tibia between the medial and interosseous borders; in the proximal third presenting the soleal line. **f. poste'rior ul'nae** [NA], the posterolaterally directed surface of the ulna; called also *f. dorsalis ulnae*. **Potter f.**, the facial appearance characteristic of bilateral renal agenesis: flattened nose, receding chin, wide interpupillary space, and large, low-set ears. **f. pulmona'lis cor'dis** [NA], the surface of the heart that faces the lung. **f. radia'les digito/rum ma'nus**, NA alternative for *f. laterales digitorum manus*. **f. rena'lis glan'dulae sup'rarena'lis** [NA], the surface of the adrenal gland that is directed toward the kidney, being separated from it by a layer of fat; called also *basis glandulae suprarenalis* and *inferior margin of suprarenal gland*. **f. rena'lis lie'nis** [NA], the surface of the spleen that is in contact with the left kidney. **f. sacropel'vi'na os/sis il'i** [NA], an irregular area on the inner surface of the ala of the ilium, posterior to the iliac fossa; it contains the iliac tuberosity and the auricular surface. Called also *sacropelvic surface of the ilium*. **f. scaphoi'deae**, dish face. **f. spheno-maxilla'ris a'lae mag'nae**, *f. maxillaris alae majoris*. **f. sternocosta'lis cor'dis** [NA], the convex surface of the heart, which in general is directed anteriorly and somewhat superiorly, being formed mainly by the right ventricle, and to a lesser degree by the left ventricle and the atria. **f. supe'rior hemi-sphe'rii cerebel'li** [NA], the superior surface of the cerebellar hemisphere, consisting of the ala of the lobulus centralis, the lobulus quadrangularis, the lobulus simplex, and the superior semilunar lobule. **f. supe'rior hep'a'tis**, pars superior faciei diaphragmaticae hepatis. **f. supe'rior troch'leae ta'li** [NA], the broad, smooth surface of the talus that articulates with the tibia. **f. superolatera'lis cer'ebr'i** [NA], the convex outer surface of the cerebrum, which faces the calvaria; called also *f. convexa cerebri*. **f. symphys/eos os/sis pu'bis**, *f. symphysia'lis* [NA], the rough, ovoid, medial surface of the body of the pubic bone, by which it articulates at the pubic symphysis with its fellow on the opposite side. **f. tempora'lis a'lae mag'nae**, *f. tempora'lis a'lae majo'ris* [NA], the lateral and inferior surface of the great wing of the sphenoid bone, divided by the infratemporal crest into a superior part that forms a portion of the wall of the temporal fossa, and an inferior part that forms part of the wall of the infratemporal fossa. **f. tempora'lis os/sis fronta'lis** [NA], the slightly concave surface of the frontal bone that forms the upper part of the wall of the temporal fossa and gives attachment to the anterosuperior part of the temporalis muscle. **f. tempora'lis os/sis zygoma'tici** [NA], the inter-

nal, concave surface of the zygomatic bone, facing the temporal and infratemporal fossae. **f. tempora'lis par'tis squa-mo'sae** [NA], *f. tempora'lis squa'mae tempora'lis*, the external surface of the squamous part of the temporal bone, the anterior part of which forms a portion of the temporal fossa. **f. tibia'lis cru'ris**, NA alternative for *f. medialis cruris*. **ty-phoid f.**, *f. typho'sa*, the vacant and bewildered, often wild and defiant expression, with face flushed and a dusky, leaden hue, seen in early stages of typhoid fever. **f. ulna/res digito/rum ma'nus**, NA alternative for *f. mediales digitorum manus*. **f. urethra'lis pe'nis** [NA], the surface of the penis overlying the urethra, and opposite the dorsum penis. **f. vesica'lis u'teri** [NA], the flat anterior surface of the uterus, adjacent to the urinary bladder. **f. vestibula'ris den'tis** [NA], vestibular surface: the surface of a tooth that is directed outward toward the vestibule of the mouth, including the buccal and labial surfaces; called also *f. facialis dentis* [NA alternative] or *facial surface*. **f. viscera'lis hep'a'tis** [NA], the posteroinferior surface of the liver, which is in contact with various abdominal viscera; called also *f. inferior hepatis*. **f. viscera'lis lie'nis** [NA], the surface of the spleen which comes in contact with various other viscera, including the colon (facies colica), kidney (facies renalis), and stomach (facies gastrica). **f. vola'ris antibrachii**, *f. anterior antibrachii*. **f. vola'les digito/rum ma'nus**, *f. palmares digitorum manus*. **f. vola'ris ra'dii**, *f. anterior radii*. **f. vola'ris ul'nae**, *f. anterior ulnae*.

facilitation (fah-sil'f-i-ta'shun) [L. *facilis* easy] the promotion or hastening of any natural process; the reverse of inhibition; specifically, the effect of a nerve impulse acting across a synapse, and resulting in an increase in the efficacy of subsequent impulses in that nerve fiber, or impulses in other convergent nerve fibers, in exciting the postsynaptic element. See *law of facilitation*. **Wedensky f.**, facilitation across a block; when there is a complete block to nerve conduction the threshold of the nerve below the block to electric stimulation is lowered.

facilitative (fah-sil'f-i-ta'tiv) in pharmacology, denoting a reaction arising as an indirect result of drug action, as development of an infection after the normal microflora has been altered by an antibiotic.

facilitory (fah-sil'f-i-tör-e) making easier; promoting or hastening a natural process; acting so as to render a neural element more easily excitable.

facing (fäs'ing) a piece of porcelain or resin fashioned to represent the facial surface of a tooth and reinforced by metal so as to restore the full form of the natural tooth.

facio- (fa'she-o) [L. *facies* face] a combining form denoting relationship to the face.

faciobrachial (fa'she-o-bra'ke-al) [*facio-* + Gr. *brachiōn* arm] pertaining to the face and arm.

faciocephalgia (fa'she-o-sef'ah-lal'je-ah) [*facio-* + Gr. *kephalē* head + *-algia*] neuralgic pain in the face and neck attributed to disorders of the autonomic (vegetative) nervous system.

faciocervical (fa'she-o-ser'vë-kal) [*facio-* + L. *cervix* neck] pertaining to or affecting the face and neck.

faciolingual (fa'she-o-ling'gwal) [*facio-* + L. *lingua* tongue] pertaining to the face and tongue.

facioplasty (fa'she-o-plas'te) [*facio-* + Gr. *plassein* to form] plastic surgery of the face.

facioplegia (fa'she-o-ple'je-ah) [*facio-* + Gr. *plēgē* stroke] facial paralysis.

facioscapulohumeral (fa'she-o-skap'u-lo-hu'mer-al) pertaining to the face, scapula, and arm.

faciostenosis (fa'she-o-stë-no'sis) failure of the midface to grow.

F.A.C.O.G. Fellow of the American College of Obstetricians and Gynecologists.

F.A.C.P. Fellow of the American College of Physicians.

F.A.C.S. Fellow of the American College of Surgeons.

F.A.C.S.M. Fellow of the American College of Sports Medicine.

F-actin see *actin*.

factitial (fak-tish'al) produced by artificial means; unintentionally produced.

factitious (fak-tish'us) [L. *factitiosus*] artificial; not natural.

factor (fak'tor) [L. "maker"] an agent or element that contributes to the production of a result, such as a chemical compound that is essential to a reaction (e.g., a coagulation factor); a quantity or symbol employed in a specific formula or, in the study of heredity, a particular gene; a property of immunoglobulins by which they can be identified by a given set of reagents. **accelerator f.**, see *Factor V*, under *coagulation f.s.* **accessory f.**, *accessory food f.*, a vitamin. **activation f.**, see *Factor XII*, under *coagulation f.s.* **adrenocorticotrophic releasing f. (ACTH-RF)**, corticotropin releasing f. **aldosterone stimulating f.**, a hypothalamic hormone of the diencephalon that stimulates the elaboration of aldosterone by the zona glomerulosa of the adrenal cortex. **alpha f.**, a name formerly given the hormone(s) that governs the estrous phase of the ovarian cycle; see *estrogenic hormones*, under *hormone*. **anabolism-promot-**

ing f., a principle which enhances protein utilization, permitting growth or tissue restitution with a lower level of protein intake than possible without it, an activity noted in various antibiotics and ataractics. Abbreviated **APF**. **animal protein f.**, an element in animal proteins found to be essential to maximal growth of animals; vitamin B₁₂. Abbreviated **APF**. **antiachromotrichia f.**, pantothenic acid. **antiacrodyria f.**, pyridoxine. **antialopecia f.**, inositol. **antianemia f.**, cyanocobalamin. **antianemia f. for chicks**, a vitamin, folic acid, in spinach and other green leaves, which prevents anemia in chicks. **antiblack tongue f.**, niacin. **anticanities f.**, **antidermatitis f. of chicks**, pantothenic acid. **antidermatitis f. of rats**, pyridoxine. **anti-egg white f.**, biotin. **anti-gray hair f.**, pantothenic acid. **antihemophilic f.**, 1. see **Factor VIII**, under **coagulation f.s.** Abbreviated **AHF**. 2. [USP] a sterile freeze-dried powder containing the **Factor VIII** fraction obtained from suitable whole-blood donors. **antihemophilic f., cryoprecipitated** [USP], a sterile, frozen concentrate of human antihemophilic factor prepared from the **Factor VIII**-rich cryoprotein fraction of human venous plasma obtained from suitable whole-blood donors from a single unit of plasma derived from whole blood or by plasmapheresis, collected and processed in a closed system. Called also **human antihemophilic f.** **antihemophilic f., human**, antihemophilic f., def. 2. **antihemophilic f. A**, see **Factor VIII**, under **coagulation f.s.** **antihemophilic f. B**, see **Factor IX**, under **coagulation f.s.** **antihemophilic f. C**, see **Factor XI**, under **coagulation f.s.** **antihemorrhagic f.**, vitamin K. **antineuritic f.**, thiamine. **antinuclear f. (ANF)**, an autoantibody against constituents of cell nuclei that may be demonstrated by immunofluorescence and is present in the sera of patients with systemic lupus erythematosus and occasionally in rheumatoid arthritis and other collagen diseases. **antipellagra f.**, niacin. **anti-pernicious anemia f.**, cyanocobalamin. **antirachitic f.**, vitamin D. **antiscorbutic f.**, ascorbic acid. **antisterility f.**, vitamin E. **antistiffness f.**, a factor present in raw cream, crude molasses, and unheated cane juice, lack of which in animals causes stiffness of the wrist, and later emaciation, weakness, and death. **anti-xerophthalmia f.**, **antixerotic f.**, vitamin A. **f. B**, a complement component C3 proactivator which participates in the alternative pathway of complement activation. The factor B-C3b complex is split by factor D, which leads to formation of C3 convertase, which in turn acts in the alternative pathway. **beta f.**, former name for progesterone. **Bittner milk f.**, mouse mammary tumor virus. **blastogenic f. (BF)**, lymphocyte transforming f. **bone f.**, a fundamental factor in periodontoclasia, being the systemic regulatory influence upon the response of alveolar bone to local irritants. **Bx f.**, aminobenzoic acid. **C f.**, a factor found in the soluble part of cytoplasm which promotes the contraction of mitochondria. **C3 nephritic f.**, a gamma globulin (not an immunoglobulin) in the plasma of certain individuals with membranoproliferative glomerulonephritis with hypocomplementemia. C3 nephritic factor initiates the alternative pathway of complement activation and stabilizes alternative pathway C3 convertase. **Castle's f.**, intrinsic factor, the mucoprotein in gastric juice necessary for the absorption of cyanocobalamin. **chemotactic f.**, the substance that brings about chemotaxis. **chick antidermatitis f.**, pantothenic acid. **chick antipellagra f.**, pantothenic acid. **chick growth f. S**, streptogenin. **Christmas f.**, see **Factor IX**, under **coagulation f.s.** **chromotrichial f.**, aminobenzoic acid. **citrovorum f.**, folic acid. **clone-inhibiting f. (CIF)**, a lymphokine that exhibits a direct cytostatic effect against actively growing tissue-culture tumor cell lines. **coagulation f.s.**, substances in the blood that are essential to the clotting process and hence, to the maintenance of normal hemostasis. They are designated by Roman numerals, to which the notation "a" is added to indicate the activated state. Platelet factors, designated by Arabic numerals, also play a role in coagulation. **Factor I**, fibrinogen: a high-molecular-weight plasma protein which is converted to fibrin through the action of thrombin. Deficiency of this factor results in afibrinogenemia or hypofibrinogenemia. Several molecular forms of this factor have been recognized. **Factor II**, prothrombin: a protein present in the plasma that, in theoretical hematology, is converted to thrombin by extrinsic prothrombin converting principle. More than one molecular form has been detected. Deficiency of this factor leads to hypoprothrombinemia. **Factor III**, tissue thromboplastin: a material derived from several sources in the body (brain, lung, etc.) and important in the formation of extrinsic prothrombin converting principle in the extrinsic pathway of blood coagulation. Called also **tissue factor**. **Factor IV**, calcium: a factor required in many phases of blood coagulation. **Factor V**, proaccelerin: a heat- and storage-labile material, present in plasma but not in serum, functioning in both the intrinsic and extrinsic pathways of blood coagulation. Deficiency of this factor, an autosomal recessive trait, leads to a rare hemorrhagic tendency, known as Owen's disease or parahemophilia, which varies greatly in severity. Called also **accelerator globulin (AG)** and **labile factor**. **Factor VI**, a factor (accelerin) previously thought to be an activated form of Factor V. It no longer is considered in the scheme of hemostasis, and hence it is assigned neither a name

nor a function at this time. **Factor VII**, proconvertin: a heat- and storage-stable factor participating only in the extrinsic pathway of blood coagulation. Deficiency of this factor which may be hereditary (autosomal recessive) or acquired (associated with vitamin K deficiency) results in a hemorrhagic tendency. Called also **prothrombokinase**, **autoprothrombin I**, **serum prothrombin conversion accelerator (SPCA)**, and **stable factor**. **Factor VIII**, antihemophilic factor (AHF): a relatively storage-labile factor participating only in the intrinsic pathway of blood coagulation. Deficiency of this factor, when transmitted as a sex-linked recessive trait, causes classical hemophilia (hemophilia A). More than one molecular form of this factor has been discovered. Called also **antihemophilic globulin (AHG)** and **antihemophilic factor A**. **Factor IX**, plasma thromboplastin component (PTC): a relatively storage-stable substance involved only in the intrinsic pathway of blood coagulation. Deficiency of this factor results in a hemorrhagic syndrome called hemophilia B or Christmas disease, which is similar to classical hemophilia (hemophilia A). More than one molecular form has been discovered. Called also **autoprothrombin II**, **Christmas factor**, and **antihemophilic factor B**. **Factor X**, Stuart factor: a storage-stable factor that participates in both the intrinsic and extrinsic pathways of blood coagulation. Deficiency of this factor may cause a systemic coagulation disorder (Factor X deficiency). Called also **autoprothrombin C**, **Prover factor**, **Stuart-Prover factor**, and **thrombokinase**. **Factor XI**, plasma thromboplastin antecedent (PTA): a stable factor involved in the intrinsic pathway of blood coagulation. Deficiency of this factor results in a systemic blood-clotting defect called hemophilia C or Rosenthal's syndrome, that may resemble classical hemophilia. Called also **antihemophilic factor C**. **Factor XII**, Hageman factor: a stable factor activated by contact with glass or other foreign surfaces, which initiates the intrinsic process of blood coagulation *in vitro*. Deficiency of this factor results in prolonged *in vitro* blood clotting but overt clinical bleeding is rare. Called also **glass**, **contact**, or **activation factor**. **Factor XIII**, fibrin stabilizing factor (FSF): a factor that polymerizes fibrin monomers so that they become stable and insoluble in urea, thus enabling fibrin to form a firm blood clot. Deficiency of this factor produces a clinical hemorrhagic diathesis. Called also **fibrinase** and **Laki-Lorand factor (LLF)**. The inactive form is also known as **protransglutaminase**, and the active form as **transglutaminase**. **platelet factor 1**, adsorbed Factor V from the plasma. **platelet factor 2**, an accelerator of the thrombin-fibrinogen reaction, attached to platelets. **platelet factor 3**, a substance, probably a lipoprotein, extracted from platelets, which contributes to the interaction of plasma coagulation proteins in the generation of intrinsic prothrombin converting principle. **platelet factor 4**, an intracellular protein component of blood platelets, capable of neutralizing the antithrombotic activity of heparin in the fibrinogen-fibrin reaction and the inhibitory effect of heparin in the thromboplastin generation test. **coenzyme f.**, diaphorase. **contact f.**, see **Factor XII**, under **coagulation f.s.** **corticotropin releasing f. (CRF)**, a factor elaborated by the hypothalamus at the median eminence, which stimulates the release of corticotropin by the anterior pituitary gland. **Curling f.**, griseofulvin. **f. D**, a factor which, when activated (D) serves as a serine esterase that participates in the alternative pathway of complement activation by splitting factor B from C3b. **Day's f.**, folic acid. **diabetogenic f.**, a substance of unknown constitution associated with extracts of growth hormone from the anterior pituitary which, when injected into normal dogs, causes them to become diabetic. **diffusion f.**, hyaluronidase. **Duran-Reynals f.**, hyaluronidase. **eluate f.**, pyridoxine. **erythrocyte maturation f. (E.M.F.)**, a former name for vitamin B₁₂ (cyanocobalamin). **erythropoietic stimulating f. (E.S.F.)**, a name given a factor in the body which stimulates the production of erythrocytes; probably identical with erythropoietin. **extrinsic f.**, vitamin B₁₂ (cyanocobalamin). **Ff**, the episome which determines the mating type of conjugating bacteria, being present in the donor (male) bacterium and absent in the recipient (female); called also **F element**, **sex f.**, and **fertility f.** **fermentation L. casei f.**, folic acid. **fertility f.**, **F f.** **fibrin stabilizing f.**, see **Factor XIII**, under **coagulation f.s.** **filtrate f.**, filtrate f. II, pantothenic acid. **follicle stimulating hormone releasing f. (FRF, FSHRF)**, gonadotropin releasing hormone. **galactopoietic f.**, prolactin. **gastric anti-pernicious anemia f.**, **gastric intrinsic f.**, intrinsic f. **glass f.**, see **Factor XII**, under **coagulation f.s.** **glucose tolerance f.**, a biologically active complex of chromium and nicotinic acid that facilitates the reaction of insulin with receptor sites on tissues. **gonadotropin releasing f. (GnRF)**, see under hormone. **growth hormone releasing f. (GRF)**, a postulated hormone elaborated by the median eminence of the hypothalamus, which stimulates the release of growth hormone from the anterior pituitary gland. Called also **growth hormone releasing hormone (GH-RH)** and **somatotropin releasing hormone (SRF)**. **f. H**, biotin. **Hageman f. (HF)**, see **Factor XII**, under **coagulation f.s.** **histamine releasing f.**, a lymphokine that is produced by sensitized lymphocytes on stimulation by antigen and that leads to histamine release by basophils. **HL-A f.s.**, a single genetic system of closely related human histocompatibility antigens that are present on leukocytes. The expression of these antigens is determined by two closely linked loci termed **LA** and

Four. hyperglycemic-glycogenolytic f., see *glucagon f. I*, 1. see under *coagulation f.s.* 2. pyridoxine. **f. II**, 1. see under *coagulation f.s.* 2. pantothenic acid. **f. III**, see under *coagulation f.s.* **inhibiting f.s.**, factors elaborated by one structure (as by the hypothalamus) that inhibit the release of hormones by another structure (as by the anterior pituitary gland), including melanocyte-stimulating hormone inhibiting factor and prolactin inhibiting factor. The term is applied to substances of unknown chemical structure, while substances of established chemical identity are called *inhibiting hormones* (see under *hormone*). **intermediate lobe inhibiting f.**, melanocyte-stimulating hormone inhibiting f. **intrinsic f.**, a glycoprotein secreted by the parietal cells of the gastric glands, necessary for the absorption of vitamin B₁₂ (cyanocobalamin, extrinsic factor). Lack of intrinsic factor, with consequent deficiency of vitamin B₁₂, results in pernicious anemia. **f. IV**, see under *coagulation f.s.* **f. IX**, see under *coagulation f.s.* **labile f.**, see *Factor V*, under *coagulation f.s.* **Lactobacillus casei f.**, folic acid. **Lactobacillus lactis Dörner f.**, cyanocobalamin. **lactogenic f.**, prolactin. **Laki-Lorand f.**, see *Factor XIII*, under *coagulation f.s.* **LE f.**, an immunoglobulin (a 7S antibody) that reacts with leukocyte nuclei, found in the serum of patients with systemic lupus erythematosus. **lethal f.s.**, disorders of genetic material which lead to the death of the zygote, or of the individual developing from it before attaining the age of reproduction. This can be a matter of lethal genes or deficiencies due to missing sections. **leukocyte inhibitory f. (LIF)**, a lymphokine that prevents polymorphonuclear leukocytes from migrating. **leukocyte mitogenic f. (LMF)**, a lymphokine substance causing blast transformation and synthesis of DNA in normal lymphocytes. **leukocytosis promoting f.**, Menkin's name for a substance or factor liberated by injured cells, which is responsible for the leukocytosis accompanying inflammatory processes; abbreviated LPF. **leukopenic f.**, Menkin's name for a factor in inflammatory exudates which may be the cause of the initial leukopenia accompanying inflammatory processes. **liver filtrate f.**, pantothenic acid. **liver Lactobacillus casei f.**, folic acid. **LLD f.**, cyanocobalamin. **luteinizing hormone releasing f. (LRF)**, a factor elaborated by the hypothalamus at the median eminence, which stimulates the release of luteinizing hormone by the anterior pituitary gland; called also *LH releasing f.* **lymph node permeability f. (LNPF)**, a substance from normal lymph nodes which produces vascular permeability. **lymphocyte transforming f. (LTF)**, a lymphokine that causes transformation and clonal expansion of nonsensitized lymphocytes; called also *blastogenic f.*, *mitogenic f.*, and *recruitment f.* **lysogenic f.**, bacteriophage. **macrophage-activating f.**, a factor released by sensitized lymphocytes that induces in macrophages an increased content of lysosomal enzymes, more aggressive phagocytosis, and increased mitotic activity. **Marsh f.**, **Marsh-Bendall f.**, a soluble muscle protein, derived from the sarcoplasmic reticulum, which produces muscle relaxation by interfering with the enzymatic (ATPase) breakdown of ATP and consequently with contraction of the muscle; called also *relaxing f.* **maturation f.**, a substance that causes cells to mature (differentiate). **mauve f.**, a substance in the urine that yields a mauve color on paper chromatography; see *malvaria*. **melanocyte stimulating hormone inhibiting f. (MIF)**, a factor elaborated by the hypothalamus at the median eminence, which inhibits the release of melanocyte-stimulating hormone by the anterior pituitary gland; called also *intermediate lobe inhibiting f.* and *MSH inhibiting f.* **melanocyte stimulating hormone releasing f. (MRF, MSHRF)**, a factor elaborated by the hypothalamus at the median eminence, which stimulates release of melanocyte-stimulating hormone by the anterior pituitary gland. **migration inhibiting f. (MIF)**, a lymphokine released from sensitized lymphocytes which inhibits the migration of macrophages. **milk f.**, mouse mammary tumor virus. **mitogenic f.**, lymphocyte transforming f. **modifying f.s.**, polygenes, or multiple factors, which affect the degree of expressivity of another gene; called also *modifiers* or *modifying genes*. **mouse antialopeia f.**, inositol. **mouse mammary tumor f.**, see under *virus*. **MSH inhibiting f.**, melanocyte-stimulating hormone inhibiting f. **müllerian regression f.**, **müllerian duct inhibitory f.**, a factor postulated to be present in the male embryo which inhibits development of the wolffian ducts. **multiple f.s.**, in heredity, two or more genes which cooperate or blend or cumulate to produce a certain character. **myocardial depressant f. (MDF)**, a peptide formed in response to a fall in systemic blood pressure, that has a negatively inotropic effect on myocardial muscle fibers. **N f.**, a factor occurring in yeast, meat, liver, and wheat germ, the absence of which from an otherwise complete diet causes rats to voluntarily consume more alcohol than they do when factor N is present in the diet. **Nebenthau f.**, a chemical group, N:C(OH).CH₃, derived from urea; an essential constituent of the barbituric acid hypnotics. **necrotizing f.**, necrotoxin. **nerve growth f.**, a protein consisting of two identical polypeptide chains associated with two gamma subunits (enzymes) and two alpha subunits; first isolated from mouse sarcoma and later from snake venom and mouse salivary glands, it stimulates the growth of sensory and sympathetic nerve cells and of the

adrenal medulla and has been found to be secreted by a variety of normal and neoplastic cells, including those of man. Abbreviated NGF. **Norit eluate f.**, folic acid. **osteoclast activating f.**, a lymphokine substance produced by lymphocytes which facilitates bone resorption. **pellagra-preventive f.**, niacin. **platelet f.s.**, factors important in hemostasis which are contained in or attached to the platelets. See *platelet factors 1, 2, 3, and 4*, under *coagulation f.s.* See also *platelet cofactors*, under *cofactor*. **platelet activating f. (PAF)**, an immunologically produced substance which leads to clumping and degranulation of blood platelets. **P-P f.**, niacin. **prolactin inhibiting f. (PIF)**, a factor elaborated by the hypothalamus at the median eminence, which inhibits the secretion of prolactin by the anterior pituitary gland. **prolactin releasing f. (PRF)**, a factor(s) elaborated by the hypothalamus at the median eminence, which stimulates the release of prolactin by the anterior pituitary gland. In human subjects, thyrotropin releasing hormone (prolactin) can act as a prolactin releasing factor. **proliferation inhibiting f. (PIF)**, a lymphokine that inhibits mitosis in tissue-culture cells. **Prower f.**, see *Factor X*, under *coagulation f.s.* **f. R.**, folic acid. **R f.**, the bacterial plasmid (R plasmid) responsible for resistance to antibiotics; it is transmitted to other bacterial cells by conjugation, as well as to the progeny of any cell containing it. The portions required for replication and transmission are called resistance transfer factors (RTF), to which are attached various R genes mediating specific resistances. **rat acrodynia f.**, pyridoxine. **recruitment f.**, lymphocyte transforming f. **reducing f.**, ascorbic acid. **relaxing f.**, Marsh f. **releasing f.s.**, factors elaborated in one structure (as in the hypothalamus) that effect the release of hormones from another structure (as from the anterior pituitary gland), including corticotropin releasing factor, melanocyte stimulating hormone releasing factor, and prolactin releasing factor. The term is applied to substances of unknown chemical structure, while substances of established chemical identity are called *releasing hormones* (see under *hormone*). **resistance-inducing f.**, see *Rubin's test* (def. 2), under *tests*. **resistance transfer f.**, see *R f.* **restropic f.**, an unidentified substance in extracts of the anterior pituitary claimed to stimulate the reticuloendothelial system. **Rh f.**, **Rhesus f.**, antigens (agglutinogens) present on the membrane of red blood cells; see *blood group*. **rheumatoid f.**, a protein (IgM) of high molecular weight, detectable by serological tests, which is found in the serum of most patients with rheumatoid arthritis and in other related and unrelated diseases and sometimes in apparently normal persons. Abbreviated RF. **f. S**, biotin. **separation f.**, the ratio of the relative concentration of two isotopes after processing, to their relative concentration before processing. **sex f.**, **F f.** **Simon's septic f.**, decrease of eosinophils and increase of neutrophils in the blood in pyogenic infections. **SLR f.**, folic acid. **somatotropin releasing f. (SRF)**, growth hormone releasing f. **spreading f.**, hyaluronidase. **stable f.**, see *Factor VII*, under *coagulation f.s.* **Streptococcus lactis R f.**, folic acid. **Stuart f.**, **Stuart-Prower f.**, see *Factor X*, under *coagulation f.s.* **sulfation f.**, somatomedin. **thyrotropin releasing f. (TRF)**, see under *hormone*. **transfer f. (TF)**, a factor occurring in sensitized lymphocytes that has the capacity to transfer delayed hypersensitivity to a normal (nonreactive) individual. **Trapp's f.**, the last two figures expressive of the specific gravity of urine; when multiplied by 2 they give the number of parts of solids per 1000. **tumor-angiogenesis f.**, a factor produced by cancer cells of solid tumors that stimulates the growth of blood vessels into the tumor. **tumor necrosis f.**, a glycopeptide appearing in the blood in the presence of endotoxins; it is capable of producing *in vitro* necrosis of tumor cells but not of normal cells. **f. U**, folic acid. **f. V**, 1. see under *coagulation f.s.* 2. nicotinamide-adenine dinucleotide phosphate (NADP); see under *dinucleotide*. **f. VI**, see under *coagulation f.s.* **f. VII**, see under *coagulation f.s.* **f. VIII**, see under *coagulation f.s.* **f. W**, biotin. **Wills f.**, folic acid. **f. X**, 1. see under *coagulation f.s.* 2. biotin. **f. XI**, see under *coagulation f.s.* **f. XII**, see under *coagulation f.s.* **yeast eluate f.**, pyridoxine. **yeast filtrate f.**, pantothenic acid. **yeast L. casei f.**, folic acid.

facultative (fak'ul-ta'tiv) not obligatory; pertaining to or characterized by the ability to adjust to particular circumstances or to assume a particular role.

faculty (fak'ul-te) [L. *facultas*] 1. any normal power or function, especially a mental one. 2. the corps of professors and instructors of a college or university. **fusion f.**, the power of blending into one the two images viewed by the two eyes.

FAD flavin adenine dinucleotide.

fading (fād'ing) an illness of puppies marked by progressive weakness which makes suckling impossible, a falling body temperature, and paddling movements; it usually results in death within a few days of birth.

fae- for words beginning thus, see those beginning *fe-*.

Faget's law (sɪgn) (fazh-āz') [Jean Charles Faget, French physician, 1818-1884] see under *law*.

fagopyrism (fag-op'i-rizm) [L. *fagopyrum* buckwheat] poisoning by buckwheat.

Fahraeus phenomenon, reaction, test (fah-re'us) [Robin

Fahraeus, Swedish pathologist, born 1888] see *erythrocyte sedimentation rate*, under *rate*.

Fahrenheit scale, thermometer (far'en-hit) [Gabriel Daniel Fahrenheit, German physicist, 1686–1736] see under *scale* and *thermometer*.

failure (fāl'yer) inability to perform. **heart f.**, see under *H*. **kidney f.**, renal f. **renal f.**, the inability of a kidney to excrete metabolites at normal plasma levels under conditions of normal loading, or the inability to retain electrolytes under conditions of normal intake. In the acute form, it is marked by uremia and usually by oliguria or anuria, with hyperkalemia and pulmonary edema. **respiratory f.**, a persistent condition of abnormally low arterial oxygen tension (PaO₂) or abnormally high carbon dioxide tension (PaCO₂).

faint (fānt) syncope.

falcadina (fal'kah-de'nah) a disease of Istria, a peninsula in the Adriatic, characterized by the formation of papillomas.

falcate (fal'kāt) falciform.

falces (fal'sēz) [L.] plural of *falx*.

falcial (fal'shal) pertaining to a *falx*.

falciform (fal'si-form) [L. *falx* sickle + *forma* form] shaped like a sickle.

falcular (fal'ku-lar) [L. *falx* sickle] sickle-shaped.

fallopian aqueduct (arch), artery, ligament, tube (fal-lo'pe-an) [Gabirole Falloppio (L. Fallopius), 1523–1562; an important Italian anatomist, pupil of Vesalius, and later professor at Padua] see *canalis facialis*, *arteria uterina*, *ligamentum inguinale*, and *tuba uterina*.

Fallot's tetralogy (disease, syndrome, tetrad), trilogy (fal-ōz') [Étienne-Louis Arthur Fallot, French physician, 1850–1911] see *tetralogy of Fallot* and *trilogy of Fallot*.

fallout (fawl'out) the settling to the earth's surface of radioactive fission products that have been projected into the atmosphere by the explosion of a nuclear device.

false (fawls) [L. *falsus*] not true; not genuine; apparent, but not real.

false-negative (fawls/neg'ah-tiv) 1. denoting a test result that wrongly excludes an individual from a diagnostic or other category. 2. an individual so excluded. 3. an instance of a false-negative result.

false-positive (fawls/pos'i-tiv) 1. denoting a test result that wrongly assigns an individual to a diagnostic or other category. 2. an individual so categorized. 3. an instance of a false-positive result.

falsification (fawl'si-fi-ka'shun) a deliberate misstatement or misrepresentation. **retrospective f.**, unconscious distortion of past experiences to conform to present emotional needs.

falsifying (fawl'si-fi'ing) in psychology, signifying a form of facial deceit in which an individual pretends to experience a feeling not present, shows no feeling when aroused, or substitutes signs of one emotional reaction for those of another.

Falta's coefficient, triad (fahl'taz) [Wilhelm Falta, Vienna physician, born 1875] see under *coefficient* and *triad*.

falx (falks), pl. *fal'ces* [L. "sickle"] a sickle-shaped organ or structure; used as a general term in anatomical nomenclature to designate such a structure. **aponeurotic f.**, **f. aponeurotica**, f. inguinalis. **f. cerebel'li** [NA], **f. of cerebellum**, the small fold of dura mater in the midline of the posterior cranial fossa, projecting forward toward the vermis of the cerebellum. **f. cer'ebri** [NA], **f. of cerebrum**, the sickle-shaped fold of dura mater that extends downward in the longitudinal cerebral fissure and separates the two cerebral hemispheres. **inguinal f.**, **f. inguina'lis** [NA], the united tendons of the transverse and internal oblique muscles going to the linea alba and pectineal line of the pubic bone; called also *Henle's ligament* and *tendo conjunctivus*. **ligamentous f.**, **f. ligamento'sa**, processus falciformis ligamenti sacrotuberosi. **f. sep'ti**, NA alternative for *valvula foraminis ovalis*.

F.A.M.A. Fellow of the American Medical Association.

fames (fa'mēz) [L.] hunger.

familial (fah-mil'e-al) [L. *familia* family] occurring in or affecting more members of a family than would be expected by chance.

family (fam'i-le) 1. a group of individuals descended from a common ancestor. 2. a taxonomic subdivision subordinate to an order (or suborder) and superior to a tribe (or subfamily). **Jukes f.**, the fictitious name of a family located mostly in New York State, which exhibited a high degree of crime, immorality, disease, and poverty; their history covers five generations. **Kallikak f.**, the fictitious name of a New Jersey family whose sociological history dates from the American Revolution; there are two branches: one consisting mostly of intelligent and respectable individuals, the other exhibiting a high incidence of mental deficiency and immorality. **systematic f.**, see *family* (def. 2). **Zero f.**, a Swiss family of three branches, two of which are respected and one very unfit; a very complete history from the 17th century.

famotone hydrochloride (fam'o-tēn) chemical name: 1-[(4-chlorophenoxy)methyl]-3,4-dihydroisquinoline hydrochloride; an antiviral agent, C₁₆H₁₄ClNO·HCl.

fan (fan) an area, figure, or structure resembling an open fan. **Dunham's f's**, formations seen in the roentgenogram of the lung in silicosis, made up of nodules connected by fine lines in a pyramidal arrangement; called also *Dunham's cones* or *triangles*.

F and R force and rhythm (of pulse).

fang (fang) 1. the root of a tooth. 2. a carnassial tooth of a carnivore or the venomous tooth of a serpent.

fango (fan'go) volcanic mud.

fangothrapy (fan'go-ther'ah-pe) the therapeutic use of fango in packs or baths.

Fannia (fan'e-ah) a genus of flies (family Muscidae), the larvae of which have caused both intestinal and urinary myiasis in man. In some systems of classification, it is included in the family Anthomyiidae. **F. canicula'ris**, the lesser house fly; a species of small grayish flies, visibly different from the housefly; they lay their eggs on decaying vegetable matter or animal manure, from which the eggs or larvae may gain access to human hosts. **F. scala'ris**, a species of flies, the latrine flies, similar to but larger than *F. canicularis*, and commonly depositing its eggs on excrement, rather than on vegetable matter.

fantascope (fan'tah-skōp) [fantasy + Gr. *skopein* to examine] an apparatus for enabling a person to converge the eyes, and so observe certain phenomena of binocular vision.

fantast (fan'tast) a psychopathic person in whom fantasy and day-dreaming usurp the place of real experience and activity.

fantasy (fan'tah-se) [Gr. *phantasia* imagination; the power by which an object is made apparent to the mind] a psychic mechanism by which a harsh reality is converted into an imaginary experience that satisfies unconscious wishes or expresses unconscious conflicts.

fantridone hydrochloride (fan'trī-dōn) chemical name: 5-[3-(dimethylamino)propyl]-6(5H)-phenanthridinone monohydrochloride monohydrate; an antidepressant, C₁₈H₂₀N₂O·HCl·H₂O.

Fantus' antidote (fan'tus) [Bernard Fantus, Chicago pharmacologist, 1874–1940] see under *antidote*.

F.A.P.H.A. Fellow of the American Public Health Association.

Farabeuf's amputation, triangle (far'ah-bufs') [Louis Hubert Farabeuf, French surgeon, 1841–1910] see under *amputation* and *triangle*.

farad (far'ad) [Michael Faraday] the unit of electrical capacity. The capacity of a condenser which, charged with 1 coulomb, gives a difference of potential of 1 volt. This unit is so large that one-millionth part of it has been adopted as a practical unit called a microfarad.

faraday (far'ah-da) the quantity of electrical charge associated with one gram equivalent of an electrochemical reaction, equal to about 96,510 coulombs.

Faraday's constant, law, dark space (far'ah-dāz) [Michael Faraday, English physicist, 1791–1867] see under *constant*, *law*, and *space*.

faradic (fah-rad'ik) pertaining to faradism.

faradimeter (far'ah-dim'ē-ter) [farad + Gr. *metron* measure] an instrument for measuring faradic electricity.

faradism (far'ah-dizm) 1. induced current. 2. induced current in a rapidly alternating current. 3. faradization. **surging f.**, a faradic current of gradually increasing and decreasing amplitude.

faradization (far'ah-di-za'shun) the therapeutic use of an interrupted current for the stimulation of muscles and nerves. Such a current is derived from an induction coil.

faradocontractility (far'ah-do-kon'trak-tik'i-te) contractility in response to faradic stimulus.

faradopalpation (far'ah-do-pal-pa'shun) galvanopalpation.

farcy (far'se) cutaneous glanders, the more chronic and constitutional lymphatic form of glanders, marked by thickening of the superficial lymph vessels; see *glanders*. **button f.**, farcy characterized by the formation of small tubercular nodules in the skin of the limbs, thorax, and abdomen. **cattle f.**, a disease of cattle caused by infection with *Nocardia farcinica*, and characterized by the formation of cheesy nodules in the subcutaneous tissue and the organs. **cryptococcus f.**, lymphangitis epizootica. **Japanese f.**, **Neapolitan f.**, lymphangitis epizootica. **f. pipes**, acute farcy along the lymphatic vessels. **water f.**, inflammation of the lymphatics of a horse's leg.

fardel-bound (far'del-bownd) having an inflamed abomasum and distended omasum, so that chewing of the cud is impossible; a condition affecting cattle and sheep.

farina (fah-re'nah) [L.] 1. meal or flour. 2. a starchy food prepared from cereal grains, usually from wheat. **f. ave'na**, oatmeal. **f. trit'ici**, wheat flour.

farinaceous (far'i-na'shus) [L. *farinaceus*] 1. of the nature of flour or meal. 2. starchy; containing starch.

farinometer (far'i-nom'ē-ter) an instrument for determining the percentage of gluten in flour.

farnoquinone (far-no-kwin'ŏn) menaquinone.

Farr's law (farz) [William Farr, English medical statistician, 1807-1883] see under *law*.

Farre's tubercles (farz) [John Richard Farre, an English physician, 1775-1862] see under *tubercle*.

Farre's white line (farz) [Arthur Farre, British obstetrician, 1811-1887] see under *line*.

farsighted (far-sit'ed) hyperopic.

farsightedness (far-sit'ed-nes) hyperopia.

fasc. abbreviation for *L. fasciculus*, bundle.

fascia (fash'e-ah), pl. *fasciae* [L. "band"] 1. [NA] a sheet or band of fibrous tissue such as lies deep to the skin or forms an investment for muscles and various organs of the body. 2. (obs.) a bandage. **abdominal f.**, internal, f. transversalis. **Abbernethy's f.**, f. iliaca. **f. adherens**, that portion of the junctional complex of the cells of an intercalated disk which is the counterpart of the zonula adherens of epithelial cells, but instead of being beltlike it has multiple, moderately extensive but discontinuous areas with irregular and variable outlines. **anal f.**, f. diaphragmatis pelvis inferior. **anoscrotal f.**, f. perinei superficialis. **antebrachial f.**, f. antebra'chii [NA], the investing fascia of the forearm; called also (*deep*) f. of forearm. **aponeurotic f.**, deep f. f. of arm, f. brachii. **f. axilla'ris** [NA], axillary f., the investing fascia of the armpit which passes between the lateral borders of the pectoralis major and latissimus dorsi muscles. **bicipital f.**, aponeurosis musculi bicipitis brachii. **brachial f.**, f. bra'chii [NA], the investing fascia of the arm. **buccinator f.**, f. buccopharyn'gea [NA], buccopharyngeal f., a fibrous membrane forming the external covering of the constrictor muscles of the pharynx, and passing forward superiorly to the surface of the buccinator muscle. **Buck's f.**, the deep fascia of the penis, being continuous with Colles' fascia of the perineum and with Scarpa's fascia of the abdominal wall. **bulbar f.**, f. bul'bi [Teno'ni], vagina bulbi. **f. of Camper**, the superficial layer of the superficial fascia of the abdomen. **cervical f.**, f. cervicalis. **cervical f., deep**, f. nuchae. **f. cervica'lis** [NA], the fascia of the neck, comprising a superficial layer deep to the skin, a pretracheal layer anterior to the trachea, and a prevertebral layer anterior to the vertebrae; it also forms a sheath enclosing the carotid vessels and vagus nerve. Called also f. colli, cervical f., and f. of neck. **f. cine'rea** (obs.), gyrus fasciolaris. **clavipectoral f.**, f. clavipectora'lis [NA], a fascial sheet investing the subclavius muscle, attached to the clavicle above and continuing to the pectoralis minor muscle below; called also f. coracoclavicularis and coracoclavicular f. **f. clitor'idis** [NA], f. of clitoris, the dense fibrous tissue that encloses the two corpora cavernosa of the clitoris. **Cloquet's f.**, the condensation of extraperitoneal tissue closing the femoral ring (septum femorale). **Colles' f.**, f. diaphragmatis urogenitalis inferior. **f. col'li**, f. cervicalis. **fasciae of colon**, teniae coli. **Cooper's f.**, 1. fascia cremasterica. 2. see *fibrae intercrurales*. **coracoclavicular f.**, f. coracoclavicular'is, coracocostal f., f. clavipectoralis. **cremasteric f.**, f. cremaster'ica [NA], the thin covering of the spermatic cord formed by the investing fascia of the cremasteric muscle; it is adjacent to the external surface of the internal spermatic fascia. Called also *Cooper's f.* and *intercolumnar f.* **cribriform f.**, 1. fascia cribrosa. 2. septum femorale. **f. cribro'sa** [NA], cribriform fascia: the part of the superficial fascia of the thigh that covers the saphenous opening. **crural f.**, f. cru'ris [NA], the investing fascia of the leg; called also *crural aponeurosis*. **Cruveilhier's f.**, f. perinei superficialis. **dartos f. of scrotum**, tunica dartos. **deep f.**, a dense, firm, fibrous membrane investing the trunk and limbs, and giving off sheaths to the various muscles; called also *aponeurotic f.* **deep f. of arm**, f. brachii. **deep f. of back**, f. thoracolumbalis. **deep f. of forearm**, f. antebrachii. **deep f. of perineum**, diaphragma urogenitale. **deep f. of thigh**, f. lata femoris. **Denonvilliers' f.**, septum rectovesicale. **f. denta'ta hip-pocam'pi**, dentate f., gyrus dentatus. **f. diaphrag'matis pel'vis infe'rior** [NA], the fascia that covers the lower surface of the coccygeus and levator ani muscles, forming the medial wall of the ischiorectal fossa; called also *ischio-rectal f.* and *ischio-rectal aponeurosis*. **f. diaphrag'matis pel'vis supe'rior** [NA], the fascia on the upper surface of the levator ani and coccygeus muscles. **f. diaphrag'matis urogenita'lis infe'rior** [NA], the investing fascia on the superficial surface of the urogenital diaphragm, which is continuous with the fascia covering the external oblique muscle and the sheath of the rectus abdominis; called also *ischio-eprostatic aponeurosis* or *fascia*, and *membrana perinei*. **f. diaphrag'matis urogenita'lis supe'rior** [NA], the investing fascia on the deep surface of the urogenital diaphragm, continuous with the membranous layer of the subcutaneous tissue covering the front and sides of the lower part of the abdomen; called also *rectal f.* and *rectovesical f.* **dorsal f.**, deep, f. thoracolumbalis. **dorsal f. of foot**, f. dorsalis pedis. **dorsal f. of hand**, f. dorsa'lis ma'nus [NA], the investing fascia of the back of the hand. **f. dorsa'lis pe'dis** [NA], the investing fascia on the dorsum of the foot. **endoabdominal f.**, f. transversalis. **endopelvic f.**, f. endopelvi'na, a name given to fascia forming part of the general

layer lining the pelvic walls and serving as a packing for the pelvic organs, as well as ensheathing the blood vessels, various specific parts of which have been known by various names. **endothoracic f.**, f. endothora'cica [NA], the fascial sheet beneath the serous lining of the thoracic cavity. **extrapleural f.**, a prolongation of the endothoracic fascia sometimes found at the root of the neck, which is important as possibly modifying the auscultatory sounds at the apex of the lung. **femoral f.**, f. lata femoris. **fibroareolar f.**, f. superficialis. **f. of forearm**, f. antebrachii. **f. of Gerota**, Gerota's f., a fibrous capsule enclosing the kidney and extending for a variable distance down the ureter. **hypogastric f.**, f. pelvis. **iliac f.**, 1. fascia iliaca. 2. arcus iliopectineus. **f. ili'aca** [NA], a strong fascia covering the inner surface of the iliac and psoas muscles. **f. iliopectin'ea**, iliopectineal f., arcus iliopectineus. **infundibuliform f.**, f. spermatica interna. **intercolumnar f.**, 1. fascia cremasterica. 2. see *fibrae intercrurales*. **ischio-prostatic f.**, f. diaphragmatis urogenitalis inferior. **ischio-rectal f.**, f. diaphragmatis pelvis inferior. **f. la'ta fem'oris** [NA], the external investing fascia of the thigh. **f. of leg**, f. cruris. **longitudinal f., anterior**, ligamentum longitudinale anterius. **longitudinal f., posterior**, ligamentum longitudinale posterius. **lumbodorsal f.**, f. lumbodorsa'lis, f. thoracolumbalis. **masseteric f.**, f. masseter'ica [NA], a layer of fascia covering the masseter muscle. **muscular fasciae of eye**, fas'ciae muscula'res bul'bi [NA], fas'ciae muscula'res oc'uli, the sheets of fascia investing the extraocular muscles, continuous with the vagina bulbi. **f. of nape**, f. nuchae. **f. of neck**, f. cervicalis. **f. nu'chae** [NA], nuchal f., the fascia on the muscles in the dorsal region of the neck. **obturator f.**, f. obturato'ria [NA], the part of the parietal fascia of the pelvis covering the internal obturator muscle. **orbital fasciae**, fas'ciae orbita'les [NA], fibrous tissue surrounding the posterior part of the eyeball, supporting and binding together the structures within the orbit. **palmar f.**, aponeurosis palmaris. **palpebral f.**, f. palpebra'lis, septum orbitale. **parietal f. of pelvis**, f. pelvis parietalis. **parotid f.**, f. parotide'a [NA], a layer of cervical fascia enclosing the parotid gland. **f. parotideomasseter'ica**, the fascia enclosing the parotid gland and masseter muscle; separately called f. parotide'a and f. masseterica [NA]. **f. pectin'ea**, pectineal f., the pubic portion of the fascia lata; called also *Cowper's ligament*. **pectoral f.**, f. pectora'lis [NA], the sheet of fascia investing the pectoralis major muscle. **pelvic f.**, f. pelvis. **pelvic f., parietal**, f. pelvis parietalis. **pelvic f., visceral**, f. pelvis visceralis. **pelviprostatic f.**, f. prostatae. **f. pel'vis** [NA], pelvic fascia: an inclusive term for the fascia that forms part of the general layer lining the walls of the pelvis and invests the pelvic organs; called also *hypogastric f.* **f. pel'vis parieta'lis** [NA], the fascia on the wall of the pelvis that covers the muscles which pass from the interior of the pelvis to the thigh. **f. pel'vis viscera'lis** [NA], visceral fascia of pelvis: the fascia that covers the organs and vessels of the pelvis. **f. pe'nis profun'da** [NA], the firm inner fascial layer that surrounds the corpora cavernosa and the corpus spongiosum collectively. **f. pe'nis superficia'lis** [NA], the loose external layer of fascial tissue of the penis, continuous with the tunica dartos and with the superficial perineal fascia. **perineal f., deep**, diaphragma urogenitale. **perineal f., middle**, f. diaphragmatis urogenitale superior. **perineal f., superficial**, f. perinei superficialis. **f. perine'i superficia'lis** [NA], superficial fascia of perineum: the subcutaneous tissue of the urogenital region, comprising a superficial fatty and a deep membranous layer; called also *Cruveilhier's f.* **pharyngobasilar f.**, f. pharyngobasila'ris [NA], a strong fibrous membrane in the wall of the pharynx, lined internally with mucous membrane and incompletely covered on its outer surface by the overlapping constrictor muscles of the pharynx. It blends with the periosteum at the base of the skull. Called also *pharyngeal* or *pharyngobasilar aponeurosis*, and *aponeurosis pharyngis* or *pharyngobasilaris*. **phrenicopleural f.**, f. phrenicopleura'lis [NA], the fascial layer on the upper surface of the diaphragm, beneath the pleura. **plantar f.**, aponeurosis plantaris. **prevertebral f.**, f. prevertebra'lis, lamina prevertebralis. **proper f. of neck**, f. pro'pria col'li, f. cervicalis. **f. pro'pria coo'peri**, fascia spermatica interna. **f. prosta'tae** [NA], f. of prostate, the reflection of the superior fascia of the pelvic diaphragm onto the prostate. **rectal f.**, f. diaphragmatis pelvis superior. **rectoabdominal f.**, vagina musculi recti abdominis. **rectovesical f.**, f. diaphragmatis pelvis superior. **Richet's f.**, a fold of extraperitoneal fascia enveloping the obliterated umbilical vein. **scalene f.**, membrana supraperalealis. **Scarpa's f.**, 1. the deep, membranous layer of subcutaneous abdominal fascia. 2. see *fibrae intercrurales*. **semilunar f.**, aponeurosis musculi bicipitis brachii. **Sibson's f.**, membrana supraperalealis. **spermatic f., external**, f. spermatica externa. **spermatic f., internal**, f. spermatica interna. **f. spermatica exter'na** [NA], external spermatic fascia: the thin outer covering of the spermatic cord, which is continuous with the investing fascia of the external oblique muscle. **f. spermatica inter'na** [NA], internal spermatic fascia: the thin innermost covering of the spermatic cord, derived from the transversalis fascia of the abdominal wall;

called also *tunica vaginalis communis* [testis et funiculi spermatici]. **subperitoneal f.**, 1. fascia subperitonealis. 2. tela subserosa peritonei. **f. subperitonea/lis** [NA], the thin layer of connective tissue separating the peritoneum from the transversalis fascia. **superficial f.**, 1. fascia superficialis. 2. subcutaneous tissue (tela subcutanea [NA]). **superficial f. of perineum**, f. perinei superficialis. **f. superficialis**, a fascial sheet lying directly beneath the skin. **f. superficialis perine/i**, f. perinei superficialis. **f. of Tarin**, f. tari'ni, gyrus dentatus, def. 1. **temporal f.**, f. tempora/lis [lam'ina profun'da et lam'ina superficialis] [NA], a strong fibrous sheet covering the temporal muscle; it has a deep and a superficial part which attach inferiorly to the zygomatic arch. Called also *temporal aponeurosis*. **f. of Tenon**, vagina bulbi. **f. of thigh**, f. lata femoris. **f. thoracolumba/lis** [NA], **thoracolumbar f.**, the fascia of the back that attaches medially to the vertebral column for its entire length and blends laterally with the aponeurosis of the transversus abdominis muscle; inferiorly it attaches to the iliac crest and the sacrum. Called also *f. lumbodorsalis* and *lumbodorsal f.* **thyrolaryngeal f.**, fascia investing the thyroid body and attaching to the cricoid cartilage. **f. transversa/lis** [NA], **transverse f.**, part of the inner investing layer of the abdominal wall, continuous with the fascia of the other side behind the rectus abdominis and the rectus sheath, and continuous also with the diaphragmatic fascia, iliac fascia, and the parietal pelvic fascia. **triangular f. of abdomen**, ligamentum inguinale reflexum. **triangular f. of Macalister**, musculus pyramidalis. **triangular f. of Quain**, ligamentum inguinale reflexum. **Tyrrell's f.**, septum rectovesicale. **f. of urogenital trigone**, diaphragma urogenitale. **visceral f. of pelvis**, f. pelvis visceralis. **volar f.**, aponeurosis palmaris.

fasciae (fash'e-e) [L.] plural of *fascia*.

fasciagram (fash'e-ah-gram) a roentgenogram obtained by fasciography.

fasciagraphy (fash'e-ag'rah-fe) roentgenography of fasciae after the injection of air into them.

fascial (fash'e-al) pertaining to or of the nature of a fascia.

fasciaplasty (fash'e-ah-plas'te) [fascia + Gr. *plassein* to form] a plastic operation on a fascia.

fascicle (fas'i-k'l) a small bundle or cluster, especially of nerve or muscle fibers; see also *fasciculus*. **longitudinal f's of cruciform ligament**, fasciculi longitudinales ligamenti cruciformis atlantis.

fascicular (fah-sik'u-lar) 1. pertaining to a fascicle. 2. fasciculated.

fasciculated (fah-sik'u-lāt-ed) clustered together or occurring in bundles.

fasciculation (fah-sik'u-la'shun) 1. the formation of fasciculi. 2. a small local contraction of muscles, visible through the skin, representing a spontaneous discharge of a number of fibers innervated by a single motor nerve filament.

fasciculi (fah-sik'u-li) [L.] plural of *fasciculus*.

fasciculus (fah-sik'u-lus), pl. *fasciculi* [L. dim. of *fascis* bundle] a fascicle: a small bundle or cluster; [NA] a general term for a small bundle of nerve, muscle, or tendon fibers. **f. aberrans of Monakow**, tractus rubrospinalis. **f. acus'ticus** (obs.), striae medullares ventriculi quarti. **f. ante'rior pro'prius** [Flech'sig], a name given the fasciculi proprii of the anterior funiculus of the spinal cord; called also *Flechsig's f.* **f. anterolatera/lis superficialis** [Gower'si], tractus spinocerebellaris anterior. **f. arcua'tus**, f. longitudinalis superior cerebri. **f. atrioventricularis** [NA], a small band of atypical cardiac muscle fibers originating in the atrioventricular node; see *bundle of His*. **f. of Burdach**, 1. f. longitudinalis superior cerebri. 2. pars temporalis radiationis corporis callosi. **cerebellospinal f.**, **f. cerebellospinalis**, tractus spinocerebellaris posterior. **f. cerebrosplinalis ante'rior**, tractus pyramidalis anterior. **cerebrosplinal f.**, lateral, **f. cerebrosplinalis latera/lis**, tractus pyramidalis lateralis. **cuneate f. of Burdach**, f. cuneatus medullae spinalis. **cuneate f. of medulla oblongata**, f. cuneatus medullae oblongatae. **cuneate f. of spinal cord**, f. cuneatus medullae spinalis. **f. cuneatus** [Burda'chi], f. cuneatus medullae spinalis. **f. cuneatus medul'lae oblongatae** [NA], cuneate fasciculus of medulla oblongata: the continuation into the medulla oblongata of the fasciculus cuneatus of the spinal cord; called also *funiculus cuneatus medullae oblongatae*. **f. cuneatus medul'lae spina/lis** [NA], the lateral portion of the posterior funiculus of the spinal cord, composed of ascending fibers that terminate in the nucleus cuneatus of the medulla oblongata; called also *cuneate f. of spinal cord* or *Burdach*, and *f. cuneatus* [Burdachi]. **dorsolateral f.**, **f. dorsolatera/lis**, tractus dorsolateralis. **f. exi/lis**, a cluster of muscle fibers connecting the flexor pollicis longus with the medial condyle of the humerus, or with the coronoid process of the ulna. **extrapyramidal motor f.**, rubrospinal tract. **fibrous f. of biceps muscle**, aponeurosis musculi bicipitis brachii. **Flechsig's f.**, 1. fasciculus anterior proprius. 2. fasciculus lateralis proprius. **f. of Foville**, a term that has been applied to the tractus spinocerebellaris posterior, but which more properly relates to the stria

terminalis. **f. of Goll**, f. gracilis medullae spinalis. **f. of Gowers**, tractus spinocerebellaris anterior. **f. gra'cilis** [Gol'li], f. gracilis medullae spinalis. **f. gra'cilis medul'lae oblongatae** [NA], the continuation into the medulla oblongata of the fasciculus gracilis of the spinal cord; called also *posteromedian column of medulla oblongata*. **f. gra'cilis medul'lae spina/lis** [NA], the median portion of the posterior funiculus of the spinal cord, composed of ascending fibers that terminate in the nucleus gracilis of the medulla oblongata; called also *f. gracilis* [Golli] and *column of Goll*. **interfascicular f.**, **f. interfascicula'ris**, a collection of fibers situated between the fasciculus gracilis and the fasciculus cuneatus, containing some of the descending branches of the fibers of the medial division of the dorsal roots of the spinal nerves; called also *Schultze's bundle* and *comma tract of Schultze*. **f. latera/lis plexus brachia/lis** [NA], the lateral cord of the brachial plexus, formed by the union of the anterior divisions of the superior and middle trunks, C5 through C7, and from which arise the lateral pectoral and musculocutaneous nerves and the lateral root of the median and the ulnar nerves. **f. latera/lis pro'prius** [Flech'sig], a name given the white fibers (part of the fasciculi proprii) lateral to the gray matter of the spinal cord; called also *Flechsig's f.* **f. lenticula'ris**, the dorsal part of the ansa lenticularis lying between the subthalamic nucleus and the zona incerta, and consisting chiefly of nerve fibers that arise in the globus pallidus, reach the thalamus by traversing the H field (Forel's field), and enter the fasciculus thalamicus; called also *field H*. **longitudinal f.**, **dorsal f.**, longitudinalis dorsalis. **longitudinal f.**, **medial f.**, longitudinalis medialis. **longitudinal f. of cerebrum**, inferior, f. longitudinalis inferior cerebri. **longitudinal f. of cerebrum**, superior, f. longitudinalis superior cerebri. **longitudinal fasciculi of colon**, see *teniae coli*. **longitudinal fasciculi of cruciform ligament**, fasciculi longitudinales ligamenti cruciformis atlantis. **longitudinal f. of medulla oblongata**, posterior, f. longitudinalis medialis. **f. longitudina/lis dorsa/lis** [NA], dorsal longitudinal fasciculus: a lightly myelinated fiber bundle that runs in the periventricular gray substance throughout the extent of the mesencephalon, near the medial longitudinal fasciculus; called also *Schultze's bundle*. **f. longitudina/lis infe'rior cer'e'bri** [NA], inferior longitudinal f. of cerebrum: a bundle of association fibers interconnecting the cortex of the occipital and temporal lobes, extending through the occipital and temporal lobes of the cerebrum, and consisting chiefly of geniculocalcarine projection fibers. **fasciculi longitudina/les ligamen'ti crucifor'mis atan'tis** [NA], longitudinal fasciculi of cruciform ligament: vertical midline longitudinal fibers that, together with the transverse ligament of the atlas, form the cruciform ligament of the atlas. The fibers arise in two groups from the root of the dens—one group extending cranially to the anterior margin of the foramen magnum, the other caudally to the body of the axis. **f. longitudina/lis media/lis** [NA], medial longitudinal fasciculus: a fiber tract extending between the mesencephalon and the upper part of the spinal cord; it lies close to the median plane, just ventral to the central gray matter, and interconnects the vestibular nuclei with motor nuclei, chiefly those of the third, fourth, sixth, and eleventh cranial nerves. **f. longitudina/lis media/lis medul'lae oblongatae**, the portion of the fasciculus longitudinalis medialis within the medulla oblongata. **f. longitudina/lis media/lis pon'tis**, the portion of the fasciculus longitudinalis medialis within the pons. **fasciculi longitudina/les pon'tis** [NA], **fasciculi longitudina/les** [pyramida/les] **pon'tis**, a former term for the corticopontine fibers (corticopontine tract), together with the corticonuclear and corticopontine fibers of the pyramidal tract in the pars ventralis pontis. **f. longitudina/lis supe'rior cer'e'bri** [NA], superior longitudinal fasciculus of cerebrum: a bundle of association fibers in the cerebrum, extending from the frontal lobe to the posterior end of the lateral sulcus, and interrelating the cortex of the frontal, temporal, parietal, and occipital lobes; called also *f. arcuatus*. **maculary f.**, a system of nerve fibers originating in the macula lutea; some are uncrossed (on the temporal side) and others are crossed fibers (on the nasal side of the retina). **mamillothalamic f.**, **f. mamillothalam'icus** [NA], a stout bundle of fibers from the mamillary body to the anterior nucleus of the thalamus; called also *f. thalamomamillaris* [Vicq d'Azyri], *thalamomamillary bundle*, and *bundle of Vicq d'Azyr*. **f. margina/lis ventra/lis** (obs.), a fasciculus made up of the tectospinal tract and the vestibulospinal tract. **f. media/lis plexus brachia/lis** [NA], the medial cord of the brachial plexus, formed by the anterior division of the inferior trunk, C8 through T1, and from which arise the medial pectoral, medial brachial cutaneous, and medial antebrachial cutaneous nerves, and the medial root of the ulnar and the median nerves. **Meynert's f.**, f. retroflexus. **Monakow's f.**, tractus rubrospinalis. **f. occipito-fronta/lis infe'rior**, a collection of association fibers in the inferior part of the extreme capsule near the uncinate fasciculus, connecting various inferior gyri of the temporal and frontal lobes. **f. occipitofronta/lis supe'rior**, f. subcallosus. **olivary f.** (obs.), the fibers that enclose the olivary body. **oval f.**, an area of descending fibers in the posterior funiculus of the spinal cord near the posterior septum; called also *median root zone*. **f.**

posterior plexus brachialis [NA], the posterior cord of the brachial plexus, formed by the union of the posterior divisions of the superior, middle, and inferior trunks, C5 through C8 and sometimes T1, and from which arise the subscapular, thoracodorsal, radial, and axillary nerves. **fasciculi proprii** [NA], that part of the white matter of the spinal cord bordering the gray matter, and containing fibers that travel for a distance of only a few segments of the cord. **pyramidal f., anterior**, former name for *tractus pyramidalis anterior*. **pyramidal f., direct**, former name for *tractus pyramidalis anterior*. **pyramidal f., lateral**, former name for *tractus pyramidalis lateralis*. **f. pyramidalis anterior**, former name for *tractus pyramidalis anterior*. **f. pyramidalis lateralis**, former name for *tractus pyramidalis lateralis*. **fasciculi pyramidalis medullae oblongatae**, *fibrae pyramidales medullae oblongatae*. **f. retroflexus** [NA], one that begins in the habenular nuclei, and extends downward and forward to the interpeduncular nucleus; called also *Meynert's bundle*, *fasciculus*, or *tract*, and *habenulopeduncular tract*. **f. of Rolando**, an elevation on the lateral side of the fasciculus cuneatus of the medulla oblongata, produced by the underlying gray matter; called also *funiculus of Rolando*. **f. rotundus** (obs.), *tractus solitarius medullae oblongatae*. **septomarginal f.**, a collection of fibers situated near the posterior median septum of the spinal cord, containing some of the descending branches of the fibers of the medial division of the dorsal roots of the spinal nerves. **solitary f.**, *tractus solitarius medullae oblongatae*. **subcallosal f.**, *f. subcallosus*. **f. subcallosus** [NA], subcallosal fasciculus: a collection of association fibers lying just internal to the intersection of the internal capsule and corpus callosum, interconnecting the cortex of the occipital and temporal lobes with that of the insula and frontal lobe, and probably comprising a significant part of the tapetum. Called also *f. occipitofrontalis superior*. **sulcomarginal f.**, *f. sulcomarginalis*, a layer of descending branches from the midbrain tectum situated in the anterior funiculus of the spinal cord, along the border of the anterior fissure. **f. tesres** (obs.), *f. longitudinalis medialis pontis*. **f. thalamicus**, a bundle of nerve fibers lying dorsal to the zona incerta, and comprising dentothalamic, rubrothalamic, and pallidothalamic fibers; the latter fibers reach it by way of the fasciculus lenticularis (field H₂) and the H field (Forel's field). It is separated from the fasciculus lenticularis by the zona incerta. Called also *field H₁*. **f. thalamomamillaris** [Vicq d'Azyr], *f. mamillothalamicus*. **fasciculi transversi aponeurosis palmaris** [NA], transverse fasciculi of palmar aponeurosis: the transverse fascial bands that support the webs between the fingers. **fasciculi transversi aponeurosis plantaris** [NA], transverse fasciculi of plantar aponeurosis: transverse bundles in the plantar aponeurosis near the toes. **f. of Türck**, *tractus pyramidalis anterior*. **unciform f., uncinatus f., f. uncinatus** [NA], a collection of association fibers which interconnect the cortex of the orbital surface of the frontal lobe with the parahippocampal gyrus and perhaps with the amygdala; other temporofrontal connections probably also exist. **f. of Vicq d'Azyr**, *f. mamillothalamicus*.

fasciectomy (fas'e-ek'to-me) [*fascia* + Gr. *ektomē* excision] excision of fascia.

fasciitis (fas'e-i'tis) inflammation of fascia. **exudative calcifying f.**, calcinosis. **necrotizing f.**, a gas-forming, fulminating, necrotic infection of the superficial and deep fascia, resulting in thrombosis of the subcutaneous vessels and gangrene of the underlying tissues; a dark patch appears on the overlying skin, which breaks down and discharges large amounts of necrotic material. It is usually caused by multiple pathogens and is frequently associated with diabetes mellitus. **nodular f.**, proliferative *f. perirenal f.*, retroperitoneal fibrosis. **proliferative f.**, a benign reactive proliferation of fibroblasts with a distinct microscopic pattern superficially resembling that of sarcoma; the lesions are located in the subcutaneous tissues and commonly associated with the deep fascia. **pseudosarcomatous f.**, a benign soft-tissue tumor occurring subcutaneously and sometimes arising from deep muscle and fascia, and histologically resembling a malignant sarcoma.

fasciodesis (fas'e-od'ē-sis) [L. *fascia* + Gr. *desis* binding] the operation of suturing a fascia to skeletal attachment.

Fasciola (fah-si'o-lah) [L. *fasciola* a band] a genus of flukes. **F. cer'vi**, former name for *Paramphistomum cervi*. **F. gigan'tica**, the giant liver fluke of Africa, Asia, and Hawaii, which occasionally infects man. **F. hepat'ica**, the common liver fluke of sheep, oxen, goats, horses, and other herbivorous animals. It is occasionally found in the human liver, where it may cause dangerous symptoms by obstructing the biliary passages and by invasion of the liver parenchyma. Several snails of the genus *Lymnaea* act as invertebrate hosts. Called also *Distoma hepaticum*. **F. heteroph'yes**, *Heterophyes heterophyes*. **F. mag'na**, *Fascioloides magna*.

fasciola (fah-se'o-lah, fah-si'o-lah), pl. *fasciolae* [L., dim. of *fascia*] 1. a small band or striplike structure. 2. a small bandage. **f. cine'rea**, *f. cine'rea cin'guli*, gyrus fasciolaris. **f. den'ta'ta** (obs.), gyrus dentatus.

fasciolae (fah-se'o-le, fah-si'o-le) [L.] plural of *fasciola*.

Fasciola hepatica (adult form). Left, Reproductive systems: AC, acetabulum; AT, anterior testis; CS, cirrus sac; O, ootype; OV, ovary; PT, posterior testis; UT, uterus; VIT, vitellaria. Right, Multibranched intestinal caeca. (Cheng.)

fasciolar (fah-se'o-lar, fah-si'o-lar) pertaining to a fasciola.

Fascioletta (fas'e-o-let'tah) a genus of parasitic flukes. **F. ilioca'na**, *Echinostoma iliocanum*.

fascioliasis (fas'e-o-li'ah-sis) infection with *Fasciola hepatica* or *F. gigantea*.

Fascioloides (fas'e-o-loi'dēz) a genus of flukes. **F. mag'na**, the large American liver fluke, a trematode found in the liver and lungs of herbivorous animals in North America; formerly called *Fasciola magna*.

fasciolopsiasis (fas'e-o-lop-si'ah-sis) the state of being infected with flukes of the genus *Fasciolopsis*.

Fasciolopsis (fas'e-o-lop'sis) [*fasciola* + Gr. *opsis* appearance] a genus of trematode worms. **F. bus'ki**, a trematode worm found in the small intestine of residents in many parts of Asia. It is the largest of the intestinal flukes, and may cause nausea, diarrhea, and a malabsorption syndrome if present in large numbers. The intermediate hosts are the snails *Planorbis coenosus* and various species of *Segmentina*. Other names given this species are *F. fuelleborni* from Calcutta and Egypt, *F. goddardi* and *F. spinifera* from China, and *F. rathouisi* from Asia. Formerly called *Distoma buski*.

fascioplasty (fash'e-o-plas'te) plastic operation on fascia.

fasciorrhaphy (fash'e-or'ah-fe) [*fascia* + Gr. *rhaphe* suture] the repair of lacerated fascia.

fasciotomy (fash'e-ot'o-me) [*fascia* + Gr. *temnein* to cut] surgical incision or transection of fascia.

fascitis (fah-si'tis) fasciitis.

fast (fast) 1. immovable, or unchangeable; resistant to the action of a specific drug, stain, or destaining agent. 2. abstention from food.

fastidium (fas-tid'e-um) [L. "loathing, disgust"] repugnance to food.

fastigatum (fas'ti-ga'tum) [L.] pointed; sharpened to a point.

fastigial (fas-tij'e-al) of or pertaining to the fastigium.

fastigium (fas-tij'e-um) [L. "gable end"] 1. the highest point in the roof of the fourth ventricle of the brain, at the junction between the superior medullary velum and the nodulus. 2. the acme, or highest point, as of a fever.

fastness (fast'nes) the quality, in bacteria, of being resistant to the action of specific stains or inhibitors.

fat (fat) 1. adipose tissue; a white or yellowish tissue which forms soft pads between various organs of the body, serves to smooth and round out bodily contours, and furnishes a reserve supply of energy. 2. an ester of glycerol with fatty acids, usually oleic acid, palmitic acid, or stearic acid; tri-acyl glycerol; neutral fat. **bound f.**, masked f. **brown f.**, brown adipose tissue. **chyle f.**, fat in the form of an extremely fine emulsion taken into the chyle by the lymphatics of the intestine. **corpse f.**, adipocere. **fetal f.**, a term sometimes used in pathology to refer to brown adipose tissue. **grave f.**, adipocere. **masked f.**, fat that can be detected in a cell or tissue by chemical methods but is not revealed by staining methods; called also *bound f.* **milk f.**, the suspension in milk which tends to separate out as cream. **molecular f.**, fat occurring in fine specks within the cells. **moruloid f.**, mulberry f., brown adipose tissue. **neutral f.**, see *fat* (def. 2). **polyunsaturated f.**, a fat containing fatty acid that has more than one double bond in its carbon chain.

saturated f., one containing fatty acid that has only single bonds in its carbon chain. **unsaturated f.**, a fat containing fatty acid that has one or more double bonds in its carbon chain. **wool f.**, anhydrous lanolin. **wool f.**, **hydrous**, lanolin. **wool f.**, **refined**, anhydrous lanolin.

fatal (fa'tal) causing death; deadly; mortal; lethal.

fate (fāt) [L. *fatum* what is ordained by the gods] the ultimate disposition or decreed outcome. In pharmacology, the intermediate and ultimate disposition of a drug in the body. **prospective f.**, the development normally achieved by any region of the egg or early embryo when there is no interference.

fatigability (fat'fī-gah-bil'fī-te) easy susceptibility to fatigue.

fatigue (fah-tēg'fī) [Fr.; L. *fatigatio*] a state of increased discomfort and decreased efficiency resulting from prolonged or excessive exertion; loss of power or capacity to respond to stimulation. **combat f.**, disabling physical and emotional fatigue occurring in association with military combat; also formerly used (World War II) as a synonym for *combat neurosis*. Called also *battle f.* **stimulation f.**, an increase in the threshold of a neural element due to repeated stimulation.

fatty (fat'e) pertaining to or characterized by fat.

fauces (faw'sēz) [L., pl. of *faux* "a gorge, narrow pass"] [NA] the passage from the mouth to the pharynx, including both the lumen and its boundaries; the throat.

Fauchard's disease (fo-shar'z) [Pierre *Fauchard*, French dentist, 1678-1761] periodontitis.

faucial (faw'shal) pertaining to the fauces.

faucitis (faw-si'tis) inflammation of the fauces.

Faught's sphygmomanometer (fawtz) [Francis Ashley *Faught*, American chemist, born 1881] see under *sphygmomanometer*.

fauna (faw'nah) [L. *Faunus* mythical deity of herdsmen] the animal life present in or characteristic of a given region or locality. It may be discernible with the unaided eye (macrofauna), or only with the aid of a microscope (microfauna).

Fauvel's granules (fo-vel'z) [Sulpice Antoine *Fauvel*, French physician, 1813-1884] see under *granule*.

fava (fa'vah) *Vicia faba* L. (Leguminosae).

faveolar (fa-ve'o-lar) pertaining to the faveolus (foveola).

faveolate (fa-ve'o-lāt) [L. *faveolus*, from *fa'vus* honeycomb] honeycombed; alveolate.

faveoli (fa-ve'o-li) [L.] plural of *faveolus*.

faveolus (fa-ve'o-lus), pl. *fave'oli* [L.] foveola.

favid (fa'vid) a secondary skin eruption due to allergy in favus.

favism (fa'vism) [Italian *fava* bean] an acute hemolytic anemia caused by ingestion of fava beans or inhalation of the pollen of the plant *Vicia faba* (*fava*), occurring in certain individuals, usually as a result of a hereditary biochemical lesion of the erythrocytes and a consequent enzyme deficiency. See *glucose-6-phosphate dehydrogenase anemia*, under *anemia*.

favus (fa'vus) [L. "honeycomb"] a distinctive type of tinea capitis, caused by *Trichophyton schoenleinii*, and characterized by the formation of yellow, cup-shaped crusts composed of dense mats of mycelia and epithelial debris, which enlarge to form prominent honeycomb-like masses. **f. circina'tus**, favus occurring in a circinate patch. **f. of fowl**, a chronic dermatomycosis affecting the comb of fowl, caused by *Trichophyton gallinae*; called also *comb disease*, usually in male birds. **f. herpet'icus**, a very rare form favus in which the lesion is papulovesicular and studded with small yellow points. **f. herpetifor'mis**, mouse favus. **mouse f.**, a disease of mice, caused by the fungus *Trichophyton mentagrophytes* var. *quinqueanum*; it may be transmitted to man. **f. mu'rrium**, mouse f.

Fc [fragment, crystallizable] one of the two segments of the IgG molecule obtained by treatment of the antibody molecule with papain; it is crystallizable and contains most of the antigenic determinants. See also *Fab*.

Fc' a fragment produced in minute quantities following papain digestion of immunoglobulin molecules, in addition to the usual Fc fragments. It is a dimer that is not bonded covalently. It contains the principal part of the C terminal portion of two Fc fragments, lacking the terminal 13 amino acids.

F.D. focal distance; fatal dose (now called lethal dose [LD]).

Fd the heavy chain portion of a Fab fragment following papain digestion of an IgG molecule. The variable segment of an Fd fragment is part of the antigen-binding site of the Fab region of an antibody molecule.

FDA Food and Drug Administration, a division of the Department of Health and Human Services.

F.D.A. fronto-dextra anterior (right frontoanterior, a position of the fetus); Food and Drug Administration.

F.D.I. abbreviation for *Fédération Dentaire Internationale* [Fr. International Dental Association].

F.D.P. fronto-dextra posterior (right frontoposterior, a position of the fetus).

F.D.T. fronto-dextra transversa (right frontotransverse, a position of the fetus).

Fe chemical symbol for iron (L. *ferrum*).

Fe_{Na} excreted fraction of filtered sodium; see under *test*.

fear (fēr) a normal emotional response, in contrast to anxiety and phobia, to consciously recognized and external sources of danger, which is manifested by alarm, apprehension, or disquiet.

febantel (feb'an-tel) chemical name: [[2-[(methoxyacetyl)-amino]-4-(phenylthio)phenyl]carbonimidoyl]biscarbamic acid dimethyl ester; a veterinary antihelminthic, C₂₀H₂₂N₄O₆S.

Feb. dur. abbreviation for L. *feb're duran'te*, while the fever lasts.

febricant (feb'rī-kant) causing fever.

febricide (feb'rī-sīd) [*febris* + L. *caedere* to kill] 1. lowering bodily temperature in fever. 2. an agent that reduces fever.

febricity (fe-bris'fī-te) feverishness; the quality of being febrile.

febricula (fe-brik'u-lah) [L.] a slight or temporary attack of fever of indefinite origin or pathology.

febrificient (feb'rī-fa'shent) [*febris* + L. *facere* to make] producing fever.

febrific (fē-brif'ik) producing fever.

febrifugal (fē-brif'ū-gal) [*febris* + L. *fugare* to put to flight] dispelling or relieving fever.

febrifuge (feb'rī-fūj) an agent that reduces body temperature in fever; antipyretic.

febrifugine (feb-rif'u-jin) an antimalarial alkaloid, C₁₆H₁₉O₃N₃, from Ch'ang Shan.

febrile (feb'rīl) [L. *febrilis*] pertaining to or characterized by fever.

febris (fe'bris) [L.] fever. **f. endem'ica rose'ola**, dengue. **f. enterico'idēs**, enteric fever. **f. meliten'sis**, brucellosis. **f. quinta'na**, trench fever. **f. recur'rens**, relapsing fever. **f. ru'bra**, scarlet fever. **f. sudora'lis**, brucellosis. **f. un'dulans**, brucellosis. **f. uveoparotide'a**, uveoparotid fever. **f. wolhyn'ica**, trench fever.

fecal (fe'kal) pertaining to or of the nature of feces.

fecalith (fe'kah-lth) [*feces* + Gr. *lithos* stone] an intestinal concretion formed around a center of fecal matter.

fecaloid (fe'kal-oid) resembling fecal matter.

fecaloma (fe'kah-lo'mah) [*feces* + *-oma*] stercoroma.

fecaluria (fe'kah-lu're-ah) [*feces* + Gr. *ouron* urine + *-ia*] the presence of fecal matter in the urine.

feces (fe'sēz) [L. *faeces*, pl. of *faex* refuse] the excrement discharged from the intestines, consisting of bacteria, cells exfoliated from the intestines, secretions, chiefly of the liver, and a small amount of food residue.

Fechner's law (fek'nerz) [Gustav Theodor *Fechner*, Prussian natural philosopher, 1801-1887] see under *law*.

FeCO₃ ferrous carbonate.

fecula (fek'u-lah) [L. *faecula* lees, dregs] 1. lees or sediment. 2. starch; also the starchy part of a seed.

feculent (fek'u-lent) [L. *faeculentus*] 1. having dregs or a sediment. 2. excrementitious.

fecundate (fe'kun-dāt) [L. *fecundare* to make fruitful] to impregnate or fertilize.

fecundatio (fe'kun-da'she-o) [L.] fecundation. **f. ab ex'tra**, impregnation occurring without entrance of the penis into the vagina.

fecundation (fe'kun-da'shun) [L. *fecundatio*] impregnation or fertilization. **artificial f.**, artificial insemination.

fecundity (fē-kun'dī-te) [L. *fecunditas*] ability to produce offspring rapidly and in large numbers. In demography, the physiological ability to reproduce, as opposed to fertility.

Fede's disease (fa'daz) [Francesco *Fede*, an Italian physician, 1832-1913] Riga-Fede disease.

Federici's sign (fe-de-re'chēz) [Cesare *Federici*, an Italian physician, 1838-1892] see under *sign*.

feble-mindedness (fe'b'l-mind'ed-nes) former name for mental retardation. The feble-minded were divided into three grades: idiots, with a mental age below two years; imbeciles, with a mental age between two and seven years; and morons, with a mental age between seven and twelve years.

feedback (fēd'bak) the return of some of the output of a system as input so as to exert some control in the process; see also *endproduct inhibition*, under *inhibition*. **alpha f.**, see under *biofeedback*. **negative f.**, the condition of maintaining a constant output of a system by exertion of an inhibitory control on a key step in the system by a product of that system. **positive f.**, a condition causing the output of a system to increase continually by exertion of a stimulatory effect on a key step in the system by a product of that system.

feed-forward (fēd-for'ward) the anticipatory effect that one intermediate in a metabolic or endocrine control system exerts on another intermediate further along in the pathway; such effect may be stimulatory (positive f.) or inhibitory (negative f.).

feeding (fēd'ing) the taking or giving of food. **artificial f.**, feeding of a baby with food other than mother's milk. **breast**

f., breast-feeding. **extrabuccal f.**, the administration of nutriment other than by mouth. **Finkelstein's f.**, feeding of infants based upon decrease in the milk sugar of the food. **forced f.**, **forcible f.**, the administration of food by force to those who cannot or will not receive it. **sham f.**, feeding in which the food is chewed and swallowed but does not enter the stomach, because of diversion to the exterior by an esophageal fistula or other device.

Feer's disease (fairz) [Emil Feer, Swiss pediatrician, 1864–1955] acrodynia.

fee-splitting (fe-split'ing) the division of moneys received by a specialist, such as a surgeon, between himself and the physician who referred the patient to him.

feet (fēt) see *foot*.

Fehleisen's streptococcus (fa'lis-enz) [Friedrich Fehleisen, German (later American) physician, 1854–1924] *Streptococcus pyogenes*.

Fehling's solution, test (fa'lingz) [Hermann Christian von Fehling, German chemist, 1812–1885] see under *solution* and *tests*.

fel (fel), gen. *fel'lis* [L. "bile," "gall"] the bile. **f. bo'vis**, ox bile. **f. bo'vis purifica'tum**, **f. tau'ri purifica'tum**, ox bile extract.

Felderstruktur (fel'der-shtrook'tur) [Ger.] the term used to describe the pattern of organization of the myofilaments in cardiac and red skeletal muscles, in which the myofilaments are not associated in discrete myofibrils, but instead form a continuous field interrupted by mitochondria. Cf. *Fibrillenstruktur*.

Feleky's instrument (fa-la'kēz) [Hugó von Feleky, Budapest urologist, 1860–1932] see under *instrument*.

Felicola (fel-i-kó'lah) a genus of parasitic insects of the order Mallophaga, the biting lice. It includes *F. subrostratus*, a parasite of cats.

feline (fe'lin) [L. *felēs* cat] pertaining to, characteristic of, or derived from a cat.

Felix Vi serum (fa'liks) [Arthur Felix, Prague bacteriologist, 1887–1956] see under *serum*.

Felix-Weil reaction (fa'liks-vil) [Arthur Felix, Prague bacteriologist, 1887–1956; Edmund Weil, German physician in Prague, 1880–1922] Weil-Felix reaction.

fellatio (fē-la'she-o) [L. *fellare* to suck] oral stimulation or manipulation of the penis.

felo-de-se (fa'lo-da-sa') [Sp. "felon of one's self"] a person who commits suicide.

felon (fel'on) a purulent infection or abscess involving the pulp of the distal phalanx of the finger. Cf. *paronychia* and *eponychia*.

bone f., a subperiosteal felon causing necrosis of the bone.

deep f., a term which includes subcutaneous, thecal, and subperiosteal felons. **frog f.**, an abscess in the web space of the hand.

subcutaneous f., a deep felon situated beneath the skin.

subcuticular f., **subepithelial f.**, a pustule located between the cuticle and the true skin.

subperiosteal f., a felon involving the periosteum of the terminal phalanx.

superficial f., subcuticular felon. **thecal f.**, a felon that involves the synovial sheath, producing a suppurative tenosynovitis.

Felsules (fel'sulz) trademark for a preparation of chloral hydrate.

Felton's serum, unit (fel'tunz) [Lloyd D. Felton, Boston physician, 1885–1953] see under *serum* and *unit*.

feltwork (fel'twerk) a complex of closely interwoven fibers, as of nerve fibrils. **Kaes' f.**, a dense network of nerve fibers in the cerebral cortex.

Felty's syndrome (fel'tēz) [Augustus Roi Felty, American physician, born 1895] see under *syndrome*.

female (fe'māl) [L. *femella* young woman] 1. an individual organism of the sex that bears young or that produces ova or eggs. 2. feminine.

feminine (fem'i-nin) pertaining to the female sex, or possessing qualities normally characteristic of the female.

femininity (fem'i-nin'i-te) womanhood; the possession of normal female qualities by a woman.

feminism (fem'i-nizm) the appearance or existence of female secondary sex characters in the male. **mammary f.**, gynecmastia.

Feminone (fem'i-nōn) trademark for a preparation of ethinyl estradiol.

feminization (fem'i-ni-za'shun) 1. the normal induction or development of female sex characters. 2. the induction or development of female secondary sex characters in the male. **testicular f.**, a condition in which the subject is phenotypically female but lacks nuclear sex chromatin and is of XY chromosomal sex; the uterus and tubes are absent or rudimentary, and the gonads are typically testes and may be abdominal or inguinal in position. The *incomplete* form is marked by partial fusion of the labioscrotal folds and clitoromegaly, and at puberty, variable feminization and partial virilization may both take place.

feminonucleus (fem'i-no-nu-kle'us) the female pronucleus.

Fem. intern. abbreviation for *L. femor'ibus inter'nus*, at the inner side of the thighs.

femme (fahm) [Fr.] woman. **sage f.** (sahzh-fahm') [Fr. "wise woman"], a midwife.

Femogen (fem'o-gen) trademark for preparations of esterified estrogens.

femora (fem'o-rah) [L.] plural of *femur*.

femoral (fem'or-al) [L. *femoralis*] pertaining to the femur, or to the thigh.

femorocoele (fem'o-ro-sē'l) [L. *femur* thigh + Gr. *kēlē* hernia] femoral hernia.

femoriliac (fem'o-ro-il'e-ak) pertaining to the femur and the ilium.

femorotibial (fem'o-ro-tib'e-al) pertaining to the femur and the tibia.

femto- [Danish *femten* fifteen] a combining form used in naming units of measurement to indicate one-quadrillionth (10^{-15}) of the unit designated by the root with which it is combined.

femur (fe'mur), pl. *fem'ora* [L.] 1. [NA] the bone that extends from the pelvis to the knee, being the longest and largest bone in the body; its head articulates with the acetabulum of the hip bone, and distally the femur, along with the patella and tibia, forms the knee joint. See Plate accompanying *skeleton*. Called also *thigh bone* and *femoral bone*. 2. the proximal portion of the lower member of the body, situated between the pelvis and the knee; the thigh.

fenalamide (fen-al'ah-mid) chemical name: ethyl *N*-[2-(diethylamino)ethyl]-2-ethyl-2-phenylmalonamate; a smooth muscle relaxant, $C_{19}H_{30}N_2O_3$.

fenbendazole (fen-ben'dah-zōl) chemical name: [5-(phenylthio)-1*H*-benzimidazol-2-yl] carbamic acid methyl ester; an anthelmintic, $C_{15}H_{13}N_3O_2S$.

fenbufen (fen-bu'fen) chemical name: γ -oxo-[1,1'-biphenyl]-4-butanolic acid; an anti-inflammatory, $C_{16}H_{14}O_3$.

fenclufenac (fen-klo'fen-ak) chemical name: 2-(2,4-dichlorophenoxy)benzeneacetic acid; an anti-inflammatory, $C_{14}H_{10}Cl_2O_3$.

fenclonine (fen'klo-nēn) chemical name: DL-3-(4-chlorophenyl)alanine; a serotonin inhibitor, $C_9H_9ClNO_2$.

fenclorac (fen-klor'ak) chemical name: α ,3-dichloro-4-cyclohexylbenzeneacetic acid; an anti-inflammatory, $C_{14}H_{16}Cl_2O_2$.

fendosal (fen'do-sal) chemical name: 5-(4,5-dihydro-2-phenyl-3*H*-benz[e]indol-3-yl)-2-hydroxy-5-benzoic acid; an anti-inflammatory, $C_{25}H_{19}NO_3$.

fenestra (fē-nes'trah), pl. *fenes'trae* [L. "window"] a window-like opening; [NA] a general term for an opening or open area. Also, an opening in a bandage or cast, or in the blade of a forceps. **f. choled'ocha**, the perforation in the medial descending portion of the duodenum through which enter the common bile duct and the pancreatic duct. **f. of cochlea**, **f. coch'leae** [NA], a round opening in the inner wall of the middle ear inferior to and a little posterior to the fenestra vestibuli; it is covered by the secondary tympanic membrane. Called also *round window*. **f. nov-ova'lis**, a surgically created oval window in the lateral semicircular canal in Lempert's fenestration operation. **f. ova'lis**, *f. vestibuli*. **f. rotun'da**, *f. cochleae*. **f. vestib'uli** [NA], an oval opening in the inner ear, which is closed by the base of the stapes; called also *f. ovalis* and *oval window*.

fenestrae (fē-nes'tre) [L.] plural of *fenestra*.

fenestrate (fen'es-trāt) to pierce with one or more openings.

fenestrated (fen'es-trāt'ed) [L. *fenestratus*] pierced with one or more openings.

fenestration (fen'es-tra'shun) [L. *fenestratus* furnished with windows] 1. the act of perforating, or the condition of being perforated. 2. the surgical creation of a new opening in the labyrinth of the ear for the restoration of hearing in cases of otosclerosis. **alveolar plate f.**, a condition in which a round or oval, window-like defect exists in the cortical plate of bone overlying a portion of the root of a tooth. Such defects are most common over the buccal aspect of the roots of teeth, particularly in those instances in which the alveolar bone over the root is unusually thin. **aortopulmonary f.**, aortic septal defect.

fenestrel (fen-es'trel) chemical name: 5-ethyl-6-methyl-4-phenyl-3-cyclohexene-1-carboxylic acid; an estrogen, $C_{16}H_{20}O_2$.

fenethylamine hydrochloride (fen-eth'i-lin) chemical name: 7-[2-(α -methylphenethyl)amino]ethyl] theophylline monohydrochloride; a central nervous system stimulant, $C_{18}H_{23}N_3O_2 \cdot HCl$.

fenfluramine hydrochloride (fen-floor'ah-mēn) chemical name: *N*-ethyl- α -methyl-3-(trifluoromethyl)benzeneethanamine hydrochloride. An adrenergic, $C_{12}H_{16}F_3N \cdot HCl$, used as an anorexic in the short-term treatment of exogenous obesity; administered orally.

fenisorex (fen-i'so-reks) chemical name: *cis*-7-fluoro-3,4-dihydro-1-phenyl-1*H*-2-benzopyran-3-methanamine; an anorexic, $C_{16}H_{16}FNO$.

fenmetozole hydrochloride (fen-met'o-zōl) chemical name: 2-[(3,4-dichlorophenoxy)methyl]-4,5-dihydro-1*H*-imidazole mono-

hydrochloride; an antidepressant and narcotic antagonist, $C_{10}H_{10}Cl_2N_2O \cdot HCl$.

fenobam (fen'o-bam) chemical name: *N*-(3-chlorophenyl)-*N'*-(4,5-dihydro-1-methyl-4-oxo-1*H*-imidazol-2-yl)urea; a tranquilizer, $C_{11}H_{11}ClN_4O_2$.

fenopropfen (fen-o-pro'fen) chemical name: $(\pm)\alpha$ -methyl-3-phenoxybenzeneacetic acid, an anti-inflammatory, analgesic, and antipyretic, $C_{15}H_{14}O_3$. **f. calcium** [USP], the calcium salt of fenopropfen, $C_{30}H_{26}CaO_6 \cdot 2H_2O$, having the same actions as the base; used for relief of the signs and symptoms of rheumatoid arthritis and osteoarthritis, administered orally.

fenoterol (fen'o-ter'ol) chemical name: 3,5-dihydroxy- α -[[*p*-hydroxy- α -methylphenethyl]amino]methyl]benzyl alcohol; a bronchodilator, $C_{17}H_{21}NO_4$.

fenpipalone (fen-pip'ah-lon) chemical name: 5-[2-(3,6-dihydro-4-phenyl-1(2*H*)-pyridinyl)ethyl]-3-methyl-2-oxazolidinone; an anti-inflammatory, $C_{17}H_{20}N_2O_2 \cdot HCl$, used as a bronchodilator.

fenspiride hydrochloride (fen-spēr'id) 8-(2-phenethyl)-1-oxa-3,8-diazaspiro[4.5]decan-2-one monohydrochloride. An antiadrenergic compound, $C_{15}H_{20}N_2O_2 \cdot HCl$, used as a bronchodilator.

fentanyl citrate (fen'tah-nil) [USP] chemical name: *N*-phenyl-*N*'-[1-(2-phenylethyl)-4-piperidineyl] propanamide 2-hydroxy-1,2,3-propanetricarboxylate (1:1). A narcotic analgesic, $C_{22}H_{26}N_2O \cdot C_3H_5O_7$, derivative of piperidine, occurring as a white, crystalline powder or white, glistening crystals; used mainly preoperatively, postoperatively, and during surgery, administered intravenously or intramuscularly. A combination of fentanyl citrate and droperidol (known as *Innovan*) is administered intramuscularly to produce neuroleptanalgesia.

fenticlor (fen'ti-klor) chemical name: 2,2'-thiobis[4-chlorophenol]. A topical anti-infective, $C_{12}H_8Cl_2O_2S$, which has been used in candidal and dermatophytic infections of the skin and mucous membranes.

fenugreek (fen'u-grēk) [L. *faenum graecum* Greek hay] the leguminous annual herb, *Trigonella foenumgraecum* L., grown in Southern Europe, India, and Northern Africa for its oily seeds, which are used in making curry. The seeds are used in veterinary medicine in poultices, ointments, and plasters, and to flavor medicinal powders that are mixed with the food of livestock. See also *trigonelline*.

Fenwick's disease (fen'wicks) [Samuel Fenwick, English physician, 1821-1902] see under *disease*.

Fe₂O₃ ferric oxide.

Fe(OH)₃ ferric hydroxide.

feosol (fe'o-sol) trademark for preparations of ferrous sulfate.

feral (fe'ral) [L. *feralis*] savage; wild; deadly; living in the wild state, especially after having been domesticated.

fer-de-lance (fär-dē-lahs') [Fr. "lance head"] a large venomous snake, *Bothrops atrox*, of South and Central America, Mexico and the West Indies; see table accompanying *snake*.

Féréol's nodes (fa'ra-ōlz') [Louis Henri Felix Féréol, French physician, 1825-1891] see under *node*.

Fergon (fer'gon) trademark for preparations of ferrous gluconate.

Fergusson's incision (operation), speculum (fer'gus-unz) [Sir William Fergusson, British surgeon, 1808-1877] see under *incision* and *speculum*.

Fer-In-Sol (fer'in-söl) trademark for a preparation of ferrous sulfate.

ferment [L. *fermentum* leaven] 1. (fer-ment') to undergo fermentation; the term is applied to decomposition of carbohydrates. 2. (fer'ment) any substance that causes fermentation in other substances with which it comes in contact; see *enzyme*. **chemical f.**, a ferment that is not a living organism; an enzyme. **curdling f.**, rennin. **defensive f's**, see *Abderhalden's reaction*, under *reaction*. **diastatic f.**, an enzyme that changes starch into sugar. **digestive f.**, a ferment which participates in the digestion of food. **fibrin f.**, thrombin. **lactic f.**, a ferment or enzyme that decomposes lactose into lactic acid and carbon dioxide. **milk-curdling f.**, rennin. **organized f.** (obs.), a living plant or animal organism, such as a microbe, which acts as a ferment. **protective f.**, a ferment formed in the body as a result of the presence in the blood of foreign substances, and capable of splitting up the foreign substance and thus protecting the organism. Called also *abuehrfermente* and *protective enzyme*. Cf. *Abderhalden's reaction*, under *reaction*. **soluble f.**, **unorganized f.**, an enzyme that can be extracted, isolated, and purified. **urea f.**, see *urease*. **Warburg's f.**, see under *enzyme*.

fermental (fer-men'tal) pertaining to or arising from a ferment or enzyme.

fermentation (fer'men-ta'shun) [L. *fermentatio*] the anaerobic enzymatic conversion of organic compounds, especially carbohydrates, to simpler compounds, especially to ethyl alcohol, resulting in energy in the form of adenosine triphosphate (ATP); the process is used in the production of alcohol, bread, vinegar, and other food or industrial products. It differs from respiration in that organic substances rather than molecular oxygen are used as electron

acceptors. **acetic f.**, the conversion of a weak alcoholic solution into acetic acid or vinegar. **alcoholic f.**, the production of ethyl alcohol from carbohydrates. **ammoniacal f.**, the formation of ammonia and carbon dioxide from urea by urease. **amyl f.**, the fermentation which produces amyl alcohol from sugar. **butyric f.**, the change of carbohydrates, milk, etc., into butyric acid. **caseous f.**, the coagulation of soluble casein under the influence of rennin. **dextran f.**, the fermentation by which dextrose is converted into dextran. **diastatic f.**, the change of starch into glucose, under the influence of ptyalin, the glycolytic enzyme, etc. **frog spawn f.**, dextran f. **lactic f.**, **lactic acid f.**, the conversion of sugars to lactic acid by various bacteria; the souring of milk. **propionic f.**, the production of propionic acid from sugars or lactic acid by certain bacteria. **stormy f.**, the rapid fermentation of milk produced by *Clostridium perfringens*, marked by rupture of the clotted milk by the pressure of the gas which develops. **viscous f.**, the production of gummy substances, as in the urine, in milk, and in wine, under the influence of various bacilli.

fermentemia (fer'men-te'me-ah) [*ferment* + Gr. *haima* blood + *-ia*] the presence of a ferment in the blood.

fermentogen (fer-men'to-jen) [*ferment* + Gr. *gennan* to produce] a substance which may be converted into an enzyme; a zymogen.

fermentoid (fer-men'toid) [*ferment* + Gr. *eidos* form] an enzyme that has been altered so as to lose its active properties; a denatured enzyme.

fermentum (fer-men'tum) [L. "ferment"] yeast.

fermium (fer'me-um) [Enrico Fermi, Italian physicist, 1901-1954; winner of the Nobel prize for physics in 1938] the chemical element number 100, atomic weight 253, symbol Fm, originally discovered in debris from thermonuclear explosion in 1952.

ferning (fern'ing) the appearance of a fernlike pattern in a dried specimen of cervical mucus, an indication of the presence of estrogen; called also *fern phenomenon*.

-ferous [L. *ferre* to bear] a word termination meaning bearing or producing.

Ferrata's cell (fer-at'az) [Adolfo Ferrata, Italian physician, 1880-1946] hemohistioblast.

ferrated (fer-ät'ed) charged with iron.

ferredoxin (fer'ē-dok'sin) a nonheme iron-containing protein, also having a high sulfide content and a very low redox potential; the ferredoxins participate in electron transport in photosynthesis, nitrogen fixation, and various other biological processes.

Ferrein's canal, cord, etc. (fer'inz) [Antoine Ferrein, French physician, 1693-1769] see under *canal, cord, foramen, ligament, pyramid, tube, and tubule*.

ferri (fer'e) [L. gen. of *ferrum*] see *iron*.

ferri-albuminic (fer'e-al-bu-min'ik) containing iron and albumin.

Ferribacterium (fer're-bak-te're-um) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as rods with rounded or square ends, singly, or in pairs or short chains. It includes two species, *F. duplex* and *F. rectangularis*.

ferric (fer'ik) [L. *ferrum*] containing iron in its plus-three oxidation state, Fe(III) (sometimes designated Fe³⁺). For ferric compounds see under the salt, e.g., arsenate and citrate. **f. oxide, red** [NF], a red pigment used as a pharmaceutical aid in preparations for application to the skin. **f. oxide, yellow** [NF], a yellow pigment used as a pharmaceutical aid in preparations for application to the skin.

Ferrier's treatment (method) (fer'e-erz) [P. Ferrier, French physician] see under *treatment*.

ferrihemochrome (fer'e-he'mo-krōm) the ferric compound of hemochrome.

ferritin (fer'i-tin) the iron-apoferritin complex, which is one of the chief forms in which iron is stored in the body; it occurs at least in the gastrointestinal mucosa, liver, spleen, bone marrow, and reticuloendothelial cells generally.

Ferrobacillus (fer'o-bah-sil'us) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as short rod-shaped cells, singly or in pairs, which oxidize ferrous iron to the ferric state. The type species is *F. ferrooxidans*.

ferrocholate (fer'o-ko'lin-āt) a chelate prepared by reacting equimolar quantities of freshly precipitated ferric chloride with choline dihydrogen citrate, the metallic ion being sequestered and firmly bound into a ring within the molecule; used in the treatment of iron-deficiency anemias. Called also *iron choline citrate*.

ferroflocculation (fer'o-flok'u-la'shun) a flocculation test for malaria, performed with a fine-grained iron antigen; see *Henry's test*, under *tests*.

ferrohemochrome (fer'o-he'mo-krōm) the ferrous compound of hemochrome.

ferrokinetics (fer'ro-ki-net'iks) the turnover, or rate of change, of iron in the body.

Ferrolip (fer'ō-lip) trademark for preparations of ferrocholine.

ferroprotein (fer'ō-pro'te-in) a protein combined with an iron-containing radical; the ferroproteins are respiratory carriers. Cf. *Warburg's enzyme*, under *enzyme*, and *cytochrome* (def. 1.).

ferrosilicon (fer'ō-sil'i-kon) an alloy of iron and silicon made by electrothermal reduction, and used for the deoxidation of steel.

ferrosoferric (fer-ō'so-fer'ik) combining a ferrous with a ferric compound; containing iron in two different oxidation states, as in the oxide Fe_3O_4 .

ferrotherapy (fer'ō-ther'ah-pe) [*ferrum* + *therapy*] therapeutic use of iron and iron compounds.

ferrous (fer'us) containing iron in its plus-two oxidation state, Fe(II) (sometimes designated Fe^{2+}). For ferrous compounds see under the salt, e.g., arsenate and sulfate.

ferruginous (fer-u'jī-nus) [*L. ferruginosus*; *ferrugo* iron rust] 1. containing iron or iron rust; chalybeate. 2. of the color of iron rust.

ferrule (fer'ool) a ring or band of metal applied to the root or crown of a tooth in order to strengthen it, or to protect the margin of the prepared area during placement of a restoration.

ferrum (fer'um) [*L.*] iron.

Ferry-Porter law (fer're-por'ter) [Edwin Sidney *Ferry*, American scientist, born 1868; T.C. *Porter*, English scientist] see under *law*.

fertile (fer'til) [*L. fertilis*] fruitful; susceptible of being developed into a new individual (of ova); not sterile or barren.

fertility (fer-til'i-te) 1. the capacity to conceive or induce conception. 2. the ratio of the number of births per year to the number of women of child-bearing age; see *birth rate*, under *rate*.

fertilization (fer'ti-lī-za'shun) the act of rendering gametes fertile or capable of further development; fecundation. Fertilization begins with contact between spermatozoon and ovum, leading to their fusion, which stimulates the completion of ovum maturation with release of the second polar body. Male and female pronuclei then form and perhaps merge; synapsis follows, which restores the diploid number of chromosomes and results in biparental inheritance and the determination of sex. The process of fertilization leads to the formation of a zygote and ends with the initiation of its cleavage. **cross f.**, the fertilization of one flower by the pollen of another; allogamy. **external f.**, union of the gametes outside the bodies of the originating organisms, as in most fish. **internal f.**, union of the gametes inside the body of the female, the sperm having been transferred from the body of the male by an accessory sex organ or other means.

fertilizin (fer'ti-lī'zin) a substance of the plasma membrane and gelatinous coat of the ovum of some species. It is considered to possess the specific receptor groups that bind the spermatozoon to the ovum. In sea-urchins, it has been characterized chemically as a glycoprotein of about 300,000 molecular weight.

Ferv. abbreviation for *L. fer'vens*, boiling.

fervescence (fer-ves'ens) [*L. fervescere* to become hot] development of an increased body temperature, or fever.

fescue (fes'ku) 1. any of the grasses belonging to the genus *Festuca*. 2. a condition resembling ergotism, affecting cattle and sometimes sheep, in New Zealand, Australia, and the United States, grazing on tall fescue (*Festuca arundinacea*) contaminated by a fungus which contains a toxic principle similar to ergot; it is characterized by lameness of the hind feet, which may progress to necrosis of the affected extremities, sometimes involving the ears or tail. Called also *fescue foot*.

Fesotype (fe'so-tim) trademark for a preparation of ferrous sulfate.

fester (fes'ter) to suppurate superficially.

festinant (fes'ti-nant) accelerating.

festination (fes'ti-na'shun) [*L. festinatio*] an involuntary tendency to take short accelerating steps in walking (festinating gait), as in paralysis agitans and other neurologic diseases.

festoon (fes-toon') a carving in the base material of a denture that simulates the contours of the natural tissues being replaced by the denture.

festschrift (fest'shrift) [Ger.] a memorial volume; a book made up of articles contributed by pupils or associates and friends of a scientist or leader, published usually to honor some special occasion, such as a birthday or other anniversary.

fetal (fe'tal) of or pertaining to a fetus; pertaining to *in utero* development after the embryonic period.

fetalism (fe'tal-izm) fetalization.

fetalization (fe'tal-i-za'shun) the retention, into adult life, of bodily characters which at some earlier stage of evolutionary history were actually only infantile and were rapidly lost as the organism attained maturity.

fetation (fe-ta'shun) 1. the development of a fetus within the uterus. 2. pregnancy.

feticide (fe'ti-sid) [*fetus* + *L. caedere* to kill] the destruction of the fetus.

fetid (fe'tid) [*L. foetidus*] having a rank or disagreeable smell.

fetish (fet'ish, fe'tish) an object believed to be endowed with supernatural powers or regarded with unreasoning devotion; an object (a shoe, stocking, etc.) or a part of the body (a lock of hair, etc.) charged with special erotic interest.

fetishism (fet'ish-izm, fe'tish-izm) the worship or adoration of an inanimate object as a symbol of a loved person; the displacement of erotic interest to a fetish.

fetishist (fet'ish-ist, fe'tish-ist) a person who secures erotic gratification from a fetish.

fetlock (fet'lok) the metacarpophalangeal and metatarsophalangeal regions in the horse.

fetoglobulin (fe'to-glob'u-lin) fetoprotein.

fetography (fe-tog'rah-fe) [*fetus* + Gr. *graphein* to write] roentgenography of the fetus in utero.

fetology (fe-tol'o-je) that branch of medicine dealing with the fetus in utero.

fetometry (fe-tom'ē-tre) [*fetus* + Gr. *metron* measure] the measurement of the fetus, especially of the diameters of its head. **roentgen f.**, measurement of the fetal head in the uterus by means of the roentgen ray.

fetoplacental (fe'to-plah-sen'tal) pertaining to the fetus and placenta.

fetoprotein (fe'to-pro'tēn) a fetal antigen that also occurs in adults in certain diseases; α_1 -fetoprotein appears in the serum of patients with hepatoma and embryonal adenocarcinoma; γ -fetoprotein in that of patients with a variety of neoplasms, including sarcomas and leukemias; and β -fetoprotein (found to be identical with normal liver ferritin) in fetal liver and in adults with a variety of liver diseases. Called also *fetoglobulin*.

fetor (fe'tor) [*L.*] stench, or offensive odor. **f. ex o're**, halitosis. **f. hepat'icus**, the peculiar odor of the breath characteristic of hepatic disease; liver breath. **f. o'ris**, halitosis.

fetoscope (fe'to-skōp) 1. a specially designed stethoscope for listening to the fetal heart beat. 2. an endoscope for viewing the fetus in utero.

fetoscopic (fe'to-skop'ik) pertaining to or accomplished by fetoscopy.

fetoscopy (fe-tos'ko-pe) viewing of the fetus in utero by means of the fetoscope.

fetoxylate hydrochloride (fē-toks'ī-lāt) chemical name: 2-phenoxylethyl 1-(3-cyano-3,3-diphenylpropyl)-4-phenylisonipecotate monohydrochloride; a smooth muscle relaxant, $\text{C}_{26}\text{H}_{28}\text{H}_2\text{O}_3 \cdot \text{HCl}$.

fetuin (fe'tu-in) a low-molecular-weight globulin which constitutes nearly the total globulin in the blood of the fetus and newborn of ungulates.

fetus (fe'tus) [*L.*] the unborn offspring of any viviparous animal; specifically, the unborn offspring in the postembryonic period, after major structures have been outlined, in man from seven or eight weeks after fertilization until birth. **f. acardi'acus**, acardius. **f. amor'phus**, holoacardius amorphus. **calcified f.**, lithopedion. **f. compres'sus**, f. papyraceus. **harlequin f.**, a fetus entirely covered with thick, horny, armor-like plates, the severest form of lamellar exfoliation of the newborn (see under

Harlequin fetus (Arey).

exfoliation); it is usually stillborn or dies shortly after birth. **ichthyosis f.**, harlequin f. **f. in fe'tu**, a small, imperfect fetus, incapable of independent life, contained within the body of another fetus, the autosite. **mummified f.**, a shriveled and dried-up fetus. **paper-doll f.**, **papyraceous f.**, f. papyraceus. **f. papyra'ceus**, a dead fetus pressed flat by the growth of a living twin. **parasitic f.**, an incomplete minor fetus attached to a larger, more completely developed fetus, or autosite. **f. sanguinolen'tis**, a dead fetus which has undergone maceration. **sireniform f.**, a sirenomelus, or symposium apus.

Feulgen test (reaction) (foil'gen) [Robert *Feulgen*, German physiologic chemist, 1884-1955] see under *test*.

fever (fe'ver) [*L. febris*] 1. elevation of body temperature above the normal; pyrexia. It may be due to such physiologic stress as ovulation, excess thyroid hormone secretions, vigorous exercise, central nervous system lesions, or to infection by microorganisms, or to a host of noninfectious processes, as that accompanying inflammation or resulting from release of pyrogenic materials, as in leukemia. 2. any disease characterized by fever. **abortus f.**, brucellosis. **absorption f.**, a fever often seen during the first twelve hours after parturition. **Aden f.**, dengue. **ady-**

namie f., asthenic f. **African coast f.**, East Coast f. **African tick f.**, relapsing fever caused by *Borrelia duttonii*. **algid pernicious f.**, pernicious malaria with symptoms of collapse. **American mountain f.**, Colorado tick f. **Andaman A f.**, a leptospiral fever occurring in the Netherlands East Indies. **aphthous f.**, foot-and-mouth disease. **Argentinian hemorrhagic f.**, an acute, sometimes fatal disease caused by the Junin virus, characterized by chills, fever, severe myalgia, leukopenia, hemorrhagic manifestations, shock, renal involvement, and neurologic abnormalities. Called also *mal de rostreros* and *Junin f.* **artificial f.**, elevation of bodily temperature produced by artificial means, as by external heat or the injection of typhoid vaccine or malarial parasites. **aseptic f.**, fever associated with aseptic wounds, presumably due to the disintegration of leukocytes or to the absorption of avascular or traumatized but uninfected tissue. **Assam f.**, kala-azar. **asthenic f.**, a fever with nervous depression, feeble pulse, and a cool, moist skin. **Australian Q f.**, see *Q fever*. **autumn f.**, nanukayami. **Bangkok hemorrhagic f.**, dengue. **biduotertian f.**, tertian malaria with two broods of parasites segmenting on alternate days, so that the febrile paroxysms are nearly continuous. **biliary f. of dogs**, canine piroplasmosis. **biliary f. of horses**, a disease of horses due to infection with *Nuttallia equi* or *Babesia caballi*, marked by high fever, jaundice, hemoglobinuria, gastrointestinal disturbances, and rapid emaciation; called also *equine biliary f.* and *equine piroplasmosis*. **bilious f. (obs.)**, fever accompanied by the vomiting of bile. **bilious f. of cattle**, gallsickness. **black f.**, 1. Rocky Mountain spotted f. 2. kala-azar. **blackwater f.**, a dangerous complication of falciparum malaria, characterized by the passage of dark red to black urine, severe toxicity, and high mortality, especially for Europeans; called also *West African f.* and *hemolytic malaria*. **blue f.**, Rocky Mountain spotted f. **Bolivian hemorrhagic f.**, a hemorrhagic fever occurring in Bolivia, which is clinically identical with Argentinian hemorrhagic fever (q.v.), but is caused by the Machupo virus. **bouquet f.**, dengue. **boutonneuse f.**, a disease endemic in the Mediterranean area, the Crimea, Africa, and India, due to infection with *Rickettsia conorii*, which is transmitted by the tick *Rhipicephalus sanguineus*; it is marked by chills, fever, primary skin lesions (tache noir or eschar), and a rash appearing on the second to fourth day; called also *Conor* and *Bruch's disease* and *escharonodulaire*. Known also by various names according to geographical area, e.g., *Indian tick typhus*, *Kenya fever*, and *Marseilles fever*. **bovine epizootic f.**, ephemeral f. of cattle. **bovine infectious petechial f.**, a disease of cattle in Kenya, characterized by hemorrhages of the visible mucous membranes, fever, and diarrhea; there may be severe conjunctivitis and protrusion of the eyeball, and death within one to three days is not uncommon. The cause is believed to be a rickettsial-like organism, *Cytoecetes ondiri*, spread by a biting insect. Called also *Ondiri disease*. **brain f.**, inflammation of the brain or meninges, or both together. **brass-founder's f.**, metal fume fever (q.v.) caused by fumes of any of several metals, most commonly zinc, copper, or magnesium; called also *brass* or *brazier's chill*. **Brazilian f.**, **Brazilian spotted f.**, Rocky Mountain spotted f. **breakbone f.**, dengue. **buck f.**, the condition of suddenly being given one's great opportunity and being unable to act appropriately. **Bullis f.**, a febrile disease observed in soldiers who had been at Camp Bullis, Texas, in 1942, marked by very low white blood cell count with neutropenia, postorbital and occipital headache, and constant lymphadenitis. It is probably caused by an unclassified species of *Rickettsia*, and transmitted by the bites of the Lone Star tick, *Amblyomma americanum*. Called also *Lone Star f.* and *Texas tick f.* **Bushy creek f.**, pretibial f. **Bwamba f.**, a mild febrile viral disease of sudden onset, occurring in Uganda; it is marked by headache, backache, mild conjunctivitis, and rash. **cachectic f.**, **cachexial f.**, kala-azar. **Cameroon f.**, malaria. **camp f.**, typhus. **canicola f.**, Stuttgart disease. **carbuncular f.**, a variety of anthrax affecting cattle and horses, marked by the formation of circumscribed swellings in the skin, which at first are hard, hot, and painful, but later become gangrenous. **catarrhal f.**, herpetic f. **cat-bite f.**, an infectious disease of man transmitted by the bite of a cat, caused by *Pasteurella multocida*, and marked by the formation of an abscess at the site of inoculation. NOTE: Not to be confused with cat-scratch fever, which has also been called cat-bite fever. **cat-scratch f.**, a benign, subacute, regional lymphadenitis resulting from the scratch or bite of a cat or a scratch from a surface contaminated by a cat; it is marked by a primary papular eruption at the site of inoculation which may develop into a small ulcer. Occasionally, a meningoencephalitis results. A virus is suspected as the cause. Cf. *cat-bite f.* **central f.**, sustained fever resulting from damage to the thermoregulatory centers of the hypothalamus. **Central Asian hemorrhagic f.**, a tickborne hemorrhagic fever occurring in Kazakhstan and Uzbekistan, U.S.S.R.; it is thought to be transmitted by the tick *Hyalomma anatolicum*. **cerebrospinal f.**, epidemic cerebrospinal meningitis. **cesspool f.**, typhoid f. **Chagres f.**, originally, a severe type of malaria occurring along the Chagres River in Panama; it is also applied to fever caused by the Chagres virus, which occurs in Panama. Called also *Panama f.* **Charcot's f.**, intermittent hepatic f. **child-**

bed f., puerperal f. **Choix f.**, a disease observed in northern Mexico, identical with Rocky Mountain spotted fever. **Colombian tick f.**, a variety of spotted fever occurring in Colombia, identical with Rocky Mountain spotted fever. **Colorado tick f.**, a nonexanthematous febrile disease occurring in the Rocky Mountain regions of the United States where the tick vector (*Dermacentor andersoni*) of the causative virus is prevalent. **Congolian red f.**, murine typhus. **continued f.**, one which does not vary more than 1.0° to 1.5° F. in twenty-four hours. **continuous f.**, persistently elevated body temperature, showing no or little variation and never falling to normal during any 24-hour period. **Corsican f.**, a sort of malaria occurring in Corsica. **cotton-mill f.**, byssinosis. **Crimean hemorrhagic f.**, a hemorrhagic fever transmitted by the tick *Hyalomma marginatum*, occurring in the Crimea and the Lower Don and Volga River Valleys of the U.S.S.R. **Cyprus f.**, brucellosis. **dandy f.**, dengue. **deer fly f.**, tularemia. **dehydration f.**, 1. inanition f. 2. fever due to loss of body water or inadequate fluid intake, sometimes occurring as a postoperative complication. **dengue f.**, dengue. **desert f.**, the primary stage of coccidioidomycosis. **digestive f.**, a slight rise of temperature during the process of digestion. **double continued f.**, a fever resembling typhoid fever occurring in China. **double quartan f.**, a form of malaria in which the paroxysms occur on two successive days with a one day interval. **drug f.**, a febrile reaction marked by prolonged temperature elevation during the course of administration of a drug, such as an antibiotic, antineoplastic, vaccine, etc.; it may be associated with vasculitis affecting small vessels, and usually disappears rapidly on discontinuance of the drug. **Dumdum f.**, kala-azar. **dust f.**, brucellosis. **Dutton's relapsing f.**, the central African form of relapsing fever caused by *Borrelia duttonii*. **East Coast f.**, a form of piroplasmosis of cattle in Africa, caused by *Theileria (Piroplasma) parva*, and marked by high fever and swelling of the lymph nodes. The organism is transmitted by the bite of several ticks of the genus *Rhipicephalus*. Called also *African Coast f.*, *Rhodesian f.*, *Rhodesian red-water f.*, *Rhodesian tick f.*, and *lymphadenitis aleucaeica parasitaria*. **elephantoid f.**, a recurrent acute febrile condition occurring with filariasis; it may be associated with elephantiasis or lymphangitis. **enteric f.**, 1. typhoid f. 2. paratyphoid (def. 2). **entericoid f.**, any fever which resembles typhoid fever in its clinical manifestations. **ephemeral f.**, a slight fever persisting or lasting only a day or two. **ephemeral f. of cattle**, stiff sickness; three-day sickness: an acute infectious disease symptomatically resembling a benign form of African horse sickness, which affects cattle in South Africa. It is characterized by high fever, stiffness, and lameness, and is thought to be of viral origin. **epidemic catarrhal f.**, influenza. **epidemic hemorrhagic f.**, an acute infectious disease characterized by fever, purpura, peripheral vascular collapse, and acute renal failure, caused by a filtrable agent thought to be transmitted to man by mites or chiggers; called also *hemorrhagic nephrosonephritis*, *hemorrhagic f. with renal syndrome*, and *nephropathia epidemica*. **equine biliary f.**, biliary f. of horses. **eruptive f.**, any fever accompanied by an eruption on the skin. **eruptive Mediterranean f.**, boutonneuse f. **essential f.**, fever for which no cause has been found. **estivoautumnal f.**, a type of falciparum malaria that was formerly endemic in the United States. **etiocholanolone f.**, a rare disorder in which periodic fever is accompanied by high plasma levels of unconjugated etiocholanolone; it may be associated or confused with other disorders, such as adrenogenital syndrome and familial Mediterranean fever. **exanthematic f. of Marseille**, boutonneuse f. **exanthematous f.**, eruptive f. **familial Mediterranean f.**, a hereditary disease transmitted in an autosomal recessive manner, usually occurring in Armenians and Sephardic Jews, and characterized by short recurrent attacks of fever with pain in the abdomen, chest, or joints and erythema resembling that seen in erysipelas; it is sometimes complicated by amyloidosis. Called also *benign paroxysmal peritonitis*, *periodic peritonitis*, *familial recurrent polyserositis*, and *periodic or recurrent polyserositis*. **famine f.**, 1. relapsing fever. 2. typhus. **Far East hemorrhagic f.**, epidemic hemorrhagic f. **fatigue f.**, a febrile attack due to overexercise and the absorption of waste products. **ferment f.**, a fever produced by the subcutaneous injection of an enzyme. **field f.**, harvest f. **five-day f.**, trench f. **flood f.**, scrub typhus. **fog f.**, a highly fatal, acute adenomatoid reaction in the lungs of cattle, believed to be a response to chemicals generated in the rumen by cattle grazing on "fog" (second growth pasture grasses). **food f.**, sudden fever with digestive disturbance lasting from a few days to some weeks; once attributed to intestinal autointoxication, these symptoms may be due to viral gastroenteritis. **Fort Bragg f.**, pretibial f. **foundryman's f.**, metal fume f. **Gibraltar f.**, brucellosis. **glandular f.**, infectious mononucleosis. **goat f.**, **goat's milk f.**, brucellosis. **Hankow f.**, schistosomiasis japonica. **harvest f.**, a form of spirochetosis affecting harvest workers; it is marked by fever, conjunctivitis, stupor, diarrhea, vomiting, and abdominal pains, and is caused by *Leptospira grippotyphosa*; called also *field f.* **Hasami f.**, a mild fever of Japan caused by *Leptospira autumnalis*. **Haverhill f.**, the bacillary form of rat-bite fever

(q.v.), caused by *Streptobacillus moniliformis*, and transmitted through contaminated raw milk and its products. It was first reported in an epidemic in Haverhill, Massachusetts in 1925. **hay f.**, a seasonal variety of allergic rhinitis, marked by acute conjunctivitis with lacrimation and itching, swelling of the nasal mucosa, nasal catarrh, sudden attacks of sneezing, and often with asthmatic symptoms. It is regarded as an anaphylactic or allergic condition excited by a specific allergen (e.g., a pollen) to which the individual is sensitized. Known by various names, including *allergic conjunctivitis* and *pollenosis*. Cf. *nonseasonal allergic rhinitis*. **hay f., nonseasonal, hay f., perennial**, nonseasonal allergic rhinitis. **hectic f.**, a daily recurring fever with profound sweating, chills, and flushed countenance. **hemoglobinuric f.**, malaria attended with hemoglobinuria; see *blackwater f.* **hemorrhagic f's**, a group of viral diseases of diverse etiology but having many similar clinical characteristics; increased capillary permeability, leukopenia, and thrombocytopenia are common to all. Hemorrhagic fevers are characterized by sudden onset, fever, headache, generalized myalgia, backache, conjunctivitis, and severe prostration, followed by various hemorrhagic symptoms, which result in focal inflammatory reaction and necrosis resulting in mild leukocytosis. **hemorrhagic f. with renal syndrome**, epidemic hemorrhagic f. **herpetic f.**, primary infection with herpes simplex virus, with diffuse involvement of mucous membranes of the mouth and lips and the surrounding skin; fever and sometimes chills occur. **Herxheimer's f.**, a fever that sometimes accompanies a Jarisch-Herxheimer reaction. **hospital f.**, epidemic typhus. **hyperpyrexial f.**, a fever with very high temperature (104 to 107° F.). **hysterical f.**, an irregular elevation of temperature without general symptoms, sometimes seen in hysteria. **icterohemorrhagic f.**, leptospiral jaundice. **Ikwa f.**, trench f. **inanimation f.**, a transitory fever that frequently occurs in infants during the first few days of life; it is believed to be due to dehydration and is also called *dehydration f.* **induced f.**, fever brought on artificially, as by the injection of malarial organisms or typhoid vaccine. **intermenstrual f.**, fever sometimes seen in women between menstrual periods. **intermittent f.**, an attack of malaria or other fever characterized by recurring paroxysms of elevated temperature separated by intervals during which the temperature is normal. **intermittent hepatic f.**, a fever occurring intermittently as the result of intermittent impaction of stone in the common duct and inflammation of the bile ducts; called also *Charcot fever* and *Charcot syndrome*. **inundation f.**, scrub typhus. **irritation f.**, a febrile condition due to the presence of irritant materials in the body. **island f.**, scrub typhus. **Jaccoud's dissociated f.**, fever with slow and irregular pulse in tuberculosis meningitis of adults. **jail f.**, epidemic typhus. **Japanese flood f.**, **Japanese river f.**, scrub typhus. **jungle f.**, falciparum malaria occurring in the East Indies. **jungle yellow f.**, a form of yellow fever endemic in parts of Africa and South America; it occurs in or near uncut forest or jungle. **Junin f.**, Argentinian hemorrhagic f. **Kagami f.**, infectious mononucleosis. **Katayama f.**, fever associated with severe schistosomal infections accompanied by hepatosplenomegaly and by eosinophilia. **Kedani f.**, scrub typhus. **Kenya f.**, Kenya typhus. **Kew Gardens spotted f.**, rickettsialpox. **Kinkiang f.**, schistosomiasis japonica. **Korean hemorrhagic f.**, epidemic hemorrhagic fever. **Korin f.**, epidemic hemorrhagic f. **kriim f.**, an endemic fever of Iceland, Faroe, and Greenland. **Kumaon f.**, a form of typhus in India. **Kyoto f.**, a seven-day fever occurring in Kyoto, Japan. **land f.**, a set of symptoms resembling seasickness sometimes experienced when, after an ocean voyage, the ship enters a relatively landlocked body of water. **Lassa f.**, a highly fatal, acute, febrile disease caused by an extremely virulent arenavirus, occurring in West Africa, and characterized by progressively increasing prostration, sore throat, ulcerations of the mouth or throat, rash, and general aches and pains. **lechuguilla f.**, a disease of sheep and goats in western Texas, marked by toxic encephalitis, nephritis, photosensitization, listlessness, icterus, and a yellow discharge from the eyes and nostrils; it is caused by eating the plant *Agave lechuguilla*. Commonly called *swellhead*. **lent f.**, typhoid f. **leprotic f.**, the irregular febrile disturbances seen in the early stages of lepromatous leprosy; a form or a part of the lepra reaction. **Levant f.**, a fever endemic in the Levant; by some believed to be of malarial origin. **Lone Star f.**, Bullis f. **lung f.**, lobar or other pneumonia. **macular f.**, 1. a fever characterized by the presence of macules. 2. former term for typhus. **malarial f.**, malaria. **Malta f.**, **Maltese f.**, brucellosis. **Manchurian f.**, a disease similar to typhoid fever or typhus, occurring in Manchuria. **Marseilles f.**, boutonneuse f. **marsh f.**, 1. leptospiral jaundice. 2. malaria. **Mediterranean f.**, 1. brucellosis. 2. boutonneuse f. **Mediterranean exanthematous f.**, boutonneuse f. **Mediterranean yellow f.**, leptospiral jaundice. **metal fume f.**, an occupational disorder occurring in those engaged in welding and other metallic operations and due to inhalation of volatilized metals; it is characterized by sudden onset of thirst and a metallic taste in the mouth, followed by high fever, muscular aches and pains, shaking chills, headache, weakness, diaphoresis, and leukocytosis. The symptoms usually subside

within 24 to 48 hours, but repeated attacks are common. The disorder includes *brassfounder's f.* (*brass chill*, *brazier's chill*, *brassfounder's ague*) and *spelter's f.* (*spelter's chill*, *zinc chill*, *zinc fume f.*). Cf. *polymer fume f.* **Meuse f.**, trench f. **mianeh f.**, a form of relapsing fever in Iran. **milk f.**, 1. a fever said to attend the establishment of lactation after delivery. 2. an endemic fever said to be caused by the use of unwholesome cow's milk. 3. a form of paralysis affecting cows near delivery; usually accompanied by hypocalcemia, it is due to a metabolic disorder. Called also *parturient apoplexy*, *parturient fever*, and *parturient paralysis*. **Mossman f.**, a febrile disease endemic in Queensland, Australia, caused by *Leptospira australis*. **mountain f.**, 1. Colorado tick fever. 2. Rocky Mountain spotted fever. 3. brucellosis. **mountain tick f.**, Colorado tick f. **mud f.**, leptospiral jaundice. **muma f.**, a term applied to elephantoid fever in Samoa. **Murchison-Pel-Ebstein f.**, a type of fever typical of Hodgkin's disease, characterized by irregular episodes of pyrexia of several days' duration, with intervening periods in which the temperature is normal. **nanukayami f.**, nanukayami. **Neapolitan f.**, brucellosis. **night-soil f.**, typhoid f. **nine-mile f.**, a name formerly given to Q fever in mice and laboratory workers; see *Q fever*. **Omsk hemorrhagic f.**, an acute febrile viral disease occurring in Russia, closely resembling Kyasanur forest disease, and characterized by fever, headache, hemorrhagic manifestations, and a high incidence of bronchopneumonia; ticks of the genus *Dermacentor* serve as the vector. **O'nyong-nyong f.**, an epidemic, febrile, viral disease resembling dengue, which occurs in Kenya and Uganda. **Oroya f.**, the acute febrile anemic stage of Carrión's disease. **Pahvant Valley f.**, tularemia. **paludal f.**, malaria. **Panama f.**, Chagres f. **pappataci f.**, phlebotomus f. **paratyphoid f.**, paratyphoid. **parenteric f.**, a disease clinically resembling typhoid fever and paratyphoid fever, but not caused by *Salmonella*. **parrot f.**, psittacosis. **parturient f.**, milk f., def. 3 **Pel-Ebstein f.**, a cyclic fever occasionally seen in Hodgkin's disease and also associated with other diseases, characterized by irregular episodes of pyrexia of several days duration, with intervening afebrile periods lasting for days or weeks. Called also *Murchison-Pel-Ebstein f.*, *Pel-Ebstein pyrexia*, and *Pel-Ebstein symptom*. **periodic f.**, a hereditary condition characterized by repetitive febrile episodes and autonomic disturbances, occurring in precise or irregular cycles of days, weeks, or months. Transmitted as an autosomal dominant trait, it may begin at any time of life and may last for decades with temporary remissions, or may cease. See also *etiocholanolone f.* and *familial Mediterranean f.* **petechial f.**, cerebrospinal meningitis. **Pfeifer's glandular f.**, infectious mononucleosis. **pharyngoconjunctival f.**, a febrile disease caused by an adenovirus, occurring in epidemic form, largely in school children, and characterized by fever, pharyngitis, rhinitis, conjunctivitis, and enlarged cervical lymph nodes; called also *Beal's disease*. **Philippine hemorrhagic f.**, hemorrhagic dengue. **phlebotomus f.**, a febrile disease of short duration, resembling dengue in many of its symptoms, occurring in Mediterranean and Middle East countries, and caused by Naples and Sicilian sandfly fever viruses, which are transmitted by the sandfly, *Phlebotomus papatasi*. Called also *pappataci f.* and *sandfly f.* **pinta f.**, a disease observed in northern Mexico, identical with Rocky Mountain spotted fever. **pneumonic f.**, pneumonia. **polyleptic f.**, relapsing f. **polymer fume f.**, an occupational disorder due to exposure to the products of combustion of polymers, chiefly polytet (also known as Teflon or paratetrafluoroethylene), the manifestations of which are quite similar to those of metal fume fever (q.v.). Called also *Teflon shakes*. **Pomona f.**, a leptospiral infection occurring in Australia, caused by *Leptospira pomona*. **Pontiac f.**, a self-limited disease first noted in an outbreak in 1968 in a single building in Pontiac, Michigan, marked by fever, cough, muscle aches, chills, headache, chest pain, confusion, and pleuritis; it is now known to be caused by a strain of *Legionella pneumophila*. **pretibial f.**, a leptospiral infection marked by a rash on the pretibial region accompanied by lumbar and postorbital pain, malaise, coryza, and fever; it is caused by *Leptospira autumnalis*. Called also *Bushy creek f.* and *Fort Bragg f.* **prison f.**, typhus. **protein f.**, heightened temperature produced by the injection of protein material into the body. **puerperal f.**, septicemia accompanied by fever, in which the focus of infection is a lesion of the mucous membrane of the parturient canal due to trauma during childbirth; the etiologic agent is usually a streptococcus. Called also *childbed f.*, and *puerperal sepsis* or *septicemia*. **pulmonary f.**, pneumonia. **pythogenic f.**, typhoid f. **Q f.** [Q for *query*] a generally self-limited rickettsial infection caused by *Coxiella burnetii* (*Rickettsia diaporica*), characterized by fever, headache, constitutional symptoms, and pneumonitis. Unlike other rickettsial infections, Q fever is usually acquired by inhalation of the agent and it is not marked by a rash. First described in Australia, but worldwide in distribution, it includes Balkan grippé in the Mediterranean area. Called also *Australian Q f.*, *hiberno-vernal bronchopneumonia* and *nine-mile f.* **quartan f.**, see under *malaria*. **quintan f.**, **quintana f.**, trench f. **quotidian f.**, a fever that recurs every day; see under *malaria*. **rabbit f.**, tularemia. **rat-bite f.**, either of two clinically similar but etiologically distinct, acute

infectious diseases, usually transmitted through the bite of a rat, and occurring in a bacillary form caused by *Streptobacillus moniliformis*, and in a spirillary form caused by *Spirillum minor*. In the bacillary form, usually after a latent period of less than ten days, the initial wound heals promptly without inflammation, but after a week or ten days the bite site becomes inflamed, painful, and indurated, followed by adenitis, chills, vomiting, headache, high fever, morbilliform eruption, especially on the hands and feet, and polyarthritides that is often severe. This form also may be associated with ingestion of contaminated raw milk or its products (*Haverhill fever*), in which case there is no initial wound, the first symptoms being systemic. In the spirillary form (*sodoku*), the latent period is most commonly greater than ten days, inflammation recurs at the primary wound site, the rash is less evident than in the bacillary form, arthritis is rare, and the fever is commonly of the relapsing type. **recurrent f.**, relapsing f. **red f.**, dengue. **red f. of Congo**, murine typhus. **red-water f.**, Texas f. **relapsing f.**, any one of a group of acute infectious diseases caused by various species of *Borrelia*, transmitted by lice (*Pediculus humanus*) and ticks (*Ornithodoros*), and marked by alternating periods of fever and apyrexia, each lasting from five to seven days. The disease begins abruptly with chill, headache, neuromuscular pains, fever, and sometimes vomiting. During the febrile periods there is enlargement of the liver and spleen. The organism causing the disease varies in different countries. **re-mittent f.**, a fever in which the diurnal variation is 2° F. or more, but in which the temperature never falls to a normal level; see *malaria*. **rheumatic f.**, a febrile disease occurring as a delayed sequela of infections with group A hemolytic streptococci and characterized by multiple focal inflammatory lesions of the connective tissue structures, especially of the heart, blood vessels, and joints (polyarthritides), and by the presence of Aschoff bodies in the myocardium and skin. Typically, the onset is signalled by the sudden occurrence of fever and joint pain, followed by manifestations of heart and pericardial disease, abdominal pain, skin changes, and chorea. Atypical manifestations, particularly in adults, are not uncommon. Called also *acute articular rheumatism*, *acute rheumatic fever* or *arthritis*, and *polyarthritides rheumatica acuta*. **Rhodesian f.**, East Coast f. **rice-field f.**, a fever affecting workers in the rice harvest in Italy and in Sumatra; it is caused by a species of *Leptospira*. **Rift Valley f.**, a febrile disease caused by an arbovirus, transmitted by mosquitoes of the genera *Aedes*, *Culex*, and *Erethmapodites* and also by contact with tissues and secretions of diseased animals; the symptoms resemble those of dengue. First observed in the Rift Valley of Kenya, it is now seen in Uganda, Natal, and South Africa. It is rarely fatal to man. In animals, it is also known as enzootic hepatitis. **Rio Grande f.**, brucellosis. **river f. of Japan**, scrub typhus. **Robles' f.**, a condition characterized by irregular fever and mild general symptoms, and continuing from two weeks to three months. It occurs in British Honduras. Not to be confused with Robles' disease (onchocerciasis). **rock f.**, brucellosis. **Rocky Mountain spotted f.**, infection with *Rickettsia rickettsii*, transmitted by various ticks, including *Dermacentor andersoni*, *D. variabilis*, *Amblyomma americanum*, and the rabbit tick *Haemaphysalis leporispalustris*. First reported in Rocky Mountain states, the disease has since reported in the eastern U.S. and most other states, as well as in Canada, Mexico, Colombia, and Brazil. The infection follows tick bite by a few days and begins with fever, muscle pain, and weakness, with headache followed in two to four days by a macular petechial eruption that begins on the hands and feet and spreads centripetally to the trunk and face. The sensorium is clouded. The localization of rickettsiae in the intima of arterioles is responsible for microangiopathic thrombohemolytic anemia, nephritis, and meningoencephalitis. Called also *Choix f.*, *pinta f.*, and *tickborne typhus*. It is also known by various names according to geographic area. **Roman f.**, a virulent type of malaria which prevailed in the Campagna of Rome, a low plain surrounding the city. **Russian headache f.**, a dengue-like disease. **sakushu f.**, seven-day fever occurring in autumn epidemics in the Okayama Prefecture of Japan. **Salinem f.**, see under *infection*. **Salonica f.**, trench f. **salt f.**, fever associated with excess of salt in the body, due to the retention by the salt of the water normally eliminated in perspiration. **sandfly f.**, phlebotomus f. **San Joaquin f.**, the primary stage of coccidioidomycosis. **scarlet f.**, infection due to Group A β -hemolytic streptococci, and rarely to other serological types of β -hemolytic streptococci that elaborate erythrogenic toxin. It affects mainly the pharynx, but may affect the skin (wound and burn scarlet fever) or birth canal (puerperal scarlet fever). The signs are those of streptococcal infection (pharyngotonsillitis, cellulitis) or those of endometritis, followed by those of toxic origin, including headache, abdominal pain, nausea, and rarely lymphocytic meningitis and hepatitis, and a cutaneous eruption. The skin lesions are a combination of a generalized flush on the trunk and proximal parts of the extremities and cheeks, and of a pinpoint papular eruption on all parts except the face. The skin folds, such as the antecubital fossae and inguinal folds, are hemorrhagic and nonblanching. The rash may last only a few hours, but typically lasts two to three days before fading. Superficial flaking appears over much of the involved area; confluent peeling over fingers and toes is characteristic. The disease is much milder now than in the

past, and septic complications such as otitis media, mastoiditis, and suppurative lymphadenitis are rare. Immune-complex nephritis and rheumatic fever are complications derived from Group A streptococcal infection. Called also *febris rubra* and *scarlatina*. See also *erythrogenic toxin*, under *toxin*. **septic f.**, fever due to septicemia. **seven-day f.**, 1. a fever affecting Europeans in India, and marked by symptoms similar to those of dengue. 2. benign leptospirosis. 3. nanukayami. 4. sakushu f. **sheep f.**, heartwater. **shin bone f.**, trench f. **ship f.**, epidemic typhus. **shipping f.**, a disease of cattle caused by *Pasteurella haemolytica* in association with a virus; infection occurs when the resistance of the animal is lowered by stress. **shoddy f.**, a febrile disease, with cough, dyspnea, and headache, caused by dust in shoddy factories. **shouten f.**, a disease which is probably a form of dengue. **slime f.**, leptospiral jaundice. **slow f.**, brucellosis. **solar f.**, dengue. **Songo f.**, epidemic hemorrhagic f. **South African tick-bite f.**, an infection in South Africa caused by *Rickettsia conorii*, the etiologic agent of boutonneuse fever, transmitted by the ixodid ticks, *Haemaphysalis leachi*, *Rhipicephalus evertsi*, *R. appendiculatus*, *Amblyomma hebraeum*, and *Hyalomma aegyptium*. **South American hemorrhagic f.**, see *Argentinian hemorrhagic f.* and *Bolivian hemorrhagic f.* **spelter's f.**, metal fume fever caused by fumes in zinc smelters; called also *spelter's chill*, *zinc chill*, and *zinc fume f.* **spirillum f.**, *sodoku* or rat-bite fever due to *Spirillum minus*. **spotted f.**, a febrile disease typically characterized by a skin eruption, such as Rocky Mountain spotted fever, boutonneuse fever, and other infections caused by tick-borne rickettsiae, and typhus and epidemic cerebrospinal meningitis. **sthenic f.**, fever characterized by a full, strong pulse, hot and dry skin, high temperature, thirst, and active delirium. **stiff-neck f.**, epidemic cerebrospinal meningitis. **stockyards f.**, a complex of bacterial and viral diseases of the respiratory system of cattle. **Sumatran mite f.**, a form of scrub typhus transmitted by larvae of *Trombicula deliensis*. **sun f.**, dengue. **swamp f.**, 1. leptospiral jaundice. 2. equine infectious anemia. 3. malaria. **swine f.**, hog cholera. **swine f., African**, a viral disease similar to but more severe than hog cholera, and caused by an immunologically distinct agent; recognized first in Africa and found also in western Europe, Cuba, Brazil, the Dominican Republic, and Haiti. **tertiary f.**, see under *malaria*. **tetanol f.**, cerebrospinal meningitis. **Texas f.**, an infectious disease of cattle caused by the presence in the blood of *Babesia bigemina*, which is introduced by the bite of the ticks *Boophilus annulatus* and *B. microplus*. Called also *bovine piroplasmiasis* and *red-water f.* **Texas tick f.**, Bullis f. **Thai hemorrhagic f.**, hemorrhagic dengue. **therapeutic f.**, pyretotherapy, def. 1. **thermic f.**, sunstroke. **three-day f.**, phlebotomus f. **threshing f.**, irritation of the respiratory tract, headache, and fever, occurring in workers at threshing grain. **tibialgic f.**, trench f. **tick f.**, any infectious disease transmitted by the bite of a tick; the causative parasite may be a rickettsia, as in Rocky Mountain spotted fever; a *Babesia*, as in Texas fever; a *Borrelia*, as in relapsing fever; or a virus, as in Colorado tick fever. **Tobia f.**, a disease observed in Colombia, identical with Rocky Mountain spotted fever. **Tokushima f.**, infectious mononucleosis. **traumatic f.**, one which follows a wound or injury. **trench f.**, a self-limited louseborne rickettsial disease due to *Rochalimaea quintana*, transmitted by the body louse, *Pediculus humanus*, and characterized by intermittent fever, generalized aches and pains, particularly severe in the shins, chills, sweating, vertigo, malaise, typhus-like rash, and multiple relapses. Conditions for spread were met principally during World War I. Called also *quintan f.*, *five-day f.*, *Meuse f.*, *shin bone f.*, *Wolhynia f.*, and *His-Werner disease*. **trypanosome f.**, trypanosomiasis. **tsutsugamushi f.**, scrub typhus. **twelve-day f. of Nigeria**, a dengue-like or typhus-like fever, characterized by abundant rash for several weeks, slight albuminuria, and fever terminating by lysis. **typhoid f.**, infection by *Salmonella typhosa* involving primarily the lymphoid follicles of the ileum. The disease may begin abruptly with chills and fever; there is bacteremia, abdominal distention, splenomegaly, and later bacilluria. Rose-colored macules appear transiently on the skin in the early stage of the disease. Perforation of the bowel occurs in about 5 per cent of untreated cases. **typhoid f., abenteric**, formerly, typhoid fever in which the intestinal tract was thought not to be involved. **typhoid f., ambulatory**, a form in which the symptoms are not severe enough to confine the patient to bed. **typhoid f., apyretic**, a form in which the fever does not rise above 100° F., often remaining normal. **typhomalarial f.**, a fever showing typhoid symptoms, but believed to be malarial in origin; called also *febris undulans*. **typhus f.**, see *typhus*. **undulant f.**, brucellosis. **urethral f., urinary f.**, fever following the use of the urethral bougie, catheter, or sound. **uveoparotid f.**, a manifestation of sarcoidosis, marked by chronic inflammation of the parotid gland and the uvea; it is attended also by chronic iridocyclitis, unilateral facial paralysis, lassitude, and a subfebrile temperature. Called also *febris uveoparotidea* and *Heerfordt's disease*. **Uzbekistan hemorrhagic f.**, a disease related to, and possibly identical with, Crimean hemorrhagic fever; it may be transmitted by the tick *Hyalomma anatolicum*. **vaccinal f.**, the slight fever that sometimes follows vaccination. **valley f.**,

the primary stage of coccidioidomycosis. **van der Scheer's f.**, trench f. **Walcheren f.**, severe malaria endemic in Holland. **war f.**, epidemic typhus. **West African f.**, blackwater f. **West Nile f.**, see under *encephalitis*. **Whitmore's f.**, melioidosis. **Wolhynia f.**, trench f. **wound f.**, traumatic f. **Yangtze Valley f.**, schistosomiasis japonica. **yellow f.**, an acute infectious disease due to a virus, transmitted to man by mosquitoes which acquire the infection either from man (urban type) or from animals (jungle type). It occurs endemically primarily in the tropical regions of South America and Africa, and occasionally in Central America and other areas. It is marked by fever, jaundice, and albuminuria, the jaundice resulting from necrosis of the liver. **Urban yellow fever** affects chiefly persons living in close contact with one another, and is transmitted by *Aedes aegypti*, which usually breeds near human habitations. **Jungle (or sylvan) yellow fever** most often affects those working in or living near forests; it has a variety of mosquito vectors, including several species of *Haemagogus* in South America, and *Aedes africanus* and *A. simpsoni* in Central Africa. Called also *fièvre jaune*, *gelb fieber*, and *virus amaril*. **zinc fume f.**, spelter's f.

F.F.A. free fatty acids.

F.F.T. flicker fusion threshold.

fiat (fi'at), pl. *fi'ant* [L.] let there be made.

fiber (fi'ber) 1. an elongated, threadlike structure; see also *fibra* [NA]. 2. in nutrition, the sum of the constituents of the diet that are not digested by gastrointestinal enzymes; see *dietary f.* **A f's**, myelinated fibers of the somatic nervous system having a diameter of 1μ to 22μ and a conduction velocity of 5 to 120 meters per second; they include the alpha, beta, delta, and gamma fibers. **accelerating f's**, **accelerator f's**, adrenergic fibers that transmit the impulses that accelerate the heart beat; called also *augmentor f's* and *cardiac accelerator f's*. **accessory f's**, those fibers of the zonule of Zinn running perpendicularly to the chief fibers and not reaching the lens of the eye; supporting the fibers running from the ciliary body to the chief fibers and bracing them, including the interciliary fibers and the orbiculociliary fibers. Called also *auxiliary fibers*. **adrenergic f's**, nerve fibers that liberate epinephrine-like substances at the time of passage of nerve impulses across a synapse. **alpha f's**, motor and proprioceptive fibers of the A type having conduction velocities of 70 to 120 meters per second and ranging from 13μ to 22μ in diameter. **alveolar f's**, fibers of the periodontal ligament extending from the cementum of the tooth root to the walls of the alveolus, distinguished as alveolar crest, horizontal, oblique, and apical fibers. Called also *cementoalveolar f's*. **alveolar crest f's**, fibers of the periodontal ligament extending from the cementum of the tooth root to the alveolar crest. **anastomosing f's**, **anastomotic f's**, fibers extending from one muscle bundle or nerve trunk to another. **apical f's**, fibers of the periodontal ligament extending from the cementum of the apical portion of the tooth root to the deepest portion of the alveolus. **archiform f's**, fibrae intercrurales. **arcuate f's**, **external**, fibrae arcuatae externae. **arcuate f's**, **internal**, fibrae arcuatae internae. **arcuate f's** of cerebrum, fibrae arcuatae cerebri. **argentaffin f's**, **argentophil f's**, **argentophilic f's**, reticular f's. **asbestos f's**, fibers formed in degenerating hyaline cartilage by ossification of the collagen fibers. **association f's**, nerve fibers that interconnect portions of the cerebral cortex within a hemisphere. Short association fibers interconnect neighboring gyri; long fibers interconnect more widely separated gyri and are arranged into bundles or fasciculi. **astral f.**, see under *ray*. **augmentor f's**, accelerating f's. **auxiliary f's**, accessory f's. **axial f.**, the axon of a nerve fiber. **B f's**, myelinated preganglionic autonomic axons having a fiber diameter $<3\mu$ and a conduction velocity of 3 to 15 meters per second. **basilar f's**, fibers that form the middle layer of the zona arcuata and the zona pectinata of the basilar membrane in the inner ear; called also *auditory strings*. **Bergmann's f's**, processes which radiate from the molecular layer of the cerebellum and enter the pia. **Berneheimer's f's**, a tract of nerve fibers connecting the optic tract to Luys' body. **beta f's**, touch and temperature fibers of the A type having conduction velocities of 30 to 70 meters per second and ranging from 8μ to 13μ in diameter. **bone f's**, Sharpey's f's. **Brücke's f's**, fibrae meridianales musculi ciliaris. **bulbospiral f's**, spiral muscular fibers forming a portion of the musculature of the atria and ventricles of the heart. **Burdach's f's**, nerve fibers connected with Burdach's nucleus (nucleus cuneatus). **C f's**, unmyelinated postganglionic fibers of the autonomic nervous system, also the unmyelinated fibers found at the dorsal roots, and at free nerve endings, which have a conduction velocity of 0.6 to 2.3 meters per second and a diameter of 0.3μ to 1.3μ . **capsular f's**, the nerve fibers within the internal capsule of the brain. **cardiac accelerator f's**, accelerating f's. **cardiac depressor f's**, vagal fibers to the heart which when activated cause a decrease in cardiac output. **cardiac pressor f's**, sympathetic nerve fibers to the heart which when activated cause an increase in cardiac output. **cemental f's**, the fibers of the periodontal membrane extending from the cementum to the zone of the

intermediate plexus, where their terminations are interspersed with the terminations of the alveolar group of periodontal fibers. **cementoalveolar f's**, alveolar f's. **cerebrospinal f's**, the fibers in the internal capsule of the brain which run from the motor region of the cortex to the pyramids of the medulla oblongata. **chief f's**, those fibers of the zonule of Zinn which run from the ciliary body to the lens, including the orbiculopostero-capsular, the orbiculoanterior-capsular, the ciliopostero-capsular, and cilioequatorial fibers; called also *principal* or *main f's*, and *white f's*. **cholinergic f's**, nerve fibers that liberate acetylcholine at the synapse. **chromatic f.**, the long fiber of chromatin into which the nucleus is resolved during the early stages of karyokinesis and which afterward separates into the chromosomes. **chromosomal f.**, traction f. **cilioequatorial f's**, those chief fibers which pass from the summits of the ciliary processes to the equator of the lens. **ciliopostero-capsular f's**, the most numerous of the chief zonular fibers, arising from the tips and sides of the ciliary processes, passing posteriorly and crossing the anteriorly directed fibers, to insert into the posterior capsule anterior to the insertion of the orbiculopostero-capsular fibers. **circular f's** of ciliary muscle, fibrae circulares musculi ciliaris. **circular f's** of eardrum, see *stratum circulare membranae tympani*. **climbing f's**, **clinging f's**, afferent fibers arising in part from the middle cerebellar peduncle and passing through the granular layer of the cerebellar cortex to terminate on Purkinje cell dendrites. Called also *tendrils f's*. Cf. *mossy f's*. **collagen f's**, **collagenic f's**, collagenous f's. **collagenous f's**, the soft, flexible, white fibers which are the most characteristic constituent of all types of connective tissue, consisting of the protein collagen, and composed of bundles of fibrils that are in turn made up of smaller units (microfibrils) which show a characteristic crossbanding with a major periodicity of 65 nm. See also *fibrous long-spacing collagen* and *segment long-spacing collagen*, under *collagen*, and see also *tropocollagen*. **collateral f's** of Winslow, fibrae intercrurales. **commisural f's**, the nerve fibers which pass between the cortex of opposite hemispheres of the brain, or between two sides of the brain stem or spinal cord. **cone f's**, the fiber-like extensions of the retinal cells on either side of their nuclei. *Outer cone fibers* connect the cone nucleus to the inner segment in the region of the fovea; *inner cone fibers* run from the cone nucleus through the outer part of the anterior plexiform layer and terminate in a cone pedicle. **continuous f's**, the spindle fibers in mitosis which extend from pole to pole. **Corti's f's**, rods of Corti. **cortico-bulbar f's**, **corticonuclear f's**, fibrae corticonucleares. **corticopontine f's**, tractus corticopontinus. **corticospinal f's**, fibrae corticospinales. **dark f's**, muscle fibers rich in sarcoplasm and having a dark appearance. **Darkshevich's f's**, nervous fibers of the cerebrum running from the optic tract to the habenular ganglion. **decussating f's**, any set of interconnecting fibers. **dendritic f's**, fibers which pass in a tree-like form from the cortex to the white substance of the brain. **dental f's**, **Tomes' f's**. **dentinogenic f's**, Korff's f's. **depressor f's**, 1. nerve fibers which, when stimulated reflexly, cause a diminished vasomotor tone and thereby a decrease in arterial pressure. 2. cardiac depressor f's. **dietary f.**, that part of whole grains, vegetables, fruits, and nuts that resists digestion in the gastrointestinal tract; it consists of carbohydrate (cellulose, etc.) and lignin. **Edinger's f's**, fibers in the cerebrum of amphibia, forming part of the visual paths. **elastic f's**, yellowish fibers of elastic quality traversing the intercellular substance of connective tissue; called also *yellow f's*. **endogenous f's**, nerve fibers of the spinal cord which arise from cells the bodies of which are situated inside the cord. **exogenous f's**, fibers of the spinal cord which arise from cells the bodies of which are situated outside the cord. **extraciliary f's**, see *fleece*. **extrafusil f's**, ordinary muscle fibers, as opposed to the intrafusil fibers of the muscle spindle. **forklike f's**, branching fibers in the tunica media of arteries. **gamma f's**, A fibers that conduct touch and pressure impulses and innervate the intrafusil fibers of the muscle spindle; they conduct at velocities of 15 to 40 meters per second and range from 3μ to 7μ in diameter. **Gerdy's f's**, the fibers of the superficial ligament connecting the clefts of the palmar surfaces of the fingers. **gingival f's**, the collagen fibers which make up the gingival corium and support the gingivae. They are attached and adapted to the tooth surface and act as a barrier to the apical migration of the epithelial attachment. **Goll's f's**, fibers extending from Goll's nucleus (nucleus gracilis) to the vermis of the cerebellum. **Gottstein's f's**, the external hair cells, and nerve fibers associated with them, forming a part of the expansion of the auditory nerve in the cochlea. **Gratiolet's radiating f's**, radiatio optica. **gray f's**, unmyelinated nerve fibers, found largely, but not exclusively, in the sympathetic nerves; called also *f's* of *Remak*. **hair f.**, any one of the horny fibers, each containing relics of a nucleus, which make up the main substance of a hair. **half-spindle f's**, spindle fibers in mitosis which extend from one pole to the chromosomes. **Henle's f's**, the fibers of the fenestrated membrane which exists in certain arteries between the external and middle coats; some are elastic, others nucleated. **Herxheimer's f's**, minute spiral fibers in the stratum mucosum of the skin; called also *Herxheimer's spirals*. **heterodesmotic f's**,

white fibers connecting dissimilar gray structures of the nervous system. **homodesmotic f's**, white fibers connecting similar gray structures of the central nervous system. **horizontal f's**, fibers of the periodontal ligament extending horizontally from the cementum of the tooth root to the walls of the alveolus. **impulse-conducting f's**, Purkinje's f's. **interciliary f's**, those accessory fibers running between the ciliary processes. **intercolumnar f's**, *fibrae intercolumnares*. **intercrural f's**, *fibrae intercrurales*. **internuncial f's**, fibers connecting nerve cells. **interzonal f's**, the delicate fibers of achromatin forming the central spindle during karyokinesis. **intrafusal f's**, modified muscle fibers which, surrounded by fluid and enclosed in a connective tissue envelope, compose the muscle spindle. **James f.**, junctional tissue or a tract which bypasses the atrioventricular node, thus permitting ventricular pre-excitation. **Korff's f's**, thickened radial argentophilic collagen fibers at the periphery of the pulp of a tooth, entering the dentin and condensing to form the matrix; called also *dentinogenic f's*. **lattice f's**, reticular f's. **f's of lens**, *fibrae lentis*. **light f's**, muscle fibers poor in sarcoplasm and therefore more transparent than dark fibers. **longitudinal f's of pons**, *fasciculi longitudinales pontis*. **Luschka's f's**, fibers of the levator ani muscle that meet between the anus and the vagina in the perineal body. **Mahaim f's**, fibers arising from the proximal main atrioventricular bundle, which allow early excitation of the base of the ventricular septum. **main f's**, chief f's. **mantle f.**, any one of the cytoplasmic filaments which assist in drawing the daughter chromosomes toward the poles of the central spindles. **Mauthner's f.**, an axon that extends from the metencephalon to the caudal end of the spinal cord of fishes and amphibians, and provides the final common path for impulses to the tail. **medullated f's**, *myelinated f's*. **meridional f's of ciliary muscle**, *fibrae meridionales musculi ciliaris*. **moss f's**, **mossy f's**, thick afferent nerve fibers arising from the inferior cerebellar peduncle and passing into the cerebellar cortex to terminate in numerous branches or mosslike appendages around the cells of the granular layer. Cf. *climbing f's*. **motor f.**, a fiber in a mixed nerve which transmits impulses to a muscle fiber. **Müller's f's**, elongated neuroglial cells traversing all the layers of the retina and forming its most important supporting element; called also *sustentacular f's*, *cells of Müller*, and *radial cells of Müller*. **muscle f.**, any of the cells of skeletal or cardiac muscle tissue. Skeletal muscle fibers are cylindrical multinucleate cells containing contracting myofibrils, across which run transverse striations, enclosed in a sarcolemma. Cardiac muscle fibers contain one or sometimes two nuclei and myofibrils and are separated from one another by an intercalated disk; although striated, cardiac muscle fibers branch to form an interlacing network. See also *muscle cell*, under *cell*. **muscle f's**, **intermediate**, muscle fibers having characteristics intermediate between red and white muscle fibers. **muscle f's**, **red**, the small dark fibers that predominate in red muscle (q.v.). **muscle f's**, **white**, the large pale fibers that predominate in white muscle (q.v.). **myelinated f's**, **myelinated nerve f's**, grayish white nerve fibers whose axons are encased in a myelin sheath, which may in turn be enclosed by a neurilemma; called also *medullated f's* and *medullated nerve f's*. Cf. *unmyelinated f's*. **Nélaton's f's**, Nélaton's sphincter. **nerve f.**, a slender process of a neuron, especially the prolonged axon which conducts nerve impulses away from the cell. Nerve fibers are classified on the basis of the presence or absence of a myelin sheath as myelinated or unmyelinated. **neuroglial f.**, one of the fibrillar structures embedded in the cytoplasm and expansions of neuroglial cells. **nonmedullated f's**, unmyelinated f's. **oblique f's**, fibers of the periodontal ligament which extend obliquely from the cementum of the tooth root to the alveolar bone. **oblique f's of stomach**, *fibrae obliquae ventriculi*. **odontogenic f's**, the fibers forming the layer of connective tissue of the matrix of a tooth surrounding the pulp. **olivocerebellar f's**, see *tractus olivocerebellaris*. **orbiculoanteriorcapsular f's**, those chief fibers which have the most posterior and internal position, lying in close relation to the anterior boundary of the vitreous. **orbiculociliary f's**, those accessory fibers which pass from the pars orbicularis to the ciliary processes. **orbiculoposterocapsular f's**, those chief fibers which spring from the prolongation of the hyaloid membrane investing the ciliary ring. **ostecollagenous f's**, fibers gathered together into bundles and united by a special binding substance in the interstitial substance of bone. **osteogenic f's**, osteogenic f's. **osteogenic f's**, precollagenous fibers formed by osteoclasts and becoming the fibrous component of bone matrix. **oxytalan f.**, a connective tissue fiber, resistant to acid hydrolysis, found in structures subjected to mechanical stress, such as tendons, ligaments, adventitia, and connective tissue sheaths that surround the skin appendages. **perforating f's**, Sharpey's f's. **periventricular f's**, *fibrae periventriculares*. **pilomotor f's**, unmyelinated nerve fibers going to the small muscles of the hair follicles. **postcommissural f's**, the fibers of the posterior commissure lying just behind the pineal body. **postganglionic f's**, fibers constituting a postganglionic neuron. **precollagenous f's**, a name given reticular fibers on the supposition that they are immature collagenous fibers.

precommissural f's (*obs.*), fibers of the anterior commissure in the lamina terminalis. **preganglionic f's**, fibers constituting a preganglionic neuron. **pressor f's**, 1. nerve fibers which, when stimulated reflexly, cause or increase vasomotor tone. 2. cardiac pressor f's. **principal f's**, 1. chief f's. 2. fibers of the periodontal ligament, which are collagen fibers arranged in bundles along the length of the root of a tooth, and suspend and anchor the tooth to the alveolus. They include the transseptal, alveolar crest, horizontal, oblique, and apical fibers. **projection f's**, a term applied to all the bundles of axons which connect the cerebral cortex with the subcortical centers, the brain stem, and the spinal cord; called also *projection tract*. **Prussak's f's**, two short fibers from the end of the short process of the malleus to the notch of Rivinus. **Purkinje's f's**, modified cardiac muscle fibers in the subendothelial tissue that rapidly transmit impulses in the heart and serve to coordinate contraction of the heart; dense networks of these fibers form the sinoatrial and atrioventricular nodes. **pyramidal f's of medulla oblongata**, *fibrae pyramidales medullae oblongatae*. **radiating f's of anterior chondrosternal ligaments**, *ligamenta sternocostalia radiata*. **radiating f's of eardrum**, see *stratum radiatum membranae tympani*. **radicular f's**, fibers in the roots of the spinal nerves. **Rasmussen's nerve f's**, efferent fibers in both the vestibular and cochlear divisions of the eighth cranial nerve, which originate bilaterally from the vicinity of the superior olive. **Reissner's f.**, a highly refractive longitudinal fiber in the central canal of the spinal cord. **f's of Remak**, gray f's. **reticular f's**, immature connective tissue fibers, staining with silver, forming the reticular framework of lymphoid and myeloid tissue and occurring also in the interstitial tissue of glandular organs, the papillary layer of the skin, and elsewhere; called also *argentaffin f's*, *argentophilic f's*, *lattice f's*, and *Gitterfasern*. **Retzius' f's**, the stiff filaments of Deiters' cells in the organ of Corti. **Ritter's f.**, a fiber in the axis of a retinal rod, probably a nerve fiber. **rod f's**, the fiber portion of the rod cells of the retina. **Rolando's f's** (*obs.*), *fibrae arcuatae externae*. **Sappey's f's**, smooth muscle fibers in the check ligaments of the eye near their orbital attachments. **Sharpey's f's**, 1. collagenous fibers that pass from the periosteum and are embedded in the outer circumferential and interstitial lamellae of bone; called also *bone f's*. 2. terminal portions of principal fibers that insert into the cementum of a tooth. Called also *perforating f's*. **short association f's**, fibers in the cerebrum that connect adjacent gyri. **sinospiral f's**, spiral muscular fibers forming a portion of the musculature of the atria and ventricles of the heart. **spindle f's**, the microtubules radiating from the centrioles during mitosis and forming a spindle-shaped configuration. See *spindle*. **Stilling's f's**, a term applied, probably incorrectly, to association fibers of the cerebellum; more correctly refers to the reticular formation of the medulla oblongata. **sudomotor f's** unmyelinated nerve fibers going to the sweat glands. **sustentacular f's**, Müller's f's. **T f.**, a nerve fiber that branches at right angles from the axon of a nerve cell. **tendrill f's**, climbing f's. **Tomes' f's**, branching processes of the odontoblasts in the dentinal canals; called also *dentinal f's*. **traction f's**, the fibers of the spindle in mitosis along which the daughter chromosomes move apart; called also *chromosomal f's*. **transilient f's**, short association fibers, especially those that pass from one gyrus to another not next to it. **transseptal f's**, fibers of the periodontal ligament extending interproximally over the interdental septum, their ends being embedded in the cementum of adjacent teeth. **transverse f's of pons**, *fibrae pontis transversae*. **ultraterminal f.**, a thin unmyelinated twig given off from the ramifications of the axon in the motor plate. **unmyelinated f's**, **unmyelinated nerve f's**, nerve fibers (axons) that lack the myelin sheath but may be enclosed by a neurilemma. Called also *nonmedullated f's* and *nonmedullated nerve f's*. Cf. *myelinated f's*. **varicose f's**, certain myelinated fibers which have no neurilemma; after death a fluid accumulates between the myelin and the axon, giving the fibers a varicose appearance. **vasomotor f's**, unmyelinated nerve fibers going chiefly to arteriolar muscles. **von Monakow's f's**, ansa lenticularis. **Weissmann's f's**, fibers within the muscle spindle. **white f's**, collagenous f's. **yellow f's**, elastic f's. **zonular f's**, *fibrae zonulares*.

fibercolonoscope (fi'ber-ko-lōn'-o-skōp) a fiberscope for viewing the colon.

fibergastroscope (fi'ber-gas'tro-skōp) a fiberscope for viewing the stomach.

fiber-illuminated (fi'ber-il-loo'min-a'ted) transmitting light by means of bundles of glass or plastic fibers, utilizing a lens system to transmit the image; said of endoscopes of such design.

fiberoptic (fi'ber-op'tik) pertaining to fiberoptics; coated with glass or plastic fibers having special optical properties.

fiberoptics (fi'ber-op'tiks) the transmission of an image along flexible bundles of coated parallel glass or plastic fibers that propagate light by internal reflections.

fiberscope (fi'ber-skōp) a flexible endoscope whose lumen is coated with glass or plastic fibers having special optical properties; see *fiberoptics*.

Fibiger (fi'bi-ger) Johannes Andreas Grib, Danish pathologist,

1867-1928; winner of the Nobel prize in physiology and medicine for 1926.

fibra (fi'brah), pl. *fi'brae* [L.] [NA] a fiber: a general term designating an elongated, threadlike structure. **fi'brae annula' res**, see *pars annularis vaginae fibrosae digitorum manus* and *pars annularis vaginae fibrosae digitorum pedis*. **fi'brae arcua'tae cer'e'bri** [NA], arcuate fibers of cerebrum: short association fibers within the cerebral cortex, connecting adjacent gyri; called also *fibrae propriae*. **fi'brae arcua'tae exter'nae** [NA], external arcuate fibers: fibers that arise from the arcuate nuclei and run laterally over the surface of the medulla oblongata to reach the cerebellum by way of the inferior cerebellar peduncle. **fi'brae arcua'tae inter'nae** [NA], internal arcuate fibers: fibers that arise from the nucleus cuneatus and nucleus gracilis and pass ventromedially around the central gray substance of the medulla oblongata to form the decussation of the medial lemniscus. **fi'brae cerebello-oliva' res**, see *tractus olivocerebellaris*. **fi'brae circula' res mus'culi cilia'ris** [NA], circular fibers: fibers forming a fairly discrete portion of the ciliary muscle and extending around the apex of the ciliary body close to the root of the iris. Called also *Müller's muscle*. **fi'brae corticonuclea' res** [NA], corticonuclear fibers: longitudinal fibers of the pyramidal tract that arise in the cerebral cortex, descend in the internal capsule, and synapse in the various motor nuclei of the mesencephalon, pons, and medulla oblongata. Called also *corticobulbar fibers*. **fi'brae corticoponti' nae** [NA], corticopontine fibers: former NA term for *tractus corticopontinus*. **fi'brae corticoreticula' res** [NA], nerve fibers that arise chiefly in the sensorimotor areas of the cerebral cortex, descend with corticospinal fibers, and synapse with cells of the reticular formation, especially in the pons and medulla oblongata. **fi'brae corticospina' les** [NA], corticospinal fibers: longitudinal fibers that arise in the cerebral cortex, descend in the internal capsule, mesencephalon, pons, and pyramids of the medulla oblongata and which form, upon reaching the spinal cord, the pyramidal (corticospinal) tracts. **fi'brae intercru'ra' les** [NA], intercru'ral fibers: fibers joining the medial and lateral crura of the superficial inguinal ring; called also *Cooper's* or *Scarpa's fascia*, *Todd's process*, and *collateral fibers of Winslow*. **fi'brae len'tis** [NA], fibers of lens: long bands, derived from the epithelium, that make up the substance of the lens. **fi'brae meridiona' les** [Brue'cke], *fibrae merionales musculi ciliaris*. **fi'brae meridiona' les mus'culi cilia'ris** [NA], meridional fibers of ciliary muscle: fibers of the ciliary muscle that run from the pectinate ligament toward the ciliary processes; called also *fibrae merionales* [Brue'cke] and *Brücke's fibers*. **fi'brae obli' quae ventric'uli** [NA], oblique fibers of stomach: the inner, obliquely coursing fibers of the muscular tunic of the stomach. **fi'brae periventricula' res** [NA], periventricular fibers: fibers that arise from the hypothalamus, then descend in the central gray matter through the tegmentum of the mesencephalon and the reticular formation of the pons and medulla oblongata; some are found in the dorsal longitudinal fasciculus. **fi'brae pon'tis profun'dae**, the more deeply situated of the *fibrae pontis transversae*. **fi'brae pon'tis superficia' les**, the more superficial of the *fibrae pontis transversae*. **fi'brae pon'tis transver'sae** [NA], transverse fibers of pons: fibers within the ventral part of the pons which arise from the pontine nuclei and run laterally to form the middle cerebellar peduncles. Most of these fibers cross the midline. **fi'brae pro'priae**, *fibrae arcuatae cerebri*. **fi'brae pyramida' les medul'lae oblonga'tae**, former NA term for the portion of the pyramidal tract in the ventromedial part of the medulla oblongata; called also *fasciculi pyramidales medulla oblongatae* or *pyramidal fibers of medulla oblongata*. **fi'brae zonula' res** [NA], zonular fibers: the fibers that anchor the lens capsule to the ciliary body and the retina; called also *aponeurosis of Zinn*.

fibrae (fi'bre) [L.] plural of *fibra*.

fibre (fi'ber) fiber.

fiberscope (fi'ber-sköp) fiberscope.

fibril (fi'bril) [L. *fibrilla*] a minute fiber or filament; often a component of a compound fiber. **border f's**, myoglia. **collagen f's**, delicate fibrils of collagen in connective tissue, usually cemented together in wavy bundles. Cf. *fibroblast*. **dental f's**, component fibrils of the dental matrix. **Dirck's f's**, fibrils of elastic tissue binding together the layers of elastic fibers of the tunica media of an artery. **Ebner's f's**, threadlike fibrils in the dentin and in the cementum of a tooth. **fibrogia f's**, see *fibrogia*. **muscle f.**, **muscular f.**, myofibril. **nerve f.**, an axon. **side f. of Golgi**, a delicate twig given off at right angles from a neuraxon near its junction with the ganglion cells. **Tomes' f's**, see under *fiber*.

fibrilla (fi-bril'ah), pl. *fibril'lae* [L.] a fibril.

fibrillae (fi-bril'e) [L.] plural of *fibrilla*.

fibrillar, fibrillary (fi'bril-lar, fi'bril-lär-e) pertaining to a fibril or to fibrils.

fibrillated (fi'bril-lät-ed) made up of fibrils.

fibrillation (fi-bril-la'shun) 1. the quality of being fibrillar. 2. a small, local involuntary contraction of muscle, invisible under the skin, resulting from spontaneous activation of single muscle

cells or muscle fibers. 3. the initial degenerative changes in osteoarthritis, characterized by softening of the articular cartilage and development of vertical clefts between groups of cartilage cells. **atrial f.**, atrial arrhythmia characterized by rapid randomized contractions of the atrial myocardium, causing a totally irregular, often rapid ventricular rate. **auricular f.**, atrial f. **ventricular f.**, arrhythmia characterized by fibrillary contractions of the ventricular muscle due to rapid repetitive excitation of myocardial fibers without coordinated contraction of the ventricle, an expression of randomized circus movement or of an ectopic focus with a very rapid cycle.

Fibrillenstruktur (fi'ril-len-shtrook'tur) [Ger.] the term used to describe the pattern of separate myofibrils that is typical of white skeletal muscles. Cf. *Felderstruktur*.

fibrilloblast (fi-bril'o-blast) [fibril + Gr. *blastos* germ] odontoblast.

fibrillogenesis (fi-bril'o-jen'ē-sis) the formation of fibrillae.

fibrillolysis (fi'bril-lol'i-sis) the destruction or dissolution of fibrils or fibrillae.

fibrillolytic (fi'bril-o-lit'ik) destroying or dissolving fibrillae.

fibrin (fi'brin) the insoluble protein formed from fibrinogen by the proteolytic action of thrombin during normal clotting of blood. Fibrin forms the essential portion of the blood clot. **gluten f.**, a form of fibrin from the seeds of various plants. **Henle's f.**, fibrin formed by precipitating semen with water. **myosin f.**, an insoluble variety of myosin, probably actomyosin. **stroma f.**, fibrin obtained from the stroma of blood corpuscles. **vegetable f.**, gluten f.

fibrinase (fi'brin-ās) Factor XIII; see *coagulation factors*, under *factor*.

fibrinocellular (fi'brī-no-sel'u-lar) made up of fibrin and cells.

fibrinogen (fi-brin'o-jen) [fibrin + Gr. *gennan* to produce] 1. Factor I; see *coagulation factors*, under *factor*. 2. human fibrinogen: a sterile fraction of normal human plasma, dried from the frozen state, which in solution has the property of being converted into soluble fibrin when thrombin is added; administered by intravenous infusion to increase the coagulability of the blood.

fibrinogenase (fi'brin-oj'ē-nās) [fibrinogen + -ase] thrombin.

fibrinogenemia (fi-brin'o-jē-ne'me-ah) hyperfibrinogenemia.

fibrinogenesis (fi'brī-no-jen'ē-sis) the production or formation of fibrin.

fibrinogenic (fi'brī-no-jen'ik) producing or causing the formation of fibrin.

fibrinogenolysis (fi'brī-no-jē-nol'i-sis) [fibrinogen + Gr. *lysis* dissolution] the dissolution or inactivation of fibrinogen in the blood.

fibrinogenolytic (fi'brī-no-jen'o-lit'ik) pertaining to or inducing fibrinogenolysis.

fibrinogenopenia (fi-brin'o-jen'o-pe'ne-ah) deficiency of fibrinogen in the blood.

fibrinogenopenic (fi'brin-o-jen'o-pe'nik) pertaining to or caused by fibrinogenopenia.

fibrinogenous (fi'brī-noj'ē-nus) caused by fibrin, or resulting from the formation of fibrin.

fibrinoid (fi'brī-noid) [fibrin + Gr. *eidos* form] 1. resembling fibrin. 2. a homogeneous, eosinophilic, refractile, relatively acellular material with some of the tinctorial properties of fibrin.

fibrinokinase (fi'brī-no-ki'nās) a non-water-soluble plasminogen activator derived from animal tissues; called also *tissue activator*.

fibrinolysin (fi'brī-nol'i-sin) 1. plasmin. 2. a commercial preparation of proteolytic enzyme formed from profibrinolysin by the action of physical agents or by specific bacterial kinases; used to promote dissolutions of thrombi. **seminal f.**, an enzyme in human semen that liquefies the clotted semen.

fibrinolysis (fi'brī-nol'i-sis) [fibrin + Gr. *lysis* dissolution] the dissolution of fibrin by enzymatic action.

fibrinolytic (fi'brī-no-lit'ik) pertaining to, characterized by, or causing fibrinolysis.

fibrinopenia (fi'brī-no-pe'ne-ah) [fibrin + Gr. *penia* poverty] deficiency of fibrinogen in the blood.

fibrinopeptide (fi'brī-no-pep'tid) a substance split off from fibrinogen, during coagulation, by the action of thrombin.

fibrinoplastic (fi'brī-no-plas'tik) of the nature of fibrinoplastic.

fibrinoplastin (fi'brī-no-plas'tin) paraglobulin. **Schmidt's f.**, paraglobulin.

fibrinoplatelet (fi'brin-o-plät'let) composed of fibrin and platelets, as a blood clot.

fibrinopurulent (fi'brī-no-pu'roo-lent) characterized by the presence of both fibrin and pus.

fibrinorrhea (fi'brī-no-re'ah) a profuse discharge containing fibrin.

fibrinoscopy (fi-brī-nos'ko-pe) [fibrin + Gr. *skopein* to examine] inoscopy.

fibrinose (fi'brī-nōs) an albumose derived from fibrin.

fibrinous (fi/'brī-nus) pertaining to or of the nature of fibrin.

fibrinuria (fi/'brin-u're-ah) the presence of fibrin in the urine.

fibro- (fi/'bro) [L. *fibra* fiber] a combining form denoting relationship to fibers.

fibroadenia (fi/'bro-ah-de'ne-ah) [*fibro-* + Gr. *adēn* gland] fibroid degeneration of gland tissue, especially the reduction in lymphocytes and increase in stroma in the malpighian bodies in Banti's disease.

fibroadenoma (fi/'bro-ad'ē-no'mah) adenoma containing fibrous tissue. **giant f. of the breast**, a fibroadenoma of large size that may involve much of the mammary gland.

fibroadenosis (fi/'bro-ad'ē-no'sis) a nodular condition of the breast not due to neoplasm.

fibroadipose (fi/'bro-ad'i-pōs) both fibrous and fatty.

fibroangioma (fi/'bro-an'je-o'mah) an angioma containing much fibrous tissue. **nasopharyngeal f.**, see under *angiofibroma*.

fibroareolar (fi/'bro-ah-re'o-lar) [*fibro-* + L. *areola*] both fibrous and areolar.

fibroatrophy (fi/'bro-at'ro-fe) a combination of fibrosis and atrophy.

fibroblast (fi/'bro-blast) [*fibro-* + Gr. *blastos* germ] 1. a connective tissue cell; a flat elongated cell with cytoplasmic processes at each end, having a flat, oval, vesicular nucleus. Fibroblasts, which differentiate into chondroblasts, collagenoblasts, and osteoblasts, form the fibrous tissues in the body, tendons, aponeuroses, supporting and binding tissues of all sorts. Called also *fibrocyte* and *desmocyte*. 2. collagenoblast; the collagen-producing cell. Such cells also proliferate at the site of chronic inflammation. **pericryptal f's**, flattened fibroblasts forming a sheath around the intestinal glands of the colon.

fibroblastic (fi/'bro-blas'tik) 1. pertaining to fibroblasts. 2. fibroplastic.

fibroblastoma (fi/'bro-blas-to'mah) a tumor arising from a fibroblast; such tumors are now differentiated as fibromas or fibrosarcomas. **perineural f.**, a tumor arising from the connective tissue sheath of a neuron, as an acoustic neuroma.

fibrobronchitis (fi/'bro-brong-ki'tis) croupous bronchitis.

fibrocalcific (fi/'bro-kal-sif'ik) pertaining to or characterized by partially calcified fibrous tissue.

fibrocarcinoma (fi/'bro-kar'si-no'mah) scirrhus carcinoma.

fibrocartilage (fi/'bro-kar'ti-lij) a type of cartilage made up of typical cartilage cells (chondrocytes), with parallel thick, compact collagenous bundles forming the interstitial substances, separated by narrow clefts enclosing the encapsulated cells; called also *stratified cartilage*. For names of specific structures composed of such tissue, see under *fibrocartilago*. **basal f.**, fibrocartilago basalis. **basilar f.**, synchondrosis sphenoccipitalis. **circumferential f.**, fibrocartilage that forms a rim about a joint cavity. **connecting f.**, a disk of fibrocartilage that attaches opposing bones to each other by synchondrosis; called also *spongy f.* **cotyloid f.**, labrum acetabulare. **elastic f.**, fibrocartilage containing elastic fibers. **interarticular f.**, an articular disk (def. 1); see terms beginning *discus articularis*, under *discus*. **intervertebral f's**, disci intervertebrales. **semilunar f's**, crescent-shaped structures resting on the articulating surfaces of the upper end of the tibia, increasing the concavity of the tibial condyles and acting as cushions or shock absorbers; the lateral and medial menisci. **spongy f.**, connecting f. **stratiform f.**, cartilage such as that lining the bony grooves lodging certain tendons. **white f.**, fibrocartilage in which strong bundles of white fibrous tissue predominate. **yellow f.**, fibrocartilage containing bundles of yellow elastic fibers but with little or no white fibrous tissue.

fibrocartilagines (fi/'bro-kar'ti-laj'i-nēz) [L.] plural of *fibrocartilago*.

fibrocartilaginous (fi/'bro-kar'ti-laj'i-nus) pertaining to or composed of fibrocartilage.

fibrocartilago (fi/'bro-kar'ti-lah'go), pl. *fibrocartilagines* [L.] [NA] fibrocartilage: a general term for an anatomical structure composed of cartilage the matrix of which contains a considerable amount of fibrous tissue; called also *stratified cartilage*. **f. basalis**, basal fibrocartilage: the cartilage that fills the foramen lacerum of the skull. **f. basilaris**, synchondrosis sphenoccipitalis. **fibrocartilagines intervertebrales**, disci intervertebrales. **f. navicularis**, a fibrocartilaginous facet on the dorsal surface of the plantar calcaneonavicular ligament that helps form the articular cavity for the head of the talus.

fibrocasseous (fi/'bro-ka'se-us) both fibrous and caseous.

fibrocellular (fi/'bro-sel'u-lar) partly fibrous and partly cellular.

fibrochondritis (fi/'bro-kon-dri'tis) [*fibro-* + *chondritis*] inflammation of a fibrocartilage.

fibrochondroma (fi/'bro-kon-dro'mah) [*fibro-* + *chondroma*] chondroma that contains areas of fibrosis.

fibrocollagenous (fi/'bro-kol-laj'ē-nus) both fibrous and collagenous; pertaining to or composed of fibrous tissue mainly composed of collagen.

fibrocyst (fi/'bro-sist) [*fibro-* + Gr. *kystis* sac, bladder] cystic fibroma.

fibrocystic (fi/'bro-sis'tik) characterized by the development of cystic spaces, especially in relation to some duct or gland, accompanied by an overgrowth of fibrous tissue.

fibrocystoma (fi/'bro-sis-to'mah) cystic fibroma.

fibrocyte (fi/'bro-sit) [*fibro-* + Gr. *kutos* hollow vessel] fibroblast.

fibrocytogenesis (fi/'bro-si'to-jen'ē-sis) [*fibrocyte* + Gr. *genesis* production] the development of connective tissue fibrils.

fibrodysplasia (fi/'bro-dis-pla'se-ah) fibrous dysplasia.

fibroelastic (fi/'bro-e-las'tik) composed of fibrous and elastic tissue.

fibroelastosis (fi/'bro-e'las-to'sis) overgrowth of fibroelastic elements. **endocardial f.**, a condition characterized by hypertrophy of the wall of the left ventricle and conversion of the endocardium into a thick fibroelastic coat, with the capacity of the ventricle sometimes reduced, but often increased.

fibroenchondroma (fi/'bro-en'kon-dro'mah) enchondroma containing fibrous elements.

fibroepithelioma (fi/'bro-ep'i-the'le-o'mah) a tumor composed of fibrous and epithelial elements. **pre malignant f.**, a fibroepithelioma manifested as an elevated skin-colored sessile lesion, usually occurring on the lower trunk or lumbosacral region in persons of middle age or older, and composed of interlacing ribbons of cells that extend downward from the surface to form an epithelial meshwork upon a hyperplastic mesodermal stroma. It may occur in association with superficial basal cell carcinoma, and may eventually transform into a true basal cell carcinoma. Called also *pre malignant fibroepithelial tumor*.

fibrofascitis (fi/'bro-fah-si'tis) fibrositis.

fibrofatty (fi/'bro-fat'e) both fibrous and fatty.

fibrofibrinous (fi/'bro-fi'brus) joining or connecting fibers.

fibrogenesis (fi/'bro-jen'ē-sis) [*fibro-* + *genesis*] the development of fibers. **f. imperfecta os'sium**, a rare collagen disorder causing osteomalacia, with progressive skeletal pain and tenderness.

fibrogenic (fi/'bro-jen'ik) conducive to the development of fibers.

fibroglia (fi-brog'le-ah) [*fibro-* + Gr. *glia* glue] border fibrils in close relation to the surface of fibroblasts, and thought by some to be transformations of the ectoplasm.

fibroglioma (fi/'bro-gli-o'mah) a glioma containing an excessive amount of fibrous tissue.

fibrohemorrhagic (fi/'bro-hem'o-raj'ik) attended with hemorrhage and fibrin formation.

fibrohistiocytic (fi/'bro-his'te-o-sit'ik) having fibrous and histiocytic elements.

fibroid (fi'broid) [*fibro-* + Gr. *eidos* form] 1. having a fibrous structure; resembling a fibroma. 2. a fibroma. 3. leiomyoma; *fibroids* is a colloquial clinical term for leiomyoma uteri.

fibroidectomy (fi'broid-ek'to-me) [fibroid + Gr. *ektomē* excision] excision of a fibroid tumor (myoma) of the uterus.

fibroin (fi-bro'in) a white albuminoid, C₁₅H₂₃N₃O₈, from spiders' webs and the cocoons of insects.

fibrolipoma (fi/'bro-li-po'mah) [*fibro-* + Gr. *lipos* fat + *-oma*] lipoma containing an excess of fibrous tissue.

fibrolipomatous (fi/'bro-li-po'mah-tus) pertaining to fibrolipoma.

fibroma (fi-bro'mah) a tumor composed mainly of fibrous or fully developed connective tissue; called also *fibroid*. **ameloblastic f.**, an odontogenic tumor characterized by the simultaneous proliferation of both epithelial and mesenchymal tissue, without the formation of enamel or dentin. **f. cavernosum**, a cavernous hemangioma containing an excess of fibrous tissue. **cementifying f.**, cementoblastoma; a tumor usually occurring in the mandible of older persons and consisting of fibroblastic tissue containing masses of cementum-like tissue. **chondromyxoid f.**, a rare, benign, slowly growing tumor of bone of chondroblastic origin, usually affecting the large long bones of the lower extremity; it has distinct histological characteristics and is sometimes mistaken for chondrosarcoma. **concentric f.**, a uterine fibroma surrounding the uterine cavity. **f. cutis**, fibroma of the skin. **cystic f.**, a fibroma that has undergone cystic degeneration. **f. durum**, hard f. **hard f.**, one composed of fibrous tissue with few cells; called also *f. durum*. **intra canalicular f.**, fibroadenoma of the breast. **juvenile nasopharyngeal f.**, nasopharyngeal angiofibroma. **f. molle**, soft fibroma. **f. mucinosum**, a fibroma affected with mucoid degeneration. **f. myxomatoses**, a myxofibroma. **nonosteogenic f.**, a common degenerative and proliferative lesion of the medullary and cortical tissues of bone, occurring most commonly near the ends of the diaphyses of the large long bones, particularly of the lower extremities, often causing no symptoms and discovered only incidentally in roentgenograms of the skeleton made for other reasons. **odontogenic f.**, a benign tumor of the jaw, arising from the embryonic portion of the tooth germ, the dental papilla, or dental follicle, or

originating later from the periodontal membrane. **ossifying f.**, **ossifying f. of bone**, a benign, relatively slow-growing, central bone tumor, usually of the jaws, especially the mandible, which is composed of fibrous connective tissue within which bone is formed. **osteogenic f.**, osteoblastoma. **parasitic f.**, a pedunculated, subperitoneal fibroid of the uterus which obtains part or all of its blood supply from the omentum. **f. pendulum**, a pendulous fibroma of the skin. **rabbit f.**, a naturally occurring benign viral disease of the wild cottontail rabbit, which is transmissible to laboratory rabbits, and marked by the development of fibromas that regress; called also *Shope f.* **recurrent digital f. of childhood**, digital fibromatosis. **f. sarcomato'sum**, fibrosarcoma. **Shope f.**, rabbit f. **soft f.**, one containing copious cells; called also *f. molle*. **telangiectatic f.**, angiofibroma. **f. thecocellula're xanthomato'sides**, theca cell tumor. **f. xantho'ma**, fibroxanthoma.

fibromatogenic (fi-'bro-'mah-to-jen'ik) producing or causing the formation of fibroma.

fibromatoid (fi-'bro-'mah-to'id) [*fibroma* + Gr. *eidos* form] resembling fibroma; fibroma-like.

fibromatosis (fi-'bro-'mah-to'sis) the formation of a fibrous, tumor-like nodule arising from the deep fascia with a tendency to local recurrence, as in desmoid tumor. **f. col'li**, a firm, fusiform, fibrous mass in the midportion of the sternocleidomastoid muscle, usually occurring between two weeks and two months of age, and commonly disappearing in four to eight months; in some instances, torticollis may develop. It is believed by some to be a small hematoma due to injury to the muscle at birth. **congenital generalized f.**, a condition in which multiple small, firm, spherical or ovoid fibromas of the subcutaneous and muscle tissues, the viscera, and osseous systems are characteristically present at birth. Visceral involvement may be responsible for various symptoms, such as intestinal obstruction, diarrhea due to diffuse involvement of the intestines, and respiratory disturbances. Death frequently occurs during the neonatal period or early infancy. **digital f.**, a rare, often recurrent, condition of infancy and early childhood, in which one or more fibromas occur on the lateral or dorsal aspects of the fingers and toes; histologically, the lesions are composed of fibrous connective tissue and abundant collagen, and contain characteristic virus-like, black intracellular inclusions. Called also *recurrent digital fibroma of childhood*. **f. gingi'vae**, **gingival f.**, noninflammatory fibrous hyperplasia of the gingiva manifested as a dense, diffuse, smooth or nodular overgrowth of the gingival tissues, sometimes to the point that the crowns of the teeth are hidden. It usually appears at the time of tooth eruption. Most cases are hereditary (autosomal dominant) and are associated with hypertrichosis. Called also *elephantiasis gingivae* and *macroggingivae*. **infantile digital f.**, digital f. **palmar f.**, fibromatosis involving the palmar fascia, and resulting in Dupuytren's contracture. **plantar f.**, fibromatosis involving the plantar fascia manifested as single or multiple nodular swellings, sometimes accompanied by pain but usually unassociated with contractures. **subcutaneous pseudosarcomatous f.**, proliferative fasciitis. **f. ventric'uli**, linitis plastica.

fibromatous (fi-'bro-'mah-tus) pertaining to or of the nature of fibroma.

fibromectomy (fi-'bro-'mek'to-me) [*fibroma* + Gr. *ektomē* excision] excision of a fibroma.

fibromembranous (fi-'bro-'mem-'brah-nus) composed of membrane containing much fibrous tissue.

fibromuscular (fi-'bro-'mus'ku-lar) composed of fibrous and muscular tissue.

fibromyitis (fi-'bro-'mi-'i'tis) [*fibro* + Gr. *mys* muscle + *-itis*] inflammation and fibrous degeneration of a muscle.

fibromyoma (fi-'bro-'mi-'o'mah) [*fibro* + Gr. *mys* muscle + *-oma*] leiomyoma. **f. u'teri**, leiomyoma uteri.

fibromyomectomy (fi-'bro-'mi-'o-'mek'to-me) excision of a fibromyoma (leiomyoma).

fibromyositis (fi-'bro-'mi-'o-si'tis) [*fibro* + Gr. *mys* muscle + *-itis*] inflammation of fibromuscular tissue. **nodular f.**, a disease marked by inflammation and the formation of nodules in the muscles.

fibromyotomy (fi-'bro-'mi-'o'to-me) incision into a fibromyoma (leiomyoma).

fibromyxoma (fi-'bro-'mik-so'mah) myxofibroma.

fibromyxosarcoma (fi-'bro-'mik'so-'sar-'ko'mah) myxosarcoma or myxoid liposarcoma that is undergoing fibrosis.

fibronectin (fi-'bro-'nek'tin) [*fibro* + L. *nexus* a connecting] an adhesive glycoprotein: one form circulates in plasma, acting as an opsonin; another is a cell-surface protein which mediates cellular adhesive interactions. Fibronectins are important in connective tissue, where they cross-link to collagen, and they are also involved in aggregation of platelets.

fibroneuroma (fi-'bro-'nu-ro'mah) neurofibroma.

fibronuclear (fi-'bro-'nu'kle-ar) made up of nucleated fibers.

fibro-osteoma (fi-'bro-'os-'te-o'mah) an ossifying fibroma.

fibropapilloma (fi-'bro-'pap'i-lo'mah) a papilloma containing much fibrous tissue; called also *fibroepithelial papilloma*.

fibropituitocyte (fi-'bro-'pi-tu'i-sit) see *pituicyte*.

fibroplasia (fi-'bro-'pla'se-ah) the formation of fibrous tissue, as occurs normally in the healing of wounds and abnormally in some tissues. **retrolental f.**, a bilateral retinopathy occurring in premature infants treated with excessively high concentrations of oxygen, characterized by vascular dilatation, proliferation, and tortuosity, edema, and retinal detachment, with ultimate conversion of the retina into a fibrous mass that can be seen as a dense retrolental membrane; usually, growth of the eye is arrested and may result in microphthalmia, and blindness may occur. Called also *retinopathy of prematurity*, *RLF*, and *Terry's syndrome*.

fibroplastic (fi-'bro-'plas'tik) [*fibro* + Gr. *plassein* to form] giving origin to fibrous tissue.

fibroplastin (fi-'bro-'plas'tin) paraglobulin.

fibroplate (fi-'bro-'plāt) an interarticular fibrocartilage.

fibropolypus (fi-'bro-'pol'i-pus) a polyp containing fibrous elements.

fibropurulent (fi-'bro-'pu'roo-lent) characterized by the presence of both fibers and pus.

fibroreticulate (fi-'bro-'re-tik'u-lāt) composed of a network of fibers.

fibrosarcoma (fi-'bro-'sar-'ko'mah) a sarcoma derived from fibroblasts that produce collagen. **odontogenic f.**, a malignant tumor of the jaws, originating from one of the mesenchymal components of the tooth or tooth germ, and histologically identical with other fibrosarcomas; the malignant counterpart of odontogenic fibroma.

fibrosclerosis (fi-'bro-'skle-ro'sis) fibrosis associated with sclerosis. **multifocal f.**, any of a group of disorders of unknown etiology characterized by fibrosis, including mediastinal, hilar, and retroperitoneal fibrosis, Reidel's struma, and sclerosing cholangitis.

fibrose (fi-'brōs) 1. to form fibrous tissue. 2. fibrous.

fibroserous (fi-'bro-'se'rus) composed of both fibrous and serous elements.

fibrosis (fi-'bro'sis) the formation of fibrous tissue; fibroid or fibrous degeneration. **African endomyocardial f.**, endomyocardial f. **congenital hepatic f.**, a developmental disorder of the liver marked by formation of irregular broad bands of fibrous tissue containing multiple cysts formed by disordered terminal bile ducts, chiefly in the portal areas, resulting in vascular constriction, which leads to portal hypertension. It may be associated with polycystic renal disease. **cystic f.**, cystic f. of the pancreas. **cystic f. of the pancreas**, a generalized, hereditary disorder of infants, children, and young adults, in which there is widespread dysfunction of the exocrine glands; characterized by signs of chronic pulmonary disease (due to excess mucus production in the respiratory tract), pancreatic deficiency, abnormally high levels of electrolytes in the sweat, and occasionally by biliary cirrhosis. Pathologically, the pancreas shows obstruction of the pancreatic ducts by amorphous eosinophilic concretions, with consequent deficiency of pancreatic enzymes, resulting in steatorrhea and azotorrhea. The degree of involvement of organs and glandular systems may vary greatly, with consequent variations in the clinical picture. It is transmitted as an autosomal recessive trait. Called also *fibrocystic disease of the pancreas* and *mucoviscidosis*. **diatomite f.**, a form of silicosis caused by inhalation of diatomaceous earth (silicon dioxide). **diffuse interstitial pulmonary f.**, idiopathic pulmonary f. **endomyocardial f.**, idiopathic myocardiopathy occurring endemically in various regions of Africa and rarely in other areas, characterized by cardiomegaly, marked thickening of the endocardium with dense, white fibrous tissue that frequently extends to involve the inner third or half of the myocardium, and congestive heart failure. Called also *African endomyocardial f.* **graphite f.**, a form of silicosis caused by the inhalation of graphite, which may contain as much as 10 per cent silicon dioxide. **idiopathic pulmonary f.**, chronic inflammation and progressive fibrosis of the pulmonary alveolar walls, with steadily progressive dyspnea, resulting finally in death from oxygen lack or right heart failure. Called also *diffuse interstitial pulmonary f.* The acute, rapidly fatal form is often called *Hamman-Rick syndrome*. **idiopathic retroperitoneal f.**, retroperitoneal f. **mediastinal f.**, development of whitish, hard fibrous tissue in the upper mediastinum, causing compression, distortion, or obliteration of the superior vena cava, and sometimes constriction of the bronchi and large pulmonary vessels. **neoplastic f.**, proliferative f. **nodular subepidermal f.**, the formation, beneath the epidermis, of multiple fibrous nodules as the result of productive inflammation. **panmural f. of the bladder**, chronic interstitial cystitis. **periureteric f.**, progressive development of fibrous tissue, spreading laterally from the great midline vessels, gradually engulfing, distorting, and finally causing strangulation of one or both ureters. **postfibrinous f.**, fibrosis occurring in tissues in which fibrin has been deposited. **proliferative f.**, fibrosis in which the fibrous elements continue to proliferate after the original causative factor has ceased to operate; called also *neoplastic f.* **pulmonary f.**, see *idiopathic pulmonary f.* **replacement f.**, the development of fibrous tissues to replace tissue that has been damaged. **retroperitoneal f.**, deposition

of fibrous tissue in the retroperitoneal space, producing vague abdominal discomfort, and often causing blockage of the ureters, with resultant hydronephrosis and impaired renal function, which may result in renal failure. **root sleeve f.**, fibrosis and thickening of the dura mater resulting from prolonged nerve root pressure. **f. u'teri**, a morbid condition characterized by overgrowth of the smooth muscle and increase in the collagenous fibrous tissue, producing a thickened, coarse, tough myometrium.

fibrositis (fi'bro-si'tis) [*fibrous* tissue + *-itis*] inflammatory hyperplasia of the white fibrous tissue of the body, especially of the muscle sheaths and facial layers of the locomotor system; it is marked by pain and stiffness. Called also *fibrofascitis* and *muscular rheumatism*.

fibrothorax (fi'bro-tho'raks) a condition characterized by adhesion of the two layers of pleura, the lung being covered by a thick layer of nonexpandable fibrous tissue; often a consequence of traumatic hemothorax or of effusion.

fibrotic (fi-brot'ik) pertaining to or characterized by fibrosis.

fibrotuberculosis (fi'bro-tu-ber'ku-lo'sis) fibroid phthisis.

fibrous (fi'brus) composed of or containing fibers.

fibrovascular (fi'bro-vas'ku-lar) both fibrous and vascular.

fibroxanthoma (fi'bro-zan-tho'mah) a type of xanthoma containing fibromatous elements.

fibula (fib'u-lah) [L. "buckle"] [NA] the outer and smaller of the two bones of the leg, which articulates proximally with the tibia and distally is joined to the tibia in a syndesmosis. See Plate accompanying *skeleton*.

fibular (fib'u-lar) pertaining to the fibula; peroneal.

fibularis (fib'u-la'ris) fibular; [NA] a term designating relationship to the fibula.

fibulocalcaneal (fib'u-lo-kal-ka'ne-al) pertaining to the fibula and calcaneus.

F.I.C.D. Fellow of the International College of Dentists.

ficin (fi'sin) [L. *ficus* fig] a highly active, crystallizable proteinase from the sap of fig trees which catalyzes the hydrolysis of many proteins at acid (4.1) pH, the clotting of milk, and "digestion" of some living worms, e.g., whipworms. Ficin is used as a protein digestant and to enhance the agglutination of red blood cells with IgG antibodies (e.g., Rh antibodies). It also shows esterase activity. It has been used in dogs as a trichuricide.

Fick's bacillus (fiks) [Rudolph Armin Fick, German physician, 1866-1939] *Proteus vulgaris*.

Fick principle (formula, method) (fik) [Adolph Eugen Fick, German physiologist, 1829-1901] see under *principle*.

Ficker's diagnosticum (fik'erz) [Philipp Martin Ficker, German bacteriologist, 1868-1950] see under *diagnosticum*.

F.I.C.S. Fellow of the International College of Surgeons.

fidicinales (fi-dis'i-na'lez) [pl., from L. *fidicen*, *fidicinis*, a player on the harp] *musculi lumbricales manus*.

fieber (fe'ber) [Ger.] fever. **gelb f.**, yellow fever. **rück'fall f.**, relapsing fever.

Fiedler's disease, myocarditis (fēd'lerz) [Carl Ludwig Alfred Fiedler, German physician, 1835-1921] see *leptospiral jaundice*, under *jaundice*, and see *acute isolated myocarditis*, under *myocarditis*.

field (fēld) 1. an area or open space, as an operative field or visual field. 2. a range of specialization in knowledge, study, or occupation. 3. in embryology, the developing region within a range of modifying factors. **absolute f.**, that area of the cerebral cortex injury which always causes paralysis or spasm. **auditory f.**, the space or range within which stimuli may be perceived as sound. **Cohnheim's f's**, see under *area*. **f. of consciousness**, the total sum of experiences at a given instant. **dark-f.**, see under *microscope*, and see *ultramicroscope*. **f. of fixation**, the region bounded by the utmost limits of central or clear vision, the eye being allowed to move, but the head being fixed. **Flechsigs f.**, the myelinogenetic field. **Forel's f.**, the complex field of nerve fibers (the H field) that lies medial to the subthalamic nucleus and zona incerta, immediately rostral to the red nucleus. It contains pallidofugal, dentothalamic, and rubrothalamic fibers, principally in the form of two fiber bundles: the fasciculus lenticularis (field H₂), which enters the H field, and the fasciculus thalamicus (field H₁), which leaves it. **gamma f.**, any area subjected to radiation from an unshielded or slightly shielded gamma radiation source. **H f.**, see *Forel's f.* **f. H₁**, fasciculus thalamicus. **f. H₂**, fasciculus lenticularis. **high-power f.**, the area of a slide visible under the high magnification system of a microscope. **individuation f.**, a region in which an organizer influences adjacent tissue to become a part of a total embryo. **Krönig's f.** (*obs.*), the area of resonance on the chest due to the apices of the lungs. **low-power f.**, the area of a slide visible under the low magnification system of a microscope. **magnetic f.**, that portion of space about a magnet in which its action is perceptible. **f. of a microscope**, the area that can be seen through a microscope at one time. The *high-power field* is that area which is visible under the high-power objective; the *low-power field* is that which is visible under low power. **morphogenetic f.**, an embryonic region, larger than its main deriv-

atives, out of which definite structures normally develop. **myelinogenetic f.**, a collection of fibers in the neuraxis which at a definite stage of development receive myelin sheaths; called also *Flechsigs field*. **penumbra f.**, the region of free space which is irradiated by primary photons coming from only part of the radiation source. **primary nail f.**, a flat area on the terminal phalanx in the embryo where the nail is to develop. **relative f.**, an area of the cerebral cortex in which a lesion may or may not cause paralysis. **surplus f.**, the portion of the field of vision in partial hemianopia which passes beyond the point of fixation. **f. of vision**, that portion of space which the fixed eye can see. **f. of vision, cribriform**, a field of vision over which a number of isolated scotomas lie dispersed. **f. of vision, overshoot**, a condition in which the line of separation between the halves of the field of vision does not pass through the point of fixation. **visual f.**, the area within which stimuli will produce the sensation of sight with the eye in a straight-ahead position. **Wernicke's f.**, see under *area*.

Fielding's membrane (fēld'ingz) [George Hunsley Fielding, English anatomist, 1801-1871] the tapetum, def. 2.

fièvre (fe-evr') [Fr.] fever. **f. boutonneuse** (fe-evr' boot-ton-uz'), boutonneuse fever. **f. caprine** (fe-evr' kah-prēn'), brucellosis. **f. exanthématique de Marseille** (fe-evr' eks-an'thē-mah-tēk') boutonneuse fever. **f. jaune** (fe-evr' zhōn), yellow fever. **f. récurrente** (fe-evr' ra'kuh-rant'), relapsing fever.

FIGLU formiminoglutamic acid.

figurat (fig'u-ra'tum) [L.] figured; a term used to describe skin lesions that have a geometric, usually circular or annular, pattern.

figure (fig'ūr) [L. *figura*, from *ingere* to shape or form] 1. an object of a particular form. 2. a number, or numeral. **fortification f's**, a form of migraine aura characterized by scintillating, colored lights or zigzag luminous bands suggestive of the walls of a turret. **Minkowski's f.**, a numerical expression of the relation between dextrose and nitrogen in the urine on a pure meat diet, and when fasting. It is 2.8:1. **mitotic f's**, stages of chromosome aggregation exhibiting a pattern characteristic of mitosis. **Purkinje's f's**, see under *image*. **Stifel's f.**, a black disk having a white spot in the center, used for locating and measuring the blind spot in the eye. **Zöllner's f's**, see under *line*.

fila (fi'lah) [L.] plural of *filum*.

filaceous (fi-la'shus) made up of filaments.

filament (fil'ah-ment) [L. *filamentum*] a delicate fiber or thread. **acrosomal f.**, a long, thin, rigid filament projecting from the head of a spermatozoon; it is formed by elongation of the central part of the acrosome in preparation for the fertilization process, and is used to make contact with and to penetrate the cell membrane of the ovum. **axial f.**, axoneme. **linin f.**, a network of linin spread throughout the cell nucleus. **lymphatic anchoring f's**, filaments that attach the endothelial cells of lymphatic capillaries to the connective tissue between surrounding tissue cells. **root f's of spinal nerves**, *fila radicularia nervorum spinalium*. **spermatic f.**, end piece, def. 2. **terminal f.**, 1. *filum terminale*. 2. end piece (def. 2). **terminal f. of spinal dura mater**, *filum durae matris spinalis*.

filamenta (fil'ah-men'tah) [L.] plural of *filamentum*.

filamentous (fil-ah-men'tus) composed of long, threadlike structures; said of bacterial colonies.

filamentum (fil'ah-men'tum), pl. *filamen'ta* [L.] a filament.

filar (fi'lar) [L. *filum* thread] threadlike; filamentous.

Filaria (fi-la're-ah) [L. *filum* thread] a former loosely applied generic name for members of the superfamily Filarioidea. **F. bancrofti**, *Wuchereria bancrofti*. **F. conjunctivae**, a species, possibly identical with *Dirofilaria conjunctivae*, found in the eye of horses and asses, and sometimes in man; called also *F. palpebralis*. **F. demarquay'i**, *Mansonella ozzardi*. **F. diurna**, *Loa loa*. The name was actually applied to the microfilaria (*microfilaria diurna*). **F. equina**, *Setaria equina*. **F. immitis**, *Dirofilaria immitis*. **F. jun'cea**, *Mansonella ozzardi*. **F. lo'a**, *Loa loa*. **F. medinen'sis**, *Dracunculus medinensis*. **F. nocturna**, *Wuchereria bancrofti*. **F. ozzardi**, *Mansonella ozzardi*. **F. palpebra'lis**, *F. conjunctivae*. **F. per'stans**, *Dipetalonema per'stans*. **F. recon'dita**, *Dipetalonema recon'ditum*. **F. san'guinis-hom'inis**, *Wuchereria bancrofti*. **F. vol'vulus**, *Onchocerca volvulus*.

filaria (fi-la're-ah), pl. *fila'riae* [L. *filum* thread] a nematode worm of the superfamily Filarioidea. **Bancroft's f.**, *Wuchereria bancrofti*. **Brug's f.**, *Brugia malayi*.

filariae (fi-la're-e) [L.] plural of *filaria*.

filarial (fi-la're-al) pertaining to, caused by, or denoting filariae.

filariasis (fil'ah-ri'ah-sis) a diseased state due to the presence of filariae within the body. **Bancroft's f.**, **f. bancrofti**, **bancroftian f.**, infection with the filarial worm *Wuchereria bancrofti*, the adults of which reside in the lymphatic system, producing recurrent lymphangitis with fibrosis and obstruction. In extensive obstruction, chronic edema may result, progressing to elephantiasis. The disease is transmitted by mosquitoes, which

harbor the larval forms (microfilariae). **Brug's f., Malayan f., ma'layi**, infection with the filarial worm *Brugia malayi*, the adult forms of which reside in the lymphatics, lymph nodes, and connective tissue; symptoms range from asymptomatic adenitis, to periodic attacks of fever and lymphangitis, to elephantiasis, especially of the legs and feet. The disease is transmitted by mosquitoes. **Ozzard's f.**, infection with *Mansonella ozzardi*.

filaricidal (fi-lār'i-sid'al) [*filaria* + L. *caedere* to kill] destructive to filariae.

filaricide (fi-lār'i-sid) an agent that is destructive to filariae.

filariform (fi-lār'i-form) threadlike; resembling filariae; denoting that developmental stage in the life cycle of certain nematodes which is characterized by the possession of an esophagus of uniform diameter and which is often, as in hookworms, the infective stage.

Filarioidea (fi-lār'e-oi'de-ah) a superfamily or order of nematode parasites, the adults being threadlike worms which invade the tissues and body cavities where the female deposits embryonated eggs (prelarvae) known as microfilariae. These microfilariae are ingested by blood-sucking insects in whom they pass their developmental stage and are returned to man by the bites of such insects. The filariae of man belong to the genera *Wuchereria*, *Onchocerca*, *Loa*, *Dipetalonema*, *Mansonella*, *Dirofilaria*, and *Brugia*.

Filatov's (Filatow's) disease (fi-lat'ofs) [Nils Fédorovich Filatov, pediatrician in Moscow, 1847–1902] infectious mononucleosis.

Filatov-Dukes disease (fi-lat'of-düks) [Nils Fédorovich Filatov; Clement Dukes, English physician, 1845–1925] Dukes' disease.

Fildes' law (fil'dez) [Paul Gordon Fildes, English bacteriologist, born 1882] see under *law*.

file (fil) a surgical or a dental instrument with a finely serrated surface, for reducing surplus hard substance such as bone or materials used in dental restorations, or for smoothing roughened surfaces.

filicin (fil'i-sin) a compound found in aspidium.

filiform (fil'i-form, fi'li-form) [L. *filum* thread + *forma* form] 1. thread shaped. 2. an extremely slender bougie.

filio-parental (fil'e-o-pah-ren'tal) pertaining to the relationships between children and their parents.

filipin (fi'li-pin) chemical name: 4,6,8,10,12,14,16,27-octahydroxy-3-(1-hydroxyethyl)-17,28-dimethyloxacyclooctacos-17,19-,21,23,25-pentaen-2-one; an antifungal antibiotic, C₃₅H₅₈O₁₁. Called also *filipin III*.

Filipovitch's (Filipowicz's) sign (fi-le'po-vich'ez) [Casimir Filipowitch, Polish physician] see under *sign*.

filipuncture (fil'i-punk-tūr) [L. *filum* thread + *punctura* puncture] (*obs*) the insertion of a wire or thread into an aneurysm.

filix (fi'liks), pl. *fil'ices* [L.] a fern. **f. mas**, male fern; see *aspidium*.

fillet (fil'et) 1. a loop, as of cord or tape, for making traction. 2. in the nervous system, a long band of nerve fibers, such as the medial lemniscus.

filling (fil'ing) 1. the material inserted into a prepared tooth cavity, usually gold, amalgam, cement, or a synthetic resin. 2. the restoration of the crown with appropriate material after removal of the carious tissue from a tooth. **complex f.**, a filling for a complex cavity. **composite f.**, a filling that consists of a composite resin. **compound f.**, a filling for a cavity that involves two surfaces of a tooth. **direct f.**, one that is formed and completed directly in the tooth cavity. **direct resin f.**, a direct filling made from a synthetic resin. **indirect f.**, one that is constructed on a die that has been made from an accurate impression of the tooth and that is then inserted into the tooth cavity. **permanent f.**, a filling intended to provide complete function while the tooth remains in the oral cavity. **retrograde f.**, an amalgam or other restoration placed in the apical portion of a tooth to seal the root canal following surgical removal of a periapical lesion. **root canal f.**, a filling placed in the root canal of a tooth to obliterate the space once occupied by the dental pulp. **temporary f.**, a filling placed in a tooth cavity with the intention of removing it within a short period of time.

film (film) 1. a thin layer or coating. 2. a thin sheet specially processed for use in photography or roentgenography; used also to designate such a sheet after exposure to light rays or other radiant energy to which it is sensitive. **bite-wing f.**, an x-ray film for radiography of oral structures, with a protruding tab to be held between the upper and lower teeth. **fixed blood f.**, a thin film of blood spread on a slide, dried quickly, and fixed. **gelatin f.**, **absorbable** [USP], a sterile, nonantigenic, absorbable, water-insoluble gelatin film, used as a local hemostatic. **lateral jaw f.**, a radiograph showing either the ramus or the body of the mandible. **occlusal f.**, a radiograph showing topographic and cross-sectional views of the maxillary or mandibular dental structure and adjacent tissue. **periapical f.**, a radiograph showing a particular tooth and the tissues adjacent to the apex of its root. **spot f.**, a radiograph of a small anatomic area obtained (a) by rapid exposure during fluoroscopy to provide a permanent record of a transiently observed abnormality, or (b)

by limitation of radiation passing through the area to improve definition and detail of the image produced. **sulfa f.**, a film made from an emulsion of sulfadiazine, sulfanilamide, and methyl cellulose; used as a dressing for burns, cuts, and skin grafts. **x-ray f.**, a sheet specially prepared for use in roentgenography after exposure to roentgen rays and appropriate processing; a roentgenogram.

film badge (film baj) a pack of radiographic film or films, used for the detection and approximate measurement of radiation exposure of personnel.

filopod (fil'o-pod) filopodium.

filopodia (fi'lo-po'de-ah) plural of *filopodium*.

filopodium (fi'lo-po'de-um), pl. *filopodia* [L. *filum* thread + Gr. *pous* foot] a slender, pointed pseudopodium composed of ectoplasm. Cf. *axopodium*, *lobopodium*, and *rhizopodium*.

filopressure (fi'lo-presh'ūr) [L. *filum* thread + *pressura* pressure] the compression of a blood vessel by a thread.

filovascularis (fi'lo-var'i-ko'sis) the development of varicosities on the axon of a nerve fiber.

filter (fil'ter) [L. *filtrum*] 1. a device for the straining of water or other liquid. 2. in radiology, a solid screen usually of varying thickness of metal (aluminum, copper, tin, lead, etc.) which when placed in the pathway of the radiation beam prevents transmission of beta particles and photons of longer wavelengths.

Berkefeld f., a bacterial filter made of infusorial earth, available in three porosities: V (*viel*, or coarse), N (normal), and W (*wenig*, or fine). Most bacteria are removed by the V filter; all are usually removed by the N; and the W is used for exceedingly small organisms. **Chamberland f.**, a bacterial filter made of unglazed porcelain, available in several graded porosities, L1, L2, L3, etc., the L3 being roughly equivalent to the Berkefeld N.

Coors f., a bacterial filter cylinder of unglazed porcelain.

Gooch f., a platinum or porcelain crucible the bottom of which is perforated with holes and covered with a layer of asbestos fibers.

intermittent sand f., a sand filter to which sewage is applied for only a short time and then is allowed to drain away so that aeration and oxidation may take place.

mechanical f., a filter of sand or other porous material through which water is forced rapidly to remove gross particles; these particles may be the precipitate caused by the addition of some coagulant.

Milipore f., trademark for a device used to filter nutrient solutions as they are administered intravenously.

Pasteur-Chamberland f., a hollow column of unglazed porcelain through which liquids are forced by pressure or by vacuum exhaustion.

percolating f., trickling f. **roughing f.**, **scrubbing f.**, a coarse-grained filter through which turbid water is passed to remove the larger particles and thus protect the sand filter from clogging.

Seitz f., one in which the filtering element is an asbestos pad, which is the equivalent of the Berkefeld N filter.

sintered glass f., a filter of sintered glass, available in various porosities, sometimes designed C (coarse), M (medium), F (fine), and UF (ultrafine); only the ultrafine is bacteria-proof.

slow sand f., a filter made of sand and gravel through which water passes slowly and is purified largely by the action of the microorganisms growing on the surface of the grains of sand near the top of the filter.

sprinkling f., a trickling filter in which the sewage is applied by spray.

trickling f., beds of porous material on which sewage is distributed and allowed to percolate through to drains laid on a tight floor; the purpose is to so oxidize the organic material as to make it nonputrescible. Called also *percolating f.*

umbrella f., a filter used in transvenous caval interruption for the prevention of pulmonary embolism.

Wood's f., see under *light*.

filterable (fil'ter-ah-b'l) capable of passing through the pores of a filter; said of elements that can pass through a filter which will not permit the passage of the usual microorganisms.

filtrable (fil'trah-b'l) filterable.

filtrate (fil'trāt) a liquid that has passed through a filter.

glomerular f., the ultrafiltrate of plasma that passes across the membranes of the malpighian corpuscles of the kidney to the lumen of Bowman's capsule.

filtration (fil-tra'shun) 1. the passage of a liquid through a filter, accomplished by gravity, pressure, or vacuum (suction). 2. in radiology, the use of a solid screen usually made of metal (aluminum, copper, tin, lead, etc.) to absorb beta particles and photons of longer wavelengths.

gel f., column chromatography in which high molecular weight substances are separated according to molecular size.

fil'trum ventric'uli [L.] a depression between the two projections formed in the lateral wall of the vestibule of the larynx by the arytenoid and cuneiform cartilages; called also *Merkel's filtrum*.

filum (fi'lum), pl. *fi'la* [L.] [NA] a threadlike structure or part.

fi'la anastomot'ica ner'vi acus'tici, an anastomotic filament between the vestibulocochlear and facial nerves in the internal acoustic meatus.

f. du'rae ma'tris spina'lis [NA], filum of spinal dura mater: the downward prolongation of dura mater from the apex of the dural sac; joined by the filum terminale, it blends with the periosteum on the back of the coccyx.

Called also *central ligament*, *coccygeal ligament*, or *terminal*

filament of spinal dura mater. **fi/la olfacto'ria**, nervi olfactorii. **fi/la radicularia nervo'rum spinalium** [NA], the threadlike filaments by which the dorsal and ventral roots of each spinal nerve are attached to the spinal cord; called also *root filaments of spinal nerves*. **f. of spinal dura mater**, f. durae matris spinalis. **f. termina'le** [NA], terminal filament: a slender, threadlike prolongation of the spinal cord from the conus medullaris to the apex of the dural sac, where it fuses with the filum of the dura mater, and extends to the back of the coccyx as the coccygeal ligament, where it blends with the periosteum.

fimbria (fim'bre-ah) [L. *fimbriae* (pl.) a fringe] 1. a fringe, border, or edge; [NA] a general term for such a structure. 2. in microbiology, one of the minute filamentous appendages of certain bacteria; they are considerably smaller and less rigid than flagella and are associated with antigenic properties of the cell surface; called also *pilus*. **f. hippocam'pi** [NA], the band of white matter along the medial edge of the ventricular surface of the hippocampus; called also *corpus fimbriatum hippocampi*. **ovarian f.**, **f. ova'rica** [NA], the longest of the processes that make up the fimbriae tubae uterinae, extending along the free border of the mesosalpinx; called also *fimbriated extremity*. **fim'briae of tongue**, plica fimbriata. **fim'briae tu'bae uteri'nae** [NA], **fimbriae of uterine tube**, the numerous divergent fringed processes on the distal part of the infundibulum of the uterine tube.

Fimbriaria (fim'bre-a're-ah) a genus of tapeworms of the family Hymenolepididae, which are parasites of anseriform birds. **F. fasciola'ris**, a tapeworm infecting wild and domestic fowl.

fimbriated (fim'bre-ät-ed) [L. *fimbriatus*] fringed.

fimbriation (fim'bre-a'shun) the formation of or the possession of fimbriae.

fimbriatum (fim'bre-a'tum) [L.] fringed.

fimbriocoele (fim'bre-o-sēl') [*fimbria* + Gr. *kēlē* hernia] hernia containing fimbriae of the uterine tube.

Finckh test (fink) [Johann Finckh, German psychiatrist, born 1873] see under *tests*.

finder (find'er) a device on a microscope to facilitate the finding of some object in the field.

finding (find'ing) an observation; a condition discovered.

finger (fing'ger) any of the five digits of the hand. **baseball f.**, partial permanent flexion of the terminal phalanx of a finger caused by a ball or other object striking the end or back of the finger, resulting in rupture of the attachment of the extensor tendon; called also *mallet f.* **blubber f.**, seal f. **bolster f's**, the swollen fingers that result from a *Candida* infection in workers who handle sugar. **Brodie's f.** (obs.), herpes zoster infection of the finger. **clubbed f.**, a deformity produced by proliferation of the soft tissues about the terminal phalanx, with no constant osseous changes; seen in various cases of chronic disease of the thoracic organs. **dead f.**, a numb, mottled finger, as one seen in acrocyanosis. **drop f.**, *mallet f.* **drumstick f.**, clubbed f. **first f.**, the thumb. **giant f.**, macrodactyly. **hammer f.**, *mallet f.* **hippocratic f's**, enlargement of the terminal phalanges, with coarse nails curving over the ends of the fingers (hippocratic nails); see *hypertrophic pulmonary osteoarthropathy*, under *osteoarthropathy*. **index f.**, the second digit of the hand, the thumb being considered the first; the forefinger. **insane f.**, chronic felon in certain cases of confirmed insanity. **lock f.**, one that is fixed in a flexed position, owing to the presence of a small fibrous growth in the sheath of the flexor tendon. **Madonna f's**, the thin, delicate fingers seen in pituitary acromicria. **mallet f.**, permanent flexion of the distal phalanx; called also *drop or hammer f.* See also *baseball f.* **ring f.**, the fourth digit of the hand. **seal f.**, a disease of unknown etiology clinically resembling erysiploid, occurring in handlers of seals and seal skins; called also *blubber f.* **snapping f.**, trigger f. **spider f.**, arachnodactyly. **spring f.**, a condition in which flexion and extension of the finger beyond certain points are difficult. **trigger f.**, a finger liable to be affected with a momentary spasmodic arrest of flexion or extension, followed by a snapping into place; it is due to stenosing tendovaginitis, or a nodule in the flexor tendon (see *lock f.*). **tulip f's**, a very rare condition in which the fingers are affected by dermatitis after handling tulip bulbs. **washerwoman's f's**, the dry shrunken fingers of patients with fatal cases of cholera. **waxy f.**, dead f. **webbed f's**, fingers united to a greater or less extent by a fold of skin; syndactyly. **white f.**, dead f.

fingeragnosia (fing'ger-ag-no'se-ah) [*finger* + *agnosia*] inability to recognize, indicate on command, name, or choose the individual fingers of one's own hand or of the hands of others.

finger and toe (fing'er and tōw) 1. finger and toe disease. 2. a condition affecting various animals, in which finger-like tumors develop in various organs of the body.

finger nail (fing'er-nāl) the nail of a finger; see *unguis* [NA].

fingerprint (fing'er-print) 1. an impression of the cutaneous ridges of the fleshy distal portion of a finger, made by applying ink and pressing the finger on paper; such records (as well as prints of hand or foot) are used as means of establishing identification. 2. in biochemistry, a photomicrograph obtained by fingerprinting;

also, the characteristic positioning of the peptide fragments of a protein subjected to fingerprinting.

fingerprinting (fing'ger-print'ing) a technique for determining the structure of a protein in which the protein is split into peptides by digestion with protease and the fragments are separated in one direction by electrophoresis and at right angles by chromatography. After staining, the peptide fragments are seen to be in characteristic locations.

finger-sucking (fing'ger-suk'ing) see *thumb-sucking*.

Finikoff's treatment (method) (fin'i-kofs) [Aleksandr Paulovick Finikoff, Leningrad surgeon, born 1886] see under *treatment*.

Finkelstein's albumin milk, feeding [Heinrich Finkelstein, German pediatrician, 1865-1942] see *albumin milk*, under *milk*, and see under *feeding*.

Finkler-Prior spirillum (fink'ler-pri'or) [Dittmar Finkler, German bacteriologist, 1852-1912; J. Prior, German bacteriologist, 19th century] *Vibrio proteus*.

Finney's pyloroplasty (operation) (fin'ēz) [John M. T. Finney, Baltimore surgeon, 1863-1942] see under *pyloroplasty*.

Finochietto's stirrup (fe-no'ke-at'ōz) [Enrique Finochietto, surgeon in Buenos Aires, 1880-1948] see under *stirrup*.

Finsen bath, lamp (apparatus), light (rays), treatment (fin'sen) [Niels Ryberg Finsen, Danish physician, 1860-1904; the first to discover the curative effects of ultraviolet rays, and winner of the Nobel prize for medicine and physiology in 1903] see under *bath, lamp, light*, and *treatment*.

fire (fir) fever; inflammation. **St. Anthony's f.** (obs.), 1. ergotism. 2. erysipelas. **St. Francis' f.** (obs.), erysipelas.

firpene (fir'pēn) pinene.

first aid (fēst ād) emergency care and treatment of an injured person before definitive medical and surgical management can be secured.

Fischer's sign (fish'erz) [Louis Fischer, pediatrician in New York, 1864-1945] see under *sign*.

Fischer's test [Emil Fischer, German chemist, 1852-1919] see under *tests*.

Fishberg concentration test (fish'berg) [Arthur Maurice Fishberg, American physician, born 1898] see under *tests*.

fishpox (fish'poks) a hyperplastic epidermal disease of viral origin occurring in fresh-water and marine fish.

fissile (fis'il) capable of being split; fissionable.

fission (fish'un) [L. *fissio*] 1. the act of splitting. 2. a form of asexual reproduction in which the cell divides into two or more daughter parts, each of which becomes a new, independent organism; it is seen chiefly among the protists. See also *binary f.* and *multiple f.* 3. the splitting of the nucleus of an atom, releasing a great quantity of kinetic energy. **binary f.**, fission of a cell in which the cell divides into two approximately equal daughter parts. **cellular f.**, see *fission*, 2nd def. **multiple f.**, fission of a cell in which the cell divides into a number of daughter cells. **nuclear f.**, see *fission*, 3rd def.

fissionable (fish'un-ah-b'l) capable of undergoing fission.

fissiparous (fi-sip'ah-rus) [L. *fissus* cleft + *parere* to produce] propagated by fission.

fissula (fis'u-lah) [L., dim. of *fissum*] a little cleft. **f. an'te fenes'tram**, an irregular ribbon of connective tissue that extends through the bony otic capsule from the vestibule just anterior to the oval window, to the tympanic cavity near the processus cochleariformis.

fissura (fis-su'rah), pl. *fissu'rae* [L.] [NA] fissure: a general term for a cleft or groove, especially a deep fold in the cerebral cortex that involves its entire thickness. **f. in a'no**, anal fissure. **f. antitragohelici'na** [NA], antitragohelicine fissure: a fissure in the auricular cartilage between the cauda helices and the antitragus; called also *posterior fissure of auricle*. **f. au'ris congen'ita**, preauricular fistula; see under *fistula*. **f. calcar'i'na**, sulcus calcarinus. **fissu'rae cerebel'li** [NA], the numerous shallow grooves in the cortex of the cerebellum, on the surface and within the deep fissures, which divide the cortex into folia; called also *sulci cerebelli* and *sulci of cerebellum*. **f. cer'ebri latera'lis** [Syl'vii], sulcus lateralis cerebri. **f. choro'i'dea** [NA], choroid fissure: the line in the lateral ventricle along which the choroid plexus invaginates. **f. collatera'lis**, sulcus collateralis. **f. hippocam'pi**, sulcus hippocampi. **f. horizonta'lis cerebel'li** [NA], horizontal fissure of cerebellum: the fissure that separates the superior from the inferior semilunar lobule of the cerebellum. Called also *sulcus horizontalis cerebelli* and *great horizontal fissure*. **f. horizonta'lis pulmo'nis dex'tri** [NA], horizontal fissure of right lung: the cleft that extends forward from the oblique fissure in the right lung, separating the upper and middle lobes. **f. ligamen'ti te're'tis** [NA], fissure for ligamentum teres: the fossa on the visceral surface of the liver lodging the ligamentum teres in the adult, and helping separate the right and left lobes of the liver; called also *fossa venae umbilicalis*, *fissure of round ligament*, and *umbilical fissure*. **f. ligamen'ti veno'si** [NA], fissure for ligamentum venosum: a fossa on the posterior part of the diaphragmatic

surface of the liver lodging the ligamentum venosum in the adult. **f. longitudina'lis cer'e'br'i** [NA], longitudinal fissure of cerebrum: the deep fissure between the cerebral hemispheres extending inferiorly to the corpus callosum. **f. media'na [ante'rior] medul'lae oblonga'tae** [NA], anterior median fissure of medulla oblongata: the longitudinal fissure in the median plane of the anterior aspect of the medulla oblongata, continuous with the anterior median fissure of the spinal cord; it separates the pyramids and is partially obliterated below by their decussation. **f. media'na [ante'rior] medul'lae spina'lis** [NA], anterior median fissure of spinal cord; the deep longitudinal fissure in the median plane of the anterior aspect of the spinal cord; it contains the anterior spinal artery ensheathed in the linea splendens. Called also *anteromedian groove of spinal cord* and *Haller's line*. **f. media'na poste'rior medul'lae oblonga'tae**, sulcus mediana posterior medullae oblongatae. **f. obli'qua pulmo'nis** [NA], oblique fissure of lung: 1. the cleft that separates the lower from the middle lobe in the right lung. 2. the cleft that separates the upper from the lower lobe in the left lung. **f. orbita'lis infe'rior** [NA], inferior orbital fissure: a cleft in the inferolateral wall of the orbit bounded by the great wing of the sphenoid and the orbital process of the maxilla; it transmits the infraorbital and zygomatic nerves and the infraorbital vessels. Called also *inferior sphenoidal fissure* and *sphenomaxillary fissure*. **f. orbita'lis supe'rior** [NA], superior orbital fissure: an elongated cleft between the small and great wings of the sphenoid bone, which transmits various nerves and vessels; called also (*superior*) *sphenoidal fissure*. **f. parietooccipita'lis**, sulcus parietooccipitalis. **f. petrooccipita'lis** [NA], petrooccipital fissure: a fissure extending backward from the foramen lacerum to the jugular foramen, between the basioccipital and the posterior and inner border of the petrous portion of the temporal bone; called also *petrobasilar fissure*. **f. petrosquamo'sa** [NA], petrosquamous fissure: a slight fissure of varying distinctness in the floor of the middle cranial fossa, marking the line of fusion between the squamous and petrous portions of the temporal bone. **f. petrotympan'ica** [NA], petrotympanic fissure: a narrow transversely running slit just posterior to the articular surface of the mandibular fossa of the temporal bone; an arteriole and the chorda tympani nerve pass through it, and it lodges a portion of the malleus. Called also *glaserian, tympanic, or tympanosquamous fissure*. **f. posterolatera'lis cerebel'li** [NA], posterolateral fissure: the fissure which separates the nodulus from the uvula and the flocculus from the tonsilla of the cerebellum. **f. pri'ma cerebel'li** [NA], primary fissure: the fissure that separates the anterior from the posterior lobe in the cerebellum; it lies between the culmen and declive of the vermis, and between the part of the hemisphere that is continuous with the culmen and the lobulus simplex in the hemisphere. **f. pterygoi'dea**, pterygoid fissure: a fissure on the inferior portion of each pterygoid process where the pyramidal process of the palatine bone is inserted between the diverging medial and lateral pterygoid plates; called also *palatine* or *pterygoid notch*, and *palatine* or *pterygoid incisura*. **f. pterygomaxilla'ris** [NA], pterygomaxillary fissure: a cleft just behind the inferior orbital fissure between the lateral pterygoid plate and the maxilla; called also *pterygopalatine fissure*. **f. secun'da cerebel'li** [NA], secondary fissure: a fissure that lies between the uvula of the cerebellum and the pyramid. **f. sphenoccipita'lis**, sphenoccipital fissure: the fissure between the basilar part of the occipital bone and the body of the sphenoid bone; called also *basilar* or *occipitosphenoidal fissure*. **f. sphenopetro'sa** [NA], sphenopetrosal fissure: a fissure in the floor of the middle cranial fossa between the posterior edge of the great wing of the sphenoid bone and the petrous part of the temporal bone; called also *angular* or *petrosphenoidal fissure*. **f. transver'sa cer'e'br'i** [NA], transverse fissure of cerebrum: the fissure between the dorsal surface of the diencephalon and the ventral surface of the cerebral hemispheres, produced by the folding back of the hemispheres during their development; called also *great (transverse) fissure of cerebrum* and *fissure of Bichat*. **f. tympanomastoi'dea** [NA], tympanomastoid fissure: an external fissure on the inferior and lateral aspect of the skull between the tympanic portion and the mastoid process of the temporal bone; the auricular branch of the vagus nerve often passes through it. Called also *petromastoid fissure*. **f. tympanosquamo'sa** [NA], tympanosquamous fissure: a line seen on the posterior wall of the external acoustic meatus at the junction between the tympanic and squamous parts of the temporal bone.

fissurae (fis-su're) [L.] plural of *fissura*.

fissural (fish'u-ral) pertaining to a fissure.

fissure (fish'ür) [L. *fissura*] 1. any cleft or groove, normal or otherwise; especially a deep fold in the cerebral cortex which involves the entire thickness of the brain wall. See *fissura*. Cf. *sulcus*. 2. in dentistry, a fault in the surface of a tooth caused by the imperfect joining of the enamel of the different lobes; to be distinguished from a groove or sulcus (A.D.A.). Called also *enamel f.* **abdominal f.**, a congenital cleft in the abdominal wall. **adoccipital f.**, an inconstant sulcus which crosses the caudal part of the precuneus and joins the occipital fissure. **Ammon's f.**, a pear-shaped aperture in the sclera at an early fetal period. **amygdaline f.**, a slight groove inconstantly present

near the extremity of the temporal lobe. **anal f.**, **f. in a'no**, a painful linear ulcer at the margin of the anus. **angular f.**, fissura sphenopetrosa. **antitragehelicine f.**, fissura antitragehelicina. **ape f. (obs.)**, any fissure in the human brain that is found also in apes, especially the sulcus lunatus. **f. of aqueduct of vestibule**, apertura externa aqueductus vestibuli. **f. of auricle, posterior**, fissura antitragehelicina. **auricular f. of temporal bone**, fissura tympanomastoidea. **basilar f.**, fissura sphenoccipitalis. **basisylvian f.**, the part of the lateral sulcus between the temporal lobe and the orbital surface of the frontal bone. **f. of Bichat**, fissura transversa cerebri. **branchial f's**, see under *cleft*. **Broca's f.**, a term loosely applied to the anterior and ascending rami of the cerebral lateral sulcus which invade the left inferior frontal gyrus. **Burdach's f.**, the groove between the lateral surface of the insula and the inner surface of the operculum. **calcarine f.**, sulcus calcarinus. **callosal f.**, sulcus corporis callosi. **callosomarginal f.**, sulcus cinguli. **central f.**, sulcus centralis cerebri. **cerebral f's, f's of cerebrum**, sulci cerebri. **cerebral f., lateral**, sulcus lateralis cerebri. **choroid f.**, 1. a ventral fissure formed by invagination of the optic vesicle and its stalk in the embryo, permitting the ingrowth of the mesoblast for the formation of the vitreous humor, etc. 2. fissura choroidea. **collateral f.**, sulcus collateralis. **corneal f.**, the cleft or groove in the scleral margin into which the limbus corneae fits; called also *rima cornealis* and *corneal cleft*. **craniofacial f.**, a vertical fissure separating the mesethmoid into two parts. **dentate f.**, sulcus hippocampi. **f. of ductus venosus**, fossa ductus venosi. **Ecker's f.**, sulcus occipitalis transversus. **enamel f.**, a fault in the enamel surface of a tooth; see *fissure* (def. 2). **entorbital f.**, a sulcus occasionally seen between the orbital and olfactory sulci. **ethmoid f.**, meatus nasi superior. **glaserian f.**, fissura petrotympanica. **f. of glottis**, rima glottidis. **great f. of cerebrum**, fissura transversa cerebri. **great horizontal f.**, fissura horizontalis cerebelli. **Henle's f's**, spaces filled with connective tissue between the muscular fibers of the heart. **hippocampal f.**, **f. of hippocampus**, sulcus hippocampi. **horizontal f. of cerebellum**, fissura horizontalis cerebelli. **horizontal f. of right lung**, fissura horizontalis pulmonis dextri. **inferoifrontal f.**, sulcus frontalis inferior. **intercerebral f.**, one separating the two hemispheres of the brain. **interparietal f.**, sulcus intraparietalis. **intratonsillar f.**, fossa supratonsillaris. **lacrimal f.**, sulcus lacrimalis ossis lacrimalis. **lateral f. of cerebrum**, sulcus lateralis cerebri. **f. for ligamentum teres**, fissura ligamenti teretis. **f. for ligamentum venosum**, fissura ligamenti venosi. **longitudinal f.**, 1. fissura longitudinalis cerebri. 2. tenia omentalis. **longitudinal f. of cerebellum**, vallecule cerebelli. **longitudinal f. of cerebrum**, fissura longitudinalis cerebri. **mandibular f's**, the two lowest facial fissures of the embryo. **maxillary f.**, a groove on the maxilla for the maxillary process of the palatal bone. **median f. of medulla oblongata, anterior**, fissura mediana anterior medullae oblongatae. **median f. of medulla oblongata, posterior**, sulcus medianus posterior medullae oblongatae. **median f. of spinal cord, anterior**, fissura mediana anterior medullae spinalis. **median f. of spinal cord, posterior**, sulcus medianus posterior medullae spinalis. **f. of Monro**, sulcus hypothalamicus. **oblique f. of lung**, fissura obliqua pulmonis. **occipital f.**, sulcus parietooccipitalis. **occipitosphenoidal f.**, fissura sphenoccipitalis. **oral f.**, rima oris. **orbital f., inferior**, fissura orbitalis inferior. **orbital f., superior**, fissura orbitalis superior. **f. of palpebrae**, **palpebral f.**, rima palpebrarum. **Pansch's f.**, sulcus intraparietalis. **paracentral f., anterior (obs.)**, sulcus precentralis. **parietooccipital f.**, sulcus parietooccipitalis. **parieto-sphenoid f.**, incisura parietalis ossis temporalis. **paroccipital f. (obs.)**, the posterior portion of the sulcus intraparietalis. **petrobasilar f.**, fissura petrooccipitalis. **petromastoid f.**, fissura tympanomastoidea. **petrooccipital f.**, fissura petrooccipitalis. **petrosal f., superficial**, hiatus canalis nervi petrosi majoris. **petrosphenoidal f.**, fissura sphenopetrosa. **petrosquamosal f.**, **petrosquamous f.**, fissura petrosquamosa. **petrotympanic f.**, fissura petrotympanica. **portal f.**, porta hepatis. **postcentral f.**, sulcus postcentralis. **posterolateral f.**, fissura posterolateralis cerebelli. **precentral f.**, sulcus precentralis. **precuneal f.**, a sulcus in the precuneus. **prepyramidal f.**, a fissure between the pyramis vermis and the uvula vermis. **presylvian f.**, the anterior branch of the lateral cerebral sulcus. **primary f.**, fissura prima cerebelli. **pterygoid f.**, fissura pterygoidea. **pterygomaxillary f.**, fissura pterygomaxillaris. **pterygopalatine f.**, fissura pterygopalatinis. **pterygopalatine f. of palatine bone**, sulcus palatinus major ossis palatini. **pterygotympanic f.**, fissura petrotympanica. **pudendal f.**, **f. of pudendum**, rima pudendi. **retrocuticular f.**, a fissure in the oral epithelium made by a tooth at the time of eruption. **f. of Rolando**, sulcus centralis cerebri. **f. of round ligament**, fissura ligamenti teretis. **sagittal f. of liver**, fossa sagittalis sinistra hepatis. **Santorini's f's**, incisurae cartilaginis meatus acustici. **Schwalbe's f.**, fissura choroidea. **secondary f.**, fissura secunda cerebelli. **spheno-**

noidal f., fissura orbitalis superior. **sphenoidal f., inferior**, fissura orbitalis inferior. **sphenoidal f., superior**, fissura orbitalis superior. **sphenomaxillary f.**, 1. fissura orbitalis inferior. 2. fossa pterygopalatina. **sphenoccipital f.**, fissura sphenoccipitalis. **sphenopetrosal f.**, fissura sphenopetrosa. **squamotympanic f.**, fissura petrotympanica. **subfrontal f.**, sulcus frontalis inferior. **subsylvian f. (obs.)**, 1. an occasional fissure on the ventral surface of the frontal lobe of the brain. 2. ramus posterior sulci lateralis cerebri. **subtemporal f.**, an occasional fissure in the inferior and middle temporal convolutions. **superfrontal f.**, sulcus frontalis superior. **supertemporal f.**, sulcus temporalis superior. **sylvian f., f. of Sylvius**, sulcus lateralis cerebri. **tentorial f. (obs.)**, sulcus collateralis. **transtemporal f.**, an occasional short fissure on the lateral surface of the temporal lobe. **transverse f., porta hepatis**. **transverse f. of cerebrum**, fissura transversa cerebri. **transverse f. of cerebrum, great**, fissura transversa cerebri. **transverse occipital f.**, sulcus occipitalis transversus. **tympanic f.**, fissura petrotympanica. **tympanomastoid f.**, fissura tympanomastoidea. **tympanosquamous f.**, 1. fissura tympanosquamosa. 2. fissura petrotympanica. **umbilical f.**, fissura ligamenti teretis. **f. of the venous ligament**, fossa ductus venosi. **f. of the vestibule**, rima vestibuli. **zygal f.**, a fissure that consists of two portions united by a third portion. **zygomaticosphe-noid f.**, a fissure between the orbital surface of the great wing of the sphenoid bone and the zygomatic bone.

fistula (fis'tu-lah), pl. *fistulas* or *fistulae* [L. "pipe"] an abnormal passage or communication, usually between two internal organs, or leading from an internal organ to the surface of the body; frequently designated according to the organs or parts with which it communicates, as anovaginal, bronchocutaneous, hepato-pleural, pulmonoperitoneal, rectovaginal, urethrovaginal, and the like (see illustrations). Such passages are frequently created experimentally for the purpose of obtaining body secretions for physiologic study. **abdominal f.**, an abnormal passage lead-

Various types of fistulae, designated according to site or to the organs with which they communicate.

ing from one of the hollow abdominal viscera to the surface of the abdomen. **alveolar f., dental f.** **amphibolic f.**, an opening made into the gallbladder of an animal in order to obtain bile for study, with the common bile duct left intact so that the bile may flow through it when the fistula is closed. **anal f., f. in a'no**, one opening on the cutaneous surface near the anus, which may or may not communicate with the rectum. **arteriovenous f.**, an abnormal communication between an artery and a vein; it may result from injury (*traumatic arteriovenous f.*), or occur as a congenital abnormality (*congenital arteriovenous fistula*). **f. au'ris congen'ita**, preauricular f., congenital. **biliary f.**, an abnormal passage communicating with the biliary tract. **f. bimuco'sa**, a complete fistula of the anus, both ends of which open on the mucous surface of the anal canal. **blind f.**, a fistula that is open at one end only; it may open only upon the cutaneous surface of the body (*external blind f.*), or on an internal

mucous surface (*internal blind f.*). Called also *incomplete f.* **branchial f.**, an abnormal passage resulting from failure of closure of a branchial cleft; called also *cervical f.* **cervical f.**, 1. branchial f. 2. an abnormal passage communicating with the canal of the cervix uteri. **f. cervicovagina'lis la-queat'ica**, a fistula in the vaginal portion of the cervix uteri, communicating with the cervical canal and the vagina. **f. ciba'lis**, the esophagus. **f. col'li congen'ita**, a congenital fistula in the neck, opening into the pharynx. **colonic f.**, an abnormal passage communicating with the colon and the cutaneous surface of the body (*external colonic f.*), or with the colon and another hollow organ (*internal colonic f.*). **complete f.**, an abnormal passage in the body, each end of which opens on a mucous surface or on the cutaneous surface of the body. **f. cor'neae**, an orifice remaining after failure of a corneal ulcer to heal. **coronary arteriovenous f.**, a congenital condition in which there is an abnormal communication between a coronary artery and vein. **coronary artery f.**, a congenital condition in which there is an abnormal communication between a coronary artery and the right heart, or with the pulmonary or bronchial arteries. **craniosinus f.**, a fistula between the intracranial space and one of the paranasal sinuses, permitting the escape of cerebrospinal fluid into the nose. **dental f.**, an abnormal passage communicating with the apical periodontal area of a tooth, which permits egress on the mucous membrane or the skin of an inflammatory or suppurative discharge; called also *alveolar f.* **Eck's f.**, an artificial communication made between the portal vein and the vena cava (Eck, 1877). **Eck's f. in reverse**, an artificial communication created to route all the blood from the posterior (lower) part of the body through the portal vein and liver. **external f.**, an abnormal communication between a hollow organ and the external surface of the body. **fecal f.**, a colonic fistula opening on the external surface of the body and discharging feces. **gastric f.**, an abnormal passage communicating with the stomach; often applied to an artificially created opening through the abdominal wall into the stomach (gastrostoma). **gingival f.**, a dental fistula opening on the gingiva. **hepatic f.**, an abnormal communication between the liver and another body part or organ. **horseshoe f.**, a semicircular fistulous tract near the anus, both openings being on the cutaneous surface. **incomplete f., blind f.** **internal f.**, an abnormal communication between two internal organs. **intestinal f.**, an abnormal passage communicating with the intestine, often designating an artificially created opening through the abdominal wall into the intestine. **lacrimal f.**, an abnormal passage communicating with the lacrimal sac or duct. **lacteal f.**, an abnormal passage communicating with a lacteal duct. **lymphatic f., f. lymphat'ica**, an abnormal passage communicating with a lymphatic vessel. **Mann-Bollman f.**, an artificial opening into an isolated segment of intestine, the proximal end of which is sutured to the abdominal wall and the distal end attached by end-to-side anastomosis to the duodenum or other part of the small intestine. **parietal f.**, an abnormal passage in the body wall, ending blindly or communicating with an internal organ or body cavity. **pharyngeal f.**, an abnormal passage communicating with the pharynx. **pilonidal f., pilonidal sinus.** **pre-auricular f., congenital**, an epidermal-lined tract communicating with a pitlike depression just in front of the helix and above the tragus (ear pit), resulting from imperfect fusion of the first and second branchial arches in formation of the auricle; called also *f. auris congenita*. **pulmonary f.**, an abnormal passage communicating with the lung. **pulmonary arteriovenous f., congenital**, a congenital anomaly characterized by existence of a direct communication between the pulmonary arterial and venous systems, allowing unoxygenated blood to enter the systemic circulation. **rectovaginal f.**, one between the rectum and vagina. **rectovesical f.**, one between the rectum and urinary bladder. **salivary f.**, an abnormal passage communicating with a salivary duct. **spermatic f.**, an abnormal passage communicating with the seminal ducts. **stercoral f., fecal f.** **submental f.**, a salivary fistula opening below the chin. **Thiry's f.**, an artificial opening into an isolated segment of intestine, the proximal end of which is sutured to the abdominal wall and the distal end is closed. **Thiry-Vella f.**, an artificial opening into an internal closed loop of intestine, which communicates with the abdominal wall through an intestinal segment interposed between the surface and the loop. **thoracic f.**, an abnormal passage communicating with the thoracic cavity. **tracheal f.**, an abnormal passage communicating with the trachea. **umbilical f.**, an abnormal passage communicating with the gut or with the urachus at the umbilicus. **urachal f.**, an abnormal passage communicating with the urachus. **urinary f.**, an abnormal passage communicating with the urinary tract. **Vella's f.**, an artificial opening into an isolated segment of intestine, both open ends of which are sutured to the abdominal wall. **vesical f.**, an abnormal passage communicating with the urinary bladder. **vesicovaginal f.**, one from the bladder to the vagina.

fistulae (fis'tu-le) plural of *fistula*.

fistulatome (fis'tu-lah-tōm') [*fistula* + Gr. *temnein* to cut] an instrument for incising a fistula; syringotome.

fistulectomy (fis'tu-lek'to-me) [*fistula* + Gr. *ektomē* excision] excision of a fistulous tract.

fistulization (fis'tu-li-za'shun) 1. the process of becoming fistulous. 2. the surgical creation of an opening into a hollow organ, cavity, or abscess; the creation of a communication between two structures which were not previously connected.

fistuloenterostomy (fis'tu-lo-en'ter-os'to-me) the operation of making a biliary fistula empty permanently into the intestine.

fistulotomy (fis'tu-lot'o-me) incision of a fistula.

fistulous (fis'tu-lus) [L. *fistulosus*] pertaining to or of the nature of a fistula.

fit (fit) 1. an episode characterized by inappropriate and involuntary motor or psychic activity. See also *epilepsy*. 2. the adaptation of one structure into another, as the adaptation of any dental restoration to its site in the mouth. **running f.**, 1. fright disease. 2. cursive epilepsy.

Fitz's law, syndrome (fitz'ez) [Reginald Heber Fitz, physician in Boston, 1843–1913] see under *law* and *syndrome*.

Fitz Gerald method, treatment [William Henry Hope Fitz Gerald, American physician, 1872–1939] zone therapy.

fix (fiks) to fasten or hold firm; see *fixation*.

fixateur (feks-ah-ter') [Fr.] Metchnikoff's term for antibody or amboceptor.

fixation (fik-sa'shun) [L. *fixatio*] 1. the act or operation of holding, suturing, or fastening in a fixed position. 2. the condition of being held in a fixed position. 3. in psychiatry, the cessation of the development of personality at a stage short of complete maturity. 4. in microscopy, the treatment of material so that its structure may be examined in greatest detail with minimal alteration of the normal state, and also to provide information concerning the chemical properties (as of cell constituents) by interpretation of fixation reactions. 5. in chemistry, the process whereby a substance is removed from the gaseous or solution phase and localized. 6. in ophthalmology, direction of the gaze so that the visual image of the object falls on the fovea centralis. 7. in film processing, the chemical removal of all undeveloped salts of the film emulsion, as on x-ray films. **alexin f.**, complement f. **autotrophic f.**, the cyclic mechanism whereby carbon dioxide is fixed into organic linkage by autotrophic organisms, e.g., plants and autotrophic bacteria. **binocular f.**, training both eyes on the same object as in ordinary vision. **Bovin f.**, an acetate fixation which destroys the mitochondria of the cell. **complement f., f. of the complement**, when antigen unites with its specific antibody, complement, if present is taken into the combine and becomes inactive or fixed. Its presence or absence as free, active complement can be shown by adding sensitized blood cells to the mixture. If free complement is present, hemolysis occurs; if not, no hemolysis is observed. This reaction is the basis of many serologic tests for infection, including the Wassermann test for syphilis, and reactions for gonococcus infection, glanders, typhoid fever, tuberculosis, amebiasis, etc. Called also *Bordet-Gengou phenomenon* and *Neisser-Wechsberg phenomenon*. **elastic band f.**, the stabilization of fractured segments of the jaws by means of intermaxillary elastic bands applied to splints or appliances. **external pin f.**, a method for stabilizing fractures by means of pins drilled into the bony parts through the overlying skin and connected by metal bars. **external pin f., biphasic**, external pin fixation in which the rigid metal bar connector is replaced with an acrylic bar adapted at the time of the reduction. **father f.**, inordinate attachment of a person to the male parent. **freudian f.**, arrest of an emotional progression at some intermediate level of psychosexual development. **internal f.**, the fastening together of the ends of a fractured bone by means of wires, plates, screws, or nails applied directly to the fractured bone. **intraosseous f.**, the open reduction and stabilization of fractured bony parts by direct fixation to one another with surgical wires, screws, pins, and/or plates. **maxillo-mandibular f.**, the fixation of fractures of the maxilla or mandible in a functional relationship with the opposing dental arch, through the use of elastics, wire ligatures, arch bars, or other splints. **mother f.**, inordinate attachment of a person to the female parent. **nasomandibular f.**, mandibular immobilization, especially for edentulous jaws, using maxillomandibular splints; a circummandibular wire is connected with an intraoral interosseous wire passed through a hole drilled into the anterior nasal spine of the maxilla. **nitrogen f.**, the union of the free atmospheric nitrogen with other elements to form chemical compounds, such as ammonia and nitrates or amino groups. It is done mostly by certain organisms in the soil and in the roots of legumes, by electric power in special machines, and by catalysis. **parent f.**, inordinate attachment of an individual for a parent, persisting into adult life and preventing normal development of interest in a person of the opposite sex. **skeletal f.**, immobilization of the ends of a fractured bone by metal wires or plates applied directly to the bone (*internal skeletal fixation*) or on the body surface (*external skeletal fixation*).

fixative (fik'sah-tiv) 1. an agent employed in the preparation of a histologic or pathologic specimen, for the purpose of maintaining the existing form and structure of all its constituent elements. Great numbers of such agents are used, the most important being

composed of formalin, potassium bichromate, bichloride of mercury, osmic acid, glutaraldehyde, or picric acid (trinitrophenol), alone or in various combinations. See also under *fluid* and *solution*. 2. see *amboceptor*. **glutaraldehyde f.**, a fixative used in specimen preparation for electron microscopy that does not simultaneously stain the tissue. **Kaiserling's f.**, see under *solution*. **Maximow's f.**, a solution composed of Zenker's fixative, formol, and osmic acid, used in preserving vertebrate cells for study with the visible light microscope. **Zenker's f.**, a fixative solution containing corrosive mercuric chloride, potassium bichromate, sodium sulfate, glacial acetic acid, and water; the sodium sulfate is frequently omitted. The most widely used variations of this fixative are the modifications by Maximow, by Helly, and by Custer, in which formalin replaces the acetic acid. **Zenker-formol f.**, a solution composed of Zenker's fixative with added formalin; see *Helly's fluid*, under *fluid*.

fixator (fiks-a'tor) antibody.

Fl. fluid.

F.L.A. fronto-laeva anterior (left frontoanterior—a position of the fetus).

F.l.a. abbreviation for L. *fi'at le'ge ar'tis*, let it be done according to rule.

flabellum (flah-bel'um) [L. a "little fan"] (*obs.*) a set of radiating fibers in the corpus striatum.

flaccid (flak'sid) [L. *flaccidus*] weak, lax, and soft.

flacherie (flash-er-e') [Fr.] a fatal disease of silkworms occurring in two forms: an infectious form due to a small nonoccluded virus and a noninfectious form due to environmental changes, such as a sudden increase in temperature and humidity. It is marked by diarrhea, weakness, flaccidity, and death, after which the body quickly turns dark and the tissues liquefy. See also *gattine*.

Flack's node, test (flaks) [Martin William Flack, physiologist in London, 1882–1931] see *Keith-Flack's node*, under *node*, and see under *tests*.

flagella (flah-jel'ah) [L.] plural of *flagellum*.

flagellar (flah-jel'ar) of or relating to a flagellum.

Flagellata (flaj'ě-la'tah) Mastigophora.

flagellate (flaj'ě-lāt) 1. any microorganism having flagella as organs of locomotion. 2. any protozoan of the subphylum Mastigophora. 3. having flagella. 4. to practice flagellation.

flagellation (flaj'ě-la'shun) 1. a form of massage by tapping a part with the fingers. 2. whipping or being whipped to achieve erotic pleasure. 3. the protrusion of flagella; exflagellation.

flagelliform (flah-jel'i-form) [L. *flagellum* whip + *forma* shape] shaped like a flagellum, or lash.

flagellin (flah'jel-in) a protein occurring in the flagella of bacteria; it is similar to keratin, myosin, and fibrinogen.

flagellosis (flaj'ě-lo'sis) infection with a flagellate protozoan.

flagellospore (flah-jel'o-spōr) zoospore.

flagellula (flah-jel'u-lah) zoospore.

flagellum (flah-jel'um), pl. *flagel'la* [L. "whip"] a long, mobile, whiplike projection from the free surface of a cell, serving as a locomotor organelle; it is composed of nine pairs of microtubules arrayed around a central pair. Arising from basal bodies, flagella are common to all mastigophoran protozoa and occur in such specialized cells as spermatozoa. Bacterial flagella are thinner and simpler, being composed of tightly wound chains of strands that contain flagellin. Bacteria having a single flagellum are *monotrichous*, those with two or more at one end are *lophotrichous*, those with one flagellum at each end are *amphitrichous*, and those with flagella around the entire surface are *peritrichous*. Cf. *cilium*, def. 3.

Flagyl (flag'l) trademark for a preparation of metronidazole.

flail (flāl) exhibiting abnormal or paradoxical mobility, as flail joint, flail chest, or flail valve.

Flajani's disease (flah-jan'ez) [Giuseppe Flajani, Italian surgeon, 1741–1808] Graves' disease.

flame (flām) 1. the luminous, irregular appearance usually accompanying combustion caused by the light emitted from energetically excited chemical species, or an appearance resembling it. 2. to render an object sterile by exposure to a flame. **capillary f's**, telangiectatic spots sometimes seen on the face of a newborn infant; called also *stork bites*. **manometric f.**, a gas flame in an enclosed box arranged so that it pulsates with the vibration of air caused by sound; such pulsations may be seen on a mirror or recorded photographically (flame picture).

flange (flanj) a projecting border or edge; in dentistry, that part of the denture base which extends from around the embedded teeth to the border of the denture. **buccal f.**, the portion of the flange of a denture that occupies the buccal vestibule of the mouth and extends distally from the buccal notch. **denture f.**, see *flange*. **labial f.**, the portion of the flange of a denture that occupies the labial vestibule of the mouth. **lingual f.**, the portion of the flange of a mandibular denture which occupies the space adjacent to the residual ridge and next to the tongue.

Tubed pedicle flap raised from the abdomen and (1) sutured to the arm to preserve blood supply, (2) transferred from abdomen to leg, and (3) from arm to leg.

flank (flank) the part of the body below the ribs and above the ilium.

flap (flap) 1. a mass of tissue for grafting, usually including skin, only partially removed from one part of the body so that it retains its own blood supply during its transfer to a new location; used to repair defects in an adjacent or distant part of the body. 2. an uncontrolled movement. **Abbé f.**, a triangular surgical flap taken from the median portion of the lower lip, and used to correct defects of the upper lip. **advancement f.**, sliding f. **bi-lobed f.**, Zimany's bilobed flap. **bipedicle f.**, a pedicle flap with two vascular attachments. **circular f.**, a surgical flap of somewhat circular outline. **cross-arm f.**, a surgical flap cut from one arm and attached to the other to repair a defect. **cross-leg f.**, a surgical flap cut from one leg and attached to the other to repair a defect. **delayed transfer f.**, a surgical flap that is partially raised from its bed and then later replaced; done to force the flap to develop further collateral circulation through the pedicle. **direct transfer f.**, immediate transfer f. **distant f.**, a pedicle flap brought from a distant area and transplanted by bringing the donor area and the recipient site into close approximation; called also *Italian f.* **double-end f.**, a pedicle flap or rope flap. **double pedicle f.**, bipedicle f. **envelope f.**, a mucoperiosteal flap retracted from a horizontal linear incision (as along the free gingival margin) with no vertical component of that incision. **Estlander f.**, a surgical flap cut from the corner of the upper lip, and used for repair of lateral defects of the lower lip. **free f.**, an island flap detached from the body and reattached at the distant recipient site by microvascular anastomosis. **French f.**, sliding f. **gauntlet f.**, pedicle f. **Gillies' f.**, rope f. **immediate transfer f.**, a surgical flap that is applied to the recipient site immediately after it is elevated from its bed; called also *direct transfer f.* **Indian f.**, interpolated f. **interpolated f.**, a pedicle flap that is twisted or rotated on its base and placed into a contiguous area; called also *Indian f.* **island f.**, a skin flap consisting of the skin and subcutaneous tissue with a pedicle made up of only the nutrient vessels. **Italian f.**, distant f. **jump f.**, a flap cut from the abdomen and attached to a flap of the same size on the forearm; the forearm flap is transferred later to some other part of the body to fill a defect there. **Langenbeck's pedicle mucoperiosteal f.**, von Langenbeck's bipedicle mucoperiosteal f. **lingual tongue f.**, a combination flap used to repair fistulae of the hard palate: a palatal flap forms the floor of the nose, and a flap taken from the back or edge of the tongue forms the palatal surface. **local f.**, a surgical flap cut from the tissue neighboring the defect. **mucoperiosteal f.**, a flap of mucosal tissue, including the periosteum, reflected from bone. **liver f.**, asterixis. **musculo-cutaneous f.**, a surgical flap cut from skin and muscle. **myocutaneous f.**, a compound flap of skin and muscle with adequate vascularity to permit sufficient tissue to be transferred to the recipient site. **pedicle f.**, a flap consisting of the full thickness of the skin and the subcutaneous tissue, attached by a

pedicle. **rope f.**, a bipedicle flap made by elevating a long strip of tissue from its bed except at the two extremities, the cut edges then being sutured together to form a tube; called also *tube* or *tunnel f.*, and *Gillies' f.* **rotation f.**, a pedicle flap whose width is increased by transforming the edge of the flap distal to the defect into a curved line; the flap is then rotated and a counterincision is made at the base of the curved line, which increases the mobility of the flap. **skin f.**, a full-thickness mass or flap of tissue containing epidermis, dermis, and subcutaneous tissue. **sliding f.**, a flap carried to its new position by a sliding technique of surgical advancement. **surgical f.**, a mass of tissue partially detached from one part of the body but carrying with it its own nutrient blood vessels or at least a portion of them, and attached, directly or as a jump flap, to a remote part, for repair of a defect. **tube f.**, **tubed pedicle f.**, rope f. **tunnel f.**, rope f. **von Langenbeck's bipedicle mucoperiosteal f.**, a bipedicle flap of the conjoined mucoperiosteal tissues, used for closure of a cleft palate. **V-Y f.**, a flap in which the incision is made in the shape of a V and is sutured in the shape of a Y so as to lengthen an area of tissue; or conversely the incision is Y-shaped and the closure V-shaped to shorten an area of tissue. **Z-f.**, a flap in which the incision is made in the shape of a Z so as to distribute contraction into more than one direction; often used to correct scars. **Zimany's bilobed f.**, a surgical flap consisting of a large lobe that is transposed into the primary defect and a smaller second lobe that is transposed to fill the secondary defect produced by mobilization of the large lobe.

flaps (flaps) severe swelling of the lips in horses.

flare (flār) 1. the red outermost zone of the "triple response" (Sir Thomas Lewis) urticarial wheal reaction, a manifestation of immediate, as opposed to delayed, allergy or hypersensitivity. 2. a spreading flush or area of redness on the skin, spreading out around an infective lesion or extending beyond the main point of reaction to an irritant. 3. sudden exacerbation of a disease.

flash (flash) excess material extruded from a mold, as in the packing of a denture by the compression technique.

flask (flask) 1. a container, such as a narrow-necked vessel of glass for containing liquid. 2. a metal case in which the materials used in the creation of artificial dentures are placed for processing. 3. to place a denture in a flask for processing. **casting f.**, refractory f. **crown f.**, a small, sectional, boxlike metal case in which a sectional mold of plaster of Paris or of artificial stone is made for compressing and curing plastics on small dental restorations. **culture f.**, a flask for growing cultures of bacteria or of other cells. **denture f.**, a boxlike case of metal which can be tightly closed, and in which dentures or other resinous restorations can be compressed and cured. **Erlenmeyer f.**, a glass flask with a conical body, broad base, and narrow neck. **refractory f.**, a metal tube in which a refractory mold is made for casting metal dental restorations or appliances; called also *casting f.* **volumetric f.**, a narrow-

necked vessel of glass calibrated to contain or deliver an exact volume at a given temperature.

flasking (flask'ing) the act of investing a pattern for a dental prosthesis.

flat (flat) 1. lying in one plane; having an even surface. 2. having little or no resonance. 3. slightly below the normal pitch of a musical tone. **optical f.**, a glass plate so perfectly flat that only an interferometer can measure its unevenness.

Flatau's law (flat-owz') [Edward Flatau, Polish neurologist, 1869-1932] see under *law*.

flatfoot (flat'foot) a condition in which one or more of the arches of the foot have flattened out; called also *pes planovalgus*, *pes planus*, and *pes valgus*. **rocker-bottom f.**, see under *foot*.

Print of soles (A) of normal foot and (B) of one with flatfoot (Albert).

spastic f., a painful form of flatfoot due to spasm of the peroneal muscles.

flatness (flat'nes) a peculiar sound lacking resonance, heard on percussing a part that is abnormally solid.

flatulence (flat'u-lens) [L. *flatulentia*] the presence of excessive amounts of air or gases in the stomach or intestine, leading to distention of the organs.

flatulent (flat'u-lent) [L. *flatulentus*] pertaining to or characterized by flatulence; distended with gas.

flatus (fla'tus) [L. "a blowing"] 1. gas or air in the gastrointestinal tract. 2. gas or air expelled through the anus. **f. vagina'-lis**, noisy expulsion of gas from the vagina.

flatworm (flat'werm) any worm belonging to the phylum Platyhelminthes.

flav-, flavo- [L. *flavus* yellow] a combining form meaning yellow.

flavanoid (fla'vah-noid) flavonoid.

flavanone (fla'vah-nōn) colorless, flavonoid compounds formed by reduction of the 2:3 double bond of a flavone; they occur in free

form or as glycosides. A subgroup, the *flavanonols*, have a 3-hydroxy group and seldom occur as glycosides.

flavanonol (fla'vah-non-ol) a subgroup of flavanone (q.v.).

flavescent (flah-ves'ent) [L. *flavescere* to become gold colored] yellowish.

flavin (fla'vin) [L. *flavus* yellow] any one of a group of water-soluble pigments widely distributed in animals and plants, including riboflavin and yellow enzymes, and characterized by a yellow color, an intense green fluorescence, and the isoalloxazine nucleus. **f.-adenine dinucleotide (FAD)**, a coenzyme that is a condensation product of riboflavin phosphate and adenylic acid; it forms the prosthetic group of certain enzymes (flavoproteins), including D-amino acid oxidase and xanthine oxidase, and is important in electron transport in mitochondria. **f. mononucleotide (FMN)**, a derivative of riboflavin consisting of a three-ring system (isoalloxazine) attached to the alcohol (ribitol); it acts as a coenzyme for a number of oxidative enzymes (flavoproteins), including L-amino acid oxidase and cytochrome c reductase; called also *riboflavin phosphate*.

flavine (fla'vin) acriflavine hydrochloride.

flavivirus (fla've-vi'rus) a subcategory of togaviruses; the type species is the yellow fever virus.

Flavobacterium (fla'vo-bak-te're-um) a genus of microorganisms of the family Achromobacteraceae, order Eubacteriales, made up of gram-negative rod-shaped bacteria characteristically producing yellow, orange, red, or yellow-brown pigmentation, and found in soil and water. It includes 26 species, some of which are said to be pathogenic.

flavoenzyme (fla'vo-en'zim) any enzyme containing a flavin nucleotide (FMN or FAD) as a prosthetic group; called also *flavoprotein*.

flavone (fla'vōn) a colorless crystalline substance, the 4-keto series of flavonoids, able to reverse increased capillary fragility. Numerous yellow dyestuffs having similar properties are derived from it.

flavonoid (fla'vo-noid) a generic term for a group of aromatic oxygen heterocyclic compounds derived from 2-phenylbenzopyran or its 2,3-dehydro derivative. They are widely distributed in higher plants, one subgroup, the anthocyanins, accounting for the majority of yellow, red, and blue pigmentation. Another subgroup, varying somewhat in structure, has physiologic properties formerly referred to as "vitamin P" activity, now called *bioflavonoids*, e.g., citrin, rutin, etc. The flavonoids are grouped in order of increasing oxidation state: catechins; leucoanthocyanidins and flavanones, flavanols, flavones, and anthocyanidins; and flavonols.

flavonol (fla'vo-nol) a yellow crystalline flavonoid, formed by introduction of an OH group at C-3 of a flavone; it is grouped with the flavones and isoflavones.

flavoprotein (fla'vo-pro'te-in) any enzyme containing a flavin nucleotide (FAD or FMN) as a prosthetic group; called also *flavoenzyme*.

flavor (fla'vor) 1. that quality of any substance which affects the taste. 2. a pharmaceutical or other preparation for improving the taste of a food or medicine.

flavoxanthin (fla'vo-zan'thin) a minor, yellow, carotenoid pigment, C₄₀H₅₆O₃, from the petals of ranunculaceous plants, structurally related to vitamin A but having no vitamin A activity.

flavoxate hydrochloride (fla-voks'āt) chemical name: 3-methyl-4-oxo-2-phenyl-4H-1-benzopyran-8-carboxylic acid 2-(1-piperidinylethyl ester hydrochloride. A smooth muscle relaxant, C₂₄H₂₅NO₄·HCl, occurring as an off-white, crystalline powder; used as an antispasmodic for the urinary system, administered orally.

Flaxedil (flaks'ē-dil) trademark for a preparation of gallamine triethiodide.

flaxseed (flaks'sēd) linseed.

flazalone (fla'zah-lōn) chemical name: *p*-fluorophenyl-4-(*p*-fluorophenyl)-4-hydroxy-1-methyl-3-piperidyl ketone; an anti-inflammatory agent, C₁₉H₁₉F₂NO₂.

fld. fluid.

fldr. fluid dram.

flea (fle) any insect of the order *Siphonaptera*; many are parasitic and may act as carriers of disease. The genera of medical importance are: *Cediopsylla*, *Ceratophyllus*, *Ctenocephalides*, *Ctenophthalmus*, *Leptopsylla*, *Diamanus*, *Echidnophaga*, *Hoplopsyllus*, *Monopsyllus*, *Neopsylla*, *Nosopsyllus*, *Oropsylla*, *Pulex*, *Rhopalopsyllus*, *Tunga*, *Xenopsylla*. **Asiatic rat f.**, *Xenopsylla cheopis*. **burrowing f.**, *Tunga penetrans*. **cat f.**, *Ctenocephalides felis*. **cavy f.**, *Rhopalopsyllus cavicola*. **chigoe f.**, *Tunga penetrans*. **common f.**, *Pulex irritans*. **common rat f.**, *Nosopsyllus fasciatus*. **dog f.**, *Ctenocephalides canis*. **European mouse f.**, *Ctenophthalmus agrytes*. **European rat f.**, *Nosopsyllus fasciatus*. **human f.**, *Pulex irritans*. **Indian rat f.**, *Xenopsylla astia*. **jigger f.**, *Tunga penetrans*. **mouse f.**, *Leptopsylla segnis*. **sand f.**, *Tunga penetrans*. **squirrel f.**, *Hoplopsyllus anomalus*. **sticktight f.**, *Echidnophaga gallinacea*. **suslik f.**, any of several species of fleas which infest Russian ground squirrels. **tropical rat f.**, *Xenopsylla cheopis*.

flacainide acetate (flē-ka'nid) chemical name: *N*-(2-piperidinylmethyl)-2,5-bis(2,2,2-trifluoroethoxy)benzamide monoacetate; a cardiac depressant with antiarrhythmic action, C₁₇H₂₀F₆N₂O₃·C₂H₄O₂.

Fleischig's area, etc. (flek'sigz) [Paul Emil Fleischig, neurologist in Leipzig, 1847-1929] see under *area*, *column*, *cuticulus*, *fasciculus*, *field*, and *law*.

fleck (flek) a flake, particle, speckle, or spot. **tobacco f's**, Gamna-Gandy nodules.

fleckfieber (flek-fe'ber) [Ger.] epidemic typhus; see under *typhus*.

fleckmilz (flek'milts) [Ger.] a condition of the spleen in malignant nephrosclerosis in which necrotic follicles appear as translucent areas.

flection (flek'shun) flexion.

fleece (flēs) a network of interlacing fibers. **f. of Stilling**, the lacework of white fibers surrounding the dentate nucleus.

Fleischl's test (fli'shelz) [Ernst von *Fleischl* von Marxow, Austrian pathologist, 1846–1891] see under *tests*.

Fleischmann's hygroma (fli'sh'manz) [Godfried *Fleischmann*, German anatomist, 1777–1853] see under *hygroma*.

Fleitmann's test (flit'manz) [Theodore *Fleitmann*, German chemist] see under *tests*.

Fleming (flem'ing), Sir Alexander. A Scottish bacteriologist, 1881–1955; co-winner, with Ernst Boris Chain and Sir Howard Walter Florey, of the Nobel prize in medicine and physiology for 1945 for the discovery of penicillin and its curative effect in infectious disease.

flemingen (flē-min'jin) any of several chalcone dyes from waras; a natural dyestuff (C.I. natural yellow 22) from shrubs of the genus *Flemingia*.

Flemming's center, solution (fixing fluid) [Walther *Flemming*, German anatomist, 1843–1905] see *germinal center*, under *center*, and see under *solution*.

flesh (flesh) the soft, muscular tissue of the animal body.

goose f., cutis anserina. proud f., exuberant amounts of soft, edematous, granulation tissue that may develop during the healing of large surface wounds.

fletazepam (flē-taz'ē-pam) chemical name: 7-chloro-5-(2-fluorophenyl)-2,3-dihydro-1-(2,2,2-trifluoroethyl)-1*H*-1,4-benzodiazepine; a skeletal muscle relaxant, C₁₇H₁₃ClF₅N₂.

fletcherism (flek'sher-izm) [Horace *Fletcher*, American dietitian, 1849–1919] the thorough mastication of solid food and the taking of liquids by sips.

flex (fleks) [L. *flexus* bent] to bend or put in a state of flexion.

flexibilitas (flek-si-bil'i-tas) [L.] flexibility. **f. ce'rea**, a cataleptic state in which the limbs retain any position in which they may be placed.

flexibility (flek-si-bil'i-te) [L. *flexibilitas*] the quality of being flexible. **waxy f.,** *flexibilitas cerea*.

flexible (flek'si-bl) [L. *flexibilis, flexilis*] readily bent without tendency to break.

flexile (fleks'il) flexible.

fleximeter (fleks-im'ē-ter) an instrument for measuring the amount of flexion of a joint.

flexion (flek'shun) [L. *flexio*] the act of bending or condition of being bent.

Flexner's bacillus, dysentery, serum (fleks'nerz) [Simon *Flexner*, American pathologist, 1863–1946] see *Shigella flexneri*, see *bacillary dysentery*, under *dysentery*, and see *antimeningococcus serum*, under *serum*.

flexor (flek'sor) [L.] any muscle that flexes a joint; see *Table of Musculi*. **f. retinac'ulum**, see *retinaculum flexorum manus* and *retinaculum flexorum pedis*.

flexuose (fleks'u-ōs) winding or wavy.

flexura (flek-shoo'rah), pl. *flexur'ae* [L.] flexure: a bending; [NA] a general term for a bent portion of a structure or organ. **f. co'li dex'tra** [NA], right flexure of colon: the bend in the large intestine at which the ascending colon becomes the transverse colon; called also *f. hepatica coli* and *hepatic flexure of colon*. **f. co'li sinis'tra** [NA], left flexure of colon: the bend in the large intestine at which the transverse colon becomes the descending colon; called also *f. lienalis coli* and *splenic flexure of colon*. **f. duode'ni infe'rior** [NA], inferior flexure of duodenum: the bend in the duodenum at which the descending duodenum becomes horizontal or transverse. Called also *inferior angle of duodenum*. **f. duode'ni supe'rior** [NA], superior flexure of duodenum: the bend in the first or superior part of the duodenum; called also *superior angle of duodenum*. **f. duodenojejuna'lis** [NA], duodenal flexure: the bend in the small intestine at the junction between the duodenum and jejunum; the suspensory muscle of the duodenum attaches to this point. **f. hepat'ica co'li**, *f. coli dextra*. **f. liena'lis co'li**, *f. coli sinistra*. **f. perinea'lis rec'ti** [NA], perineal flexure of rectum: the dorsal and caudal bend at the caudal end of the rectum. **f. sacra'lis rec'ti** [NA], sacral flexure of rectum: the dorsal first bend in the rectum.

flexurae (flek-shoo're) [L.] plural of *flexura*.

flexural (flek'shur-al) pertaining to or affecting a flexure.

flexure (flek'sher) a bending; a bent portion of a structure or organ; see *flexura*. **basocranial f.,** pontine f. **caudal f.,** the bend at the aboral end of the embryo; called also *sacral f.* **cephalic f.,** the curve in the midbrain of the embryo; called also *cranial f.* **cerebral f.,** one of the bends in the embryonic brain; called also *nuchal f.* **cervical f.,** a bend in the neural tube of the embryo at the junction of the brain and spinal cord. **cranial f.,** cephalic f. **dorsal f.,** one of the flexures of the embryo in the mid-dorsal region. **duodenojejunal f.,** flexura duodenojejunalis. **hepatic f. of colon,** flexura coli dextra. **inferior f. of duodenum,** flexura duodeni inferior. **left f. of colon,** flexura coli sinistra. **lumbar f.,** the ventral curvature of the back in the lumbar region. **mesencephalic f.,** a flexure in the neural tube of the vertebrate embryo at the level of the mesencephalon. **nuchal f.,** cervical f. **perineal f. of rectum,** flexura perinealis recti. **pontine f.,** a flexure

in the hindbrain of the embryo; called also *basocranial f.* **right f. of colon,** flexura coli dextra. **sacral f.,** caudal f. **sacral f. of rectum,** flexura sacralis recti. **sigmoid f.,** sigmoid colon. **splenic f. of colon,** flexura coli sinistra. **superior f. of duodenum,** flexura duodeni superior.

flicker (flik'er) the visual sensation produced by intermittent flashes of light occurring at a certain rate. The flashes may appear to flicker or to be steady according to the rate of interruption (*flicker phenomenon*). The number of flashes per second at which the light just appears to be continuous is known as the *flicker fusion threshold* (*fusion frequency; critical fusion frequency*). The *flicker test*, determination of the flicker fusion threshold, is sometimes used in the diagnosis of existent or incipient high blood pressure and certain forms of heart disease, or to determine the effect of a drug on blood vessel spasm. A low threshold indicates disease.

Fließ treatment (therapy) (flēs) [Wilhelm *Fließ*, Berlin physician, 1858–1928] see under *treatment*.

flight of ideas a condition in which the patient talks almost continuously and jumps repeatedly from one subject to another before the first topic is concluded; sometimes seen in acute manic states and acute schizophrenia.

Flint's arcade, law (flints) [Austin *Flint*, American physiologist, 1836–1915] see under *arcade* and *law*.

Flint's murmur (flints) [Austin *Flint*, American physician, 1812–1886] see under *murmur*.

floaters (flo'ters) "spots before the eyes"; deposits in the vitreous of the eye, usually moving about and probably representing fine aggregates of vitreous protein occurring as a benign degenerative change. Called also *vitreous f's* and *muscae volitantes*.

floccilegium (flok'si-le'je-um) floccillation.

floccillation (flok'si-la'shun) [L. *floccilatio*] the picking at bed-clothes by a delirious patient.

floccose (flok'ōs) [L. *floccosus* full of flocks of wool] woolly; said of a bacterial growth which is composed of short, curved chains variously oriented.

floccular (flok'u-lar) pertaining to the flocculus.

flocculation (flok'u-la'shun) a colloid phenomenon in which the disperse phase separates in discrete, usually visible, particles rather than in a continuous mass, as in coagulation. **Ramon f.,** a method of standardizing antitoxic sera by the *in vitro* precipitation of toxin and antitoxin when mixed.

floccule (flok'ul) flocculus. **toxoid-antitoxin f.,** a suspension of the precipitate formed when toxoid and antitoxin are mixed.

flocculent (flok'u-lent) containing downy or flaky masses.

flocculi (flok'u-li) plural of *flocculus*.

flocculoreaction (flok'u-lo-re-ak'shun) a serum reaction characterized by flocculation.

flocculus (flok'u-lus), pl. *floc'uli* [L. "tuft"] 1. a small tuft, as of wool or similar material, or a small mass of other fibrous material such as one of the flakes of a flocculent solution. 2. [NA] a small lobe on the lower side of either cerebellar hemisphere, continuous with the nodule of the vermis. Called also *floccule*. 3. the floccular portion of the flocculonodular lobe. **accessory f., f. secunda'rii, secondary f.,** a small lobe sometimes seen near the flocculus in the inferior process of the cerebellum.

floctafenine (flok'tah-fen'en) chemical name: 2-[[8-(trifluoromethyl)-4-quinoliny]amino]benzoic acid; an analgesic, C₂₀H₁₇F₃N₂O₄.

Flood's ligament (fludz) [Valentine *Flood*, Irish surgeon, 1800–1847] see under *ligament*.

flooding (flud'ing) in behavior therapy, a form of desensitization (q.v.) for the treatment of phobias and related disorders in which the patient is repeatedly exposed, in imagination or real life, to emotionally distressing stimuli of high intensity. Cf. *implosion* and *systematic desensitization*.

Flor. abbreviation for L. *flor'es*, flowers.

flora (flo'rah) [L. *Flora*, the goddess of flowers] the plant life present in or characteristic of a special location; it may be discernible with the unaided eye (macroflora), or only with the aid of a microscope (microflora). **intestinal f.,** the bacteria normally residing within the lumen of the intestine.

florantyrone (flo-ran'ti-rōn) chemical name: γ-oxo-8-fluoranthenebutyric acid. A hydrocholeretic agent, C₂₀H₁₄O₃, occurring as yellow, crystalline platelets; administered orally in the treatment of chronic cholecystitis, cholangitis, and biliary dyskinesia, and in the prevention of cholelithiasis.

Floraquin (flor'ah-kwin) trademark for a preparation of iodoquinol.

Florence's crystals, test (reaction) (flor-ahns') [Albert *Florence*, French physician, 1851–1927] see under *crystal* and *tests*.

florientium (flo-ren'she-um) former name for promethium.

flores (flo'rēz) [L., pl. of *flos* flower] 1. the blossoms or flowers of a plant. 2. a drug after sublimation. **f. benzo'i'ni**, benzoic acid. **f. sul'furis**, sublimed sulfur.

Florey unit (flor'e) [Sir Howard W. *Florey*, English pathologist,

born 1898; co-winner, with Ernst Boris Chain and Sir Alexander Fleming, of the Nobel prize for medicine in 1945 for the discovery of penicillin] see *Oxford unit*, under *unit*.

florid (flor'id) [L. *floridus* blossoming] 1. in full bloom; occurring in fully developed form. 2. having a bright red color.

Floridin (flor'i-din) trademark for a preparation of fuller's earth.

florigen (flor'i-jen) a hypothetical flower-producing hormone of unknown chemical composition, believed to be produced in the leaves and transported in the phloem to the buds.

Florinef (flor'i-nef) trademark for preparations of fludrocortisone acetate.

florizine (flor'i-zēn) dericin.

Floropryl (flor'o-pril) trademark for preparations of isoflurophate.

Florschütz formula (flor'shitz) [Georg Florschütz, German physician, born 1859] see under *formula*.

Flourens' theory (doctrine) (floo-ranz') [Marie Jean Pierre Flourens, French physiologist, 1794-1867] see under *theory*.

flow (flo) the amount of a fluid that flows through an organ or part in a specified time. **effective renal blood f.**, that portion of the total renal blood flow that perfuses functional renal tissue, e.g., the glomeruli; abbreviated ERBF. **effective renal plasma f.**, the amount of blood plasma perfusing functional renal tissue each minute, as measured by clearance methods (normally about 600 ml./min.); abbreviated ERPF. **gene f.**, transfer of genes from one population to another by migration and miscegenation. **total renal blood f.**, the volume of blood that passes each minute into the renal arteries (normally 1200 ml./min.); abbreviated TRBF.

Flower's index (flow'erz) [Sir William Henry Flower, British physician, 1831-1899] dental index; see under *index*.

flowers (flow'erz) 1. the blossoms of a plant. 2. a sublimed drug, as sulfur or benzoic. **f. of arsenic**, arsenic trioxide. **f. of benzoic**, benzoic acid. **f. of camphor**, powdered camphor prepared by sublimation. **pyrethrum f's**, the dried powdered flowers of the perennial herbs *Chrysanthemum* (*Pyrethrum*) *cinerariaefolium* (Trév.) Vis., indigenous to Dalmatia and Montenegro, and *C. coccineum* and *C. marschalli*, indigenous to western Asia; they are used in the preparation of insecticides, and have been used as a scabicide. Called also *Dalmatian*, or *Persian*, *insect powder*. **f. of sulfur**, sublimed sulfur.

flowmeter (flo'me-ter) an apparatus for measuring the rate of flow of liquids or gases. **blood f.**, an instrument for determining the rate of blood flow in the arteries or veins.

flow tract (flo'trakt) the path of the blood within the chambers of the heart. In the *left flow tract*, blood enters the left atrium through the pulmonary veins, flows through the mitral valve into the left ventricle, and passes through the aortic valve and on into the aorta and systemic circulation. In the *right flow tract*, blood enters the right atrium through the venae cavae, flows through the tricuspid valve into the right ventricle, and passes through the pulmonary valve and on into the pulmonary artery and the pulmonary circulation.

floxacillin (flok's'ah-sil'in) chemical name: 6-[3-(2-chloro-6-fluorophenyl)-5-methyl-4-isoxazolecarboxamido]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. A penicillinase resistant, semisynthetic penicillin, $C_{18}H_{17}ClFN_2O_6S$, which has been used primarily in the treatment of infections due to benzylpenicillin-resistant staphylococci. Called also *flucloxacillin*.

floxuridine (flok's-ur'i-dēn) [USP] chemical name: 2'-deoxy-5-fluorouridine. An antineoplastic that acts as an antimetabolite similarly to fluorouracil, $C_9H_{11}FN_2O_5$, occurring as a white to off-white solid; used in the palliative management of carcinoma in certain patients, administered by intra-arterial infusion. Abbreviated FUDR. *Sterile floxuridine* [USP] is lyophilized floxuridine suitable for intra-arterial infusion.

fl.oz. fluidounce; see under *ounce*.

F.L.P. fronto-laeva posterior (left fronto posterior—a position of the fetus).

F.L.T. fronto-laeva transversa (left frontotransverse—a position of the fetus).

flu (floo) popular name for *influenza*.

Fluax (floo'aks) trademark for a preparation of influenza virus vaccine.

flazacort (floo-az'ah-kort) chemical name: 21-(acetyloxy)-9-fluoro-11 β ,21-dihydroxy-2'-methyl-5 β H-pregna-1,4-dieno[17,16-d]-oxazole-3,20-dione; an anti-inflammatory, $C_{28}H_{36}FNO_6$.

flubendazole (floo-ben'dah-zōl) chemical name: [5-(4-fluorobenzoyl)-1H-benzimidazol-2-yl]carbamic acid methyl ester; an antiprotozoal, $C_{16}H_{12}FN_2O_3$.

flucindole (floo-sin'dōl) chemical name: 6,8-difluoro-2,3,4,9-tetrahydro-N,N-dimethyl-1H-carbazol-3-amine; a tranquilizer, $C_{14}H_{16}F_2N_2$.

flucoronide (floo-klor'o-nid) chemical name: 9,11 β -dichloro-6 α -fluoro-21-dihydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, $C_{24}H_{32}Cl_2FO_6$, used in the treatment of steroid-responsive dermatoses.

flucloxacillin (floo'kloks-ah-sil'in) floxacillin.

Flucort (floo'kort) trademark for a preparation of flumethasone.

flucrylate (floo'krī-lāt) chemical name: 2,2,2-trifluoro-1-methylethyl 2-cyanoacrylate; a tissue adhesive, $C_7H_5F_3NO_2$.

fluctuant (fluk'tu-ant) 1. showing varying levels. 2. conveying the sensation of or exhibiting wavelike motion on palpation, owing to a liquid content.

fluctuation (fluk'tu-a'shun) [L. *fluctuatio*] 1. a variation, as about a fixed value or mass. 2. a wavelike motion, as of a fluid in a cavity of the body after succussion.

flucytosine (flu-si'to-sēn') [USP] chemical name: 5-fluorocytosine. An antifungal, $C_4H_4FN_2O$, occurring as a white to off-white, crystalline powder; used in the treatment of serious infections, such as septicemia, endocarditis, and urinary tract infections, due to *Candida* and/or *Cryptococcus* species, administered orally.

fludalanine (floo-dal'ah-nēn) chemical name: 3-fluoro-D-alanine-2-D; an antibacterial, $C_3H_5DFNO_2$.

fludazonium chloride (floo'dah-zo'ne-um) chemical name: 1-[2-(2,4-dichlorophenyl)-2-[(2,4-dichlorophenyl)methoxy]ethyl]-3-[2-(4-fluorophenyl)-2-oxoethyl]-1H-imidazolium chloride; a topical anti-infective, $C_{26}H_{20}Cl_5FN_2O_2$.

fludorex (floo'do-reks) chemical name: 3-methoxy-N-methyl-m-(trifluoromethyl)phenethylamine; an anorectic and antiemetic, $C_{11}H_{14}F_3NO$.

fludrocortisone acetate (floo'dro-kor'ti-sōn) [USP] chemical name: 21-(acetyloxy)-9 α -fluoro-11 β 17 α -dihydroxy-pregn-4-ene-3,20-dione. A synthetic corticosteroid with significant mineralocorticoid and glucocorticoid activity, $C_{23}H_{31}FO_6$, occurring as white to pale yellow crystals or crystalline powder; used mainly in replacement therapy of the mineralocorticoid in Addison's deficiency disease and in salt-losing adrenogenital syndrome; administered orally. Called also *fluohydrisone* and *fluohydrocortisone*.

flufenisal (floo-fen'i-sal) chemical name: 4'-fluoro-4-hydroxy-3-biphenylcarboxylic acid acetate; an analgesic, $C_{15}H_{11}FO_4$.

flügelplatte (fle'gel-plah'teh) [Ger.] lamina alaris.

Fluhmann's test (floo'manz) [C. Frederic Fluhmann, American gynecologist, born 1898] see under *tests*.

fluid (floo'id) [L. *fluidus*] 1. a liquid or a gas. 2. composed of elements or particles which freely change their relative positions without their separating. See also *liquid*, *liquor*, and *solution*. **allantoic f.**, the fluid contained in the allantois. **Altmann's f.**, a histologic fixing fluid composed of equal parts of 2 per cent osmic acid solution and a 5 per cent potassium dichromate solution. **amniotic f.**, fluid within the amniotic cavity produced by the amnion at the very earliest period of fetation and later by lungs and kidneys; at first crystal clear, it later becomes cloudy. The amount at term normally varies from 500 to 2000 ml. Called also *aqua* or *liquor amnii*, and, popularly, *waters*. **ascitic f.**, the serous fluid which accumulates in the peritoneal cavity in ascites. **Bamberger's f.**, an albuminous mercuric solution for use in the treatment of syphilis. **bleaching f.**, a fluid prepared by passing chlorine gas into an emulsion of calcium hydrate. **Bouin's f.**, a histologic fixing fluid consisting of formaldehyde solution, glacial acetic acid, and saturated solution of trinitrophenol (picric acid). **Burnett's disinfecting f.**, a strong aqueous solution of zinc chloride. **Callison's f.**, a solution of distilled water, Löffler's aniline methylene blue, solution of formaldehyde, glycerin, ammonium oxalate, and sodium chloride; used as a diluent in counting red blood corpuscles. **Carrel-Dakin f.**, diluted sodium hypochlorite solution. **cerebrospinal f. (C.S.F.)**, the fluid contained within the four ventricles of the brain, the subarachnoid space, and the central canal of the spinal cord; it is formed by the choroid plexus and brain parenchyma, is circulated through the ventricles into the subarachnoid space, and is absorbed into the venous system. Called also *liquor cerebrospinalis* [NA]. **chlorspalladium f.**, a decalcifying fluid for anatomical and other specimens, containing palladium chloride and hydrochloric acid; called also *Waldeyer's f.* **Coley's f.**, see under *toxin*. **Condy's f.**, a disinfecting solution of sodium and potassium permanganates. **Dakin's f.**, a buffered aqueous solution of sodium hypochlorite used as a bactericide; see *sodium hypochlorite solution*, under *solution*, and *Carrel-Dakin treatment*, under *treatment*. **decalcifying f.**, a solution of formic acid and formalin. **Delafield's f.**, a fixing fluid for delicate histologic tissues, containing osmic acid, chromic acid, acetic acid, and alcohol. **Ecker's f.**, Rees and Ecker diluting f. **extracellular f.**, a general term for all the body fluids outside the cells, including the interstitial fluid, plasma, lymph, cerebrospinal fluid, etc. Extracellular fluid consists of ultrafiltrates of the blood plasma and transcellular fluid, i.e., fluid produced by active cellular secretion. It provides a constant external environment for the cells. **Flemming's fixing f.**, Flemming's solution. **follicular f.**, liquor folliculi. **formol-Müller f.**, Müller's fluid to which formaldehyde has been added. **Gauvain's f.**, a mixture of guaiacol, iodoform, ether, and sterile olive oil; formerly for lavage in empyema. **Helly's f.**, a histologic fixative consisting of Zenker's fluid in which the glacial acetic acid is replaced by formalin; the most widely used formula consists of 9 parts Zenker stock solution and 1 part

neutral formalin (Zenker-Helly-Maximow) and is usually called *Zenker-formol fixative*. **interstitial f.**, the extracellular fluid that bathes the cells of most tissues but which is not within the confines of the blood or lymph vessels and is not a transcellular fluid; it is formed by filtration through the blood capillaries and is drained away as lymph. It is the extracellular fluid volume minus the lymph volume, the plasma volume, and the transcellular fluid volume. **intracellular f.**, the portion of the total body water with its dissolved solutes which are within the cell membranes. **Kaiserling's f.**, see under *solution*. **labyrinthine f.**, perilymph. **Lang's f.**, a hardening fluid containing corrosive mercuric chloride, sodium chloride, and acetic acid, in water. **Locke's f.**, see under *solution*. **Mitchell's f.**, a mixture of sodium chloride, bromine, hydrochloric acid, and water acted on by an electric current; formerly advocated for treatment of pulmonary tuberculosis. **Morton's f.**, a mixture of iodine, potassium iodide, and glycerin; formerly used by injection in spinal meningocele. **Müller's f.**, a hardening solution consisting of potassium dichromate, sodium sulfate, and water. **Parker's f.**, a hardening fluid composed of formaldehyde and alcohol. **Pasteur's f.**, see under *solution*. **pericardial f.**, liquor pericardii. **Piazza's f.**, a blood-coagulating fluid composed of sodium chloride and ferric chloride in water. **Pitfield's f.**, a diluting fluid for counting leukocytes, made by dissolving acacia gum in distilled water and adding glacial acetic acid and gentian violet. **Rees and Ecker diluting f.**, a solution of sodium citrate, formaldehyde solution, brilliant cresyl blue, and distilled water, used as a diluting fluid for blood platelets. **Scarpa's f.**, endolymph (of the ear). **Schaudinn's f.**, a hardening fluid consisting of mercury bichloride, alcohol, and distilled water. **seminal f.**, semen, def. 2. **serous f.**, normal lymph of a serous cavity. **synovial f.**, synovia. **Tellyesniczky's f.**, a fixing solution consisting of potassium dichromate, water, and glacial acetic acid. **Thoma's f.**, a decalcifying fluid for histologic work, consisting of alcohol and pure nitric acid. **tissue f.**, interstitial f. **Toison's f.**, see under *solution*. **transcellular f.**, that portion of the extracellular fluid produced by active cellular secretion. **ventricular f.**, that portion of the cerebrospinal fluid contained in the cerebral ventricles. **von Behring's f.**, tulase. **Waldeyer's f.**, chlorpalladium f. **Wickersheimer's f.**, a fluid composed of arsenic trioxide, sodium chloride, and the sulfate, carbonate, and nitrate of potassium in a mixture of water, alcohol, and glycerin; used for preserving anatomical specimens. **Zenker's f.**, see under *fixative*.

fluidextract (floo'id-ek'strakt) a liquid preparation of a vegetable drug containing alcohol as a solvent or as a preservative, or both, of such strength that each milliliter contains the extraction of 1 gm. of the standard drug which it represents. The official preparations are *aromatic cascara f.* [USP], *cascara sagrada f.* [USP], *glycyrrhiza f.* [NF], and *senna f.* [USP], all of which are used as cathartics, and *eriodictyon f.* [NF], used as a flavoring agent for pharmaceutical preparations.

fluidextractum (floo'id-eks-trak'tum), gen. *fluidextrac'ti*, pl. *fluidextrac'ta* [L.] fluidextract.

fluidism (floo'id-izm) humoralism.

fluidounce (floo'id-ouns') fluid ounce; see under *ounce*.

fluidrachm (floo'id-ram') fluid dram; see under *dram*.

fluidram (floo'id-ram') fluid dram; see under *dram*.

Flu-Imune (floo'ĩ-mũn') trademark for a preparation of influenza virus vaccine.

flake (floök) any trematode worm; see *Trematoda*. **blood f.**, *Schistosoma*. **intestinal f's**, see *Echinostoma*, *Fasciolopsis*, *Gastrodiscoides*, *Heterophyes*, *Metagonimus*, and *Watsonius*. **liver f's**, see *Clonorchis*, *Dicrocoelium*, *Fasciola*, and *Opisthorchis*. **lung f.**, see *Paragonimus*.

flumen (floo'men), pl. *flu'mina* [L.] a stream. **flu'mina pilo'rum** [NA], hair streams: continuous lines formed by the pattern of hair growth on various parts of the body, the hairs lying in the same direction.

flumequine (floo'mě-kwin) chemical name: 9-fluoro-6,7-dihydro-5-methyl-1-oxo-1H-5H-benz[*ij*]quinolizine-2-carboxylic acid; an antibacterial, $C_{14}H_{12}FNO_3$.

flumethasone pivalate (floo-meth'ah-sõn) [USP] chemical name: 21-(2,2-dimethyl-1-oxopropoxy)-6 α ,9-difluoro-6,9-difluoro-11 β ,17-dihydroxy-16 α -methylpregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, $C_{27}H_{36}F_2O_6$, occurring as a white to off-white, crystalline powder; used as a topical anti-inflammatory in steroid-responsive dermatoses.

flumethiazide (floo'mě-thi'ah-zid) chemical name: 6-trifluoromethyl-2H-1,2,4-benzothiadiazine-7-sulfonamide-1,1-dioxide; a thiazide diuretic, $C_8H_6F_3N_3O_5S_2$.

flumina (floo'mĩ-nah) [L.] plural of *flumen*.

flumizole (floo'mĩ-zõl) chemical name: 4,5-bis(4-methoxyphenyl)-2-(trifluoromethyl)-1H-imidazole; an anti-inflammatory, $C_{18}H_{15}F_3N_3O_2$.

flumoxonide (floo-mok'so-nid) chemical name: 6 α ,9-difluoro-11 β -hydroxy-21,21-dimethoxy-16 α ,17-[(1-methylethylidene)bis-

(oxy)]pregna-1,4-diene-3,20-dione; an adrenocortical steroid, $C_{26}H_{34}F_2O_7$.

flunarizine hydrochloride (floo-nar'ĩ-zën) chemical name: (E)-1-[bis-(p-fluorophenyl)methyl]-4-cinnamylpiperazine dihydrochloride; a vasodilator, $C_{26}H_{26}F_2N_2 \cdot 2HCl$.

flunidazole (floo-nĩ'dah-zõl) chemical name: 2-(p-fluorophenyl)-5-nitroimidazole; an antiprotozoal agent, $C_{11}H_{10}FN_3O$.

flunisolid (floo-nis'o-lid) chemical name: 6 α -fluoro-11 β ,21-dihydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione; a glucocorticoid, $C_{24}H_{34}FO_6$. **f. acetate**, the 21-acetate ester of flunisolid, $C_{26}H_{33}FO_7$; an anti-inflammatory.

flunitrazepam (floo'ni-tráz'ě-pam) chemical name: 5-(2-fluorophenyl)-1,3-dihydro-1-methyl-7-nitro-2H-1,4-benzodiazepin-2-one; a hypnotic and induction agent in anesthesia, $C_{16}H_{12}FN_3O_3$.

flunixin (floo-nik'sin) chemical name: 2-[[2-methyl-3-(trifluoromethyl)phenyl]amino]-3-pyridinecarboxylic acid; an anti-inflammatory and analgesic, $C_{14}H_{11}F_3N_2O_2$. **f. meglumine**, the meglumine salt of flunixin, $C_{14}H_{11}F_3N_2O_2 \cdot C_7H_{17}NO_5$; an anti-inflammatory and analgesic.

fluocinolone acetonide (floo'o-sin'o-lon) [USP] chemical name: 6 α ,9-difluoro-11 β ,21-dihydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, $C_{24}H_{30}F_2O_6$, occurring as a white or practically white, crystalline powder; used as a topical anti-inflammatory in steroid-responsive dermatoses.

fluocinonide (floo'o-sin'o-nid) [USP] The 21-acetate ester of fluocinolone acetonide, occurring as a white to cream-colored, crystalline powder, which has anti-inflammatory, antipruritic, and vasoconstrictive properties; used topically in the treatment of certain dermatoses.

fluocortin butyl (floo'o-kor'tin) chemical name: 6 α -fluoro-11 β -hydroxy-16 α -methyl-3,20-dioxopregna-1,4-dien-21-oic acid butyl ester; an anti-inflammatory, $C_{26}H_{35}FO_5$.

Fluogen (floo'o-jen) trademark for a preparation of influenza virus vaccine.

fluohydrisone (floo'o-hi'dri-sõn) fludrocortisone.

fluohydrocortisone (floo'o-hi'dro-kor'ti-sõn) fludrocortisone.

Fluonid (floo'o-nid) trademark for preparations of fluocinolone acetonide.

fluor (floo'or) [L. a "flux"] a discharge. **f. al'bus**, leukorrhea.

fluorane (floo'or-ân) the parent compound of fluorescene and related dyes; 9-hydroxy-9-xanthene- α -benzoic acid lactone.

fluorescein (floo'o-res'e-in) chemical name: resorcinolphthal-ein. The simplest of the fluorane dyes and the parent compound of eosin; used intravenously in tests to assess by its fluorescence the adequacy of the circulation, and combined with radioactive iodine in localization of brain tumors, etc. Called also *dihydroxy-fluorane*. **f. isocyanate**, a form capable of being conjugated to protein and hence used as a label in fluorescent antibody staining procedures. **sodium f.** [USP], **soluble f.**, chemical name: resorcinolphthal-ein sodium. An odorless, water-soluble, orange-red powder, $C_{20}H_{10}Na_2O_5$, used in dilute solution to reveal corneal lesions and as a test of circulation in the extremities and retina. Called also *uranin*.

fluoresceinuria (floo'o-res'e-in-u're-ah) the presence of fluorescein in the urine.

fluorescence (floo'o-res'ens) [first observed in *fluor spar*] the property of emitting light while exposed to light, the wavelength of the emitted light being only slightly longer than that of the light absorbed. Cf. *phosphorescence*. **secondary f.** fluorescence in tissues which is induced by staining with fluorescent dyes (*fluorochromes*). Cf. *autofluorescence*.

fluorescent (floo'o-res'ent) exhibiting fluorescence.

fluorescein (floo'o-res'in) a reduced form of fluorescein used to detect oxidative activity. As the sodium salt, it may be used for the same purposes as sodium fluorescein.

fluoridation (floo'or-ĩ-da'shun) treatment with fluorides; specifically, the addition of fluoride to the public water supply as part of the public health program to prevent or reduce the incidence of dental caries.

fluoride (floo'o-rĩd) a binary compound of fluorine (q.v.). **stannous f.** [NF], a compound, SnF_2 , containing not less than 71.2 per cent stannous tin and between 22.3 and 25.5 per cent fluoride; applied topically to the teeth as a dental caries prophylactic.

fluoridization (floo'or-ĩ-di-za'shun) 1. application of fluoride solution to the teeth. 2. fluoridation.

fluoridize (floo-or'ĩ-diz) 1. to apply a solution of fluoride to the teeth as a means of controlling or preventing caries. 2. to add fluorides to a substance.

fluorimeter (floo'o-rim'ě-ter) fluorometer.

fluorimetry (floo'o-rim'ě-tre) fluorometry.

fluorine (floo'ĩ-rën) [from *fluor spar*, from which it is derived] a nonmetallic, gaseous element, belonging to the halogen group; symbol, F; atomic number, 9; atomic weight, 18.998. Fluorine, in the form of fluoride, is incorporated into the structure of bone and

teeth and provides protection against dental caries; an excess of fluorine may result in fluorosis.

fluoroacetate (floo'or-o-ah'sē-tāt) a salt of fluoroacetic acid (see under *acid*).

fluorochrome (floo'or-o-krōm) a fluorescent compound, as a dye, used to mark protein with a fluorescent label.

fluorocyte (floo'or-o-sit) a reticulocyte showing red fluorescence.

fluorography (floo'or-og'rah-fe) photofluorography.

Fluoromar (floo'or-mar) trademark for a preparation of fluoroxene.

fluorometer (floo'or-om'ē-ter) 1. an apparatus for measuring the quantity of rays given out by a roentgen-ray tube. 2. an attachment to the fluoroscope, enabling the operator to secure a correct and undistorted shadow of the object and to locate exactly the position of the object. 3. the instrument used in fluorometry, consisting of an energy source (e.g., a mercury arc lamp or xenon lamp) to induce fluorescence, monochromators for selection of the wavelength, and a detector; called also *fluorimeter*.

fluorometholone (floo'or-meth'o-lōn) [USP] chemical name: 9-fluoro-11 β ,17-dihydroxy-6 α -(methylpregna-1,4-diene-3,20-dione). A synthetic glucocorticoid, C₂₂H₂₈FO₄, occurring as a white to yellowish white, crystalline powder; used as a topical anti-inflammatory in steroid-responsive dermatoses.

fluorometry (floo'or-om'ē-tre) an analytical technique for identifying minute amounts of a substance by detection and measurement of the characteristic wavelength of the light it emits during fluorescence. Called also *fluorimetry*.

fluoronephelometer (floo'or-ro-nef'ē-lom'ē-ter) an instrument for analysis of a solution by measuring the light scattered or emitted by it. Called also *nefluorophotometer*.

p-fluorophenylalanine (floo'or-ro-fen'il-al'fī-nin) a modified molecule of phenylalanine that binds to enzymes but is incapable of performing the functions of the natural molecule and thus acts as an antagonist.

fluorophosphate (floo'or-o-fos'fāt) an organic compound containing fluorine and phosphorus. **diisopropyl f.**, isofluorophate.

fluorophotometry (floo'or-ro-fo-tom'ē-tre) the measurement of light given off by fluorescent substances. **vitreous f.**, the measurement of light given off by intravenously injected fluorescein that has leaked through the retinal vessels into the vitreous; done to detect the breakdown of the blood-retinal barrier, an early ocular change in diabetes mellitus.

Fluoroplex (floo'oro-pleks) trademark for a preparation of fluorouracil.

fluoroentgenography (floo'or-ro-rent'gen-og'rah-fe) photofluorography.

fluoroscope (floo'ō-ro-skōp) [*fluorescence* + Gr. *skopein* to examine] a device used for examining deep structures by means of roentgen rays; it consists of a screen (*fluorescent screen*) covered with crystals of calcium tungstate on which are projected the shadows of x-rays passing through the body placed between the screen and the source of irradiation. **biplane f.**, a fluoroscope by which examinations can be made in two planes, horizontal and vertical.

fluoroscopic (floo'or-ro-skop'fī-kal) pertaining to fluoroscopy.

fluoroscopy (floo'or-os'ko-pe) examination by means of the fluoroscope.

fluorosilicate (floo'or-ro-sil'fī-kāt) a compound of silicon and some other base with fluorine, such as sodium silicofluoride; fluorosilicates are sometimes used as insecticides, and are very toxic when ingested. Called also *silicofluoride*.

fluorosis (floo'or-ro'sis) a condition due to exposure to excessive amounts of fluorine or its compounds. Fluoride intoxication may occur as a result of such factors as accidental ingestion of fluoride-containing insecticides and rodenticides, chronic inhalation of industrial dusts or gases containing fluorides, or prolonged ingestion of water containing large amounts of fluorides; it is characterized by skeletal changes, consisting of combined osteosclerosis and osteomalacia (osteofluorosis) and by mottled enamel of the teeth when exposure occurs during enamel formation (see *dental f.*). A similar condition is seen in cattle, sheep, and other livestock, and is due to the same factors that cause intoxication in humans and also to ingestion of animal feed containing toxic levels of fluorides and grazing on pastures contaminated with fluorides in industrial dusts or gases. Called also *chronic endemic f.* and *chronic fluoride*, or *fluorine poisoning*. **dental f.**, a form of enamel hypoplasia, largely of the permanent teeth, resulting from ingestion of excessive amounts of fluoride in the natural water supply used for drinking and for food preparation during the period of enamel calcification; it is manifested by a mottled discoloration of the tooth enamel, the affected teeth having a dull, chalky white appearance on eruption and later, in areas with higher fluoride concentration, may show a brown stain. Called also *mottled enamel*. **endemic f.**, **chronic**, fluorosis.

fluorouracil (floo'or-o-ur'ah-sil) [USP] chemical name: 5-fluoro-2,4(1*H*,3*H*)-pyrimidinone. A pyrimidine analogue that acts as

an antimetabolite to uracil, C₄H₃FN₂O₂, occurring as a white to practically white, crystalline powder; used as an antineoplastic in the palliative management of carcinoma of the gastrointestinal tract, breast, and pancreas, administered intravenously. Also used topically in the treatment of actinic keratoses.

Fluothane (floo'ō-thān) trademark for a preparation of halothane.

fluotracer hydrochloride (floo'ō-tra'sen) chemical name: *cis*-(±)-9,10-dihydro-*N,N*,10-trimethyl-2-(trifluoromethyl)-9-anthracenopropanamine hydrochloride; a tranquilizer and antidepressant, C₂₁H₂₄F₃N·HCl.

fluoxetine (floo-ok'sē-tēn) chemical name: (±)-*N*-methyl-γ-[4-(trifluoromethyl)phenoxy]benzenepropanamine; an antidepressant, C₁₇H₁₈F₃NO.

fluoxymesterone (floo-ok'se-mes'ter-ōn) [USP] chemical name: 9-fluoro-11 β ,17 β -dihydroxy-17-methylandroster-4-ene-3-one. An androgen, C₂₀H₂₈FO₃, occurring as a white or practically white, crystalline powder; used in the treatment of male hypogonadism and in the palliative therapy of inoperable female breast cancer in selected patients, administered orally.

fluperamide (floo-per'ah-mid) chemical name: 4-[4-chloro-3-(trifluoromethyl)phenyl]-4-hydroxy-*N,N*-dimethyl- α,α -diphenyl-1-piperidinebutamide; an antiperistaltic, C₃₀H₃₂ClF₃N₃O₂.

fluphenazine (floo-fen'ah-zēn) chemical name: 4-[3-[2-(trifluoromethyl)-10*H*-phenothiazin-10-yl]-propyl]-1-piperazineethanol. The 2-trifluoromethyl derivative of perphenazine, C₂₂H₂₆F₃N₃OS, the most potent of the phenothiazine tranquilizers. **f. enanthate** [USP], the enanthate ester of fluphenazine, C₂₂H₂₈F₃N₃O₂, occurring as pale yellow to yellow-orange, clear to slightly turbid, viscous liquid, having the same uses as those of the hydrochloride salt, but of longer duration; administered intramuscularly and subcutaneously. **f. hydrochloride** [USP], the dihydrochloride salt of fluphenazine, C₂₂H₂₆F₃N₃OS·2HCl, occurring as a white or nearly white, crystalline powder; used as a tranquilizer in the treatment of manifestations of psychotic disorders, and as an antiemetic, administered orally and intramuscularly.

fluprednisolone (floo'pred-nis'o-lōn) chemical name: 6 α -fluoro-11 β ,21-trihydroxypregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, C₂₁H₂₇FO₅, occurring as a white to off-white, crystalline powder; used in the treatment of various conditions responsive to the anti-inflammatory actions of glucocorticoids, administered orally. **f. valerate**, an ester of fluprednisolone, C₂₆H₃₅FO₆, with actions similar to those of the base.

fluprostenol sodium (floo-pros'tē-nōl) chemical name: [1 α -(*Z*),2 β -(*E*,3*R*'),3 α ,5 α]-7-[3,5-dihydroxy-2-[3-hydroxy-4-[3-(trifluoromethyl)phenoxy]-1-butenyl]cyclopentyl]-5-heptenoic acid sodium salt; a prostaglandin of the F series, C₂₃H₂₈F₃NaO₆, used in the treatment of infertility.

fluquazone (floo'kwah-zōn) chemical name: 6-chloro-4-phenyl-1-(2,2,2-trifluoroethyl)-2(1*H*)-quinazolinone; an anti-inflammatory, C₁₆H₁₀ClF₃N₂O.

flurandrenolide (floo'an-dren'o-lid) [USP] chemical name: 6 α -fluoro-11 β ,21-dihydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]pregn-4-ene-3,20-dione. A glucocorticoid, C₂₄H₃₃FO₆, occurring as a white to off-white, fluffy, crystalline powder; used as an anti-inflammatory in the treatment of steroid-responsive dermatoses, applied topically. Called also *flurandrenolone*.

flurandrenolone (floo'an-dren'o-lōn) flurandrenolide.

flurazepam hydrochloride (floo-az'ē-pam) [USP] chemical name: 7-chloro-1-[2-(diethylamino)ethyl]-5-(2-fluorophenyl)-1,4-dihydro-2*H*-1,4-benzodiazepin-2-one dihydrochloride. A hypnotic, C₂₁H₂₃ClF₃N₃O·2HCl, occurring as an off-white to yellow, crystalline powder; administered orally.

flurbiprofen (floo-bip'ro-fen) chemical name: (±)-2-fluoro- α -methyl-[1,1'-biphenyl]-4-acetic acid; an anti-inflammatory, C₁₅H₁₃FO₂, also having analgesic and antipyretic actions; used in the treatment of rheumatoid arthritis, osteoarthritis, and spondylitis.

Flurobate (floo'ō-bāt) trademark for preparations of beta-methasone benzoate.

fluorocitabine (floo'ro-si'tah-bēn) chemical name: (2*R*)-(2 α ,3 β ,3 α ,9 α)-7-fluoro-2,3,3 α ,9 α -tetrahydro-3-hydroxy-6-imino-6*H*-furo [2',3',4',5']oxazole (3,2-*a*) pyrimidine-2-methanol; an antineoplastic, C₉H₁₀FN₃O₄.

flurogestone acetate (floo'ō-jes'tōn) chemical name: 9-fluoro-11 β ,17-dihydroxypregn-4-ene-3,20-dione 17-acetate; a progestin, C₂₃H₃₁FO₃.

fluorothyl (floo'ō-thil) [USP] chemical name: 1,1'-oxybis[2,2,2-trifluoroethane]. A central stimulant, C₆H₄F₆O, occurring as a clear, colorless, volatile liquid; used as a convulsant in psychiatric disorders for which electroconvulsive therapy is usually employed, administered by inhalation.

fluoroxene (floo-oks'ēn) chemical name: (2,2,2-trifluoroethoxy)ethene. A general anesthetic, C₄H₅F₃O, occurring as a clear, practically colorless, volatile liquid; administered by inhalation.

flush (flush) transient redness of the face and neck. See also *plethora*. **atropine f.**, flushing and dryness of the skin of the face and neck from overdosage with atropine. **breast f.**, a condition sometimes occurring in the early puerperium consisting

of a tense and flushed state of the breasts with prominent veins. **carcinoid f.**, extensive blotchy red or bluish flushing on the face or trunk, often associated with diarrhea and abdominal pain and sometimes bronchospasm; it is possibly due to vasoactive kinins or other peptides associated with carcinoid tumor. **hectic f.**, a persistent or chronic flush associated with chronic debilitating disease, usually febrile, such as pulmonary tuberculosis. **histamine f.**, sudden symmetric erythema of the face and upper trunk, usually associated with throbbing headache and bounding pulse, and histaminuria; seen in urticaria pigmentosa, it may also occur a few minutes after eating fish of the scombroid family (red snapper or mahimahi) contaminated by *Proteus* during cold storage prior to cooking. **mahogany f.**, a deep red or mahogany-colored, circumscribed spot seen on one cheek in some cases of lobar pneumonia. **malar f.**, hectic flush at the malar eminence.

fluspiरणे (floo-spiरणे) chemical name: 1-(4-fluorophenyl)-8-[4-(4-fluorophenyl)-4-oxobutyl]-1,3,8-triazaspiro[4.5]decan-4-one; a tranquilizer, $C_{23}H_{26}F_2N_3O_2$.

fluspiरणे (floo-spiरणे) chemical name: 8-[4,4-bis(p-fluorophenyl)butyl]-1-phenyl-1,3,8-triazaspiro[4.5]decan-4-one; a tranquilizer, $C_{29}H_{31}F_2N_3O$.

flutamide (floo'tah-mid) chemical name: 2-methyl-N[4-nitro-3-(trifluoromethyl)phenyl]propanamide. A nonsteroidal antiandrogen, $C_{11}H_{11}F_3N_3O_2$; used to increase the flow of urine in benign hypertrophy of the prostate.

flutiazin (floo-ti'ah-zin) chemical name: 8-(trifluoromethyl)-phenothiazine 1-carboxylic acid; an anti-inflammatory agent for veterinary use, $C_{14}H_8F_3NO_2S$.

flutter (flut'er) a rapid vibration or pulsation. **atrial f.**, a condition of cardiac arrhythmia in which the atrial contractions are rapid (200 to 320 per minute), but regular. In many instances, a circus pathway is probably present. The ventricles are unable to respond to each atrial impulse, so that a partial block usually is present. Formerly called *auricular f.* **auricular f.**, atrial f. **diaphragmatic f.**, peculiar, wavelike fibrillations of the diaphragm of unknown cause; the condition may be paroxysmal or persist indefinitely. **impure f.**, atrial flutter in which the atrial rhythm is irregular. **mediastinal f.**, a condition of abnormal motility of the mediastinum during respiratory movements. **pure f.**, atrial flutter in which the atrial rhythm is regular. **ventricular f.**, a possible transition stage between ventricular tachycardia and ventricular fibrillation, the electrocardiogram showing rapid, uniform, and virtually regular oscillations, 250 or more per minute.

flutter-fibrillation (flut'er-fi-bri-la'shun) impure flutters that vary from moment to moment in their resemblance to flutter or fibrillation, respectively.

flux (fluks) [L. *fluxus*] 1. an excessive flow or discharge. 2. a borax-containing substance that maintains the cleanliness of metals to be united and facilitates the easy flow and attachment of solder. **bloody f.**, see *dysentery*. **celiac f.**, diarrhea accompanied by the discharge of undigested food. **hepatic f.**, bilious f. **ionic f.**, the number of mols per second passing through an area of 1 cm. oriented perpendicularly to the direction of flow of the substance. **luminous f.**, the rate of passage of radiant energy evaluated by reference to the luminous sensation produced by it. **menstrual f.**, the menses. **neutral f.**, a fusible material, usually an inorganic salt, which does not unite with the combined oxygen in the metal but merely dissolves the metal oxide (barium chloride, sodium chloride). **oxidizing f.**, a material which, when heated, gives up oxygen that may unite with base metals and form oxides (as potassium nitrate, potassium chlorate). **reducing f.**, a flux which unites with the oxygen of metallic oxides and frees the metal from such combinations.

fluxion (fluks'shun) a flowing; especially an abnormal or excessive flow of fluid to a part.

fly (fli) a dipterous, or two-winged, insect. Called also *musca*. **black f.**, a name given various individuals of the family Simuliidae. **blackbottle f.**, see *Phormia*. **bloodsucking f's**, see *Chrysops* and *Tabanus*. **blow f.**, **bluebottle f.**, see *Calliphora*. **bot f.**, see *botfly*. **caddis f.**, a fly of the order Trichoptera; hairs and scales from these flies are a cause of allergic symptoms in susceptible persons. **cheese f.**, see *Piophilina*. **deer f.**, *Chrysops discalis*. **drone f.**, *Eristalis tenax*. **dung f.**, *Sepsis violacea*. **eye f.**, any fly which attacks the eye; see *Hippelates* and *Siphunculina funicola*. **face f.**, *Musca autumnalis*. **filth f.**, *Musca domestica*. **flesh f.**, see *Sarcophaga* and *Wohlfahrtia*. **fruit f.**, see *Drosophila*. **gad f.**, see *Tabanus*. **gold f.**, *Lucilia caesar*. **green-bottle f.**, see *Lucilia* and *Phaenicia*. **heel f.**, see *Hypoderma*. **horn f.**, see *Haematobia*. **horse f.**, see *Tabanus*. **house f.**, *Musca domestica*. **hover f's**, flies, such as *Helophilus* and *Eristalis*, of the family Syrphidae. **lake f.**, see *Hexagenia bilineata*. **latrine f.**, *Fannia scalaris*. **mango f.**, **mangrove f.**, *Chrysops dimidiata*. **moth f.**, a fly of the family Psychodidae. **motuca f.**, *Lepidoselaga lepidota*. **nose f.**, **nostril f.**, *Oestrus ovis*. **owl f.**, a name given individuals of the family Psychodidae. **ox-warble f.**, see *Hypoderma*. **phlebotomus f.**, see *Phlebotomus*. **Russian f.**, *Lytta*. **sand f.**, see *sandfly*. **screw-worm f.**, *Cochliomyia hominivorax*. **Seroot f.**, *Tabanus gra-*

tus. **snipe f.**, see *Rhagionidae*. **soldier f.**, *Hermetia illucens*, the larvae of which sometimes cause intestinal myiasis in man. **Spanish f.**, *Lytta vesicatoria*. **stable f.**, see *Stomoxys calcitrans*. **tick f.**, see *Hippobosca*. **tsetse f.**, see *Glossina*. **tumbu f.**, *Cordylobia anthropophaga*. **typhoid f.** (obs.), *Musca domestica*. **vinegar f.**, see *Drosophila*. **warble f.**, *Hypoderma*.

Fm chemical symbol for *fermium*.

F.M. abbreviation for L. *fi'at mistu'ra*, make a mixture.

FMN flavin mononucleotide.

focal (fo'kal) pertaining to or occupying a focus.

Fochier's abscess (fosh'e-az') [Alphonse Fochier, French gynecologist, 1845-1903] see *fixation abscess*, under *abscess*.

foci (fo'si) [L.] plural of *focus*.

focil, focile (fo'sil, fo'si-le) [L. *fusillus*, a little spindle] one of the bones of the forearm or leg.

focimeter (fo-sim'e-ter) an apparatus for finding the focus of a lens.

focus (fo'kus), pl. *fo'ci* [L. "fire-place"] 1. the point of convergence of light rays or of the waves of sound. 2. the chief center of a morbid process. **aplanatic f.**, that focus or point from which diverging rays pass the lens without spherical aberration. **Assmann f.**, the early exudative lesion of pulmonary tuberculosis, occurring most frequently in the subapical region; called also *Assmann's tuberculous infiltrate*. **conjugate f.**, the point at which rays that come from some definite point are brought together. **epileptogenic f.**, the area of the cerebral cortex responsible for causing epileptic seizures, as revealed in the encephalogram. **Ghon f.**, the primary parenchymal lesion of primary pulmonary tuberculosis in children; when associated with a corresponding lymph node focus, it is known as the *primary*, or *Ghon, complex*. Called also *Ghon's primary lesion* and *Ghon tubercle*. **principal foci**, points of convergence of rays parallel with the principal axis of a lens, or system: in the eye, (approx.) 18 mm. from the anterior nodal point, and 24 mm. from the posterior nodal point, and holding the ratio of the indices of air and vitreum (Fording). **real f.**, the point at which convergent rays intersect. **Simon's foci**, hematogenous areas in the apices of the lungs of children regarded as precursors of apical tuberculosis in later life. **virtual f.**, the point at which divergent rays would intersect if prolonged backward.

focusing (fo'kus-ing) the act of converging at a point. **isoelectric f.**, electrophoresis in which the protein mixture is subjected to an electric field in a gel medium in which a pH gradient has been established; each protein then migrates until it reaches the site (or focus) at which the pH is equal to its isoelectric point. Called also *electrofocusing*.

foe- for words beginning thus, see those beginning *fe-*.

Foerster see *Förster*.

fog (fog) a colloid system in which the dispersion medium is a gas and the disperse particles are liquid, e.g., a cloudlike mass of water droplets dispersed in air.

fogging (fog'ing) in ophthalmology, a method employed in determining the refractive error, the patient being first made artificially myopic by means of plus spheres, in order to relax all accommodation before using cylinders.

fogo (fo'go) [Port. "fire"] a name given to a skin condition in Brazil. **f. selva'gem** [Port. "wild fire"], a chronic, potentially fatal dermatosis recognized only in Brazil, and resembling severe pemphigus foliaceus; called also *Brazilian*, *South American*, or *wildfire pemphigus*.

foil (foil) metal in the form of an extremely thin, pliable sheet. **gold f.**, pure gold rolled into an extremely thin sheet, used in the restoration of carious or fractured teeth. **platinum f.**, pure platinum rolled into an extremely thin sheet, used as a matrix for various soldering procedures, and also in the construction of porcelain restorations, to provide internal form during their fabrication. **tin f.**, tin rolled into an extremely thin sheet, used to separate other materials, as separating the cast and denture-base material while it is being flasked and cured.

Fol. abbreviation for L. *fo'lia*, leaves.

folacin (fö'lah-sin) folic acid.

folate (fo'lät) a salt of folic acid; a general term for a group of substances whose molecules are made up of a form of pteric acid conjugated with L-glutamic acid. Foliates act as coenzymes that promote one-carbon transfer. They are present in natural foods, including mammalian cells.

fold (föld) a thin, recurved margin, or doubling; called also *plica*. **alar f's**, *plicae alares*. **amniotic f.**, the folded edge of the amniotic membrane where it rises over and finally encloses the embryo. **aryepiglottic f.**, *plica aryepiglottica*. **aryepiglottic f. of Collier**, *plica triangularis*. **axillary f's**, the folds of skin bounding the armpit, the *plica axillaris anterior*, and *plica axillaris posterior*. **Brachet's mesolateral f.**, mesolateral f. **bulboventricular f.**, a fold between the bulbus cordis and the ventricle that disappears as the bulbus cordis is absorbed into the right ventricle. **caval f.**, a ridge that contains the superior segment of the embryonic inferior vena cava.

cecal f's, plicae cecales. **cholecystoduodenocolic f.**, an occasionally present fold of peritoneum sometimes uniting the colon, duodenum, and gallbladder. **ciliary f's**, plicae ciliares. **circular f's**, circular f's of Kerckring, plicae circulares. **conjunctival f.**, the cul-de-sac formed where the conjunctiva is reflected from the eyeball to the upper or lower eyelid; called also *palpebral f.* and *retrotarsal f.* **costocolic f.**, ligamentum phrenicolicum. **Douglas' f.**, 1. plica rectouterina. 2. linea arcuata vaginae musculi recti abdominis. **Duncan's f's**, the loose folds of peritoneum which cover the uterus immediately following delivery. **duodenojejunal f.**, plica duodenalis superior. **duodenomesocolic f.**, plica duodenalis inferior. **epicanthal f.**, **epicanthine f.**, epicanthus (plica palpebronasalis [NA]). **epigastric f.**, plica umbilicalis lateralis, def. 1. **falciform f. of fascia lata**, margo falciformis hiatus saphenus. **fimbriated f.**, plica fimbriata. **gastric f's**, plicae gastricae. **gastropancreatic f's**, plicae gastropancreaticae. **genital f.**, genital ridge. **glossoepiglottic f's**, folds of mucous membrane extending from the base of the tongue to the epiglottis. **gluteal f.**, the crease separating the buttock from the thigh. **Guérin's f.**, a fold of mucous membrane occasionally seen in the fossa navicularis of the urethra. **Hasner's f.**, plica lacrimalis. **head f.**, a crescentic, ventral fold of the blastoderm at the future head end of the embryo. **Heister's f.**, plica spiralis. **Henssing's f.**, see under *ligament*. **horizontal f's of rectum**, plicae transversales recti. **ileoceleal f.**, plica ileocecalis. **ileo-colic f.**, a crescentic fold of peritoneum forming a part of the mesentery, mesocecum, and mesocolon. **incudal f.**, plica incudis. **inferior duodenal f.**, plica duodenalis inferior. **interarticular f. of hip**, ligamentum capitis femoris. **interuterine f.**, plica interuterica. **iridal f's**, plicae iridis. **Jonnesco's f.**, **Juvara's f.**, parietoperitoneal f. **Kerckring's f's** (of small intestine), plicae circulares. **Kohlrausch's f's**, plicae transversales recti. **lacrimal f.**, plica lacrimalis. **f's of large intestine**, plicae semilunares coli. **longitudinal f. of duodenum**, plica longitudinalis duodeni. **malleal f. of mucous membrane of tympanum**, anterior, plica mallearis anterior tunicae mucosae cavi tympani. **malleal f. of tympanic membrane, anterior**, plica mallearis anterior membranae tympani. **malleal f. of tympanic membrane, posterior**, plica mallearis posterior membranae tympani. **mammary f.**, the primordium of the mammary gland in the early embryo; it extends from the root of the upper extremity to the inguinal fold. **Marshall's f.**, plica venae cae-vae sinistrae. **medullary f.**, neural f. **mesolateral f.**, the right lamella of the primitive mesentery running to the right lobe of the liver; called also *Brachet's mesolateral f.* **mesonephric f.**, mesonephric ridge. **mesouterine f.**, a fold of peritoneum supporting the uterus. **mucobuccal f.**, the cul-de-sac formed where the mucous membrane is reflected from the upper or lower jaw to the cheek. **mucolabial f.**, the line of flexure of the oral mucous membrane as it passes from the mandible or maxilla to the lip. **mucosal f.**, plica mucosa. **mucosobuccal f.**, mucobuccal f. **mucous f.**, plica mucosa. **mucous f's of rectum**, columnae anales. **nail f.**, the fold of palmar skin around the base and sides of the nail. **nasopharyngeal f.**, plica salpingopalatina. **Nélaton's f.**, a transverse fold of mucous membrane in the rectum, marking the junction of its lower and middle thirds. **neural f.**, one of the paired folds, lying one on either side of the neural plate, that form the neural tube; called also *medullary f.* **opercular f.**, a fold of tissue constituting an adhesion between the tonsil and the anterior pillar of the fauces. **palatine f's**, transverse, plicae palatinae transversae. **palmate f's**, plicae palmatae. **palpebral f.**, conjunctival f. **palpebronasal f.**, epicanthus (plica palpebronasalis [NA]). **pancreaticogastric f's**, plicae gastropancreaticae. **paraduodenal f.**, plica paraduodenalis. **parietocolic f.**, Hensing's ligament. **parietoperitoneal f.**, a fold of peritoneum in the fetus, arising at the left side of the ascending colon and attached to the parietal peritoneum at the right of the ascending colon; called also *Jonnesco's f.* and *Juvara's f.* **pharyngoepiglottic f.**, a fold of mucous membrane running backward from the epiglottis. **pituitary f's** (obs.), diaphragma sellae. **primitive f.**, one of the two ridges flanking the primitive groove, one on either side. **proximal nail f.**, sulcus matricis unguis. **Rathke's f's**, two fetal folds of mesoderm which unite at the median line to form Douglas' septum and to render the rectum a complete canal. **rectal f's**, plicae transversales recti. **rectouterine f.**, plica rectouterina. **rectovaginal f.**, a fold of peritoneum interposed between the rectum and vagina. **rectovesical f.**, plica rectouterina. **retrotarsal f.**, conjunctival f. **Rindfleisch's f's**, folds in the serous surface of the pericardium around the beginning of the aorta. **sacrogenital f.**, plica rectouterina. **salpingopalatine f.**, plica salpingopalatina. **salpingopharyngeal f.**, plica salpingopharyngea. **Schultze's f.**, a sickle-shaped fold of the amnion extending from the point of insertion of the cord into the placenta to the remains of the umbilical vesicle. **semilunar f.**, plica semilunaris. **semilunar f's of colon**, plicae semilunares coli. **semilunar f. of conjunctiva**, plica semilunaris conjunctivae. **semilunar f. of transversalis fascia**, ligamentum interfoveolare. **serosal f.**, serous f., plica serosa. **sigmoid f's of**

colon, plicae semilunares coli. **spiral f.**, plica spiralis. **spiral f. of cystic duct**, plica spiralis. **stapedial f.**, plica stapedis. **sublingual f.**, plica sublingualis. **superior duodenal f.**, plica duodenalis superior. **synovial f.**, plica synovialis. **synovial f., infrapatellar, synovial f., patellar**, plica synovialis infrapatellaris. **synovial f. of hip**, ligamentum capitis femoris. **tail f.**, a crescentic, ventral fold of the blastoderm, at the future caudal end of the embryo. **transverse f's of rectum**, plicae transversales recti. **Treves' f.**, plica ileocecalis. **triangular f.**, plica triangularis. **tubal f's of uterine tube**, plicae tubariae tubae uterinae. **umbilical f.**, lateral, plica umbilicalis lateralis, def. 1. **umbilical f., medial**, plica umbilicalis medialis. **umbilical f., median, umbilical f., middle**, plica umbilicalis mediana. **urogenital f.**, urogenital ridge. **vaginal f's**, rugae vaginales. **vascular cecal f.**, plica cecalis vascularis. **ventricular f.**, plica vestibularis. **Veraguth's f.** (obs.), an angularly distorted fold of skin on the lateral third of the upper eyelid; described by Veraguth as occurring in melancholia. **vesical f.**, transverse, plica vesicalis transversa. **vestibular f.**, false vocal cord (plica vestibularis [NA]). **vestigial f. of Marshall**, plica venae cae-vae sinistrae. **villous f's of stomach**, plicae villosae ventriculi. **vocal f.**, true vocal cord (plica vocalis [NA]). **vocal f., false**, plica vestibularis.

folia (fo'le-ah) plural of *folium*.

foliaceous (fo'le-a'shus) [L. *folia* leaves] having, pertaining to, or resembling leaves.

folian (fo'le-an) pertaining to *Folius*' process; see *processus anterior mallei*.

folie (fo-le') [Fr.] psychosis; insanity. **f. à deux** (ah-duh'), occurrence of psychosis simultaneously in two closely associated persons, one of whom is dominant and the psychogenic source of the psychosis in the second. **f. circulaire** (seer-ku-lair'), circular psychosis. **f. du doute** (du-doot'), pathologic inability to make even the most trifling decisions, an extreme obsessive-compulsive reaction. **f. du pourquoi** (du-poor-kwah'), psychopathologic constant questioning. **f. gemellaire** (zha'më-lär'), psychosis occurring simultaneously in twins. **f. musculaire** (mus'ku-lär'), severe chorea. **f. raisonnante** (rez-un-ahnt'), the delusional form of any psychosis.

Folin's method, reagent, test (fol'inz) [Otto Knut Olof Folin, American physiologic chemist, 1867-1934] see under *method, reagent, and tests*.

folium (fo'le-um), pl. *fo'lia* [L. "leaf"] [NA] a general term for a leaflike structure, especially one of the leaflike subdivisions of the cerebellar cortex. **f. cacu' minis** (obs.), f. vermis. **fo'lia cerebel'li** [NA], **folia of cerebellum**, the numerous long narrow folds of the cerebellar cortex, separated by sulci and supported by white laminae; they are aggregated into the various subdivisions of the cerebellum. Called also *gyri cerebelli*. **lingual f.**, a foliate papilla of the tongue. **f. ver'mis** [NA], the part of the vermis of the cerebellum between the declive and the tuber vermis.

Folius' muscle, process (fo'le-us) [Caecilius Folius, anatomist of Venice, 1615-1660] see *ligamentum mallic laterale* and *processus anterior mallei*.

follicle (fo'lli-k'l) 1. a sac or pouchlike depression or cavity; see also *folliculus*. 2. a former name for a lymph nodule. **aggregated f's**, folliculi lymphatici aggregati. **aggregated f's of vermiform appendix**, folliculi lymphatici aggregati appendicis vermiformis. **antral f's**, folliculi ovarici vesiculosi. **atretic f.**, an ovarian follicle which has involuted. **dental f.**, the structure within the substance of the jaws enclosing the tooth before its eruption; the dental sac and its contents. **Fleischmann's f.**, an occasional follicle in the mucosa of the floor of the mouth, near the anterior border of the genioglossus muscle. **gastric f's**, 1. glandulae gastricae [propriae]. 2. folliculi lymphatici gastrici. **graafian f's**, folliculi ovarici vesiculosi. **hair f.**, one of the tubular invaginations of the epidermis that enclose the hairs, and from which the hairs grow; called also *folliculus pili* [NA]. **intestinal f's**, the intestinal glands; see *glandulae intestinales*. **lenticular f's**, folliculi lymphatici gastrici. **Lieberkühn's f's**, the intestinal glands; see *glandulae intestinales*. **lingual f's**, folliculi linguales. **lymph f.**, folliculus lymphaticus. **lymph f's of stomach**, folliculi lymphatici gastrici. **lymphatic f's, aggregated**, of Peyer, folliculi lymphatici aggregati. **lymphatic f's, laryngeal**, folliculi lymphatici laryngei. **lymphatic f's of large intestine, solitary**, folliculi lymphatici solitarii intestini crassi. **lymphatic f's of tongue**, folliculi linguales. **Montgomery's f's**, Naboth's f's. **mucous f's, nasal**, glandulae nasales. **Naboth's f's, nabothian f's**, cystlike formations caused by occlusion of the lumina of glands in the mucosa of the uterine cervix, causing them to be distended with retained secretion; called also *Montgomery's f's*, *Naboth's cysts, glands, or ovules*, and *ovula nabothi*. **ovarian f.**, the egg and its enclosing cells, at any stage of its development. **ovarian f's, primary**, folliculi ovarici primarii. **ovarian f's, vesicular**, folliculi ovarici vesiculosi. **primordial f.**, an ovarian follicle consisting of an egg enclosed by a single layer of cells. **sebaceous f.**, a hair follicle supplied with a relatively large sebaceous

gland, and producing a relatively insignificant hair. **secondary f's**, folliculi ovarici vesiculosi. **solitary f's**, see *folliculi lymphatici solitarii intestini crassi* and *folliculi lymphatici solitarii intestini tenuis*. **f. of Stannius**, a lymphoid unit in chicks, resembling the thymus and developing from nodules formed by proliferation of points of the epithelium of the bursa of Fabricius. **thyroid f's**, **f's of thyroid gland**, folliculi glandulae thyroideae. **f's of tongue**, folliculi linguales. **unilaminar f.**, primordial f.

folliclis (fol'i-klis) (*obs.*) tuberculosis papulonecrotica.

follicular (fo-lik'u-lar) [L. *follicularis*] of or pertaining to a follicle or follicles.

folliculi (fo-lik'u-li) [L.] plural of *folliculus*.

folliculin (fö-lik'u-lin) estrone.

folliculitis (fö-lik'u-li'tis) inflammation of a follicle or follicles; used ordinarily in reference to hair follicles, but sometimes in relation to follicles of other kinds. **f. absce'dens et suffo'diens**, perifolliculitis capitis abscedens et suffodiens. **agminate f.**, inflammation of a number of follicles in one area. **f. bar'bae**, sycosis vulgaris. **f. cheloida'lis**, keloidal f. **f. decal'vans**, a rare, localized, spreading, suppurative folliculitis of unknown cause, leading to scarring, with permanent hair loss. **f. gonorrhoe'ica**, littritis caused by gonococci. **keloidal f.**, **f. keloida'lis**, a chronic skin condition characterized by development of persistent hard follicular papules which eventually fuse, with reparative activity leading to development of typical keloidal plaques, which give the disease its name; occurring usually on the back of the neck. Called also *dermatitis papillaris capillitii* and *acne keloid*. **f. na'res per'forans**, inflammation of a hair follicle in the nose, with pustulation and destruction of the follicle, leading to extension of the process through the tissues to the external surface. **f. ulerythemato'sa reticula'ta**, a condition occurring primarily in youth, and characterized by appearance on the face of numerous closely crowded, small areas of atrophy, separated by narrow ridges, the affected area being erythematous and the skin stretched and hard. **f. variolifor'mis**, acne varioliformis.

folliculoma (fo-lik'u-lo'mah) granulosa-theca cell tumor; see under *tumor*. **f. lipidique**, a granulosa-theca cell tumor in which streamers or trabeculae of tall, columnar, lipid-laden cells are interspersed among the more characteristic collections of granulosa cells.

folliculosis (fo-lik'u-lo'sis) a disease characterized by excessive development of lymph follicles.

folliculus (fo-lik'u-lus), pl. *follic'uli* [L., dim. of *folli* a leather bag] [NA] a follicle; [NA] a general term for a very small excretory or secretory sac or gland. **follic'uli glan'dulae thyroi'deae** [NA], follicles of thyroid gland: discrete, cystlike units of the thyroid gland that are lined with cuboidal epithelium and are filled with a colloid substance; there are about 30 to each lobule. Called also *thyroid follicles*. **follic'uli lingua'les** [NA], lingual follicles: projections on the mucosa of the root of the tongue, caused by underlying nodular masses of lymphoid tissue, making up the lingual tonsil. **f. lymphat'icus**, 1. [NA] lymph follicle: a small collection of lymphoid tissue found in such places as the mucosa of the gut: called also *nodulus lymphaticus*. 2. a small transient collection of actively proliferating lymphocytes in the cortex of a lymph node, expressing the cytogenetic and defense functions of the lymphatic tissue; called also *lymphatic nodule* and *nodulus lymphaticus*. **follic'uli lymphat'ici aggrega'ti** [NA], oval elevated areas of lymphoid tissue on the mucosa of the small intestine, composed of many lymphoid follicles closely packed together; called also *noduli lymphatici aggregati* [Peyer] and *Peyer's patches*. **follic'uli lymphat'ici aggrega'ti appen'dicis vermifor'mis** [NA], aggregated follicles of vermiform appendix: oval elevated areas of lymphoid tissue occupying the greater part of the submucosa of the vermiform appendix; called also *noduli aggregati processus vermiformis*. **follic'uli lymphat'ici gas'trici** [NA], lymph follicles of stomach: small lymphocytic aggregates in the interstitial tissue of the lamina propria of the stomach, especially in the pyloric region; called also *lenticular glands of stomach*, *lymphatic nodules of stomach*, and *noduli lymphatici gastrici*. **follic'uli lymphat'ici laryn'gei** [NA], laryngeal lymphatic follicles: lymphatic aggregations in the mucosa of the ventricle of the larynx and on the posterior surface of the epiglottis; called also *noduli lymphatici laryngei*. **follic'uli lymphat'ici lien'a'les** [NA], aggregations of lymphatic tissue that ensheath the arteries in the spleen; often called the *white pulp*. Called also *malpighian bodies* or *corpuscles* (of spleen), and *noduli lymphatici lienales* [Malpighii]. **follic'uli lymphat'ici rec'ti** [NA], concentrations of lymphoid tissue in the tunica mucosa of the rectum; called also *noduli lymphatici recti*. **follic'uli lymphat'ici solita'rii intesti'ni cras'si** [NA], solitary lymphatic follicles of large intestine: the areas of concentrated lymphatic tissue in the tunica mucosa of the colon; called also *noduli lymphatici solitarii intestini crassi*. **follic'uli lymphat'ici solita'rii intesti'ni ten'uis** [NA], small lymph follicles scattered throughout the mucosa and submucosa of the small intestine; called also *noduli lymphatici solitarii intestini tenuis*, *solitary glands of small intestine*, and *solitary lymphatic nodules of small intestine*. **follic'uli ooph'ori**

prima'rii, folliculi ovarici primarii. **follic'uli ooph'ori vesiculo'si** [Graaf'i], folliculi ovarici vesiculosi. **follic'uli ovar'ici prima'rii** [NA], primary ovarian follicles: immature ovarian follicles, each comprising an immature ovum and the specialized epithelial cells (follicle cells) that surround it; called also *folliculi oophori primarii*. **follic'uli ovar'ici vesiculo'si** [NA], vesicular ovarian follicles: maturing ovarian follicles among whose cells fluid has begun to accumulate, leading to the formation of a single cavity or antrum and leaving the ovum eccentrically located in a hillock of follicle cells, the cumulus oophorus; called also *folliculi oophori vesiculosi* [Graaf'i], and *graafian follicles* or *vesicles*. **f. pi'li** [NA], hair follicle: one of the tubular invaginations of the epidermis that enclose the hairs, and from which the hairs grow.

Follutein (fol-lu'te-in) trademark for a preparation of chorionic gonadotropin.

Foltz's valve (föls'tez) [Jean Charles Eugène Foltz, French ophthalmologist, 1822-1876] see under *valve*.

Folvite (fölv'it) trademark for preparations of folic acid.

fomentation (fo'men-ta'shun) [L. *fomentatio*; *fomentum*, a poultice] treatment by warm and moist applications; also the substance thus applied.

fomes (fo'mez), pl. *fo'mites* [L. "tinder"] an object, such as a book, wooden object, or an article of clothing, that is not in itself harmful, but is able to harbor pathogenic microorganisms and thus may serve as an agent of transmission of an infection; called also *fomite*.

fomite (fo'mit) fomes.

fomites (fo'mi-tēz) plural of *fomes*.

fonazene mesylate (fo'nah-zēn) chemical name: 10-[2-(dimethylamino)propyl]-N,N-dimethylphenothiazine-2-sulfonamide monomethanesulfonate; a serotonin inhibitor, C₂₀H₂₅N₃O₅S₃.

Fonsecaea (fon-se-se'ah) a genus of dematiaceous Fungi Imperfecti, some species of which were formerly included in the genera *Hormodendrum* and *Cladosporium*. *F. pedrosoi* and *F. compactum* are etiologic agents of chromomycosis.

fontactoscope (fon-tak'to-sköp) an instrument for measuring the radioactivity of water and gas.

Fontana's markings, spaces (fon-tah'nahz) [Felice Fontana, Italian naturalist and physiologist, 1720-1805] see under *marking* and *space*, and see *spatia anguli iridocornealis*.

fontanel (fon'tah-nel) fontanelle.

fontanelle (fon'tah-nel') [Fr., dim. of *fontaine* spring, filter] a soft spot, such as one of the membrane-covered spaces (*fonticuli cranii* [NA]) remaining in the incompletely ossified skull of a fetus or infant. See also *fonticulus*. **anterior f.**, fonticulus anterior. **anterolateral f.**, fonticulus sphenoidalis. **bregmatic f.**, fonticulus anterior. **Casser's f.**, **casserian f.**, **Casserio's f.**, fonticulus mastoideus. **cranial f's**, fonticuli cranii. **frontal f.**, fonticulus anterior. **Gerdy's f.**, a fontanelle occasionally occurring in the sagittal suture; called also *sagittal f. mastoid f.*, fonticulus mastoideus. **occipital f.**, **posterior f.**, fonticulus posterior. **posterolateral f.**, **posterotemporal f.**, fonticulus mastoideus. **quadrangular f.**, fonticulus anterior. **sagittal f.**, Gerdy's f. **sphenoidal f.**, fonticulus sphenoidalis. **triangular f.**, fonticulus posterior.

fonticuli (fon-tik'u-li) [L.] plural of *fonticulus*.

fonticulus (fon-tik'u-lus), pl. *fontic'uli* [L., dim. of *fons* fountain] [NA] fontanelle; a soft spot; one of the membrane-covered spaces remaining in the incompletely ossified skull of the fetus or infant. **f. ante'rior** [NA], anterior fontanelle: the unossified area of the skull situated at the junction of the frontal, coronal, and sagittal sutures; called also *f. frontalis* [major], and *frontal fontanelle*. **fontic'uli cra'nii** [NA], the membrane-covered spaces, or soft spots, remaining at the incomplete angles of the parietal and adjacent bones, until ossification of the skull is completed; called also *fontanelles*. **f. fronta'lis** [major], **f. anterior**. **f. guttu'ris**, fossa jugularis. **f. ma'jor**, **f. anterior**. **f. mastoi'deus** [NA], mastoid fontanelle: the unossified area of the skull at the junction of the lambdoidal, parietomastoid, and occipitomastoid sutures; called also *Casser's* or *casserian fontanelle*, and *posterolateral* or *posterotemporal fontanelle*. **f. mi'nor**, **f. posterior**. **f. occipita'lis**, **f. poste'rior** [NA], posterior fontanelle: the unossified area of the skull at the junction of the sagittal and lambdoidal sutures; called also *f. minor*, and *occipital* or *triangular fontanelle*. **f. sphenoida'lis** [NA], sphenoidal fontanelle: the unossified area at the junction of the parietal and frontal bones, the greater wing of the sphenoidal, and the squamous part of the temporal bones; called also *anterolateral fontanelle*.

food (fōd) anything which, when taken into the body, serves to nourish or build up the tissues or to supply body heat; aliment; nutriment. **isodynamic f's**, foods which generate equal amounts of energy in heat units.

foot (foot) [L. *pes*] 1. the distal portion of the primate leg, upon which an individual stands and walks. It consists, in man, of the tarsus, metatarsus, and phalanges and the tissues encompassing them. See also *pes* and *talipes*. 2. a unit of linear measure, 1/3 yard, or 12 inches, being the equivalent of 30.48 cm. **athlete's**

f., *tinea pedis*. **broad f.**, *metatarsus latus*. **burning feet**, a deficiency disease, possibly pantothenic acid deficiency, occurring among the poor in South India and West Africa. It is marked by burning sensations in the soles and palms. **buttress f.**, a condition of periostitis or osteitis in the region of the pyramidal process of the os pedis of the horse, with fracture of the process, deformity of the hoof, and alteration of the normal angle of the joint. Called also *extensor process disease*, *pyramidal disease*, and *low ring-bone*. **Charcot's f.**, the deformed foot seen in tabetic arthropathy. **cleft f.**, a deformed foot in which the division between the third and fourth toes extends into the metatarsal region. **club f.**, see *talipes*. **contracted f.**, see *hoof-bound*. **crooked f.**, a condition of the horse's hoof in which one wall is concave and the opposite wall convex, giving the hoof a bent appearance; it is due to improper trimming and shoeing. **crow's f.**, one of the fine lines or creases that extend in a radial fanlike fashion from the lateral canthal regions in irregular lengths; called also *laugh line*. **dangle f.**, **drop f.**, a condition in which the foot hangs in a plantar-flexed position, due to lesion of the peroneal nerve. **end f.**, see *end-feet*. **fescue f.**, *fescue* (def. 2). **flat f.**, flatfoot. **forced f.**, a painful swelling of the feet of soldiers after forced marches, due to fracture of a metatarsal bone. **Friedreich's f.**, *pes cavus*, with hyperextension of the toes; seen in hereditary ataxia. **fungus f.**, *maduromycosis*. **Hong Kong f.**, an infectious mycotic disease (*dermatophytosis*) of the foot occurring in China. **immersion f.**, a condition resembling trench foot occurring in persons who have spent long periods in water. **Madura f.**, *maduromycosis*. **march f.**, painful swelling of the forefoot, often associated with fracture of one of the metatarsal bones, following excessive foot strain. **Morand's f.**, a foot having eight toes. **Morton's f.**, see under *toe*. **mossy f.**, an infectious verrucose condition of the skin of the feet, endemic in the Amazon region of South America. **perivascular feet**, terminal expansions of the cytoplasmic processes of some astrocytes by which they are attached to blood vessels. **pricked f.**, a condition in the horse in which the sole or the frog has been punctured either in the forge or by the animal treading on a nail or some other object. **red f.**, redfoot. **reel f.**, clubfoot; see *talipes*. **rocker-bottom f.**, 1. congenital convex *pes valgus*, due to primary dislocation of the talonavicular joint; it may occur as an isolated primary deformity or be associated with autosomal trisomy, including trisomy 13-15 and trisomy 18; called also *rocker-bottom flatfoot*. 2. *talipes equinovarus* in which the foot is shaped like a rocker of a rocking-chair, occurring as a result of a transverse break in the midtarsal area; called also *rocker-bottom deformity*. **sag f.**, sagging of the arch of the foot. **shelter f.**, a swollen condition of the feet occurring among persons who spend the night in air-raid shelters. **spatula f.**, a foot in which several toes are fused together. **spread f.**, *metatarsus latus*. **strawberry rot f.**, *dermatophilosis*. **sucker f.**, a pyramidal expansion of a process of an astrocyte by which the latter is attached to a small blood vessel; called also *sucker apparatus* or *process*, *podium*, and *vascular foot plate*. **tabetic f.**, the flat, distorted foot seen in tabes, and due to disease of the tarsus. **taut f.**, a shortening and contraction of the calf muscles and plantar flexors of the foot, due to high-heeled shoes. **trench f.**, a condition of the feet resembling frostbite. It is due to the prolonged action of water on the skin combined with circulatory disturbance due to cold and inaction. Called also *water-bite*. **weak f.**, an early stage of flatfoot.

foot-candle (foot kan'd'l) a unit of illumination being 1 lumen per square foot or equivalent to 1.0764 millilux. Cf. *lux*.

footdrop (foot'drop) dropping of the foot from paralysis of the anterior muscles of the leg.

foot lambert (foot lam'bert) see *lambert*.

footplate (foot'plāt) the flat portion of the stapes, which is set into the oval window on the medial wall of the middle ear. Called also *base of stapes*.

foot-pound (foot-pownd') the work done in raising a mass of one pound the distance of one foot against gravity. Abbreviated f.p.

forage (fo-rahzh') [Fr. "boring, drilling"] surgical creation of a V-shaped longitudinal trench in the prostate by means of electric current, thereby removing obstruction caused by its hypertrophy. The term is applied to similar cutting operations on other parts.

foramen (fo-ra'men), pl. *foramina* [L.] a natural opening or passage; [NA] a general term for such a passage, especially one into or through a bone. **accessory f.**, a lateral or accessory orifice, other than the main apical foramen, opening into the root canal of a tooth; called also *lateral f.* **alveolar foramina of maxilla**, *foramina alveolaria maxillae* [NA], the openings of the alveolar canals at the deepest portion of the tooth sockets in the maxilla. **aortic f.**, hiatus aorticus. **apical f. of tooth**, *f. apicis dentis* [NA], an aperture at or near the apex of the root of a tooth, giving passage to the blood vessels and nerves supplying the pulp; called also *f. radialis dentis*, *pupal f.*, and *root f.* **auditory f.**, *external*, meatus acusticus externus. **auditory f.**, *internal*, porus acusticus internus. **Bartholin's f.** (*obs.*), *f. obturatum*. **Bichat's f.**, *cisterna venae magnae cerebri*. **f. of Bochdalek**, hiatus pleuropertitonealis. **Botallo's f.**, *f. ovale cordis*. **Bozzi's f.** (*obs.*), *macula retinae*.

f. cae'cum lin'guae, *f. cecum linguae*. **f. cae'cum medul'lae oblonga'tae**, a small triangular expansion at the lower border of the pons, formed by the termination of the anterior median fissure of the medulla oblongata; called also *f. caecum posterius*, *Schwalbe's f.*, and *f. of Vicq d'Azyr*. **f. cae'cum poste'rius**, *f. caecum of Vicq d'Azyr*, *f. caecum medullae oblongatae*. **caroticotympanic foramina**, *canaliculi caroticotympanici*. **carotid f.**, the inferior aperture of the carotid canal, giving passage to the carotid vessels. **cecal f.**, *f. ce'cum*, *f. cecum ossis frontalis*. **f. cecum of frontal bone**, *f. cecum ossis frontalis*. **f. ce'cum lin'guae** [NA], *foramen cecum of tongue*: a depression on the dorsum of the tongue at the end of the median sulcus, representing the remains of the upper end of the thyroglossal duct of the embryo. **f. ce'cum os'sis fronta'lis** [NA], *foramen cecum of frontal bone*: a blind opening formed between the frontal crest and the crista galli; it sometimes transmits a vein from the nasal cavity to the superior sagittal sinus. Called also *cecal f.* and *f. cecum*. **f. cecum of tongue**, *f. cecum linguae*. **cervical f.**, *f. transversarium*. **condyloid f.**, *anterior*, *canalis hypoglossi*. **condyloid f.**, *posterior*, *canalis condylaris*. **conjugate f.**, a foramen formed by a notch in each of two opposed bones. **f. costo-transversa'rium** [NA], *costotransverse f.*, the narrow space between the dorsal surface of the neck of a rib and the ventral surface of the transverse process of the corresponding vertebra. **cotyloid f.**, a passage between the margin of the acetabulum and the transverse ligament. **cribroethmoid f.**, *f. ethmoidale anterius*. **dental foramina**, see *foramina alveolaria maxillae* and *foramina mandibulae*. **f. diaphrag'matis** [sel'lae], the opening in the center of the diaphragm of the sella through which the infundibulum passes. **Duverney's f.**, *f. epiploicum*. **emissary f.**, any foramen in a cranial bone that gives passage to an emissary vein. **epiploic f.**, *f. epiplo'icum* [NA], an opening connecting the two sacs of the peritoneum, situated below and behind the porta hepatis. **esophageal f.**, *hiatus esophageus*. **ethmoidal f.**, *anterior*, *f. ethmoidale anterius*. **ethmoidal f.**, *posterior*, *f. ethmoidale posterius*. **ethmoidal foramina**, *foramina ethmoidalia*. **foram'ina ethmoida'lia** [NA], *ethmoidal foramina*: small openings in the ethmoid bone at the junction of the medial wall with the roof of the orbit, the anterior transmitting the nasal branch of the ophthalmic nerve and the anterior ethmoid vessels, the posterior transmitting the posterior ethmoid vessels. Called also *orbital canals*. **f. ethmoida'le ante'rius** [NA], a small opening on the medial wall of the orbit, on the line of the frontoethmoidal suture, that transmits the anterior ethmoidal nerve and vessels. **f. ethmoida'le poste'rius** [NA], *posterior ethmoidal foramen*: a small opening on the medial wall of the orbit, on the line of the frontoethmoidal suture, that transmits the posterior ethmoidal nerve and vessels. **f. of Fallopio**, *hiatus canalis nervi petrosi majoris*. **Ferrein's f.**, *hiatus canalis nervi petrosi majoris*. **frontal f.**, *f. fronta'le* [NA], see *incisura frontalis*. **frontoethmoidal f.**, a foramen lying on the line of the frontoethmoidal suture. **Galen's f.**, the opening of an anterior cardiac vein into the right atrium. **glandular foramina of Littre**, *lacunae urethrales*. **glandular f. of Morgagni**, *glandular f. of tongue*, *f. cecum linguae*. **great f.**, *f. magnum*. **Hartigan's f.**, a foramen said to exist in the base of the transverse process of a lumbar vertebra but seldom persisting to adult life. **Huschke's f.**, a perforation found near the inner extremity of the tympanic plate between the tympanum and the jugular fossa caused by arrest of development. **incisive f.**, *f. incisivum* [NA], one of the openings in the incisive fossa of the hard palate that transmit the nasopalatine nerves. **incisor f.**, *median*, *Scarpa's f.* **infraorbital f.**, *f. infraorbita'le* [NA], the opening of the infraorbital canal on the anterior surface of the maxilla giving passage to the infraorbital nerve and vessels; called also *suborbital f.* **innominate f.**, an occasional opening in the temporal bone for passage of the small superficial petrosal nerve. **intersacral foramina**, *foramina intervertebralia ossis sacri*. **intervertebral f.**, *f. inter-ventricula're* [NA], *f. interventricula're* [Monro'i], a communication between the lateral and the third ventricle; called also *f. of Monro*. **intervertebral f.**, *f. intervertebra'le* [NA], the passage formed by the inferior and superior notches on the pedicles of adjacent vertebrae; it transmits a spinal nerve and vessels. **intervertebral foramina of sacrum**, *foramina intervertebralia ossis sacri*. **intervertebral foramina of sacrum**, *foramina intervertebra'lia os'sis sa'cri* [NA], the four short, forked tunnels in each lateral wall of the sacral canal, connecting it with the pelvic and dorsal sacral foramina; called also *intersacral canals* or *foramina*. **ischadic f.**, *greater*, *f. ischiadicum majus*. **ischadic f.**, *lesser*, *f. ischiadicum minus*. **f. ischia'dicum ma'jus** [NA], *greater ischiadic foramen*: a hole converted from the major sciatic notch by the sacrotubular and sacrosacral ligaments; called also *greater sciatic f.* and *great sacrosacral f.* **f. ischia'dicum mi'nus** [NA], *lesser ischiadic foramen*: a hole converted from the minor sciatic notch by the sacrotubular and sacrosacral ligaments; called also *lesser sciatic f.* and *small sacrosacral f.* **ischiopubic f.**, *f. obturatum*. **jugular f.**, *f. jugula're* [NA], the opening formed by the jugular notches on the temporal and occipital bones, for the

transmission of various veins, arteries, and nerves. **f. of Key and Retzius**, apertura lateralis ventriculi quarti. **lacerate f.**, anterior, fissura orbitalis superior. **lacerate f.**, middle, f. lacerum. **lacerate f.**, posterior, f. jugulare. **f. lac'erum** [NA], an irregular gap formed at the junction of the base of the great wing of the sphenoid bone, the tip of the petrous part of the temporal bone, and the basilar part of the occipital bone; in life its inferior aspect is filled with fibrocartilage, superior to which the internal carotid artery lies. **f. lac'erum ante'rius**, fissura orbitalis superior. **f. lac'erum me'dium**, f. lacerum. **f. lac'erum poste'rius**, f. jugulare. **lateral f.**, accessory f. **left f.**, inferior, hiatus aorticus. **left f.**, superior, hiatus esophageus. **f. of Luschka**, apertura lateralis ventriculi quarti. **f. of Magendie**, apertura mediana ventriculi quarti. **f. mag'num** [NA], great foramen: the large opening in the anterior and inferior part of the occipital bone, interconnecting the vertebral canal and the cranial cavity; called also *f. occipitale magnum* and *great occipital f.* **malar f.**, f. zygomaticofaciale. **f. mandib'ulae** [NA], **f. mandibula're**, the opening on the medial surface of the ramus of the mandible, leading into the mandibular canal. **mastoid f.**, **f. mastoi'deum** [NA], a prominent opening in the temporal bone posterior to the mastoid process and near its occipital articulation; an artery and vein usually pass through it. **maxillary f.**, hiatus maxillaris. **maxillary f.**, anterior, f. mentale. **maxillary f.**, inferior, f. ovale basis cranii. **maxillary f.**, internal, **maxillary f.**, posterior, f. mandibulae. **maxillary f.**, superior, f. rotundum ossis sphenoidalis. **medullary f.**, f. vertebrale. **meibomian f.**, f. cecum linguae. **mental f.**, **f. menta'le** [NA], an opening on the lateral part of the body of the mandible, opposite the second bicuspid tooth, for passage of the mental nerve and vessels. **f. of Monro**, f. interventriculare. **Morand's f.**, f. cecum linguae. **Morgagni's f.**, **morgagnian f.**, 1. a small gap on either side, between the sternal and costal portions of the diaphragm, for the passage of the superior epigastric blood vessels and a few lymphatic vessels; called also *pleuroperitoneal f.* 2. foramen cecum linguae. 3. foramen singulare. **nasal foramina**, **foram'ina nasa'lia**, openings on the outer surface of each nasal bone for the transmission of blood vessels. **foram'ina nervo'sa lam'inae spira'lis**, *foramina nervosa limbus laminae spiralis*. **foram'ina nervo'sa lim'bus lam'inae spira'lis** [NA], numerous small openings in the labium limbi tympanicum for the passage of the cochlear nerves; called also *foramina nervosa laminae spiralis* and *habenulae perforatae*. **f. nutrit'ium** [NA], **nutrient f.**, any one of the passages that admit the nutrient-vessels to the medullary cavity of a bone. **obturator f.**, **f. obtura'tum** [NA], the large opening between the os pubis and the ischium. **occipital f.**, **great, occipital f.**, inferior, f. magnum. **f. occipita'le mag'num**, f. magnum. **olfactory f.**, any one of the many openings of the cribriform plate of the ethmoidal bone. **optic f.**, **f. of sclera**, lamina cribrosa sclerae. **optic f. of sphenoid bone**, **f. op'ticum os/sis sphenoida'lis**, canalis opticus. **orbitomalar f.**, f. zygomaticoorbitale. **oval f. of fetus**, fossa ovalis cordis. **oval f. of hip bone**, f. obturatum. **oval f. of sphenoid bone**, **f. ovale basis cranii**. **f. ova'le ba'sis cra'nii** [NA], an opening in the posterior part of the medial portion of the great wing of the sphenoid bone; it transmits the mandibular branch of the trigeminal nerve and some vessels. Called also *f. ovale ossis sphenoidalis* and *oval f. of sphenoid bone*. **f. ova'le cor'dis** [NA], the aperture in the septum secundum of the fetal heart that provides a communication between the atria; called also *Botallo's f.* and *oval f. of fetus*. **f. ova'le os/sis sphenoida'lis**, **f. ovale basis cranii**. **f. of Pacchioni**, **pachionian f.**, f. diaphragmatis [sellae]. **palatine foramina**, accessory, foramina palatina minora. **palatine f.**, anterior, f. incisivum. **palatine f.**, greater, f. palatinum majus. **palatine foramina**, lesser, foramina palatina minora. **palatine f.**, posterior, f. palatinum majus. **foramina of palatine tonsil**, fossulae tonsillares tonsillae palatinae. **f. palati'num ma'jus** [NA], greater palatine foramen: the inferior opening of the great palatine canal, found laterally on the horizontal plate of each palatine bone opposite the root of each third molar tooth; it transmits a palatine nerve and artery. Called also *posterior palatine f.*, *pterygopalatine f.*, and *sphenopalatine f.* **foram'ina palati'na mino'ra** [NA], lesser palatine foramina: the openings of the palatine canals behind the palatine crest and the greater palatine foramina; called also *accessory palatine foramina*. **foram'ina papilla'ria re'nis** [NA], **papillary foramina** of kidney, minute openings in the summit of each renal papilla, the orifices of the collecting tubules; called also *foveolae papillae*. **parietal f.**, **f. parieta'le** [NA], an opening on the posterior part of the superior portion of the parietal bone near the sagittal suture, for the passage of a vein and arteriole. **pleuroperitoneal f.**, 1. hiatus pleuroperitonealis. 2. Morgagni's f. (def. 1). **pterygopalatine f.**, f. palatinum majus. **pulpal f.**, f. apicis dentis. **quadrate f.**, f. venae cavae. **f. rad'icis den'tis**, f. apicis dentis. **Retzius' f.**, apertura lateralis ventriculi quarti. **right f.**, f. venae cavae. **rivinian f.**, **Rivinus' f.**, incisura tympanica. **root f.**, f. apicis dentis. **f. rotun'dum os/sis sphenoida'lis** [NA], a round opening in the medial part of the great wing of the sphenoid bone that

transmits the maxillary branch of the trigeminal nerve; called also *superior maxillary f.* or *canal*. **sacral foramina**, anterior, foramina sacralia pelvina. **sacral foramina**, dorsal, foramina sacralia dorsalia. **sacral foramina**, internal, foramina sacralia pelvina. **sacral foramina**, posterior, foramina sacralia dorsalia. **f. of sacral canal**, hiatus sacralis. **foram'ina scara'lia anterio'ra**, foramina sacralia pelvina. **foram'ina sacra'lia dorsa'lia** [NA], dorsal sacral foramina: the eight openings (four on each side) on the dorsal surface of the sacrum for the dorsal rami of the sacral nerves; called also *foramina sacralia posteriora* and *posterior sacral foramina*. **foram'ina sacra'lia pelvi'na** [NA], the eight openings (four on each side) on the pelvic surface of the sacrum for the ventral rami of the sacral nerves. Called also *anterior sacral foramina*, *foramina sacralia anteriora*, and *internal sacral foramina*. **foram'ina sacra'lia posterio'ra**, foramina sacralia dorsalia. **sacrosciatic f.**, **great**, f. ischiadicum majus. **sacrosciatic f.**, small, f. ischiadicum minus. **f. of saphenous vein**, hiatus saphenus. **Scarpa's f.**, one of the two foramina, one behind either upper medial incisor, for transmission of the nasopalatine nerves; called also *median incisor f.* **Schwalbe's f.**, f. caecum medullae oblongatae. **sciatic f.**, greater, f. ischiadicum majus. **sciatic f.**, lesser, f. ischiadicum minus. **f. singula're** [NA], the opening in the inferior vestibular area of the fundus of the internal acoustic meatus that gives passage to the nerves of the ampulla of the posterior semicircular duct; called also *Morgagni's* or *morgagnian f.* **foramina of smallest veins of heart**, foramina venarum minimarum cordis. **Soemmering's f.** (obs.), fovea centralis retinae. **sphenopalatine f.**, 1. foramen sphenopalatinum. 2. foramen palatinum majus. **f. sphenopalati'num** [NA], sphenopalatine foramen: an opening on the medial wall of the pterygopalatine fossa, interconnecting this fossa with the nasal cavity, and transmitting the sphenopalatine artery and nasal nerves. **sphenotic f.**, f. lacerum. **spinal f.**, **f. of spinal cord**, f. vertebrale. **f. spino'sum** [NA], **spinous f.**, an opening in the great wing of the sphenoid bone, near its posterior angle, for the middle meningeal artery. **Spöndel's f.**, a small transient foramen in the cartilaginous base of the developing skull between the ethmoid bone and the lower wings of the sphenoid. **f. of Stensen**, 1. foramen incisivum. 2. canalis incisivus. **stylomastoid f.**, **f. stylomastoi'deum** [NA], a foramen on the inferior part of the temporal bone between the styloid and mastoid processes, for the facial nerve and the stylomastoid artery. **suborbital f.**, f. infraorbitale. **supraorbital f.**, **f. supraorbita'le**, **f. supraorbita'lis** [NA], an opening in the frontal bone in the supraorbital margin, giving passage to the supraorbital artery and nerve; it is often present as a notch (incisura frontalis) bridged only by fibrous tissue. Called also *supraorbital notch*. **suprapyriform f.**, an opening above the pyramidalis muscle through which the gluteal vessels and superior gluteal nerve pass out of the pelvis. **f. of Tarin** (obs.), hiatus canalis nervi petrosi majoris. **temporomalar f.**, f. zygomaticotemporale. **thebesian foramina**, **foram'ina thebes'ii**, foramina venarum minimarum cordis. **thyroid f.**, 1. f. thyroideum. 2. obturator f. **f. thyroi'deum** [NA], thyroid foramen: an inconstantly present opening in the upper part of the lamina of the thyroid cartilage, resulting from incomplete union of the fourth and fifth branchial cartilages. **tonsillar foramina**, see *fossulae tonsillares tonsillae palatinae* and *pharyngeae*. **f. transversa'rium** [NA], **transverse f.**, the passage in either transverse process of a cervical vertebra that, in the upper six vertebrae, transmits the vertebral vessels; it is small or may be absent in the seventh. Called also *cervical vertebral*, or *vertebroarterial f.* **vena caval f.**, **f. ve'nae ca'vae** [NA], the opening in the respiratory diaphragm that transmits the inferior vena cava and some branches of the right vagus nerve; called also *venal caval hiatus* and *venous f.* **foram'ina vena'rum minima'rum cor'dis** [NA], foramina of smallest veins of heart: minute openings in the walls of the right atrium of the heart, through which small veins, the venae cordis minimae, empty their blood directly into the heart; called also *Viessens' foramina* and *thebesian foramina*. **venous f.**, f. venae cavae. **vertebral f.**, 1. foramen vertebrale. 2. foramen transversarium. **f. vertebra'le** [NA], vertebral foramen: the large opening in a vertebra formed by its body and arch; called also *medullary f.* and *spinal f.* or *aperture*. **vertebroarterial f.**, f. transversarium. **f. of Vesalius**, an opening occasionally found medial to the foramen ovale of the sphenoid, for the passage of a vein from the cavernous sinus. **f. of Vicq d'Azyr**, f. caecum medullae oblongatae. **Viessens' foramina**, foramina venarum minimarum cordis. **Weitbrecht's f.**, an opening in the capsule of the shoulder joint through which passes the synovial membrane to the bursa that lines the under surface of the subscapularis muscle. **f. of Winslow**, f. epiploicum. **zygomatic f.**, anterior, zygomatic f., external, zygomatic f., facial, f. zygomaticofaciale. **zygomatic f.**, inferior, zygomatic f., internal, of Arnold, f. zygomaticoorbitale. **zygomatic f.**, internal, of Meckel, f. zygomaticotemporale. **zygomatic f.**, orbital, f. zygomaticoorbitale. **zygomatic f.**, posterior, f. zygomaticotemporale. **zygomatic f.**, superior, f. zygomaticoorbitale. **zygomatic f.**, temporal, f.

zygomaticotemporale. **zygomaticofacial f.**, **f. zygomaticofacia'le** [NA], the opening on the anterior surface of the zygomatic bone for the zygomaticofacial nerves and vessels. **zygomaticoorbital f.**, **f. zygomaticoorbita'le** [NA], either of the two openings on the orbital surface of each zygomatic bone, which transmit branches of the zygomatic branch of the trigeminal nerve and branches of the lacrimal artery. **zygomaticotemporal f.**, **f. zygomaticotempora'le** [NA], the opening on the temporal surface of the zygomatic bone for passage of the zygomaticotemporal nerve.

foramina (fo-ram'i-nah) [L.] plural of *foramen*.

Foraminifera (fo-ram'i-ni'f'er-ah) in some systems of classification, a class of the subphylum Sarcodina, and in others an order of the class Rhizopoda, including ameboid protozoa of the marine type, which secrete chalky, many-chambered shells with perforations through which the pseudopodia are extended for locomotion or food gathering. Accumulations of their shells on the ocean floor are gradually transformed into chalk.

foraminiferous (for'am-i-ni'f'er-us) [*foramen* + L. *ferre* to bear] having foramina.

foraminotomy (for'am-i-not'o-ine) [*foramina* + Gr. *tomē* a cutting] the operation of removing the roof of intervertebral foramina, done for the relief of nerve root compression.

foraminulum (for'ah-min'u-lum), pl. *foramin'ula* [L.] a minute foramen.

foration (fo-ra'shun) [L. *forare* to bore] the act or process of trephination or boring.

force (fōrs) [L. *fortis* strong] energy, or power; that which originates or arrests motion. **catabolic f.**, energy derived from the metabolism of food. **chewing f.**, masticatory f. **electromotive f.**, the force which, by reason of differences in potential, causes a flow of electricity from one place to another, giving rise to an electric current; it is measured in volts. **extraoral f.**, force applied by orthodontic anchorage units (calvarial, occipital, or cervical) outside the oral cavity. **field f's**, hypothetical forces which have a part in the individuation processes of the early embryo. **masticatory f.**, the force applied by the muscles of mastication during the chewing of food. **nerve f.**, **nervous f.**, in psychiatry, the amount of nervous capital or stamina a person possesses. **occlusal f.**, the force exerted on opposing teeth when the jaws are brought into approximation. **reciprocal f.**, a force applied by an orthodontic anchorage in which the resistance of one or more dental units is utilized to move one or more opposing dental units. Cf. *reciprocal anchorage*. **reserve f.**, energy above that required for normal functioning; in the heart it is the power which will take care of the additional circulatory burden imposed by bodily exertion. **rest f.**, the power of the heart necessary to maintain the circulation when the patient is at rest. **Van der Waals f's**, the relatively weak, short-range forces of attraction existing between atoms and molecules, which results in the attraction of nonpolar organic

compounds to each other (hydrophobic bonding). **vital f.**, the energy which characterizes a living organism.

forceps (fōr'seps) [L.] 1. an instrument with two blades and a handle for compressing or grasping tissues in surgical operations, and for handling sterile dressings and other surgical supplies. 2. any forcipate organ or part, particularly the terminal fibers of the corpus callosum. **alligator f.**, strong toothed forceps having a double clamp. **f. ante'rior**, **f. minor**. **artery f.**, forceps for grasping and compressing an artery. **Asche f.**, forceps especially designed for intranasal use. **aural f.**, forceps for operations of the ear. **axis-traction f.**, specially jointed obstetrical forceps so constructed that traction may be applied in the line of the pelvic axis. **Bailey-Williamson f.**, a special obstetrical forceps used in mid- and high-forceps delivery and in breech presentations with aftercoming head. **Barton f.**, an obstetrical forceps with a hinge in one blade, which can be applied correctly to the fetal head without disturbing its relationship to the pelvic axis. **bayonet f.**, a forceps whose blades are offset from the axis of the handle. **bone f.**, forceps used for grasping bone. **Brenner f.**, a special obstetrical forceps used in breech presentations. **bulldog f.**, spring forceps for seizing an artery to arrest or prevent hemorrhage; the jaws are usually covered with rubber tubing to prevent injury to the vascular wall. **bullet f.**, a forceps for extracting bullets. **capsule f.**, forceps for removing the lens capsule in membranous cataract. **chalazion f.**, a thumb forceps with a flattened plate at the end of one arm and a matching ring on the other; it is an ophthalmologic instrument, also used for isolation of lip and cheek lesions to facilitate removal. **Chamberlen f.**, the original form of obstetrical forceps, invented by Peter Chamberlen (1560-1631), and disclosed by Hugh Chamberlen (1664-1728). **clamp f.**, 1. a forceps with an automatic lock, used for compressing arteries, the pedicle of a tumor, etc.; called also *pedicle clamp*. 2. in dentistry, forceps used to hold and open the rubber-dam clamp while it is being placed on or removed from a tooth. **clip f.**, a double-action forceps for applying wound clips; also used to designate a McKenzie forceps for applying brain clips. **Cornet's f.**, a forceps for holding a coverglass. **DeLee f.**, a modified Simpson forceps. **dental f.**, forceps for the extraction of teeth. **disk f.**, a forceps for grasping the scleral disk in trephining the eyeball. **dressing f.**, forceps with scissor-like handles for grasping lint, drainage tubes, etc., in dressing wounds. **ear f.**, delicate forceps for extracting foreign bodies from the auditory canal. **Elliot f.**, a special obstetrical forceps used in low-forceps delivery and frank breech presentations. **epilating f.**, forceps for use in plucking out hairs. **extracting f.**, dental f. **fixation f.**, forceps for holding a part during an operation. **galea f.**, Willett f. **Garrison's f.**, an obstetrical forceps with unfenestrated blades; called also *Luikart's f.* **Good f.**, a special obstetrical forceps used in midforceps delivery in the anterior position. **Haig Ferguson f.**, a special obstetrical forceps used in low-forceps delivery. **Hawks-Dennen f.**, a special

Some types of forceps: A, Struycken ear forceps; B, serrated forceps; C, Iris forceps, fine mouse tooth; D, Schroeder tenaculum forceps; E, Schroeder vulsellum forceps (with side view of blade).

obstetrical forceps used in midforceps delivery in the anterior position. **hemostatic f.**, forceps for controlling hemorrhage. **high f.**, see *forceps delivery*, *high*, under *delivery*. **Hodge's f.**, a variety of obstetrical forceps. **Kazanjan f.**, cutting forceps used for resection of the nasal dorsal hump. **Kjelland's f.**, **Kjelland's f.**, obstetrical forceps having no pelvic curve, a marked cephalic curve, and an articulation permitting a gliding movement of one blade over the other, thus allowing the blades to adapt to the sides of the fetal head when the head lies with its long diameter in the transverse diameter of the pelvis. **Knapp's f.**, forceps with roller blades, formerly used to express trachomatous granules from the conjunctiva. **Kocher's f.**, strong forceps for holding tissues during operation or for compressing bleeding tissue. **Koeberle's f.**, hemostatic f. **Laborde's f.**, forceps for grasping the tongue in Laborde's method of stimulating respiration. **Levret's f.**, modified Chamberlen forceps, curved to correspond with the curve of the parturient canal. **lithotomy f.**, forceps for removing stone from the bladder in lithotomy. **low f.**, see *forceps delivery*, *low*, under *delivery*. **Löwenberg's f.**, forceps for removing adenoid growths. **Luikart f.**, **Garrison's f.** **f. ma'jor** [NA], the terminal fibers of the corpus callosum that pass from the splenium into the occipital lobes; called also *f. posterior*. **McKenzie f.**, a forceps for applying silver clips. **mid f.**, see *midforceps delivery*, under *delivery*. **f. mi'nor** [NA], the terminal fibers of the corpus callosum that pass from the genu into the frontal lobes; called also *f. anterior*. **mosquito f.**, a small hemostatic forceps. **mouse-tooth f.**, forceps with one or more fine teeth at the tip of each blade. **obstetrical f.**, an instrument designed to extract the fetus by the head from the maternal passages without injury to it or to the mother. **Péan's f.**, a curved or straight clamp for hemostasis. **Piper f.**, a special obstetrical forceps for an aftercoming head. **point f.**, forceps used in filling root canals, which securely holds the filling cones during their placement. **f. poste'rior**, *f. major*. **roller f.**, forceps with a roller at the end of each blade, formerly used for compressing the granulations in trachoma; called also *trachoma f.* **rongeur f.**, a forceps designed for use in cutting bone. **sequester f.**, forceps with small but strong serrated jaws for removing the portions of bone forming a sequester. **Simpson's f.**, a form of obstetrical forceps. **speculum f.**, long slender forceps for use through a speculum. **suture f.**, forceps used to hold the needle in passing a suture; a needle holder. **Tarnier's f.**, a form of axis-traction forceps. **tenaculum f.**, forceps having a sharp hook at the end of each jaw. **thumb f.**, tissue *f.* **tissue f.**, forceps with one or more fine teeth at the tip of each blade, designed for handling tissues with minimal trauma during surgery; called also *thumb f.* **tor-sion f.**, forceps for making torsion on an artery to arrest hemorrhage. **tracheal f.**, long slender forceps for removing foreign bodies from the trachea. **trachoma f.**, roller *f.* **Tucker-McLean f.**, a long obstetrical forceps with a solid blade. **vol-sella f.**, **vulsellum f.**, a forceps with teeth for grasping tissues and applying traction. **Walsham f's**, forceps especially designed for intranasal use. **Willet f.**, a vulsellum for applying scalp traction in the control of hemorrhage from placenta previa; called also *galea f.* and *Willet's clamp*.

forcipate (for'si-pāt) shaped like forceps.

Forcipomyia (for'si-po-mi'yah) a genus of midges, family Chironomidae. *F. townsendi* and *F. uta* were once thought to transmit mucocutaneous leishmaniasis.

forcipressure (for'si-presh-ur) pressure with forceps, chiefly for the arrest of hemorrhage.

Fordyce's disease, spot (for'dis-es) [John Addison Fordyce, New York dermatologist, 1858-1925] see *Fox-Fordyce disease*, under *disease*, and see under *spot*.

forearm (fôr'arm) the part of the upper limb of the body between the elbow and the wrist; called also *antebrachium* [NA].

forebrain (fôr'brân) prosencephalon.

foreconscious (fôr-kon'shus) 1. incapable of becoming conscious until certain conditions are fulfilled. 2. that part of the mind which contains memory impressions which may be brought into consciousness under certain conditions.

forefinger (fôr-fing'ger) the index finger.

forefoot (fôr'foot) 1. one of the front feet of a quadruped. 2. the fore part of the foot.

foregilding (fôr'gild-ing) the treatment of fresh nerve tissue with salts in histologic technique.

foregut (fôr'gut) the endodermal canal of the embryo cephalic to the junction of the yolk stalk; it gives rise to the pharynx, lung, esophagus, stomach, liver, and most of the small intestine.

forehead (fôr'hed) the part of the face above the eyes; called also *frons*. **bony f.**, the skeleton of the forehead, formed by the anterior part of the skull (frontal bone); called also *frons cranii* and *frons of cranium*.

forehead-plasty (fôr'hed-plas'te) plastic surgery of the forehead.

forekidney (fôr-kid'ne) pronephros.

Forel's commissure, decussation, field (fo-relz') [Auguste

Henri Forel, Swiss psychiatrist, 1848-1931] see under *commissure*, *decussation*, and *field*.

forensic (fo-ren'zik) [L. *forēnsis* relating to a market place or forum] pertaining to or applied in legal proceedings.

foreplay (fôr'pla) the sexually stimulating, usually pleasurable play preceding intercourse.

fore-pleasure (fôr'plezh-er) sexual pleasure which precedes orgasm. Cf. *end-pleasure*.

foreskin (fôr'skin) the prepuce (preputium penis). **hooded f.**, absence of the ventral foreskin, usually associated with hypospadias.

foretop (fôr'top) the anterior portion of the mane of a horse, covering the forehead.

forewaters (fôr'wat-erz) the amniotic fluid that presents at the cervix uteri.

Forhistal (for-his'tal) trademark for preparations of dimethindene maleate.

fork (fork) a pronged instrument. **tuning f.**, a device that produces harmonic vibration when its two tines are struck; used to test hearing by air and bone conduction.

form (form) [L. *forma*] the characteristic of a structure or entity generally determined by its shape and size, or other external or visible feature. **accolé f.** (ak'o-la'), *appliqué f.* (ap'li-ka'), the early form of *Plasmodium falciparum* which appears as a fine blue line with a chromatin dot apparently applied to the margin of an erythrocyte; called also *acolé form*. **arch f.**, the shape and contour of a dental arch. **band f's**, band cell; see under *cell*. **involution f's**, abnormal forms of bacteria arising through death of the cells and dissolution of their structure. **juvenile f.**, metamyelocyte. **L-f.**, L-phase variant; see under *variant*. **racemic f.**, see *racemate*. **retention f.**, adaptation of the form of a tooth cavity in such a way as to help maintain the filling material in the cavity. **spherical f. of occlusion**, an arrangement of teeth which places their occlusal surfaces on the surface of an imaginary sphere (usually 8 inches in diameter) with its center above the level of the teeth. **tooth f.**, the characteristic contour of a tooth, with its curves, lines, and angles, which permits the tooth to be differentiated from other teeth and its identity to be established. **young f.**, metamyelocyte.

Formad's kidney (fôr'madz') [Henry F. Formad, American physician, 1847-1892] see under *kidney*.

formaldehyde (fôr-mal'dē-hid) a powerful disinfectant gas, HCHO, formerly used as a disinfectant for rooms, clothing, etc. A 37 per cent solution of formaldehyde gas in water (formalin) is widely used as a fixing fluid for pathologic specimens or as a preservative, and dilutions have also been used as a surgical and general antiseptic and as an astringent.

formaldehydogenic (for-mal'dē-hid'o-jen'ik) [*formaldehyde* + *-genic*] producing formaldehyde; pertaining to the production of formaldehyde by certain compounds when subjected to chemical reactions (i.e., steroids with α-ketol grouping in the C-17 position which on treatment with periodic acid liberate formaldehyde).

formalin (fôr'mah-lin) see *formaldehyde*.

formalize (fôr'mal-iz) to treat with formaldehyde.

formamidase (form-am'i-dās) an enzyme that catalyzes the hydrolysis of formylkynurenine to kynurenine and formate in tryptophan metabolism.

formant (fôr'mant) a combination of tones produced in the articulation of a vowel phoneme (speech sound).

formate (fôr'māt) any salt of formic acid.

formatio (for-ma'she-o), pl. *formatio'nes* [L.] [NA] formation: a general term designating a structure of definite shape. **f. al'ba** (obs.), the light-colored middle part of the formatio reticularis medullae spinalis. **f. bulla'ris** (obs.), the tissue composing the primary olfactory center in the olfactory bulb; that is, the glomeruli, granule cells, and mitral cells. **f. gris'ea** (obs.), the darker-colored lateral part of the formatio reticularis medullae spinalis. **f. reticula'ris medullae oblonga'tae** [NA], reticular formation of medulla oblongata: the phylogenetically old part of the medulla oblongata which has a reticular structure, i.e., which is structurally comprised of diffuse aggregations of nerve cells in the midst of a wealth of nerve fibers and, with certain exceptions, lacks circumscribed cell groups; it fills the spaces between the major nuclei and fiber tracts. **f. reticula'ris medullae spina'lis** [NA], reticular formation of spinal cord: numerous small islets of gray matter and intersecting white fibers which together constitute part of the intermediate gray substance of the spinal cord; in the thoracic cord, the formation occurs immediately dorsal to the lateral horn. **f. reticula'ris mesenceph'ali** [NA], **f. reticula'ris pedun'culi cer'ebri**, reticular formation of mesencephalon: the part of the mesencephalon that has a reticular structure like that of the medulla oblongata; it lies between the substantia nigra and the central gray matter. **f. reticula'ris pon'tis** [NA], reticular formation of pons: the part of the pars dorsalis pontis, anterior to the central gray matter, that has a structure similar to that of the reticular formation of the medulla oblongata. **f. vermicula'**

ris (*obs.*), the tonsilla and flocculus of the cerebellum considered as one structure (Bolk).

formation (fôr-ma'shun) 1. the process of giving shape or form; the creation of an entity, or of a structure of definite shape. 2. a structure of definite shape; see *formatio*. **chiasma f.**, the process by which a chiasma is formed; it is the cytologic basis of genetic recombination, or crossing over. **coffin f.**, the surrounding of dead nerve cells by satellite cells in neuronophagia. **compromise f.**, the creation of an adjustment between a conscious intention and an unconscious opposing wish, producing the symptoms of a neurosis. **Gothic arch f.**, Henning's sign. **gray reticular f.**, substantia reticularis grisea medullae oblongatae. **palisade f.**, an arrangement in cells of a glioma, the fusiform cells being arranged in compact manner pointing radially from a central area comparatively free of vessels. **reaction f.**, the development of mental mechanisms which hold in check and repress the unconscious components of forbidden wishes. **reticular f. of medulla oblongata**, formatio reticularis medullae oblongatae. **reticular f. of mesencephalon**, formatio reticularis mesencephali. **reticular f. of pons**, formatio reticularis pontis. **reticular f. of spinal cord**, formatio reticularis medullae spinalis. **rouleaux f.**, the aggregation of erythrocytes in structures resembling piles of coins, caused by adhesion of their flat surfaces. **spore f.**, sporulation. **white reticular f.**, substantia reticularis alba medullae oblongatae.

formationes (for-ma-she-o'nêz) plural of *formatio*.

formative (fôr-mah-tiv) concerned in the origination and development of an organism, part, or tissue.

formboard (fôrmbôrd) a board containing variously shaped cutouts into which blocks corresponding to the cutouts are to be fitted; used as a test in mental deficiency.

form-class (form-klas) an artificial taxonomic category comparable to a class, to which organisms are provisionally assigned, as are imperfect fungi until their perfect (sexual) stages are identified. Form-classes are subdivided into form-orders, form-families, and so on.

forme (fôr-m), pl. *formes* [Fr.], form. **f. fruste** (fôr-m froost), pl. *formes frustes* [Fr. "defaced"], an atypical, especially a mild or incomplete, form, as of a disease or anomaly. **f. tardive** (fôr-m tahr-dêv') [Fr. "late"], a late-occurring form of a disease that usually makes its appearance at an earlier age.

form-family (form-fam'i-le) see *form-class*.

formication (fôr'mi-ka'shun) [L. *formica* ant] a sensation as of small insects crawling over the skin.

formiciasis (fôr'mi-si'ah-sis) [L. *formica* ant] a condition produced by poisoning resulting from ant bites.

Formicoidea (fôr'mi-koi-de'ah) a superfamily of ants (order Hymenoptera), some members of which may inflict painful stings.

formilase (fôr'mi-lās) an enzyme that converts acetic acid into unstable formic acid.

formimino (for-mim'i-no) the group —CH=NH.

Formin (fôr'min) trademark for preparations of methenamine.

formocortol (for-mo-kôr'tal) chemical name: 3-(2-chloroethoxy)-9-fluoro-11β,16α,17,21-tetrahydroxyl-20-oxo-pregna-3,5-diene-6-carboxaldehyde, cyclic 16,17-acetal with acetone, 21-acetate; a glucocorticoid, C₂₉H₃₈ClFO₈.

formol (fôr'mol) see *formaldehyde solution*, under *solution*.

form-order (form-or'der) see *form-class*.

formula (fôr'mu-lah), pl. *formulas* or *formulae* [L., dim. of *forma* form] a specific statement, using numerals and other symbols, of the composition of, or of the directions for preparing, a compound, such as a medicine, or of a procedure to follow for obtaining a desired value or result; a simplified statement, using numerals and symbols, of a single concept. See also *chemical f.* **acoustic f.**, Brenner's f. **Ambard's f.**, a formula for finding the urea index (*K*) in kidney disease:

$$\frac{Ur}{\sqrt{D \times \frac{70}{P} \times \sqrt{\frac{C}{25}}}} = K,$$

in which *Ur* represents the proportion of urea in the blood; *D*, the total urea for twenty-four hours in grams; *P*, the body weight of the patient in kilograms; *C*, the proportion of urea in the urine.

Arneth's f., an expression of the normal ratio of different types of polymorphonuclear leukocytes, depending on the number of lobes (1 to 5) that the nucleus shows, which is as follows: 1 lobe, 5 per cent; 2 lobes, 35 per cent; 3 lobes, 41 per cent; 4 lobes, 17 per cent; 5 lobes, 2 per cent. **Arrhenius' f.**, $\log x = \theta c$, in which *x* is the viscosity of the solution relative to that of the medium of suspension, *c* the percentage of volume occupied by the suspended particles, and θ a constant. **Beckmann's f.**, a formula used in cryoscopy, $\Delta T = Km$, in which ΔT is the difference in freezing points of the pure solvent and the solution containing a solute at molality *m*, and *K* is a constant characteristic of the particular solvent. For water, *K* = 1.860 deg(KgH₂O) per mole solute. **Bernhardt's f.**, the ideal weight of an adult in kilograms equals

height in centimeters multiplied by chest circumference in centimeters divided by 240. **Bird's f.**, the last two figures expressive of the specific gravity of urine closely represent the number of grains of solids in each ounce. **Black's f.**, $F = (W + C) - H$. *W* represents the weight in pounds; *C*, the chest measurement in inches at full inspiration; and *H*, the height in inches. When *F* is over 120 a man is classed as very strong; between 110 and 120, strong; between 100 and 110, good; between 90 and 100, fair; between 80 and 90, weak; under 80, very weak. Cf. *Pignet's f.* **Brenner's f.** (*obs.*), with the cathode in the external meatus of the ear, a loud sound is heard on closing the circuit, intensity is diminished during closure, and the sound ceases when the circuit is broken. With the anode in the meatus, no sound is heard on closing or during closure; a weak sound is heard at the break. **Broca's f.**, the ideal weight of a full-grown man in kilograms equals the number of centimeters by which his height exceeds 1 meter. **chemical f.**, a combination of symbols used to express the chemical constitution of a substance; in practice, different types of formulas, of varying complexity, are employed. See *empirical f.*, *molecular f.*, *spatial f.*, *structural f.* **Christison's f.**, Trapp's f. **configurational f.**, spatial f. **constitutional f.**, structural f. **Demoivre's f.**, the expectation of life is equal to two thirds of the difference between the age of the person and eighty. **dental f.**, an expression in symbols of the number and arrangement of teeth in the jaws. Letters represent the various types of teeth: I, *incisor*; C, *canine*; P, *premolar*; M, *molar*. Each letter is followed by a horizontal line. Numbers above the line represent maxillary teeth; those below, mandibular teeth. The human dental formula is $\frac{I_2 C_1}{M_2} = 10$ (one side only) for deciduous teeth, and $\frac{I_2 C_1 P_2 M_2}{M_2} = 16$ (one side only) for permanent teeth. **digital f.**, a formula expressing the relative lengths of the digits, usually $3 > 4 > 2 > 5 > 1$, or $3 > 2 > 4 > 5 > 1$, for the fingers, and $1 > 2 > 3 > 4 > 5$, or $2 > 1 > 3 > 4 > 5$, for the toes. **Dreser's f.**, a formula comparing the molecular concentration of the urine with that of the blood, to show the work done by the kidney. **Du Bois' f.**, the surface area, *O*, is equal to $P^{0.425} \times L^{0.725} \times 71.84$, in which *P* represents weight, and *L*, height of the body. **Einhoven's f.**, $e^1 + e^3 \times e^2$. See *Einhoven's triangle*, under *triangle*. **empirical f.**, a chemical formula which expresses the proportions of the elements present in a substance. For substances composed of discrete molecules, it expresses the relative numbers of atoms present in a molecule of the substance in the smallest whole numbers. For example, the *empirical formula* for ethane is written CH₃, whereas its actual *molecular formula* is C₂H₆. **Fick f.**, see under *principle*. **Florschütz's f.**, $L:(2B - L)$, in which *L* represents body length, and *B*, circumference of abdomen. An index of 5 is normal; an index below 5 indicates the degree of overweight. **Gale's f.**, pulse rate - pulse pressure - 111 closely represents the basal metabolic rate. **graphic f.**, a term occasionally used to describe a "complete" structural formula, i.e., one in which every individual atom and bond is represented in the formula. The distinction is made because structural formulas are frequently written in a simplified or shortened form. See *structural f.* **Guthrie's f.**, the ideal weight of an adult in pounds equals $110 + (5.5 \times \text{number of inches body height exceeds 5 feet})$. **Haines' f.**, the product obtained by multiplying the last two digits of the number expressing its specific gravity by 1.1 (Haines' coefficient) closely represents the number of grains of solids in one fluid ounce of urine. **Hamilton-Stewart f.**, a formula for measuring cardiac output following the rapid intravenous injection of an indicator dye: $F = i/ct$, in which *F* represents the blood flow in liters per minute; *i*, the injected substance in milligrams; *c*, the average dye concentration of the primary curve; and *t*, the duration of the primary curve in seconds, i.e., the time from appearance to disappearance of the dye at a fixed site if there were no recirculation of the dye. **Häser's f.**, the product obtained by multiplying the last two digits of the number expressing its specific gravity by 2.33 (Häser's coefficient) closely represents the number of grains of solids in one liter of urine. **Loebisch's f.**, the product obtained by multiplying the last two digits of the number expressing its specific gravity by 2.6 (Loebisch's coefficient) closely represents the number of grains of solids in one liter of urine. **McLean's f.**, a modification of Ambard's formula for finding the urea index in kidney disease:

$$\frac{\text{gm. urea per 24 hrs.} \times \sqrt{\text{gm. urea per L. of urine} \times 8.96}}{\text{weight in kilos} \times (\text{gm. urea per L. of blood})^2}$$

Mall's f., the age (in days) of a human embryo is equal to the square root of its length (in millimeters) from vertex to breech multiplied by 100. **Meeh's f.**, the surface area, *O*, is equal to $K \sqrt{P^2}$, in which *K* is a constant (12.3), and *P* is the weight of the body. **molecular f.**, a chemical formula giving the number of atoms of each element present in a molecule of a substance, without indicating how they are linked. **official f.**, one officially established by a pharmacopeia or other recognized authority. **paretic f.**, the findings in the cerebrospinal fluid characteristic of dementia paralytica: normal or slightly increased

pressure, moderate pleocytosis, moderate increase in protein, change in the colloidal gold test, and positive cerebrospinal fluid Wassermann test. **Pignet's f.**, $F = H - (C + W)$. H represents the height in centimeters; C , the chest measurement in centimeters at greatest expiration; and W , the weight in kilograms. When F is less than 10 a person is classed as very strong; between 10 and 15, strong; between 15 and 20, good; between 20 and 25, medium; between 25 and 30, weak; above 30, very weak. Cf. *Black's f.* **Poisson-Pearson f.**, a formula for calculating the percentage of error in determining the endemic index of malaria:

$$\frac{200}{n} \sqrt{\frac{2 \times (n-x)}{n}} \sqrt{1 - \frac{n-1}{N-1}},$$

in which N is number of children under fifteen years in the locality; n , the number examined for the spleen rate; x , the number having enlarged spleens; and x/n is the spleen rate. **projection f.**, a planar, and therefore simplified, representation of a spatial formula. **psychobiologic f.**, Meyer's term for the steps in studying and dealing with psychic disorders: What are the facts? Under what conditions do they occur? What are the factors in their working, and how do they group themselves? What are the results? How far are they modifiable? How can they be reconstructed and brought to a test? **Ranke's f.**, the number expressive of the specific gravity $- 1000 \times 0.52 - 5.406$ closely represents the amount in grams of the albumin per liter of a serous fluid. **rational f.**, structural f. **Read's f.**, $0.75 \times \text{pulse rate} + 0.75 \times \text{pulse pressure} - 72$ closely represents the basal metabolic rate. **Reuss' f.**, $\frac{3}{8}(S - 1000) - 2.8$, in which S is the specific gravity, closely represents the percentage of albumin present in a pathologic fluid exudate or transudate. **Rollier's f.**, a formula for gradually increasing exposure of the body to ultraviolet rays of the sun. **Runeberg's f.**, a modification of Reuss' formula in which 2.8 is replaced by 2.73 in case of a transudate and by 2.88 in case of an inflammatory exudate. **spatial f.**, a chemical formula giving the numbers of atoms of each element present in a molecule of a substance, which atom is linked to which, the types of linkages involved, and the relative positions of the atoms in space. **stereochemical f.**, spatial f. **structural f.**, a chemical formula telling how many atoms of

Structural formulas for ethyl alcohol.

each element are present in a molecule of a substance, which atom is linked to which, and the type of linkages involved; for convenience, abbreviated structural formulas are sometimes used. Called also *constitutional f.*, *graphic f.*, and *rational f.* **Trapp's f.**, the product obtained by multiplying the last two digits of the number expressing its specific gravity by 2 (Trapp's coefficient) closely represents the number of grains of solids in one liter of urine. **Van Slyke's f.**, the urinary coefficient of various substances is equal to $D/(Bl \times \sqrt{Wt \times V})$, in which D is the daily output in grams of the substance in the urine; Bl , the grams of the same substance per liter of blood; Wt , the weight of the patient in kilograms; and V , the total volume of urine in twenty-four hours. **vertebral f.**, an expression in symbols of the number of vertebrae in each region of the spinal column; for man it is $\text{C}_7\text{T}_{12}\text{L}_5\text{S}_5\text{Cd}_4 = 33$. **Vierordt-Mesh f.**, the body surface, O , is equal to mP^2 , in which m represents the height, and P the weight.

formulary (fôr'mu-lâr'e) a collection of recipes, formulas, and prescriptions. **National F.**, see under *N*.

formulate (fôr'mu-lât) 1. to state in the form of a formula. 2. to prepare in accordance with a prescribed or specified method.

formulation (fôr'mu-lâ'shun) the act or product of formulating. **American Law Institute f.**, a section of the American Law Institute's Model Penal Code which states that "a person is not responsible for criminal conduct if at the time of such conduct as a result of mental disease or defect he lacks substantial capacity either to appreciate the wrongfulness of his conduct or to conform his conduct to the requirement of the law."

formyl (fôr'mil) [L. *formic* + Gr. *hylê* matter] the radical, HCO or $\text{H} \cdot \text{C}=\text{O}$ —, of formic acid. **f. phenetidin**, colorless crystals, para-ethoxyformanilid, $\text{C}_8\text{H}_9\text{O} \cdot \text{C}_6\text{H}_4 \cdot \text{NH} \cdot \text{COH}$; formerly used as an antiseptic and analgesic.

formylase (fôr'mî-lās) formamidase.

formylporphyrin (fôr'mil-pôr'fî-rin) the form of porphyrin that in combination with iron acts as the prosthetic heme group of cytochrome *a*.

formyltransferase (fôr'mil-trans'fer-ās) an enzyme that catalyzes the transfer of a formyl group, as from glutamate to tetrahydrofolate.

Fornet's reaction (ring test) (fôr'nâz') [Walter Gustav Wilhelm Fornet, German physician, born 1877] see under *reaction*.

fornicate (fôr'nî-kât) 1. [L. *fornicatus* arched] shaped like an arch. 2. [L. *fornix*, a brothel] to engage in illicit sexual intercourse.

fornix (fôr'nîks), pl. *fornices* [L. "arch"] 1. [NA] a general term for an archlike structure or the vaultlike space created by such a structure. 2. fornix cerebri. **anterior f.**, see *f. vaginae*. **f. cer'e'bri** [NA], **f. of cerebrum**, the efferent pathway of the hippocampus, projecting chiefly to the mamillary bodies and habenular nuclei; each fornix of the pathway is an arched tract that is united under the corpus callosum with the other fornix, so that together they comprise two columns, a body, and two crura. **f. conjuncti'vae infe'rior** [NA], inferior conjunctival fornix: the inferior line of reflection of the conjunctiva from the eyelid to the eyeball. **f. conjuncti'vae supe'rior** [NA], superior conjunctival fornix: the superior line of reflection of the conjunctiva from the eyelid to the eyeball; it receives the openings of the lacrimal duct. **f. pharyn'gis** [NA], **f. of pharynx**, the vault of the pharynx. **posterior f.**, see *f. vaginae*. **f. sac'ci lacrima'lis** [NA], fornix of lacrimal sac: the upper, blind extremity of the lacrimal sac. **f. vagi'nae** [NA], the recess formed between the vaginal wall and the vaginal part of the cervix; sometimes spoken of as *anterior f.* or *posterior f.*, depending on its relation to the anterior or posterior wall of the vagina; called also *fundus vaginae* or *fundus of vagina*.

Foroblique (fôr'ob-lek') trademark for an obliquely forward visual telescopic system used in certain cystoscopes.

Forssell's sinus (fôr'selz) [Gösta Forssell, Swedish radiologist, 1876-1950] see under *sinus*.

Forssman's antigen (lipoid), syndrome (förs'manz) [John Forssman, Swedish pathologist, 1868-1947] see under *antigen* and *syndrome*.

Forssmann (förs'man), Werner Theodor Otto. German surgeon, born 1904; co-winner, with André F. Cournand and Dickinson W. Richards, of the Nobel prize in medicine and physiology for 1956, for developing new techniques in the diagnosis and treatment of heart disease.

Förster's choroiditis (disease), photometer (fers'terz) [Carl Friedrich Richard Förster, German ophthalmologist, 1825-1902] see under *choroiditis*, and see *photometer*.

Förster's operation (fers'terz) [Otfrid Förster, German neurologist, 1873-1941] see under *operation*.

Förster-Penfield operation (fers'ter-pen'fêld) [Otfrid Förster; Wilder Graves Penfield, American neurosurgeon, born 1891] see under *operation*.

Forthane (fôr'thân) trademark for a preparation of methylhexanamine.

fortuitous (fôr-tu'i-tus) pertaining to or occurring by chance.

fosazepam (fos-az'ê-pam) chemical name: 7-chloro-1-[(dimethylphosphoryl)methyl]-1,3-dihydro-5-phenyl-2H-1,4-benzodiazepin-2-one. A benzodiazepine derivative, $\text{C}_{18}\text{H}_{18}\text{ClN}_2\text{O}_2$, which has been used as a hypnotic.

fosfomycin (fos-fô-mî'sin) chemical name: (—)-(1*R*,2*S*)-(1,2-epoxypropyl)phosphonic acid; an antibiotic, $\text{C}_3\text{H}_7\text{O}_4\text{P}$, produced by *Streptomyces fradiae*.

fosfonet sodium (fos'fo-net) chemical name: phosphonoacetic acid monosodium salt monohydrate; an antiviral agent, $\text{C}_2\text{H}_3\text{Na}_2 \cdot \text{O}_3\text{P} \cdot \text{H}_2\text{O}$.

Foshay's reaction, serum, test [Lee Foshay, American bacteriologist, born 1896] see under *reaction, serum, and tests*.

fospirate (fos'pî-rât) chemical name: dimethyl 3,5,6-trichloro-2-pyridinyl ester; an anthelmintic for veterinary use, $\text{C}_7\text{H}_7\text{Cl}_3\text{NO}_4$.

fossa (fos'ah), pl. *fos'sae* [L.] a trench or channel; [NA] a general term for a hollow or depressed area. **acetabular f.**, **f. acetab'uli** [NA], a rough nonarticular area in the floor of the acetabulum above the acetabular notch. **adipose fossae**, spaces in the female breast, just beneath the skin, which contain fat. **Allen's f. (obs.)**, a fossa on the neck of the femur. **anconal f.**, **anconeal f.**, **f. olecrani**. **antecubital f.**, **f. cubitalis**. **f. anthe'licis** [NA], **f. of anhelix**, the depression on the medial surface of the auricle of the ear that corresponds to the anhelix on the lateral surface. **articular f. of atlas, inferior**, fovea articularis inferior atlantis. **articular f. of atlas, superior**, fovea articularis superior atlantis. **articular f. of mandible**, **f. mandibularis**. **articular f. for odontoid process of axis**, fovea dentis atlantis. **articular f. of temporal bone**, **f. mandibularis**. **f. axilla'ris** [NA], **axillary f.**, the small hollow, underneath the arm, where it joins the body at the shoulder; called also *armpit*. **Biesiadecki's f.**, **f. iliacosubfascialis**. **Broesike's f.**, **parajejunal f.** **f. caeca'lis**, a peritoneal recess at the beginning medial to and behind the cecum; it is formed by the cecal folds. **f. cani'na** [NA], **canine f.**, a wide depression on the external surface of the maxilla superolateral to the canine tooth socket; the levator anguli oris muscle arises from it. Called also *maxillary f.* **f. capitel'i**, the depression for the head of the malleus. **f. cap'itis fem'o-ris**, fovea capitis femoris. **f. carot'ica**, trigonum caroticum.

cerebellar f. (*obs.*), *f. cranii posterior*. **cerebral f.**, any one of the depressions on the floor of the cranial cavity; see *f. cranii anterior*, *f. cranii media*, and *f. cranii posterior*. **f. cer'ebri latera'lis** [*Syl'vil*], *f. lateralis cerebri*. **f. chor'dae ductus veno'si**, *f. ductus venosi*. **cochleariform f.**, *semicircularis musculi tensoris tympani*. **condylar f.**, *f. condyla'ris* [NA], **condyloid f.**, either of two pits situated on the lateral portions of the occipital bone, one on either side of the foramen magnum, posterior to the occipital condyle; called also *f. condyloidea*, *postcondyloid f.*, and *posterior condyloid f.* **condyloid f.**, *posterior*, *f. condylaris*. **condyloid f. of atlas**, *fovea articularis superior atlantis*. **condyloid f. of mandible**, *f. mandibularis*. **condyloid f. of temporal bone**, *f. mandibularis*. **f. condylo'id'ea**, *f. condylaris*. **coronoid f. of humerus**, *f. coronoi'dea hu'meri* [NA], the cavity in the humerus that receives the coronoid process of the ulnar when the elbow is flexed. **f. of coronoid process**, *f. coronoi'dea hu'meri*. **costal f.**, *inferior*, *fovea costalis inferior*. **costal f.**, *superior*, *fovea costalis superior*. **costal f.**, *transverse*, *fovea costalis transversalis*. **cranial f.**, *anterior*, *f. cranii anterior*. **cranial f.**, *middle*, *f. cranii media*. **cranial f.**, *posterior*, *f. cranii posterior*. **f. cra'nii ante'rior** [NA], *anterior cranial fossa*: the anterior subdivision of the floor of the cranial cavity, supporting the frontal lobes of the brain, and composed of portions of three bones: the ethmoid, frontal, and sphenoid. **f. cra'nii me'dia** [NA], *middle cranial fossa*: the middle subdivision of the floor of the cranial cavity, supporting the temporal lobes of the brain and the pituitary gland; it is composed of the body and greater wings of the sphenoid bone and the squamous and petrous portions of the temporal bone. **f. cra'nii poste'rior** [NA], *posterior cranial fossa*: the posterior subdivision of the floor of the cranial cavity, lodging the cerebellum, pons, and medulla oblongata; it is formed by portions of the sphenoid, temporal, parietal, and occipital bones. **crural f.**, *anulus femoralis*. **cubital f.**, 1. *fossa cubitalis*. 2. *fossa coronoi'dea humeri*. **f. cubita'lis** [NA], *cubital fossa*: the depression in the anterior region of the elbow. **f. cys'tidis fel'leae**, *f. vesicae felleae*. **digastric f.**, 1. *fossa digastrica*. 2. *incisura mastoi'dea ossis temporalis*. **f. digas'trica** [NA], *digastric fossa*: a depression on the internal surface of the body of the mandible on each side of the symphysis to which is attached the anterior belly of the digastric muscle; called also *f. musculi biventeris*, and *digastric fovea* or *impression*. **digital f. of femur**, *f. trochanterica*. **digital f.**, *inferior*, *anulus femoralis*. **digital f.**, *superior*, *f. inguinalis lateralis*. **f. duc'tus veno'si** [NA], *f. of ductus venosus*, an impression on the posterior part of the diaphragmatic surface of the liver in the fetus, lodging the ductus venosus. **duodenal f.**, *inferior*, *recessus duodenalis inferior*. **duodenal f.**, *superior*, *recessus duodenalis superior*. **duodenojejunal f.**, *recessus duodenalis superior*. **epigastric f.**, 1. *fossa epigastrica*. 2. *the urachal fossa*. **f. epigas'trica** [NA], *epigastric fossa*: a fossa in the epigastric region; called also *scrobiculus cordis* and *fovea cardiaca*. **ethmoid f.**, a groove situated in the cribriform plate of the ethmoid bone; it lodges the olfactory bulb of the brain. Called also *olfactory f.* or *groove*. **f. of eustachian tube**, *f. scaphoidea ossis sphenoidalis*. **femoral f.**, *anulus femoralis*. **floccular f.**, *f. subarcuata ossis temporalis*. **f. of gallbladder**, *f. vesicae felleae*. **f. of gasserian ganglion**, *impressio trigemini ossis temporalis*. **Gerdy's hyoid f.**, *superior carotid triangle*. **f. glan'dulae lacrima'lis** [NA], *fossa of lacrimal gland*: a shallow depression in the lateral part of the roof of the orbit, lodging the lacrimal gland; called also *lacrima' f.* **glandular f. of frontal bone**, *f. glandulae lacrimalis*. **glenoid f.**, *f. mandibularis*. **glenoid f. of scapula**, *cavitas glenoidalis*. **glenoid f. of temporal bone**, *f. mandibularis*. **greater f. of Scarpa**, *trigonum femorale*. **Gruber's f.**, a diverticulum of the suprasternal space alongside of the inner end of the clavicle. **Gruber-Landzert f.**, a recess in the peritoneum in the same situation as the superior duodenal recess, but extending downward behind the duodenojejunal angle. **harderian f.**, the depression in which the harderian glands are lodged. **f. of head of femur**, *fovea capitis femoris*. **f. hel'icis**, *scapha*. **f. hemiellip'tica**, *recessus ellipticus vestibuli*. **f. hemisphe'rica**, *recessus sphericus vestibuli*. **hyaloid f.**, *f. hyalo'id'ea* [NA], a depression on the anterior surface of the vitreous body, in which the lens is lodged; called also *lenticular f. of vitreous body*. **hypogastric f.**, *f. inguinalis medialis*. **hypophyseal f.**, *f. hypophys'eos*, *f. hypophysia'lis* [NA], a deep depression in the middle of the sella turcica of the sphenoid bone, lodging the hypophysis cerebri; called also *pituitary f.* and *sellar f.* **ileocecal f.**, *inferior*, *recessus ileocecalis inferior*. **ileocecal f.**, *superior*, *recessus ileocecalis superior*. **ileocolic f.**, *recessus ileocecalis superior*. **iliac f.**, *f. ili'aca* [NA], a large, smooth concave area occupying much of the inner surface of the ala of the ilium, especially anteriorly; from it arises the iliacus muscle. **iliacosubfascial f.**, *f. iliacosubfascia'lis*, an inconstant depression on the inner surface of the abdomen between the psoas muscle and the crest of the ilium; called also *Biesiadecki's f.* **f. iliopecti'nea**, *iliopectineal f.*, a depression between the iliopectineus and pectineus muscles in the center of the femoral triangle; called also *lesser f. of Scarpa*.

implantation f., a shallow depression at the site where the tail of a spermatozoon attaches to the head. **incisive f. of maxilla**, a slight depression on the anterior surface of the maxilla above the incisor teeth; called also *myrtiform f.*, *f. praeasalis*, and *praeasalis f.* **incudal f.**, *f. incu'dis* [NA], *f. of incus*, a groove in the posterior wall of the tympanic cavity, lodging the short limb of the incus. **infraclavicular f.**, *trigonum deltoideopectoriale*. **infraduodenal f.**, a recess in the peritoneum below the third portion of the duodenum. **f. infraspina'ta** [NA], **infraspinous f.**, the large, slightly concave area below the spinous process on the dorsal surface of the scapula; it is the site of origin of the infraspinatus muscle. **infratemporal f.**, *f. infratempora'lis* [NA], the area on the side of the cranium limited superiorly by the infratemporal crest, posteriorly by the mandibular fossa, anteriorly by the infratemporal surface of the maxilla, and laterally by the zygomatic arch and part of the ramus of the mandible; called also *zygomatic f.* **inguinal f.**, **external**, *f. inguinalis lateralis*. **inguinal f.**, **internal**, *f. inguinalis medialis*. **inguinal f.**, **lateral**, *f. inguinalis lateralis*. **inguinal f.**, **medial**, *f. inguinalis medialis*. **f. inguina'lis latera'lis** [NA], *lateral inguinal fossa*: the depression on the inside of the anterior abdominal wall lateral to the lateral umbilical fold; called also *fovea inguinalis lateralis* and *lateral inguinal fovea*. **f. inguina'lis media'lis** [NA], *medial inguinal fossa*: the depression on the inside of the anterior abdominal wall between the medial and lateral umbilical folds; called also *fovea inguinalis medialis*. **innominate f. of auricle**, *cavum conchae*. **intercondylar f. of femur**, *f. intercondylaris femoris*. **intercondylar f. of femur**, *anterior*, *facies patellaris femoris*. **intercondylar f. of tibia**, *anterior*, *area intercondylaris anterior tibiae*. **intercondylar f. of tibia**, *posterior*, *area intercondylaris posterior tibiae*. **f. intercondyla'ris fem'oris** [NA], *intercondylar fossa of femur*: the posterior depression between the condyles of the femur; called also *f. intercondyloidea femoris*. **f. intercondyl'ica**, *f. intercondylaris femoris*. **intercondyloid f.**, see *f. intercondylaris femoris*, *area intercondylaris anterior tibiae*, and *area intercondylaris posterior tibiae*. **f. intercondylo'id'ea ante'rior tib'iae**, *area intercondylaris anterior tibiae*. **f. intercondylo'id'ea fem'oris**, *f. intercondylaris femoris*. **f. intercondylo'id'ea poste'rior tib'iae**, *area intercondylaris posterior tibiae*. **f. intercrura'lis**, *f. interpeduncularis*. **f. intermesocol'ica transver'sa**, a recess of the peritoneum in the same situation as the recessus duodenalis superior, but extending transversely. **interpeduncular f.**, *f. interpeduncula'ris* [NA], *f. interpeduncula'ris* [Tari'ni], a depression between the two cerebral peduncles, the floor of which is the posterior perforated substance; called also *Tarin's f.* and *f. intercurialis*. **intersigmoid f.**, *recessus intersigmoideus*. **ischioirectal f.**, *f. ischioirecta'lis* [NA], the potential space between the pelvic diaphragm and the skin below it; an anterior recess extends a variable distance between the pelvic and urogenital diaphragms, sometimes reaching the retropubic space. **Jobert's f.**, the fossa in the popliteal region bounded above by the adductor magnus and below by the gracilis and sartorius, best seen when the knee is bent and the thigh strongly rotated outward. **f. of Jonnesco**, the duodenojejunal fossa between the superior and inferior duodenal folds. **jugal f.**, *f. jugula'ris*, 1. the depression at the base of the neck just above the sternum; called also *suprasternal space*. 2. *jugal f. of temporal bone*. **jugal f. of temporal bone**, *f. jugula'ris os'sis tempora'lis* [NA], a prominent depression on the inferior surface of the petrous part of the temporal bone, forming the major part of the jugular notch; it forms the anterior and lateral wall of the jugular foramen and lodges the superior bulb of the internal jugular vein. **lacrima'lis f.**, 1. *fossa glandulae lacrimalis*. 2. *sulcus lacrimalis ossis lacrimalis*. **f. of lacrimal gland**, *f. glandulae lacrimalis*. **f. of lacrimal sac**, *f. sacci lacrimalis*. **Landzert's f.**, *recessus paraduodenalis*. **lateral f. of cerebrum**, *f. lateralis cerebri*. **f. of lateral malleolus**, *f. malleoli lateralis*. **f. latera'lis cer'ebri** [NA], *lateral fossa of cerebrum*: a depression, in fetal life, on the lateral surface of each cerebral hemisphere at the bottom of which lies the insula; later it is closed over by the operculum, the edges of which form the lateral sulcus. Called also *f. cerebri lateralis* [*Sylvii*] and *f. of Sylvius*. **lenticular f.**, *lenticular f. of vitreous body*, *f. hyaloidea*. **lesser f. of Scarpa**, *f. iliopectinea*. **f. for ligamentum teres**, *fissura ligamenti teretis*. **f. of little head of radius**, *fovea capituli radii*. **longitudinal fossae of liver**, *right*, *fovae sagittales dextrae hepatis*. **f. longitudina'lis hep'atis**, *f. sagittalis sinistra hepatis*. **Luschka's f.**, *recessus ileocecalis superior*. **Malgaigne's f.**, see *carotid triangle*, *superior*, under *triangle*. **f. malle'oli latera'lis** [NA], *fossa of lateral malleolus*: a depression on the medial aspect of the lateral malleolus behind its articular surface. **mandibular f.**, *f. mandibula'ris* [NA], a prominent depression in the inferior surface of the squamous part of the temporal bone at the base of the zygomatic process, in which the condyloid process of the mandible rests. **mastoid f. of temporal bone**, a small triangular area between the posterior wall of the external acoustic meatus and the posterior root of the zygomatic process of the temporal bone; called also *suprameatal triangle*. **maxillary**

f., f. canina. **mesentericoparietal f.**, parajejunal f. **mesocranial f.** (obs.), f. cranii media. **mesogastric f.**, recessus duodenalis superior. **middle cranial f.**, f. cranii media. **Mohrenheim's f.**, trigonum deltopectoral. **f. of Morgagni**, f. navicularis urethrae. **f. mus/culi biven/teris**, f. digastrica. **mylohyoid f. of mandible**, fovea sublingualis. **myrtiform f.**, incisive f. of maxilla. **nasal f.**, the portion of the nasal cavity anterior to the middle meatus. **navicular f. of Cruveilhier**, f. scaphoidea ossis sphenoidalis. **navicular f. of male urethra**, f. navicularis urethrae. **navicular f. of sphenoid bone**, f. scaphoidea ossis sphenoidalis. **f. navicula/ris urethrae** [NA], f. navicula/ris urethrae [Morgagni], the lateral expansion of the urethra in the glans penis. **f. navicula/ris vestibuli vagi/nae**, f. vestibuli vaginae. **f. occipita/ris cerebra/ris** (obs.), f. lateralis cerebri. **f. olec/rani** [NA], **olecranon f.**, a depression on the posterior surface of the humerus, above the trochlea, for lodging the olecranon of the ulna when the elbow is extended. **olfactory f.**, ethmoid f. **f. of omental sac, inferior**, recessus inferior omentalis. **f. of omental sac, superior**, recessus superior omentalis. **oral f.**, stomodaeum. **oval f. of heart**, f. ovalis cordis. **oval f. of thigh**, hiatus saphenus. **f. ova/ris**, recessus ellipticus vestibuli. **f. ova/ris cor/dis** [NA], oval f. of heart: a depression on the right side of the interatrial septum of the heart, representing the remains of the fetal foramen ovale. **f. ova/ris fem/oris**, hiatus saphenus. **ovarian f.**, f. ova/rica, a shallow pouch on the posterior surface of the broad ligament, in which the ovary is located. **paraduodenal f.**, recessus duodenalis superior. **parajejunal f.**, a pouch of peritoneum below the lower end of the first part of the jejunum. **parietal f.**, the deepest portion of the inner surface of the parietal bone. **patellar f.**, f. hyaloidea. **patellar f. of femur**, facies patellaris femoris. **patellar f. of tibia**, area intercondylaris anterior tibiae. **perineal f.**, f. ischiorectalis. **petrosal f.**, f. for petrosal ganglion, fossula petrosa. **piriform f.**, recessus piriformis. **pituitary f.**, f. hypophysialis. **f. poplit/ea** [NA], **popliteal f.**, the depression in the posterior region of the knee; called also *popliteal cavity*. **popliteal f. of femur**, f. intercondylaris femoris. **popliteal f. of tibia**, area intercondylaris posterior tibiae. **postcondyloid f.**, f. condylaris. **posterior f. of humerus**, f. olecrani. **f. prae/na/ris**, **prenasal f.**, incisive f. of maxilla. **prescapular f.**, **prespinous f.**, a depression in the anterior surface of the spine of the scapula. **pterygoid f. of inferior maxillary bone**, fovea pterygoidea mandibulae. **pterygoid f. of sphenoid bone**, f. pterygoidea os/sis sphenoida/ris [NA], the posteriorly facing fossa which is formed by the divergence of the medial and lateral pterygoid plates of the sphenoid bone, and lodges the origins of the internal pterygoid muscle and tensor veli palatini muscle. **pterygomaxillary f.**, f. pterygopalatina. **f. pterygopalati/na** [NA], **pterygopalatine f.**, a small space between the front of the root of the pterygoid process of the sphenoid bone and the back of the maxilla. **radial f. of humerus**, f. radia/ris hu/meri [NA], a depression on the anterior surface of the humerus just above the capitulum. **retrocecal f.**, recessus retrocecalis. **retroduodenal f.**, a pouch of peritoneum below and behind the third portion of the duodenum. **retromandibular f.**, f. retromandibula/ris, the depression posterior to the angle of the jaw, on either side, inferior to the auricle. **rhomboid f.**, f. rhomboid/ea [NA], the floor of the fourth ventricle of the brain, made up of the dorsal surfaces of the medulla oblongata and pons. **Rosenmüller's f.**, recessus pharyngeus. **f. sac/ci lacrima/ris** [NA], the fossa that lodges the lacrimal sac, formed by the lacrimal sulcus of the lacrimal bone and the frontal process of the maxilla; called also *lacrimal groove*. **fossae sagitta/les dex'trae hep'atis**, a longitudinal fissure in the right lobe of the liver. **fossae sagitta/les hep'atis**, f. sagittalis sinistra hep'atis. **f. sagitta/ris sinis'tra hep'atis**, a longitudinal fissure in the left lobe of the liver, composed of the fossa venae umbilicalis in front and the fossa ductus venosi dorsally. **scaphoid f.**, f. scaphoi/dea, 1. scapha. 2. fossa triangularis auriculae. **scaphoid f. of sphenoid bone**, f. scaphoi/dea os/sis sphenoida/ris [NA], a depression on the superior part of the posterior portion of the medial plate of the pterygoid process of the sphenoid bone, giving attachment to the tensor veli palatini muscle. **f. scar/pae ma/jor**, trigonum femorale. **sellar f.**, f. hypophysialis. **semilunar f. of ulna**, incisura trochlearis ulnae. **sigmoid f.**, sulcus sinus transversus. **sigmoid f. of temporal bone**, sulcus sinus sigmoidi ossis temporalis. **sigmoid f. of ulna**, incisura trochlearis ulnae. **sigmoid f. of ulna, lesser**, incisura radialis ulnae. **sphenomaxillary f.**, f. pterygopalatina. **splenic f. of omental sac**, recessus lienalis. **f. subarcua'ta os/sis tempora/ris** [NA], **subarcuate f. of temporal bone**, a small fossa on the internal surface of the petrous part of the temporal bone just below the arcuate eminence, most prominent in the fetus. In the adult it lodges a piece of dura and transmits a small vein. **subcecal f.**, recessus ileocecalis inferior. **f. subinguina/ris**, a depression in the anterior surface of the thigh beneath the groin. **sublingual f.**, fovea sublingualis. **submandibular f.**, fovea submandibularis. **submaxillary f.**,

fovea submandibularis. **subpyramidal f.**, a fossa on the inferior wall of the middle ear, inferior to the round window and posterior to the pyramid. **subscapular f.**, f. subscapula/ris [NA], the concave ventral surface of the body of the scapula. **subsigmoid f.**, a fossa between the mesentery of the sigmoid flexure and that of the descending colon. **supraclavicular f.**, greater, f. supraclavicularis major. **supraclavicular f.**, lesser, f. supraclavicularis minor. **f. supraclavica/ris ma/jor** [NA], greater supraclavicular fossa: a depression on the surface of the body, located above and behind the clavicle, lateral to the tendon of the sternocleidomastoid muscle. **f. supraclavica/ris mi/nor** [NA], lesser supraclavicular fossa: the region of the neck in the depression behind the clavicle, about the interval between the two tendons of the sternocleidomastoid muscle; called also *Zang's space*. **supracondyloid f.**, a depression on the femur between the internal tuberosity and the internal supracondyloid tubercle. **supramastoid f.**, a small depression at the junction of the posterior and superior borders of the external auditory canal. **suprasphenoidal f.**, f. hypophysialis. **f. supraspina'ta** [NA], **supraspinous f.**, the deeply concave area above the spinous process on the dorsal surface of the scapula from which the supraspinous muscle takes origin. **supratonsillar f.**, f. supratonsilla/ris [NA], the space between the palatoglossal and palatopharyngeal arches superior to the tonsil. **supratrochlear f.**, posterior, f. olecrani. **supravesical f.**, f. supravesica/ris [NA], the depression on the inside of the anterior abdominal wall between the median and the medial umbilical fold; called also *fovea supravesicalis peritonaei*. **sylvian f.**, f. of Sylvius, 1. fossa lateralis cerebri. 2. sulcus lateralis cerebri. **Tarin's f.**, f. interpeduncularis. **temporal f.**, 1. fossa temporalis. 2. fossa cranii media. **f. tempora/ris** [NA], temporal fossa: the area on the side of the cranium outlined posteriorly and superiorly by the temporal lines, anteriorly by the frontal and zygomatic bones, laterally by the zygomatic arch, and inferiorly by the infratemporal crest. **terminal f.**, f. navicularis urethrae. **tibiofemoral f.**, a palpable space between the articular surfaces of the tibia and femur mesial (internal tibiofemoral f.) or lateral (external tibiofemoral f.) to the inferior pole of the patella. **tonsillar f.**, f. tonsilla/ris [NA], the depression between the palatoglossal and palatopharyngeal arches in which the palatine tonsil is located; called also *sinus tonsillaris* and *tonsillar sinus*. **f. transversa/ris hep'atis**, porta hepatis. **f. of Treitz**, recessus duodenalis superior. **triangular f. of auricle**, f. triangularis auric/ulae [NA], the cavity just above the concha of the ear between the crura of the anthelix. **trochanteric f.**, f. trochanterica [NA], a deep depression on the medial surface of the greater trochanter that receives the insertion of the tendon of the obturator externus muscle. **trochlear f.**, f. trochlea/ris, fovea trochlearis. **ulnar f.**, f. coronoidea humeri. **umbilical f.**, medial, f. inguinalis medialis. **f. umbilica/ris hep'atis**, fissura ligamenti teretis. **urachal f.**, a depression on the inner surface of the anterior abdominal wall, between the urachus and the hypogastric artery; called also *epigastric f.* **f. ve'nae ca'vae**, sulcus venae cavae. **f. ve'nae umbilica/ris**, fissura ligamenti teretis. **f. vesi/cae fel'leae** [NA], the fossa on the posteroinferior surface of the liver that lodges the gallbladder; it helps separate the left and right lobes. Called also *f. of gallbladder*. **vestibular f.**, f. of vestibule of vagina, f. vestibuli vagi/nae [NA], the part of the vestibule between the orifice of the vagina and the frenulum of the pudendal labia; called also *f. navicularis vestibuli vaginae*. **Waldeyer's f.**, the recessus duodenalis inferior and recessus duodenalis superior considered as one space. **zygomatic f.**, f. infratemporalis.

fossae (fos'e) [L.] plural of *fossa*.

fossette (fos-set') [Fr.] 1. a small depression. 2. a small and deep corneal ulcer.

fossil (fos'il) [L. *fossilis* to dig] any remains of an organism that has been preserved in the earth's crust.

fossula (fos'u-lah), pl. *fos'sulae* [L., dim. of *fossa*] a small fossa; [NA] a general term for a slight depression in the surface of a structure or organ. **f. of cochlear window**, f. fenestrae cochleae. **costal f.**, inferior, fovea costalis inferior. **costal f.**, superior, fovea costalis superior. **f. fenes'trae coch'leae** [NA], fenestra of cochlea: a depression on the medial wall of the tympanic cavity, at the bottom of which is the fenestra cochleae; called also *f. of round window*. **f. fenes'trae vestibuli** [NA], fenestra of vestibule: a depression on the medial wall of the tympanic cavity, at the bottom of which is the fenestra vestibuli; called also *f. of oval window* and *niche of round window*. **f. of oval window**, f. fenestrae vestibuli. **f. petro'sa** [NA], **petrosal f.**, f. of petrous ganglion, a small depression on the under surface of the petrous portion of the temporal bone, on a small ridge separating the jugular fossa from the external carotid foramen. **f. post fenes'tram**, a connective tissue tract just behind the oval window, resembling the fissula ante fenestram, but smaller and less constant. **f. of round window**, f. fenestrae cochleae. **tonsillar fossulae of palatine tonsil**, fossulae tonsillares palatinae. **tonsillar fossulae of pharyngeal tonsil**, fossulae tonsillares tonsillae pharyngeae. **fos'sulae tonsilla/res tonsil'lae palati/nae** [NA], tonsillar

fossulae of palatine tonsil: the mouths of the tonsillar crypts of the palatine tonsils. **fossulae tonsilla/res tonsill/ae pharyn/geae** [NA], tonsillar fossulae of pharyngeal tonsil: the mouths of the tonsillar crypts of the pharyngeal tonsil.

fossulae (fos'u-le) [L.] plural of *fossula*.

fossulate (fos'u-lāt) marked by a small fossa; hollowed or grooved.

Foster Kennedy see *Kennedy*.

Fothergill's disease (sore throat), **neuralgia**, **pill** (foth'er-gilz) [John Fothergill, English physician, 1712–1780] see *scarlatina anginosa* and *trigeminal neuralgia*, under *neuralgia*, and see under *pill*.

Fothergill's operation (foth'er-gilz) [William Edward Fothergill, Manchester gynecologist, 1865–1926] see under *operation*.

Fouchet's test (foo-shāz') [André Fouchet, French chemist, born 1894] see under *tests*.

foudroyant (foo'drah-yaw') [Fr.] fulminant.

foulage (foo-lahzh') [Fr. "treading, pressing of grapes"] massage in which the muscles are kneaded and pressed; called also *pétrissage*.

foulbrood (fowl'brood) a contagious disease of honeybees caused by *Bacillus alvei*.

foundation (fown-da'shun) the structure or basis on which something is built. **denture f.**, the portion of the structures and tissues of the mouth that is available to support a denture.

founder (fown'der) the crippled condition of a horse afflicted with laminitis. **chest f.**, founder accompanied by atrophy of the chest muscles. **grain f.**, a condition of indigestion or overloaded stomach in the horse due to overeating.

fourchette (foor-shet') [Fr. "a fork-shaped object"] frenulum labiorum pudendi.

Fournier's disease, etc. (foor-ne-āz') [Jean Alfred Fournier, dermatologist in Paris, 1832–1914] see under *disease*, *sign*, *tests*, and *treatment*.

fovea (fo've-ah), pl. *fo'veae* [L.] a pit or depression; [NA] a general term for a small pit in the surface of a structure or organ. Often used alone to indicate the central fovea of the retina. **anterior f. of humerus**, **greater**, fossa coronoidea humeri. **anterior f. of humerus**, **lesser**, fossa radialis humeri. **articular foveae for rib cartilages**, incisurae costales sterni. **articular f. of temporal bone**, fossa mandibularis. **f. articularis inferior atlan'tis** [NA], inferior articular fovea of atlas: either of the two inferior articular surfaces (facies articulares inferiores atlantis) found on the lateral masses of the atlas; called also *inferior articular facet* or *fossa of atlas*. **f. articularis superior atlan'tis** [NA], either of the two superior articular surfaces (facies articulares superiores atlantis) found on the lateral masses of the atlas; called also *superior articular surface*, *facet*, or *fossa of atlas*, and *condyloid fossa of atlas*. **calcaneal f.**, sulcus calcanei. **f. cap'itis fem'oris** [NA], fovea of head of femur: a depression in the head of the femur where the ligamentum teres is attached; called also *fossa capitis femoris* and *fossa of head of femur*. **f. capit'uli ra'dii**, a shallow cup on the upper surface of the head of the radius for articulation with the capitulum of the humerus. **f. cardi'aca**, fossa epigastrica. **central f. of retina**, **f. centra'lis ret'inae** [NA], a tiny pit, about 1 degree wide, in the center of the macula lutea, composed of slim, elongated cones; it is the area of clearest vision, because here the layers of the retina are spread aside, permitting light to fall directly on the cones. Called also *Soemmering's foramen*. **f. of condyloid process**, **f. pterygoidea mandibulae**. **f. of coronoid process**, fossa coronoidea humeri. **costal f.**, **inferior**, **f. costalis inferior**. **costal f.**, **superior**, **f. costalis superior**. **costal f.**, **transverse**, **f. costalis transversalis**. **costal foveae of sternum**, incisurae costales sterni. **f. costa'lis infe'rior** [NA], inferior costal fovea: a small facet on the lower edge of the body of a vertebra articulating with the head of a rib; called also *inferior costal fossa* or *fossula*. **f. costa'lis supe'rior** [NA], superior costal fovea: a small facet on the upper edge of the body of a vertebra articulating with the head of a rib; called also *superior costal facet*, *fossa*, or *fossula*. **f. costa'lis trans'versa'lis** [NA], transverse costal fovea: a facet on the transverse process of a vertebra for articulation with the tubercle of a rib; called also *transverse costal fossa*. **crural f.**, anulus femoralis. **dental f. of atlas**, **f. den'tis atlan'tis** [NA], the facet on the inner surface of the anterior arch of the atlas for the articulation of the dens of the axis. **digastric f.**, fossa digastrica. **femoral f.**, anulus femoralis. **foveae of fourth ventricle**, the inferior and superior foveae. **glandular foveae of Luschka**, foveolae granulares. **f. of head of femur**, **f. capitis femoris**. **f. for head of radius**, fossa radialis humeri. **f. hemiellip'tica**, recessus ellipticus vestibuli. **f. hemisphe'rica**, recessus sphericus vestibuli. **f. infe'rior** [NA], **inferior f.**, a slight depression in the sulcus limitans of the fourth ventricle, at the upper end of the trigonum nervi vagi, just caudal to the striae medullares; called also *inferior f. of sulcus limitans* and *f. of fourth ventricle*. **inferior articular f. of atlas**, **f. articularis inferior atlantis**. **inferior f. of floor of fourth ventricle**, **f. inferior**. **inguinal f.**, **external**, fossa inguinalis lateralis. **inguinal f.**, **internal**, fossa inguinalis

medialis. **inguinal f.**, **lateral**, fossa inguinalis lateralis. **inguinal f.**, **medial**, fossa inguinalis medialis. **inguinal f.**, **middle**, fossa inguinalis medialis. **f. inguina'lis latera'lis**, fossa inguinalis lateralis. **f. inguina'lis media'lis**, fossa inguinalis medialis. **interligamentous f. of peritoneum**, fossa supravescalis. **f. of lateral malleolus**, facies articularis malleolaris tibiae. **f. lim'bica**, a sulcus marking the lateral border of the lateral area olfactoria and gyrus hippocampi in lower mammals. **f. of little head of radius**, **f. capituli radii**. **malleolar f.**, **lateral**, of fibula, facies articularis malleoli fibulae. **f. of Morgagni**, fossa navicularis urethrae. **f. nu'chae**, a depression at the nape of the neck, below the external occipital protuberance. **oblong f. of aryteneoid cartilage**, **f. oblonga cartilaginis aryteneoideae**. **f. oblon'ga cartilag'inis aryteneoi'deae** [NA], oblong fovea of aryteneoid cartilage: a depression on the anterolateral surface of the aryteneoid cartilage, separated from the triangular pit above by the arcuate crest; called also *oblong pit of aryteneoid cartilage*. **pterygoid f.**, **f. pterygoi'deae mandib'ulae** [NA], **f. pterygoi'deae proces'sus condyloi'dei**, a depression on the inner side of the neck of the condyloid process of the mandible, for attachment of the external pterygoid muscle; called also *fovea of condyloid process*, and *pterygoid depression* or *pit*. **sublingual f.**, **f. sublingua'lis** [NA], a depression on the inner surface of the body of the mandible, lodging a portion of the sublingual gland. **submandibular f.**, **f. submandibula'ris** [NA], **f. submaxilla'ris**, a depression on the medial aspect of the body of the mandible, lodging a small portion of the submandibular gland; called also *submandibular* or *submaxillary fossa*. **f. supe'rior** [NA], **superior f.**, a slight depression in the sulcus limitans just rostral to the striae medullares; called also *superior f. of sulcus limitans*. **superior f. of sulcus limitans**, **f. superior fossae rhomboideae**. **supratrochlear f.**, **anterior**, fossa coronoidea humeri. **supratrochlear f. of humerus**, fossa coronoidea humeri. **f. supravescica'lis peritonea'i**, fossa supravescalis. **f. of talus**, sulcus tali. **f. of tooth of atlas**, **f. dentis atlantis**. **f. triangula'ris cartilag'inis aryteneoi'deae** [NA], a depression on the anterolateral surface of the aryteneoid cartilage, separated from the oblong pit below by the arcuate crest; called also *triangular pit of aryteneoid cartilage*. **trochlear f.**, **f. trochlea'ris** [NA], a depression on the anteromedial part of the orbital surface of the frontal bone for the attachment of the trochlea of the superior oblique muscle; it is often replaced by the trochlear spine. Called also *trochlear fossa* and *fossa trochlearis*.

foveate (fo've-āt) [L. *foveatus*] pitted.

foveation (fo've-a'shun) a pitted condition.

foveola (fo've'o-lah), pl. *foveolae* [L., dim. of *fovea*] a small pit; [NA] a general term for an extremely small depression. **f. coccygea** [NA], **coccygeal f.**, a dermal pit near the tip of the coccyx, indicative of the site of attachment of the embryonic neural tube to the skin; called also *postanal dimple* or *pit*. **foveolae gas'tricae** [NA], the numerous pits in the gastric mucosa marking the openings of the gastric glands; called also *gastric pits*. **granular foveolae**, **fove'olae granula'res** [NA], **fove'olae granula'res** [Pacchio'ni], small pits on the internal surface of the cranial bones on either side of the groove for the superior sagittal sinus; they are occupied by the arachnoidal granulations. **fove'olae papil'lae**, foramina papillaria renis.

foveolae (fo've'o-le) plural of *foveola*.

foveolate (fo've'o-lāt) pitted.

Foville's syndrome (fo-vēlz') [Achille Louis François Foville, French psychiatrist, 1831–1887] see under *syndrome*.

Fowler's incision, **position** (fow'lerz') [George Ryerson Fowler, American surgeon, 1848–1906] see under *incision* and *position*.

Fowler's solution (fow'lerz') [Thomas Fowler, English physician, 1736–1801] potassium arsenite solution.

Fowler-Murphy treatment [G. R. Fowler; John Benjamin Murphy, Chicago surgeon, 1857–1916] Murphy's treatment (def. 2).

fowlpox (fowl'poks) a contagious disease of domestic poultry and birds, due to a poxvirus, and marked by epithelial nodules on the unfeathered parts of the skin, especially the wattles, comb, and legs, and sometimes by membranous lesions in the respiratory passages; called also *epithelioma contagiosum*.

Fox's disease (foks'ez) [G. H. Fox; New York dermatologist, 1846–1937] Fox-Fordyce disease.

Fox-Fordyce disease (foks-for'dis) [G. H. Fox; John Addison Fordyce, New York dermatologist, 1858–1925] see under *disease*.

foxglove (foks'glov) see *digitalis*. **purple f.**, *digitalis*.

F.p. abbreviation for *L. fi'at po'tio*, let a potion be made; freezing point.

f.p. foot-pound.

F.pil. abbreviation for *L. fi'ant pil'ulae*, let pills be made.

F.R. flocculation reaction; see *Sachs-Georgi test*, under *tests*.

Fr chemical symbol for francium.

Fracastorius (frak'as-to're-us) [It. Girolamo Fracastoro] an Italian physician, born in Verona (1483–1553), a poet, and

geologist, who published in 1530 a medical poem, *Syphilis sive morbus gallicus*, in which the name syphilis was first given to the disease.

Fract. dos. abbreviation for *L. frac'ta do'si*, in divided doses.

fractionation (frak'shun) in chemistry, one of the separable constituents of a substance. **filtration f.**, the portion of the plasma that is filtered through the renal glomerular membranes, calculated as the ratio of the plasma flow through both kidneys to the glomerular filtration rate per minute. **mol f.**, the ratio of the number of moles of a solute to total number of moles in the solution. **plasma f.**, the various components separated from blood plasma. **plasma protein f., human** [USP], a sterile solution of selected proteins derived from the blood plasma of adult human donors, containing 4.5 to 5.5 gm. of protein per 100 ml., of which 83 to 93 per cent is albumin, and the remainder is α - and β -globulins; used as a blood-volume supporter.

fractional (frak'shun-al) [*L. fractio* a breaking] accomplished by repeated divisions; see under *dose*.

fractionation (frak'shun-a'shun) 1. in radiology, division of the total dose of radiation into small doses administered at intervals; radiation given in this manner usually causes less biological damage than the same total dose given at one time; called also *dose fractionation*. 2. in chemistry, separation of a substance into components, as by distillation or crystallization. 3. in histology, isolation of components of living cells by differential centrifugation. **dose f.**, see *fractionation* (def. 1).

fractography (frak-tog'rah-fe) [*L. fractus* broken + *Gr. graphein* to record] a technique of photography which permits observation of jagged surfaces at high magnification.

fracture (frak'chur) [*L. fractura*, from *frangere* to break] 1. the breaking of a part, especially a bone. 2. a break or rupture in a bone. **agenetic f.**, spontaneous fracture due to imperfect osteogenesis. **apophyseal f.**, one in which a small smear fragment or a bony prominence is torn from the bone. **articular f.**, a fracture of the joint surface of a bone; called also *joint f.* **atrophic f.**, a spontaneous fracture resulting from atrophy of the bone. **avulsion f.**, an indirect fracture caused by avulsion or pull of a ligament. **Barton's f.**, fracture of the distal end of the radius into the wrist joint. **basal neck f.**, fracture of the neck of the femur at its junction with the trochanteric region. **bending f.**, an indirect fracture caused by bending of the limb. **Bennett's f.**, a fracture of the base of the first metacarpal bone running into the carpometacarpal joint and complicated by subluxation. **blow-out f.**, fracture of the orbital floor caused by a sudden increase of intraorbital pressure due to traumatic force; the orbital contents herniate into the maxillary sinus so that the inferior rectus or inferior oblique muscle may become incarcerated in the fracture site, producing diplopia on looking up. In the pure type there is disruption of the orbital floor without involvement of the orbital rim; the impure type involves the rim, i.e., there is concomitant midfacial fracture. **boxer's f.**, fracture of the metacarpal neck with volar displacement of the metacarpal head. **bucket-handle f.**, a tear in the semilunar cartilage, along the middle portion, leaving a loop of cartilage lying in the intercondylar notch. **bumper f.**, fracture of one or both legs immediately below the knee caused by an automobile bumper, often involving the tibial plateau. **bursting f.**, a comminuted fracture of the distal phalanx; called also *tuft f.* **butterfly f.**, a comminuted fracture in which there are two fragments on each side of a main fragment, somewhat resembling the wings of a butterfly. **buttonhole f.**, fracture in which the bone is perforated by a missile; called also *perforating f.* **capillary f.**, a fracture that appears in the roentgenogram as a fine hairlike line, the segments of bone not being separated; sometimes seen in fractures of the skull. **cementum f.**, the tearing of fragments of the cementum from the tooth root at the cementodentinal junction, especially that occurring in association with occlusal traumatism. **chisel f.**, oblique detachment of a piece from the head of the radius. **cleavage f.**, shelling off of cartilage with a small fragment of bone from the upper surface of the capitulum humeri (Kocher). **closed f.**, a fracture which does not produce an open wound in the skin; called also *simple f.* **Colles' f.**, fracture of the lower end of the radius in which the lower fragment is displaced posteriorly (see illustration). If the lower fragment is displaced anteriorly, it is a *reverse Colles' fracture* (Smith's fracture). **comminuted f.**, one in which the bone is splintered or crushed (see illustration). **complete f.**, one in which the bone is entirely broken across. **complicated f.**, fracture with injury of the adjacent parts. **compound f.**, open f. **compression f.**, one produced by compression; e.g., vertebral fracture. **condylar f.**, fracture of the humerus in which a small fragment including the condyle is separated from the inner or outer aspect of the bone. **congenital f.**, intrauterine f. **by contrecoup**, a fracture of the skull opposite to the site of impact. **deferred f.**, in the horse, one that does not separate at the time of injury because of the presence of powerful muscles or a strong covering of periosteum, but does separate when extra strain is put upon the injured part. **depressed f.**, a fracture of the skull in which a fragment is depressed. **diacondylar f.**, transcondylar f. **direct f.**, a fracture at the point of injury. **dislocation f.**, fracture of a

bone near an articulation with concomitant dislocation of that joint. **double f.**, fracture of a bone in two places; called also *segmental f.* **Dupuytren's f.**, 1. Pott's fracture. 2. (of forearm) Galeazzi's fracture. **Duverney's f.**, fracture of the ilium just below the anterior superior spine. **dyscrasic f.**, fracture due to weakening of the bone from debilitating disease. **f. en coin** (ah kwahn), a V-shaped fracture. **f. en rave** (ah rahv), a fracture in which the break is transverse at the surface, but not within. **endocrine f.**, fracture of a bone weakened by endocrine disorder, such as hyperparathyroidism. **epiphyseal f.**, fracture at the point of union of an epiphysis with the shaft of a bone. **extracapsular f.**, a fracture of the humerus or femur outside of the capsule. **fatigue f.**, a fracture attributed to the strain of prolonged walking or exercise; see *march f.* **fissure f.**, fissured f., a crack extending from a surface into, but not through, a long bone. **Galeazzi's f.**, fracture of the radius above the wrist combined with dislocation of the distal end of the ulna; called also *Dupuytren's f.* **Gosselin's f.**, a V-shaped fracture of the distal end of the tibia, extending into the ankle joint. **greenstick f.**, fracture in which one side of a bone is broken, the other being bent (see illustration); an infraction; called also *hickory-stick* or *willow f.* **grenade-thrower's f.**, fracture of the humerus caused by muscular contraction in throwing a grenade. **Guérin's f.**, Le Fort I f. **gutter f.**, a fracture of the skull in which the depression is elliptic in form. **hangman's f.**, fracture through the pedicles of the axis (C2) with or without subluxation of the second cervical vertebra on the third. **hickory-stick f.**, greenstick f. **horizontal maxillary f.**, Le Fort I f. **impacted f.**, fracture in which one fragment is firmly driven into the other. **incomplete f.**, one which does not entirely destroy the continuity of the bone. **indirect f.**, a fracture at a point distant from the site of injury. **inflammatory f.**, fracture of a bone weakened by inflammatory disease. **interperiosteal f.**, incomplete or greenstick fracture. **intra-articular f.**, a fracture of the articular surface of a bone. **intracapsular f.**, one within the capsule of a joint. **intra-trapeziosteal f.**, a fracture without rupture of the periosteum. **intrauterine f.**, fracture of a fetal bone occurring in utero; called also *congenital f.* **joint f.**, articular fracture. **lead pipe f.**, fracture in which the cortex of the bone is slightly compressed and bulged on one side with a slight crack on the opposite side of the bone. **Le Fort's f.**, bilateral horizontal fracture of the maxilla. Le Fort fractures are classified as follows: *Le Fort I f.*, a horizontal segmented fracture of the alveolar process of the maxilla, in which the teeth are usually contained in the detached portion of the bone; called also *Guérin's f.* and *horizontal maxillary f.* *Le Fort II f.*, unilateral or bilateral fracture of the maxilla, in which the body of the maxilla is separated from the facial skeleton and the separated portion is pyramidal in shape; the fracture may extend through the body of the maxilla down the midline of the hard palate, through the floor of the orbit, and into the nasal cavity. Called also *pyramidal f.* *Le Fort III f.*, a fracture in which the entire maxilla and one or more facial bones are completely separated from the craniofacial skeleton; such fractures are almost always accompanied by multiple fractures of the facial bones. Called also *craniofacial disjunction* and *transverse facial f.* **linear f.**, a fracture extending lengthwise of the bone. **longitudinal f.**, a break in a bone extending in a longitudinal direction. **loose f.**, a fracture in which the bone is completely broken so that the broken ends have free play. **march f.**, fracture of a bone of the lower extremity, developing after repeated stresses, as seen in soldiers; called also *fatigue f.* Cf. *march foot*. **Monteggia's f.**, fracture in the proximal half of the shaft of the ulna, with dislocation of the head of the radius. Sometimes called *parry fracture* because it is often caused by attempts to fend off blows with the forearm. **Moore's f.**, fracture of the lower end of the radius with dislocation of the head of the ulna and imprisonment of the styloid process beneath the annular ligaments. **multiple f.**, a variety in which there are two or more lines of fracture of the same bone not communicating with each other. **neoplastic f.**, fracture due to weakening of the bone as a result of a malignant process. **neurogenic f.**, fracture due to weakening of the bone as a result of tabes, paresis, etc. **oblique f.**, fracture in which the break extends in an oblique direction. **open f.**, one in which there is an external wound leading to the break of the bone; called also *compound f.* **paratrooper f.**, fracture of the posterior articular margin of the tibia and/or of the internal or external malleolus. **parry f.**, Monteggia f. **pathologic f.**, one due to weakening of the bone structure by pathologic processes, such as neoplasia, osteomalacia, osteomyelitis, and other diseases. Called also *secondary f.* and *spontaneous f.* **perforating f.**, buttonhole f. **periarticular f.**, a fracture extending close to, but not into, a joint. **peritrochanteric f.**, fracture of the femur passing through the great trochanter. **pillion f.**, a fracture of the lower end of the femur occurring when the knee of a person riding pillion on a motorcycle is struck in a collision; it is a T-shaped fracture with displacement of the condyles behind the femoral shaft. **ping-pong f.**, an indented fracture of the skull, resembling the indentation that can be produced with the finger in a ping-pong ball; when elevated it resumes and retains its normal position. **pond f.**, fracture of the skull in which a fissure circumscribes the

radiating lines, giving the depressed area a circular form. **Pott's f.**, fracture of the lower part of the fibula, with serious injury of the lower tibial articulation, usually a chipping off of a portion of the medial malleolus, or rupture of the medial ligament; called also *Dupuytren's f.* **pressure f.**, one caused by pressure on the bone from an adjoining tumor. **pyramidal f. (of maxilla)**, Le Fort II f. **Quervain's f.**, fracture of the navicular bone together with a volar luxation of the os lunatum. **resecting f.**, a fracture in which a piece of the bone is removed by violence, as by a bullet. **secondary f.**, pathologic f. **segmental f.**, double f. **Shepherd's f.**, fracture of the astragalus, with detachment of the outer protecting edge. **silver-fork f.**, fracture of the lower ends of the radius (*Colles' f.*); so called because of the shape of the deformity that it causes. **simple f.**, closed f. **simple f., complex**, a closed fracture in which there is considerable injury to adjacent soft tissues. **Skillern's f.**, complete fracture of the lower third of the radius with greenstick fracture of the lower third of the ulna. **Smith's f.**, a fracture of the lower end of the radius near its articular surface with forward displacement of the lower fragment; sometimes called *reverse Colles' fracture*. **spiral f.**, one in which the bone has been twisted apart; called also *torsion f.* **splintered f.**, a comminuted fracture in which the bone is splintered into thin, sharp fragments. **spontaneous f.**, one occurring as a result of disease of a bone or from some undiscoverable cause, and not due to trauma; called also *pathologic f.* **sprain f.**, the separation of a tendon or ligament from its insertion, taking with it a piece of bone. **sprinter's f.**, fracture of the anterior superior or of the anterior inferior spine of the ilium, a fragment of the bone being pulled off by muscular violence, as at the start of a sprint. **stellate f.**, a fracture with a central point of injury, from which radiate numerous fissures. **Stieda's f.**, fracture of the internal condyle of the femur. **subcapital f.**, fracture of a bone just below its head; especially an intracapsular fracture of the neck of the femur at the junction of the head and neck. **subcutaneous f.**, closed f. **subperiosteal f.**, a crack through a bone without alteration in its alignment or contour, the supposition being that the periosteum is not broken. **supracondylar f.**, fracture of the humerus in which the line of fracture is through the lower end of the shaft of the humerus. **torsion f.**, spiral f. **torus f.**, a fracture in which there is a localized expansion or torus of the cortex, with little or no displacement of the lower end of the bone. **transcervical f.**, fracture through the neck of the femur. **transcondylar f.**, fracture of the humerus in which the line of fracture is at the level of the condyles, transverges the fossae, and is in part within the capsule of the joint; called also *diacondylar f.* **transverse f.**, a fracture at right angles to the axis of the bone. **transverse facial f.**, Le Fort III f. **transverse maxillary f.**, a term sometimes used for horizontal maxillary fracture (Le Fort I f.). **trimalleolar f.**, fracture of the medial and lateral malleoli and the posterior tip of the tibia. **trophic f.**, one due to a trophic (nutritional) disturbance. **tuft f.**, bursting f. **Wagstaffe's f.**, separation of the internal malleolus. **willow f.**, greenstick f.

fracture-dislocation (frak'chur dis'lo-ka'shun) a fracture of a bone near a joint, also involving dislocation.

Fraenkel (freng'kel) see *Fränkel*.

fragiform (frah'f-i-form) [*fraga* strawberry + *forma* shaped] shaped like a strawberry.

fragilitas (frah-jil'i-tas) [L.] fragility. **f. crin'ium**, a brittle condition of the hair. **f. os'sium**, abnormal brittleness of the bones; see *osteogenesis imperfecta*. **f. un'guium** [L. "fragility of the nails"], abnormal brittleness of the nails.

fragility (frah-jil'i-te) susceptibility, or lack of resistance, to factors capable of causing disruption of continuity or integrity. **f. of blood**, erythrocyte f. **capillary f.**, susceptibility, or lack of resistance, of capillaries to disruption under conditions of increased stress. **erythrocyte f.**, the susceptibility, or lack of resistance, of erythrocytes to hemolysis when exposed to increasingly hypotonic saline solutions (*osmotic f.*) or when subjected to mechanical trauma (*mechanical f.*). **hereditary f. of bone**, osteogenesis imperfecta. **mechanical f.**, see *erythrocyte f.* **osmotic f.**, see *erythrocyte f.*

fragilocyte (frah-jil'o-sit) an erythrocyte which is less than normally resistant to hypotonic saline solution.

fragilocytosis (frah-jil'o-si-to'sis) the presence of fragilocytes in the blood.

fragment (frag'ment) one of the small pieces into which a larger entity has been broken. **Spengler's f's**, small round bodies seen in tuberculous sputum.

fragmentation (frag'men-ta'shun) 1. a division into fragments. 2. a form of reproduction seen in certain organisms, such as flatworms, in which the body of the parent may break into several pieces, each piece then regenerating the missing parts and developing into a whole animal. **f. of myocardium**, transverse rupture of the muscle fibers of the heart.

fragmentography, mass (frag'men-tog'rah-fe) combined gas chromatography and mass spectrometry in which quantitative analysis of the substance in question (e.g., a steroid) is based on a

determination of the abundance of certain fragments characteristic of that substance.

fraise (frāz) [Fr. "strawberry"] a conical or hemispherical burr for cutting osteoplastic flaps or enlarging trephine openings.

frambesia (fram-be'ze-ah) [Fr. *framboise* raspberry] yaws. **f. trop'ica**, yaws.

frambesin (fram-be'sin) cultures of *Treponema pertenue* heated to 60° C.; used as a skin test for frambesia (yaws).

frambesioma (fram-be'ze-o'mah) mother yaw; see under *yaw*.

framboesia (fram-be'ze-ah) yaws.

framboesioma (fram-be'ze-o'mah) mother yaw; see under *yaw*.

frame (frām) a structure, usually rigid, designed for giving support to or for immobilizing a part. **Balkan f.**, a rectangular frame attached to and overhanging a bed; particularly useful in allowing bedridden patients to move more effectively and for attachment of splints. Called also *Balkan splint*. **Bradford f.**, a rectangular frame of gas pipe to which is attached a sheet of heavy canvas; used as a bed frame in tuberculosis of the spine and fracture of the thigh. **Deiters' terminal f.**, plates in the lamina reticularis uniting Deiters' phalanges with the cells of Hensen. **Foster f.**, one similar to the Stryker frame. **Hibbs' f.**, a frame used in the application of traction plaster jackets in the treatment of scoliosis. **occluding f.**, a dental articulator. **quadriplegic standing f.**, a device for supporting in the upright position a patient whose four limbs are paralyzed. **Stryker f.**, one consisting of canvas stretched on anterior and posterior frames, on which the patient can be rotated around his longitudinal axis. **trial f.**, a frame specially devised to permit easy insertion of different lenses used in correcting refractive errors of vision. **Whitman's f.**, a frame similar to Bradford's frame except that it is curved.

framework (frām'werk) the basic structure about which something is formulated or built; as the supporting elements of a prosthesis (such as a partial denture) to which the remaining portions are attached. **scleral f.**, the larger and coarser part of the angle of the iris which is adjacent to the sclera. **uveal f.**, ligamentum pectinatum anguli iridocornealis.

Francis' disease (fran'siz) [Edward Francis, American physician, born 1872] tularemia.

Francisella (fran-si-sel'ah) [Edward Francis] a genus of aerobic, nonmotile, gram-negative bacteria made up of very small, coccoid to ellipsoidal pleomorphic rods. **F. novi'cida**, the etiologic agent of a disease resembling tularemia in guinea pigs, hamsters, and white mice; not known to infect man. Formerly called *Pasteurella novicida*. **F. tularen'sis**, the etiologic agent of tularemia in man, being transmitted from wild animals to man by drinking water, by blood-sucking insects, or by contact; it is also the cause of a severe form of conjunctivitis known as conjunctivitis tularensis. Called also *Pasteurella tularensis*.

francium (fran'se-um) the chemical element of atomic number 87, atomic weight 223, symbol Fr, all isotopes of which are radioactive; formerly called *virginium*.

Franco's operation (frah'ko) [Pierre Franco, French surgeon, 1500-1561] suprapubic cystotomy.

franghi (fran'ge) venereal syphilis in Syria.

Frank's operation (franks) [Rudolf Frank, Vienna surgeon, 1862-1913] see under *operation*.

Franke's operation (frang'kez) [Felix Franke, German surgeon, born 1858] see under *operation*.

Fränkel's sign (freng'kelz) [Albert Fränkel, German physician, 1848-1916] see under *sign*.

Fränkel's speculum, test (freng'kelz) [Bernhard Fränkel, German laryngologist, 1836-1911] see under *speculum* and *tests*.

Fränkel's treatment (freng'kelz) [Albert Fränkel, Heidelberg physician, 1864-1938] see under *treatment*.

Frankenhäuser's ganglion (frang'ken-hoy'zerz) [Ferdinand Frankenhäuser, German gynecologist, died 1894] see under *ganglion*.

Frankl-Hochwart's disease (frank'l-hoch'warts) [Lothar von Frankl-Hochwart, Vienna neurologist, 1862-1914] polyneuritis cerebri menieriformis.

Franklin glasses (frangk'lin) [Benjamin Franklin, American patriot, 1706-1790] bifocal glasses.

franklinism (frangk'lin-izm) [Benjamin Franklin] 1. static or frictional electricity. 2. franklinization.

franklinization (frangk'lin-i-za'shun) the therapeutic use of static electricity.

Frasera (fra'zer-ah) [after John Fraser, 1750-1817] a genus of gentianaceous plants.

Fraunhofer's lines (frown'hof-erz) [Joseph von Fraunhofer, German optician, 1787-1826] see under *line*.

Frazier-Spiller operation (fra'zher-spil'er) [Charles Harrison Frazier; William Gibson Spiller, American neurologist, 1863-1940] see under *operation*.

FRC functional residual capacity.

F.R.C.P. Fellow of the Royal College of Physicians.

F.R.C.P.(C.) Fellow of the Royal College of Physicians of Canada.

F.R.C.P.E. Fellow of the Royal College of Physicians of Edinburgh.

F.R.C.P.(Glasg.) Fellow of the Royal College of Physicians and Surgeons of Glasgow *qua* Physician.

F.R.C.P.I. Fellow of the Royal College of Physicians in Ireland.

F.R.C.S. Fellow of the Royal College of Surgeons.

F.R.C.S.(C.) Fellow of the Royal College of Surgeons of Canada.

F.R.C.S.E. Fellow of the Royal College of Surgeons of Edinburgh.

F.R.C.S.(Glasg.) Fellow of the Royal College of Physicians and Surgeons of Glasgow *qua* Surgeon.

F.R.C.S.I. Fellow of the Royal College of Surgeons in Ireland.

F.R.C.V.S. Fellow of the Royal College of Veterinary Surgeons.

FreAmine II (fre-am'en) trademark for a crystalline amino acid solution for intravenous administration, containing a mixture of essential and nonessential amino acids but no peptides.

freckle (freck'l) a brownish pigmented spot on the skin due to discrete accumulation of melanin as a result of the stimulant effect of sunlight acting on clusters of melanocytes which have higher than normal tyrosinase activity. Called also *ephelis*. Cf. *lentigo*. **cold f.** (*obs.*), *lentigo*. **melanotic f. of Hutchinson**, a noninvasive malignant melanoma occurring most frequently on the face of women during the fourth decade, but also in both sexes at any age and on any part of the body; it may be of melanocytic rather than nevocytic origin. Called also *lentigo maligna* and *circumscribed precancerous melanosis of Dubreuilh*.

Fredet-Ramstedt operation (frē-da' rahm'stet) [Pierre Fredet, French surgeon, 1870–1946; Conrad Ramstedt, German surgeon, born 1867] see under *operation*.

freemartin (fre'mar-tin) a sexually maldeveloped female calf born as a twin to a normal male calf; it is commonly sterile and intersexual as the result of male hormone reaching it through anastomosed placental vessels.

freeze-cleaving (frēz-clēv'ing) freeze-etching.

freeze-drying (frēz-dri'ing) a method of tissue preparation in which the tissue specimen is frozen and then dehydrated at low temperature in a high vacuum.

freeze-etching (frēz-ech'ing) a method used to study unfixed cells by electron microscopy, in which the object to be studied is placed in 20 per cent glycerol, frozen at $-100^{\circ}\text{C}.$, and then mounted on a chilled holder.

freeze-fracturing (frēz-frak'chur-ing) a method of preparing cells for electron-microscopical examination: a tissue specimen is frozen at $-150^{\circ}\text{C}.$, inserted into a vacuum chamber, and fractured by a microtome; a platinum carbon replica of the exposed surfaces is made, freed of the underlying specimen, and then examined.

freeze-substitution (frēz-sub-stī-tu'shun) a modification of freeze-drying in which the ice within the frozen tissue is replaced by alcohol or other solvents at a very low temperature.

Frei's antigen, bubo, disease, test (friz) [Wilhelm Siegmund Frei, German dermatologist, 1885–1943] see *lymphogranuloma venereum*, and see under *antigen* and *tests*.

Freiberg's infraction (fri'bergz) [Albert Henry Freiberg, American surgeon, 1868–1940] see under *infraction*.

fremitus (frem'i-tus) [L.] a vibration perceptible on palpation. **bronchial f.**, **rhonchal f.** **friction f.**, the vibration caused by the rubbing together of two dry body surfaces; called also *friction rub*. **hydatid f.**, see under *thrill*. **pectoral f.**, vocal f. **pericardial f.**, a thrill of the chest wall due to the friction of the surfaces of the pericardium over each other. **pleural f.**, a palpable vibration of the wall of the thorax due to friction of the opposing surfaces of the pleura over each other. **rhonchal f.**, palpable vibrations produced by the passage of air through a large bronchial tube filled with mucus; called also *bronchial f.* **subjective f.**, a thrill felt by the patient on humming with his mouth closed. **tactile f.**, a thrill, as in the chest wall, which may be felt by a hand applied to the thorax while the patient is speaking. **tussive f.**, a thrill felt on the chest when the patient coughs. **vocal f.**, a thrill caused by speaking, and perceived by the ear of the auscultator applied to the chest; called also *pectoral f.*

frena (fre'nah) plural of *frenum*.

frenal (fre'nal) pertaining to a frenum.

French (french') see *French scale*, under *scale*.

frenectomy (fre-nek'to-me) excision of a frenum.

Frenkel's movements (treatment) (frenk-elz') [Heinrich S. Frenkel, Berlin neurologist, 1860–1931] see under *movement*.

frenoplasty (fre'no-plas'te) the correction of an abnormally attached frenum by surgically repositioning it.

frenosecretory (fre'no-se-kre'to-re) [L. *frenum* bridle + *secretory*] exercising an inhibitory or restraining power over the secretions.

frenotomy (fre-not'o-me) [L. *frenum* bridle + Gr. *tomē* a cutting] incision of a frenum or frenulum, as of the frenulum linguae in treatment of tongue-tie.

frentizole (fren'ti-zōl) chemical name: *N*-(6-methoxy-2-benzothiazolyl)-*N'*-phenylurea; an immunoregulator, $\text{C}_{15}\text{H}_{13}\text{N}_3\text{O}_2\text{S}$.

frenula (fren'u-lah) plural of *frenulum*.

frenuloplasty (fren'u-lo-plas'te) the correction of an abnormally attached frenulum by surgically repositioning it.

frenulum (fren'u-lum), pl. *fren'ula* [L., dim. of *frenum*] a small bridle; [NA] a general term for a small fold of integument or mucous membrane that checks, curbs, or limits the movements of an organ or part. see also *frenum*. **f. of anterior medullary velum**, f. veli medullaris superior. **f. clitoridis** [NA], f. of clitoris, a fold formed by the union of the labia posterior with the clitoris; called also *crus glandis clitoridis*. **f. of ileocecal valve**, f. valvae ileocecalis. **f. of inferior lip**, f. la'b'ii inferioris [NA], the fold of mucous membrane on the inside of the middle of the lower lip, connecting the lip with the gums. **f. la'b'ii superioris** [NA], frenulum of superior lip; the fold of mucous membrane on the inside of the middle of the upper lip, connecting the lip with the gums. **f. labio'rum pudendi** [NA], frenulum of pudendal labia; the posterior union of the labia minora, anterior to the posterior commissure; called also *f. pudendi*, *fourchette*, and *frenum of labia*. **f. lin'guae** [NA], frenulum of tongue; the vertical fold of mucous membrane under the tongue, attaching it to the floor of the mouth; called also *frenum of tongue*. **f. lin'guae cerebel'li**, vinctula lingulae cerebelli. **frenula of Morgagni**, see *f. valvae ileocecalis*. **f. of prepuce of penis**, f. prepu'tii pe'nis [NA], the fold on the lower surface of the glans penis that connects it with the prepuce. **f. of pudendal labia**, f. puden'di, f. labiorum pudendi. **f. of superior lip**, f. labii superioris. **f. of superior medullary velum**, f. veli medullaris superior. **f. of tongue**, f. linguae. **f. val'vae ileoceca'lis** [NA], *fren'ula val'vae co'li*, frenulum of ileocecal valve: a fold formed by the joined extremities of the ileocecal valve, extending partly around the lumen of the colon; called also *frenula* or *frenum of Morgagni*. **f. ve'li medulla'ris anterioris**, f. ve'li medulla'ris supe'rior [NA], frenulum of superior medullary velum: a band that lies in the superior medullary velum at its attachment to the inferior colliculi; called also *f. of anterior medullary velum*.

frenum (fre'num), pl. *fre'na* [L. "bridle"] a restraining structure or part; see *frenulum*. **f. of labia**, frenulum labiorum pudendi. **lingual f.**, frenulum linguae. **Macdowell's f.**, a group of fibers attached to the tendon of the pectoralis muscle and strengthening the intermuscular septum. **f. of Morgagni**, frenulum valvae ileocecalis. **f. of tongue**, frenulum linguae. **f. of valve of colon**, frenulum valvae ileocecalis.

frenzy (fren'ze) [Gr. *phrenitizēin* to be delirious or frantic] violent maniacal excitement.

frequency (fre'kwen-se) 1. the number of occurrences of a periodic process in a unit of time. 2. in statistics, the number of occurrences of a determinable entity per unit of time or of population. 3. the number of vibrations made by a particle or ray in one second; in electricity, the rate of oscillation or alternation in an alternating current; the number of complete cycles produced by an alternating current generator per second. **audio f.**, any frequency corresponding to a normally audible sound wave. **fusion f.**, see under *flicker*. **gene f.**, the number of loci at which a given allele is found in a given population, divided by the total number of loci at which it could occur. **high f.**, the rate of oscillation in an alternating current exceeding the rate at which muscular contraction ceases—approximately 10,000 per second. **infrasonic f.**, any frequency below the audio frequency range. **low f.**, an alternating current where frequency in cycles per second is low in reference to a certain standard, such as the pitch frequency of middle C. **recombination f.**, the frequency of crossing over of genes on homologous chromosomes, as determined by the number of recombinants divided by the total number of progeny. **subsonic f.**, infrasonic f. **supersonic f.**, ultrasonic f. **ultrasonic f.**, any frequency above the audio frequency range; see *ultrasonics*. **urinary f.**, urination at short intervals without increase in daily volume of urinary output, due to reduced bladder capacity.

Frerichs' theory (fra'riks) [Friedrich Theodor Frerichs, Berlin physician, 1819–1885] see under *theory*.

fressreflex (fres're-fleks) [Ger. "eating reflex"] rhythmic sucking, chewing, and swallowing movements elicited by stroking of the lips and cheeks.

freta (fre'tah) [L.] plural of *fretum*.

fretum (fre'tum), pl. *fre'ta* [L.] a constriction, or strait. **f. hal'leri**, a constriction between the atria and ventricles of the fetal heart; called also *Haller's isthmus*.

Freud's cathartic method (froids) [Sigmund Freud, neurologist in Vienna, 1856–1939] see *catharsis* (def. 2).

freudian (froid'e-an) 1. pertaining to Sigmund Freud and his doctrines regarding the causes of certain nervous disorders, that they are based on the existence of unconscious sexual impressions, and that the cure of such disorders can be secured by bringing these impressions into the consciousness by psychoanalysis; the

term also is applied to the theory that dreams are the expression under symbolic forms of suppressed wishes, many of which are of a sexual nature. See *unconscious* and *psychoanalysis*. 2. one who follows the teaching and theories of Sigmund Freud.

Freund adjuvant (froind) [Jules Thomas *Freund*, Hungarian-born bacteriologist in the United States, 1891–1960] see under *adjuvant*.

Freund's anomaly, operation (froindz) [Wilhelm Alexander *Freund*, German surgeon, 1833–1918] see under *anomaly* and *operation*.

Freund's reaction (froinds) [Hermann Wolfgang *Freund*, German gynecologist, 1859–1925] see under *reaction*.

Freund-Kaminer reaction (froind/'kah/'min-er) [Ernst *Freund*, Vienna (later London) physician, 1863–1946; Gisa *Kaminer*, Vienna physician, 1883–1941] *Freund's reaction*; see under *reaction*.

Frey's hairs (friz) [Max von *Frey*, German physiologist, 1852–1932] see under *hair*.

Frey's syndrome (friz) [Lucie *Frey*, Polish physician] auriculo-temporal syndrome; see under *syndrome*.

Freyer's operation (fri'erz) [Sir Peter Johnston *Freyer*, British surgeon, 1857–1921] see under *operation*.

FRF follicle-stimulating hormone releasing factor; see *gonadotropin releasing hormone*, under *hormone*.

F.R.F.P.S.G. Fellow of the Royal Faculty of Physicians and Surgeons of Glasgow.

friable (fri'ah-b'l) [L. *friabilis*] easily pulverized or crumbled.

Fricke's bandage (frik'ez) [Johann Karl Georg *Fricke*, German surgeon, 1790–1841] see under *bandage*.

friction (frik/'shun) [L. *frictio*] the act of rubbing; attrition.

Friderichsen-Waterhouse syndrome (frid'er-ik'sen-wah'ter-hows) [Carl *Friderichsen*, Danish physician, born 1886; Rupert *Waterhouse*, British physician, 1873–1958] *Waterhouse-Friderichsen syndrome*.

Fridericia's method (frid'er-i-che-ahz) [Louis Sigurd *Fridericia*, Danish hygienist, born 1881] see under *method*.

Friedländer's bacillus, pneumobacillus, pneumonia (fréd'len-derz) [Carl *Friedländer*, German pathologist, 1847–1887] see *Klebsiella pneumoniae*, and under *pneumonia*.

Friedländer's disease (fréd'len-derz) [Carl F. *Friedländer*, German physician, born 1841] *endarteritis obliterans*.

Friedman's test (fréd'manz) [Maurice Harold *Friedman*, American physician, born 1903] see under *test*.

Friedman-Lapham test (fréd'man-lap'ham) [Maurice Harold *Friedman*, Maxwell Edward *Lapham*, New Orleans obstetrician, born 1899] see *Friedman's test*, under *test*.

Friedmann's vasomotor syndrome (complex) (fred'manz) [Max *Friedmann*, German neurologist, 1858–1925] see under *syndrome*.

Friedreich's ataxia (tabes), disease, foot, sign (fréd'riks) [Nikolaus *Friedreich*, Heidelberg physician, 1825–1882] see under *ataxia*, *disease*, *foot*, and *sign*.

friente (fre-en'te) an erythematous dermatitis once common among wood choppers and field workers, and probably caused by *Ustilago hypodytes*.

frigidity (fri-jid'i-te) coldness; especially sexual unresponsiveness, usually applied to this state in the female. Analogous to impotence in the male.

frigorabile (frig'o-la'bil) [L. *frigor* cold + *labilis* unstable] easily affected or destroyed by cold.

frigorific (frig'o-rif'ik) [L. *frigorificus*] producing coldness.

frigostabile (frig'o-sta'bil) frigostable.

frigostable (frig'o-sta'bl) [L. *frigor* cold + *stabilis* firm] resistant to cold or low temperature.

cryotherapy (frig'o-ther'ah-pe) cryotherapy.

frit (frit) imperfectly fused material used as a basis for making glass, and used in the formation of porcelain teeth.

Fritsch's catheter (frich'es) [Heinrich *Fritsch*, German gynecologist, 1844–1914] *Bozeman's catheter*; see under *catheter*.

froe- for words beginning thus, see those beginning *fre-*.

frog (frog) 1. a tailless, leaping amphibian with a smooth skin and fully webbed feet, commonly used as a laboratory animal. 2. the band of horny substance in the middle of the sole of a horse's foot, dividing into two branches and running toward the heel in the form of a fork.

frog stay (frog sta) see *spine* (def. 3).

Fröhlich's syndrome (fra'liks) [Alfred *Fröhlich*, Vienna neurologist, 1871–1953] *adiposogenital dystrophy*.

Frohn's test (reagent) (frohnz) [Damianus *Frohn*, German physician, born 1843] see under *tests*.

Froin's syndrome (frow-än') [Georges *Froin*, French physician, born 1874] see under *syndrome*.

frolement (fröl-maw') [Fr.] 1. a rustling sound often heard in auscultation in disease of the pericardium. 2. a massage movement consisting of light brushing with the palm of the hand.

Froment's paper sign (fro-mahz') [Jules *Froment*, French physician, born 1878] see under *sign*.

Frommann's lines (from'aniz) [Carl *Frommann*, anatomist in Heidelberg, 1831–1892] see under *line*.

Frommel's disease, operation (from'elz) [Richard Julius Ernst *Frommel*, German gynecologist, 1854–1912] see *Chiari-Frommel syndrome*, under *syndrome*, and see under *operation*.

Frommel-Chiari syndrome (from'el-ke-ar'e) [Richard Julius Ernst *Frommel*; Johann Baptist *Chiari*, German obstetrician 1817–1854] *Chiari-Frommel syndrome*.

frondose (fron'dös) [L. *frondosus* leafy] bearing fronds, or villi, as the chorion frondosum.

frons (fronz) [L. "the front, forepart"] [NA], the forehead; the region of the face above the eyes. **f. cra'nii** [NA], **f. of cranium**, the anterior extremity of the brain case; the bony forehead.

frontad (frun'tad) toward a frontal aspect.

frontal (frun'tal) [L. *frontalis*] 1. pertaining to the forehead. 2. denoting a longitudinal plane of the body; see under *plane*.

frontalis (frun-ta'lis) [L.] frontal; in official anatomical nomenclature, the term designates a relationship to the frontal or coronal plane.

frontipetal (frun-tip'ě-tal) [L. *frontalis* in front + *petere* to seek] directed to the front; moving in a frontal direction.

frontomalar (frun'to-ma'lar) pertaining to the frontal and malar bones.

frontomaxillary (frun'to-mak'si-lär'e) pertaining to the frontal bone and the upper jaw.

frontonasal (frun'to-na'zal) pertaining to the frontal sinus and the nose.

fronto-occipital (frun'to-ok-sip'i-tal) pertaining to the forehead and the occiput.

frontoparietal (frun'to-pah-ri'e-tal) pertaining to the frontal and parietal bones.

frontotemporal (frun'to-tem'po-ral) pertaining to the frontal and temporal bones.

Froriep's ganglion (fro'rëps) [August von *Froriep*, German anatomist, 1849–1917] see under *ganglion*.

Froriep's induration (fro'rëps) [Robert *Froriep*, Berlin surgeon, 1804–1861] *myositis fibrosa*.

Fröschel's symptom (fresh'elz) [Emil *Fröschel*, Vienna otologist, born 1884] see under *symptom*.

frost (frost) a deposit resembling that of frozen dew or vapor. **urea f.**, the appearance on the skin of salt crystals left by evaporation of the sweat in urhidrosis.

frostbite (frost/bit) damage to tissues as the result of exposure to low environmental temperatures; called also *congelation*. **deep f.**, damage resulting from exposure to extremely low temperatures, involving not only the skin and subcutaneous tissue but also deeper tissues, sometimes leading to gangrene and loss of affected parts; it is marked by persistent ischemia, secondary thrombosis, and livid cyanosis. **superficial f.**, damage resulting from exposure to low temperatures, involving only the skin or extending to the tissue immediately beneath it; it may be manifested as simple erythema, transient anesthesia, and superficial bullae.

frottage (fro-tahzh') [Fr. "rubbing"] 1. rubbing movement in massage; effeurage. 2. sexual gratification by rubbing against the clothing of a person of the opposite sex, especially when pressed close, as in a crowd; called also *hyphephilia*.

frotteur (fro-tur') an individual who achieves sexual gratification by practicing frottage.

frotteurism (fro-tur'izm) frottage (def. 2).

F.R.S. Fellow of the Royal Society.

fructification (fruk'ti-fi-ka'shun) 1. the production of fruit. 2. a fruiting body. 3. a spore-bearing structure.

fructivorous (fruk-tiv'o-rus) subsisting on or eating fruits.

fructofuranose (fruk'to-fu'rah-nös) the combining form and the more reactive form of fructose, $\text{CH}_2\text{OH} \cdot \text{CH}(\text{CHOH})_2 \cdot \text{CHO} \cdot$

CH_2OH .

β -fructofuranosidase (fruk'to-fu'rah-no'si-dās) β -D-fructofuranoside fructohydrolase: an enzyme occurring in yeasts and other organisms that catalyzes the hydrolysis of sugars possessing a terminal unsubstituted β -D-fructofuranosyl residue. Reportedly absent at birth in the intestine of some animals (including man), but its level rises thereafter. Called also *invertase*, *invertin*, *saccharase*, and *sucrase*.

fructokinase (fruk'to-ki'nās) ATP:D-fructose 6-phosphotransferase: an enzyme that catalyzes the transfer of a high-energy phosphate group from a donor to D-fructose, producing D-fructose-1-phosphate; see also *kinase* (def. 1).

fructolysis (fruk-tol'i-sis) the splitting up of fructose.

fructopyranose (fruk'to-pi'rah-nös) fructose.

fructosamine (fruk'to-sa'min) an amino sugar formed by the reduction of the osazone of glucosamine.

fructosan (fruk'to-san) a hexosan, $C_6H_{10}O_5$, an anhydride of fructose; called also *levulan*.

fructosazone (fruk'to-sa'zōn) a phenyl-osazone of fructose identical with glucosazone; called also *levulosazone*.

fructose (fruk'tōs) [L. *fructus* fruit] chemical name: D-fructose. A ketohexose, $C_6H_{12}O_6$, occurring in honey and many sweet fruits and a component of many di- and polysaccharides; it is obtainable by inversion of aqueous solutions of sucrose and subsequent separation of fructose from glucose. The official preparation [USP], occurring as colorless crystals or as a white, crystalline powder, is administered intravenously as a fluid and nutrient replenisher. Called also *fructopyranose*, *fruit sugar*, and *levulose*. **f. diphosphate**, **f. 1,6-diphosphate**, the Harden-Young ester, a key intermediate in cellular glycolysis. **ferrie f.**, a hematinic composed of a fructose iron complex and potassium. **f. 6-phosphate**, the Neuberg ester.

fructosemia (fruk'to-se'me-ah) the presence of fructose in the blood; seen in fructose intolerance. Called also *levulosemia*.

fructosidase (fruk'to-si-dās) β -fructofuranosidase.

fructoside (fruk'to'sid) a compound that bears the same relation to fructose as a glucoside does to glucose.

fructosuria (fruk'to-su're-ah) [*fructose* + Gr. *ouron* urine + *-ia*] the presence of fructose in the urine; seen in fructose intolerance. Called also *levulosuria*. **essential f.**, a benign, asymptomatic hereditary disorder of carbohydrate metabolism, transmitted as an autosomal recessive trait, caused by a defect in the hepatic enzyme fructokinase, and in which the only manifestations are fructosemia and fructosuria. See also *hereditary fructose intolerance*, under *intolerance*.

fructosyl (fruk'to-sil) a radical of fructose.

fructosyltransferase (fruk'to-sil-trans'fer-ās) an enzyme that catalyzes the transfer of a fructosyl group, as from fructan to D-glucose to form sucrose; called also *transfructosylase*.

fructovegetative (fruk'to-vej'te-tiv) composed of or pertaining to fruits and vegetables.

frugivorous (froo-jiv'o-rus) [L. *frux* fruit + *vorare* to eat] fructivorous; eating or subsisting on fruit.

fruit (frūt) [L. *fructus*] the developed ovary of a plant, including the seed and its envelopes.

fruitarian (froo-ta're-an) a person whose diet consists chiefly of fruits.

fruitarianism (froo-ta're-an-izm) the use of an exclusively fruit diet.

frusemide (frus'ē-mid) furosemide.

Frust. abbreviation for L. *frustilla*tim, in small pieces.

frustration (frus-tra'shun) a condition of increased emotional tension resulting from failure to achieve sought gratifications or satisfactions, ordinarily as a result of forces outside of one's self (*external f.*), but also as a result of unconscious blocking of instinctual impulses (*internal f.*).

F.s.a. abbreviation for L. *fi'at secun'dum ar'tem*, let it be made skillfully.

FSH follicle-stimulating hormone.

FSH/LH-RH follicle-stimulating hormone and luteinizing hormone releasing hormone; see *gonadotropin releasing hormone*, under *hormone*.

FSH-RF follicle-stimulating hormone releasing factor; see under *factor*.

FSH-RH follicle stimulating hormone releasing hormone; see *gonadotropin releasing hormone*, under *hormone*.

ft. abbreviation for L. *fi'at* or *fi'ant*, let there be made, and for *foot* and *feet*.

Ft. mas. div. in pil. abbreviation for L. *fi'at mas'sa dividen'da in pil'ulae*, let a mass be made and divided into pills.

Ft. pulv. abbreviation for L. *fi'at pul'vis*, let a powder be made.

Fuadin (fu'ah-din) trademark for a preparation of stibophen.

Fuchs' coloboma, etc. (fooks) [Ernst *Fuchs*, German ophthalmologist, 1851-1930] see under *atrophy*, *coloboma*, *dimple*, *dystrophy*, and *syndrome*.

Fuchs' protein test [Hans J. *Fuchs*, German physician, 1873-1942] see under *tests*.

fuchsin (fook'sin) [from the pink, red, or purple flower *fuchsia*, after Leonard *Fuchs*, German botanist, 1501-1566] any of several red to purple triaminotriphenylmethane dyes. **acid f.**, a mixture of sulfonated fuchsin used in Andrade's indicator and in various complex stains; called also *acid magenta*. **basic f.**, an important histological dye, a mixture of pararosaniline, rosaniline, and magenta II. Also [USP] a mixture of rosaniline and pararosaniline hydrochlorides used as a local anti-infective. Called also *basic magenta*. **new f.**, a basic dye with staining properties much like those of basic fuchsin; it is triaminotriolymethane chloride, or trimethyl fuchsin, $[CH_3(NH_2) \cdot C_6H_3 \cdot C \cdot C_6H_3 \cdot NH_2] \cdot Cl$.

fuchsinophil (fook-sin'o-fil) [*fuchsin* + Gr. *philein* to love] 1. any cell or other element readily stained with fuchsin. 2. fuchsinophilic.

fuchsinophilia (fook'sin-o-fil'e-ah) the property of staining

readily with fuchsin dyes; especially the affinity of infarcted areas of the heart for acid fuchsin, which is an aid in determining diagnosis in cases of unexplained death.

fuchsinophilic (fook'sin-o-fil'ik) readily stained by fuchsin; pertaining to or characterized by fuchsinophilia.

fuchsinophilous (fook'sin-of'i-lus) fuchsinophilic.

fucosan (fu'ko-san) a methylpentosan that is a constituent of the cell wall of many seaweeds, and is derived from L-fucose, or 6-deoxygalactose.

fucose (fu'kōs) an unusual monosaccharide occurring as L-fucose (6-deoxy-L-galactose) in a number of mucopolysaccharides and mucoproteins, including the blood group polysaccharides.

fucosidase (fu-ko'si-dās) an enzyme that catalyzes the hydrolysis of fucose to an alcohol and D-fucose; it occurs in two forms, α - and β -D-fucosidase. A defect in the α -form results in fucosidosis.

fucoside (fu'ko-sid) an acetal derivative of fucose.

fucosidosis (fu'ko-si-do'sis) a hereditary neurovisceral disease, transmitted as an autosomal recessive trait, due to the absence of the enzymatic activity of α -fucosidase, and characterized by normal neurologic development during the first year of life followed by severe progressive cerebral degeneration, gradual loss of muscle strength, eventual spasticity and decorticate rigidity, emaciation, cardiomegaly with myocarditis, thick skin, excessive sweating, storage of abnormal carbohydrates and glycolipids in the liver and brain cells, and accumulation of fucose in all tissues.

fucoxanthin (fu'ko-zan'thin) [L. *fucus* rock lichen + Gr. *xanthos* yellow] the brown carotenoid found in diatoms, brown algae, and dinoflagellates.

FUDR floxuridine.

Fuerbringer (fer'bring-er) see *Fürbringer*.

fugacity (fu-gas'i-te) [L. *fugacitas*, from *fugere* to flee] a measure of the escaping tendency of a substance from one phase to another phase, or from one part of a phase to another part of the same phase. The logarithm of the fugacity is proportional to the chemical potential.

-fugal (fu'gal) 1. [L., *fugare* to put to flight] a word termination implying banishing, or driving away, affixed to a stem designating the object of banishment, as *culicifugal*, driving away mosquitoes and gnats (*Culex*), or *febrifugal*, relieving or dispelling fever. 2. [L., *fugere* to flee from] a word termination implying traveling away from, affixed to a stem designating the object from which flight is made, as *centrifugal* traveling away from a center, or *corticifugal*, directed away from the cortex.

fugitive (fu'ji-tiv) [L. *fugitivus*] 1. wandering. 2. transient.

Fugu (fu'gu) [Jap.] a genus of Japanese puffer fish that contain a potent neurotoxin (tetrodotoxin) concentrated in the gonads and viscera, which when eaten without special cooking preparation causes generalized paralysis and in severe cases unconsciousness and death.

fugue (fūg) [L. *fuga* a flight] a dissociative reaction in which amnesia is accompanied by physical flight from customary surroundings. **epileptic f.**, a condition of clouded consciousness which may take the place of or follow an epileptic seizure.

fuguism (foo'goo-izm) [Jap. *fugu* the tetraodon fish + *-ism*] tetrodotoxism.

fuguismus (foo'goo-iz'mus) [see *fuguism*] tetrodotoxism.

fugutoxin (foo-goo-tok'sin) tetrodotoxin.

Fukala's operation (foo-kah'lahz) [Vincenz *Fukala*, Vienna ophthalmologist, 1847-1911] see under *operation*.

Fuld's test (fuldz) [Ernst *Fuld*, German internist, born 1873] see under *test*.

fulgurant (ful'gu-rant) [L. *fulgurans*, from *fulgur* lightning] coming and going like a flash of lightning.

fulgurate (ful'gu-rāt) 1. to come and go like a flash of lightning. 2. to destroy by contact with electric sparks generated by a high frequency current; see *fulguration*.

fulguration (ful'gu-ra'shun) [L. *fulgur* lightning] destruction of living tissue by electric sparks generated by a high frequency current. This may be direct or indirect. **Direct:** An insulated fulguration electrode with a metal point is connected to the uniterminal of the high frequency apparatus and a spark of electricity is allowed to impinge on the area to be treated. **Indirect:** In this procedure the patient is connected directly by a metal handle to the uniterminal and the operator utilizes an active electrode to complete an arc from the patient. **Keating-Hart's f.**, fulguration of external cancer.

fuliginous (fu-lij'i-nus) [L. *fuligo* soot] sooty in color or appearance.

Fülleborn's method (fēl'ē-bornz) [Friedrich *Fülleborn*, German parasitologist, 1866-1933] see under *method*.

Fuller's operation [Eugene *Fuller*, New York urologist, 1858-1930] see under *operation*.

füllkörper (fēl'ker-per) [Ger., pl., "fill-bodies"] glia cells which have become degenerated; called also *filling cells*.

fulminant (ful'mī-nant) [L. *fulminare* to flare up] sudden, severe; occurring suddenly and with great intensity.

fulminate (ful'mī-nāt) to occur suddenly with great intensity.

Fulvicin (ful'vī-sin) trademark for a preparation of griseofulvin.

fumagillin (fu'mah-jil'in) chemical name: 2,4,6,8-decatetra-enedioic acid mono[5-methoxy-4-[2-methyl-3-(3-methyl-2-butenyl)oxiranyl]-1-oxaspiro[2.5]oct-6-yl]ester. An antibiotic, $C_{26}H_{34}O_7$, produced by *Aspergillus fumigatus*.

fumarase (fu'mah-rās) fumarate hydratase.

fumarate (fu'mar-āt) a salt of fumaric acid. In biochemistry, the term is often used interchangeably with fumaric acid (see under *acid*). **ferrous f.** [USP], a reddish orange to red-brown powder, $C_4H_2FeO_4$, slightly soluble in water; used as a hematinic in iron-deficiency anemia. **f. hydratase**, L-malate hydrolyase: an enzyme that catalyzes the equilibrium between fumaric acid (fumarate) and malic acid (malate); called also *fumarase*.

fumigacin (fu-mī-ga'sin) helvolic acid.

fumigant (fu'mī-gant) a substance used in fumigation.

fumigation (fu'mī-ga'shun) [L. *fumus* smoke, steam, vapor] exposure of an area or object to disinfecting fumes.

fuming (fūm'ing) [L. *fumus* smoke] smoking; emitting a visible vapor.

Fumiron (fūm'i-ron) trademark for a preparation of ferrous fumarate.

functio (funk'she-o) [L.] function. **f. lae'sa**, loss of function.

function (funk'shun) [L. *functio* a performance] the special, normal, or proper action of any part or organ. **antixenic f.**, the reactivity of living tissue to any foreign substance. **Carnot's f.**, **carnotic f.**, the relation between the quantity of heat lost by a body and the work which can be done by it.

functional (funk'shun-al) of or pertaining to a function; affecting the functions, but not the structure; said of disturbances of function with no detectable organic cause. In chemistry, denoting the group within a molecule that participates in a chemical reaction, e.g., the —OH group of an alcohol, or the —NH₂ group of an amine.

functionalis (funk'she-o-na'lis) [L.] 1. functional. 2. stratum functionale.

functionating (funk'shun-āt-ing) in a condition of performing the proper function.

fundal (fun'dal) pertaining to a fundus.

fundament (fun'dah-ment) [L. *fundamentum*] 1. a base or foundation, such as the breech or rump. 2. the anus and parts adjacent to it.

fundamental (fun'dah-men'tal) pertaining to a base or foundation.

fundectomy (fun-dek'to-me) excision of the fundus of an organ, as the fundus of the uterus.

fun di (fun'di) [L.] plural of *fundus*.

fundic (fun'dik) pertaining to a fundus.

fundiform (fun'di-form) [L. *funda* sling + *forma* form] shaped like a sling.

fundoplication (fun'do-pli-ka'shun) mobilization of the lower end of the esophagus and plication of the fundus of the stomach up around it, in treatment of peptic esophagitis to prevent reflux.

Fundulus (fun'du-lus) a genus of killifish of the order Cyprinodontidae, the common or green killifish, *F. heteroclitus*, is much used in biological research.

fundus (fun'dus), pl. *fun'di* [L.] the bottom or base of anything; [NA] a general term for the bottom or base of an organ, or the part of a hollow organ farthest from its mouth. **albinotic f.**, a fundus of the eye which permits clear visualization of the choroidal vasculature, owing to lack of pigment in the pigment epithelium and choroid. **f. albipuncta'tus**, a disorder in which gray or white mottling of the fundus of the eye is associated with night blindness; called also *Lauber's disease*. **f. of bladder**, 1. fundus vesicae urinariae. 2. apex vesicae urinariae. **f. of eye**, f. oculi. **f. flavimacula'tus**, a condition characterized by the presence of yellow to white atrophic lesions in the midperiphery or perimacular region of the fundus of the eye. **f. of gallbladder**, f. vesicae felleae. **gastric f.**, f. ventriculi. **f. of internal acoustic meatus**, f. mea'tus acus'tici inter'ni [NA], the laterally placed end or bottom of the internal acoustic meatus. **f. oc'uli**, fundus of the eye: the back portion of the interior of the eyeball, as seen by means of the ophthalmoscope. **f. of stomach**, f. ventriculi. **tessellated f.**, **tigroid f.**, a fundus of the eye with marked exposure of the choroidal vessels due to scanty pigmentation. **f. tym'pani**, paries jugularis cavi tympani. **f. of urinary bladder**, 1. fundus vesicae urinariae. 2. apex vesicae urinariae. **f. u'teri** [NA], **f. of uterus**, the part of the uterus above the orifices of the uterine tubes. **f. of vagina**, f. vagi'nae, fornix vaginae. **f. ventric'uli** [NA], that part of the stomach to the left and above the level of the entrance of the esophagus; called also *gastric f.* and *f. of stomach*. **f. ves'icae fel'leae** [NA], the inferior, dilated portion of the gallbladder; called also *f. of gallbladder*. **f. ves'icae urina'riae** [NA], fundus of urinary bladder: the base or posterior surface of the bladder; called also *f. of bladder* and *infundibulum of urinary bladder*.

funduscope (fun'dus-skōp) [*fundus* + Gr. *skopein* to examine] an instrument for examining the fundus of the eye.

funduscopy (fun-dus'ko-pe) examination or inspection of the fundus of the eye.

fundusectomy (fun'dū-sek'to-me) [*fundus* + Gr. *ektomē* excision] excision of the fundus of the stomach.

fungal (fung'gal) pertaining to or caused by a fungus.

fungate (fung'gāt) to produce fungus-like growths; to grow rapidly, like a fungus.

fungemia (fun-je'me-ah) the presence of fungi in the blood stream.

fungi (fun'ji) [L.] plural of *fungus*.

Fungi Imperfecti (fun'ji im'per-fek'ti) [L., pl. "imperfect fungi"] a large heterogeneous group of fungi which have septate mycelium and in which the perfect (sexual) stage is unknown. This group includes many of the fungi that are pathogenic for animals including man and plants, among them *Candida*, *Cryptococcus*, *Histoplasma* and *Pityrosporon*. Imperfect fungi are classified in form-classes, form-orders, and so on, until their perfect stages are identified. Called also *Deuteromycetes*.

fungicidal (fun'ji-si'dal) [*fungus* + L. *caedere* to kill] destroying fungi.

fungicide (fun'ji-sīd) an agent that destroys fungi.

fungicidin (fun'ji-si'din) nystatin.

fungiform (fun'ji-form) shaped like a fungus or mushroom.

fungistasis (fun-ji-sta'sis) [*fungus* + Gr. *stasis* a stopping] inhibition of growth of fungi.

fungistat (fun'ji-stat) a substance that inhibits the growth of fungi.

fungistatic (fun'ji-stat'ik) inhibiting the growth of fungi.

fungisterol (fun-jis'ter-ol) a sterol, $C_{28}H_{44}O$, found in ergot and other fungi.

fungitoxic (fun'ji-tok'sik) exerting a toxic effect upon fungi.

fungitoxicity (fun'ji-tok-sis'i-te) the quality of exerting a toxic effect upon fungi.

Fungizone (fun'ji-zōn) trademark for a preparation of amphotericin B.

fungoid (fung'goid) [*fungus* + Gr. *eidos* form] resembling a fungus, or mushroom. **chignon f.**, a nodular growth often occurring on human hair.

fungosity (fun-gos'i-te) a fungoid growth or excrescence.

fungous (fung'gus) [L. *fungosus*] of the nature of, caused by, or resembling a fungus.

fungus (fung'gus), pl. *fun'gi* [L.] a general term used to denote a group of eukaryotic protists, including mushrooms, yeasts, rusts, molds, smuts, etc., which are characterized by the absence of chlorophyll and by the presence of a rigid cell wall composed of chitin, mannans, and sometimes cellulose. They are usually of simple morphological form or show some reversible cellular specialization, such as the formation of pseudoparenchymatous tissue in the fruiting body of a mushroom. The dimorphic fungi grow, according to environmental conditions, as molds or yeasts. **algae-like f.**, *Phycomycetes*. **alpha f.** (*obs.*), the fungus, *Trichophyton menlagrophytes* var. *quinckeanum*. **beta f.** (*obs.*), the fungus, *Trichophyton schoenleinii*. **f. of the brain**, *hermia cerebri*. **cerebral f.**, f. cere'bri, *hermia cerebri*. **chignon f.**, see under *fungoid*. **club f.**, *Basidiomycetes*. **cutaneous f.**, dermatophyte. **fission f.**, schizomycete. **foot f.**, a fungus, such as *Madurella mycetomi*, which produces maduromycosis, or other foot infection. **gamma f.**, a strain of the fungus *Trichophyton schoenleinii*. **f. haemato'des** (*obs.*), a soft, bleeding, malignant tumor. **imperfect f.**, a fungus whose perfect (sexual) stage is unknown; *Fungi Imperfecti* (*Deuteromycetes*). **kefir fungi**, a mixture of bacteria and yeasts capable of causing lactic acid fermentation of milk of the kefir type. **mold f.**, mycelial f. **mosaic f.**, a mycelium-like intercellular deposit of cholesterol sometimes seen in scrapings from lesions thought to be fungal in origin. **mycelial f.**, any fungus that forms mycelia, in contrast to a yeast fungus; called also *mold f.* and *thread f.* **perfect f.**, a fungus for which both sexual and asexual types of spore formation are known; see *Ascomycetes*, *Phycomycetes*, and *Basidiomycetes*. **proper f.**, *Eumycetes*. **ray f.**, *Actinomycetes*. **sac f.**, *Ascomycetes*. **slime f.**, *Mycetozoa*. **f. tes'tis**, protrusion from a scrotal sinus of a mass of granulation tissue in tuberculous epididymitis. **thread f.**, mycelial f. **true f.**, *Eumycetes*. **umbilical f.** (*obs.*), umbilical granuloma. **yeast f.**, any single-celled budding form of a fungus, in contrast to a mold fungus. **yeast-like f.**, single-celled budding fungi, such as yeasts.

funic (fu'nik) pertaining to the funis.

funicle (fu'ni-kl) funicular.

funicular (fu-nik'u-lar) pertaining to a funiculus.

funiculi (fu-nik'u-li) plural of *funiculus*.

funiculitis (fu-nik'u-li'tis) 1. inflammation of the spermatic cord. 2. inflammation of that portion of a spinal nerve root which lies within the intervertebral canal. **endemic f.**, a disease of unknown etiology occurring chiefly in Ceylon and southern

India, marked by painful swelling of the spermatic cord, chills, nausea, and vomiting. The disease also occurs sporadically in temperate climates. **filarial f.**, secondary involvement of the spermatic cord in lymphatic filariasis.

funiculoepididymitis (fu-nik'u-lo-ep'i-did'i-mi'tis) inflammation of the spermatic cord and the epididymis.

funiculopexy (fu-nik'u-lo-pek'se) [L. *funiculus* cord + Gr. *pēxis* fixation] surgical fixation of the spermatic cord to the tissues in the correction of undescended testes.

funiculus (fu-nik'u-lus), pl. *funiculi* [L.] a cord; [NA] a general term for a cordlike structure or part. **f. am'nii**, a cord of tissue by which the amnion and chorion are temporarily united in certain ruminant animals. **f. ante'rior medul'lae spina'lis** [NA], **anterior f. of spinal cord**, the white substance of the spinal cord that lies on either side between the anterior median fissure and the ventral root; called also *ventral f.* and *f. ventralis*. **cuneate f.**, **f. cunea'tus** [Burdach], fasciculus cuneatus medullae spinalis. **f. cunea'tus latera'lis**, a longitudinal ridge on the oblongata between the line of roots of the spinal accessory nerve and the fasciculus cuneatus. **f. cunea'tus medul'lae oblonga'tae**, fasciculus cuneatus medullae oblongatae. **dorsal f.**, **f. dorsa'lis**, funiculus posterior medullae spinalis. **f. gra'cilis** (obs.), fasciculus gracilis medullae spinalis. **f. grac'ilis medul'lae oblonga'tae** (obs.), fasciculus gracilis medullae oblongatae. **hepatic f.**, ductus choledochus. **lateral f. of medullae oblongatae**, **f. latera'lis medul'lae oblonga'tae** [NA], the continuation into the medulla oblongata of all the fiber tracts of the lateral funiculus of the spinal cord, with the exception of the lateral pyramidal tract. **f. latera'lis medul'lae spina'lis** [NA], lateral funiculus of spinal cord: the white substance of the spinal cord that lies on either side between the dorsal and ventral roots; called also *anterolateral column* and *lateral white commissure of spinal cord*. **ligamentous f.**, ligamentum collaterale carpi ulnare. **funiculi medul'lae spina'lis** [NA], funiculi of spinal cord: the large bundles of fiber tracts that make up the white substance of the spinal cord. **f. poste'rior medul'lae spina'lis** [NA], **posterior f. of spinal cord**, the white substance of the spinal cord that lies on either side between the posterior median sulcus and the dorsal root; called also *dorsal f.* and *f. dorsalis*. **f. of Rolando**, fasciculus of Rolando. **f. solita'rius** (obs.), tractus solitarius medullae oblongatae. **f. spermat'icus** [NA], the structure that extends from the abdominal inguinal ring to the testis; called also *chorda spermatica*. See *spermatic cord*. **funiculi of spinal cord**, funiculi medullae spinalis. **f. of spinal cord, anterior**, f. anterior medullae spinalis. **f. of spinal cord, lateral**, f. lateralis medullae spinalis. **f. of spinal cord, posterior**, f. posterior medullae spinalis. **f. te'res** (obs.), eminencia medialis fossae rhomboideae. **f. umbilica'lis** [NA], the flexible structure connecting the umbilicus with the placenta and giving passage to the umbilical arteries and vein; called also *chorda umbilicalis* and *funis*. See *umbilical cord*, under *cord*. **ventral f.**, **f. ventra'lis**, f. anterior medullae spinalis.

funiform (fu'nī-form) [L. *funis* rope + *forma* shape] resembling a rope or cord.

funis (fu'nis) [L. "cord"] any cordlike structure; particularly the umbilical cord. **f. bra'chii**, the median cephalic vein of the arm (vena mediana cephalica). **f. hippo'cratis**, tendo calcaneus.

funnel (fun'el) a conic, hollow structure with a narrow opening at the apex, such as the vessels used in chemistry and pharmacy in filtering and for other purposes. **accessory müllerian f.**, a rudiment similar to the primordial uterine tube. **mitral f.**, the cone-shaped mitral valve seen in mitral stenosis, the orifice being at the apex of the cone. **muscular f.**, the funnel-shaped space bounded by the four straight muscles of the eye. **pial f.**, a sheath of adventitia, extended from the pia mater, loosely surrounding the blood vessels of the substance of the brain or cord. **Renver's f.**, an appliance used in treating urethral stricture. **vascular f.**, the light colored depression at the center of the disk of the retina.

F.U.O. fever of undetermined origin.

Furacin (fu'rah-sin) trademark for preparations of nitrofurazone.

Furadantin (fur'ah-dan'tin) trademark for preparations of nitrofurantoin.

furane, furan (fu'ran) a colorless liquid, $\text{CH}_2\text{CH}=\text{CH}_2$, from wood tar.

furanose (fu'rah-nōs) a sugar in which the oxygen ring bridges carbon atoms 1 and 4 in the aldoses or carbon atoms 2 and 5 in the ketoses.

Furaspur (fu'ah-spōr) trademark for a preparation of nitrofurfuryl methyl ether; see under *ether*.

furazolidone (fu'rah-zol'i-dōn) chemical name: 3-[(5-nitro-2-furanyl)methylene]amino-2-oxazolidinone. An antibacterial and antiprotozoal, $\text{C}_6\text{H}_7\text{N}_3\text{O}_5$, occurring as a white to slightly yellow, crystalline powder, effective against many gram-negative enteric organisms; used in the treatment of diarrhea and enteritis due to

susceptible organisms, administered orally, and (combined with nifuroxime) in bacterial, candidal, and trichomonal vaginitis, administered intravaginally.

furazolium (fūr'ah-zō'le-um) chemical name: 6,7-dihydro-3-(5-nitro-2-furyl)-5H-imidazo[2,1-b]thiazolium; an antibacterial. **f. chloride**, the chloride salt of furazolium, $\text{C}_9\text{H}_8\text{ClN}_3\text{O}_3\text{S}$; an antibacterial. **f. tartrate**, the tartrate salt of furazolium, $\text{C}_{13}\text{H}_{13}\text{N}_3\text{O}_6\text{S}$; an antibacterial.

Fürbringer's sign, test (fer'bring-erz) [Paul Fürbringer, Berlin physician, 1849-1930] see under *sign* and *tests*.

furcal (fur'kal) [L. *furca* fork] shaped like a fork; forked.

furcation (fur-ka'shun) the anatomical area of a multirooted tooth where the roots divide.

furcocercous (fur'ko-ser'kus) [L. *furca* fork + Gr. *kerkos* tail] having a forked tail.

furcula (fur'ku-la) [L. "little fork"] a horseshoe-shaped ridge in the embryonic larynx, bounding the pharyngeal aperture in front and laterally.

furfuraceous (fur'fu-ra'shus) [L. *furfur* bran] fine and loose; said of scales resembling bran or dandruff.

furfural (fur'fu-ral) furfural.

furfuran (fur'fu-ran) furan.

furfural (fur'fu-rol) [L. *furfur* bran] an aromatic compound, $\text{CH}_3\text{CH}=\text{CH}_2\text{CHO}$, from the distillation of bran, sawdust, etc. It  causes convulsions in animals.

causes convulsions in animals.

furibund (fu'ri-bund) full of fury; raging; maniacal.

furobuen (fu'ro-bu'fen) chemical name: γ-oxo-2-dibenzofuran-butanoic acid; an anti-inflammatory, $\text{C}_{16}\text{H}_{12}\text{O}_4$.

furocoumarin (fu'ro-koo'mah-rin) any of a group of antifungal dyestuffs produced by certain species of plants (e.g., parsley and figs) which, on contact with skin, cause photosensitization.

furodazole (fur-o'dah-zōl) chemical name: 2-(2-furanyl)-7-methyl-1H-imidazol hydrate; an anthelmintic, $\text{C}_{16}\text{H}_{11}\text{N}_3\text{O}_2 \cdot x\text{H}_2\text{O}$.

furor (fu'ror) [L.] fury; rage. **f. epilep'ticus**, an attack of intense anger occurring in epilepsy. **f. uteri'nus**, nymphomania.

furosemide (fu-ro'sē-mid) [USP] chemical name: 5-(aminosulfonyl)-4-chloro-2-[2-furanylmethyl]amino]benzoic acid. A sulfonamide, $\text{C}_{12}\text{H}_{11}\text{ClN}_2\text{O}_6\text{S}$, occurring as a white to slightly yellow, crystalline powder; used as a diuretic in the treatment of disorders in which edema is a symptom and in hypertension, administered orally, intramuscularly, and intravenously. Called also *frusemide* and *furseamide*.

Furoxone (fur-ok'sōn) trademark for preparations of furazolidone.

furrow (fur'o) a groove or trench. **atrioventricular f.**, the transverse groove marking off the atria of the heart from the ventricles. **digital f.**, any one of the transverse folds across the joints on the palmar surface of a finger. **genital f.**, a groove that appears on the genital tubercle of the fetus at the end of the second month. **gluteal f.**, the furrow which separates the buttocks; called also *intergluteal* or *natal cleft*. **Jadelot's f's**, see under *line*. **Liebermeister's f's**, depressions sometimes seen on the upper surface of the liver from pressure of the ribs, generally caused by tight garments or tight lacing of a girdle or corset. **mentolabial f.**, the hollow just above the chin. **nympholabial f.**, a groove separating the labium majus and labium minus on either side. **primitive f.**, primitive groove. **scleral f.**, sulcus sclerae. **Sibson's f.**, the lower border of the pectoralis major muscle. **skin f's**, sulci cutis.

fursalan (fur'sah-lan) chemical name: 3,5-dibromo-N-(tetrahydrofurfuryl)salicylamide; a disinfectant, $\text{C}_{12}\text{H}_{13}\text{Br}_2\text{NO}_3$.

furseamide (fur'sē-mid) furosemide.

Fürstner's disease (ferst'nerz) [Carl Fürstner, German psychiatrist, 1848-1906] see under *disease*.

furuncle (fu'rung-k'l) [L. *furunculus*] a painful nodule formed in the skin by circumscribed inflammation of the corium and subcutaneous tissue, enclosing a central slough or "core." Furuncles are caused by staphylococci, which enter through the hair follicles, and their formation is favored by constitutional or digestive derangement and local irritation. Called also *boil* and *furunculus*.

furuncular (fu-rung'ku-lar) pertaining to or of the nature of a furuncle or boil.

furunculoid (fu-rung'ku-loid) resembling a furuncle or boil.

furunculosis (fu-rung'ku-lo'sis) 1. the persistent sequential occurrence of furuncles over a period of weeks or months. 2. the simultaneous occurrence of a number of furuncles. **f. blastomycet'ica**, **f. cryptococ'ica**, any systemic fungous infection in which the lesions resemble furuncles.

furunculus (fu-rung'ku-lus), pl. *furunculi* [L.] furuncle. **f. orienta'lis** (obs.), cutaneous leishmaniasis.

fusaridiosis (fu'sah-rid'e-o'sis) a dermatomycosis of horses thought to be caused by the mold *Fusarium equinum* (a species now considered to be identical with *Microsporum canis*).

fusariotoxicosis (fu-sar'f'i-o-tok'si-ko'sis) a form of mycotoxicosis caused by fungi of the genus *Fusarium*.

Fusarium (fu-sa're-um) a genus of Fungi Imperfecti of the order Moniales, family Tuberculariaceae; the perfect stages of many species are included in the class Ascomycetes, order Hypocreales. Some are important pathogens of plants, and some are opportunistic infectious agents of man and animals. They have been isolated from otomycosis externa and mycotic keratitis. *F. oxysporum* and *F. solani* are frequently associated with mycotic keratitis, often destroying the eye. The *F. equinum* reported to cause a dermatomycosis of horses is probably *Microsporium canis*. **F. oxysporum**, a species causing banana wilt. **F. solanae**, a species causing potato wilt and, occasionally, mycotic keratitis of man. **F. sporotrichiella**, a species believed to be the etiologic agent of Kashin-Beck disease.

fuscin (fu'sin) [L. *fuscus* brown] a brown pigment of the retinal epithelium.

fuse (fūz) 1. a bar, strip, or wire of easily fusible metal inserted for safety in an electric circuit; when the current increases beyond a safe strength the metal melts, thus breaking the circuit and thereby saving an apparatus from overload. 2. to join together, as the abnormal coherence of adjacent body structures.

fuseau (fē-zō'), pl. *fuseaux* [Fr.] a macroaleuriospore or macroconidium.

fusi (fu'si) [L.] plural of *fusus*.

fusible (fu'zī-b'l) susceptible of being melted or fused.

fusicellular (fu'si-sel'u-lar) fusocellular.

fusidate sodium (fu'sī-dāt) chemical name: (17Z)-16β-(acetyloxy)-3α,11α-dihydroxy-29-nor-8α,9β,13α,14β-dammara-17(20),-24-diene-21-*oic* acid monosodium salt; an antibiotic of unspecified action, C₃₁H₄₇NaO₄.

fusiform (fu'zī-form) [L. *fusus* spindle + *forma* form] spindle shaped.

Fusiformis (fu'sī-for'mis) a name formerly given to the genus *Fusobacterium*. **F. necrophorus**, *Fusobacterium necrophorum*.

fusimotor (fu'sī-mo'tor) denoting motor nerve fibers (of gamma motoneurons) that innervate intrafusal fibers of the muscle spindle.

fusion (fu'zhun) [L. *fusio*] 1. the act, process, or result of melting. 2. the merging or coherence of adjacent parts or bodies. 3. the coordination of the separate images of the same object in the two eyes into one. 4. the operative formation of an ankylosis or arthrodesis (*f. of joint*). **binocular f.**, see *fusion*, def. 3. **diaphyseal-epiphyseal f.**, operative establishment of bony union between the diaphysis and epiphysis, to arrest growth in length of a bone. **nerve f.**, a method of nerve anastomosis done for the purpose of inducing a regeneration which will

resupply empty tracts of a nerve by new growths of fibers. **nuclear f.**, the fusion of two atomic nuclei to form a single heavier nucleus, resulting in the release of large amounts of energy. **spinal f.**, spondylosynesis.

fusional (fu'zhun-al) marked by fusion.

Fusobacterium (fu'zo-bak-te're-um) a genus of nonsporulating obligate anaerobic filamentous bacteria occurring as normal flora in the mouth and large bowel; often found in necrotic tissue, probably as secondary invaders. Formerly called *Fusiformis*. **F. necrophorum**, a species found in abscesses of the liver, lungs, blood, and other tissues and in chronic ulcer of the colon in man. It is also pathogenic for animals. Called also *Actinomyces necrophorus*, *Bacteroides funduliformis*, Schmorl's bacillus, and *Sphaerophorus necrophorus*. See also *foot rot of cattle* and *foot rot of sheep*, under *rot*; *necrobacillosis*; *calf diphtheria*, under *diphtheria*, and *Schmorl's disease*, under *disease*. **F. plauti-vincen'ti**, an organism found along with a spirillum (*Borrelia vincenti*) in necrotizing ulcerative gingivitis (trench mouth) and necrotizing ulcerative stomatitis. Called also *Bacteroides fusiformis*.

fusocellular (fu'so-sel'u-lar) [L. *fusus* spindle + *cellular*] having spindle-shaped cells.

fusospirillary (fu'so-spi'rī-lār'e) pertaining to or caused by fusiform bacilli and spirillae, as in necrotizing ulcerative gingivitis.

fusospirillosis (fu'so-spi'rī-lo'sis) necrotizing ulcerative gingivitis.

fusospirochetal (fu'so-spi'ro-ke'tal) pertaining to or caused by fusiform bacilli and spirochetes.

fusospirochetosis (fu'so-spi'ro-ke-to'sis) infection with fusiform bacilli and spirochetes.

fusostreptococciosis (fu'so-strep'to-kok-sī-ko'sis) infection with fusiform bacilli and streptococci.

fustic (fus'tik) a yellow dye wood from a South American tree, *Chlorophora tinctoria*.

fustigation (fus'tī-ga'shun) [L. *fustigatio*] flagellation (def. 2).

fusus (fu'sus), pl. *fusi* [L.] a spindle-like object; applied especially to minute air vesicles in a hair shaft. **cortical fusi**, the delicate air spaces appearing among the cells of the cortex as a hair grows out, produced by drying out of the fluid which fills the spaces in the living portion of the hair root. **fracture fusi**, minute rifts or ruptures observed between the keratinized cells of the cortex of a mature hair shaft which has been subjected to pressure sufficient to dissociate the cells of the particular region.

fututrix (fu-tu'triks) a female who practices tribadism.

F. vs. abbreviation for L. *fi'at venaesectio*, let the patient be bled.

G

G 1. symbol for *gravitational constant*. 2. symbol for *giga*. 3. gram; gingival; glucose; gonidial (colony).

g gravity; the unit of force exerted upon the body during acceleration and deceleration; gram.

g. gram (or grams).

γ the third letter of the Greek alphabet; see *gamma*. Symbol for *microgram* and *immunoglobulin*.

Ga chemical symbol for *gallium*.

GABA gamma-aminobutyric acid.

G-actin see *actin*.

gadfly (gad'fli) see *Tabanus*.

gadolinium (gad'o-lin'e-um) a rare element of atomic number 64, atomic weight 157.25, symbol Gd.

gaduhiston (gad'u-his'ton) [L. *gadus* cod + *histon*] a histone occurring in the spermatozoa of the codfish.

Gadus (ga'dus) [L.; Gr. *gados*] a genus of fishes. **G. mor'rhua**, the codfish; from its liver, cod liver oil is prepared.

Gaenslen's sign (test) (gēnz'lēnz) [Frederick Julius Gaenslen, Milwaukee surgeon, 1877-1937] see under *sign*.

Gaertner see *Gärtner*.

Gaffky scale (table) (gaf'ke) [Georg Theodor August Gaffky, German bacteriologist, 1850-1918] see under *scale*.

Gaffkya (gaf'ke-ah) [G. T. A. Gaffky] a genus of microorganisms of the family Micrococcaceae, order Eubacteriales, occurring as spherical cells in tetrads, often appearing to be enclosed in a common capsule. **G. homa'ri**, a species pathogenic for lobsters but not known to occur in man. **G. tetrag'ena**, a part of the normal flora of the upper respiratory tract of man, but often pathogenic for mice and other species.

gag (gag) 1. a surgical device for holding the mouth open. 2. to retch, or strive to vomit. **Dott g.**, an instrument for keeping

the mouth open during operations on the palate. **Kilner-Dott g.**, an instrument for keeping the mouth open during operations on the palate.

gage (gāj) gauge.

Gaillard-Arlt suture (ga-yahrz') [François Lucien Gaillard, French physician, 1805-1869; Carl Ferdinand Ritter von Arlt, ophthalmologist in Vienna, 1812-1887] see under *suture*.

gain (gān) 1. an increase in amount or value; a benefit or advantage; the increase achieved by amplification of a signal. 2. to acquire, obtain, or increase. **antigen g.**, the acquisition by cells of new antigenic determinants not normally present or not normally accessible in the parent tissue. **epinosic g.**, a secondary psychic or social advantage derived from a symptom or illness, as opposed to paranosic gain. Called also *secondary g.* **paranosic g.**, the primary psychic advantage in allaying internal conflicts and preserving ego integrity, derived from neurotic illness; opposed to epinosic gain. Called also *primary g.* **primary g.**, paranosic g. **secondary g.**, epinosic g.

Gairdner's test (gārd'nerz) [Sir William Tennant Gairdner, Scotch physician, 1824-1907] coin test; see under *tests*.

Gaisböck's disease, syndrome (gis'bekz) [Felix Gaisböck, German physician, 1868-1955] stress polycythemia.

gait (gāt) the manner or style of walking. **antalgic g.**, a limp adopted so as to avoid pain on weight-bearing structures (as in hip injuries), characterized by a very short stance phase. **ataxic g.**, an unsteady, uncoordinated walk, employing a wide base; see *tabetic g.* **cerebellar g.**, a staggering gait indicative of cerebellar disease. **Charcot's g.**, the peculiar gait seen in Friedreich's ataxia. **double step g.**, a gait in which the length and/or timing of alternate steps is noticeably different. **drag-to g.**, a gait in which the feet are dragged (rather than lifted) toward the crutches. **equine g.**, a walk accomplished

mainly by flexing the hip joint; seen in crossed-leg palsy. **fes-tinating g.**, a gait in which the patient involuntarily moves with short, accelerating steps, often on tiptoe, as seen in paralysis agitans and other nervous disorders; festination. **four-point g.**, a gait in forward motion is as follows: first one crutch and then the opposite leg, followed by the other crutch and then the other leg, and so on. **gluteal g.**, the gait characteristic of paralysis of the gluteus medius muscle, marked by a listing of the trunk toward the affected side at each step; called also *Trendelenburg g.* **heel-toe g.**, a gait in which the heel touches down first and the toes last. **helicopter g.**, a gait in which the feet describe half-circles, as in some cases of hysterical disorder. **hemiple-gic g.**, a gait involving flexion of the hip because of drop-foot and circumduction of the leg. **intermittent double-step g.**, a hemiplegic gait in which there is a pause after the short step of the normal foot, or in some cases after the step of the affected foot. **Oppenheim's g.**, a gait marked by irregular oscillation of the head, limbs, and body; seen in some cases of multiple sclerosis. **scissor g.**, a gait in which one foot is passed in front of the other, producing a cross-legged progression. **spastic g.**, a walk in which the legs are held together and move in a stiff manner, the toes seeming to drag and catch. **staggering g.**, a reeling, tot-tering, and tipping gait in which the individual appears as if he may fall backward or lose his balance; it is associated with alcoholic and barbiturate intoxication. **steppage g.**, the gait in drop foot in which the advancing leg is lifted high in order that the toes may clear the ground. It is due to paralysis of the anterior tibial and peroneal muscles and is seen in lesions of the lower motor neuron, such as multiple neuritis, lesions of the anterior motor horn cells, and lesions of the cauda equina. **swaying g.**, cerebellar g. **swing-through g.**, a gait in which the crutches are advanced and then the legs are swung past them. **swing-to g.**, a gait in which the crutches are advanced and the legs are swung to the same point. **tabetic g.**, an ataxic gait in which the feet slap the ground; in daylight the patient can avoid some unsteadiness by watching his feet. **three-point g.**, a gait in which both crutches and the affected leg are advanced together and then the normal leg is moved forward. **Trendelenburg g.**, gluteal g. **two-point g.**, a gait in which the right foot and left crutch (or cane) are advanced together, and then the left foot and right crutch. **waddling g.**, exaggerated alternation of lateral trunk movements with an exaggerated elevation of the hip, suggesting the gait of a duck; characteristic of progressive muscular dystrophy.

galact- see *galacto-*.

galactacrasia (gal'ak-tah-kra'se-ah) [*galact-* + a neg. + Gr. *kra-sis* mixture + *-ia*] abnormal condition of the breast milk.

galactagogen (gah-lak'tah-gog'in) human placental lactogen.

galactagogue (gah-lak'tah-gog) [*galact-* + Gr. *agōgos* leading] 1. promoting the flow of milk. 2. an agent that promotes the flow of milk.

galactan (gah-lak'tan) a hemicellulose carbohydrate that yields galactose upon hydrolysis; agar is a well-known example.

galactemia (gal'ak-te'me-ah) [*galact-* + Gr. *haima* blood + *-ia*] the presence of milk in the blood.

galactic (gah-lak'tik) 1. pertaining to milk. 2. galactagogue.

galactin (gah-lak'tin) prolactin.

galactischia (gal'ak-tisk'e-ah) [*galact-* + Gr. *ischein* to suppress] suppression of the secretion of milk.

galactitol (gah-lak'ti-tol) dulcitol.

galacto-, galact- (gah-lak'to; gah-lakt') [Gr. *gala*, *galaktos* milk] combining form denoting relationship to milk.

galactoblast (gah-lak'to-blast) [*galacto-* + Gr. *blastos* germ] a colostrum corpuscle found in the acini of the mammary gland.

galactobolic (gah-lak'to-bol'ik) of or relating to the action of neurohypophyseal peptides which contract the mammary myoe-pithelium and cause ejection of milk.

galactoceles (gah-lak'to-sēl) [*galacto-* + Gr. *kēlē* tumor] 1. a cystic enlargement of the mammary gland containing milk. 2. a hydrocele filled with a milky fluid. Called also *galactoma*.

galactocerebroside (gah-lak'to-ser'ē-bro-sīd) cerebroside.

galactochloral (gah-lak-to-klo'ral) a derivative, C₆H₄Cl₃O₆, of chloral and galactose in glossy scales; it is used as a hypnotic.

galactocrasia (gah-lak-to-kra'se-ah) galactacrasia.

galactogen (gah-lak'to-jen) a polysaccharide in the eggs of snails which yields galactose on hydrolysis.

galactogenous (gal'ak-toj'ē-nus) [*galacto-* + Gr. *gennan* to pro-duce] favoring the production of milk.

galactagogue (gah-lak'to-gog) galactagogue.

galactography (gal'ak-tog'rah-fe) [*galacto-* + *-graphy*] radiog-raphy of the mammary ducts after injection of a radiopaque substance into the duct system.

galactokinase (gah-lak'to-ki'nās) ATP: D-galactose-1-phospho-transferase: an enzyme that catalyzes the transfer of a high-en-ergy phosphate group from a donor to D-galactose, producing D-galactose-1-phosphate. See also *kinase* (def. 1).

galactolipid (gah-lak'to-lip'id) galactolipin.

galactolipin, galactolipine (gah-lak'to-li'pin) a cerebroside which yields galactose on hydrolysis; found abundantly in nervous tissue, usually as structural material. See *cerebroside*.

galactoma (gal'ak-to'mah) [*galact-* + *-oma*] galactocoele.

galactometastasis (gah-lak'to-mē-tas'tah-sis) galactoplasia.

galactometer (gal'ak-tom'ē-ter) [*galacto-* + Gr. *metron* measure] an instrument for measuring the specific gravity of milk.

galactopexic (gah-lak'to-pek'sik) fixing or holding galactose.

galactopexy (gah-lak'to-pek'se) the fixation of galactose by the liver.

galactophagous (gal'ak-tof'ah-gus) [*galacto-* + Gr. *phagein* to eat] feeding upon milk.

galactophlebitis (gah-lak'to-fle-bi'tis) [*galacto-* + *phlebitis*] phlegmasia alba dolens.

galactophyllysis (gal'ak-tof'li-sis) [*galacto-* + Gr. *phyllysis* eruption] a vesicular eruption containing a milky fluid.

galactophore (gah-lak'to-for) 1. galactophorous. 2. a milk duct.

galactophoritis (gah-lak'to-to-ri'tis) [*galacto-* + Gr. *pherein* to carry + *-itis*] inflammation of the milk ducts.

galactophorous (gal'ak-tof'o-rus) [*galacto-* + Gr. *pherein* to bear] conveying milk.

galactophygous (gal-ak-tof'i-gus) [*galacto-* + Gr. *phygē* flight] arresting the milk secretion.

galactoplasia (gah-lak'to-pla'ne-ah) [*galacto-* + Gr. *planē* wan-dering] the secretion of milk in some abnormal part; the me-tastasis of milk. Called also *galactometastasis*.

galactopoiesis (gah-lak'to-poi-e'sis) the production of milk by the mammary glands.

galactopoietic (gah-lak'to-poi-et'ik) [*galacto-* + Gr. *poiein* to make] 1. pertaining to, characterized by, or promoting the pro-duction of milk. 2. an agent that promotes the secretion of milk.

galactopyra (gah-lak'to-pi'rah) [*galacto-* + Gr. *pyr* fire] milk fever.

galactopyranose (gah-lak'to-pi'rah-nōs) the pyranose form of galactose, CH₂OH·CH·CH·(CHOH)₃·CHOH.

galactorrhea (gah-lak'to-re'ah) [*galacto-* + Gr. *rhoia* flow] ex-cessive or spontaneous flow of milk; persistent secretion of milk irrespective of nursing.

galactosamine (gah-lak'to-sam'in) an amino sugar, NH₂·CH₂·C(CHOH)₄·CHOH.

galactosan (gah-lak'to-san) a polysaccharide occurring in plants, yielding galactose on hydrolysis.

galactosazone (gah-lak'to-sa'zōn) the phenylsazone of galac-tose, CHOH(CHOH)₃C(N·NH·C₆H₅)·CH·N·NH·C₆H₅. It is a yellow, crystalline substance formed by treating galactose with phenylhydrazine and acetic acid. The crystals melt at 193° C. and may be used in identifying galactose.

galactoschesis (gal'ak-tos'kē-sis) [*galacto-* + Gr. *schesis* suppres-sion] galactischia.

galactoscope (gah-lak'to-skōp) [*galacto-* + Gr. *skopein* to exam-ine] a device for showing the proportion of cream in the milk.

galactose (gah-lak'tōs) an aldohexose, CH₂OH(CHOH)₄CHO, obtained from lactose or milk sugar by enzymatic action or by boiling with a mineral acid. It is a white crystalline substance, resembles glucose in most of its properties, but is less soluble, less sweet, and forms mucic acid when oxidized with nitric acid. D-Galactose is found in milk sugar, in the cerebroside of the brain, in the raffinose of the sugar beet, and in many gums and seaweeds; L-galactose in flaxseed mucilage.

galactosemia (gah-lak'to-se'me-ah) a hereditary disorder of galactose metabolism occurring in two forms. The classic form, due to deficiency of the enzyme galactose-1-phosphate uridyl transfer-ase, is marked by accumulation of galactose-1-phosphate and galactose in the tissues and by hepatomegaly, cataracts, and mental retardation, with vomiting, diarrhea, jaundice, poor weight gain, and malnutrition in early infancy. The second form, due to galactokinase deficiency, is marked only by cataract formation and accumulation of galactose in the blood and tissues. Both forms are transmitted as autosomal recessive traits.

galactosidase (gah-lak'to-si'dās) an enzyme occurring in two forms: α-galactosidase (melibiase) hydrolyzes the conversion of α-D-galactoside to D-galactose; β-galactosidase (lactase), which occurs in the kidney, liver, and intestinal mucosa, hydrolyzes the conversion of β-D-galactoside to D-galactose.

galactoside (gah-lak'to-sīd) a glycoside containing galactose.

galactosis (gal'ak-to'sis) the formation of milk by the lacteal glands.

galactostasia (gah-lak'to-sta'se-ah) galactostasis.

galactostasis (gal'ak-tos'tah-sis) [*galacto-* + Gr. *stasis* halt] 1. cessation of the milk secretion. 2. an abnormal collection of milk in the mammary glands.

galactosuria (gah-lak''to-su're-ah) [*galactose* + Gr. *ouron* urine + *-ia*] presence of galactose in the urine.

galactotherapy (gah-lak''to-ther'ah-pe) [*galacto-* + Gr. *therapeia* treatment] 1. the treatment of suckling children by giving remedies to the mother or wet nurse. 2. milk cure. 3. (*obs.*) the hypodermic injection of the milk of a syphilitic patient for the cure of syphilis.

galactotoxin (gah-lak''to-tok'sin) [*galacto-* + Gr. *toxikon* poison] a basic substance formed in milk.

galactotoxism (gah-lak''to-tok'sizm) poisoning by milk.

galactotrophy (gal''ak-tot'ro-fe) [*galacto-* + Gr. *trophē* nutrition] feeding with milk.

galactowaldenase (gah-lak''to-wal'den-ās) UDP-glucose epimerase.

galactoxism (gal''ak-tok'sizm) galactotoxism.

galactoxismus (gah-lak''tok-siz'mus) galactotoxism.

galactozymase (gah-lak''to-zi'mās) [*galacto-* + Gr. *zymē* leaven] a starch-liquefying enzyme.

galacturia (gal''ak-tu're-ah) [*galact-* + Gr. *ouron* urine + *-ia*] the discharge of milklike urine; chyluria.

galantamine hydrobromide (gah-lan'tah-mēn) galanthamine hydrobromide.

galanthamine hydrobromide (gah-lan'thah-mēn) the hydrobromide salt of an alkaloid, $C_{17}H_{21}NO_3 \cdot HBr$, obtained in the U.S.S.R. from the Caucasian snowdrop *Galanthus woronowii* and closely related species. It is a cholinesterase inhibitor, and is used in the U.S.S.R. in the treatment of myasthenia, myopathy, and sensory and motor dysfunction associated with disorders of the central nervous system and may be used as an antidote to nonpolarizing muscle relaxants. Called also *galantamine hydrobromide*.

gale (gahl) [Fr.] scabies.

galea (ga'le-ah) [L.] a helmet; [NA] a general term for a helmet-like structure. **g. aponeurotica** [NA], the aponeurotic structure of the scalp, connecting the frontal and occipital bellies of the occipitofrontalis muscle.

galeanthropy (ga''le-an'thro-pe) [Gr. *galē* cat + *anthrōpos* man] (*obs.*) a mental delusion that one has become a cat.

Galeati's glands (gal''e-ah'tēz) [Domenico Maria Galeati, Italian physician, 1686-1775] glandulae duodenales.

galeatus (gal''e-a'tus) [L. *galea* helmet] born with a caul.

Galeazzi's fracture, sign (gal''e-at'zēz) [Riccardo Galeazzi, Italian orthopedic surgeon, 1866-1952] see under the nouns.

Galen (ga'len) [Claudius (or Clarissimus) Galenus] (c. 129-199 A.D.). The celebrated Greek physician and medical writer, born at Pergamum (Asia Minor); latterly he practiced in Rome, where he became physician to the Emperor, Marcus Aurelius. Although he did not dissect the human cadaver, he made many valuable anatomical and physiological observations on animals, and his writings on these and other subjects are extensive. His influence on medicine was profound for many centuries—his teleology ("nature does nothing in vain") being particularly attractive to the medieval mind, although it was stultifying as regards advances in medical thought and practice. See also under *anastomosis*, *bandage*, and *foramen*, and see *venae cerebri internae*, and *magna*, and *ventricular laryngis*.

galenic (gah-len'ik) pertaining to the ancient system of medicine taught and practiced by Galenus, or Galen.

galenica (gah-len'i-kah) galenicals.

galenicals (gah-len'i-kalz) medicines prepared according to the formulas of Galen; the term is now used to denote standard preparations containing one or several organic ingredients, as contrasted with pure chemical substances.

galenics (gah-len'iks) galenicals.

galenism (ga'len-izm) Galen's system of medicine, being a blend of the humoral theory and Pythagorean number lore.

Galeodes araneoides (gal''e-o'dēz ah-ra''ne-oi'dēz) a spider-like arachnid of the Old World, with a venomous bite.

galeophilia (gal''e-o-fil'e-ah) (*obs.*) ailurophilia.

galeophobia (gal''e-o-fō'be-ah) (*obs.*) ailurophobia.

galeropia, galeropsia (gal''er-o'pe-ah, gal''er-op'se-ah) [Gr. *galeos* cheerful + *opsis* vision] exceptional clearness of vision.

gall (gawl) [L. *galla*] 1. the bile. 2. nutgall. **Aleppo g.**, nutgall. **ox g.**, see *ox bile extract*, under *extract*. **Smyrna g.**, nutgall. **wind g.**, windgall.

Gall's craniology (gawlz) [Franz Joseph Gall, anatomist in Vienna and Paris, 1758-1828] phrenology.

galacetophenone (gal-as''e-to-fe'non) chemical name: 2',3',4'-trihydroxyacetophenone. A yellowish powder, $CH_3 \cdot CO \cdot C_6H_2(OH)_3$, used as an antiseptic.

gallamine triethiodide (gal''ah-mīn tri''ē-thi'o-did) [USP] chemical name: 2,2',2''-[1,2,3-benzenetriyltris(oxy)]tris[*N,N,N*-triethyl]ethanaminium triiodide. A quaternary ammonium compound, $C_{30}H_{60}I_3N_3O_3$, occurring as a white, amorphous powder; used to induce skeletal muscle relaxation during surgery and

other procedures, such as endoscopy or intubation, administered intravenously. Called also *benzurine iodide*.

gallate (gal'āt) any salt of gallic acid.

gallbladder (gawl'blad-der) the pear-shaped reservoir for the bile on the posteroinferior surface of the liver, between the right and the quadrate lobe; from its neck, the cystic duct projects to join the common bile duct. Called also *cholecyst* and *vesica fellea* [NA]. **Courvoisier's g.**, a distended gallbladder resulting from biliary tract obstruction. **fish-scale g.**, a gallbladder with a fish-scale-like appearance due to multiple small cysts of the mucosa. **floating g.**, wandering g. **folded fundus g.**, phrygian cap. **hourglass g.**, a gallbladder in which there is an annular constriction dividing it into a wide upper and a narrower lower compartment; the anomaly may be congenital or acquired. **mobile g.**, wandering g. **sandpaper g.**, a rough state of the mucous membrane of the gallbladder caused by the presence of the cholesterol crystals. **stasis g.**, a gallbladder that contracts sluggishly in response to a fatty meal. **strawberry g.**, a gallbladder with a strawberry-like appearance, due to fine grains of cholesterol-fat material embedded in the mucosa as a result of chronic catarrhal inflammation. **wandering g.**, abnormal mobility of the fundus and body of the gallbladder.

gallein (gal'e-in) dioxyfluorescein, an aniline dye indicator which is changed in color by an alkali to red and by an acid to yellow.

Gallie transplant (gal'e) [William Edward Gallie, Toronto surgeon, 1882-1959] see under *transplant*.

Galli Mainini test (gal'e mi-ne'ne) [Carlos Galli Mainini, physician in Buenos Aires] see under *test*.

Gallionella (gal''le-o-nel'ah) [Benjamin Gaillon, French zoologist, 1782-1839] a genus of microorganisms of the family Caulobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as stalked, kidney-shaped or rounded cells, growing only in iron-containing fresh or salt water. It includes five species, *G. ferrugin'ea*, *G. infurcata*, *G. major*, *G. minor*, and *G. umbellata*.

gallipot (gal'i-pot) a small pot for ointments or confections.

gallisin (gal'i-sin) a substance analogous to dextrin.

gallium (gal'e-um) [L., from *Gallia* Gaul] a rare metal liquid at room temperature; atomic number, 31, atomic weight, 69.72; symbol, Ga: some of its compounds are poisonous.

gallnut (gawl'nūt) nutgall.

gallon (gal'on) [L. *congius*] a measure of volume, four quarts (3785 ml.); in the United States, 231 cubic inches.

gallop (gal'op) a disordered rhythm of the heart; see under *rhythm*.

gallsickness (gawl-sik'nes) anaplasmosis.

gallstone (gawl'stōn) a concretion, usually of cholesterol, formed in the gallbladder or bile duct.

GALT gut-associated lymphoid tissue; see under *tissue*.

Galton's delta, law, whistle (gawl'tonz) [Sir Francis Galton, English scientist, 1822-1911] see under the nouns.

Galv. galvanic.

galvanic (gal-van'ik) 1. named for or discovered by Luigi Galvani, Italian physician and physiologist, 1737-1798. 2. pertaining to galvanism.

galvanism (gal'vah-nizm) [Luigi Galvani] 1. galvanic electricity: unidirectional electric current derived from a chemical battery. 2. the therapeutic use of direct current. **dental g.**, a physicochemical phenomenon in which two or more dissimilar metals that have been used to restore or replace missing teeth produce the flow of an electric current. In such instances the patient may experience sharp, painful shocks to the teeth, and the pulp may become hyperemic or inflamed.

galvanization (gal'vah-ni-za'shun) treatment by galvanic electricity.

galvanocautery (gal'vah-no-kaw'ter-e) cautery accomplished by application of a wire heated with a galvanic current.

galvanochemical (gal'vah-no-kem'e-kal) pertaining to the chemical action of the galvanic current.

galvanocontractility (gal'vah-no-kon'trak-til'i-te) contractility in response to a galvanic stimulus.

galvanogustometer (gal'vah-no-gus-tom'ē-ter) an apparatus for the clinical determination of taste thresholds by the use of a galvanic current.

galvanoionization (gal'vah-no-i'on-i-za'shun) (*obs.*) iontophoresis.

galvanolysis (gal'vah-nol'i-sis) [*galvanism* + Gr. *lysis* dissolution] electrolysis.

galvanometer (gal'vah-nom'ē-ter) [*galvanism* + Gr. *metron* measure] an instrument for measuring current by electromagnetic action. **Einthoven's g., string g., thread g.**, an apparatus for detecting very minute electric currents, consisting of a delicate thread of silvered quartz or platinum stretched between the poles of a strong magnet. The thread may be illuminated by an arc light and the shadow of the thread thrown upon a screen after being magnified by a microscope.

galvanonarcosis (gal'vah-no-nar-ko'sis) (*obs.*) electronarcosis.

galvanonervous (gal/'vah-no-ner'vus) produced by application of the galvanic current to a nerve trunk.

galvanopalpation (gal/'vah-no-pal-pa'shun) a method of testing the sensory and vasomotor nerves of the skin by applying a sharp-pointed anode electrode to the part of the skin to be tested, the cathode being applied to some other part of the body.

galvanosurgery (gal/'vah-no-sur'jer-e) the employment of galvanic cautery in surgery.

galvanotaxis (gal/'vah-no-tak'sis) the tendency of an organism to arrange itself in a medium so that its axis bears a certain relation to the direction of the current in the medium.

galvanotherapeutics, galvanotherapy (gal-'vah-no-ther'-ah-pu'tiks, gal/'vah-no-ther'ah-pe) the therapeutic use of galvanic current.

galvanotropism (gal/'vah-not'ro-pizm) [*galvanism* + Gr. *tropos* a turn] the tendency of an organism to turn or move under the action of an electric current.

galziekte (gahl-zêk'te) [Dutch *gal* gall + *ziekte* sickness] South African name for gallsickness.

gamo- see *gamo-*.

gamasid (gam'ah-sid) a mite of the Gamasides group.

Gamasidae (gah-mas'fī-de) former name for a family of mites of the order Acarina, the spider mites or beetle mites; they are parasitic on birds and animals. See *Gamasides* group; under *group*.

Gamasides (gah-mas'fī-dēz) see under *group*.

gamasoidosis (gam'ah-soi-do'sis) infestation by mites of the Gamasides group, such as the dermatitis caused by the fowl mite, *Dermanyssus*.

Gamastan (gam-as'tan) trademark for a preparation of immune human serum globulin.

Gambian horse disease, sickness (gam'be-an) [*Gambia*, a country on the west coast of Africa] see under *disease* and *sickness*.

gambir (gam'bēr) the dried aqueous, astringent extract from the leaves and twigs of *Uncaria gambier*, a rubiaceaceous climbing shrub of southeastern Asia, the chief constituents of which are catechin, catechutannic acid, and quercetin; formerly used as an antidiarrheal and as a gargle for sore throat. Called also *catechu* or *pale catechu*.

gamboge (gam-bōj', gam-booj') the yellow gum-resin from *Garcinia hanburyi* Hook. f., and other guttiferous plants of Cambodia and the East Indies; used as a drastic hydragogue cathartic. Abbreviated G.G.G. Called also *cambogia* and *gutti*.

Gambusia (gam-bu'se-ah) a genus of fish effective in destroying mosquito larvae. **G. affinis**, a top minnow which has been introduced into every major malarious region in the world; it feeds upon the larvae of *Anopheles* mosquitoes along the surface of the water.

gamefar (gah'mē-fahr) pamaquine.

gametangia (gam-ē-tan'je-ah) plural of *gametangium*.

gametangium (gam-ē-tan'je-um), pl. *gametan'gia* [*gamete* + Gr. *angeion* vessel] the structure in which zygospores are developed. See *spore*.

gamete (gam'ēt) [Gr. *gametē* wife, *gametēs* husband] 1. a reproductive element; one of two cells produced by a gametocyte, male (spermatozoon) and female (ovum), whose union is necessary, in sexual reproduction, to initiate the development of a new individual. The conjugation of male and female gametes produces a zygote. 2. a male or female reproductive cell of certain Sporozoa, such as malarial plasmodia, corresponding to the spermatozoon or ovum of Metazoa, found in the gut of the host. See also *macrogamete* and *microgamete*. 3. a 1N (haploid) cell in sexual fusion.

gametic (gah-met'ik) pertaining to gametes or the primitive sexual elements.

gameto- (gam'ē-to) [Gr. *gametē* wife, *gametēs* husband] a combining form denoting relationship to a gamete.

gametoblast (gam'ē-to-blast) [*gameto-* + Gr. *blastos* germ] (obs.) a sporozoite.

gametocidal (gam'ē-to-si'dal) capable of destroying gametes or gametocytes.

gametocide (gam'ē-to-si'd) [*gameto-* + L. *caedere* to kill] an agent that destroys gametes or gametocytes.

gametocinetic (gam'ē-to-si-net'ik) gametokinetic.

gametocyst (gah-met'o-sist) a protective envelope surrounding a male and female gametocyte in certain Sporozoa.

gametocyte (gah-met'o-sit) [*gameto-* + Gr. *kytos* hollow vessel] 1. an oocyte or spermatoocyte; a cell that produces gametes. 2. the sexual form, male or female, of certain Sporozoa, such as malarial plasmodia, found in the erythrocytes, which may produce gametes when ingested by the secondary host. See also *macrogametocyte* and *microgametocyte*.

gametocytemia (gah-me'to-si-te'me-ah) the presence of malarial gametocytes in the blood.

gametogenesis (gam'ē-to-jen'ē-sis) [*gameto-* + Gr. *genesis* pro-

duction] the development of the male and female sex cells, or gametes.

gametogenic (gam'ē-to-jen'ik) producing or favoring the production of germ cells.

gametogony (gam'ē-tog'o-ne) 1. the development of merozoites of malarial plasmodia and other sporozoa into male and female gametes, which later fuse to form a zygote; called also *gamogony*. 2. reproduction by means of gametes.

gametoid (gam'ē-toid) resembling gametes or reproductive cells.

gametokinetic (gam'ē-to-ki-net'ik) [*gameto-* + Gr. *kinein* to move] stimulating gamete action.

gametologist (gam'ē-to'l'o-jist) a scientist whose special study is gametology.

gametology (gam'ē-to'l'o-je) [*gamete* + Gr. *logos* discourse] the study of gametes.

gametophagia (gam'ē-to-fa'je-ah) gamophagia.

gametophyte (gam'ē-to-fit) [*gameto-* + Gr. *phyton* plant] the haploid or sexual stage in organisms having alternation of generations (metagenesis); it may be female (megagametophyte) or male (microgametophyte).

gametotropic (gam'ē-to-trop'ik) having affinity for gametes.

Gamgee tissue (gam'je) [Joseph Sampson *Gamgee*, British surgeon, 1828–1886] see under *tissue*.

gamic (gam'ik) sexual; applied to eggs which develop only after fertilization.

gamma (gam'ah) 1. the third letter in the Greek alphabet, γ; used as part of a chemical name to distinguish the third in a series of compounds or to designate the position of the third carbon atom of an aliphatic chain or the position opposite the alpha position on the naphthalene ring. 2. microgram. 3. a unit of intensity of magnetic field, γ = 0.0001 gauss. 4. a numerical expression of the degree of development of a photographic negative.

gamma benzene hexachloride (gam'ah ben'zēn hek'sah-klōr'id) lindane.

gammacism (gam'ah-sizm) [Gr. *gamma* the letter G] the imperfect utterance of velar consonants, especially *g* and *k* sounds.

Gammacorten (gam'ah-kor'ten) trademark for a preparation of dexamethasone.

Gammagee (gam'ah-je) trademark for a preparation of immune human serum globulin.

gamma globulin see under *globulin*.

gammaglobulinopathy (gam'ah-glob'u-lin-op'ah-the) any gammopathy.

gammagram (gam'ah-gram) a graphic record of the gamma rays emitted by an object or substance.

gammagraphic (gam'ah-graf'ik) pertaining to the recording of gamma rays in the study of organs after the administration of radioactive isotopes.

gamma-lactone (gam'ah-lak'tōn) a compound having a five-membered ring structure formed by internal reaction of a carboxylic acid group with a hydroxyl group on the gamma carbon of a carbon chain.

gammaloidosis (gam'mah-loi-do'sis) amyloidosis.

gamma-pipradol (gam'ah-pip'rah-dol) azacyclonol.

gammopathy (gam-op'ah-the) an immunoproliferative disorder characterized by abnormal proliferation of the lymphoid cells producing immunoglobulins. It may be *monoclonal*, in which there is an excess of one class of heavy chain (gamma, alpha, mu, delta, or epsilon) and one type of light chain (kappa or lambda) immunoglobulin subunits produced by a single clone of cells; the monoclonal gammopathies include multiple myeloma, macroglobinemia, and heavy-chain disease. Or it may be *polyclonal*, which involves an excess of two or more classes of immunoglobulins and of both types of light chains. Polyclonal gammopathies include Hodgkin's disease and lymphatic leukemia. Called also *gammaglobulinopathy* or *immunoglobulinopathy*.

gamo-, gam- (gam'o, gam') [Gr. *gamos* marriage] combining form denoting relationship to marriage or sexual union.

gamobium (gah-mo'be-um) [*gamo-* + Gr. *bios* life] in biology, the sexually reproducing generation in cases of metagenesis (alternation of generations). Cf. *agamobium*.

gamogenesis (gam'o-jen'ē-sis) [*gamo-* + Gr. *genesis* production] sexual reproduction.

gamogenetic (gam'o-jē-net'ik) pertaining to or exhibiting sexual reproduction.

gamogony (gam-og'o-ne) gametogony.

gamone (gam'ōn) a hypothetical substance supposed to be released by the ovum (gynogamone) and spermatozoa (androgamone) to facilitate their fusion.

gamont (gam'ont) [*gam-* + Gr. *ōn* being] 1. gametocyte. 2. either of the conjugating individuals in gregarine reproduction.

gamophagia (gam'o-fa'je-ah) [*gamo-* + Gr. *phagein* to eat] the disappearance of the male or female element in the conjugation of unicellular organisms.

gampsodactyly (gamp'so-dak'tī-le) [Gr. *gampsos* crooked + *dak-*

tylos digit] deformity of the toes marked by hyperextension of the first phalanx on the metatarsal and flexion of the other two phalanges; called also *clawfoot*.

Gamulin (gam'u-lin) trademark for a preparation of immune human serum globulin. **G Rh**, trademark for a preparation of Rh₀(D) immune serum globulin.

gangli- see *ganglio-*.

ganglia (gang'gle-ah) plural of *ganglion*.

ganglial (gang'gle-al) pertaining to a ganglion.

gangliated (gang'gle-āt'ed) ganglionated.

gangliectomy (gang'gle-ek'to-me) ganglionectomy.

gangliiform (gang'gli-form) having the form of a ganglion.

gangliitis (gang'gle-i'tis) ganglionitis.

ganglio-, gangli- (gang'gle-o, gang'gle) [Gr. *ganglion* knot] combining form denoting relationship to a ganglion.

ganglioblast (gang'gle-o-blast') [ganglio- + Gr. *blastos* germ] an embryonic cell of the cerebrospinal ganglia.

gangliocyte (gang'gle-o-sit') [ganglio- + Gr. *kytos* hollow vessel] a ganglion cell.

gangliocytoma (gang'gle-o-si-to'mah) ganglioneuroma.

gangliiform (gang'gle-o-form') gangliiform.

ganglioglioma (gang'gle-o-gli-o'mah) a glioma rich in mature neurons or ganglion cells.

ganglioglioneuroma (gang'gle-o-gli'o-nu-ro'mah) ganglioneuroma.

gangliolytic (gang'gle-o-lyt'ik) ganglioplegic.

ganglioma (gang'gle-o'mah) [ganglio- + -oma] ganglioneuroma.

ganglion (gang'gle-on), pl. *ganglia* or *ganglions* [Gr. "knot"] 1. a knot, or knotlike mass. 2. [NA] a general term for a group of nerve cell bodies located outside the central nervous system; occasionally applied to certain nuclear groups within the brain or spinal cord, e.g., basal ganglia. 3. a benign cystic tumor occur-

Ganglion of wrist arising from a tendon.

ring on an aponeurosis or tendon, as in the wrist or dorsum of the foot; it consists of a thin fibrous capsule enclosing a clear mucinous fluid. **accessory ganglia**, ganglia intermedia. **acousticofacial g.**, a ganglion of early embryonic life, a portion of which persists as the geniculate ganglion. **Acrel's g.**, a cystic tumor on an extensor tendon of the wrist. **Andersch's g.**, g. inferius nervi glossopharyngei. **anterior g. of thalamus** (obs.), the anterior tubercle of the thalamus. **aorticorenal g.**, **ganglia aorticorena'lia** [NA], a more or less detached inferolateral extension of the celiac ganglion. **Arnold's g.**, 1. ganglion oticum. 2. glomus caroticum. **auditory g.**, see *nuclei cochlearis, ventralis et dorsalis*. **Auerbach's g.**, any of the small ganglia of Auerbach's plexus. **auricular g.** (obs.), g. oticum. **azygous g.**, glomus coccygeum. **basal ganglia**, specific interconnected gray masses deep in the cerebral hemispheres and in the upper brainstem, including the caudate nucleus, putamen, globus pallidus, claustrum, and substantia nigra; they are involved in motor coordination. Various other subcortical nuclei and parts of the thalamus have also been considered by some to be part of the basal ganglia. Called also *basal nuclei*. **Bezold's g.**, a series of ganglion cells in the interatrial septum. **Bidder's ganglia**, ganglia on the cardiac nerves, situated at the lower end of the atrial septum. **Blandin's g.**, g. submandibulare. **Bochdalek's g.**, g. **Bochdalek'ii**, plexus dentalis superior. **Bock's g.**, carotid g. **cardiac ganglia**, **gan'glia cardi'aca** [NA], ganglia of the cardiac plexus near the arterial ligament; called also *Wrisberg's g.* and *g. wrisbergi*. **carotid g.**, a ganglion of the internal carotid plexus in the cavernous sinus; called also *Bock's g.* **carotid g., inferior**, a gan-

glion of the internal carotid plexus in the lower part of the carotid canal; called also *Laumonier's g.* and *Schmiedel's g.* **carotid g., superior**, a ganglion of the internal carotid plexus in the upper part of the carotid canal. **celiac ganglia**, **ganglia celi'aca** [NA], two irregularly shaped ganglia, one on each crus of the diaphragm, within the celiac plexus; each contains sympathetic nerve cells and preganglionic sympathetic fibers from the greater and lesser splanchnic nerves; preganglionic parasympathetic and sensory fibers pass through the ganglia. **cephalic g.**, parasympathetic ganglia in the head, consisting of the ciliary, otic, pterygopalatine, and submandibular ganglia. **cerebrospinal ganglia**, the ganglia associated with the cranial and spinal nerves. **cervical g., inferior**, a portion of the ganglion cervicothoracicum. **cervical g., middle**, g. cervicale medium. **cervical g., superior**, g. cervicale superius. **cervical g. of uterus**, a ganglion situated near the cervix uteri; called also *Lee's g.* and *Frankenhäuser's g.* **g. cervica'le infe'rius**, a portion of the ganglion cervicothoracicum. **g. cervica'le me'dium** [NA], middle cervical ganglion: a variable ganglion, often fused with the vertebral ganglion, on the sympathetic trunk at about the level of the cricoid cartilage; its postganglionic fibers are distributed mainly to the heart, cervical region, and upper limb. Formerly called *inferior* or *superior thyroid g.* **g. cervica'le supe'rius** [NA], superior cervical ganglion: the uppermost ganglion on the sympathetic trunk, lying behind the internal carotid artery and in front of the second and third cervical vertebrae; it gives rise to postganglionic fibers to the heart via cervical cardiac nerves, to the pharyngeal plexus and thence to the larynx and pharynx, and to the head via the external and internal carotid plexuses. **cervicothoracic g.**, **g. cervicothorac'icum** [NA], a ganglion on the sympathetic trunk at the level of the 7th cervical and 1st thoracic vertebra, anterior to the 8th cervical and 1st thoracic nerves; it has two components, the inferior cervical and first thoracic ganglia, which are usually fused, partially or completely. Its postganglionic fibers are distributed to the head and neck, heart, and upper limb. Called also *stellate g.* and *g. stellatum* [NA alternative]. **cervicouterine g.**, cervical g. of uterus. **g. cilia're** [NA], **ciliary g.**, a parasympathetic ganglion in the posterior part of the orbit; it receives preganglionic fibers from the oculomotor nerve, and its postganglionic fibers supply the ciliary muscle and the sphincter pupillae. Sensory and postganglionic sympathetic fibers pass through the ganglion. **Cloquet's g.**, an enlargement of the nasopalatine nerve in the anterior palatine canal. **coccygeal g.**, glomus coccygeum. **cochlear g.**, ganglion spirale cochleae. **collateral ganglia**, prevertebral ganglia. **compound g.**, a cystic tumor of a tendon sheath that has been compressed into two parts by a ligament. **Corti's g.**, g. spirale partis cochlearis nervi octavi. **Darksheich's g.** (obs.), Darksheich's nucleus. **diaphragmatic ganglia** (obs.), ganglia phrenica. **diffuse g.**, a swelling of several adjoining tendon sheaths due to inflammatory effusion. **dorsal root g.**, spinal g. **Ehrenritter's g.**, g. superius nervi glossopharyngei. **g. extracrania'le** (obs.), g. inferius nervi glossopharyngei. **false g.**, an enlargement on a nerve that does not have a true ganglionic structure. **Frankenhäuser's g.**, cervical g. of uterus. **Froriep's g.**, the ganglion of the lowest occipital segment in the human embryo. **ganglia of autonomic plexuses**, ganglia plexuum autonomicorum. **Ganser's g.**, nucleus interpeduncularis. **Gasser's g.**, **gasserian g.**, g. trigeminale. **geniculate g.**, **g. genic'uli ner'vi facia'lis** [NA], the sensory ganglion of the facial nerve, situated on the geniculum nervi facialis. **g. of habenulae** (obs.), nucleus habenulae. **hepatic g.**, a ganglion situated near the hepatic artery. **hypogastric g.**, either of two ganglia on each side of the cervix uteri, connected with the sacral and hypogastric plexuses. **hypoglossal g.**, a ganglion of the hypoglossal nerve; rarely found in man, except in the embryo. **g. im'par** [NA], the ganglion commonly found in front of the coccyx, where the sympathetic trunks of the two sides unite. **inferior g. of glossopharyngeal nerve**, g. inferius nervi glossopharyngei. **inferior g. of vagus**, g. inferius nervi vagi. **g. infe'rius ner'vi glossopharyn'gei** [NA], inferior ganglion of glossopharyngeal nerve: the lower of two ganglia on the glossopharyngeal nerve as it passes through the jugular foramen; both contain cell bodies for the afferent fibers of the nerve. Called also *g. petrosus*, and *petrosal* or *petrosus g.* **g. infe'rius ner'vi va'gi** [NA], inferior ganglion of vagus: a ganglion of the vagus nerve located just below the jugular foramen, in front of the transverse processes of the first and second cervical vertebrae; it contains cell bodies for afferent fibers of the vagus. Called also *nodose g.* and *g. nodosum*. **inhibitory g.**, any ganglion performing an inhibitory function. **intercarotid g.** (obs.), glomus caroticum. **g. intercrania'le** (obs.), g. superius nervi glossopharyngei. **gan'glia interme'dia** [NA], **intermediate ganglia**, small groups of sympathetic nerve cells present on spinal nerves and on rami communicantes, especially in the cervical, lower thoracic, and upper lumbar regions; called also *accessory ganglia*. **interpeduncular g.** (obs.), nucleus interpeduncularis. **intervertebral g. of head**, **posterior** (obs.), g. superius nervi glossopharyngei. **g. intervertebra'le** (obs.), g. spinale. **jugular g., inferior**, g. inferius nervi glossopharyngei. **jugular g. of glos-**

sopharyngeal nerve, *g. superius nervi glossopharyngei*. **jugular g. of vagus nerve**, *g. jugula're ner'vi va'gi*, *g. superius nervi vagi*. **Küttner's g.**, a large lymph node on the internal jugular vein immediately beneath the posterior belly of the digastric muscle, forming the principal lymphatic terminus of the tongue; called also *hauptganglion of Küttner*. **Langley's g.**, a collection of nerve cells in the hilus of the submaxillary gland in some animals. **Laumonier's g.**, 1. carotid g. 2. inferior carotid g. **Lee's g.**, cervical g. of the uterus. **lesser g. of Meckel**, *g. submandibulare*. **lingual g. (obs.)**, *g. submandibulare*. **Lobstein's g.**, a ganglion on the greater splanchnic nerve above the diaphragm; probably the same as the splanchnic ganglion. **lower g. of glossopharyngeal nerve**, *g. inferius nervi glossopharyngei*. **lower g. of vagus nerve**, *g. inferius nervi vagi*. **Ludwig's g.**, a ganglion connected with the cardiac plexus and situated near the right atrium of the heart. **gan'glia lumba'lia** [NA], **lumbar ganglia**, the ganglia on the lumbar part of the sympathetic trunk, usually four or five on either side. **Luschka's g.**, *glomus coccygeum*. **gan'glia lymphat'ica**, lymph nodes; see *nodus lymphaticus*. **maxillary g. (obs.)**, *g. submandibulare*. **Meckel's g.**, *g. pterygopalatinum*. **Meissner's g.**, one of the small groups of nerve cells in the submucosal (Meissner's) plexus. **mesenteric g.**, **inferior**, *g. mesentericum inferius*. **mesenteric g., superior**, *g. mesentericum superius*. **g. mesentericum inferius** [NA], inferior mesenteric ganglion: a sympathetic ganglion in the inferior mesenteric plexus near the beginning of the inferior mesenteric artery. **g. mesentericum superius** [NA], superior mesenteric ganglion: one or more sympathetic ganglia at the sides of, or just below, the superior mesenteric artery; commonly fused with the celiac ganglia. **g. of Müller**, *g. superius nervi glossopharyngei*. **nephrolumbar g. (obs.)**, *aorticorenal g.* **g. ner'vi splanchn'ici**, *g. splanchnicum*. **nodose g.**, *g. nodo'sum*, *g. inferius nervi vagi*. **olfactory g.**, a mass of tissue in the embryo which develops into the olfactory nerves. **ophthalmic g. (obs.)**, *g. ciliare*. **optic g., orbital g. (obs.)**, *g. ciliare*. **otic g.**, *g. o'ticum* [NA], a parasympathetic ganglion in the infratemporal fossa, medial to the mandibular nerve and just inferior to the foramen ovale: its preganglionic fibers are derived from the glossopharyngeal nerve via the lesser petrosal nerve, and its postganglionic fibers supply the parotid gland. Sensory and postganglionic sympathetic fibers pass through the ganglion. Called also *Arnold's g.* and *auricular g.* **parasympathetic ganglia**, aggregations of cell bodies of cholinergic neurons of the parasympathetic nervous system; these ganglia are located near to or within the wall of the organs being innervated. See also *cholinergic*. **pelvic ganglia**, **gan'glia pelvi'na** [NA], small sympathetic and parasympathetic ganglia located within the pelvic plexus. **periosteal g.**, *periostitis aluminosa*. **petrosal g., petrosal g., inferior**, *g. petro'sum*, *petrosus g.*, *g. inferius nervi glossopharyngei*. **phrenic g., gan'glia phren'ica** [NA], a small sympathetic ganglion often found within the phrenic plexus at its junction with the celiac plexus. **gan'glia plex'uom autonomicorum** [NA], **gan'glia plex'uom sympathico'rum**, ganglia of autonomic plexuses: groups of nerve cell bodies found in the autonomic plexuses, composed primarily of sympathetic postganglionic neurons; called also *ganglia of sympathetic plexuses*. **prevertebral ganglia**, sympathetic ganglia (other than those of the sympathetic trunk) in the prevertebral plexuses of the thorax and abdomen. **primary g.**, a ganglion on a tendon or aponeurosis that does not follow a local inflammation. **prostatic g. (obs.)**, a ganglion situated on the prostate gland, and connected with the prostatic plexus. **pterygopalatine g., g. pterygopalati'num** [NA], a parasympathetic ganglion in the pterygopalatine fossa; its preganglionic fibers are derived from the facial nerve via the greater petrosal nerve and the nerve of the pterygopalatine canal. Its postganglionic fibers supply the lacrimal, nasal, and palatine glands; sensory and sympathetic fibers pass through the ganglion. Called also *Meckel's g.*, *sphenopalatine g.*, and *g. sphenopalatinum*. **Remak's g.**, a sympathetic ganglion in the heart wall near the superior vena cava; called also *sinoatrial g.* Also, sympathetic ganglia in the diaphragmatic opening for the inferior vena cava, as well as ganglia in the gastric plexus. **renal ganglia**, **gan'glia rena'lia** [NA], small sympathetic ganglia within the renal plexus. **g. ret'inae**, the outer of the two subdivisions of the internal nuclear layer of the retina. **Ribes' g.**, the alleged ganglion in the termination of the internal carotid plexus around the anterior communicating artery of the brain. **sacral ganglia**, **gan'glia sacra'lia** [NA], the ganglia of the sacral part of the sympathetic trunk, usually three or four on either side. **Scarpa's g.**, *g. vestibulare*. **Schacher's g.**, *g. ciliare*. **Schmiedel's g.**, 1. carotid g. 2. inferior carotid g. **semilunar g.**, 1. ganglion trigeminale. 2. [pl.] ganglia celiaca. **g. semiluna're** [Gas'seri], *g. trigeminale*. **sensory g.**, ganglia of the peripheral nervous system which transmit sensory impulses; also, the collective masses of nerve cell bodies in the brain subserving sensory functions. **simple g.**, a cystic tumor in a tendon sheath. **sinoatrial g.**, *Remak's g.* **sinus g.**, a group of nerve cells around the junction of the coronary sinus and the right atrium of the heart. **Soemmering's g. (obs.)**, *substantia ni-*

gra. **solar ganglia (obs.)**, *ganglia celiaca*. **sphenomaxillary g., sphenopalatine g., g. sphenopalati'num**, *g. pterygopalatinum*. **spinal g., g. spina'le** [NA], the ganglion found on the dorsal root of each spinal nerve, composed of the unipolar nerve cell bodies of the sensory neurons of the nerve. **spiral g., spiral g. of cochlea**, *g. spirale cochleae*. **spiral g. of cochlear nerve**, *g. spirale partis cochlearis nervi octavi*. **g. spira'le coch'leae** [NA], spiral ganglion of cochlea: the ganglion of the cochlear nerve, located within the modiolus and consisting of bipolar cells which send fibers peripherally through the foramina nervosa to the spiral organ, and centrally through the internal acoustic meatus to the cochlear nuclei of the brain stem. **g. spira'le ner'vi coch'leae**, **g. spira'le par'tis cochlea'ris ner'vi octa'vi** [NA], spiral ganglion of cochlear nerve: the sensory ganglion of the pars cochlearis of the eighth cranial nerve, located within the modiolus and consisting of bipolar cells which send fibers peripherally through the foramina nervosa to the spiral organ, and centrally through the internal acoustic meatus to the cochlear nuclei of the brain stem; called also *Corti's g.* **splanchnic g.**, 1. ganglion splanchnicum. 2. plexus celiacus. **g. splanchn'icum** [NA], splanchnic ganglion: a small ganglion formed on the greater splanchnic nerve near the twelfth thoracic vertebra. **stellate g.**, *g. cervicothoracicum*. **g. stella'tum**, NA alternative for *g. cervicothoracicum*. **submandibular g., g. submandibula're** [NA], **g. submaxilla're**, **submaxillary g.**, a parasympathetic ganglion located superior to the deep part of the submandibular gland, on the lateral surface of the hyoglossus muscle; its preganglionic fibers are derived from the facial nerve by way of the chorda tympani and lingual nerve, and its postganglionic fibers supply the submandibular and sublingual glands; sensory and postganglionic sympathetic fibers pass through the ganglion. **superior g. of glossopharyngeal nerve**, *g. superius nervi glossopharyngei*. **superior g. of vagus nerve**, *g. superius nervi vagi*. **g. supe'rius**, **g. supe'rius ner'vi glossophary'nei** [NA], superior ganglion of glossopharyngeal nerve: the upper of two ganglia on the glossopharyngeal nerve as it passes through the jugular foramen; both ganglia contain cell bodies for afferent fibers of the nerve. **g. supe'rius ner'vi va'gi** [NA], superior ganglion of vagus nerve: a small ganglion on the vagus in the jugular foramen, giving off a meningeal and an auricular branch and containing cell bodies for afferent fibers of the vagus; called also *g. jugularis nervi vagi* and *jugular g. of vagus nerve*. **suprarenal g.**, a small sympathetic ganglion in the suprarenal plexus. **sympathetic ganglia**, aggregations of cell bodies of primarily adrenergic neurons of the sympathetic nervous system; these ganglia are arranged in chainlike fashion on either side of the spinal cord. See also *adrenergic*. **ganglia of sympathetic plexuses**, ganglia plexuom autonomicorum. **ganglia of sympathetic trunk**, ganglia trunci sympathici. **synovial g.**, a myxoid cyst. **terminal g., g. termina'le** [NA], a group of nerve cells found along the terminal nerves, medial to the olfactory bulb. **gan'glia thoraca'lia**, **thoracic ganglia**, **gan'glia thora'lica** [NA], the ganglia on the thoracic portion of the sympathetic trunk, usually about eleven or twelve on either side. **g. thora'cium pri'mum**, a portion of ganglion cervicothoracicum; it is present sometimes as a separate ganglion. **thyroid g., inferior**, **thyroid g., superior**, names formerly applied to *g. cervicale medium*. **trigeminal g., g. of trigeminal nerve**, **g. trigemina'le** [NA], a ganglion on the sensory root of the fifth cranial nerve, situated in a cleft within the dura mater (trigeminal cave) on the anterior surface of the petrous portion of the temporal bone, and giving off the ophthalmic and maxillary and part of the mandibular nerve; it contains the cells of origin of most of the sensory fibers of the trigeminal nerve. Called also *semilunar g.*, and *g. semilunare* [Gasser]. **Troisier's g.**, an enlarged lymph node sometimes seen above the clavicle in cases of retrosternal tumor. **gan'glia trun'ci sympath'ici** [NA], ganglia of sympathetic trunk: groups of nerve cell bodies found along each sympathetic trunk, about twenty to twenty-three on either side. **tympenic g.**, *g. tympanicum*. **tympenic g. of Valentin**, a ganglion on a superior dental nerve; also, *intumescentia tympanica*. **g. tympan'icum** [NA], tympanic ganglion: an enlargement on the tympanic branch of the glossopharyngeal nerve. **upper g.**, *g. superius nervi glossopharyngei*. **vagal g., inferior**, *g. inferius nervi vagi*. **vagal g., superior**, *g. superius nervi vagi*. **Valentin's g.**, 1. *intumescentia tympanica*. 2. a ganglion on a superior dental nerve. **ventricular g.**, *Bidder's g.* **vertebral g., g. vertebra'le**, [NA], a small ganglion on one of the branches interconnecting the middle and cervicothoracic ganglia of the sympathetic trunk, in front of the vertebral artery; it contributes to the ansa subclavia and sends postganglionic fibers to the vertebral nerve and plexus and to the brachial plexus. **vestibular g., g. vestibula're** [NA], the sensory ganglion of the pars vestibularis of the eighth cranial nerve; it is located in the superior part of the lateral end of the internal acoustic meatus and consists of bipolar cells whose peripheral processes form small nerves supplying the utricle, saccule, and semicircular canals, and whose central processes reach the vestibular nuclei of the brain stem. Called also *Scarpa's g.* **Walther's g.**, *glomus coccygeum*. **Wrisberg's g., g. Wrisbergi**, see *ganglia cardiaca*.

wrist g., cystic enlargement of a tendon sheath on the back of the wrist.

ganglionated (gang'gle-o-nāt-ed) provided with ganglia.

ganglionectomy (gang'gle-o-nek'to-me) [ganglio- + Gr. *ektomē* excision] excision of a ganglion.

ganglioneure (gang'gle-o-nūr'n) [ganglio- + Gr. *neuron* nerve] any: cell of a nervous ganglion.

ganglioneuroblastoma (gang'gle-o-nu'ro-blas-to'mah) a tumor composed of ganglioneuromatous and neuroblastomatous elements.

ganglioneurofibroma (gang'gle-o-nu'ro-fi-bro'mah) ganglioneuroma.

ganglioneuroma (gang'gle-o-nu-ro'mah) a benign neoplasm composed of nerve fibers and mature ganglion cells; regarded by many as a fully differentiated neuroblastoma.

ganglionic (gang'gle-on'ik) pertaining to a ganglion.

ganglionitis (gang'gle-on-i'tis) inflammation of a ganglion.

acute posterior g., herpes zoster. **gasserian g.**, herpes zoster ophthalmicus.

ganglionoplegic (gang'gle-on'o-ple'jik) ganglioplegic.

ganglionostomy (gang'gle-o-nos'to-me) [ganglio- + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an opening into a cystic tumor on a tendon sheath or aponeurosis.

ganglioplegic (gang'gle-o-ple'jik) [ganglio- + Gr. *plēgē* stroke] 1. blocking transmission of impulses through the sympathetic and parasympathetic ganglia. 2. an agent that blocks the transmission of impulses through the sympathetic and parasympathetic ganglia.

ganglioside (gang'gle-o-sid) a general designation for a member of a class of galactose-containing cerebrosides found in the tissues of the central nervous system. Gangliosides are glycolipids of the basic composition ceramide-glucose-galactose-*N*-acetylneuraminic acid. **g. GM₁**, a ganglioside with the addition of an *N*-acetyl galactosamine and a galactose group; it accumulates in tissues in generalized gangliosidosis. **g. GM₂**, a ganglioside with the addition of *N*-acetyl galactosamine at the terminal; it accumulates in tissues in Tay-Sachs disease.

gangliosidoses (gang'gle-o-si-do'sēz) plural of *gangliosidosis*.

gangliosidosis (gang'gle-o-si-do'sis), pl. *gangliosidoses*. A lipid storage disorder marked by accumulation of gangliosides in tissues due to an enzyme defect. In generalized gangliosidosis, a defect of β -galactosidase results in accumulation of ganglioside GM₁ (the major monosialoganglioside); in Tay-Sachs disease, a defect of hexosaminidase A results in accumulation of ganglioside GM₂.

generalized g., a lipid-storage disease in which ganglioside GM₁ is stored in the tissues, due to a defect in the enzyme β -galactosidase. It is characterized principally by mental retardation, hepatomegaly, skeletal deformities, and (in about half the cases) cherry red spot. It is transmitted as an autosomal recessive trait. **GM₁ g.**, generalized g. **GM₂ g.**, Tay-Sachs disease.

gangliospor (gang'gle-o-spōr) a fungal spore developed from the swollen tip of a hypha.

gangliosympathectomy (gang'gle-o-sim'pah-thek'to-me) excision of a sympathetic ganglion.

Gangolphe's sign (gahn-golfs') [Louis Gangolphe, French surgeon] see under *sign*.

gangosa (gang-go'sah) [Sp. "muffled voice"] a form of treponematos manifest as a destructive ulceration of the nose, nasopharynx, and hard palate, being one of the late lesions of yaws; called also *ogo* and *rhinopharyngitis mutilans*.

gangrene (gang'grēn) [L. *gangraena*; Gr. *gangraina* an eating sore, which ends in mortification] death of tissue, usually in considerable mass and generally associated with loss of vascular (nutritive) supply and followed by bacterial invasion and putrefaction. Cf. *necrosis* and *necrobiosis*. **anaphylactic g.**, gangrene occurring as a result of anaphylactic reaction to the injection of antigen (anaphylactogen), such as serum. **angiosclerotic g.**, dry gangrene caused by vascular sclerosis. **circumscribed g.**, gangrene that is clearly separated from normal tissue by a zone of inflammatory reaction. **cold g.**, gangrene that is not preceded by inflammation. **diabetic g.**, moist gangrene occurring in a person with diabetes; called also *glycemic g.* **dry g.**, necrosis occurring without subsequent bacterial decomposition, the tissues becoming dry and shriveled. **embolic g.**, that which follows the blocking of the blood supply by an embolism. **emphysematous g.**, gas g. **epidemic g.**, ergotism. **Fournier's g.**, idiopathic gangrene of the scrotum. **fulminating g.**, malignant edema. **gas g.**, gaseous g., an acute, severe, and painful condition often resulting from dirty, lacerated wounds in which the muscles and subcutaneous tissues become filled with gas and a serosanguineous exudate. The condition is due to histotoxic infection by anaerobic bacteria, among which are *Clostridium perfringens*, *C. novyi*, *C. septicum* (*vibrion septique*), *C. sporogenes*, and other species of *Clostridium*. Called also *clostridial myonecrosis*. **glycemic g.**, **glykemic g.**, diabetic g. **hot g.**, gangrene which follows an inflammation. **humid g.**, moist g. **inflammatory g.**, gangrene due to acute inflammation. **mephitic g.**, gas g. **moist g.**, necrosis of tissues, with proteolytic decomposition resulting from bacterial action. **oral**

g., gangrenous stomatitis. **pressure g.**, gangrene due to pressure, as in decubitus ulcer. **primary g.**, gangrene occurring without preceding inflammation of the part. **progressive g.**, gangrene in which an effective limiting zone of inflammatory reaction does not form. **progressive bacterial synergistic g.**, a superficial spreading infection caused by the association of two organisms, neither one of which is capable of producing significant infection alone. **Raynaud's g.**, Raynaud's disease, def. 1. **secondary g.**, a form which follows a local inflammation. **senile g.**, dry gangrene affecting the extremities of the aged. **static g.**, gangrene that results from stasis of blood in a part. **symmetric g.**, gangrene of corresponding digits on both sides, due to vasomotor disturbances. **sympathetic g.**, gangrene which results from some primary condition. **thrombotic g.**, gangrene from thrombosis of an artery. **traumatic g.**, gangrene which occurs as a consequence of accidental injury. **trophic g.**, gangrene due to lesion of the trophic nerve supply of a part. **venous g.**, static g.

gangrenosis (gang'grē-no'sis) the development of gangrene.

gangrenous (gang'grē-nus) pertaining to, characterized by, or of the nature of gangrene.

ganja (gan'jah) an Asian Indian preparation of *Cannabis sativa* in which an infusion is made from the mature female plant tops of very carefully selected, cultivated varieties. It may also be smoked and, when incorporated into sweet meats, is known as majoon.

ganoblast (gan'o-blast) ameloblast.

Ganser's ganglion, symptom, syndrome (gan'serz) [Sigbert Joseph Maria Ganser, psychiatrist in Dresden, 1853-1931] see under *syndrome* and *syndrome*, and see *nucleus interpeduncularis*.

Gant's clamp (gants) [Samuel Goodwin Gant, New York proctologist, 1870-1944] see under *clamp*.

Gant's line, operation (gants) [Frederick James Gant, English surgeon, 1825-1905] see under *line* and *operation*.

Gantanol (gan'tah-nol) trademark for preparations of sulfamethoxazole.

Gantrisin (gan'tri-sin) trademark for preparations of sulfisoxazole.

gap (gap) an unoccupied interval in time; an opening or hiatus.

air-bone g., the lag between the audiographic curves for air- and bone-conducted stimuli, as an indication of a conductive hearing loss. **auscultatory g.**, time in which sound is not heard in the auscultatory method of sphygmomanometry, occurring particularly in hypertension and in aortic stenosis. **Bochdalek's g.**, hiatus pleuroperitonealis. **chromatid g.**, a nonstaining region in a chromatid, the portions of the chromatid immediately proximal and distal to the site remaining in alignment. **inter-occlusal g.**, interocclusal distance; see under *distance*. **isochromatid g.**, a nonstaining region of the same level in two sister chromatids, the distal segments remaining in alignment with the proximal portions. **silent g.**, auscultatory g.

gapes (gāps) a disease of young fowls and turkeys caused by the gapeworm *Syngamus trachea* and marked by gasping and choking.

Garamycin (gar-ah-mi'sin) trademark for a preparation of gentamicin sulfate.

Garcinia (gar-sin'e-ah) a genus of guttiferous fruit trees widely cultivated in the tropics. *G. hanburyi* Hook. f. is the source of gamboge, *G. mangostana* L. of mangosteen, a delicious berry.

Gardiner-Brown's test [Alfred Gardiner-Brown, English otologist] see under *tests*.

Gardner's syndrome (gard'nerz) [Eldon J. Gardner] see under *syndrome*.

Garel's sign (gar-elz') [Jean Garel, French physician, 1852-1931] see under *sign*.

Garg. abbreviation for *L. gargaris'mus*, gargle.

gargalanesthesia (gar'g'l-an'es-the'ze-ah) absence of the tickle sense.

gargalesthesia (gar'g'l-es-the'ze-ah) the sense which perceives tickling sensations.

gargalesthetic (gar'g'l-es-thet'ik) pertaining to the tickle sense.

gargarism (gar'gar-izm) [L., Gr., *gargarisma*] a gargle or throat wash.

garget (gar'get) mastitis in the cow.

gargle (gar'g'l) [L. *gargarisma*] 1. to agitate a solution in the throat by forcing air through it so as to rinse or medicate the mucous membranes. 2. a solution used for rinsing or medicating the mouth and throat.

gargoylism (gar'goil-izm) Hurler's syndrome.

Garland's curve, triangle (gar'landz) [George Minot Garland, American physician, 1848-1926] see *Ellis' line*, under *line*, and see under *triangle*.

garnet (gar'net) a silicate of any combination of aluminum, cobalt, magnesium, iron, and manganese, usually coated on paper or cloth, commonly used in dentistry for polishing dentures.

Garré's osteomyelitis (disease, osteitis) (gar-āz') [Carl

Garré, Swiss surgeon, 1858–1928] sclerosing nonsuppurative osteomyelitis; see under *osteomyelitis*.

Garrod's test (gar'ods) 1. (for hematoporphyrin in urine) [Sir Archibald Edward Garrod, British physician, 1857–1936]. 2. (for uric acid in blood) [Alfred Baring Garrod, London physician, 1819–1907]. See under *tests*.

garrot (gar'ot) a form of tourniquet.

Gärtner's bacillus (gairt'nerz) [August Gärtner, German bacteriologist, 1848–1934] *Salmonella enteritidis*.

Gartner's cyst, duct (canal) (gart'nerz) [Hermann Treschow Gartner, Danish surgeon and anatomist, 1785–1827] see under *cyst*, and see *ductus epoophori longitudinales*.

Gärtner's phenomenon, tonometer (gairt'nerz) [Gustav Gärtner, Austrian pathologist, 1855–1937] see under *phenomenon* and *tonometer*.

Garymicin (gar'y'i-mi'sin) trademark for a preparation of gentamicin.

gas (gas) any elastic aeriform fluid in which the molecules are separated from one another and so have free paths. **alveolar g.**, the gas in the alveoli of the lungs, where gaseous exchange with the capillary blood takes place; called also *alveolar air*. **coal g.**, a gas produced by the destructive distillation of coal and much used for domestic cooking; it is poisonous because it contains carbon monoxide. **ethyl g.**, tetraethyl lead. **expired g.**, gas expired from the lungs, especially a mixture of gas from the dead space and alveolar gas. **hemolytic g.**, arsine. **inert g.**, a gas that does not react chemically with the other constituents of a system, especially in reference to the noble gases, such as helium and argon. **lacrimator g.**, tear g. **laughing g.**, nitrous oxide. **marsh g.**, methane. **mustard g.**, dichlorodithiethyl sulfide. **noble g.**, the gas elements of group VIII of the periodic table, i.e., helium, neon, argon, krypton, xenon, and radon. **olefiant g.**, ethylene. **sewer g.**, the mixture of gases and vapors from a sewer; often dangerous from the contained materials resulting from the decay of organic matter. **sneezing g.**, diphenylchlorarsine. **suffocating g.**, any of several war gases, e.g., phosgene or dephosgene oxycarbon, that causes intense irritation of the bronchial tubes and lungs, resulting in pulmonary edema. **sweet g.**, carbon monoxide. **tear g.**, a gas which produces severe lacrimation by irritating the conjunctivae. **vesicating g.**, dichlorodithiethyl sulfide. **war g.**, any noxious gas manufactured for possible use in warfare.

gaseous (gas'e-us, gash'us) of the nature of a gas.

gasiform (gas'i-form) gaseous.

Gaskell's bridge (gas'kelz) [Walter Holbrook Gaskell, English physiologist, 1847–1914] bundle of His.

gaskin (gas'kin) the thigh of a horse.

gasogenic (gas-o-jen'ik) producing gas.

gasometer (gas-om'ë-ter) a calibrated container for measuring volume of gases.

gasometric (gas'o-met'rik) pertaining to gasometry.

gasometry (gas-om'ë-tre) [gas + Gr. *metron* measure] the chemical determination of the amount of gas present in a mixture.

Gasser (gas'er), Herbert Spencer. American physiologist, 1888–1963, noted for his work on the nervous system; co-winner with E. Joseph Erlanger, of the Nobel prize for medicine and physiology in 1944.

Gasser's ganglion (gas'erz) [Johann Laurentius Gasser, professor in Vienna from 1757 to 1765] ganglion trigeminale.

gasserectomy (gas'er-ek'to-me) surgical removal of the trigeminal (gasserian) ganglion.

gasserian (gas-se're-an) named for Johann Laurentius Gasser, as gasserian (trigeminal) ganglion.

gaster (gas'ter) [Gr. *gaster*] stomach.

gasteralgia (gas-ter-al'je-ah) (obs.) gastric colic.

gasterangiempfraxis (gas'ter-an'je-em-frak'sis) [gaster + Gr. *angeion* vessel + *emphraxis* obstruction] (obs.) obstruction of the blood vessels of the stomach.

gasteremphraxis (gas'ter-em-frak'sis) (obs.) 1. gasterangiempfraxis. 2. distention of the stomach.

Gasteromycetes (gas'ter-o-mi-se'téz) a series of basidiomycetous fungi of the subclass Homobasidiomycetidae, including the puffballs and stinkhorns, in which the spores are arranged around a columella; it includes the genera *Lycoperdon*, *Calvatia*, *Geaster*, and *Phallus*.

Gasterophilus (gas'ter-off'i-lus) [gaster + Gr. *philein* to love] a genus of dipterous insects of the family Oestridae. *G. intestinalis* is the botfly whose larva infests horses. Migration of the larva beneath the skin of their occasional human hosts may give rise to a form of creeping eruption (larva migrans). *G. hemorrhoidalis*, the nose botfly, which has orange-red terminal segments, sometimes infests man.

gastr- see *gastro-*.

gastradenitis (gas'trad-ë-ni'tis) [gastr- + Gr. *adēn* gland + *-itis*] inflammation of the stomach glands.

gastralgia (gas-tral'je-ah) [gastr- + *-algia*] gastric colic.

Gasterophilus and larva.

gastralgokenosis (gas-tral'go-ke-no'sis) [gastr- + Gr. *algos* pain + *kenōsis* emptiness] paroxysmal gastric pain when the stomach is empty, which is easily relieved by taking food.

gastramine hydrochloride (gas'trah-min) betazole hydrochloride.

gastratrophia (gas'trah-tro'fe-ah) [gastr- + Gr. *atrophia* atrophy] atrophic gastritis.

gastr ectasia, gastr ectasis (gas-trek-ta'ze-ah; gas-trek'tah-sis) [gastr- + Gr. *ektasis* stretching] (obs.) dilatation of the stomach.

gastroctomy (gas-trek'to-me) [gastr- + Gr. *ektomē* excision] excision of the whole (total g.) or part (subtotal g., partial g., gastric resection) of the stomach.

gastric (gas'trik) [L. *gastricus*; Gr. *gaster* stomach] pertaining to, affecting, or originating in the stomach.

gastricsin (gas-trik'sin) a proteolytic enzyme—a hydrolase—isolated from the gastric juice. Originating from the same precursor (pepsinogen) as pepsin, it is of heavier molecular weight than pepsin, and possesses different amino acids at the N terminal.

gastrin (gas'trin) a polypeptide hormone secreted by gastrin cells of the pyloric glands, whose activity is related to the terminal tetrapeptide. It strongly stimulates secretion of gastric acid (causing contraction of the lower esophageal sphincter and modifying gastric and esophageal motility) and pepsin, and weakly stimulates secretion of pancreatic enzymes and gallbladder contraction.

gastrinoma (gas'trin-o'mah) a gastrin-secreting non-beta islet cell tumor associated with Zollinger-Ellison syndrome, usually found within the substance of the pancreas but also occurring at other sites, as in the antrum of the stomach, hilus of the spleen, and regional lymph nodes.

gastritic (gas-trit'ik) pertaining to or affected with gastritis.

gastritis (gas-tri'tis) [gastr- + *-itis*] inflammation of the stomach. **antral g.**, **antrum g.**, inflammation affecting the antrum of the stomach. **atrophic g.**, chronic gastritis with atrophy of the mucous membrane and glands. **atrophic-hyperplastic g.**, a variant of atrophic gastritis in which the mucosa is of normal or even increased thickness. **catarrhal g.**, inflammation of the mucous membrane of the stomach, with hypertrophy of the membrane, secretion of an excessive quantity of mucus, and alteration of the gastric juice. The condition is marked by loss of appetite, nausea, pain, vomiting, and tympanitic distention of the stomach. **chemical g.**, inflammation caused by the ingestion of corrosive substances, with complete mucosal destruction in fatal cases; called also *corrosive g.* **chronic cystic g.**, gastritis in which the gastric and pyloric glands are dilated and lined by flattened epithelium, suggestive of a degenerative rather than an inflammatory condition. **chronic follicular g.**, an atrophic gastritis in which the size and number of lymphoid follicles in the mucosa and submucosa are greatly increased, with heavy infiltration of the entire mucosa by lymphocytes. **cirrhotic g.**, linitis plastica. **corrosive g.**, chemical g. **eosinophilic g.**, gastritis in which there is considerable edema and a heavy infiltration of all coats of the wall of the pyloric antrum by eosinophils. **erosive g.**, gastritis in which the surface epithelium is eroded, manifesting as a patchy or a diffuse lesion; exfoliative g. **exfoliative g.**, chronic gastritis in which bits of the surface of the mucous membrane are shed; erosive g. **follicular g.**, inflammation of the glands of the stomach. **giant hypertrophic g.**, excessive proliferation of the gastric mucosa, producing diffuse thickening of the stomach wall; inflammatory changes may be associated. Called also *Menetrier's disease*. **hemorrhagic g.**, erosive gastritis with bleeding. **hypertrophic g.**, gastritis with infiltration and enlargement of the glands. **phlegmonous g.**, a variety with abscesses in the stomach walls. **polypous g.**, hypertrophic gastritis with polypoid projections into the stomach. **pseudomembranous g.**, a variety in which a false membrane occurs in patches within the stomach. **radiation g.**, gastritis resulting from radiation injury. **toxic g.**, gastritis caused by the action of a poison or a corrosive agent. **zonal g.**, gastritis occurring in the vicinity of a gastric lesion, as that associated with peptic ulcer and gastric carcinoma.

gastro-, gastr- (gas'tro; gas'tr-) [Gr. *gaster* stomach] combining form denoting relationship to the stomach.

gastrocephalus (gas'tro-a-sef'ah-lus) [gastro- + a neg. + Gr. *kephalē* head] a twin monster, the autosite bearing a headless parasite on its abdomen.

gastroadenitis (gas'tro-ad'ë-ni'tis) gastradenitis.

gastrodynamic (gas"tro-a"di-nam'ik) marked by an adynamic condition of the stomach.

gastroamorphus (gas"tro-a-mor'fus) [*gastro-* + Gr. *a neg. + morphē* form] a presumptive twin monster in which the parasite consists of fetal parts concealed within the abdomen of the autosite.

gastroanastomosis (gas"tro-ah-nas"to-mo'sis) gastrogastrosomy.

gastroatonia (gas"tro-ah-to'ne-ah) (*obs.*) atony of the stomach.

gastrocamera (gas"tro-kam'er-ah) a small camera which can be swallowed or passed down the esophagus on an appropriate instrument to photograph the inside of the stomach; it is attached to an external control box by a hollow flexible tube, and fitted with a flash lamp and inflation bulb. After the camera is inserted into the stomach, the bulb is inflated and pictures are taken as the flash lamp is triggered.

gastrocardiac (gas"tro-kar'de-ak) pertaining to the stomach and the heart.

gastrocele (gas"tro-sēl) [*gastro-* + Gr. *kēlē* hernia] hernial protrusion of the stomach or of a gastric pouch.

gastrochronorrhea (gas"tro-kron'o-re'ah) [*gastro-* + Gr. *chronos* time + *rhoia* flowing] (*obs.*) chronic gastric hypersecretion.

gastrocnemius (gas"trok-ne'me-us) [*gastro-* + Gr. *knēmē* leg] see *Table of Musculi*.

gastrocoele (gas"tro-sēl) [*gastro-* + Gr. *koiolos* hollow] the archenteron.

gastrocolic (gas"tro-kol'ik) pertaining to or communicating with the stomach and colon, as a gastrocolic fistula.

gastrocolitis (gas"tro-kol-i'tis) [*gastro-* + Gr. *kolon* colon + *-itis*] inflammation of the stomach and colon.

gastrocoloptosis (gas"tro-kol'lop-to'sis) [*gastro-* + *colon* + Gr. *ptōsis* falling] (*obs.*) downward displacement of the stomach and colon.

gastrocolostomy (gas"tro-kol'los'to-me) [*gastro-* + Gr. *kolon* colon + *stomoun* to provide with an opening, or mouth] the creation of an artificial opening between the stomach and the colon; also, the opening so established.

gastrocolotomy (gas"tro-kol'lo'to-me) [*gastro-* + Gr. *kolon* colon + *tomē* a cutting] incision into the stomach and colon.

gastrocutaneous (gas"tro-ku-ta'ne-us) pertaining to the stomach and skin, or communicating with the stomach and the cutaneous surface of the body, as a gastrocutaneous fistula.

gastrodermis (gas"tro-der'mis) [*gastro-* + Gr. *derma* skin] the tissue lining the gut cavity of an invertebrate, which is responsible for digestion and absorption.

gastrodiaphane (gas"tro-di'ah-fān) [*gastro-* + Gr. *dia* through + *phainein* to show] a small electric lamp introduced into the stomach in gastrodiaphany.

gastrodiaphanoscapy (gas"tro-di-af'ah-nos'ko-pe) [*gastro-* + Gr. *dia* through + *phainein* to show + *skopein* to examine] gastrodiaphany.

gastrodiaphany (gas"tro-di-af'ah-ne) [*gastro-* + Gr. *dia* through + *phainein* to show] the exploration of the stomach by means of an electric lamp passed down the esophagus.

gastrodidymus (gas"tro-did'i-mus) [*gastro-* + Gr. *didymos* twin] symmetrical conjoined twins joined in the abdominal region.

gastrodisciasis (gas"tro-dis-ki'ah-sis) infection caused by *Gastrodiscoides hominis*.

Gastrodiscoides (gas"tro-dis-koi'dēz) [*gastro-* + Gr. *diskos* disk + *eidōs* form] a genus of trematodes parasitic in the intestinal tract; called also *Gastrodiscus*. **G. hominis**, a species common in the cecum and large intestine of pigs and occasionally in man, in Indochina, India, and Malaysia. Called also *Amphistomum hominis*.

Gastrodiscus (gas"tro-dis'kus) *Gastrodiscoides*.

gastrodisk (gas"tro-disk) the embryonic disk.

gastroduodenal (gas"tro-du'o-de'nal) pertaining to or communicating with the stomach and duodenum, as a gastroduodenal fistula.

gastroduodenectomy (gas"tro-du'o-dē-nek'to-me) excision of stomach and duodenum.

gastroduodenitis (gas"tro-du-od'ē-ni'tis) [*gastro-* + *duodenitis*] an inflammation of the stomach and duodenum.

gastroduodenoscopy (gas"tro-du'o-dē-nos'ko-pe) [*gastro-* + *duodenum* + Gr. *skopein* to examine] examination of the stomach and duodenum, the gastroscope usually being passed through the esophagus, occasionally through incisions in the abdominal and gastric walls if performed during operation.

gastroduodenostomy (gas"tro-du'o-dē-nos'to-me) [*gastro-* + *duodenum* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an anastomosis between the stomach and the duodenum.

gastrodynia (gas"tro-din'e-ah) [*gastro-* + Gr. *odynē* pain] pain in the stomach.

gastroenteralgia (gas"tro-en'ter-al'je-ah) [*gastro-* + Gr. *enteron* intestine + *-algia*] pain in the stomach and intestines.

gastroenteric (gas"tro-en-ter'ik) [*gastro-* + Gr. *enteron* intestine] pertaining to the stomach and intestines.

gastroenteritis (gas"tro-en-ter-i'tis) [*gastro-* + *enteritis*] inflammation of the stomach and intestines. **acute infectious g.**, gastritis with acute onset, caused by various bacteria and viruses. **eosinophilic g.**, a disorder marked by infiltration of the mucosa of the small intestine by eosinophils, with edema but without vasculitis, and by eosinophilia of the peripheral blood. Symptoms, including abdominal pain, diarrhea, nausea, fever, and malabsorption, depend on the site and extent of the disorder. The stomach is also frequently involved. The disorder is commonly associated with intolerance to specific foods. See also *eosinophilic granuloma* (def. 2), under *granuloma*. **g. paratyphosa B.**, gastroenteritis caused by *Salmonella paratyphi B.* **transmissible g. (T.G.E.) of swine**, a viral disease of swine occurring chiefly during the winter and characterized by severe diarrhea and acute inflammation of the gastric mucosa which may lead to ulceration and hemorrhage. The mortality rate among piglets is very high. **g. typhosa**, a form of gastroenteritis caused by *Salmonella typhosa*.

gastroenteroanastomosis (gas"tro-en'ter-o-ah-nas"to-mo'sis) anastomosis between the stomach and small intestine in gastroenterostomy.

gastroenterocolitis (gas"tro-en'ter-o-kol-i'tis) inflammation of the stomach, small intestine, and colon.

gastroenterocolostomy (gas"tro-en'ter-o-kol'los'to-me) [*gastro-* + Gr. *enteron* intestine + *kolon* colon + *stomoun* to provide with an opening, or mouth] surgical creation of an opening between the stomach, intestine, and colon; also, the opening so established.

gastroenterologist (gas"tro-en'ter-ol'o-jist) a practitioner who specializes in diseases of the digestive tract.

gastroenterology (gas"tro-en'ter-ol'o-je) [*gastro-* + Gr. *enteron* intestine + *-logy*] the study of the stomach and intestines and their diseases.

gastroenteropathy (gas"tro-en'ter-op'ah-the) any disease of the stomach and intestines.

gastroenteroplasty (gas"tro-en'ter-o-plas'te) a plastic operation on the stomach and small intestine.

gastroenteroptosis (gas"tro-en'ter-op-to'sis) [*gastro-* + Gr. *enteron* intestine + *ptōsis* falling] downward displacement, or prolapse, of the stomach and intestines; a term based on the concept that variations in the positions of organs cause disease.

gastroenterostomy (gas"tro-en-ter-os'to-me) [*gastro-* + Gr. *enteron* intestine + *stomoun* to provide with an opening, or mouth] surgical creation of an artificial passage (anastomosis) between the stomach and intestines (usually the jejunum); see illustration on following page.

gastroenterotomy (gas"tro-en'ter-ot'o-me) [*gastro-* + Gr. *enteron* intestine + *temnein* to cut] surgical incision into the stomach and intestine.

gastroepiploic (gas"tro-ep'i-plo'ik) [*gastro-* + Gr. *epiploon* caul] pertaining to the stomach and epiploon (omentum).

gastroesophageal (gas"tro-ē-sof'ah-je'al) pertaining to the stomach and esophagus, as the gastroesophageal junction.

gastroesophagitis (gas"tro-ē-sof'ah-ji'tis) inflammation of the stomach and esophagus.

gastroesophagostomy (gas"tro-ē-sof'ah-gos'to-me) surgical creation of an anastomosis between the stomach and the esophagus; done for stricture of the lower end of the esophagus.

gastrofiberscope (gas"tro-fi'ber-skōp) a fibroscope for viewing the stomach.

gastrogastrostomy (gas"tro-gas-tros'to-me) [*gastro-* + *gastro-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an anastomosis between the pyloric and cardiac ends of the stomach, usually performed because of hourglass contraction of the middle third of the stomach; also, the anastomosis so established.

gastrogavage (gas"tro-gah-vazh) [*gastro-* + Fr. *gavage* cramming] the introduction of nutriment into the stomach by means of a tube passed through the esophagus.

gastrogenic (gas"tro-jen'ik) formed or originating in the stomach.

Gastrogratin (gas"tro-graf'in) trademark for a preparation of meglumine diatrizoate.

gastrograph (gas"tro-graf) [*gastro-* + Gr. *graphein* to record] an apparatus for recording the motions of the stomach.

gastrohepatic (gas"tro-hē-pat'ik) [*gastro-* + Gr. *hēpar* liver] pertaining to the stomach and liver.

gastrohepatitis (gas"tro-hep-ah-ti'tis) inflammation of the stomach and liver.

gastrohydrorrhea (gas"tro-hi'dro-re'ah) [*gastro-* + Gr. *hydōr* water + *rhoia* flow] (*obs.*) the secretion by the stomach of a quantity of watery fluid deficient in hydrochloric acid and gastric enzymes.

gastrohypertonic (gas"tro-hi'per-ton'ik) marked by excessive tonicity of the stomach.

gastroileac (gas"tro-il'e-ak) pertaining to stomach and ileum.

gastroileitis (gas''tro-il-e-i'tis) inflammation of the stomach and ileum.

gastroileostomy (gas''tro-il-e-os'to-me) surgical creation of an anastomosis between the stomach and ileum; also, the anastomosis so established.

gastrointestinal (gas''tro-in-tes'ti-nal) [*gastro-* + *intestinal*] pertaining to or communicating with the stomach and intestine, as a gastroenteric fistula.

gastrojejunocolic (gas''tro-jě-ju''no-kol'ik) pertaining to or communicating with the stomach, jejunum, and colon, as a gastrojejunocolic fistula.

gastrojeunoesophagostomy (gas''tro-jě-ju''no-ě-sof''ah-gos'-to-me) esophagojejunogastrostomosis.

gastrojejunostomy (gas''tro-jě-ju-nos'to-me) [*gastro-* + *jejunostomy*] surgical creation of an anastomosis between the stomach and jejunum; also, the anastomosis so established.

gastrokinesograph (gas''tro-ki-nes'o-graf) [*gastro-* + *Gr. kinēsis* motion + *graphein* to record] a device for recording the mechanical motions of the stomach.

gastrolial (gas''tro-li'en-al) [*gastro-* + *L. lien* spleen] pertaining to the stomach and spleen.

gastrolith (gas'tro-lith) [*gastro-* + *Gr. lithos* stone] a calcareous or other concretion formed in the stomach; called also *gastric* or *stomachic calculus*.

gastrolithiasis (gas''tro-li-thi'ah-sis) [*gastro-* + *Gr. lithos* stone + *-iasis*] the presence or formation of gastroliths.

gastrologist (gas-trol'o-jist) a specialist in diseases of the stomach.

gastrology (gas-trol'o-je) [*gastro-* + *-logy*] the sum of knowledge regarding the stomach.

gastrolysis (gas-trol'i-sis) [*gastro-* + *Gr. lysis* loosening] surgical division of perigastric adhesions in order to mobilize the stomach.

gastromalacia (gas''tro-mah-la'she-ah) [*gastro-* + *Gr. malakia* softening] an abnormal softening or softness of the wall of the stomach; see *softening of the stomach*.

gastromegaly (gas''tro-meg'ah-le) [*gastro-* + *Gr. megas* large] enlargement of the stomach.

gastromelus (gas-trom'ě-lus) [*gastro-* + *Gr. melos* limb] a monster with a supernumerary leg attached to the abdomen.

gastromycosis (gas''tro-mi-ko'sis) [*gastro-* + *Gr. mykēs* fungus] a disease of the stomach caused by fungi.

gastromyotomy (gas''tro-mi-ot'o-me) [*gastro-* + *Gr. mys* muscle

+ *temnein* to cut] incision through the muscular coats of the stomach down to the mucosa.

gastromyxorrhœa (gas''tro-mik''so-re'ah) [*gastro-* + *Gr. myxa* mucus + *rhoia* flow] excessive secretion of mucus by the stomach.

gastrone (gas'trôn) a reputed hormonal inhibitor of gastric acid secretion, extracted from gastric mucus.

gastroneostomy (gas''tro-nēs''te-os'to-me) [*gastro-* + *Gr. nēstis* jejunum + *stomoun* to provide with a mouth or opening] gastrojejunostomy.

gastropancreatitis (gas''tro-pan''kre-ah-ti'tis) inflammation of the stomach and pancreas.

gastroparalysis (gas''tro-pah-ral'i-sis) paralysis of the stomach; gastric atony; gastroparesis.

gastroparesis (gas''tro-par'ě-sis) [*gastro-* + *Gr. paresis* paralysis] paralysis of the stomach.

gastroparietal (gas''tro-pah-ri'ě-tal) pertaining to the stomach and the body wall.

gastropathic (gas''tro-path'ik) pertaining to disease of the stomach.

gastropathy (gas-trop'ah-the) [*gastro-* + *Gr. pathos* disease] any disease of the stomach.

gastroperiodynia (gas''tro-per'e-o-din'e-ah) [*gastro-* + *Gr. periodos* period + *odynē* pain] periodical attacks of pain in the stomach.

gastroperitonitis (gas''tro-per'i-to-ni'tis) inflammation of the stomach and peritoneum.

gastropexy (gas'tro-pek'se) [*gastro-* + *Gr. pēxis* fixation] surgical fixation of the stomach to correct displacement.

Gastrophilus (gas-trof'i-lus) *Gasterophilus*.

gastrophotography (gas''tro-fo-tog'rah-fe) photography of the interior of the stomach by means of a camera either built into the distal tip of the gastroscope, or attached to the eyepiece with light being transmitted to the stomach by a fiberoptic bundle system.

gastrophotor (gas''tro-fo'tor) an instrument for gastrophotography.

gastrophrenic (gas''tro-fren'ik) [*gastro-* + *Gr. phrēn* diaphragm] pertaining to the stomach and diaphragm.

gastrophthisis (gas''tro-thi'sis) [*gastro-* + *Gr. phthisis* wasting] 1. hyperplasia of the gastric mucosa and submucosa, leading to thickening of the stomach walls and diminution of its cavity. 2. emaciation due to abdominal disease.

gastroplasty (gas'tro-plas'te) [*gastro-* + Gr. *plassein* to form] plastic operation on the stomach.

gastroplegia (gas'tro-ple'je-ah) [*gastro-* + Gr. *plēgē* stroke] paralysis of the stomach.

gastropliation (gas'tro-pli-ka'shun) [*gastro-* + L. *plicare* to fold] the surgical treatment of gastric dilatation by stitching a fold in the stomach.

gastropneumonic (gas'tro-nu-mon'ik) pertaining to the stomach and lungs.

gastropod (gas'tro-pod) a mollusk of the class Gastropoda; see *snail*.

Gastropoda (gas-trop'ō-dah) [*gastro-* + Gr. *pous* foot] a class of mollusks embracing the snails, slugs, whelks, abalones, etc., including many species that serve as primary and intermediate hosts of pathogens.

gastroptosis (gas'tro-to'se-ah) (obs.) gastroptosis.

gastroptosis (gas'tro-to'sis) [*gastro-* + Gr. *ptosis* falling] downward displacement of the stomach; a term based on the outmoded concept that variation in position of abdominal organs is pathological.

gastropulmonary (gas'tro-pul'mo-nar-e) [*gastro-* + L. *pulmo* lung] pertaining to the stomach and lungs.

gastropylorotomy (gas'tro-pi'lo-rek'to-me) [*gastro-* + Gr. *pylōros* pylorus + *ektomē* excision] excision of the pyloric portion of the stomach.

gastropyloric (gas'tro-pi-lor'ik) pertaining to the stomach in its entirety and to the pylorus.

gastroradiculitis (gas'tro-rah-dik'u-li'tis) [*gastro-* + L. *radix* root + *-itis*] inflammation of the posterior roots of spinal nerves involving irritation of the sensory fibers in them which are connected with the stomach.

gastrorrhagia (gas'tro-ra'je-ah) [*gastro-* + Gr. *rhēgnynai* to break forth] hemorrhage from the stomach.

gastrorrhaphy (gas-tror'ah-fe) [*gastro-* + Gr. *rhaphe* suture] suture of a wound of the stomach.

gastrorrhea (gas'tro-re'ah) [*gastro-* + Gr. *rhoia* flow] excessive secretion of mucus or gastric juice in the stomach; gastric hypersecretion.

gastrorrhexis (gas'tro-rek'sis) [*gastro-* + Gr. *rhēxis* rupture] rupture of the stomach.

gastroschisis (gas-tros'ki-sis) [*gastro-* + Gr. *schisis* cleft] a congenital fissure of the abdominal wall not involving the site of insertion of the umbilical cord, and usually accompanied by protrusion of the small and part of the large intestine.

gastroscope (gas'tro-skōp) [*gastro-* + Gr. *skopein* to examine] an endoscope for inspecting the interior of the stomach. **fiberoptic g.**, a fiberscope for examining the stomach.

gastroscopic (gas'tro-skop'ik) pertaining to gastroscopy or the gastroscope.

gastroscopy (gas-tros'ko-pe) [*gastro-* + Gr. *skopein* to examine] inspection of the interior of the stomach by means of the gastroscope.

gastroselective (gas'tro-sē-lek'tiv) having an affinity for receptors involved in regulation of gastric activities.

gastrosia (gas-tro'se-ah) a disease of the stomach. **g. fungo'sa**, a disease of the stomach caused by fungi or molds.

gastrosis (gas-tro'sis) any disease of the stomach.

gastrospasm (gas'tro-spazm) [*gastro-* + *spasm*] spasm of the stomach.

gastrospiry (gas'tro-spi're) [*gastro-* + L. *spirare* to breathe] aerophagia.

gastrosplenic (gas'tro-splen'ik) pertaining to the stomach and spleen.

gastrostaxis (gas'tro-stak'sis) [*gastro-* + Gr. *staxis* a dripping] the oozing of blood from the mucous membrane of the stomach; hemorrhagic gastritis.

gastrostenosis (gas'tro-stē-no'sis) [*gastro-* + Gr. *stenōsis* narrowing] contraction or shrinkage of the stomach.

gastrostogavage (gas-tros'to-gah-vahzh') introduction of nutriment into the stomach by means of a tube passed through a gastric fistula.

gastrostolavage (gas-tros'to-lah-vahzh') irrigation of the stomach through a gastric fistula.

gastrostoma (gas-tros'to-mah) [*gastro-* + Gr. *stoma* mouth] a gastric fistula or a surgically created opening from the stomach through the abdominal wall.

gastrostomosis (gas-tros'to-mo'sis) gastrostomy.

gastrostomy (gas-tros'to-me) [*gastro-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an artificial opening into the stomach; also, the opening so established. **Beck's g.**, creation of a gastric fistula by the formation of a tube from the greater curvature of the stomach to the surface of the abdominal wall. **Witzel g.**, that in which a catheter is inserted and secured from the gastric lumen to the surface of the abdominal wall.

gastrosuccorrhea (gas'tro-suk'o-re'ah) [*gastro-* + L. *succus*

juice + Gr. *rhoia* flow] excessive and continuous secretion of gastric juice. **digestive g.**, a condition in which there is excessive secretion of gastric juice during digestion only.

gastrothoracopagus (gas'tro-tho'rah-kop'ah-gus) [*gastro-* + Gr. *thōrax* chest + *pagos* thing fixed] a double monster joined at the abdomen and thorax. **g. dipy'gus**, a double monster in which there is attached to the abdomen of the autosite a parasite consisting of the pelvis and lower extremities only; called also *dipygus parasiticus*.

gastrotome (gas'tro-tōm) a cutting instrument used in gastrotomy.

gastrotomy (gas-trot'o-me) [*gastro-* + Gr. *temnein* to cut] incision into the stomach.

gastrotonometer (gas'tro-to-nom'ē-ter) [*gastro-* + Gr. *tonos* tension + *metron* measure] an instrument for measuring intragastric pressure.

gastrotonometry (gas'tro-tro-nom'ē-tre) the measurement of intragastric pressure.

gastrotoxin (gas'tro-tok'sin) a substance that exerts a toxic effect on the stomach.

Gastrotricha (gas'tro-trik'ah) [*gastro-* + Gr. *trichos* hair] a class of very small aquatic animals of the phylum Aschelminthes, which have cilia on the ventral surface and a triradial esophagus. In some systems of classification, they are considered to be a separate phylum.

gastrotopic (gas'tro-trop'ik) [*gastro-* + Gr. *tropos* a turning] having an affinity for or exerting a special effect upon the stomach.

gastrotyimpanites (gas'tro-tim'pah-ni'tēz) [*gastro-* + *tympanites*] tympanitic distention of the stomach.

gastrula (gas'troo-lah) that early embryonic stage which follows the blastula. The simplest type consists of two layers, the ectoderm and the mesentoderm, and of two cavities, one lying between the ectoderm and the entoderm; the other (the archenteron) formed by invagination so as to lie within the entoderm and having an opening (the blastopore).

Section of a gastrula.

gastrulation (gas'troo-la'shun) the process by which a blastula becomes a gastrula or, in forms without a true blastula, the process by which three germ cell layers are acquired.

Gatch bed (gach) [Willis Dew Gatch, American surgeon, born 1879] see under *bed*.

gatism (ga'tizm) [Fr. *gâter* to spoil] rectal, vesical, or rectovesical incontinence.

gatophilia (ga'to-fil'e-ah) (obs.) ailurophilia.

gatophobia (ga'to-fo'be-ah) (obs.) ailurophobia.

gattine (ga'tēn) a form of flacherie (a disease of silkworm larvae) in which the cephalic end of affected larvae may become swollen and almost translucent; thought to be caused by a mixed infection with an unidentified virus and an enterococcus closely related to *Streptococcus faecalis*.

Gaucher's cells, disease (splenomegaly) (go-shāz) [Phillippe Charles Ernest Gaucher, French physician, 1854–1918] see under *cell* and *disease*.

gauge (gāj) an instrument for determining the dimensions or caliber of anything. **Boley g.**, a watchmaker's gauge used in dentistry to measure tooth dimensions and to make other measurements important in prosthetic dentistry. **catheter g.**, a plate with graduated perforations for measuring the outside diameter of catheters.

Gaultheria (gawl-the're-ah) [Jean François Gaultier, Quebec physician and botanist, 1708–1756] a genus of ericaceous plants; the leaves of *G. procumbens*, of North America, afford a fragrant volatile oil rich in methyl salicylate.

gauntlet (gawnt'let) [Fr. *gant* glove] a bandage which covers the hand and fingers like a glove.

gauss (gows) [Johann Karl F. Gauss, German physicist, 1777–1855] the unit of magnetic flux density; symbol *B*. In the SI system of units, it has been replaced by the *tesla*.

gaussian curve (gow'shun) [J. K. F. Gauss] see under *curve*.

Gauvain's fluid (go-vānz') [Ernest Almore *Gauvain*, American dermatologist, born 1893] see under *fluid*.

gauze (gawz) a light, open-meshed fabric of muslin or similar material. Before use in surgery, it is usually sterilized and frequently impregnated with various antiseptics. **absorbable g.**, gauze made from oxidized cellulose. **absorbent g.** [USP], a well-bleached cotton cloth of plain weave, of various thread counts (20–44 per inch warp, 12–36 filling) and various weights (17.2–44.5 gm. per yard). **absorbent g., sterile**, absorbent gauze which has been sterilized and subsequently protected from contamination. **petrolatum g.** [USP], absorbent gauze saturated with white petrolatum; used as a protective covering for wounds. **zinc gelatin impregnated g.** [USP], absorbent gauze impregnated with zinc gelatin that may contain a small amount of ferric oxide.

gavage (gah-vahzh') [Fr. "cramming"] 1. forced feeding especially through a tube passed into the stomach. 2. the therapeutic use of a very full diet; superalimentation.

Gavard's muscle (gah-vahrz') [Hyacinthe *Gavard*, French anatomist, 1753–1802] see under *muscle*.

Gay-Lussac's law (ga'lū-sahks') [Joseph Louis *Gay-Lussac*, French naturalist, 1778–1850] Charles' law; see under *law*.

Gaza's operation (gah'zahz') [Wilhelm von *Gaza*, German surgeon, 1883–1936] ramisection.

gaze (gaz) 1. to look in one direction for a period of time. 2. the act or state of looking steadily in one direction.

g-cal. gram calorie; see *small calorie*, under *calorie*.

Gd chemical symbol for *gadolinium*.

GDH glutamic acid dehydrogenase.

Ge chemical symbol for *germanium*.

gear (gēr) equipment. **cervical g.**, an extraoral appliance by means of which the back of the neck is used for anchorage or as a base of traction in effecting tooth movement.

Geaster (je-as'ter) a genus of basidiomycetous fungi of the order Lycoperdales, series Gasteromycetes, including the star fungi.

Gee's disease (gēz) [Samuel Jones *Gee*, London physician, 1839–1911] the infantile form of nontropical sprue.

Gee-Herter disease (ge'her'ter) [S. J. *Gee*; Christian Archibald *Herter*, American physician, 1865–1910] the infantile form of nontropical sprue.

Gee-Herter-Heubner disease, syndrome (ge'her'ter-hoib'-ner) [S. J. *Gee*; C. A. *Herter*; Johann Otto L. *Heubner*, pediatrician in Berlin, 1843–1926] the infantile form of nontropical sprue.

Gee-Thaysen disease (ge'thi'sen) [S. J. *Gee*; Thorwald Einar *Hess Thaysen*, Copenhagen physician, 1883–1936] the adult form of nontropical sprue.

geeldikkop (gēl-dik'kop) [Dutch "yellow, thick head"] *tribulosis*.

Gegenbaur's cell (ga'gen-bow'erz) [Carl *Gegenbaur*, German anatomist, 1826–1903] osteoblast.

gegenhalten (ga'gen-halt'en) [Ger.] an involuntary resistance to passive movement, as may occur in cerebral cortical disorders.

Geigel's reflex (gi'gelz) [Richard *Geigel*, German physician, 1859–1930] see under *reflex*.

Geiger counter, Geiger-Müller counter (gi'ger, gi'ger-mil'er) [Hans *Geiger*, German physicist in England, 1882–1945] see under *counter*.

Geissler's test (gis'lerz) [Ernst *Geissler*, German physician in 19th century] see under *tests*.

Geissler's tube (gis'lerz) [Heinrich *Geissler*, German inventor, 1814–1879] see under *tube*.

gel (jel) a colloid which is firm in consistency, although containing much liquid, a colloid in a gelatinous form. See *sol*. **aluminum hydroxide g.** [USP], a suspension of 3.6 to 4.4 per cent of aluminum oxide (Al_2O_3), in the form of aluminum hydroxide and hydrated oxide, used as a gastric antacid, especially in the treatment of peptic ulcer. Called also *colloidal aluminum hydroxide gel*. **aluminum hydroxide g., dried** [USP], a white, amorphous powder suitable for preparing tablets and capsules, obtained by drying aluminum hydroxide gel, and containing not less than 50 per cent aluminum oxide; used as an antacid. **aluminum carbonate g., basic**, an aqueous suspension containing the equivalent of 4.9 to 5.3 per cent aluminum oxide and not less than 2.4 per cent carbon dioxide; used as an antacid. **aluminum phosphate g.** [USP], a water suspension of aluminum phosphate and some flavoring agents; it contains 4 to 5 per cent aluminum phosphate ($AlPO_4$) and is used as a gastric antacid, especially in the treatment of gastric ulcer. **betamethasone benzoate g.** [USP], a gel containing 90 to 110 per cent of the labeled amount of betamethasone benzoate; used as a topical glucocorticoid. **corticotropin g.**, repository corticotropin injection [USP]. **fluocinonide g.** [USP], a gel containing 90 to 110 per cent of the labeled amount of fluocinonide; used as a topical glucocorticoid. **silica g.** [NF], a gel obtained by the reaction of sodium silicate with hydrochloric or sulfuric acid, and containing not less than 99 percent of silica; used as a dispersing

and suspending agent. **sodium fluoride and orthophosphoric acid g., sodium fluoride and phosphoric acid g.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of fluoride ion, in an aqueous medium containing a suitable viscosity-inducing agent; used as a dental caries prophylactic, applied topically to the teeth. **tolnaftate g.** [USP], a gel containing 90 to 110 per cent of the labeled amount of tolinaftate; used as an antifungal agent. **tretinoin g.** [USP], a gel containing 90 to 130 per cent of the labeled amount of tretinoin; used as a topical keratolytic.

Gel. quav. abbreviation for *L. gelati'na qua'vis*, in any kind of jelly.

gelase (jel'ās) an enzyme that splits agar.

gelasmus (jē-las'mus) [G. *gelasma* a laugh] hysterical laughter.

gelastic (jē-las'tik) [Gr. *gelastos* laughable] pertaining to laughter.

gelate (jel'āt) to form a gel.

gelatification (jē-lat'i-fi-ka'shun) conversion into gelatin.

gelatigenous (jel'ah-tij'ē-nus) producing or forming gelatin.

gelatin (jel'ah-tin) [*L. gelatina*, from *gelare* to congeal] [USP] a product obtained by partial hydrolysis of collagen derived from the skin, white connective tissue, and bones of animals; used as a suspending agent. It is also used pharmaceutically in the manufacture of capsules and suppositories, and has been suggested for intravenous use as a plasma substitute, and has been used as an adjuvant protein food. **agar g.**, nutrient bouillon solidified with gelatin and agar. **g. compound phenolized**, a mixture of gelatin, zinc oxide, glycerin, and water in phenol, used in preparing bandages (jelly bandages) for chronic ulcers and burns; especially effective in the ambulatory management of varicose ulcers. **dextrose g.**, nutrient gelatin containing dextrose. **fish g.**, fish bouillon solidified with 10 per cent of gelatin. **glucose-formate g.**, nutrient gelatin containing glucose and sodium formate. **glycerinated g.**, a preparation of gelatin and glycerin. **Japanese g.**, agar. **Kitasato's glucose-formate g.**, glucose-formate g. **lactose-litmus g.**, nutrient gelatin containing lactose and sufficient litmus solution to color the medium a deep lavender. **litmus g.**, nutrient gelatin containing sufficient litmus to give it a deep lavender color. **litmus whey g.**, litmus whey when solidified with gelatin. **meat extract g.**, meat extract bouillon solidified with gelatin. **meat infusion g.**, nutrient g. **medicated g.**, gelatin mixed with medicated substances for local application. **nutrient g.**, a culture medium consisting of nutrient bouillon solidified with 12 per cent gelatin. **silk g.**, sericin. **vegetable g.**, a gelatin-like matter obtained from vegetable tissues; see *agar*. **g. of Wharton**, Wharton's jelly. **whey g.**, whey, obtained from fresh milk which has been curdled with rennet, solidified with 10 per cent of gelatin. **wort g.**, beerwort culture medium solidified with 10 per cent of gelatin. **zinc g.** [USP], a preparation of zinc oxide, gelatin, glycerin, and purified water, applied topically as a protective.

gelatinase (jē-lat'i-nās) an enzyme that liquefies gelatin, but does not affect fibrin and egg albumin; it occurs among bacteria, molds, and yeasts.

gelatiniferous (jel'ah-ti-ni'fer-us) [*L. gelatina* gelatin + *ferre* to bear] producing gelatin.

gelatinize (jē-lat'i-nīz) 1. to convert into gelatin. 2. to become converted into gelatin.

gelatinoid (jē-lat'i-noid) resembling gelatin.

gelatinolytic (jel'ah-ti-no-lit'ik) [*gelatin* + Gr. *lysis* dissolution] dissolving or splitting up gelatin.

gelatinosa (jel'ah-ti-no'sah) [*L.*] gelatinous; see entries beginning *substantia gelatinosa*, under *substantia*.

gelatinous (jē-lat'i-nus) [*L. gelatinosus*] like jelly or softened gelatin.

gelatinum (jel-ah-ti-num) [*L.*] gelatin. **g. glycerina'tum**, glycerinated gelatin.

gelation (jē-la'shun) the conversion of a sol into a gel.

gelatose (jel'ah-tōs) an albumose formed by hydrolyzing gelatin by acid, alkalis, or an enzyme.

gelatum (jē-la'tum) [*L.*] jelly, or gel.

geld (geld) to remove the testes, especially of the horse.

gelding (gel'ding) a castrated male animal, especially a horse.

Gelfilm (jel'film) trademark for absorbable gelatin film (q.v., under *film*).

Gelfoam (jel'fōm) trademark for an absorbable gelatin sponge.

gelidusi (ga'le-doo'se) pelidisi.

Gélineau's syndrome (zha-lī-no') [Jean Baptiste Edouard *Gélineau*, French neurologist, born 1859] narcolepsy.

Gellé's test (zhel-āz') [Marie Ernest *Gellé*, French otologist, 1834–1923] see under *tests*.

Gellhorn pessary (jel'horn) [George *Gellhorn*, St. Louis gynecologist, 1870–1936] see under *pessary*.

gelometer (jel-om'ē-ter) a device for determining the time required for a solution to gel.

gelose (jel'ös) agar.

gelosis (jē-lo'sis), pl. *gelo'ses* [L. *gelare* to freeze] a hard lump in a tissue, especially such a lump in a muscle.

gelotherapy, gelototherapy (jel'o-ther'ah-pe; jel'o-to-ther'ah-pe) [Gr. *gelōs* laughter + *therapeia* cure] treatment of disease by provoking laughter.

gelotripsy (jel'o-trip'se) [*gelosis* + Gr. *tripsis* a rubbing] the breaking up of geloses in muscle by massage.

gelsemine (jel'sē-mēn) an alkaloid, $C_{20}H_{22}N_2O_2$, obtained from the roots and rhizomes of *Gelsemium sempervirens* (L.) Ait., (Loganiaceae). It acts as a mild central nervous system stimulant with toxic side effects, including double vision and muscular weakness, and may cause respiratory arrest.

Geltabs (jel'tabz) trademark for a preparation of ergocalciferol.

Gély's suture (zha-lēz') [Jules Aristide Gély, French surgeon, 1806-1861] see under *suture*.

gemästete (gē-mes'tē-tē) [Ger.] swollen or bloated: a term applied to enlarged astrocytes in the region of a degenerated area.

gemcadiol (jem'kah-di'öl) chemical name: 2,2,9,9-tetra-methyl-1,10-decanediol; an antihyperlipidemic, $C_{14}H_{30}O_2$.

Gemella (jē-mel'ah) in some systems of classification, a genus of aerobic or facultatively anaerobic cocci of the family Streptococcaceae, occurring singly or in pairs with adjacent sides flattened; they are found as parasites of mammals. **G. haemolytans**, a species found in bronchial secretions and slime from the respiratory tract.

gemellary (jem'ē-lār'e) pertaining to twins.

gemellipara (jem'el-lip'ah-rah) [L. *gemelli* twins + *parere* to produce] a woman who has given birth to twins.

gemellology (jem'el-ol'o-je) [L. *gemellus* twin + *-logy*] the scientific study of twins and twinning.

geminat (jem'i-nāt) [L. *geminatus*] paired; occurring in pairs.

gemination (jem-i-na'shun) a doubling; in dentistry the division of a tooth bud which results in the formation of two teeth or of a double crown formed on a single root with a single pulp canal.

gemini (jem'i-ni) [L.] plural of *geminus*.

geminous (jem'i-nus) geminate.

geminus (jem'i-nus), pl. *gem'ini* [L.] a twin. **gem'ini aequales**, monozygotic twins.

gemistocyte (jem-is'to-sit) [Gr. *gemistos* laden, full + *cyte*] an astrocyte in which the cell body swells considerably, the nucleus assumes an eccentric position, and the cytoplasm is clearly visible. Called also *gemistocytic astrocyte*.

gemistocytic (jem-is'to-si'tik) composed of large round cells (gemistocytes); a term applied to astrocytomas composed of such cells.

gemma (jem'ah) [L. "bud"] a budlike body or structure.

gemmangioma (jem'an-je-o'mah) hemangioendothelioma.

gemmation (jē-ma'shun) [L. *gemma* to bud] reproduction by budding, a kind of reproduction in cells in which a portion of the cell body is thrust out and then becomes separated, forming a new individual; used particularly to describe the formation of chlamydospores in fungi. See *budding*, def. 1.

gemma (jem'ul) [L. *gemma*, dim. of *gemma* bud] 1. a reproductive bud; the immediate product of gemmation. 2. any one of the many little excrescences upon the dendrites of a nerve cell; called also *dendritic spine*. 3. hypothetical units assumed to be thrown off by the somatic cells, to be stored in the germ cells, and to determine the development of certain characters.

Gemonil (jem'o-nil) trademark for a preparation of metharbital.

-gen (jen') [Gr. *gennan* to produce] a word termination denoting an agent productive of the object or state indicated by the word stem to which it is affixed, as allergen (allergy), cryogen (cold), and pathogen (disease).

genal (je'nal) [L. *gena* cheek] pertaining to the cheek; buccal.

gender (jen'der) sex; the category to which an individual is assigned on the basis of sex.

gene (jēn) [Gr. *gennan* to produce] the biologic unit of heredity, self-reproducing and located at a definite position (locus) on a particular chromosome. The concept of gene is still evolving. From the standpoint of function, genes are conceived of as structural, operator, and regulator genes (see subentries). From another standpoint, they are conceived of as cistrons, mutons, and recones (see individual entries). As classically construed, the gene is approximately synonymous with cistron. **allelic g's**, genes situated at corresponding loci in a pair of chromosomes. **amorphic g.**, an amorph. **complementary g's**, two independent pairs of nonallelic genes, neither of which will produce its effect in the absence of the other; called also *reciprocal g's*. **cumulative g's**, polygenes. **derepressed g.**, in genetic theory, one that in response to an environmental demand for a particular enzyme functions to increase production of that enzyme; cf. *repressed g.* **dominant g.**, one that produces an effect (the phenotype) in the organism, regardless of the state of the corresponding allele, i.e., regardless of whether the individual is homozygous or heterozygous. **histocompatibility g.**, a gene

that determines the specificity of tissue antigenicity (HLA antigens) and thus the compatibility of donor and recipient in tissue transplantation and blood transfusion; see *HLA antigens*, under *antigen*. **holandric g's**, genes in the nonhomologous region of the Y chromosome. **hologynic g's**, genes located on the X chromosome and appearing only in the female offspring. **immune response (Ir) g's**, genes of the major histocompatibility complex that govern the immune response to individual immunogens. **Ir g's**, immune response g's. **Is g's**, those genes that govern the formation of suppressor T-lymphocytes. **leaky g.**, one in which a switch in the sequence of bases in a nucleotide results in the production of a mutant protein that, because of a single amino acid replacement, has only partial enzymatic activity; a hypomorph. **lethal g.**, a gene the presence of which brings about the death of the organism, or permits its survival only under certain conditions; see also *lethal equivalent*. **modifying g's**, see under *factor*. **mutant g.**, a gene in which the loss, gain, or exchange of material has resulted in a permanent transmissible change in function. Such a gene may have become practically inactive (*amorph*), may act to antagonize or inhibit normal activity (*antimorph*), may act to increase normal activity (*hypermorph*), or may show only a slight reduction in its effectiveness (*leaky gene* or *hypomorph*). **nonstructural g's**, the operator and regulator genes, i.e., those not concerned in the formation of templates for messenger RNA. **operator g.**, in genetic theory, a gene that serves as a starting point for reading the genetic code and that, through interaction with a repressor, controls the activity of the structural genes associated with it in the operon. **pleiotropic g.**, one producing many effects in the phenotype. **recessive g.**, a gene that produces an effect in the organism only when it is transmitted by both parents, i.e., only when the individual is homozygous. **reciprocal g's**, complementary g's. **regulator g.**, in genetic theory, a gene that synthesizes repressor, a substance which, through interaction with the operator gene, switches off the activity of the structural genes associated with it in the operon. **repressed g.**, in genetic theory, one that under normal conditions does not always function to produce the maximum number of enzymes; cf. *derepressed g.* **repressor g.**, regulator g. **sex-conditioned g.**, a gene that is fully expressed in one sex only. **sex-limited g.**, a sex-linked or autosomal gene that will produce an effect in one sex only. **sex-linked g.**, a gene that is carried on the X or Y chromosome. **silent g.**, a third allele postulated to explain the complete lack of a specific enzyme activity (e.g., cholinesterase activity). **structural g.**, a gene that specifies the amino acid sequence of a polypeptide chain. **sublethal g.**, a gene the presence of which handicaps or impairs the function of the organism. **supplementary g's**, two independent pairs of genes which interact in such a way that one dominant will produce its effect even in the absence of the other, but the second requires the presence of the first to be effective. **taster g.**, the gene that governs the ability to taste phenylthiourea. **wild-type g.**, the normal allele of a rare mutant gene, sometimes symbolized by +. **X-linked g.**, a gene that is carried on the X, or female sex, chromosome; generally used synonymously with sex-linked gene, since no genetic disorders have as yet been associated with genes of the Y chromosome.

geneogenous (je'ne-oj'ē-nus) [Gr. *genea* birth + *gennan* to produce] congenital.

genera (jen'er-ah) [L.] plural of *genus*.

general (jen'er-al) [L. *generalis*] affecting many parts or all parts of the organism; not local.

generalization (jen'er-al-i-za'shun) the phenomenon in pavlovian conditioning in which, after conditioning is established, a stimulus similar in some respect to the conditioned stimulus will also elicit the conditioned reflex.

generalize (jen'er-al-iz) to convert from a local to a general disease; to render general.

generation (jen'ē-ra'shun) [L. *generatio*] 1. the act or process of reproduction. 2. a class composed of all individuals removed by the same number of successive ancestors from a common predecessor, or occupying positions on the same level in a genealogical chart. **alternate g.**, the alternate reproduction by asexual and sexual means in an animal or plant species. **asexual g.**, production of a new individual (organism) not originating from the union of sexual elements (gametes), as by fission, budding, etc. **direct g.**, asexual g. **filial g., first**, all of the offspring produced by the mating of two individuals, as in a hybrid cross; symbol F_1 . **filial g., second**, all of the offspring produced by the mating of two individuals of the first filial generation; symbol F_2 . **nonsexual g.**, asexual g. **parental g.**, the generation with which a particular genetic study is begun; symbol P . **sexual g.**, production of a new individual (organism) by the union of male and female elements (gametes). **spontaneous g.**, the discredited concept of continuous generation of living organisms from nonliving matter; abiogenesis.

generative (jen'ē-ra'tiv) pertaining to the reproduction of the species.

generator (jen'er-a'tor) something that produces or causes to exist; a machine that converts mechanical to electrical energy.

pulse g., the power source for a cardiac pacemaker system, usu-

ally fueled by lithium or plutonium-238, supplying impulses to the implanted electrodes, either at a fixed rate or in some programmed pattern.

generic (jě-ner'ik) [L. *genus*, *generis* kind] 1. pertaining to a genus. 2. nonproprietary; denoting a drug name not protected by a trademark, usually descriptive of its chemical structure; sometimes called *public name*.

genial, genesic (jě-ne'ze-al; jě-nes'ik) pertaining to generation or to origin.

genesiology (jě-ne'ze-ol'o-je) [*genesis* + *-logy*] the sum of what is known concerning reproduction.

genesis (jen'ě-sis) [Gr. *genesis* production, generation] the coming into being of anything; the process of originating. Often used as a word termination to denote the production, formation, or development of the object or state indicated by the word stem to which it is affixed, as biogenesis, gametogenesis, and pathogenesis.

genestasis (jen'ě-sis'tah-sis) [*genesis* + Gr. *stasis* a stopping] interruption of the reproduction of organisms by chemotherapy so as to permit the body cells or fluids to dispose of them.

genestatic (jen'ě-stat'ik) tending to prevent sporulation.

genetic (jě-net'ik) 1. pertaining to reproduction, or to birth or origin. 2. inherited.

geneticist (jě-net'ī-sist) a specialist in genetics.

genetics (jě-net'iks) [Gr. *gennan* to produce] the study of heredity. **biochemical g.**, the science concerned with the chemical and physical nature of genes and the mechanism by which they control the development and maintenance of the organism. **clinical g.**, the study of the possible genetic factors influencing the occurrence of a pathologic condition. **molecular g.**, that branch of genetics concerned with the molecular structure and activities of the genetic material, including the replication of DNA, its transcription into RNA, and the translation of RNA to form proteins.

genetotrophic (jě-net'ō-trōf'ik) pertaining to genetics and nutrition; relating to problems of nutrition which are hereditary in nature, or transmitted through the genes.

genetous (jě-net'us) dating from fetal life.

Geneva Convention an international agreement of 1864 whereby, among other pledges, the signatory nations pledged themselves to treat the wounded and the army medical and nursing staffs as neutrals on the field of battle.

Gengou phenomenon (zhaw-goo') [Octave Gengou, French bacteriologist, 1875-1957] fixation of the complement; see under *fixation*.

genial, genian (jě-ni'al; jě-ni'an) [Gr. *geneion* chin] pertaining to the chin.

genic (jen'ik) pertaining to or caused by genes.

-genic (jen'ik) [Gr. *gennan* to produce] a word termination meaning producing, or productive of.

genicula (jě-nik'u-lah) [L.] plural of *geniculum*.

genicular (jě-nik'u-lar) pertaining to the knee.

geniculate (jě-nik'u-lāt) [L. *geniculatus*] bent, like a knee.

geniculum (jě-nik'u-lum), pl. *genic'ula* [L., dim. of *genu*] a little knee; [NA] a general term designating a sharp, kneelike bend in a small structure or organ, such as a nerve. **g. cana'lis facia'lis** [NA], **g. of facial canal**, the bend in the facial canal which lodges the geniculum nervi facialis; called also *genu of facial canal* and *knee of aqueductus fallopii*. **g. of facial nerve**, **g. ner'vi facia'lis** [NA], the part of the facial nerve at the lateral end of the internal acoustic meatus, where the fibers turn sharply posteroinferiorly, and where the geniculate ganglion is found; called also *external genu of facial nerve*.

genin (jen'in) aglycone.

genio- [Gr. *geneion* chin] a combining form denoting relationship to the chin. See also words beginning *mento-*.

geniocheiloplasty (je'ne-o-ki'lo-plas'te) [Gr. *geneion* chin + Gr. *cheilos* lip + *plassein* to form] plastic surgery of the chin and lip.

genioglossus (je'ne-o-glos'us) see *Table of Musculi*.

geniohyoglossus (je'ne-o-hi'ō-glos'us) musculus geniohyoglossus.

geniohyoid (je'ne-o-hi'oid) pertaining to the chin and hyoid bone.

geniohyoideus (je'ne-o-hi-oi'de-us) see *Table of Musculi*.

genioplasty (jě-ni'o-plas'te) [Gr. *geneion* chin + Gr. *plassein* to shape.] plastic surgery of the chin.

genital (jen'i-tal) [L. *genitalis* belonging to birth] 1. pertaining to reproduction, or to the organs of generation. 2. [pl.] the reproductive organs (organa genitalia [NA]).

genitalia (jen'i-ta'le-ah) [L., pl.] the reproductive organs (organa genitalia [NA]). **external g.**, see *partes genitales feminae externae* and *partes genitales masculinae externae*. **indifferent g.**, the reproductive organs of the embryo prior to the establishment of definitive sex.

genitaloid (jen'i-tal-oid) [*genitalia* + Gr. *eidos* form] pertaining to the primordial sex cells, before future sexuality is distinguishable.

Female external genitalia (Bleier).

genito- (jen'i-to) [L. *genitalis* belonging to birth] a combining form denoting relationship to the organs of reproduction.

genitocrural (jen'i-to-kroo'ral) [*genital* + *crural*] pertaining to the genitalia and the leg.

genitofemoral (jen'i-to-fem'or-al) genitocrural.

genitography (jen'i-tog'rah-fe) radiography of the urogenital sinus and internal duct structures after injection of a contrast medium through the opening of the sinus.

genitoinfectious (jen'i-to-in-fek'shus) venereal.

genitoplasty (jen'i-to-plas'te) [*genital* + Gr. *plassein* to mold] plastic surgery on the genital organs.

genitourinary (jen'i-to-u'ri-nar-e) pertaining to the genital and urinary organs; urogenital; urinosexual.

genius (jěn'yus) 1. distinctive character or peculiar nature. 2. superlative aptitude or ability. **g. epidem'icus**, Sydenham's theory of "epidemic constitutions," that contagious diseases are influenced by cosmic or atmospheric conditions which may change the character of and produce variations in these diseases. **g. lo'ci**, the particular susceptibility of a tissue to develop secondary tumors. **g. mor'bi**, the predominant character of a disease.

Gennari's line (band, layer, stria, stripe) (jen-nah'rēz) [Francisco Gennari, Italian anatomist of the 18th century] see *Baillarger's lines*, under *line*.

geno- (jen'o) [Gr. *gennan* to produce] a combining form denoting relationship to reproduction or to sex.

genoblast (jen'o-blast) [*geno-* + Gr. *blastos* germ] 1. the nucleus of the fertilized ovum. 2. a mature germ cell.

genocopy (jen'o-kop'e) an individual whose phenotype mimics that of another genotype but whose character is determined by a distinct assortment of genes; called also *genetic mimic*. Cf. *phenocopy*.

genodermatology (jen'o-der'mah-tol'o-je) that branch of dermatology which treats of hereditary skin diseases.

genodermatosis (jen'o-der-mah-to'sis) [*geno-* + *dermatosis*] a genetically determined disorder of the skin, usually generalized; if circumscribed, it is usually called *nevus*.

genome (je'nōm) [*gene* + *chromosome*] the complete set of hereditary factors, as contained in the haploid assortment of chromosomes.

genomic (je-nom'ik) pertaining to the genome.

genophobia (jen'o-fo'be-ah) [*geno-* + Gr. *phobein* to be affrighted by + *ia*] morbid dread of sex and sexuality.

genotype (jen'o-tip) [*geno-* + Gr. *typos* type] 1. the entire genetic constitution of an individual; also, the alleles present at one or more specific loci. 2. the type species of a genus.

genotypic (jen'o-ti'pik) pertaining to or expressive of the genotype.

-genous [Gr.] a word termination signifying arising or resulting from, or produced by.

Gensoul's disease (zhan-soolz') [Joseph Gensoul, French surgeon, 1797-1858] Ludwig's angina; see under *angina*.

gentamicin (jen'tah-mi'sin) an antibiotic complex isolated from the actinomycetes *Micromonospora purpurea* and *M. echinosporea*, consisting of components designated A, B, C, etc. The form in medicinal use is a mixture of three fractions of the C component (C₁, C_{1a}, C₂); it is bactericidal for a wide range of pathogens, being highly effective against many gram-negative bacteria, especially *Pseudomonas* species, as well as some gram-positive species, especially *Staphylococcus aureus*. **g. sulfate** [USP], the sulfate salt of the antibiotic substances isolated from *Micromonospora purpurea*. It is used as an antibacterial in the treatment of infections caused by susceptible organisms involving almost all body organs and systems, especially in gram-negative bacillary infections of the urinary tract, in burns contaminated by *Pseudomonas*, sepsis, and toxemias. It is administered intramus-

cularly, intravenously, or applied topically to the skin, and is also applied topically to the conjunctiva in eye infections due to responsive bacteria.

gentamycin (jen'tah-mi'sin) gentamicin.

gentian (jen'shun) the dried rhizome and roots of *Gentiana lutea* L. (Gentianaceae); it has been used as a bitter tonic. It contains gentiin, gentiamarin, gentisin, gentisic acid, gentiopicrin, gentianose, and pectin. Also known as *yellow* or *pale gentian*. **g. violet** [USP], chemical name: *N*-[4-bis[4-(dimethylamino)phenyl]-methylene]-2,5-cyclohexadiene-1-ylidene]-*N*-methylmethanaminium chloride. Hexamethylpararosaniline chloride, usually admixed with penta- and tetramethylpararosaniline chlorides, occurring as a dark green powder or greenish glistening pieces having a metallic luster. It is a dye with antibacterial, antifungal, and anthelmintic properties, applied topically in the treatment of infections of the skin and mucous membranes associated with gram-positive bacteria and molds, and administered orally in pinworm and liver fluke infections. It has been given orally, intravenously, and by transduodenal intubation in strongyloidosis.

gentianophil (jen'shan-o-fil) 1. an element staining readily with gentian violet. 2. gentianophilic.

gentianophilic (jen'shan-o-fil'ik) [*gentian* + Gr. *philein* to love] staining readily with gentian violet.

gentianophilous (jen'shan-of'i-lus) gentianophilic.

gentianophobic (jen'shan-o-fo'bik) not staining readily with gentian violet.

gentianophobic (jen'shan-of'o-bus) gentianophobic.

gentianose (jen'shen-ös) a trisaccharide, $C_{18}H_{32}O_{16}$, occurring in the rhizomes of gentian.

gentiavert (jen'shah-vern) gentian violet.

gentiopicrin (jen'she-o-pik'rín) [*gentian* + Gr. *pikros* bitter] a bitter, crystalline glycoside, $C_{18}H_{20}O_8$, from gentian root.

gentisate (jen'ti-sát) a salt of gentisic acid.

Gentran (jen'tran) trademark for a preparation of dextran 70.

gentrogenin (jen'tro-jen'in) botogenin.

genu (je'nu), gen. *ge'nus*, pl. *gen'ua* [L.] [NA] 1. the knee; the site of articulation between the thigh (femur) and leg. 2. a general term used to designate any anatomical structure bent like the knee. **g. cap'sulae inter'nae** [NA], genu of internal capsule: the blunt angle formed by the union of the two limbs of the internal capsule, situated posterior to the caudate nucleus, anterior to the thalamus, and medial to the lentiform nucleus; called also *knee of internal capsule*. **g. cor'poris callo'si** [NA], **g. of corpus callosum**, the sharp ventral curve at the anterior end of the trunk of the corpus callosum. **g. extror'sum**, **g. varum**. **g. of facial canal**, geniculum canalis facialis. **g. of facial nerve**, properly genu nervi facialis (*internal g.*), but also applied to geniculum nervi facialis (*external g.*). **g. of facial nerve, external**, geniculum nervi facialis. **g. of facial nerve, internal**, *g. nervi facialis*. **g. impres'sum**, a flattening and bending of the knee joint to one side, with consequent displacement of the patella up and to the same side. **g. of internal capsule**, *g. capsulae interna*. **g. [inter'num] ra'dicis ner'vi facia'lis**, *g. nervi facialis*. **g. intror'sum**, *g. valgum*. **g. ner'vi facia'lis** [NA], genu of facial nerve: the bend in the fibers arising from the nucleus of the facial nerve, which produces the facial colliculus in the floor of the fourth ventricle; it is at this point that the fibers loop around the abducent nucleus. **g. recurva'tum**, hyperextension of the knee; called also *back knee*. **g. val'gum**, a deformity in which the knees are abnormally close together and the space between the ankles is increased; known also as *knock knee*. **g. va'rum**, a deformity in which the knees are abnormally separated and the lower extremities are bowed inwardly; the deformity may be in the thigh or leg, or both. Known also as *bowleg*.

genua (jen'u-ah) [L.] plural of *genu*.

genua (jen'u-al) relating to or resembling a genu.

genucubital (jen'u-ku'bi-tal) [L. *genu* knee + *cubitus* elbow] pertaining to the knees and elbows; see under *position*.

genufacial (jen'u-fa'shal) [L. *genu* knee + *facies* face] pertaining to the knees and face; see under *position*.

genupectoral (jen'u-pek'tor-al) [L. *genu* knee + *pectus* breast] pertaining to the knees and chest; see under *position*.

genus (je'nus), pl. *gen'era* [L.] a taxonomic category subordinate to a tribe (or subtribe) and superior to a species (or subgenus).

geny- (jen'e) [Gr. *genys* jaw] a combining form denoting relationship to the jaw.

geo- (je'o) [Gr. *gē* earth] a combining form denoting relationship to the earth, or to soil.

geobiology (je'o-bi-ol'o-je) [*geo-* + *biology*] the biology of terrestrial life.

geochemistry (je'o-kem'is-tre) [*geo-* + *chemistry*] the science concerned with study of the elements in the earth's crust and the chemical changes that occur therein.

Geocyclus (je'o-si'klus) a genus of schizomycetes with flagella-like filaments.

geode (je'öd) [Gr. *geōdes* earthlike: so called from a fancied resemblance to a mineral geode] a dilated lymph space.

geogen (je'o-jen) an aspect of the geography or geochemistry of an area that affects organisms in it, particularly with reference to disease.

geomedicine (je'o-med'i-sin) [*geo-* + *medicine*] that branch of medicine that has to do with the influence of climatic and environmental conditions on health.

geopathology (je'o-pah-thol'o-je) [*geo-* + *pathology*] the study of the peculiarities of disease in relation to topography, climate, food habits, etc., of various regions of the earth.

Geopen (je'o-pen) trademark for a preparation of carbenicillin disodium.

geophagia (je-o-fa'je-ah) [*geo-* + Gr. *phagein* to eat] the habit of eating clay or earth.

geophagism (je-of'ah-jizm) geophagia.

geophagist (je-of'ah-jist) one who eats earth habitually.

geophagy (je-of'ah-je) geophagia.

Georgi's test (ga-or'gēz) [Walter Georgi, German bacteriologist, 1889–1920] Sachs-Georgi test; see under *tests*.

geotaxis (je'o-tak'sis) [*geo-* + Gr. *taxis* arrangement] geotropism.

geotragia (je'o-tra'je-ah) [*geo-* + Gr. *trōgein* to chew] geophagia.

geotrichosis (je'o-tri-ko'sis) infection by *Geotrichum candidum*, which may attack the bronchi, lungs, mouth, or intestinal tract; its manifestations resemble those of candidiasis.

Geotrichum (je-ot'ri-kum) a genus of yeastlike imperfect fungi of the family Cryptococcaceae, order Moniliales. *G. candidum*, found in the feces and in dairy products, is the etiologic agent of geotrichosis.

geotropic (je'o-trop'ik) influenced in growth by gravity.

geotropism (je-ot'ro-pizm) [*geo-* + Gr. *tropos* a turning] a tendency of growth or movement toward or away from the earth; the influence of gravity on growth. A tendency to grow toward the earth is *positive g.*; to grow away from the earth, *negative g.*

Geraghty's test (ger'ah-tēz) [John Timothy Geraghty, American physician, 1876–1924] the phenolsulfonphthalein test.

geraniol (jē-ra'ne-ol) 1. a 10-carbon branched-chain alcohol, 2,6-dimethyl-2,6-octadiene-8-ol, occurring widely in essential oils of plants. 2. a pheromone of certain species of bees, being secreted by worker bees to signal the location of food.

geratic (jē-rat'ik) [Gr. *gēras* old age] pertaining to old age.

geratology (jer'ah-tol'o-je) gerontology.

gerbil (jer'bil) a small burrowing rodent of the genus *Gerbillus*, which is native to the more arid parts of Africa and southwestern Asia, and is capable of serving as an agent for the transmission of plague.

Gerdy's fibers, etc. (zher-dēz) [Pierre Nicholas Gerdy, French physician, 1797–1856] see under *fiber*, *fontanelle*, *fossa*, *loop*, and *ligament*.

gerontology (jer'e-ol'o-je) [Gr. *gēras* old age + *-logy*] the science which deals with old age and its phenomena.

Gerhardt's disease, sign (phenomenon), test (reaction) (ger'harts) [Carl Adolf Christian Jacob Gerhardt, German physician, 1833–1902] see *erythromelalgia*, and see under *sign* and *tests*.

Gerhardt's test (zher-harts') [Charles Frédéric Gerhardt, French chemist, 1816–1856] see under *tests*.

Gerhardt-Semon law [Carl Adolf Christian Jacob Gerhardt; Sir Felix Semon, German laryngologist in London, 1849–1921] see under *law*.

geriatric (jer'e-at'rik) pertaining to the treatment of the aged.

geriatrician (jer'e-ah-trish'an) a specialist in geriatrics.

geriatrics (jer'e-at'riks) [Gr. *gēras* old age + *iatrikē* surgery, medicine] that branch of medicine which treats all problems peculiar to old age and the aging, including the clinical problems of senescence and senility. **dental g.**, gerodontology.

gerodontology (jer'e-o-don'tiks) gerodontology.

gerodontist (jer'e-o-don'tist) gerodontist.

geriopsychosis (jer'e-o-si-ko'sis) [Gr. *gēras* old age + *psychosis*] any one of the presenile and senile groups of mental diseases (Southard).

Gerlach's network, valve (ger'laks) [Joseph von Gerlach, German anatomist, 1820–1896] see under *network*, and see *valvula processus vermiformis*.

Gerlier's disease (zher-le-āz') [Felix Gerlier, French physician, 1840–1914] see under *disease*.

germ (jerm) [L. *germen*] 1. a pathogenic microorganism. 2. living substance capable of developing into an organ, part, or organism as a whole; a primordium. **dental g.**, the collective tissues from which an entire tooth is formed, including the dental sac, dental organ, and dental papilla. **enamel g.**, the epithelial rudiment of the enamel organ. **hair g.**, see *hair matrix*, under *matrix*. **tooth g.**, a budlike thickening in the connective tissue of the jaw that is a primordium of a tooth. **wheat**

g., the embryo of wheat, which contains tocopherol, thiamine, riboflavin, and other vitamins.

germanin (jer'mah-nin) suramin sodium.

germanium (jer-ma'ne-um) a rare element, having the appearance of a bluish gray metalloid, atomic number 32, atomic weight 72.59; symbol, Ge.

germerine (jer'mer-en) a crystalline alkaloid, $C_{36}H_{57}O_{11}N$, from *Veratrum senecio*.

germicidal (jer'mi-si'dal) [L. *germen* germ + *caedere* to kill] lethal to pathogenic microorganisms.

germicide (jer'mi-sid) an agent that kills pathogenic microorganisms.

germinal (jer'mi-nal) [L. *germinalis*] pertaining to or of the nature of a germ cell or the primitive stage of development.

germination (jer'mi-na'shun) [L. *germinatio*] the sprouting of a seed or spore or of a plant embryo.

germinative (jer'mi-na'tiv) [L. *germinativus*] pertaining to or causing germination.

germinoma (jer'mi-no'mah) a neoplasm of germ tissue (testis or ovum), e.g., a seminoma.

germitrine (jer'mi-trên) an antihypertensive alkaloid isolated from green hellebore (*Veratrum viride* Ait. [Liliaceae]).

germogen (jer'mo-jen) [*germ* + Gr. *gennan* to produce] a mass of protoplasm from which reproductive cells arise.

gero-, geronto- (jer'o, jer-on'to) [Gr. *gêras* old age; *gerôn*, *gerontos* old man] combining form denoting relationship to old age or to the aged.

gerocomia (jer'o-ko'me-ah) [*gero-* + Gr. *komein* to care for] the care of old men; the hygiene of old age.

gerocomy (jer'o-ko'me) gerocomia.

geroderma, gerodermia (jer-o-der'mah, jer-o-der'me-ah) [*gero-* + Gr. *derma* skin] dystrophy of the skin and genitals, producing the appearance of old age (Rummo and Ferrannini, 1897).

g. osteodysplas'tica, a condition believed to be transmitted as an X-linked recessive trait, with occasional manifestation in females, in which geroderma is associated with osseous changes, including osteoporosis and lines in the bones somewhat resembling growth rings of a tree.

gerodontia (jer-o-don'she-ah) gerodontics.

gerodontic (jer'o-don'tik) [*gero-* + Gr. *odous* tooth] 1. pertaining to changes in the dental tissues with age. 2. pertaining to the practice of gerodontics.

gerodontics (jer'o-don'tiks) the treatment of dental problems of aging persons, or those peculiar to advanced age.

gerodontist (jer'o-don'tist) a dentist who practices gerodontics.

gerodontology (jer'o-don-to'l'o-je) the study of the dentition and dental problems in the aged or aging.

gerokomy (jer-o'ko-me) gerocomia.

geromasmus (jer'o-mah-raz'mus) [*gero-* + Gr. *marasmos* a wasting] the emaciation sometimes characteristic of old age.

geromorphism (jer'o-mor'fizim) [*gero-* + Gr. *morphe* form] premature senility.

cutaneous g., a condition in which the skin shows at a very early age the characteristics of old age.

gerontal (jer-on'tal) pertaining to an old man or old age; senile.

gerontin (jer-on'tin) a base from the nuclei of the cells of a dog's liver, identical with spermin.

geronto- see *gero-*.

gerontologist (jer'on-to'l'o-jist) a specialist in gerontology.

gerontology (jer'on-to'l'o-je) [*geronto-* + *-logy*] the scientific study of the problems of aging in all their aspects—clinical, biological, historical, and sociological.

gerontophile (jer-on'to-fil) a person who manifests gerontophilia.

gerontophilia (jer'on-to-fil'e-ah) [*geronto-* + Gr. *philein* to love] special fondness for old people.

gerontopia (jer'on-to'pe-ah) [*geronto-* + Gr. *opsis* vision] senopia.

gerontotherapeutics (jer-on'to-ther'ah-pu'tiks) [*geronto-* + *therapeutics*] therapeutic management of aging persons designed to retard and prevent the development of many of the aspects of senescence.

gerontotherapy (jer-on'to-ther'ah-pe) gerontotherapeutics.

gerontotoxon, gerontoxon (jer-on'to-tok'son, jer-on-tok'son) [*geronto-* + Gr. *toxos* bow] the arcus senilis. **g. len'tis**, equatorial couching of the lens in the aged; no longer done.

geropsychiatry (jer'o-si-ki'ah-tre) a subspecialty of psychiatry dealing with mental illness in the elderly.

Gerota's capsule, method (ga-ro'tahz) [Dimitru Gerota, anatomist in Bucharest, 1867–1939] see under *capsule* and *method*.

Gerovital H3 (jer'o-vi'tal) trademark for a preparation of 2 per cent procaine hydrochloride solution with small amounts of benzoic acid, potassium metabisulfite, and disodium phosphate; it is purported to increase longevity, retard the aging process, rejuvenate the senile, and prevent or relieve various disorders, such as arthritis, arteriosclerosis, angina pectoris, etc.

Gerson-Herrmannsdorfer diet (gär'son-Har'mans-dor-fer) [Max Gerson; Adolph Herrmannsdorfer, German surgeon, born 1889] Gerson diet.

Gerstmann's syndrome (garst'manz) [Josef Gerstmann, Vienna neurologist, born 1887] see under *syndrome*.

gerüstmark (gê-rist'mark) [Ger. *Gerüst* scaffolding + *Mark* marrow] a unique, collagen-poor zone of connective tissue lying across the bone marrow adjoining the growing ends of bones; observed in scurvy.

gesarol (ges'ah-rol) chlorophenothane.

gestacalone (jes'tah-klôn) chemical name: 17 β -acetyl-6-chloro-1 β ,1a,2 β ,8 β ,9 α ,10,11,12,13,14 α ,15,16, β -17-tetradecahydro-10 β ,13 β -dimethyl-3*H*-dicyclopropa[1,2:16,17]cyclopenta[a]-phenanthren-3-one; a progestin, $C_{23}H_{27}ClO_2$.

gestagen (jes'tah-jen) any hormone with progestational activity, progesterone being the most important.

gestalt (ges-tawlt') a whole perceptual configuration; see *gestaltism*.

gestaltism (gê-stawlt'izm, gê-shtawlt'izm) [Ger. *Gestalt* form] that theory in psychology which claims that the objects of mind, as immediately presented to direct experience, come as complete unanalyzable wholes or forms (*Gestalten*) which cannot be split up into parts; called also *gestalt theory*.

gestation (jes-ta'shun) [L. *gestatio*, from *gestare* to bear] the period of development of the young in viviparous animals, from the time of fertilization of the ovum until birth; see also *pregnancy*.

exterior g., the development of an infant after emergence from the uterus, until the time of quadrupedal locomotion, or about the age of nine months, during the period when it is in need of maternal care and might still be regarded by some as a fetus.

interior g., development of a fetus before birth; a term used only in contradistinction to external gestation.

gestodene (jes'to-dên) chemical name: 13-ethyl-17 α -hydroxy-18,19-dinorpregna-4,15-diene-20-yn-3-one; a progestin, $C_{21}H_{26}O_2$.

gestonorone caproate (jes-to'nor-ôn) chemical name: 17-[(1-oxohexyloxy)-19-norpregna-4-ene,3,20-dione hexanoate; a progestin, $C_{26}H_{38}O_4$, which has been used in the treatment of endometrial carcinoma and benign prostatic hypertrophy.

gestosis (jes-to'sis), pl. *gesto'ses* [L. *gestare* to bear] any toxic manifestation of pregnancy.

gestrinone (jes'tri-nôn) chemical name: 13-ethyl-17-hydroxy-18,19-dinor-17 α -pregna-4,9-11-trien-20-yn-3-one; a progestin, $C_{21}H_{24}O_2$.

G.F.R. glomerular filtration rate.

G.G.G. abbreviation for L. *gum'mi gut'tae gam'biae*; see *gam-boge*.

GH growth hormone.

Ghilarducci's reaction (ge'llar-doot'shêz) [Francesco Ghilarducci, Italian physician, 1857–1924] see under *reaction*.

Ghon's complex, focus (primary lesion, tubercle) (gahn) [Anton Ghon, Prague pathologist, 1866–1936] see *primary complex*, under *complex*, and see under *focus*.

Ghon-Sachs bacillus [Anton Ghon; Anton Sachs] *Clostridium septicum*.

ghost (gôst) a faint or shadowy figure, lacking the customary substance of reality. **blood g.**, phantom corpuscle.

GH-RH growth hormone releasing hormone.

G.I. gastrointestinal; globin insulin.

Giacomini's band (jah-ko-me'nêz) [Carlo Giacomini, Italian anatomist, 1841–1898] see under *band*.

Giannuzzi's crescents, (bodies, cells, demilunes) (jah-noot'zêz) [Giuseppe Giannuzzi, Italian anatomist, 1839–1876] see under *crescent*.

giant (ji'ant) [Gr. *gigas*] a person or organism of very great size; see *gigantism*.

giantism (ji'ant-izm) 1. gigantism. 2. excessive size, as of cells or nuclei.

Giardia (je-ar'de-ah) [Alfred Giard, biologist in Paris, 1846–1908] a genus of flagellate protozoa of the order Polymastigida, class zoomastigophoea, found in the intestinal tract of man and of animals. **G. intestinalis**, **G. lamblia**. **G. lamb'lia**, the species causing giardiasis in man; it is a symmetrical, pear-shaped organism with four pairs of flagella and a sucking disk by which it attaches to the mucosa of the duodenum and upper jejunum. Called also *G. intestinalis* and *Lambliia intestinalis*.

giardiasis (ji'ar-di'ah-sis) infection with *Giardia lamblia*, characterized by protracted, intermittent diarrhea with symptoms suggesting malabsorption, and by abdominal pain, distention, and flatulence; light infections are usually asymptomatic.

giberellin (gib-ber-el'in) any of a class of phytohormones whose most striking activity is the promotion of lateral bud development in decapitated plant stems; first isolated from fungi of the genus *Gibberella*.

Gibbon's hernia (hydrocele) (gib'onz) [Q. V. Gibbon, American surgeon, 1813–1894] see under *hernia*.

Gibbon-Landis test (gib'on-lan'dis) [John Heysham Gibbon, Jr.,

Giardia lamblia: A, trophozoite; B, cyst. (Cheng.)

American physician, born 1903; Eugene Markley Landis, American physician, born 1901] see under *tests*.

gibbosity (gĭ-bos'fĭ-te) [L. *gibbosus* crooked] the condition of being humped; kyphosis.

gibbous (gib'us) [L. *gibbosus*] convex; humped; protuberant; humpbacked.

Gibbs' theorem (gibz) [Josiah Willard Gibbs, American physicist, 1839–1903] see under *theorem*.

Gibbs-Donnan equilibrium (gibz-don'an) [J. W. Gibbs; Frederick George Donnan, English chemist, 1870–1956] see under *equilibrium*.

gibbus (gib'us) [L.] a hump.

Gibert's disease (zhe-bärz') [Camille Melchior Gibert, French dermatologist, 1797–1866] pityriasis rosea.

Gibney's bandage (strapping), perispondylitis (disease) (gib'nēz) [Virgil Pendleton Gibney, New York surgeon, 1847–1927] see under *bandage* and *perispondylitis*.

Gibson's murmur, rule (gib'sunz) [George Alexander Gibson, Edinburgh physician, 1854–1913] see under *murmur* and *rule*.

gid (gid) a functional and organic disease of the brain and spinal cord of domestic animals, especially a disease of sheep caused by the presence of *Coenurus cerebralis* (the larva of the dog tapeworm, *Multiceps multiceps*), and marked by unsteadiness of gait. Called also *coenurosis*, *staggers*, and *sturdy*.

giddiness (gid'e-nes) dizziness.

Giemsa stain (gēm'sah) [Gustav Giemsa, chemist and bacteriologist in Hamburg, 1867–1948] see *Table of Stains and Staining Methods*.

Gierke's corpuscles (gēr'kez) [Hans Paul Bernhard Gierke, German anatomist, 1847–1886] see under *corpuscle*.

Gierke's disease (gēr'kez) [Edgar Otto Konrad von Gierke, German pathologist, 1877–1945] glycogen storage disease, type I; see under *disease*.

Gieson (ge'son) see *van Gieson*.

Gifford's operation, reflex, sign (gif'ordz) [Harold Gifford, American oculist, 1858–1929] see under *operation*, *reflex*, and *sign*.

giga- (jig'ah, ji'gah) [Gr. *gigas* mighty] a combining form designating gigantic size; used in naming units of measurement to indicate a quantity one billion (10⁹) times the unit designated by the root with which it is combined.

gigantism (ji-gan'tizm; ji'gan-tizm) [Gr. *gigas* giant] abnormal overgrowth; excessive size and stature. **acromegalic g.**, pituitary gigantism in which the body also has the changes in the short and flat bones characteristic of acromegaly. **cerebral g.**, gigantism in the absence of increased levels of growth hormone, attributed to a cerebral defect; infants are large, and accelerated growth continues for the first four or five years, the rate being normal thereafter. The hands and feet are large, the head large and dolicocephalic, the eyes have an antimongoloid slant, with hypertelorism. The child is clumsy, and mental retardation of varying degree is usually present. Called also *Sotos' syndrome*. **eunuchoid g.**, gigantism in which the body shows the proportion of a eunuch and sexual deficiency. **fetal g.**, excessive size of the fetus or newborn, as in cerebral gigantism and infants of diabetic mothers. **hyperpituitary g.**, Launois' syndrome. **normal g.**, gigantism in which the body proportions and sexual development are normal. **pituitary g.**, Launois' syndrome.

giganto- (ji-gan'to) [Gr. *gigas*, *gigantos* huge] a combining form meaning huge.

gigantomastia (ji-gan'to-mas'te-ah) extreme hypertrophy of the breast.

gigantosoma (ji-gan'to-so'mah) [*giganto-* + Gr. *sōma* body] gigantism, or great size and stature.

Gigli's operation, wire saw (jēl'yēz) [Leonardo Gigli, gynecologist in Florence, 1866–1908] see under *operation* and *saw*.

gikiyami (ge'ke-yam'e) nanukayami.

gilbert (gil'bert) [W. Gilbert, English physicist, 1544–1603] the unit of magnetomotive force; symbol, F.

Gilbert's disease (cholemia, syndrome), sign (zhēl-bärz') [Nicolas Augustin Gilbert, French physician, 1858–1927] see under *disease* and *sign*.

Gilchrist's disease, mycosis (gil'krists) [Thomas Caspar Gilchrist, American dermatologist, 1862–1927] North American blastomycosis.

gildable (gil'dah-b'l) susceptible of being colored with gold stains.

gill (gil) 1. the respiratory organ of aquatic animals, such as fish, mollusks, and many arthropods, usually a thin-walled projection from the body surface or from some part of the digestive tract whose surface is increased by filaments, lamellae, or other folds. 2. one of the thin perpendicular plates found on the underside of a mushroom cap and along which the basidia are produced.

Gill's operation (gilz) [Arthur Bruce Gill, American orthopedic surgeon, 1876–1965] see under *operation*.

Gillenia (jil-le'ne-ah) [L.; after Arnold Gill] a genus of rosaceous plants; the root of *G. trifoliata* and *G. stipulacea*, of North America, is mildly emetic and aperient.

Gilles de la Tourette's syndrome (disease) [Georges Gilles de la Tourette, French physician, 1857–1904] see under *syndrome*.

Gillespie's operation (gil-les'pēz) [James Donaldson Gillespie, Scottish physician, 1823–1891] see under *operation*.

Gilliam's operation (gil'i-amz) [David Tod Gilliam, Columbus gynecologist, 1844–1923] see under *operation*.

Gillies' flap (graft), operation (gil'ēz) [Sir Harold Delf Gillies, British plastic surgeon, 1882–1960] see *rope flap*, under *flap*, and see under *operation*.

Gilmer's splint (gil'merz) [Thomas Lewis Gilmer, American oral surgeon, 1849–1931] see under *splint*.

Gimbernat's ligament, reflex ligament (him-ber-nats') [Antonio de Gimbernat, Spanish surgeon and anatomist, 1734–1816] see *ligamenta lacunare* and *ligamentum inguinale reflexum*.

ginger (jin'jer) [L. *zingiber*; Gr. *zingiberis*] the dried rhizome of the tropical plant *Zingiber officinale*, used as a flavoring agent. It has been used in the treatment of flatulence and colic, and is used in veterinary medicine as a stimulant and carminative in atonic indigestion of horses and cattle, and in the treatment of spasmodic colic in horses.

gingiva (jin'ji-vah, jin'ji-vah) [L. "gum of the mouth"] see *gingivae*. **alveolar g.**, that portion of the gingivae which covers the alveolar process. **areolar g.**, that portion of the gingivae which overlies the alveolar process, being bound to it by loose areolar connective tissue. **attached g.**, the portion of the gingiva that is firm, dense, stippled, and tightly bound down to the underlying periosteum, tooth, and bone. **buccal g.**, that portion of the gingivae which is applied to the buccal surfaces of the posterior teeth. **cemented g. (obs.)**, epithelial attachment of Gottlieb. **free g.**, the portion of the gingivae that surrounds the tooth and is not directly attached to the tooth surface; called also *free gum margin*. **interdental g.**, the soft supporting tissue that normally fills the space between two contacting teeth. **labial g.**, that portion of the gingivae which is applied to the labial surfaces of the anterior teeth. **lingual g.**, that portion of the gingivae which is applied to the lingual surfaces of the teeth. **marginal g.**, the portion of the free gingiva localized at the labial, buccal, lingual, and palatal aspects of the teeth; gingival margin. **septal g.**, that portion of the gingivae which occupies the interproximal spaces; sometimes called *gingival papillae*.

gingivae (jin'ji've, jin'ji've) [L., plural of *gingiva*] [NA] the gums: the mucous membrane, with the supporting fibrous tissue, which overlies the crowns of unerupted teeth and encircles the necks of those that have erupted. See also under *gingiva*.

gingival (jin'ji-val, jin'ji-val) pertaining to the gingivae.

gingivalgia (jin'ji-val'je-ah) [*gingiva* + *-algia*] pain in the gingivae.

gingivally (jin'ji-val'le) toward the gingivae.

gingivectomy (jin'ji-vek'to-me) [*gingiva* + Gr. *ektomē* excision] surgical excision of all loose infected and diseased gingival tissue to eradicate periodontal infection and reduce the depth of the gingival sulcus.

gingivitis (jin'ji-vi'tis) [*gingiva* + *-itis*] inflammation involving the gingival tissue only. **atrophic g., senile**, a condition characterized by hyperkeratinization and areas of desquamation in the gingiva. **bismuth g.**, inflammation of the gingivae caused by local deposit of bismuth from the blood stream, after its administration for systemic disease. **catarrhal g.**, a transitory inflammation of the gingival and/or oral mucous membranes accompanied by erythema, swelling, and occasional epithelial desquamation; usually a result of the change in the oral bacterial

flora. **"cotton-roll" g.**, secondary infection of denuded areas of gingivae caused by adherence of epithelium to cotton rolls placed in the mouth during dental procedures. **desquamative g.**, a chronic inflammatory condition characterized by tendency of the surface epithelium of the gingivae to desquamate. **eruptive g.**, gingivitis accompanying eruption of the teeth. **fusospirochetal g.**, necrotizing ulcerative g. **g. gravidarum**, pregnancy g. **hemorrhagic g.**, gingivitis characterized by profuse bleeding, especially that associated with ascorbic acid deficiency. **herpetic g.**, infection of gingivae by the herpes simplex virus. **hormonal g.**, gingivitis associated with gingival enlargement, in which modification of the sex hormones, as during pregnancy and puberty, or other endocrine dysfunction, such as diabetes mellitus, may be a primary or a complicating factor. **hyperplastic g.**, gingivitis characterized by proliferation of the various tissue elements, epithelium, and connective tissue; it may be accompanied by dense infiltration of inflammatory cells. **marginal g.**, inflammation of the gingivae limited to the marginal gingiva. **marginal g., simple**, hyperemia of the gingivae with edema of the margins and gingival papillae, resulting from slight trauma or neglected dental hygiene. **marginal g., suppurative, g. margina'lis suppurati'va**, inflammation of the gingival margins, with formation of a purulent discharge. **necrotizing ulcerative g.**, trench mouth; an acute or chronic gingival infection characterized by redness and swelling, by necrosis extending from the interdental papillae along the gingival margins, and by pain, hemorrhage, a necrotic odor, and often a pseudomembrane. Called also *fusospirochetal g.* or *angina*, *Plaut's ulcer*, *Vincent's g.* or *infection*, *fusospirochetal*, *trench throat*, and *ulceromembranous g.* or *angina*. When the condition extends to other parts of the oral mucosa, with lesions involving the palate or pharynx, it is called *necrotizing ulcerative gingivostomatitis*, *Vincent's angina* or *stomatitis*, *Plaut's angina*, and *pseudomembranous angina*. **phagedenic g.**, rapidly progressive ulcerative inflammation of the gums. **pregnancy g.**, any of various gingival changes during pregnancy, ranging from gingivitis to the so-called pregnancy tumor; called also *g. gravidarum*. **scorbutic g.**, gingivitis associated with vitamin C deficiency. **streptococcal g.**, inflammation of the gingival margins caused by streptococcal infection. **ulceromembranous g.**, necrotizing ulcerative g. **Vincent's g.**, necrotizing ulcerative g.

gingivo- (jin'ji-vo) [L. *gingiva* gum] a combining form denoting relationship to the gingivae.

gingivoaxial (jin'ji-vo-ak'se-al) pertaining to or formed by the gingival and axial walls of a tooth cavity.

gingivobuccoaxial (jin'ji-vo-buk'ko-ak'se-al) pertaining to or formed by the gingival, buccal, and axial walls of a tooth cavity.

gingivoectomy (jin'ji-vo-ek-to-me) gingivectomy.

gingivoglossitis (jin'ji-vo-glos-si'tis) [*gingiva* + Gr. *glōssa* tongue + *-itis*] inflammation of gingivae and tongue.

gingivolabial (jin'ji-vo-la'be-al) pertaining to the gingivae and lips.

gingivolinguoaxial (jin'ji-vo-ling'gwo-ak'se-al) pertaining to or formed by the gingival, lingual, and axial walls of a tooth cavity.

gingivoplasty (jin'ji-vo-plas'te) [*gingivo-* + Gr. *plassein* to form] surgical modeling of the gingival margin and papillae to obtain a normal gingival contour.

gingivosis (jin'ji-vo'sis) [*gingivo-* + *(o)sis*] a chronic diffuse inflammation of the gingivae, with desquamation of the papillary epithelium and mucous membrane.

gingivostomatitis (jin'ji-vo-sto'mah-ti'tis) inflammation involving both the gingivae and the oral mucosa. **herpetic g.**, an infection of the oral mucosa (including the gingivae) by the herpes simplex virus, characterized by redness of oral tissues, formation of multiple vesicles and painful ulcers, and fever. **necrotizing ulcerative g.**, that caused by extension to the oral mucosa of necrotizing ulcerative gingivitis, characterized by ulceration, pseudomembrane, and odor, with lesions involving the palate or pharynx as well as the oral mucosa.

ginglyform (jin'gli-form) ginglymoid.

ginglymoarthrodial (jin'gli-mo-ar-thro'de-al) partly ginglymoid and partly arthrodial.

ginglymoid (jin'gli-moid) [*ginglymus* + Gr. *eidos* form] resembling a ginglymus.

ginglymus (jin'gli-mus) [L.; Gr. *ginglymos* hinge] [NA] a type of synovial joint that allows movement in but one plane, forward and backward, as the hinge of a door; called also *ginglymoid* or *hinge joint*.

ginseng (jin'seng) [Chinese *jin-tsan* life of man] 1. any herb of the genus *Panax*, especially *P. schinseng* (Chinese ginseng) and *P. quinquefolius* (American ginseng), whose roots are used by the Chinese as a tonic, stimulant, and aphrodisiac. 2. the root of Chinese or American ginseng.

Giordano's sphincter (jor-dan'ōz) [Davide *Giordano*, Italian surgeon, born 1864] musculus sphincter ductus choledochi.

Giraldés' organ (he-ral'dās) [Joachim Albin Cardozo Cazado *Giraldés*, Portuguese surgeon in Paris, 1808–1875] paradidymis.

Girard's treatment (method) (jir-ardz') [Brig. Gen. Alfred C. *Girard*, Swiss surgeon, 1850–1916] see under *treatment*.

Girardinus (ji-rar'di-nus) *Poecilia*. **G. poecilo'ides**, *Poecilia reticulata*.

girdle (ger'd'l) an encircling structure, or part; anything that encircles a body. Called also *cingulum* [NA]. Cf. *belt*. **Hitzig's g.**, an encircling zone of analgesia at the level of the breasts, in the area supplied by the third and sixth dorsal nerves, seen in the early stages of tabes dorsalis. **g. of inferior extremity**, pelvic g. (*cingulum membri inferioris* [NA]). **limbus g.**, a corneal degeneration in the form of an opaque line concentric with the limbus; called also *white limbal g. of Vogt*. **pectoral g.**, shoulder g. **pelvic g.**, the encircling bony structure supporting the lower limbs; see *cingulum membri inferioris* [NA]. **shoulder g.**, the encircling bony structure supporting the upper limbs; see *cingulum membri superioris* [NA]. **g. of superior extremity**, **thoracic g.**, shoulder g. (*cingulum membri superioris* [NA]). **Venus' g.**, mercurial plaster spread on leather or linen, once used in the treatment of syphilis; called also *balteum venereum*. **white limbal g. of Vogt**, limbus g.

Girdner's probe (gerd'nerz) [John Harvey *Girdner*, physician in New York, 1856–1933] an electric probe; see under *probe*.

gitaligenin (ji-tal'i-jen'in) the aglycone of gitalin.

Gitaligin (ji-tal'i-jin) trademark for a preparation of gitalin (def. 2).

gitalin (jit'ah-lin) 1. a crystalline cardiac glycoside, $C_{55}H_{96}O_{12}$, from the leaves of *Digitalis purpurea*. 2. a mixture of the digitalis glycosides gitoxin, gitaloxin, and digitoxin, having the same actions as digitalis and used like digitalis in the treatment of congestive heart failure and other cardiac disorders; administered orally. Called also *amorphous g.*

gitaloxin (jit'ah-loks'in) a cardiac glycoside from *Digitalis purpurea*.

githagism (gith'ah-jizm) poisoning by the seeds of *Agrostemma githago*, or corn cockle.

gitogenin (jit-ōj'ē-nin) a sapogenin, $C_{27}H_{44}O_4$, from gitonin.

gitonin (jit'o-nin) a neutral saponin, $C_{50}H_{82}O_{23}$, from digitalis seed.

gitoxigenin (ji-tok'si-jen-in) an aglycone of gitoxin, $C_{23}H_{36}O_6$.

gitoxin (ji-tok'sin) a cardiac glycoside, $C_{41}H_{64}O_{14}$, principally from *Digitalis purpurea* but also a constituent of *D. lanata*.

Gitterfasern (git'er-fas'ern) [Ger.] the reticular lattice fibers of the corium.

Giuffrida-Ruggieri stigma (joof-re'dah-roo'je-er'e) [Vincenzo *Giuffrida-Ruggieri*, Italian anthropologist, 1872–1922] see under *stigma*.

Givens' method (giv'enz) [Maurice Hope *Givens*, American biochemist, born 1888] see under *method*.

GIX an insecticidal compound, DFDT.

gizzard (giz'ard) the strong muscular stomach of a bird.

GL abbreviation for *greatest length*, an axis of measurement or dimension used for small flexed embryos.

Gl chemical symbol for *glucinium* (beryllium).

gl. abbreviation for *L. glan'dula* and *glan'dulae* (gland, glands).

GL 54 athomin.

glabella (glah-bel'ah) [L. *glaber* smooth] 1. the smooth area on the frontal bone between the superciliary arches. 2. the most prominent point in the midsagittal plane between the eyebrows; used as an anthropometric landmark.

glabellad (glah-bel'ad) toward the glabella.

glabellum (glah-bel'um) glabella.

glabrificin (glah-brif'i-sin) [L. *glaber* smooth + *facere* to make] (*obs.*) an antibody; so called because of its property of rendering bacteria smooth or glabrous.

glabrous (glab'rus) [L. *glaber* smooth] smooth and bare.

glacial (glah'shal) [L. *glacialis*] resembling ice; vitreous; solid.

gladiate (glah-de-āt) [L. *gladius* sword] sword-shaped.

gladiolus (glah-di'ō-lus) [L., dim. of *gladius* sword] corpus sterni.

gladiomanubrial (glad'e-o-mah-nu'bre-al) pertaining to gladiolus (corpus sterni) and manubrium.

glairin (glār'in) [L. *clarus* clear] (*obs.*) a gelatinous substance of bacterial origin found in the water of certain sulfur springs; called also *baregin*.

glairy (glār'e) resembling the white of an egg.

gland (gland) [L. *glans* acorn] an aggregation of cells, specialized to secrete or excrete materials not related to their ordinary metabolic needs; called also *glandula* [NA]. **absorbent g.**, lymph node. **accessory g.**, a minor mass of glandular tissue situated near or at some distance from a gland of similar structure. **acid g's**, glandulae gastricae [propriae]. **acinous g.**, acinous g. **acinotubular g.**, tubuloacinar g. **acinous g.**, a gland made up of one or more acini. **admaxillary g.**, glandula parotis accessoria. **adrenal g.**, a flattened body situated in the retroperitoneal tissues at the cranial pole of either kidney. In man, the adrenal gland is the result of fusion of two organs, recognizable

THE ENDOCRINE GLANDS

Schematic diagram of various forms of glands: A, simple tubular; B, simple coiled tubular; C, simple branched tubular; D, simple alveolar; E, simple branched alveolar; F, compound tubular; G, compound alveolar.

as cortex and medulla. The adrenal cortex, under control of the pituitary hormone corticotropin, elaborates steroid hormones—glucocorticoids, 17-ketosteroids, mineralocorticoids, estrogens, androgens, and progestins. The adrenal medulla elaborates the catecholamines epinephrine and norepinephrine. Called also *glandula suprarenalis* [NA] and *suprarenal g.* **adrenal g's**, **accessory**, accessory adrenal glandular tissue found in the abdomen or pelvis. Such tissue is usually either cortical or medullary; rarely is a true accessory adrenal gland found. Called also *glandulae suprarenales accessoriae* [NA] and *accessory suprarenal glands*. **aggregate g's**, **agminated g's**, folliculi lymphatici aggregati. **Albarrán's g.**, that part of the median lobe of the prostate underneath the uvula vesicae. **alveolar g.**, acinous g. **anal g's**, circumanal g's. **anteprostatic g.**, bulbourethral g. **aortic g.**, see under *body*. **apical g's of tongue**, glandulae linguales anteriores. **apocrine g.**, one the discharged secretion of which contains part of the secreting cells; see *glandulae sudoriferae*. **aporic g.**, endocrine g's. **areolar g's**, glandulae areolares. **arterial g.**, any knot of small arteries, or mass of vascular tissue, such as the glomus coccygeum. **arteriococcygeal g.**, glomus coccygeum. **arytenoid g's**, glandulae laryngeae posteriores. **Aselli's g's**, see under *pancreas*. **atribiliary g.**, adrenal g. **Avicenna's g.**, an encapsulated tumor. **axillary g's**, nodi lymphatici axillares. **Bartholin's g's**, one of the two small bodies on either side of the vaginal orifice, homologues of the bulbourethral glands in the male; called also *glandula vestibularis major* [NA]. **Bauhin's g's**, glandulae linguales anteriores. **Baumgarten's g's**, tubular glands of the conjunctiva situated on the nasal side of the eyelids. **g's of biliary mucosa**, glandulae mucosae biliosae. **Blandin's g's**, **Blandin and Nuhn's g's**, glandulae linguales anteriores. **blood g's**, **blood vessel g's**, endocrine g's. **Boerhaave's g's** (obs.), glandulae sudoriferae. **Bonnot's g.**, brown adipose tissue. **Bowman's g's**, glandulae olfactoriae. **brachial g's**, nodi lymphatici cubitales. **bronchial g's**, glandulae bronchiales. **Bruch's g's**, the lymph follicles of the conjunctiva of the lower lid. **Brunner's g's**, glandulae duodenales. **buccal g's**, glandulae buccales. **bulbocavernosus g.**, bulbourethral g. **bulbourethral g.**, one of two glands embedded in the substance of the sphincter of the urethra, just posterior to the membranous part of the urethra; called also *Cowper's g.* and *glandula bulbourethralis* [NA]. **cardiac g's**, mucin-secreting glands at the cardiac end of the stomach surrounding the entrance of the esophagus into the stomach. **carotid g.**, glomus caroticum. **celiac g's**, lymph nodes anterior to the abdominal aorta. **ceruminous g's**, the glands in the skin of the external auditory canal that secrete the cerumen; called also *glandulae ceruminosae* [NA]. **cervical g's of uterus**, glandulae cervicales uteri. **cheek g's**, glandulae buccales. **choroid g.** (obs.), the choroid plexus, regarded as one of the sites of formation of the cerebrospinal fluid. **Ciaccio's g's**, glandulae lacrimales accessoriae. **ciliary g's**, **ciliary g's of conjunctiva**, glandulae ciliares conjunctivales. **circumanal g's**, specialized sweat and sebaceous glands situated around the anus; called also *anal g's* and *glandulae circumanales* [NA]. **Cloquet's g.**, see under *node*. **closed g.**, endocrine g's. **Cobelli's g's**, mucous glands in the mucosa of the esophagus just above the cardia. **coccygeal g.**, glomus coccygeum. **coil g.**, eccrine g. **compound g.**, one made up of a number of smaller units whose excretory ducts combine to

form ducts of progressively higher order. **conglobate g.**, a lymph node. **conglomerate g.** (obs.), compound g. **conjunctival g's**, glandulae conjunctivales. **Cowper's g.**, bulbourethral g. **cutaneous g's**, glands in the skin; see *glandulae cutis*. **cytogenic g.**, a term applied to the testis and the ovary because they form free living cells. **ductless g.**, one without a duct; see *endocrine g's*. **duodenal g's**, glandulae duodenales. **Duverney's g.**, bulbourethral g. **Ebner's g's**, albuminous or serous secreting glands in the posterior part of the tongue near the vallate papillae; called also *gustatory g's*. **eccrine g.**, one of the ordinary, or simple, sweat glands of the body, which is of the merocrine type; see *glandulae sudoriferae*. **Egglis' g's**, glandulae mucosae ureteris. **endocrine g's**, organs that secrete specific substances (hormones) which are released directly into the circulatory system and which influence metabolism and other body processes. The endocrine glands include the pituitary, thyroid, parathyroid, and adrenal glands, the pineal body, and the gonads. See also under *system*, and see Plate XIX. Called also *glandulae sine ductibus* [NA]. **endoepithelial g.**, intraepithelial g. **esophageal g's**, glandulae esophageae. **excretory g.**, any gland that excretes waste products from the system. **exocrine g.**, a gland which discharges its secretion through a duct opening on an internal or external surface of the body, as a lacrimal gland. Cf. *endocrine g's*. **follicular g's of tongue**, folliculi linguales. **fundic g's**, **fundus g's**, glandulae gastricae [propriae]. **Galeati's g's**, glandulae duodenales. **gastric g's**, the secreting glands of the stomach, including the fundic, cardiac, and pyloric glands. **gastric g's**, **proper**, glandulae gastricae [propriae]. **gastroepiploic g's**, nodi lymphatici gastrici [dextri et sinistri]. **g's of Gay**, glandulae circumanales. **genal g's**, glandulae buccales. **genital g.**, 1. ovary [ovarium] [NA]. 2. testis. **gingival g's**, gland-like infoldings of epithelium at the junction of gingiva and tooth. **Gley's g's**, glandulae thyroideae accessoriae. **globate g.**, lymph node. **glomerate g's**, **glomiform g's**, glandulae glomiformes. **glossopalatine g's**, mucous glands at the posterior end of the smaller sublingual glands. **Guérin's g's**, ductus paraurethrales. **gustatory g's**, Ebner's g's. **guttural g.**, one of the mucous glands of the pharynx. **g's of Haller**, glandulae preputiales. **Harder's g's**, **harderian g's**, accessory lacrimal glands at the inner corner of the eye in animals that possess nictitating membranes and excrete an unctuous fluid that facilitates the movement of the third eyelid. They are rudimentary in man. **haversian g's**, villi synoviales. **hedonic g's**, glands in some of the lower animals which function during the season of sexual activity. **hemal g's**, see under *node*. **hemal lymph g's**, hemal nodes. **hematopoietic g's** (obs.), certain glandlike bodies which take a part in the making of the blood, such as the spleen. **hemolymph g's**, 1. hemal nodes. 2. see under *node*. **Henle's g's**, tubular glands in the conjunctiva of the eyelids. **hepatic g's**, glandulae mucosae biliosae. **heterocrine g's**, seromucous g's. **hibernating g.**, a collection of brown fatty tissue found in various regions of the body in hibernating animals; see *interscapular g.* **holocrine g.**, a gland whose discharged secretion contains entire secreting cells. **incretory g's**, endocrine g's. **intercarotid g.**, glomus caroticum. **intermediate g's**, according to some authorities, a fourth type of gastric gland (q.v.) found in a narrow region between the fundic and pyloric glands. **interscapular g.**, brown adipose tissue. **interstitial g.**, 1. (pl.) the aggregations of Leydig cells of the testis; so called because of their occurrence in clusters and their endocrine function. 2. the interstitial cells (see def. 2) of the ovary, collectively; so called because of their epithelioid appearance and presumed secretory function. **intestinal g's**, straight tubular glands in the mucous membrane of the intestines, opening, in the small intestine, between the bases of the villi, and containing argentaffin cells; called also *glandulae intestinalis* [NA]. **intraepithelial g.**, a gland situated in an epithelial layer. **intramuscular g's of tongue**, glandulae linguales anteriores. **jugular g.**, a lymph node behind the clavicular insertion of the sternomastoid muscle. **Krause's g's**, accessory lacrimal glands situated deep in the subconjunctival connective tissue, mainly in the upper fornix; called also *glandulae conjunctivales* [NA]. **labial g's of mouth**, glandulae labiales oris. **lacrimal g.**, glandula lacrimalis. **lacrimal g's**, **accessory**, glandulae lacrimales accessoriae. **lactiferous g.**, mammary g's. **g's of large intestine**, see *glandulae intestinales*. **large sweat g.**, an apocrine gland which usually produces an odoriferous secretion. **laryngeal g's**, glandulae laryngeae. **lenticular g's of stomach**, folliculi lymphatici gastrici. **lenticular g's of tongue**, folliculi linguales. **g's of Lieberkühn**, glandulae intestinales. **lingual g's**, glandulae linguales. **lingual g's, anterior** (of Blandin and Nuhn), glandulae linguales anteriores. **Littre's g's**, 1. glandulae preputiales. 2. glandulae urethrales urethrae masculinae. **Luschka's g.**, glomus coccygeum. **lymph g.**, **lymphatic g.**, lymph node. **lymph g's**, **extraparotid**, lymph nodes overlying the parotid gland, between the superficial and deep fasciae. **malar g's**, glandulae buccales. **mammary g.**, the specialized accessory gland of the skin of female mammals that secretes milk. In the human female, it is a compound tubuloalveolar gland composed of 15 to 25 lobes arranged radially

about the nipple and separated by connective and adipose tissue, each lobe having its own excretory (lactiferous) duct opening on the nipple. The lobes are subdivided into lobules, with the alveolar

ducts and alveoli being the secretory portion of the gland. Called also *lactiferous gland* and *glandula mammaria* [NA]. **mammary g's, accessory**, *mmae accessoriae* [femininae et masculinae]. **mandibular g.**, *glandula submandibularis*. **Manz' g's**, glandular depressions on the borders of the eyelids. **Mehlis' g.**, gland cells surrounding the ootype of trematodes. **meibomian g's**, *glandulae tarsales*. **merocrine g.**, one in which the secretory cells maintain their integrity throughout the secretory cycle. **mesenteric g's**, *nodi lymphatici mesenterici*. **mesocolic g's**, lymph nodes in the mesentery of the colon; see *nodi lymphatici colici dextri, medii, and sinistri, nodi lymphatici ileocolici, and nodi lymphatici mesenterici inferiores*. **mixed g's**, 1. glands that have both endocrine and exocrine portions. 2. seromucous g's. **molar g's**, *glandulae molares*. **Moll's g's**, sweat glands that have become arrested in their development, situated obliquely in contact with and parallel to the bulbs of the eyelashes. Called also *glandulae ciliares conjunctivales* [NA]. **monophtychic g.**, a gland in which the tubules or alveoli are lined with a single layer of secreting cells. **Montgomery's g's**, *glandulae areolares*. **Morgagni's g's**, *glandulae urethrales urethrae masculinae*. **g's of mouth**, *glandulae oris*. **mucilaginous g's**, *villi synoviales*. **muciparous g.**, *glandula mucosa*. **mucous g.**, a gland that secretes a slimy, chemically inert material; called also *glandula mucosa* [NA]. **mucous g's, lingual**, *glandulae linguales*. **mucous g's of auditory tube**, *glandulae tubariae*. **mucous g's of duodenum**, *glandulae duodenales*. **mucous g's of eustachian tube**, *glandulae tubariae*. **multicellular g.**, one in which many cells cooperate to produce a gland complex, represented in its simplest form by a secretory sheet (q.v.) of epithelial cells. **myometrial g.**, a tissue supposed to develop in the wall of the uterus at the site of implantation of the placenta and to last until the end of pregnancy. **Naboth's g's**, Naboth's follicles. **nabothian g's**, see under *follicle*. **nasal g's**, *glandulae nasales*. **g. of neck**, *tonsilla pharyngea*. **Nuhn's g's**, *glandulae linguales anteriores*. **odoriferous g's of prepuce**, *glandulae preputiales*. **oil g's**, *glandulae sebaceae*. **olfactory g's**, *glandulae olfactoriae*. **oxyntic g's**, *glandulae gastricae* [propriae]. **pacchionian g's (obs.)**, *granulationes arachnoideales*. **palatine g's**, *glandulae palatinae*. **palpebral g's**, *glandulae tarsales*. **pancreaticosplenic g's**, *nodi lymphatici pancreaticolienales*. **paraarenal g's**, glands opening near the frenum of the prepuce. **parathyroid g's**, small bodies in the region of the thyroid gland, developed from the endoderm of the branchial clefts, occurring in a variable number of pairs, commonly two (*glandula parathyroidea inferior* and *glandula parathyroidea superior* [NA]) (see inset on accompanying Plate). The parenchyma consists of masses and cords of epithelial cells, which have been divided into two main types: chief cells and oxyphil cells, but intermediate forms exist. The parathyroid glands secrete parathyroid hormone and are concerned chiefly with the metabolism of calcium and phosphorus. Called also *epithelial or parathyroid bodies*. **paraurethral g's**, *ductus paraurethrales*. **parotid g.**, the largest of the three chief, paired salivary glands; see *glandula parotis* [NA]. **parotid g., accessory**, *glandula parotis accessoria*. **pectoral g's**, see *nodi lymphatici axillares*. **peptic g's**, *glandulae gastricae*

[propriae]. **perspiratory g's (obs.)**, *glandulae sudoriferae*. **Peyer's g's**, *folliculi lymphatici aggregati*. **pharyngeal g's**, *glandulae pharyngeae*. **Philip's g's**, enlarged glands above the clavicle, seen in children with tuberculosis. **pineal g.**, pineal body. **pituitary g.**, the epithelial body of dual origin located at the base of the brain in the sella turcica. It is attached by a stalk to the hypothalamus, from which it receives an important neural outflow. The pituitary gland (or *hypophysis* [NA]) is composed of two main lobes: the *adenohypophysis* (anterior lobe, *lobus anterior* [NA], anterior pituitary), which arises from the buccal epithelium in the embryo, and the *neurohypophysis* (posterior lobe, *lobus posterior* [NA], posterior pituitary), which originates in the embryo as an evagination from the floor of the diencephalon. The adenohypophysis comprises the *pars infundibularis* (or *pars tuberalis*), a thin cloak of cells on the anterior and lateral surfaces of the neural stalk; the *pars distalis*, the main body of the adenohypophysis; and the *pars intermedia*, an ill-defined region between the two lobes (assigned in some systems of nomenclature to the neurohypophysis). The neurohypophysis comprises the *neural stalk* (infundibulum), which is continuous with the hypothalamus, and the *neural lobe* (infundibular process, *pars nervosa*), which is the main body of the neurohypophysis. The adenohypophysis secretes several important hormones (growth hormone, ACTH, α -MSH, β -MSH, TSH, FSH, LH, and prolactin) which are released on stimulation of the pituitary by releasing factors secreted by the hypothalamus, and which regulate the proper functioning of the thyroid, gonads, adrenal cortex, and other endocrine organs. As a consequence, it is of vital importance to the growth, maturation, and reproduction of the individual. The neurohypophysis, formerly thought to be the source of hormones having antidiuretic and oxytocic action, is now known to serve only as a reservoir for them, releasing them as needed. Called also *glandula pituitaria* [NA alternative], *hypophysis cerebri* [NA], and *pituitary body*. **Poirier's g's**, lymph nodes on the conoid ligament at the upper border of the isthmus of the thyroid. **polyphtychic g.**, a gland in which the tubules or alveoli are lined with more than one layer of secreting cells. **preen g.**, a large, compound alveolar structure present on the back of birds, above the base of the tail, which secretes an oily "water-proofing" material that the bird applies to its feathers and skin by preening. **pregnancy g's**, the glands containing female genital hormone, that is, the ovarian follicle, corpus luteum, and placenta. **prehyoid g's**, *glandulae thyroidea accessoriae*. **preputial g's**, *glandulae preputiales*. **prostate g.**, *prostate*. **puberty g's**, Steinach's name for the interstitial cells of Leydig in the male and the lutein cells of the ovary in the female. **pyloric g's**, *glandulae pyloricae*. **racemose g's**, glands composed of acini arranged like grapes on a stem. **retrolingual g.**, a rather large gland in some animals situated near the mandibular gland. **retromolar g's**, *glandulae molares*. **Rivinus g.**, *glandula sublingualis*. **Rosenmüller's g.**, 1. *pars palpebralis glandulae lacrimalis*. 2. [pl.] *nodi lymphatici inguinalis profundi*. **saccular g.**, a gland consisting of a sac or sacs, lined with glandular epithelium. **salivary g's**, the glands of the oral cavity whose combined secretion constitutes the saliva; they include the parotid, sublingual, and submandibular glands, as well as numerous small glands in the tongue, lips, cheeks, and palate. **salivary g., abdominal**, the pancreas. **salivary g., external**, *glandula parotis*. **salivary g., internal**, see *glandula sublingualis* and *glandula submandibularis*. **Sandström's g's**, *glandulae thyroidea accessoriae*. **Schüller's g's**, diverticula of the ducts of Gartner. **sebaceous g's**, *glandulae sebaceae*. **sebaceous g's of conjunctiva**, *glandulae sebaceae conjunctivales*. **sentinel g.**, an enlarged lymph node, considered to be pathognomonic of some pathological condition elsewhere. **seromucous g.**, one that contains both serous and mucous secreting cells; called also *glandula seromucosa* [NA]. **serous g.**, a gland that secretes a watery albuminous material commonly but not always containing enzymes; called also *glandula serosa* [NA]. **Serres' g's**, pearly masses of epithelial cells near the surface of the gum of the infant. **sexual g.**, see *testis* and *ovary*. **Sigmund's g's**, the epitrochlear lymph nodes. **simple g.**, one with a nonbranching duct. **Skene's g's**, *ductus paraurethrales*. **g's of small intestine**, see *glandulae intestinales*. **solitary g's of large intestine**, *folliculi lymphatici solitarii intestini crassi*. **solitary g's of small intestine**, *folliculi lymphatici solitarii intestini tenuis*. **splenoid g.**, an apparently compensatory new growth that sometimes follows extirpation of the spleen. **Stahr's g.**, a lymph node situated on the facial artery. **staphyline g's**, *glandulae palatinae*. **subauricular g's**, *nodi lymphatici retroauriculares*. **sublingual g.**, the smallest of the three chief, paired salivary glands; see *glandula sublingualis* [NA]. **submandibular g., submaxillary g.**, one of the three chief, paired salivary glands; see *glandula submandibularis* [NA]. **sudoriferous g's, sudoriparous g's**, *glandulae sudoriferae*. **suprarenal g.**, *adrenal g.* **suprarenal g., accessory**, *glandulae suprarenales accessoriae*. **Suzanne's g.**, a mucous gland of the mouth, beneath the alveolingual groove. **sweat g's**, *glandulae sudoriferae*. **synovial g's**, *villi synoviales*. **target g.**, a gland specifically affected by a pituitary hormone; such glands include the thyroid, adrenals, and gonads. **tarsal**

g's, tarsoconjunctival g's, glandulae tarsales. **Theile's g's**, glandlike formations in the walls of the cystic duct and in the pelvis of the gallbladder. **thymus g.**, thymus. **thyroid g.**, one of the endocrine glands, normally situated in the lower part of the front of the neck and consisting of two lobes, one on either side of the trachea and joined in front by a narrow isthmus. It secretes, stores, and liberates as necessary the thyroid hormones (thyroxine and triiodothyronine), which require iodine for their elaboration and which are concerned in regulating the metabolic rate. It also secretes thyrocalcitonin. Called also *glandula thyroidea* [NA] and *thyroid body*. See also *thyroid*. **thyroid g's, accessory**, glandulae thyroideae accessoriae. **g's of tongue**, glandulae linguales. **tracheal g's**, glandulae tracheales. **trachoma g's**, lymphoid follicles of the conjunctiva, found chiefly near the inner canthus of the eye. **tubular g.**, any gland made up of or containing a tubule or a number of tubules. **tubuloacinar g.**, one that is both tubular and acinous. **tympenic g's**, glandulae tympanicae. **g's of Tyson**, glandulae preputiales. **unicellular g.**, a cell which performs a secretory function, as a goblet cell. **urethral g's**, see entries beginning *glandulae urethrales*, under *glandula*. **urethral g's of female urethra**, glandulae urethrales urethrae feminae. **uropygial g's**, preen g. **uterine g's**, glandulae uterinae. **utricular g's**, glandulae uterinae. **vaginal g.**, any gland occurring exceptionally in the vaginal mucous membrane. **vascular g.**, 1. glomus. 2. a hemal node. **vestibular g.**, greater, glandula vestibularis major [NA]. **vestibular g's, lesser**, glandulae vestibulares minores. **Virchow's g.**, signal node. **vitelline g.**, see *vitellarium*. **vulvovaginal g.**, glandula vestibularis major. **Waldeyer's g's**, acinotubular glands in the inner skin of the attached edge of the eyelid. **Weber's g's**, the tubular mucous glands of the tongue. **g's of Wolfring**, small tubuloalveolar glands in the subconjunctival tissue above the upper border of the tarsal plate, their ducts opening on the conjunctival surface. **g's of Zeis**, modified rudimentary sebaceous glands attached directly to the follicles of the eyelashes; called also *glandulae sebaceae conjunctivales* [NA]. **Zuckerkindl's g.**, corpora paraaortica.

glandorous (glan'der-us) of the nature of or affected with glands.

glanders (glan'derz) [*L. malleus*] a contagious disease of horses, communicable to man, and caused by the *glanders bacillus*, *Pseudomonas mallei*. It is marked by a purulent inflammation of mucous membranes and an eruption of nodules on the skin which coalesce and break down, forming deep ulcers, which may end in necrosis of cartilages and bones. Called also *maliasmus* and

Pseudomonas mallei.

malleus; the more chronic and constitutional lymphatic form is known as *farcy*. **African g.**, **Japanese g.**, lymphangitis epizootica.

glandes (glan'dēz) [*L.*] plural of *glans*.

glandilemma (glan'di-lem'ah) [*gland* + *Gr. lemma* sheath] the capsule or outer envelope of a gland.

glandula (glan'du-lah), pl. *glan'dulae* [*L.*] [NA] a gland: an aggregation of cells, specialized to secrete or excrete materials not related to their ordinary metabolic needs. **glan'dulae areola' res** [NA], **glan'dulae areola' res** [Montgomer'ii], areolar glands: sebaceous glands of the mammary areola; called also *Montgomery's glands*. **glan'dulae bronchia' les** [NA], bronchial glands: seromucous glands in the mucosa and submucosa of the bronchial walls. **glan'dulae bucca' les** [NA], buccal glands: the serous and mucous glands on the inner surface of the cheeks. **g. bulbourethra' lis** [NA], **g. bulbourethra' lis** [Cow'peri], bulbourethral gland: either of two glands embedded in the substance of the sphincter of the male urethra, just posterior to the membranous part of the urethra; they are homologues of the greater vestibular glands in the female. Called also *Cowper's gland*. **glan'dulae cerumino' sae** [NA], ceruminous glands: the glands in the skin of the external auditory canal that secrete the cerumen. **glan'dulae cervica' les u'teri** [NA], cervical glands of uterus: compound clefts in the wall of the uterine cervix. **glan'dulae cilia' res conjunctiva' les** [NA], **glan'dulae cilia' res** [Mol'li], ciliary glands of conjunctiva: sweat glands that have become arrested in their development, situated obliquely in contact with and parallel to the bulbs of the eyelashes; called also *Moll's glands*. **glan'dulae circumana' les** [NA], circumanal glands: specialized sweat and sebaceous glands situated in an annular zone around the anus; called also *anal glands*. **g. clau' sa**, a ductless (endocrine) gland. **glan'dulae conjunctiva' les** [NA], conjunctival glands: accessory lacrimal glands situated deep in the subconjunc-

tival connective tissue, mainly in the upper fornix; called also *glandulae mucosae conjunctivae* [Krause] and *Krause's glands*. **glan'dulae cu'tis** [NA], cutaneous glands: the glands of the skin, including the sweat glands (glandulae sudoriferae), sebaceous glands (glandulae sebaceae), and the modified sweat glands that secrete cerumen (glandulae ceruminosae). **glan'dulae duodena' les** [NA], **glan'dulae duodena' les** [Brun'neri], duodenal glands: tubuloalveolar glands in the submucous layer of the duodenum which open into the crypts of Lieberkühn; they secrete urogastrone. Called also *Brunner's glands*. **glan'dulae esophage' ae** [NA], esophageal glands: the mucous glands in the submucosa of the esophagus. **glan'dulae gas'tricae** [pro'priae] [NA], gastric glands proper: very numerous, nearly straight tubular glands located in the mucosa of the fundus and body of the stomach; they contain the cells that produce acid and pepsin. Called also *fundic glands*. **glan'dulae glomifor' mes** [NA], glomiform glands: glomiform arteriovenous shunts found in the skin, which are called glands although they appear to be nonglandular; called also *glomerate glands*. **glan'dulae hepat'icae**, glandulae mucosae biliosae. **g. incisi' va**, a small intraoral gland in the median line of the upper jaw near the incisors. **g. intercarot'ica**, glomus caroticum. **glan'dulae intestina' les** [NA], intestinal glands: simple tubular glands in the mucous membrane of the small intestine (*intestinales intestini tenuis*), opening between the bases of the villi and containing argentaffin cells; of the large intestine (*g. intestinales intestini crassi*); and of the rectum (*g. intestinales intestini recti*). Called also *crypts, glands, or follicles of Lieberkühn*, and *intestinal follicles*. **glan'dulae labia' les o'ris** [NA], labial glands of the mouth: the serous and mucous glands on the inner part of the lips. **g. lacrima' lis** [NA], lacrimal gland: one of the glands that lie at the upper outer angle of the orbit and secrete the tears; they are divided into two portions, the orbital and palpebral, by the orbital fascia. **glan'dulae lacrima' les accesso' riae** [NA], accessory lacrimal glands: portions of the lacrimal gland sometimes found near the superior fornix of the conjunctiva. **g. lacrima' lis infe'rior**, pars palpebralis glandulae lacrimalis. **g. lacrima' lis supe'rior**, pars orbitalis glandulae lacrimalis. **glan'dulae laryn' geae** [NA], laryngeal glands: the mucous glands in the mucosa of the larynx. **glan'dulae laryn' geae anterio' res**, mucous glands in the anterior of the larynx. **glan'dulae laryn' geae me' diae**, mucous glands located in the arytenoepiglottic fold. **glan'dulae laryn' geae poste' rio' res**, mucous glands in the posterior wall of the larynx; called also *arytenoid glands*. **glan'dulae lingua' les** [NA], lingual glands: the mucous and serous glands on the surface of the tongue. **glan'dulae lingua' les anterio' res** [NA], anterior lingual glands: deeply placed mucoserous glands near the apex of the tongue. **g. mamma' ria** [NA], mammary gland: the collective glandular elements of the mamma, or breast, which secrete milk for nourishment of the young; see *mammary gland*, under *gland*. **glan'dulae mola' res** [NA], molar glands: the glands on the external aspect of the buccinator muscle, their ducts piercing it to open on the internal aspect of the cheek; called also *retromolar glands*. **g. muco' sa** [NA], mucous gland: a gland that secretes a slimy, chemically inert material. **g. muco' sae tu' bae auditi' vae**, g. tubariae. **glan'dulae muco' sae bilio' sae** [NA], glands of biliary mucosa: tubuloalveolar glands in the mucosa of the bile ducts and the neck of the gallbladder; called also *hepatic glands* and *glandulae hepaticae*. **glan'dulae muco' sae conjuncti' vae** [Kraus' ei], glandulae conjunctivales. **glan'dulae muco' sae ure'teris**, mucous glands of the ureter. **glan'dulae nasa' les** [NA], nasal glands: numerous large mucous and serous glands in the respiratory part of the nasal cavity. **glan'dulae olfacto' riae** [NA], olfactory glands: small mucous glands in the olfactory mucosa; called also *Bowman's glands*. **glan'dulae o'ris** [NA], the glands of the mouth. **glan'dulae palati' nae** [NA], palatine glands: the mucous glands on the soft palate and the posteromedial part of the hard palate; called also *staphyline glands*. **glan'dulae parathyroi' deae** [NA], small bodies in the region of the thyroid gland occurring in a variable number of pairs, commonly two, named *glandula parathyroidea superior* and *glandula parathyroidea inferior*, according to their position; see *parathyroid glands*, under *gland*. **g. paro' tis** [NA], parotid gland: the largest of the three chief, paired glands which, together with numerous small glands in the mouth, constitute the salivary glands; it is located below the zygomatic arch, below and in front of the external acoustic meatus. **g. paro' tis accesso' ria** [NA], accessory parotid gland: a more or less detached portion of the parotid gland that is frequently present. **glan'dulae pel' vis rena' lis**, mucous glands in the wall of the kidney pelvis. **glan'dulae pharyn' geae** [NA], pharyngeal glands: mucous glands beneath the tunica mucosa of the pharynx. **g. pituita' ria** [NA alternative], pituitary gland; see under *gland*. **glan'dulae preputia' les** [NA], preputial glands: small sebaceous glands of the corona of the penis and the inner surface of the prepuce, which secrete smegma; called also *Littre's crypts or glands*. **g. prosta' ta**, **g. prostat' ica**, prostate. **glan'dulae pylo' riae** [NA], pyloric glands: the mucin-secreting glands of the pyloric part of the stomach. **glan'dulae seba' ceae** [NA], sebaceous glands: holocrine glands of the skin, secreting an oily substance,

sebum, and situated in the corium. **glan'dulae seba'ceae conjunctiva'les** [NA], sebaceous glands of conjunctivae: modified rudimentary sebaceous glands attached directly to the follicles of the eyelashes; called also *glands of Zeis*. **glan'dulae seba'ceae la'bii majo'ris pudenda'lis**, sebaceous glands in the skin of the labia majora. **glan'dulae seba'ceae mam'mae**, glandulae areolares. **g. seromuco'sa** [NA], seromucous gland: a gland composed of both mucous and serous secreting cells, such as the labial glands. **g. sero'sa** [NA], serous gland: a gland that secretes a watery albuminous material, commonly but not always containing enzymes. **glan'dulae si'ne duc'tibus** [L. "glands without ducts"] [NA], the endocrine glands, including the thyroid and parathyroid glands, the pituitary gland, the adrenal gland, and the gonads; see *endocrine glands*, under *gland*. **g. sublingua'lis** [NA], sublingual gland: the smallest of the three chief, paired salivary glands, predominantly mucous in type, and draining into the oral cavity through 10 to 30 sublingual ducts; called also *Rivinus gland*. **g. submandibula'ris** [NA], **g. submaxilla'ris**, submandibular gland: one of the three chief, paired salivary glands, predominantly serous, lying partly above and partly below the posterior half of the base of the mandible. **glan'dulae sudori'erae** [NA], sudoriferous or sweat glands: the glands that secrete sweat, situated in the corium or subcutaneous tissue, and opening by a duct on the surface of the body. They are of two types: The ordinary or *eccrine sweat glands* are unbranched, coiled, tubular glands that are distributed over almost all of the body surface, and promote cooling by evaporation of their secretion. The *apocrine sweat glands* are large, branched, specialized glands that empty into the upper portion of a hair follicle instead of directly onto the skin surface, and are found only on certain areas of the body, such as around the anus and in the axilla. Called also *sudoriparous glands*. **g. suprarena'lis** [NA], a flattened body situated in the retroperitoneal tissues at the superior pole of either kidney; see *adrenal gland*, under *gland*. **glan'dulae suprarena'les accesso'riae** [NA], accessory suprarenal gland: accessory adrenal glandular tissue found in the abdomen or pelvis. See *adrenal g.*, accessory, under *gland*. **glan'dulae suprarena'les sic'cae**, desiccated adrenal glands. **glan'dulae tarsi'les** [NA], **glan'dulae tarsi'les** [Meibom'i], tarsal glands: sebaceous follicles between the tarsi and the conjunctiva of the eyelids; called also *meibomian glands*. **g. thyroi'dea** [NA], thyroid gland: one of the endocrine glands, normally situated in the front of the lower part of the neck and consisting of two lobes, one on either side of the trachea and joined in front by a narrow isthmus. It secretes, stores, and liberates as necessary the thyroid hormones (thyroxine and triiodothyronine), which require iodine for their elaboration and are concerned in regulating the rate of metabolism. It also secretes thyrocalcitonin. Called also *thyroid body*. See also *thyroid*. **glan'dulae thyroi'deae accesso'riae** [NA], accessory thyroid glands: small exclaves of the thyroid gland that may be found any place along the course of the thyroglossal duct, as well as in the thorax. **glan'dula thyroi'deae accesso'ria suprahyoi'deae**, accessory thyroid tissue found above the hyoid bone. **glan'dulae thyroi'deae sic'cae**, desiccated thyroid glands. **glan'dulae trachea'les** [NA], tracheal glands: mucous glands in the elastic submucous coat between the cartilaginous rings and on the posterior wall of the trachea. **glan'dulae tuba'riae** [NA], mucous glands within the mucosa of the auditory tube, especially near its nasopharyngeal end; called also *glandulae mucosae tubae auditivae* and *mucous glands of auditory or eustachian tube*. **g. tympan'icae**, tympanic gland: a small mass situated on Jacobson's nerve in the tympanic canal. **glan'dulae urethra'les** [Lit'trei], glandulae urethrales urethrae masculinae. **glan'dulae urethra'les ure'thrae femini'nae** [NA], urethral glands of female urethra: numerous small mucous glands in the mucosa of the female urethra, some of which on either side are drained by the inconstant paraurethral duct opening into the vestibule. **glan'dulae urethra'les ure'thrae masculi'nae** [NA], mucous glands in the wall of the male urethra; called also *Littre's glands*. **glan'dulae urethra'les ure'thrae mulie'bris**, glandulae urethrales urethrae feminae. **g. uropygia'lis**, preen gland. **glan'dulae uteri'nae** [NA], uterine glands: simple tubular glands throughout the entire thickness and extent of the endometrium, which become enlarged during the premenstrual period. **glan'dulae vesica'les ves'icae urina'riae**, mucous glands in the wall of the urinary bladder. **g. vestibula'ris ma'jor** [NA], either of two small reddish yellow bodies in the vestibular bulbs, one on each side of the vaginal orifice; they are homologues of the bulbourethral glands in the male. Called also *Bartholin's gland* and *greater vestibular gland*. **glan'dulae vestibula'les mino'res** [NA], small mucous glands opening upon the vestibular mucous membrane between the urethral and the vaginal orifice; called also *lesser vestibular glands*.

glandulae (glan'du-le) [L.] plural of *glandula*.

glandular (glan'du-lar) 1. pertaining to or of the nature of a gland. 2. pertaining to the glans penis.

glandule (glan'dül) [L. *glandula*] a small gland.

glandulous (glan'du-lus) [L. *glandulosus*] abounding in kernels or small glands.

glans (glanz), pl. *glan'des* [L. "acorn"] [NA] a general term for a small rounded mass, or glandlike body. **g. clitor'idis** [NA], **g. of clitoris**, erectile tissue at the end of the clitoris, which is continuous with the intermediate part of the vestibular bulbs. **g. pe'nis** [NA], the cap-shaped expansion of the corpus spongiosum at the end of the penis; called also *balanus*.

Glanzmann's thrombasthenia (disease) (glahnz'manz) [Edward Glanzmann, Swiss pediatrician, 1887-1959] see *thrombasthenia*.

glare (glär) a condition of discomfort in the eye and of depression of central vision produced when a bright light enters the field of vision, especially when the eye is adapted to dark. The amount of glare is directly proportional to the candle power of the light and inversely proportional to the square of the distance of the light from the eye and to its angular distance from the visual axis. *Direct g.*, when the image of the light falls on the fovea; *peripheral g.*, when it falls outside of the fovea.

glarometer (glär-om'ter) an instrument for measuring a person's resistance to glare from the lights of an approaching automobile.

glaserian fissure, etc. (gla-se're-an) [named for or described by Johann Heinrich Glaser (Glaserius), Swiss anatomist, 1629-1675] *fissura petrotympanica*.

Glasgow's sign (glas'gōz) [William Carr Glasgow, American physician, 1845-1907] see under *sign*.

glass (glas) [L. *vitrum*] 1. a hard, brittle, and often transparent material, usually consisting of the fused amorphous silicates of potassium or sodium, and of calcium, with silica in excess. 2. a container, usually cylindrical, made from glass. 3. (pl.) lenses worn to aid or improve vision; see *glasses*, *lens*, and *spectacles*. **cover g.**, a thin glass plate used to cover an object for microscopical examination. **crown g.**, a glass of low refractive index (achieved by incorporating a considerable percentage of phosphorus pentoxide); used in combination with flint glass in multielement lenses. **cupping g.**, a vessel of glass from which the air has been or can be exhausted, applied to the body for the purpose of drawing blood to the surface. **flint g.**, a highly refractive glass in which calcium has been replaced in large part by lead; used for lenses and prisms and in the manufacture of cut glass. **holvi g.**, glass more transparent than ordinary glass to ultraviolet rays. **lithium g.**, glass containing lithium, used in *grenz ray* x-ray tubes. **object g.**, see *objective*. **optical g.**, glass of high quality and controlled composition, used for lenses. **quartz g.**, pure fused silica, SiO₂; used for prisms, lenses, and chemical vessels (1) because its index of thermal expansion is so small that it does not crack when heated or cooled, and (2) because it transmits more ultraviolet radiation than does ordinary glass. **soluble g.**, a potassium or sodium silicate which is sometimes used in preparing immovable bandages. **test g.**, a small glass vessel, resembling a beaker, used in a chemical laboratory. **watch g.**, a relatively airtight eye shield made of metal or other substances, and having a shape similar to that of a watch crystal; used primarily to cover an exposed cornea, but may be used to guard an unaffected eye from infection from an affected eye. **water g.**, soluble g. **Wood's g.**, see under *light*.

glasses (glas'ez) spectacles; a pair of lenses arranged in a frame holding them in the proper position before the eyes, as an aid to vision. **bifocal g.**, lenses which have two different refracting powers, one for distant and one for near vision. **contact g.**, see *contact lens*. **crutch g.**, glasses which will elevate and support the upper lid of patients with ptosis. **Hallauer's g.**, glasses with grayish-green lenses which prevent the passage of blue and ultraviolet rays. **hyperbolic g.**, lenses ground with a section of a hyperbolic curve. **snow g.**, glasses with special lenses to prevent snow blindness. **sun g.**, glasses with special lenses which filter the rays of the sun. **trifocal g.**, glasses with lenses which have three different refracting powers, one for distant, one for intermediate, and one for near vision.

glassy (glas'ez) like glass; hyaline or vitreous.

Glauber's salt (glaw'berz) [Johann Rudolf Glauber, German physician and chemist, 1604-1688] sodium sulfate.

glaucaurubin (glaw'kah-ru'bin) a crystalline glycoside obtained from the fruit of *Simaruba glauca* D.C. (Simorubaceae); formerly used as an amebicide.

glaucoma (glaw-ko'mah) [Gr. *glaukōma* opacity of the crystalline lens (from the dull gray gleam of the affected eye)] a group of eye diseases characterized by an increase in intraocular pressure which causes pathological changes in the optic disk and typical defects in the field of vision. **absolute g.**, **g. absolu'tum**, the final stage of glaucoma characterized by pain in the eye and blindness. **acute congestive g.**, narrow-angle g. **air-block g.**, a form of postoperative glaucoma, resulting from blockage of the flow of aqueous by air injected inadvertently behind the iris either through the pupillary opening or through a peripheral iridectomy. **angle-closure g.**, narrow-angle g. **angle-recession g.**, glaucoma secondary to contusion injury of the eye, in which the anterior chamber is deep and the angle recedes, with exposure of the ciliary body, as seen gonioscopically, and there is blocking of the trabecular spaces. **aphakic g.**, a general term referring to glaucoma in an eye from which the lens has been

removed; the glaucoma may be related to the cataract extraction or to its sequelae, or it may have existed prior to the cataract extraction. **apoplectic g.**, hemorrhagic g. **auricular g.**, that associated with increased intralabyrinthine pressure. **capsular g.**, that due to obstruction of the outlet channels of the aqueous humour. **chronic narrow-angle g.**, a form of narrow-angle glaucoma without a severe congestive episode. **chronic simple g.**, open-angle g. **closed-angle g.**, narrow-angle g. **congenital g.**, infantile g. **congestive g.**, narrow-angle g. **g. consumma'tum**, g. absolutum. **Don- ders' g.**, g. simplex. **enzyme g.**, a transient glaucoma developing postoperatively in patients in whom trypsin has been used in the lysis of the zonule during cataract surgery; it is usually self-limited, with no permanent damage. **hemorrhagic g.**, that which is caused by pressure from retinal hemorrhage (von Graefe). **g. im'minens**, an impending glaucoma. **infantile g.**, a form of congenital glaucoma that may be fully developed at birth, with characteristic signs (enlargement and hazing of the corneas), or it may develop at any time up to two or three years of age; these signs result from inability of the cornea and sclera to withstand the increased intraocular pressure. Called also *buphthalmos*. Cf. *juvenile g.* **inflammatory g.**, a form attended with ciliary congestion, corneal opacity, and blindness, recurring in paroxysmal attacks. **juvenile g.**, glaucoma differing from infantile glaucoma in that it occurs in older children and young adults up to 30 years of age, and there is no gross enlargement of the eyeball. **lenticular g.**, glaucoma occurring in association with congenital or traumatic dislocation of the lens, or with swelling of the lens, usually due to mechanical obstruction to the peripheral angle of the anterior chamber. **malignant g.**, glaucoma that grows rapidly worse in spite of iridectomy. **narrow-angle g.**, a form of primary glaucoma in an eye characterized by a shallow anterior chamber and a narrow angle, in which filtration is compromised as a result of the iris blocking the angle; called also *angle-closure g.*, *closed-angle g.*, and *acute congestive g.* **neovascular g.**, a form of secondary glaucoma; glaucoma caused by neovascularization in the chamber angle. **non-congestive g.**, open-angle g. **obstructive g.**, narrow-angle g. **open-angle g.**, a form of primary glaucoma in an eye in which the angle of the anterior chamber remains open, but filtration is gradually diminished because of the tissues of the angle; called also *simple g.*, *chronic simple g.*, and *wide-angle g.* **phakogenic g.**, glaucoma resulting from pupillary block, in turn caused by a swollen lens, with angle closure. **phakolytic g.**, glaucoma secondary to leakage of lens protein into the aqueous from a mature or more often a hypermature cataract and the subsequent ingestion of the protein by macrophages, which swell and block the trabecular spaces. It has the following characteristics: mature or hypermature cataract, open angle (often with angle recession), deep anterior chamber, uveitis, and increased intraocular pressure. **pigmentary g.**, a form of open-angle glaucoma associated with an abnormal amount of pigment dispersion in the anterior segment of the eye. **primary g.**, increased intraocular pressure occurring in an eye without previous disease; see *narrow-angle g.* and *open-angle g.* **secondary g.**, increased intraocular pressure resulting from a disease or injury, as from dislocation of the lens, tumor of the uveal tract, or hemorrhage into the anterior chamber. **simple g.**, open-angle g. **g. sim'plex**, a form with no pronounced inflammatory symptoms, but attended with progressive loss of vision. **traumatic g.**, an increase in intraocular pressure due to a nonperforating injury of the globe, resulting in vascular congestion. **vitreous-block g.**, postoperative glaucoma in which vitreous plugs the pupil, so that the aqueous, which is unable to move to the anterior chamber, forces the vitreous and iris forward, producing occlusion of the chamber angle and eventually peripheral anterior synechiae. **wide-angle g.**, open-angle g.

glaucomatous (glaw-ko'mah-tus) pertaining to or of the nature of glaucoma.

glauconosis (glaw-ko'sis) blindness caused by glaucoma.

glauconuria (glaw'ko-su're-ah) [Gr. *glaukos* silvery + *ouron* urine + *-ia*] indicanuria.

glaze (glāz) in dentistry, a ceramic veneer added to a porcelain restoration after it has been fired, to give a completely nonporous, glossy or semiglossy surface.

gleet (glēt) 1. a chronic form of gonorrheal urethritis. 2. a urethral discharge, especially one that is mucous or purulent. **vent g.**, cloacitis.

gleety (glēt'e) pertaining to or of the nature of gleet.

Glénard's disease (gla-nar'z) [Frantz Glénard, French physician, 1848-1920] see *splanchnoptosis*.

glenohumeral (gle'no-hu'mer-al) pertaining to the glenoid cavity and to the humerus.

glenoid (gle'noid) [Gr. *glēnē* socket + *eidos* form] resembling a pit or socket; see *cavitas glenoidalis*.

Glenospora (gle-nos'po-rah) a former name for genus of fungi of uncertain classification, species of which have been assigned to several other genera. *G. graphii* was reported from otomycosis.

Glenosporella (gle'no-spo-rel'ah) former name for the genus *Chrysosporium*.

Gley's cells, glands (glāz) [Marcel Eugène Émile Gley, French physiologist, 1857-1930] see under *cell* and see *glandulae thyroidea accessoriae*.

glia (gli'ah) [Gr. "glue"] the neuroglia; also used as a word termination to denote a glue-like structure or tissue. **ameboid g.**, degenerated neuroglial cells which are rich in pale protoplasm, possess few processes, and have densely staining nuclei. **cytoplasmic g.**, enlarged neuroglial cells, rich in cytoplasm, containing vacuoles and supplied with fibrils; seen in degeneration of the spinal cord. **g. of Fañana**, a form of neuroglial cell occurring in the molecular layer of the cerebellar cortex. **fibrillary g.**, degenerated neuroglial cells containing an abundance of fibrils.

gliacyte (gli'ah-sit) [*glia* + Gr. *kytos* hollow vessel] a cell of the neuroglia.

gliadin (gli'ah-din) [Gr. *glia* glue] an alcohol-soluble protein present in wheat and occurring in various forms (α -, β -, γ -, and W-gliadins); it contains the toxic factor associated with celiac disease.

glial (gli'al) of or pertaining to the neuroglia or glia.

gliamilide (gli-am'i-lid) chemical name: *endo-N*-[2-[1-[[[(bicyclo[2.2.1]hept-5-en-2-ylmethyl)amino]carbonyl]amino]sulfonyl]-4-piperidinyl]ethyl]-2-methoxy-3-pyridinecarboxamide; an oral hypoglycemic, $C_{23}H_{33}N_5O_5S$.

gliarase (gli'ah-rās) an aggregation of astrocytes whose cytoplasm has undergone incomplete fission.

glibenclamide (gli-ben'klah-mid) glyburide.

glibornuride (gli-born'ūr-id) chemical name: *N*-[[[3-hydroxy-4,7,7-trimethylbicyclo[2.2.1]hept-2-yl]amino]carbonyl]-4-methylbenzenesulfonamide; an orally effective hypoglycemic agent of the sulfonylurea group, $C_{18}H_{26}N_2O_4S$.

glicetanile sodium (gli-set'ah-nil) chemical name: *N*-(5-chloro-2-methoxyphenyl)-4-[[[5-(2-methylpropyl)-2-pyrimidinyl]amino]sulfonyl]benzeneacetamide monosodium salt; an oral hypoglycemic, $C_{23}H_{24}ClN_4NaO_4S$. Called also *glydanile sodium*.

glide (glid) a smooth continuous movement. **mandibular g.**, the side-to-side, protrusive, and intermediate movement of the mandible occurring when the teeth or other occluding surfaces are in contact. **occlusal g.**, the movement induced by deflexive tooth contact that diverts the mandible from a normal path of closure to a centric jaw relation.

gliflumide (gli'floo'mid) chemical name: (-)-(S)-*N*-[1-(5-fluoro-2-methoxyphenyl)ethyl]-4-[[[5-(2-methylpropyl)-2-pyrimidinyl]amino]sulfonyl]benzeneacetamide; an oral hypoglycemic, $C_{25}H_{28}FN_4O_5S$.

glio- (gli'o) [Gr. *glia* glue] a combining form denoting relationship to a gluey substance or specifically to the neuroglia.

gliobacteria (gli'o-bak-te're-ah) [*glio-* + *bacteria*] rod-shaped schizomycetes which are surrounded by a zooglea.

glioblast (gli'o-blast) spongioblast.

glioblastoma (gli'o-blas-to'mah) [*glio-* + Gr. *blastos* germ + *-oma*] a general term for malignant forms of astrocytoma.

g. multiforme, an astrocytoma of Grade III or IV; it is a rapidly growing tumor, usually confined to the cerebral hemispheres and composed of a mixture of spongioblasts, astroblasts, and astrocytes. Called also *spongioblastoma multiforme* and *anaplastic astrocytoma*.

gliococcus (gli'o-kok'us) [*glio-* + Gr. *kokkos* berry] a micrococcus that forms gelatinous matter.

gliocyte (gli'o-sit) gliacyte. **retinal g's**, Müller's fibers.

gliocytoma (gli'o-si-to'mah) glioma.

gliofibrillary (gli'o-fi'brī-lār-e) pertaining to fibrils of the neuroglia.

gliogenous (gli-oj'ē-nus) [*glio-* + Gr. *gennan* to produce] produced or formed by glial (neuroglial) cells.

glioma (gli-o'mah) [*glio-* + *-oma*] a tumor composed of tissue which represents neuroglia in any one of its stages of development. The term is sometimes extended to include all the primary intrinsic neoplasms of the brain and spinal cord, including astrocytomas, ependymomas, neurocytomas, etc. **astrocytic g.**, astrocytoma. **g. endoph'ytum**, retinoblastoma beginning in the inner layers of the retina. **ependymal g.**, a bulky, solid, rather firm but vascular tumor of the fourth ventricle. **g. exoph'ytum**, retinoblastoma beginning in the outer layers of the retina. **ganglionic g.**, a glioma that contains also ganglion cells of nearly adult type; see *neuroblastoma*. **mixed g.**, a glioma in which the cytological components are of more than one cell type, the commonest form consisting of oligodendrogliomatous foci in an otherwise typical astrocytoma. **nasal g.**, a tumor-like mass composed of ectopic neural tissue in the nasal cavity.

optic g., a slow-growing glioma of the optic nerve or optic chiasm heralded by visual loss, often with secondary strabismus, followed by proptosis and loss of ocular movement. **peripheral g.**, schwannoma. **g. ret'inae**, retinoblastoma. **g. sarcomato'sum**, a gliosarcoma. **telangiectatic g.**, glioma containing blood vessels.

gliomatosis (gli'o-mah-to'sis) excessive development of the

neuroglia, especially of the spinal cord, in certain cases of syringomyelia.

gliomatous (gli-o'mah-tus) affected with or of the nature of glioma.

glioneuroma (gli'o-nu-ro'mah) a tumor containing both gliomatous and neuromatous elements.

gliophagia (gli'o-fa'je-ah) [glío- + Gr. *phagein* to eat] phagocytosis of neuroglial cells.

gliopil (gli'o-pil) [glío- + Gr. *pilos* felt] a dense feltwork of glial processes, as in the subependymal matrix of the ventricular system.

gliosa (gli-o'sah) (obs.) the gray matter of the spinal cord which covers the head of the dorsal horn and surrounds the central canal.

gliosarcoma (gli'o-sar-ko'mah) [glío- + *sarcoma*] a spindle cell glioma; see also *spongioblastoma*. **g. ret'inae**, retinoblastoma.

gliosis (gli-o'sis) an excess of astroglia in damaged areas of the central nervous system. **basilar g.**, gliosis affecting the brain stem, thalamus, and corpus striatum. **cerebellar g.**, gliosis affecting the cerebellum. **diffuse g.**, gliosis affecting the whole of the cerebral tissue, or widely scattered through it. **hemispheric g.**, gliosis affecting one of the cerebral hemispheres. **hypertrophic nodular g.**, a form of gliosis in which the brain is symmetrically enlarged because of hyperplasia of the neuroglial tissue. **isomorphic g.**, gliosis in which there is a regular and parallel arrangement of glial fibers. **lobar g.**, gliosis affecting a single lobe of the brain. **perivascular g.**, a form of arteriosclerosis of the cerebral vessels, marked by increase of the neuroglia about the vessels. **spinal g.**, gliosis of the spinal cord. **unilateral g.**, hemispheric gliosis.

gliosome (gli'o-sōm) [glío- + Gr. *sōma* body] one of the small cytoplasmic granules seen in neuroglial cells.

gliotoxin (gli'o-to'k'sin) an antibiotic substance, $C_{13}H_{14}N_2O_4S_2$, obtained from several unrelated species of fungi, including species of *Trichoderma*, *Aspergillus*, and *Penicillium*; it is a neutral, nitrogen- and sulfur-containing compound first isolated from culture filtrates of *Gliocladium* (*Trichoderma*).

glipizide (glip'ah-zid) chemical name: *N*-[2-[4-[[[(cyclohexylamino)carbonyl]amino]sulfonyl]phenyl]ethyl]-5-methylpyrazine carboxamide. An orally effective hypoglycemic, $C_{21}H_{27}N_5O_4S$, used in the treatment of diabetes mellitus in certain patients.

Gliricola (gli-rik'o-lah) a genus of biting lice. **G. porcel'li**, a biting louse found on guinea pigs.

glischrin (glis'krin) [Gr. *glischros* gluey] a mucin produced in urine by bacterial activity.

glischruria (glis-kroo're-ah) [Gr. *glischros* gluey + *ouron* urine + *-ia*] the presence of glischrin in the urine.

glissade (glis-ād') [Fr. "sliding"] a gliding involuntary movement of the eye in changing the point of fixation; it is a slower, smoother movement than is a saccade.

glissadic (glis-sad'ik) pertaining to a glissade.

Glisson's capsule, cirrhosis, disease, sling (glis'unz) [Francis Glisson, English physician and anatomist, 1597-1677, one of the founders of the Royal Society] see *capsula fibrosa perivascularis*, *capsular cirrhosis*, and *rickets*, and see under *sling*.

glissonitis (glis'o-ni'tis) inflammation of Glisson's capsule (*capsula fibrosa perivascularis* [NA]).

globi (glo'bi) [L.] 1. plural of *globus*. 2. encapsulated globular masses containing bacilli, seen in smears of lepromatous leprosy lesions.

globidiosis (glob-bid'i-o'sis) former name for besnoitiosis.

Globidius (glo-bid'e-um) former name for *Besnoitia*.

globin (glo'bin) the protein constituent of hemoglobin; also any member of a group of proteins similar to the typical globin. **g. zinc insulin injection**, see under *injection*.

globinometer (glo'bi-nom'e-ter) an instrument used in determining the proportion of oxyhemoglobin in the blood.

globoid (glo'boid) globe-shaped; spheroid.

globose (glo'bōs) [L. *globus* a ball] globe-shaped, spherical.

globoside (glo'b'o-sid) a sphingoglycolipid containing acetylated aminosugars and simple hexoses of the general composition: ceramide-(glucose)_m-(galactose)_n-(*N*-acetylhexosamine)_p. It occurs in human serum, spleen, liver, and erythrocytes, accumulates in tissues in Sandhoff's disease, and is probably a precursor of glucocerebroside and ceramide trihexoside.

globular (glob'u-lar) 1. like a globe or globule. 2. composed of globules.

Globularia (glob'u-la're-ah) a European shrub; *G. alypum* L. (Globulariaceae), a perennial herb indigenous to the Mediterranean region, is used as a purgative and for intermittent fevers.

globulariacitrin (glob'u-la're-ah-sit'rin) rutin.

globule (glob'ul) [L. *globulus* a globule] 1. a small spherical mass or body. 2. a small spherical drop of fluid or semifluid substance, e.g., a fat droplet in milk or a drop of water. 3. a little globe or pellet, as of medicine. **dentin g's**, small spherical bodies in the peripheral dentin, created by beginning calcification of the matrix about discrete foci. **Dobie's g.**, a minute stainable mass in the middle of the transparent disk of a muscle fibril.

Marchi's g's, fragments and particles of broken-up myelin which stain by Marchi's method, seen in degeneration of the spinal cord. **milk g's**, the small round masses of fat in milk which tend to separate out as cream. **Morgagni's g's**, minute opaque spheres sometimes found between the eye lens and its capsule, chiefly in cases of cataract. **myelin g's**, colorless globules resembling fat droplets and sometimes spirally marked, seen in some sputa. **polar g's**, polar bodies.

globuli (glob'u-li) [L.] plural of *globulus*.

globulin (glob'u-lin) [L. *globulus* globule] a class of proteins characterized by being insoluble in water, but soluble in saline solutions (euglobulins), or water soluble proteins (pseudoglobulins) whose other physical properties closely resemble true globulins. See *serum g.* **AC g.**, **accelerator g.**, Factor V; see *coagulation factors*, under *factor*. **alpha g's**, globulins of plasma which in neutral or alkaline solutions have the greatest electrophoretic mobility, in this respect most nearly resembling the albumins. **antidiphtheritic g.**, the globulin which is the active constituent of antidiphtheritic serum. **antihemophilic g. (AHG)**, Factor VIII; see *coagulation factors*, under *factor*. **antihuman g.**, precipitin for human globulin produced in non-human species by injection of human globulin. **anti-human g. serum** [USP], a sterile liquid preparation of serum produced by immunizing lower animals, such as rabbits or goats, with human serum or plasma or with selected human plasma proteins. It may be a general purpose reagent, containing, at a minimum, antibodies against IgG and the C3d component of complement, a reagent containing only antibodies against IgG (not heavy-chain specific), or reagents containing only antibodies specific for individual or selected components of complement or a single class of immunoglobulins (e.g., anti-IgG, heavy-chain specific). **antilymphocyte g.**, the gamma globulin fraction of antilymphocyte serum, a powerful immunosuppressant. **antitoxic g.**, the globulin which is the active constituent of an antitoxic serum. **Bence Jones g.**, see under *protein*. **beta g's**, globulins of plasma which have an electrophoretic mobility in neutral or alkaline solutions intermediate between that of the alpha and the gamma globulins. **corticosteroid-binding g. (CBG)**, transcortin. **gamma g's**, a group of plasma globulins which, in neutral or alkaline solutions, have the slowest electrophoretic mobility and which have sites of antibody activity. See *immunoglobulin*. Also used, in the singular, to refer to *immune g.* **hepatitis B immune g.** [USP], a sterile nonpyrogenic solution consisting of globulins derived from blood plasma of human donors who have high titers of antibodies against hepatitis B surface antigen; used as a passive immunizing agent. **immune g.**, **immune human serum g.** [USP], a sterile solution containing many antibodies normally present in adult human blood; it contains 15 to 18 gm. of protein per 100 ml., not less than 90 per cent of which is gamma globulin. Each lot is derived from an original plasma or serum pool representing venous or placental blood from at least 1000 individuals; used for passive immunization of susceptible contacts against infectious hepatitis, poliomyelitis, rubella, rubeola, and varicella, and in the treatment of gamma globulin deficiency, administered intramuscularly. Called also *gamma g.* and *immune serum g. (human)*. **measles immune g.**, a sterile solution of globulins derived from the blood plasma of normal, adult human donors, which is prepared from immune serum globulin that complies, after dilution if necessary, with the measles antibody requirements of the U.S. Public Health Service. It contains not less than 10 gm. and not more than 18 gm. of protein per 100 ml., of which not less than 90 per cent is gamma globulin; used as a passive immunizing agent. **pertussis immune human g.** [USP], a sterile solution of globulins derived from the blood plasma of adult human donors immunized with pertussis vaccine, containing 10 to 18 gm. of protein per 100 ml., of which not less than 90 per cent is gamma globulin; used for the prophylaxis and treatment of pertussis, administered intramuscularly. Called also *pertussis immune g. (human)*. **rabies immune g.** [USP], a sterile nonpyrogenic, slightly opalescent solution consisting of globulins from blood plasma or serum (negative for hepatitis B surface antigen) from adult human donors who have been immunized with rabies vaccine and have high titers of rabies antibody; used as a passive immunizing agent. **Rh₀(D) immune human g.** [USP], a sterile solution of globulins derived from human blood plasma containing antibody to the erythrocyte factor Rh₀(D); it contains 10 to 18 gm. of protein per 100 ml., not less than 90 per cent of which is gamma globulin. It is used to suppress formation of active Rh₀(D) antibodies in Rh₀(D)-negative mothers after delivery or miscarriage of a Rh₀(D)-positive baby or fetus when Rh₀(D)-positive red cells enter the maternal circulation and thus to prevent erythroblastosis fetalis in the next pregnancy if the child is Rh₀(D)-positive; administered intramuscularly. Called also *Rh₀ immune g. (human)*, and *Rh₀(D) antigen immune g.* **serum g.**, a group of proteins precipitated from plasma (or serum) by half saturation with ammonium sulfate; further fractionation of globulins into subgroups may be carried out by solubility, chromatography, electrophoresis, and ultracentrifugation. The principal groups include the α -, β -, and γ -globulins, which differ with respect to their association with lipids or carbohydrates and their content of physiologically significant features. The fractions include immunoglobulins (anti-

bodies) in the β and γ fractions, lipoproteins in the α and β fractions, gluco- or mucoproteins, and metal-binding and metal-transporting proteins. Also present in globulin fractions are prothrombin, macroglobulin, plasminogen, euglobulin, fibrinogen, cryoglobulin, and antihemophilic globulin. **specific immune serum g.**, a sterile solution of globulins prepared from the sera of convalescent patients or those hyperimmunized to a given antigen; such preparations include measles, pertussis, mumps, tetanus, vaccinia, and Rh₀ immune globulin. **T g.**, a strong immunoglobulin band appearing in electrophoresis of horse serum after hyperimmunization; a possible subclass of IgG. **tetanus immune human g.** [USP], a sterile solution of gamma globulins derived from the blood plasma of adult human donors who have been immunized with tetanus toxoid, containing 10 to 18 gm. of protein per 100 ml., of which not less than 90 per cent is gamma globulin; used in the prophylaxis and treatment of tetanus, administered intramuscularly. Called also **tetanus immune g. (human)**. **thyroxine-binding g.**, a plasma carrier protein that transports thyroxine in the blood. **vaccinia immune human g.** [USP], a sterile nonpyrogenic solution of globulins from the blood plasma of adult human donors who have been immunized with vaccinia virus (smallpox vaccine), containing 15 to 18 gm. of protein per ml., not less than 90 per cent of which is gamma globulin; used as a passive immunizing agent, administered intramuscularly. **g. X**, a globulin occurring in the intracellular spaces of muscle. **zoster immune g.**, specific immune globulin prepared from the plasma of those who have recovered from herpes zoster (shingles); used for prevention or treatment of varicella in susceptible or infected individuals, as those with immunodeficiency.

globulinuria (glob'u-lin-u're-ah) [*globulin* + Gr. *ouron* urine + -ia] the presence of globulin in the urine.

globulose (glob'u-lōs) a proteose produced by action of pepsin on the globulins; several varieties have been described.

globulus (glob'u-lus), pl. *glob'uli* [L.] 1. the globose nucleus. 2. a pill, bolus, or spherical suppository. **glob'uli os'sei**, globules of bone tissue contained within lacunae of the calcified cartilage matrix in intrachondrial bone.

globus (glo'bus), pl. *glob'i* [L.] 1: a sphere or ball; [NA] a general term denoting a spherical structure. 2. a subjective sensation as of a lump or mass. 3. see *globi*, def. 2. **g. abdomina'lis**, the sensation of a lump in the lower abdomen. **g. of the heel**, that portion of the wall of a horse's hoof where it curves around the heel to form the bar. **g. hyster'icus**, the subjective sensation of a lump in the throat, a condition frequently seen in hysteria. **g. ma'jor epididym'idis**, caput epididymidis. **g. mi'nor epididym'idis**, cauda epididymidis. **g. pal'lidus** [NA], the smaller and more medial part of the lentiform nucleus of the brain, separated from the putamen by the lateral medullary lamina and subdivided by the medial medullary lamina into internal and external parts; it has extensive connections with the striatum, thalamus, and mesencephalon.

glomangioma (glo-man'je-o'mah) [*glomus* + Gr. *angeion* vessel + -oma] a benign, often painful tumor derived from a neurovascular glomus, usually occurring on the distal portions of the fingers and toes, in the skin or in deeper structures.

glomectomy (glo-mek'to-me) excision of a glomus, especially of the glomus caroticum.

glomera (glom'er-ah) [L.] plural of *glomus*.

glomerate (glom'er-āt) [L. *glomeratus* wound into a ball] crowded together into a ball.

glomerular (glo-mer'u-lar) pertaining to or of the nature of a glomerulus, especially a renal glomerulus.

glomeruli (glo-mer'u-li) [L.] plural of *glomerulus*.

glomerulitis (glo-mer'u-li'tis) inflammation of the glomeruli of the kidney, with proliferative or necrotizing changes of the endothelial or epithelial cells or thickening of the basement membrane.

glomerulonephritis (glo-mer'u-lo-nē-frī'tis) [*glomerulus* + *nephritis*] a variety of nephritis characterized by inflammation of the capillary loops in the glomeruli of the kidney. It occurs in acute, subacute, and chronic forms and may be secondary to hemolytic streptococcal infection. Evidence also supports possible immune or autoimmune mechanisms. **acute g.**, glomerulonephritis, typically preceded by tonsillitis or febrile pharyngitis, and characterized by proteinuria, edema, hematuria, renal failure, and hypertension. **chronic g.**, a slowly progressive glomerulonephritis generally leading to irreversible renal failure; it may be a primary disease, follow acute glomerulonephritis, or be secondary to systemic disease. Symptoms and course vary widely. **chronic lobular g.**, membranoproliferative g. **focal g.**, a condition in which only some glomeruli show inflammatory changes, others appearing normal. **focal embolic g.**, focal glomerulonephritis associated with bacterial endocarditis; see *Löhlein-Baehr lesion*, under *lesion*. **hypocomplementemic g.**, membranoproliferative g. **IgA g.**, a chronic form marked by hematuria and proteinuria and by deposits of IgA immunoglobulin in the mesangial areas of the renal glomeruli, with subsequent reactive hyperplasia of mesangial cells; called also *Berger's disease* and *IgA nephropathy*. **lobular g.**, membranoprolifer-

ative g. **lobulonodular g.**, membranoproliferative g. **malignant g.**, acute glomerulonephritis marked by a rapidly fatal course and by histological lesions in which diffuse epithelial proliferation is predominant from the outset. Principal signs are anuria, proteinuria, microscopic hematuria, and anemia. Called also **rapidly progressing g.** **membranoproliferative g.**, **mesangiocapillary g.**, a chronic glomerulonephritis in which the glomeruli are enlarged, with marked accentuation of the lobular pattern, as a result of proliferation of mesangial cells and irregular thickening of the capillary walls which narrows the capillary lumina; it is a slowly progressive disease usually affecting older children and young adults of both sexes, with sudden onset of hematuria, proteinuria, or nephrotic syndrome. There is persistent reduction in complement levels in the serum, with deposition of activated complement components in the glomerular capillaries. Called also **chronic lobular g.**, **hypocomplementemic g.**, and **lobular g.** **membranous g.**, a form characterized histologically by proteinaceous deposits on the glomerular capillary basement membrane or by thickening of the membrane. The clinical features are those of chronic glomerulonephritis, occasionally with transient nephrotic syndrome. **nodular g.**, membranoproliferative g. **rapidly progressing g.**, malignant g. **segmental g.**, focal glomerulonephritis in which only limited segments of affected glomeruli are diseased. **subacute g.**, persistence of acute glomerulonephritis, with or without periods of remission, which may develop into the lobular or malignant forms.

glomerulonephropathy (glo-mer'u-lo-nē-frop'ah-the) any noninflammatory disease of the renal glomeruli.

glomerulopathy (glo-mer'u-lop'ah-the) any disease of the renal glomeruli. **diabetic g.**, intercapillary glomerulosclerosis.

glomerulosclerosis (glo-mer'u-lo-skle-ro'sis) fibrosis and scarring which result in senescence of the renal glomeruli. **diabetic g.**, intercapillary g. **intercapillary g.**, a degenerative complication of diabetes, manifested as albuminuria, nephrotic edema, hypertension, renal insufficiency, and retinopathy.

glomerulose (glo-mer'u-lōs) glomerular.

glomerulotropin (glo-mer'u-lo-tro'pin) a substance, probably secreted by the diencephalon, capable of stimulating the zona glomerulosa of the adrenals to produce aldosterone; its rate of secretion is increased by a decreased sodium concentration.

glomerulus (glo-mer'u-lus), pl. *glomer'uli* [L., dim. of *glomus* ball] a tuft or cluster; used in anatomical nomenclature as a general term to designate such a structure, as one composed of blood vessels or nerve fibers. Often used alone to designate one of the glomeruli of the kidney (glomeruli renis [NA]). **arterial glomeruli**, **coccygeal**, **glomus coccygeum**. **glomer'uli arterio'si coch'leae** [NA], an arterial network surrounding the cochlea. **caudal glomeruli**, **glomus coccygeum**. **glomer'uli of kidney**, **malpighian glomeruli**, **glomeruli renis**. **nonencapsulated nerve g.**, a nerve ending in the connective tissue of various organs in which the terminal branches of the nerve form spherical or elongated structures resembling glomeruli. **olfactory g.**, one of the small globular masses of dense neuropil in the olfactory bulb containing the first synapse in the olfactory pathway. **renal glomeruli**, **glomer'uli re'nis** [NA], globular tufts of capillaries, one projecting into the expanded end or capsule of each of the uriniferous tubules, which together with its surrounding capsule (*glomerular capsule*) constitute the renal corpuscle. Called also *glomeruli of kidney*, and *malpighian glomeruli*. See also plate accompanying *kidney*. **Ruysch's glomeruli**, **glomeruli renis**.

glomic (glo'mik) pertaining to or affecting a glomus.

glomoid (glo'moid) resembling a glomus.

glomus (glo'mus), pl. *glom'era* [L. "a ball"] [NA] a small, histologically recognizable body, composed primarily of fine arterioles connecting directly with veins, and possessing a rich nerve supply. **glom'era aor'tica** [NA], aortic bodies: small neurovascular structures on either side of the aorta in the region of the aortic arch; they contain chemoreceptors that play a role in reflex regulation of respiration by responding to changes in oxygen, carbon dioxide, and hydrogen ion concentration in the blood. **g. carot'icum** [NA], **carotid g.**, **g. carotid'eum**, carotid body: a small neurovascular structure lying in the bifurcation of the right and left carotid arteries; it contains chemoreceptors that monitor the oxygen content of the blood and help to regulate respiration. **choroid g.**, **g. choro'i'deum** [NA], an enlargement of the choroid plexus of the lateral ventricle where the inferior horn joins the central part. **coccygeal g.**, **g. coccyg'eum**, a collection of arteriovenous anastomoses formed, close to the tip of the coccyx, by the middle sacral artery; called also *Luschka's body*, *ganglion*, or *gland*. **cutaneous g.**, **digital g.**, **neuromyoarterial g.**, the total unit making up a Sucquet-Hoyer anastomosis; it is an organ located in the derma and cutaneous tissue, chiefly beneath the nails, and acting to control the circulation in the peripheral tissues. **g. intravaga'le**, an aggregation of chemoreceptors. **g. jugula're**, an aggregation of chemoreceptors in the dome of the bulb of the jugular vein.

gloss- see *gloss-*.

glossa (glos'ah) [Gr. *glōssa*] the tongue (lingua [NA]).

glossagra (glos-sa'grah, glos'ag-rah) [gloss- + Gr. *agra* seizure] gouty pain of the tongue.

glossal (glos'al) pertaining to the tongue; lingual.

glossalgia (glos-sal'je-ah) [gloss- + *-algia*] pain in the tongue.

glossanthrax (glos-san'thraks) [gloss- + *anthrax*] carbuncle of the tongue.

glossectomy (glos-sek'to-me) [gloss- + Gr. *ektomē* excision] surgical removal of the tongue (*total g.*) or of a portion of it (*partial g.*).

Glossina (glos-si'nah) a genus of biting flies of the family Muscidae; the tsetse flies. **G. mor'sitans**, a fly of South Africa which transmits by its bite *Trypanosoma brucei*, the cause of nagana in horses; it also transmits *T. rhodesiense*, the cause of Rhodesia trypanosomiasis. **G. pallid'ipes**, a fly which trans-

Glossina morsitans.

mits *Trypanosoma brucei*. **G. palpa'lis**, a species of Central Africa which transmits by its bite *Trypanosoma gambiense*, the organism causing African trypanosomiasis. Other species which probably transmit trypanosomes to animals and to man are: *G. brevipalpis*, *G. fusca*, *G. longipalpis*, *G. longipennis*, *G. morsitans*, *G. pallicera*, *G. pallidipes*, *G. swynnertoni*, *G. tachinoides*.

glossitis (glos-si'tis) [gloss- + *-itis*] inflammation of the tongue. **g. area'ta exfoliat'va**, geographic tongue. **atrophic g.**, Hunter's g. **benign migratory g.**, geographic tongue. **Hunter's g.**, a condition of the tongue seen in pernicious anemia, marked by smooth atrophy of the surface and edges. **idiopathic g.**, inflammation of the substance of the tongue and its mucous membrane. **g. mi'grans**, geographic tongue. **Moeller's g.**, chronic superficial glossitis, or glossodynia exfoliativa; an affection of the tongue sometimes extending to the cheeks and palate, affecting middle-aged people, especially women, and marked by burning pain and by red irregular patches, thinning of the papillae, and desquamation of the stratum corneum. Called also *chronic lingual papillitis*. **parasitic g.**, **g. parasit'ica**, black tongue. **parenchymatous g.**, idiopathic g. **psychogenic g.**, glossopyrosis. **rhomboid g.**, **median g. rhomboi'dea media'na**, a congenital anomaly of the tongue, with a flat or slightly raised ovoid-, diamond-, or rhomboid-shaped reddish patch or plaque on the midline of the dorsal surface, immediately anterior to the circumvallate papillae.

glosso-, **gloss-** (glos'o, glos) [Gr. *glōssa* tongue] a combining form denoting relationship to the tongue.

glossocoele (glos'o-sēl) [glosso- + Gr. *kēlē* tumor] swelling and protrusion of the tongue.

glossocinesthetic (glos'o-sin-es-thet'ik) glossokinesthetic.

glossocoma (glō-sok'o-mah) retraction of the tongue.

glossodynamometer (glos'o-di'nah-mom'ē-ter) [glosso- + *dynamometer*] an instrument for recording the power of the tongue to resist pressure.

glossodynia (glos'o-din'e-ah) [glosso- + Gr. *odynē* pain] pain in the tongue. **g. exfoliat'va**, Moeller's glossitis.

glossoepiglottic (glos'o-ep-i-glot'ik) glossoepiglottidean.

glossoepiglottidean (glos'o-ep-i-glo-tid'e-an) pertaining to the tongue and epiglottis.

glossograph (glos'o-graf) [glosso- + Gr. *graphein* to record] an apparatus for recording the tongue movements in speech.

glossohyal (glos'o-hi'al) [glosso- + *hyoid*] pertaining to the tongue and hyoid bone.

glossokinesthetic (glos'o-kin'es-thet'ik) [glosso- + *kinesthetic*] pertaining to the subjective perception of the movements of the tongue in speech.

glossolalia (glos'o-la'le-ah) [glosso- + Gr. *lalein* to babble] speech in unknown or imaginary language, as "speaking in tongues," a state observed in religious ecstasy in which the speaker (and the congregation) believes that God (or the gods) is speaking through him in celestial languages.

glossology (glō-sol'o-je) [glosso- + *-logy*] 1. the sum of knowledge regarding the tongue. 2. a treatise on nomenclature.

glossomantia (glos'o-man-ti'ah) [glosso- + Gr. *manteia* divination] prognosis based on the appearance of the tongue.

glossoncus (glō-song'kus) [glosso- + Gr. *onkos* mass] a swelling of the tongue.

glossopalatinus (glos'o-pal'ah-ti'nus) musculus palatoglossus.

glossopathy (glō-sop'ah-the) [glosso- + Gr. *pathos* disease] any disease of the tongue.

glossopexy (glos'o-pek'se) lip-tongue adhesion.

glossopharyngeal (glos'o-fah-rin'je-al) [glosso- + *pharynx*] pertaining to the tongue and pharynx.

glossopharyngeum (gos'o-fah-rin'je-um) [glosso- + *pharynx*] the tongue and pharynx together.

glossopharyngeus (glos'o-fah-rin'je-us) see *pars glossopharyngea musculi constrictoris pharyngis superioris*.

glossophytia (glos'o-fit'e-ah) [glosso- + Gr. *phyton* plant] black tongue.

glossoplasty (glos'o-plas'te) [glosso- + Gr. *plassein* to mold] plastic operation on the tongue.

glossoptosis (glos'op-to'sis) [glosso- + Gr. *ptōsis* fall] downward displacement or retraction of the tongue.

glossopyrosis (glos'o-pi-ro'sis) [glosso- + Gr. *pyrōsis* burning] a burning sensation in the tongue.

glossorrhaphy (glō-sor'ah-fe) [glosso- + Gr. *rhaphe* suture] suture of the tongue.

glossoscopy (glō-sos'ko-pe) [glosso- + Gr. *skopein* to examine] examination of the tongue.

glossospasm (glos'o-spazm) [glosso- + Gr. *spasmos* spasm] spasm of the tongue muscles.

glossosteresis (glos'o-ster-e'sis) glossectomy.

glossotilt (glos'o-tilt) [glosso- + Gr. *tillein* to pull] a lever which holds the tongue during one of the processes for artificial respiration.

glossotomy (glō-sot'o-me) [glosso- + Gr. *temnein* to cut] incision of the tongue.

glossotrichia (glos'o-trik'e-ah) [glosso- + Gr. *thrix* hair] hairy tongue.

glottal (glot'al) pertaining to the glottis.

glottic (glot'ik) 1. pertaining to the glottis. 2. pertaining to the tongue.

glottides (glot'i-dēz) plural of *glottis*.

glottis (glot'is), pl. *glot'tides* [Gr. *glōttis*] [NA] the vocal apparatus of the larynx, consisting of the true vocal cords (*plica vocalis*) and the opening between them (*rima glottidis*). **false g.**, *rima vestibuli*. **intercartilaginous g.**, **respiratory g.**, *pars intercartilaginea rimae glottidis*. **true g.**, *rima glottidis*.

glottitis (glō-ti'tis) glossitis.

glottology (glō-tol'o-je) glossology.

glou-glou (gloo'gloo) [Fr.] a gurgling sound produced in the stomach by various causes, such as the pressure of a girdle.

Glover's organism (glov'erz) [T. J. Glover, Canadian bacteriologist, born 1887] see under *organism*.

glow (glo) incandescence; also brightness or warmth of color.

glloxazone (gloks'ah-zōn) chemical name: 2,2'-(1-(1-ethoxyethyl)-1,2-ethanediyli-dene)bishydrazine carbothioamide; a compound, C₈H₁₆N₆O₂S₂, used in *Anaplasma* infections in cattle.

Glu glutamic acid or glutamine.

glucagon (gloo'kah-gon) 1. a polypeptide hormone secreted by the alpha cells of the islets of Langerhans in response to hypoglycemia or to stimulation by the growth hormone of the anterior pituitary; it stimulates glycogenolysis in the liver by inducing activation of liver phosphorylase. Called also *hyperglycemic-glycogenolytic factor* (*HGF*). 2. [USP] the polypeptide occurring in the pancreas of those domestic mammals used for food by man, C₁₅₃H₂₂₅N₄₃O₄₆S, which has the property of increasing the blood glucose concentration, occurring as a fine, white or faintly colored crystalline powder; used in the form of the hydrochloride salt as an antihypoglycemic, administered parenterally. **intestinal g.**, enteroglucagon.

glucagonoma (glu'kah-gon-o'mah) a glucagon-secreting, usually malignant tumor of the alpha cells of the islets of Langerhans, which may be associated with a syndrome of dermatitis, stomatitis, elevated serum glucagon levels, abnormal glucose tolerance, weight loss, and anemia.

glucal (gloo'kal) an aldehyde derivative, C₆H₁₀O₄, of glucose.

glucan (gloo'kan) any polysaccharide (e.g., glycogen, starch, and cellulose) composed of repeating units of glucose; a homopolymer of glucose.

glucase (gloo'kās) (*obs.*) an enzyme from plants and microorganisms, changing starch into dextroglucose.

glucatonia (gloo-kah-to'ne-ah) reduction of blood sugar to a point where pathologic symptoms are produced.

glucemia (gloo-se'me-ah) glycemia.

gluceptate (glu-sep'tāt) USAN contraction for glucoheptonate.

glucide (gloo'sid) an organic substance consisting in whole or in part of carbohydrates; a general term, embracing the carbohydrates and glycosides.

glucidtemns (gloo'sid-tems) a collective name for the products produced by the digestion of starch, namely, dextrin, maltose, and glucose.

glucinium (gloo-sin'e-um) beryllium.

gluciphore (gloo'si-för) glucophore.

gluco- (gloo'ko) [Gr. *gleukos* sweetness] a combining form denoting relationship to sweetness, or to glucose. Cf. *glyco-*.

glucocerebroside (gloo/'ko-ser/'ē-bro-sid'') a cerebroside with a glucose sugar; it accumulates in the tissues in Gaucher's disease.

glucocinin (gloo/'ko-sin'in) glucocinin.

glucocorticoid (gloo/'ko-kor'ti-koid) 1. any of the group of corticosteroids predominantly affecting carbohydrate metabolism (promotion of gluconeogenesis, liver glycogen deposition, and elevation of blood glucose levels). They also influence fat and protein metabolism and have many other activities; e.g., they affect muscle tone and the excitation of nerve tissue and the microcirculation, increase gastric secretion, alter connective tissue response to injury, impede cartilage production, inhibit inflammatory, allergic, and immunological responses, suppress production of adrenocortical steroids and pituitary release of corticotropin, induce shrinkage of lymphatic tissue, and reduce the number of circulating lymphocytes. Some also exhibit varying degrees of mineralocorticoid activity. In man, the most important glucocorticoid is cortisol (hydrocortisone). Cf. *mineralocorticoid*. 2. of, pertaining to, or resembling a glucocorticoid.

Gluco-Ferrum (gloo/'ko-fer'rum) trademark for preparations of ferrous gluconate.

glucofuranose (gloo/'ko-fu'rah-nōs) a form of glucose in which carbon atoms 1 and 4 are bridged by an oxygen atom.

glucogenesis (gloo/'ko-jen'ē-sis) the formation of glucose by the breakdown of glycogen.

glucogenic (gloo/'ko-jen'ik) giving rise to or producing glucose.

glucohemias (gloo/'ko-he'me-ah) glycemia.

glucokinase (gloo/'ko-ki'nas) ATP:D-glucose 6-phosphotransferase. An enzyme that in the presence of ATP catalyzes the conversion of glucose to glucose 6-phosphate.

glucokinetic (gloo/'ko-ki-net'ik) activating sugar so as to maintain the sugar level of the blood.

glucokinin (gloo/'ko-kin'in) [gluco- + Gr. *kinein* to move] a hormone-like substance obtained from vegetable tissues and yeast, subcutaneous injection of which produces hypoglycemia in animals and acts on depancreatized dogs in a manner similar to insulin; called also *plant* or *vegetable insulin*.

glucolactone (gloo/'ko-lak'tōn) a lactone from gluconic acid.

glucolysis (gloo-kol'i-sis) glycolysis.

glucolytic (gloo/'ko-lit'ik) glycolytic.

gluconate (gloo/'ko-nāt) a salt of gluconic acid, containing the $\text{HOCH}_2(\text{CHOH})_4\text{COO}$ —radical. **ferrous g.** [USP]; a yellowish gray, or greenish yellow powder or granules, $\text{C}_{12}\text{H}_{22}\text{FeO}_{14} \cdot 2\text{H}_2\text{O}$, used as an iron supplement in iron-deficiency anemia; called also *iron gluconate*.

gluconeogenesis (gloo/'ko-ne'o-jen'ē-sis) the formation of glucose from molecules that are not themselves carbohydrates, as from amino acids, lactate, and the glycerol portion of fats. Called also *glyconeogenesis*.

gluconeogenetic (gloo/'ko-ne'o-jē-net'ik) pertaining to or involved in gluconeogenesis.

glucopenia (gloo-ko-pe'ne-ah) glucopenia.

glucophenetidin (gloo/'ko-fē-net'i-din) a derivative from parphenetidin and dextrose, in silky white needles.

glucophore (gloo/'ko-fōr) [gluco- + Gr. *phoros* bearing] the group of atoms in a molecule of a compound which is responsible for its sweet taste.

glucoprotein (gloo/'ko-pro'te-in) glycoprotein.

glucoproteinase (gloo/'ko-pro'te-in-ās) an enzyme that catalyzes the hydrolysis of glucoproteins.

glucopyranose (gloo/'ko-pi'rah-nōs) a form of glucose in which carbon atoms 1 and 5 are bridged by an oxygen atom.

glucoregulation (gloo/'ko-reg'u-la'shun) regulation of glucose metabolism.

glucosamine (gloo/'ko-sam'en) chemical name: 2-amino-2-deoxy-D-glucose. An amino acid derivative of glucose, $\text{C}_6\text{H}_{13}\text{NO}_5$, obtained from mucin and chitin by hydrolysis and occurring in many polysaccharides of vertebrate tissue; called also *glycosamine*. **acetyl g.**, the structural unit of chitin.

glucosan (gloo/'ko-san) an anhydro-polymer which on hydrolysis yields a hexose.

glucosazone (gloo/'ko-sa'zōn) a yellow crystalline substance, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{C}(\text{N} \cdot \text{NH} \cdot \text{C}_6\text{H}_5)_2 \cdot \text{CH}(\text{N} \cdot \text{NH} \cdot \text{C}_6\text{H}_5)$, produced by treating dextrose with phenylhydrazine and acetic acid; the crystals melt at 205° C. and may be used in the identification of glucose.

glucose (gloo/'kōs) [Gr. *gleukos* sweetness; *glykys* sweet] 1. D-glucose, a monosaccharide (hexose), $\text{C}_6\text{H}_{12}\text{O}_6$, also known as *dextrose* (q.v.), found in certain foodstuffs, especially fruits, and in the normal blood of all animals. It is the end product of carbohydrate metabolism and is the chief source of energy for living organisms, its utilization being controlled by insulin. Excess glucose is converted to glycogen and stored in the liver and muscles for use as needed and, beyond that, is converted to fat and stored as adipose tissue. Glucose appears in the urine in diabetes mellitus. 2. liquid g. **Brun's g.**, a histologic clearing solution composed of glucose, distilled water, camphor, and glycerin. **gamma g.**, a very reactive form of glucose that can be isolated only as a

derivative. **liquid g.** [NF], an odorless, colorless or yellowish, thick syrupy liquid, with a sweet taste, consisting chiefly of dextrose, with dextrans, maltose, and water, and obtained by the incomplete hydrolysis of starch; used as a flavoring agent, tablet binder, and coating agent in pharmaceutical preparations. It may be used as a food, often administered rectally, and has been used in the treatment of dehydration. Sometimes simply called *glucose*. **g. 1-phosphate**, an intermediate in carbohydrate metabolism, $\text{CH}_2\text{OH} \cdot \text{CH}(\text{CHOH})_3 \cdot \text{CH} \cdot \text{O} \cdot \text{PO} \cdot (\text{OH})_2$. **g. 6-phosphate**, an

intermediate in carbohydrate metabolism, $\text{CHOH}(\text{CHOH})_3 \cdot \text{CH} \cdot \text{O} \cdot \text{PO}(\text{OH})_2$.

glucosidase (gloo-ko'si-dās) glucoside glucohydrolase: an enzyme that splits a glucoside. α-Glucosidase (maltase) occurs in the intestinal juice, and β-glucosidase (cellobiase) in the kidney, liver, and intestinal mucosa.

glucoside (gloo/'ko-sid) a glycoside in which the sugar constituent is glucose; originally the term glucoside was given to any of a variety of natural plant products containing a sugar, but it is now generally restricted to those in which the sugar is glucose. See *glycoside*.

glucosidolytic (gloo/'ko-si'do-lit'ik) causing the splitting up of glucosides.

glucosin (gloo/'ko-sin) any one of a group of bases derived from glucosyl by the action of ammonia; some are highly toxic.

glucosulfone sodium (gloo/'ko-sul'fōn) chemical name: 1,1'-(sulfonylbis[4,1-phenyleneimino])bis[1-deoxy-1-sulfo-D-glucitol]disodium salt. An antibacterial derivative of dapsone, $\text{C}_{24}\text{H}_{34}\text{N}_2\text{Na}_2\text{O}_{18}\text{S}_3$, having actions similar to those of the parent compound, occurring as white to faintly yellow, amorphous solid; used primarily as a leprostatic in the treatment of lepromatous and tuberculoid leprosy, administered intravenously.

glucosum (gloo-ko'sum) glucose.

glucosuria (gloo/'ko-su're-ah) [glucose + Gr. *ouron* urine + -ia] 1. the presence of glucose in the urine. 2. dextrosuria.

glucosyl (gloo/'ko-sil) a glucose radical.

glucosyltransferase (gloo/'ko-sil-trans'fer-ās) any enzyme that catalyzes the transfer of a glucosyl group, as from UDP to D-fructose to form sucrose; called also *transglucosylase*.

glucoxylose (gloo/'ko-zi'lōs) a disaccharide, $\text{C}_{11}\text{H}_{20}\text{O}_{10}$, occurring in the leaves and branches of *Daviesia latifolia*.

glucuro lactone (gloo/'ku-ro-lak'tōn) chemical name: γ-lactone of D-glucofuranuronic acid; formerly used in treatment of arthritis, neuritis, and fibrositis.

glucuronate (gloo-ku'ro-nāt) a salt of glucuronic acid.

β-glucuronidase (gloo/'ku-ron'i-dās) β-D-glucuronide glucuronohydrolase: an enzyme that attacks glycosidic linkages in natural and synthetic glucuronides and has been implicated in estrogen metabolism and cell division. It occurs in the spleen, liver, and endocrine glands.

glucuronide (gloo-ku'ron-id) any glycosidic compound of glucuronic acid; the glucuronides, which are generally inactive, constitute the major proportion of metabolites of many phenols, alcohols, and carboxylic acids.

glucuronolactone (gloo/'ku-ro'no-lak'tōn) glucuro lactone.

glue (gloo) an adhesive preparation in the form of impure gelatin derived from boiling certain animal substances, such as hoofs, in water.

Gluge's corpuscles (gloo/'gez) [Gottlieb Gluge, German pathologist, 1812-1898] see under *corpuscle*.

glutamate (gloo/'tah-māt) a salt of glutamic acid. In biochemistry, glutamate and glutamic acid are used interchangeably even though glutamate technically refers to the negatively charged ion.

glutaminase (gloo-tam'i-nās) L-glutamine aminohydrolase: an enzyme that catalyzes the splitting of glutamine into glutamic acid and ammonia; it occurs in the liver, kidney, and brain and in bacteria and plants.

glutamine (gloo/'tah-min) the monoamide of glutamic acid, $\text{C}_5\text{H}_{10}\text{N}_2\text{O}_3$, occurring in the juices of many plants and in some animal tissues; it is an important carrier of urinary ammonia and is broken down in the kidney by the enzyme glutaminase.

glutamyl (gloo/'tah-mil) the univalent radical of glutamic acid.

glutaral (gloo/'tah-ral) glutaraldehyde. **g. concentrate** [USP], a solution of glutaraldehyde in purified water, containing not less than 49 per cent and not more than 51 per cent by weight of glutaraldehyde; used as a disinfectant.

glutaraldehyde (gloo/'tah-ral'dē-hid) chemical name: pentanedial. A disinfectant, $\text{C}_5\text{H}_8\text{O}_2$, effective against vegetative gram-positive, gram-negative, and acid-fast bacteria, bacterial spores, some fungi, and viruses; used in an aqueous solution for sterilization of endoscopic equipment, thermometers, and plastic, rubber, or other non-heat-resistant equipment. It is also used topically as an anhidrotic and may be used in the treatment of warts. Glutaraldehyde is also used as a tissue fixative for light and electron microscopy because of its preservation of fine structural detail and localization of enzyme activity. Called also *glutaral*.

glutargin (gloo'tar-jin) arginine glutamate.

glutathione (gloo'tah-thi'ōn) [*glutamic acid* + Gr. *theon* sulfur] a tripeptide, γ -glutamyl-cysteinyl-glycine, $\text{HOOC}\cdot\text{CH}(\text{NH}_2)\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{CO}\cdot\text{NH}\cdot\text{CH}(\text{CH}_2\cdot\text{SH})\cdot\text{CO}\cdot\text{NH}\cdot\text{CH}_2\cdot\text{COOH}$, composed of glutamic acid, cysteine, and aminoacetic acid, and isolated from animal and plant tissues. It is the coenzyme of glyoxalase and acts as a respiratory carrier of oxygen. **oxidized g.**, the precursor of reduced glutathione. Abbreviated GSSG. **reduced g.**, a tripeptide present in red cells, deficiency of which most probably predisposes erythrocytes to the oxidant and hemolytic effects of certain drugs, such as the antimalarial agents. It is functionally associated with glucose-6-phosphate dehydrogenase and reduced nicotinamide-adenine dinucleotide phosphate (NADP) in the maintenance of red cell integrity. Abbreviated GSH.

glutathionemia (gloo'tah-thi'o-ne'me-ah) the presence of glutathione in the blood.

glutathionuria (gloo'tah-thi'o-nu're-ah) the excretion of excessive amounts of glutathione in the urine.

gluteal (gloo'te-al) [Gr. *gloutos* buttock] pertaining to the buttocks.

glutelin (gloo'tē-lin) a simple protein, insoluble in all neutral solvents, but readily soluble in very dilute acids and alkalis and coagulable by heat; it occurs in seeds of cereals.

gluten (gloo'ten) [L. "glue"] the protein of wheat and other grains which gives to the dough its tough elastic character. **g.-casein**, a protein preparation employed in intestinal surgery to excite adhesive inflammation.

glutenin (gloo'tē-nin) the glutenin of wheat.

gluteofemoral (gloo'te-o-fem'or-al) [*gluteal* + *femoral*] pertaining to the buttock and thigh.

gluteoinguinal (gloo'te-o-in'gwī-nal) pertaining to the buttock and groin.

glutethimide (gloo-teth'i-mid) [USP] chemical name: 3-ethyl-3-phenyl-2,6-piperidinedione. A nonbarbiturate structurally related to phenobarbital, $\text{C}_{13}\text{H}_{15}\text{NO}_2$, occurring as a white, crystalline powder; used as a sedative and hypnotic, administered orally.

glutin (gloo'tin) 1. a viscid substance from the glutelin of wheat: gluten-casein. 2. gelatin in its soft, dissolved, or gelatinous state.

glutinous (gloo'ti-nus) [L. *glutinosus*] sticky; adhesive; gluey; viscid.

glutitis (gloo-ti'tis) [Gr. *gloutos* buttock + *-itis*] inflammation of the buttock.

glutolin (gloo'to-lin) an albuminoid substance found in small amounts in paraglobulin and thought to be a constant constituent of blood plasma. It is precipitated by treatment of blood plasma with magnesium sulfate.

glutoscope (gloo'to-skōp) an apparatus for observing agglutination.

glutose (gloo'tōs) an artificial glucoside that resembles glucose in many of its chemical reactions, but which seems to be inert in the body.

Gluzinski's test (gloo-zin'skēz) [Wladyslaw Antoni *Gluzinski*, a physician in Lemberg, 1856-1935] see under *tests*.

Gly glycine.

glyburide (gli'būr-id) chemical name: 5-chloro-*N*-[2-[4-[[[(cyclohexylamino)carbonyl]amino]sulfonyl]phenyl]ethyl]-2-methoxybenzamide; an orally effective hypoglycemic agent of the sulfonylurea group, $\text{C}_{23}\text{H}_{26}\text{ClN}_3\text{O}_5\text{S}$. Called also *glibenclamide*.

glycal (gli'kal) an unsaturated sugar, $-\text{CH}=\text{CH}-$.

glycan (gli'kan) polysaccharide.

glycase (gli'kās) an enzyme that converts maltose and maltodextrin into dextrose.

glycemia (gli-se'me-ah) [Gr. *glykys* sweet + Gr. *haima* blood + *-ia*] the presence of glucose in the blood.

glycemin (gli'sē-min) a substance, secreted by the liver, in the blood of diabetics which has an antagonistic action toward insulin by inhibition to fixation of dextrose by erythrocytes.

glyceraldehyde (glis'er-al'de-hid) a compound, glyceric aldehyde, $\text{CH}_2\text{OHCHOHCHO}$, formed by the oxidation of glycerol. **g. phosphate**, a triosephosphate which results from the decomposition of hexosephosphate in the chemistry of muscle contraction.

glycerate (glis'er-āt) a salt or ester of glyceric acid, $\text{CH}_2\text{OH}-\text{CHOH}-\text{COOH}$.

glyceridase (glis'er-i-dās) lipase.

glyceride (glis'er-id) an organic acid ester of glycerol; the natural fats are glycerides of the higher fatty acids.

glycerin (glis'er-in) [L. *glycerinum*] [USP] chemical name: 1,2,3-propanetriol. A clear, colorless, syrupy liquid, $\text{C}_3\text{H}_8\text{O}_3$, obtained as a by-product of soap, by carbohydrate fermentation, and by propylene synthesis; administered rectally as a cathartic and orally as a diuretic to reduce intraocular pressure. It is also used as a solvent, humectant, and vehicle in various pharmaceutical preparations. See also *glycerol*.

glycerinated (glis'er-in-āt-ed) treated with, or preserved in glycerin.

glycerinum (glis'er-i-num) [L.] glycerin.

glycerite (glis'er-it) [L. *glyceritum*] a solution or mixture of a medicinal substance in glycerin; the glycerites for which official standards have been promulgated are boroglycerin, starch, and tannic acid glycerites. **boroglycerin g.**, see under *boroglycerin*. **starch g.** [NF], a preparation of starch, benzoic acid, glycerin, and purified water; used topically as an emollient; called also *glyceritum amyli*. **tannic acid g.**, a preparation of tannic acid, sodium citrate, exsiccated sodium sulfite, and glycerin, containing about 20 per cent of tannic acid; used as an astringent. Called also *glyceritum acidii tannici*.

glyceritum (glis'er-i'tum), gen. *glyceri'ti*, pl. *glyceri'ta* [L.] glycerite. **g. ac'id** **tan'nic**, tannic acid glycerite. **g. am'yli**, starch glycerite. **g. boroglyceri'ni**, boro-glycerin glycerite.

glycerogel (glis'er-o-jel) a gel in which glycerin is the dispersed medium.

glycerogelatin (glis'er-o-jel'ah-tin) glycerin jelly.

glycerol (glis'er-ol) a trihydric sugar alcohol, $\text{CH}_2\text{OH}\cdot\text{CHOH}\cdot\text{CH}_2\text{OH}$, being the alcoholic component of the fats; it is soluble in water and alcohol. Glycerol is an intermediate in the metabolism of fatty acids and serves as a phosphate acceptor. Pharmaceutical preparations are called glycerin (q.v.). **g. boroglycerite**, boroglycerin glycerite. **iodinated g.**, chemical name: 2-(1-iodoethyl)-1,3-dioxolane-4-methanol; an isomeric mixture of the iodinated dimers of glycerol, $\text{C}_6\text{H}_{11}\text{IO}_3$, used as an expectorant. **g. phosphate**, an intermediate in glycolysis and alcoholic fermentation, $\text{CH}_2\text{OH}\cdot\text{CHOH}\cdot\text{CH}_2\cdot\text{O}\cdot\text{PO}(\text{OH})_2$.

glycerolize (glis'er-o-liz) to treat with or preserve in glycerol, as in the exposure of red blood cells to glycerol solution so that glycerol diffuses into the cells before they are frozen for preservation.

glycerophilic (glis'er-o-fil'ik) having a special affinity for glycerol.

glycerophosphatase (glis'er-o-fos'fah-tās) an enzyme which catalyzes the decomposition of glycerophosphates.

glycerophosphate (glis'er-o-fos'fāt) any salt of glycerophosphoric acid; several of them are used in nostrums together with alcohol as so-called nerve tonics. **ferric g.**, a greenish yellow powder, $\text{C}_9\text{H}_2\text{Fe}_2\text{O}_{13}\text{P}_3$, used as a tonic and in iron deficiency anemia; called also *iron glycerophosphate*.

glycerose (glis'er-ōs) a sugar formed by oxidizing glycerol; there are two glyceroses, glyceraldehyde and dihydroxyacetone.

glyceryl (glis'er-il) the trivalent radical, $\text{C}_3\text{H}_5\text{O}_2$, glycerol. **g. guaiacolate**, guaifenesin. **g. monostearate** [NF], a compound prepared from glycerin and stearic acid, occurring as a white waxlike solid, or white waxlike beads or flakes with a slight, pleasant, fatty odor and taste; used as an emulsifying agent. **g. triacetate**, triacetin. **g. trinitrate**, nitroglycerin.

glycidaldehyde (gli'sid-al'dē-hid) a chemical used to inactivate virions in the preparation of virus vaccines.

glycide (gli'sid) glycidol.

glycidol (glis'id-ol) the oxide of hydroxypropene, isomeric with lactic aldehyde and acetol.

glycinate (gli'sin-āt) any salt of glycine (aminoacetic acid).

glycine (gli'sēn) chemical name: aminoacetic acid. A nonessential amino acid, $\text{H}_2\text{NCH}_2\text{COOH}$, occurring as a constituent of many proteins. It has been synthesized and is used as a gastric antacid and dietary supplement; it has also been used in the treatment of various myopathies. Glycine has also been postulated to be a neurotransmitter, inhibiting neural excitation in the central nervous system.

glycinemia (gli'si-ne'me-ah) hyperglycinemia.

glycinin (glis'i-nin) a globulin which constitutes 90 to 95 per cent of the protein content of soy bean.

Glyciphagus (gli-sif'ah-gus) *Glyciphagus*. **G. domes'ticus** (*G. pruno'rum*), *Glyciphagus domesticus*.

glyco- [Gr. *glykys* sweet] a combining form denoting relationship to sugar. Cf. *gluco*.

glycobiarsol (gli'ko-bi-ar'sol) [USP] chemical name: [(4-hydroxyacetyl)amino]phenyl]arsonato(1-) oxobismuth. An arsenic- and bismuth-containing compound, $\text{C}_9\text{H}_9\text{AsBiNO}_6$, occurring as a yellowish white to beige-pink, amorphous powder; used as an intestinal antiamoebic, administered orally. It is also effective in trichomonal and candidal vaginitis and other nongonococcal vaginal infections, administered intravaginally.

glycocalix, glycocalyx (gli'ko-kal'iks) the glycoprotein and polysaccharide covering that surrounds many cells; in bacterial cells the glycocalyx forms masses of fibers which extend from the cell and by means of which the cell adheres to surfaces.

glycocholate (gli'ko-kol'āt) a salt of glycocholic acid; see *bile salts*, under *salt*.

glycocine (gli'ko-sin) aminoacetic acid.

glycocolastic (gli'ko-klas'tik) [*glyco-* + Gr. *klaan* to break] glycolytic.

glycocoll (gli'ko-kol) [*glyco-* + Gr. *kolla* glue] glycine.

glycocyaninase (gli/'ko-si'am/'i-nās) guanidinoacetate amidohydrolase: an enzyme in the liver that hydrolyzes glycoamine into urea and aminoacetic acid.

glycocyanine (gli/'ko-si'ah-min) guanidinoacetic acid.

glycogelatin (gli/'ko-jel'ah-tin) an ointment base containing glycerin and gelatin.

glycogen (gli/'ko-jen) [*glyco-* + Gr. *gennan* to produce] a polysaccharide, (C₆H₁₀O₅)_n, the chief carbohydrate storage material in animals. It is a long-chain polymer of glucose, formed in and largely stored in the liver and to a lesser extent in muscles, being depolymerized to glucose and liberated as needed. Called also *animal starch*, *tissue dextrin*, and *hepatin*. **hepatic g.**, glycogen stored in the liver. **tissue g.**, glycogen stored in tissues other than the liver, especially in muscle.

glycogenase (gli/'ko-jē-nās'') an enzyme that hydrolyzes glycogen to lower saccharides; see *Cori ester*, under *ester*.

glycogenesis (gli/'ko-jen'ē-sis) [*glyco-* + *genesis*] 1. the formation or synthesis of glycogen. 2. the production of sugar.

glycogenetic (gli/'ko-jē-net'ik) glycogenic.

glycogenic (gli/'ko-jen'ik) pertaining to, characterized by, or promoting glycogenesis; pertaining to glycogen.

glycogenolysis (gli/'ko-jē-nol'ī-sis) [*glycogen* + Gr. *lysis* dissolution] the splitting up of glycogen in the body tissues, yielding glucose.

glycogenolytic (gli/'ko-jen'o-lit'ik) pertaining to, characterized by, or promoting glycogenolysis.

glycogenosis (gli/'ko-jē-no'sis), pl. *glycogenoses*. Any of a group of metabolic disorders characterized by excessive storage of glycogen; for various forms, see *glycogen storage disease*, under *disease*. **generalized g.**, glycogen storage disease, type II; see under *disease*. **hepatorenal g.**, glycogen storage disease, type I; see under *disease*. **myophosphorylase deficiency g.**, glycogen storage disease, type V; see under *disease*.

glycogenous (gli-'koj'ē-nus) glycogenetic.

glycogeusia (gli/'ko-ju'se-ah) [*glyco-* + Gr. *geusis* taste] a condition in which there is a sweet taste in the mouth.

glycohemias (gli/'ko-he'me-ah) [*glyco-* + Gr. *haima* blood + *-ia*] glycemia.

glycohemoglobin (gli/'ko-he'mo-glo'bin) a glycosylated hemoglobin; see hemoglobin A_{1c}.

glycohistiecthia (gli/'ko-his-tek'e-ah) [*glyco-* + Gr. *histos* tissue + *echein* to hold] the presence of an abnormally large amount of sugar in a tissue (Urbach).

glycol (gli/'kol) any of a group of aliphatic dihydric alcohols, having marked hygroscopic properties and useful as solvents and plasticizers. *Diethylene glycol* should not be used for oral administration. **polyethylene g.**, see under *P*.

glycolate (gli/'ko-lāt) a salt or ester of glycolic acid.

glycolipid (gli/'ko-lip'id) a lipid containing carbohydrate groups, usually galactose but also glucose, inositol, or others. Phosphate may or may not be present, and glycerol or sphingosine may occur. The simplest are the glycolipids. The glycolipids include the cerebroside.

glycolyl (gli/'ko-lil) the radical HOCH₂CO— of glycolic acid, HO·CH₂·COOH.

glycolysis (gli-'kol'i-sis) [*glyco-* + Gr. *lysis* solution] the anaerobic enzymatic conversion of glucose to the simpler compounds lactate or pyruvate, resulting in energy stored in the form of adenosine triphosphate (ATP), as occurs in muscle; it differs from respiration in that organic substances, rather than molecular oxygen, are used as electron acceptors.

glycolytic (gli/'ko-lit'ik) pertaining to, characterized by, or promoting glycolysis.

glycometabolism (gli/'ko-met-ah-bol'ik) pertaining to the metabolism of sugar.

glycometabolism (gli/'ko-mē-tab'o-lizm) the metabolism of sugar.

glycone (gli/'kōn) a glycerin suppository.

glyconeogenesis (gli/'ko-ne'o-jen'ē-sis) [*glyco-* + Gr. *neos* new + *gennan* to produce] gluconeogenesis.

glyconucleoprotein (gli/'ko-nu'kle-o-pro'te-in) a nucleoprotein bearing carbohydrate groups.

glycopenia (gli/'ko-pe'ne-ah) [*glyco-* + Gr. *penia* poverty] a deficiency of sugar in the tissues.

glycopeptide (gli/'ko-pep'tid) any of a class of peptides that contain carbohydrates, including those that contain amino sugars.

glycopexic (gli/'ko-pek'sik) pertaining to, characterized by, or promoting glycopexis.

glycopexis (gli/'ko-pek'sis) [*glyco-* + Gr. *pēxis* fixation] the fixation or storing of sugar or glycogen.

Glycophagus (gli-'kof'ah-gus) *Glycophagus*.

glycophenol (gli/'ko-fe'nol) glucide.

glycophilia (gli/'ko-fil'e-ah) [*glyco-* + Gr. *philein* to love] a condition in which a very small amount of dextrose produces hyperglycemia.

glycophorin (gli/'ko-for'in) a protein that projects through the thickness of the cell membrane of erythrocytes; it is attached to oligosaccharides at the outer cell membrane surface and to contractile proteins (spectrin and actin) at the cytoplasmic surface.

glycopolyuria (gli/'ko-pol'e-u're-ah) [*glyco-* + Gr. *polys* much + *ouron* urine + *-ia*] diabetes with a moderate increase of the sugar of the urine and with a marked increase of uric acid in the blood.

glycoprival (gli/'ko-pri'val) [*glyco-* + L. *privus* deprived of] pertaining to or characterized by deprivation of carbohydrates.

glycoprotein (gli/'ko-pro'te-in) any of a class of conjugated proteins consisting of a compound of protein with a carbohydrate group. They are distinguished by yielding in decomposition a product frequently capable of reducing alkaline solutions of cupric oxide. The glycoproteins include the mucins, the mucoids, and the chondroproteins. Glycoproteins having a very high content of polysaccharides are called *proteoglycans*.

glycoptyalism (gli/'ko-ti'al-izm) [*glyco-* + Gr. *ptyalon* saliva] glycosialia.

glycopyrrolate (gli/'ko-pir'ro-lāt) [USP] chemical name: 3-[(cyclopentylhydroxyphenylacetyl)oxy]-1,1-dimethyl pyrrolidinium bromide. A synthetic quaternary anticholinergic, C₁₆H₂₈BrNO₃, occurring as a white, crystalline powder; used in the treatment of peptic ulcer and other gastrointestinal disturbances in which hyperacidity, hypermotility, and/or spasm occur, administered orally, subcutaneously, intramuscularly, or intravenously. Called also *glycopyrronium bromide*.

glycopyrronium bromide (gli/'ko-pir-ro'ne-um) glycopyrrolate.

glycoregulation (gli/'ko-reg'u-la'shun) the control of sugar metabolism.

glycoregulatory (gli/'ko-reg'u-lah-to're) pertaining to the control of sugar metabolism.

glycorrhachia (gli/'ko-ra'ke-ah) [*glyco-* + Gr. *rhachisspine* + *-ia*] presence of glucose in the cerebrospinal fluid.

glycorrhea (gli/'ko-re'ah) [*glyco-* + Gr. *rhoia* flow] any sugary discharge, as of urine.

glycosamine (gli/'ko-sam'in) glucosamine.

glycosaminoglycan (gli/'kōs-am'i-no-gli'kan) mucopolysaccharide, excluding its protein moiety.

glycosaminolipid (gli/'kos-am'i-no-lip'id) any of a class of lipids that contain amino sugars.

glycosecretory (gli/'ko-se-kre'to-re) causing or concerned in the deposition of glycogen.

glycosemia (gli-'ko-se'me-ah) glycemia.

glycosene (gli/'ko-sēn) an anhydrosugar in which there is a double bond between two adjacent carbon atoms having hydroxyl groups in the *trans* position.

glycosialia (gli/'ko-si-a'le-ah) [*glyco-* + Gr. *sialon* saliva + *-ia*] presence of glucose in the saliva.

glycosialorrhoea (gli/'ko-si'ah-lo-re'ah) [*glyco-* + Gr. *sialon* saliva + *rhoia* flow] excessive flow of saliva containing glucose.

glycosidase (gli/'ko-si-dās) any of a large group of hydrolytic enzymes that attack glycosidic linkages. The α -glycosidases occur in the intestinal juice; the β -glycosidases in various tissues, including the liver, kidney, and spleen.

glycoside (gli/'ko-sid) any compound that contains a carbohydrate molecule (sugar), particularly any such natural product in plants, convertible, by hydrolytic cleavage, into sugar and a nonsugar component (aglycone), and named specifically for the sugar contained, as glucoside (glucose), pentoside (pentose), fructoside (fructose), etc. **cardiac g.**, any one of a group of glycosides occurring in certain plants (*Digitalis*, *Strophanthus*, *Urginea*, and others), which have a characteristic action on the contractile force of cardiac muscle. **cyanophoric g.**, a glycoside which on hydrolysis yields hydrocyanic acid. **sterol g.**, phytosterolin.

glycosometer (gli/'ko-som'ē-ter) [*glyco-* + Gr. *metron* measure] an instrument used in determining the proportion of glucose in the urine.

glycosphingolipid (gli/'ko-sfing'o-lip'id) a sphingolipid containing the sugar glucose or galactose.

glycostatic (gli/'ko-stat'ik) tending to maintain a constant sugar level.

glycosuria (gli/'ko-su're-ah) [*glyco-* + Gr. *ouron* urine + *-ia*] the presence of glucose in the urine; especially the excretion of an abnormally large amount of sugar (glucose) in the urine, i.e., more than 1 gm. in 24 hours. **alimentary g.**, digestive g. **benign g.**, renal g. **digestive g.**, normal glycosuria following the ingestion of sugar. **emotional g.**, glycosuria induced by violent emotion. **epinephrine g.**, glycosuria following the injection of epinephrine. **hyperglycemic g.**, glycosuria associated with hyperglycemia. **magnesium g.**, glycosuria due to high concentration of magnesium in the blood. **nervous g.**, glycosuria produced by puncture of the fourth ventricle of the brain or by stimulation of the great splanchnic nerve. **non-diabetic g.**, **nonhyperglycemic g.**, **normoglycemic g.**, **orthoglycemic g.**, renal g. **pathologic g.**, a condition in

which large amounts of sugar appear in the urine for a considerable period of time. **phloridzin g.**, **phlorhizin g.**, glycosuria following the administration of phlorhizin. **renal g.**, glycosuria occurring when there is only the normal amount of sugar in the blood, due to inherited inability of the renal tubules to reabsorb glucose completely. **toxic g.**, glycosuria produced by poisons.

glycosyl (gli/'ko-sil) a radical derived from a carbohydrate.

glycosylated (gli-'ko-si-lāt/'ed) having formed a linkage with a glycosyl group.

glycosylation (gli/'ko-si-la'shun) the formation of linkages with glycosyl groups.

glycosyltransferase (gli/'ko-sil-trans/'fer-ās) any enzyme that catalyzes the transfer of glycosyl groups from one molecule to another; the glycosyltransferases include the glucosyltransferases, fructosyltransferases, and pentosyltransferases. Called also *transglucosylase*. **α-glucan-branching g.**, α-1,4-glucan:α-1,4-glucan 6-glycosyltransferase. An enzyme that transfers part of a 1,4-glucan chain from a 4- to a 6-position, converting amylose into amylopectin. Called also *branching enzyme*, *Q enzyme*, and *amylase-1,4→1,6-transglucosylase*.

glycotaxis (gli/'ko-tak'sis) [*glyco-* + Gr. *taxis* arrangement] the metabolic distribution of glucose to the body tissues.

glycotropic (gli/'ko-trop'ik) [*glyco-* + Gr. *tropos* a turning] having an affinity for or attracting sugar; mediated by sugar; causing hyperglycemia.

glycuresis (gli/'ku-re'sis) the normal increase in the glucose content of the urine which follows an ordinary carbohydrate meal.

glycuronide (gli-'ku-ro-nid) a compound formed by the union of glycuronic acid and some other substance, frequently an aromatic body.

glycuronuria (gli-'ku-ro-nu're-ah) the presence of glucuronic acid in the urine.

glycyl (glis'il) the univalent acid radical, $\text{H}_2\text{NCHC}_2\text{O}$, derived from aminoacetic acid.

glycylglycine (glis'il-glis'in) the simplest dipeptide, $\text{CH}_2(\text{NH}_2)\cdot\text{CO}\cdot\text{NH}\cdot\text{CH}_2\cdot\text{CO}_2\cdot\text{H}$.

glycyltryptophan (glis'il-trip'to-fan) a dipeptide consisting of glycine and tryptophan radicals; used as a test for cancer of stomach. See under *tests*.

Glycyphagus (gli-sif'ah-gus) [Gr. *glykys* sweet + *phagein* to eat] a genus of mites. **G. domes'ticus**, the food mite; the causative agent of grocers' itch.

Glycyrrhiza (glis'i-ri'zah) [Gr. *glykys* sweet + *rhiza* root] a genus of leguminous plants.

glycyrrhiza (glis'i-ri'zah) [NF] the dried rhizome and roots of *Glycyrrhiza glabra* (Spanish licorice) or its variety *glandulifera* (Russian licorice), or of other varieties; used as a pharmaceutical necessity for the preparation of pure glycyrrhiza extract; see under *extract*. Called also *licorice*, *licorice root*, and *liquorid*.

glycyrrhizin (glis'i-ri'zin) [L. *glycyrrhizinum*] a very sweet substance $\text{C}_{42}\text{H}_{82}\text{O}_{16}$, from glycyrrhiza; has been used in the treatment of Addison's disease.

glydanile sodium (gli'dah-nil) glicetanile sodium.

glykemia (gli-ke'me-ah) glycemia.

glymidine sodium (gli'mi-dēn) chemical name: *N*-[5-(2-methoxyethoxy)-2-pyrimidinyl]benzene sulfonamide sodium salt; an oral hypoglycemic, $\text{C}_{13}\text{H}_{14}\text{N}_3\text{NaO}_5\text{S}$.

glyoxal (gli-ok'sal) a yellow crystalline compound, $\text{O}:\text{HC}\cdot\text{CH}:\text{O}$, prepared by the oxidation of acetaldehyde; called also *biformyl*, *ethanedial*, and *oxalaldehyde*.

glyoxalase (gli-ok'sah-lās) either of two enzymes: glyoxalase I is lactoyl-glutathione lyase, and glyoxalase II is hydroxyacyl-glutathione hydrolase.

glyoxalin (gli-ok'sah-lin) iminazole.

glyoxisome (gli-ok'si-sōm) glyoxosome.

glyoxosome (gli-ok'so-sōm) any of the microbodies present in certain plants and microorganisms, resembling the peroxisomes of vertebrate animal cells, but having, in addition to catalase and oxidase enzymes, the enzymes of the glyoxylate cycle, a metabolic pathway involved in the conversion of fat to carbohydrate. Glyoxosomes, in association with chloroplasts, also participate in the process of photorespiration. Called also *glyoxisome*. See also *microbody* and *peroxisome*, def. 1.

glyoxylate (gli-ok'si lāt) a salt of ester of glyoxylic acid.

glyphylline (gli-fil'lin) dyphylline.

Glyptocranium (glip'to-kra'ne-um) *Mastophora*. **G. gasteracanthoides**, *Mastophora gasteracanthoides*.

Glytheonate (gli-the'o-nāt) trademark for a preparation of theophylline sodium glycinate.

Gm [abbreviation for gamma] a genetically determined allotypic marker on the heavy chain of human IgG, inherited as a simple Mendelian trait and found on both the Fc and Fd fragments of the γ chain; over 20 allotypes are known.

gm gram.

G.M.C. General Medical Council (British).

Gmelin's test (ma'linz) [Leopold Gmelin, German physiologist, 1788-1853] see under *tests*.

GMK a preparation of green monkey kidney cells used as culture system for growing viruses, e.g., for recovering the rubella virus.

GMP guanosine monophosphate.

gnat (nat) a small dipterous insect. In England the term is applied to mosquitoes; in America to insects smaller than mosquitoes. See *Chironomidae*. **buffalo g.**, a name given various individuals of the family Simuliidae. **eye g.**, *Hippelates pusio*. **fungus g.**, a gnat whose larvae feed on fungi; see *Bradysia* and *Sciaria*. **turkey g.**, a name given various individuals of the family Simuliidae.

gnath- see *gnatho-*.

gnathalgia (nath-al'je-ah) [*gnath-* + *-algia*] pain in the jaw.

gnathic (nath'ik) pertaining to the jaw or cheek.

gnathion (nath'e-on) an anthropologic and cephalometric landmark, indicating the most outward and everted point on the profile curvature of the chin.

gnathitis (nath-i'tis) [*gnath-* + *-itis*] inflammation of the jaw.

gnatho-, **gnath-** (nath'o, nath) [Gr. *gnathos* jaw] a combining form denoting relationship to the jaw.

Gnathobdellidae (nath'ob-del'i-de) a family of the Hirudinea, which includes leeches of the genera *Hirudo*, *Limnatis*, *Haemadipsa*, *Macrobdella*, *Theromyzon*, *Haemopsis*, *Dinobdella*, and *Hirudinaria*.

gnathocephalus (nath'o-sef'ah-lus) [*gnatho-* + Gr. *kephalē* head] a monster with no head except the jaws.

gnathodynamics (nath'o-di-nam'iks) [*gnatho-* + Gr. *dynamis* power] the study of the physical forces used in mastication.

gnathodynamometer (nath'o-di'nah-mom'ē-ter) [*gnatho-* + *dynamometer*] an instrument for measuring the force exerted in closing the jaws; called also *occlusometer*. **bimeter g.**, a gnathodynamometer equipped with a central-bearing point of adjustable height.

gnathodynia (nath'o-din'e-ah) [*gnatho-* + *odynē* pain] pain in the jaw.

gnathography (nath-og'rah-fe) [*gnatho-* + Gr. *graphein* to record] the recording of the strength of a patient's bite by a tracing of the changes in the flow of an electric current through a bite gauge.

gnathologic (nath'o-loj'ik) relating to gnathology.

gnathology (nath-ol'o-je) a science which deals with the masticatory apparatus as a whole, including morphology, anatomy, histology, physiology, pathology, and therapeutics.

gnathoplasty (nath'o-plas'te) [*gnatho-* + Gr. *plassein* to mold] plastic surgery of the jaw or cheek.

gnathoschisis (nath-os'ki-sis) [*gnatho-* + Gr. *schisis* splitting] congenital cleft of the upper jaw, as in cleft palate.

gnathostatics (nath'o-stat'iks) [*gnatho-* + Gr. *statikē* the art of weighing] a method of orthodontic diagnosis based on determination of the basal and craniometric relationships between the teeth and their supporting structures.

Gnathostoma (nath-os'to-mah) [*gnatho-* + Gr. *stoma* mouth] a genus of nematode worms of the superfamily Spiruroidea, which are parasitic in cats, swine, cattle, and sometimes in man. **G. spinigerum**, a nematode parasitic in the stomach of cats and dogs that ingest fish which contain the larvae; man acquires the larvae when he eats undercooked fish. See *gnathostomiasis*.

gnathostomatics (nath'o-sto-mat'iks) the physiology of the mouth and jaws.

gnathostomiasis (nath'o-sto-mi'ah-sis) infection with the nematode *Gnathostoma spinigerum*, acquired when undercooked fish harboring the larvae are eaten. The larvae migrate, often in the subcutaneous tissue, causing a "creeping swelling" associated with intense eosinophilia. Occasionally they migrate to deeper tissues and cause abscesses.

Gnathostomum (nath-os'to-mum) *Gnathostoma*.

gnosia (no'se-ah) the faculty of perceiving and recognizing.

gnosis (no'sis) [Gr. *gnōsis* knowledge] Edinger's term for the arousal of associative mnemonic complexes by sensory pallial impulses; one of the functions of the cerebral cortex. Cf. *praxis*.

gnotobiology (no'to-bi-ol'o-je) gnotobiotics.

gnotobiota (no'to-bi-o'tah) the specifically and entirely known microfauna and microflora of a specially reared laboratory animal.

gnotobiote (no'to-bi-ōt) a specially reared laboratory animal the microfauna and microflora of which are specifically known in their entirety.

gnotobiotic (no'to-bi-ot'ik) pertaining to a gnotobiote or to gnotobiotics. Cf. *axenic*.

gnotobiotics (no'to-bi-ot'iks) [Gr. *gnōtos* known + *biota* the fauna and flora of a region] the science of rearing laboratory animals the microfauna and microflora of which are specifically known in their entirety.

gnotophoresis (no'to-for'ē-sis) [Gr. *gnōtos* known + *phōresis* a

being borne] the state of existence of an organism bearing one or more known species in intimate contact with it and no other demonstrable viable microorganisms.

gnotophoric (no'to-for'ik) pertaining to gnotophoresis.

Gn-RH gonadotropin-releasing hormone; see under *hormone*.

Goa powder (go'ah) [*Goa* a city of India] see under *powder*.

goatpox (göt'poks) an acute, highly infectious disease of goats marked by a vesicular eruption with catarrh of the respiratory mucous membranes and caused by a poxvirus. It is less severe than sheep-pox. Called also *variola caprina*.

Godélier's law (go-da-lyáz') [Charles Pierre Godélier, French physician, 1813-1877] see under *law*.

Goetsch's skin reaction (test) (gech'ez) [Emil Goetsch, American physician, born 1883] see under *reaction*.

goiter (goi'ter) an enlargement of the thyroid gland, causing a swelling in the front part of the neck. **aberrant g.**, enlargement of an ectopic or supernumerary thyroid gland. **adenomatous g.**, enlargement of the thyroid gland caused by adenomas of the gland, or by multiple colloid nodules. **Basedow's g.**, a colloid goiter which has become hyperfunctioning after administration of iodine. **colloid g.**, a large and soft form of goiter in which the follicles of the gland are greatly distended with colloid. **congenital g.**, enlargement of the thyroid gland which is present at birth, or which results from a congenital absence of enzymes leading to inadequate production of thyroxine. **cystic g.**, an enlarged thyroid gland containing cysts formed by mucoid or colloid degeneration. **diffuse g.**, a thyroid gland which is diffusely enlarged. **diving g.**, a movable goiter located sometimes above and sometimes below the sternal notch. **endemic g.**, enlargement of the thyroid gland occurring in certain districts, particularly in the mountain regions of the Alps, Pyrenees, Carpathians, Andes, and Himalayas, and other areas where the iodine content of the normal diet is low. **exophthalmic g.**, enlargement of the thyroid gland with protrusion of the eyeballs; see *Graves' disease*, under *disease*. **fibrous g.**,

Exophthalmic goiter.

enlargement of the thyroid gland caused by hyperplasia of the capsule and stroma. **follicular g.**, parenchymatous g. **in-thoracic g.**, goiter in which a portion of the enlarged thyroid is situated in the thoracic cavity. **iodide g.**, that occurring in reaction to iodides at high concentrations, due to inhibition of iodide organization (Wolff-Chaikoff effect). **lingual g.**, an enlargement of the upper end of the original thyroglossal duct, forming a tumor at the posterior part of the dorsum of the tongue. **lymphadenoid g.**, struma lymphomatosa. **nodular g.**, an enlarged thyroid gland containing circumscribed nodules within its substance. **nontoxic g.**, that occurring sporadically and not associated with hyperthyroidism; such goiters may be either diffuse or nodular. **parenchymatous g.**, goiter marked by increase in the follicles and proliferation of the epithelium. **perivascular g.**, one which surrounds a large blood vessel. **plunging g.**, diving g. **retrovascular g.**, goiter with a process or processes behind an important blood vessel. **simple g.**, simple hyperplasia of the thyroid gland. **substernal g.**, goiter in which a portion of the enlarged gland is situated beneath the sternum. **suffocative g.**, one which causes dyspnea by pressure. **toxic g.**, Graves' disease; see under *disease*. **vascular g.**, enlargement of the thyroid gland due chiefly to dilatation of the blood vessels. **wandering g.**, diving g.

goitre (goi'ter) [Fr.] goiter.

goitrin (goi'trin) a goitrogenic substance isolated from rutabagas and turnips.

goitrogen (goi'tro-jen) a goiter-producing compound.

goitrogenic (goi'tro-jen'ik) producing goiter.

goitrogenicity (goi'tro-jē-nis'i-te) the tendency to produce goiter.

goitrogenous (goi'troj'ē-nus) producing goiter.

goitrous (goi'trus) pertaining to or of the nature of goiter.

gold (göld) a yellow metallic element occurring in masses or veins in rocks or in grains in the sand of rivers. Its symbol is Au (L. *aurum*); atomic number, 79; atomic weight, 196.967; specific gravity, 19.32. Gold compounds are used in medicine, chiefly in arthritis, and all the compounds are poisonous. **annealed g.**, gold which has been heated in a flame to drive off any contaminating gases and increase its cohesive properties. **g. aurothio-**

sulfate, g. sodium thiosulfate. **cohesive g.**, a chemically pure gold which can be made to form a solid block when properly compacted or condensed into a tooth cavity. **colloidal g.**, a purplish suspension of minute particles of metallic gold, made by reducing a solution of bromauric acid or other acid or salt of gold, used in medicine since alchemical times. The radioactive form, made by exposure to neutrons, is used as a suspension in the pleural cavity to treat lung cancer. **crystal g.**, **crystalline g.**, mat g. **Dutch g.**, an alloy of copper and zinc. **fibrous g.**, mat g. **mat g.**, a type of pure gold composed of flakelike crystals formed by electrodeposition. **noncohesive g.**, gold which does not weld because of a gaseous contaminant on its surface. **Nürnberg g.**, a preparation containing 2.5 per cent gold, 7.5 per cent aluminum, and 90 per cent copper. **radioactive g.**, radiogold. **g. sodium thiomalate** [USP], an odorless, fine, white to yellowish white powder with a metallic taste, $C_4H_3AuNa_2O_4S \cdot H_2O$, used in treatment of rheumatoid arthritis and nondisseminated lupus erythematosus, administered intramuscularly. Called also *sodium aurothiomalate*. **g. sodium thiosulfate**, white needle-like or prismatic small glistening crystals, $Na_2Au(S_2O_3)_2 \cdot 2H_2O$, soluble in water; used in the treatment of rheumatoid arthritis. Called also *sodium aurothiosulfate*. **g. thioglucose**, aurothioglucose.

Goldblatt's clamp, hypertension, kidney [Harry Goldblatt, Cleveland physician, born 1891] see under *clamp*, *hypertension*, and *kidney*.

Goldflam's disease (gölt'flahmz) [Samuel Goldflam, Polish neurologist, 1852-1932] myasthenia gravis.

Goldflam-Erb disease (gölt'flahm-ərb) [S. V. Goldflam; Wilhelm Heinrich Erb, German internist, 1840-1921] myasthenia gravis.

Goldscheider's percussion, test (göld'shi-derz) [Johannes Karl August Eugen Alfred Goldscheider, Berlin physician, 1858-1935] see *threshold percussion*, under *percussion*, see *orthopercussion*; and see under *tests*.

Goldstein's disease, etc. (göld'stinz) [Hyman Isaac Goldstein, American physician, 1887-1954] see under *disease*, *hematemesis*, *hemoptysis*, and *sign*.

Goldstein rays (göld'stin) [Eugene Goldstein, German physicist, 1850-1930] see under *ray*.

Goldthwait's sign (symptom) (göld'thwäts) [Joel Ernest Goldthwait, American orthopedic surgeon, born 1866] see under *sign*.

Golgi's complex, etc. (gol'jēz) [Camillo Golgi, Italian histologist, 1843-1926; co-winner, with Santiago Ramón y Cajal, of the Nobel prize for medicine and physiology in 1906 in recognition of their work on the structure of the nervous system] see under *complex*, *corpuscle*, *law*, *neuron*, *organ*, *Table of Stains*, and *theory*.

golgiosome (gol'je-o-sōm) mitochondrion-sized, platelike structures which make up the Golgi complex of the cell; the platelike structure consists of stacks of flattened vessels (cisternae) more commonly known as dictyosomes.

Goll's column, fasciculus (column, tract), fibers, nucleus (golz) [Friedrich Goll, Swiss anatomist, 1829-1903] see *fasciculus gracilis medullae spinalis*, and *nucleus gracilis*, and see under *fiber*.

Goltz's experiment, theory (gölts'ez) [Friedrich Leopold Goltz, German physician, 1834-1902] see under *experiment* and *theory*.

Gombault's degeneration, neuritis (gom-bōz') [François Alexis Albert Gombault, French neurologist, 1844-1904] progressive hypertrophic interstitial neuropathy.

Gombault-Philippe triangle (gom-bo'fe-lép') [F. A. A. Gombault; Claudius Philippe, French pathologist, 1866-1903] see under *triangle*.

gomitoli (go-mit'o-li) a network of capillaries in the upper infundibular stem (of the hypothalamus) that surround terminal arterioles of the superior hypophyseal arteries and that lead into portal veins to the adenohypophysis.

Gomori methods, stains [George Gomori, Hungarian histochemist in Chicago, 1904-1957] see *Table of Stains and Staining Methods*, under *stain*.

gomphiasis (gom-fi'ah-sis) [Gr. "tooth ache," "gnashing of the teeth"] 1. looseness of the teeth. 2. odontalgia.

gomphosis (gom-fō'sis) [Gr. *gomphōsis* a bolting together] [NA] a type of fibrous joint in which a conical process is inserted into a socket-like portion, such as the styloid process in the temporal bone, or the teeth in the dental alveoli.

gon- (gon) 1. [Gr. *gonē* seed] a combining form denoting relation to seed or to the semen. 2. [Gr. *gony* knee] a combining form denoting relationship to the knee.

gonacratia (gon'ah-kra'she-ah) [gon-(1) + Gr. *akrateia* incontinence] spermatorrhea.

gonad (go'nad, gon'ad) [L. *gonas*, from Gr. *gonē* seed] a gamete-producing gland; an ovary or testis. **indifferent g.**, the sexually undifferentiated gonad of the early embryo. **third g.**, the adrenal gland, so called because of the interrelationship between it and the sex glands. **streak g's**, an undevel-

oped gonadal structure found in the broad ligament below the fallopian tube and composed of whorled connective-tissue stroma with no germinal or secretory cells; seen most often in Turner's syndrome. Phenotypic development is female.

gonadal (go'nad-al) pertaining to a gonad.

gonadectomize (go'nah-dek'to-miz) to deprive of the gonads by surgical excision.

gonadectomy (go'nah-dek'to-me) [gonad + Gr. *ektomē* excision] removal of an ovary or testis.

gonadial (go-nad'e-al) pertaining to a gonad.

gonadoblastoma (gon'ah-do-blas-to'mah) a dysgerminoma that contains all gonadal elements—germ cells, sex cord derivatives and stromal derivatives; occurring almost exclusively in abnormal gonads, most often associated with some form of gonadal dysgenesis, frequently with abnormal chromosomal karyotype.

gonadogenesis (gon'ah-do-jen'ē-sis) [gonado- + Gr. *genesis* production] the development of the gonads in the embryo, especially the development of gonads typical of one or the other sex.

gonadoinhibitory (gon'ah-do-in-hib'i-to-re) inhibiting or preventing gonadal activity.

gonadokinetic (gon'ah-do-ki-net'ik) [gonad + Gr. *kinēsis* motion] stimulating gonadal activity.

gonadopathy (gon'ah-dop'ah-the) [gonad + Gr. *pathos* disease] any disease of the gonads.

gonadopause (go-nad'o-paws) the loss of gonadal activity which accompanies the aging process.

gonadorelin (go'nad-o-rel'in) gonadotropin releasing hormone.

gonadotherapy (gon'ah-do-ther'ah-pe) treatment by the use of hormones from the ovary or testis.

gonadotrope (go-nad'o-trōp) 1. any of the basophils (beta cells) of the adenohypophysis, the granules of which secrete follicle-stimulating hormone and luteinizing hormone. It is not yet settled whether there are two distinct cell types or whether one cell type secretes both hormones; called also *delta basophil* and *delta cell*. 2. a gonadotropic substance.

gonadotroph (go-nad'o-trōf) gonadotrope.

gonadotrophic (gon'ah-do-trō'fik) gonadotropic.

gonadotrophin (gon'ah-do-trō'fin) gonadotropin.

gonadotropic (gon'ah-do-trōp'ik) [gonad + Gr. *tropos* a turning] stimulating the gonads; applied to hormones of the anterior pituitary which influence the gonads.

gonadotropin (gon'ah-do-trō'pin) any hormone having a stimulating effect on the gonads. Two such hormones are secreted by the anterior pituitary: follicle-stimulating hormone and luteinizing hormone, both of which are active, but with differing effects, in the two sexes. See also *chorionic g.* **chorionic g.**, 1. the gonad-stimulating principle produced by the cytotrophoblastic cells of the placenta and excreted through the kidneys. 2. [USP] the same principle obtained from the urine of pregnant women, occurring as a white or practically white, amorphous powder; used in the treatment of certain cases of cryptorchidism and male hypogonadism, and to induce ovulation and pregnancy in certain infertile, anovulatory women, administered intramuscularly. **equine g.**, pregnant mare serum g. **human chorionic g. (HCG)**, see *chorionic g.* **human menopausal g. (HMG)**, menotropins. **pregnant mare serum g.**, a preparation of the follicle-stimulating substance obtained from the blood serum of pregnant mares; it has been used in the treatment of cryptorchidism, sterility, pituitary dwarfism, and other conditions in both men and women. Called also *equine g.* Abbreviated PMSG.

gonaduct (gon'ah-dukt) the duct of a gonad; an oviduct or seminal duct.

gonagra (gon-ag'rah) [gon-(2) + Gr. *agra* seizure] gout in the knee.

gonalgia (go-nal'je-ah) [gon-(2) + *-algia*] pain in the knee.

gonangiectomy (gon'an-je-ek'to-me) vasectomy.

gonarthrititis (gon'ar-thri'tis) [gon-(2) + Gr. *arthron* joint + *-itis*] inflammation of a knee or knee joint.

gonarthrocace (gon'ar-throk'a-se) [gon-(2) + Gr. *arthron* joint + *kakē* evil] white swelling of the knee, produced by tuberculous arthritis.

gonarthromeningitis (gon-ar'thro-men'in-jī'tis) [gon-(2) + Gr. *arthron* joint + *mēnix* membrane] inflammation of the synovial membrane of the knee joint.

gonarthrosis (gon'ar-thro'sis) arthritic affection of the knee joint, due to degeneration or trauma.

gonarthrotomy (gon'ar-throt'o-me) [gon-(2) + Gr. *arthron* joint + *temnein* to cut] surgical incision of the knee joint.

gonatocele (go-nat'o-sēl) [gon-(2) + Gr. *kēlē* tumor] tumor of the knee.

gonecyst, gonecystis (gon'ē-sist, gon'ē-sis'tis) [Gr. *gonē* seed + *kystis* bladder] vesicula seminalis.

gonecystitis (gon'ē-sis-ti'tis) inflammation of a seminal vesicle.

gonecystolith (gon'ē-sis'to-lith) [gonecyst + Gr. *lithos* stone] a concretion in a seminal vesicle.

gonecystopyosis (gon'ē-sis'to-pi-o'sis) [gonecyst + Gr. *pyōsis* suppuration] suppuration in a seminal vesicle.

goneitis (gon'e-i'tis) [gon-(2) + *-itis*] inflammation of the knee.

gonepoiesis (gon'e-poi-e'sis) [Gr. *gonē* seed + *poiein* to make] the secretion or formation of the semen.

gonepoietic (gon'e-poi-et'ik) pertaining to, characterized by, or promoting gonepoiesis.

Gongylonema (gon'jī-lo-ne'mah) [Gr. *gongylos* round + *nēma* thread] a genus of nematodes of the superfamily Spiruroidea. **G. ingluvic'ola**, a species found in chickens. **G. neoplas'ticum**, a species occurring in the anterior portion of the digestive tract of rats. **G. pul'chrum**, a common parasite in the esophageal mucosa of sheep, goats, cattle, and pigs in the United States; it has been found in the mucosa and submucosa of the lips and mouth of man. **G. scuta'tum**, **G. pulchrum**.

gongylonemiasis (gon'jī-lo-ne-mi'ah-sis) infection with *Gongylonema*.

gonia (go'ne-ah) plural of *gonion*.

gonial (go'ne-al) pertaining to the gonion.

gonidangium (gon'id-an'je-um) a cell within which gonidia are formed.

gonidia (go-nid'e-ah) plural of *gonidium*.

gonidiospore (go-nid'e-o-spōr) 1. a general term for a sexual spore of fungi, as one produced from an antherium. 2. a spore produced from the algal part of a lichen. See *spore*.

gonidium (go-nid'e-um), pl. *gonid'ia* [Gr. *gonē* seed] 1. the algal cell part of the thallus of a lichen. 2. a motile reproductive unit of the nitrogen-fixing bacteria *Azotobacter* and *Rhizobium*.

Gonin's operation (go-nāz') [Jules Gonin, Swiss ophthalmic surgeon, 1870–1935] see under *operation*.

gonio- (go'ne-o) [Gr. *gōnia* angle] a combining form denoting relationship to an angle.

Goniobasis (go'ne-o-ba'sis) a genus of small fresh-water snails. **G. sili'cula**, the host of *Trogloremma salmincola* in northwestern United States.

goniocraniometry (go'ne-o-kra'ne-om'ē-tre) [gonio- + *craniometry*] the measurement of the cranial angles.

gonioma (gon'e-o'ma) [gon-(1) + *-oma*] a term formerly applied to testicular tumors thought to be derived from sexual cells.

goniometer (go'ne-om'ē-ter) [gonio- + Gr. *metron* measure] 1. an instrument for measuring angles. 2. a plank, one end of which may be tilted to any height, used in testing for labyrinthine disease. **finger g.**, an apparatus for measuring the limits of flexion and extension of the interphalangeal joints of the fingers.

gonion (go'ne-on), pl. *go'nia* [Gr. *gōnia* angle] a cephalometric landmark, being the most inferior, posterior, and lateral point on the external angle of the mandible.

goniophotography (go'ne-o-fo-to'g'rah-fe) photography of the angle of the anterior chamber of the eye.

Goniops (gon'e-ops) a genus of tabanid flies.

goniopuncture (go'ne-o-punk'tūr) a filtering operation for glaucoma, done by inserting a knife blade through clear cornea just within the limbus, across the anterior chamber, and through the opposite corneal scleral wall.

gonioscope (go'ne-o-skōp') [gonio- + Gr. *skopein* to examine] an optical instrument for examining the angle of the anterior chamber and for demonstrating ocular motility and rotation.

gonioscopy (go'ne-os'ko-pe) examination of the angle of the anterior chamber of the eye with the gonioscope.

goniosynechia (go'ne-o-si-nek'e-ah) adhesion of the iris to the cornea at the angle of the anterior chamber of the eye.

goniotomy (go'ne-ot'o-me) [gonio- + Gr. *tomē* a cutting] Bar-kan's operation for that type of glaucoma which is characterized by an open angle and normal depth of the anterior chamber; it consists of the opening of Schlemm's canal under direct vision secured by a contact glass.

gonitis (go-ni'tis) [gon-(2) + *-itis*] inflammation of the knee. **fungous g.**, inflammation of the knee joint in which the capsule is diffusely thickened. **g. tuberculo'sa**, tuberculosis of the knee joint.

gono- (gon'o) [Gr. *gonē* seed] a combining form denoting relationship to semen or seed.

gonoblennorrhea (gon'o-blen'o-re'ah) gonorrheal conjunctivitis.

gonocampsis (gon'o-kamp'sis) permanent flexion of the knee.

gonocoele (gon'o-sēl) spermatocele.

gonochorism (gon-ok'o-rizm) [gono- + Gr. *chōrizein* to separate] differentiation of the gonads with normal development of the reproductive organs appropriate to the sex; the opposite of hermaphroditism.

gonococcal (gon'o-kok'al) pertaining to gonococci.

gonococchemia (gon'o-kok-se'me-ah) [L. *gonococci* + Gr. *haima* blood + *-ia*] the presence of gonococci in the blood.

gonococci (gon'o-kok'si) plural of *gonococcus*.
gonococcic (gon'o-kok'sik) gonococcal.
gonococcide (gon'o-kok'sid) [*gonococcus* + L. *caedere* to kill] an agent that kills gonococci.
gonococcocide (gon'o-kok'o-sid) [*gonococcus* + L. *caedere* to kill] gonococcide.
gonococcus (gon'o-kok'us), pl. *gonococ'ci* [*gono-* + *coccus*] an individual microorganism of the species *Neisseria gonorrhoeae*, the organism causing gonorrhea.
gonocyte (gon'o-sit) [*gono-* + Gr. *kytos* hollow vessel] 1. the primitive reproductive cell of the embryo. 2. a secondary gamete-producing cell.
gonomery (gon-om'er-e) [*gono-* + Gr. *meros* part] the condition in which the paternal and the maternal chromosomes remain in separate groups and do not completely fuse, as occurs in certain hybrids.
gononephrotome (gon'o-nef'ro-tōm) [*gono-* + Gr. *nephros* kidney + *tomē* a section] that part of the mesoderm which develops into the reproductive and excretory organs of the embryo.
gonophage (gon'o-fāj) a bacteriophage having the gonococcus as its natural host.
gonophore (gon'o-fōr) [*gono-* + Gr. *phoros* bearing] an accessory generative organ, such as the uterine tube and uterus in the female, or spermiduct and seminal vesicle in the male.
gonorrhea (gon'o-re'ah) [*gono-* + Gr. *rhein* to flow] infection due to *Neisseria gonorrhoeae* transmitted venereally in most cases, but also by contact with infected exudates in neonatal children at birth, or by infants in households with infected inhabitants. It is marked in males by urethritis with pain and purulent discharge, but is commonly asymptomatic in females, although it may extend to produce suppurative salpingitis, oophoritis, tubo-ovarian abscess, and peritonitis. Bacteremia occurs in both sexes, resulting in cutaneous lesions, arthritis, and rarely meningitis or endocarditis.
gonorrheal (gon'o-re'al) of or pertaining to gonorrhea.
gonosome (gon'o-sōm) [*gono-* + Gr. *soma* body] former term for sex chromosome.
gototokont (gon'o-to'kont) auxocyte.
gototome (gon'o-tōm) [*gono-* + Gr. *tomē* a section] that part of the mesoderm which develops into the reproductive organs of the embryo.
gony- (gon'e) [Gr. *gony* knee] a combining form denoting relationship to the knee.
Gonyaulax (gon'e-aw'laks) a genus of protozoa of the order Dinoflagellata, class Phytomastigophora, found in salt, fresh, or brackish waters, and having yellow to brown chromatophores. **G. catanel'la**, a poisonous flagellate protozoon which may cause *gonyaulax poisoning* and which helps to form the destructive red tide in the ocean. See also *gonyaulax poison*, under *poison*.
gonycampsis (gon'i-kamp'sis) [*gony-* + Gr. *kampsis* bending] abnormal curvature of the knee.
gonycrotosis (gon'e-kro-te'sis) [*gony-* + Gr. *krotēsis* striking] genu valgum.
gonyectyposis (gon'e-ek'ti-po'sis) [*gony-* + Gr. *ektypōsis* a modeling in relief] genu varum.
gonyocele (gon'e-o-sēl') [*gony-* + Gr. *kēlē* tumor] synovitis or tuberculous arthritis of the knee.
gonyoncus (gon'e-ong'kus) [*gony-* + Gr. *onkos* bulk] tumor of the knee.
Goodell's sign (law) (good'elz) [William Goodell, American gynecologist, 1829–1894] see under *sign*.
Goodpasture's stain (good-pas'churs) [Ernest William Goodpasture, American pathologist, 1886–1960] see *Table of Stains and Staining Methods*, under *stain*.
Goodpasture's syndrome [E. W. Goodpasture] see under *syndrome*.
Goormaghtigh's apparatus (cells) [Norbert Goormaghtigh, Belgian physician, 1890–1960] juxtaglomerular cells.
Gordiacea (gor'de-a'se-ah) Nematomorpha.
Gordius (gor'de-us) [Gordian knot] a genus of the Gordiacea, the hair snakes or horsehair worms. **G. aquat'icus**, a species occasionally found as a pseudoparasite of the intestinal tract of man; its presence is the result of the accidental ingestion of infected insects. **G. medinen'sis**, *Dracunculus medinensis*. **G. robus'tus**, a species that is generally a pseudoparasite of the intestinal tract (see *G. aquaticus*), but has also been reported as invading the periorbital tissues of man.
Gordon (gor'don), Alexander (1752–1799). Scottish obstetrician who, in his *Treatise on the Epidemic Puerperal Fever of Aberdeen* (1795), first demonstrated the contagiousness of this disease.
Gordon's bodies, test (gor'donz) [Mervyn Henry Gordon, English physician, 1872–1953] see under *body* and *tests*.
Gordon's reflex, sign (gor'donz) [Alfred Gordon, American neurologist, 1874–1953] see *flexor reflex*, *paradoxical*, under *reflex*, and *finger phenomenon* (def. 1), under *phenomenon*.
gorget (gor'jet) a wide-grooved lithotome director.

gorondou (go-ron'doo) goundou.

Goslee tooth (goz'le) [Hart J. Goslee, American dentist, 1871–1930] see under *tooth*.

Gosselin's fracture (gos-laz') [Léon Athanase Gosselin, French surgeon, 1815–1887] see under *fracture*.

Gossypium (gō-sip'e-um) [L.] a genus of tropical and subtropical malvaceous plants found in both hemispheres, including ten species, three of which (*G. barbadense*, *G. herbaceum*, and *G. hirsutum*) yield most of the world's cotton. The dried bark of the root of various species (cotton root bark) was formerly used as an oxytocic. See *cotton*, and see *cottonseed oil*, under *oil*.

gossypium (gō-sip'e-um), gen. *gossyp'ii* [L.] cotton. **g. asepticum**, **g. depura'tum**, **g. purifica'tum**, purified cotton.

gossypol (gos'i-pol) chemical name: 2,2'-bis[8-formyl-1,6,7-trihydroxy-5-isopropyl-3-methylnaphthyl]. A poisonous yellow pigment, C₃₀H₃₀O₈, found in cottonseed (and named for *Gossypium*) which is detoxified by heating. Gossypol has male antifertility properties, apparently having its effects in the seminiferous tubules, where spermatozoa are produced.

GOT glutamine-oxaloacetic transaminase.

Göthlin's test (index) (get'linz) [Gustaf Fredrik Göthlin, Swedish physiologist, 1874–1949] see under *tests*.

Gottlieb's epithelial attachment (got'lēbz) [Bernhard Gottlieb, Vienna dentist, 1885–1950] see under *attachment*.

Gottstein's fibers, process (got'stinz) [Jacob Gottstein, otologist in Breslau, 1832–1895] see under *fiber* and *process*.

gouge (gowj) a hollow chisel used in cutting and removing bone. **Kelley g.**, an instrument for removing cartilage grafts.

Goulard's extract, lotion, water (goo-larz') [Thomas Goulard, French surgeon, 1720–1790] see *lead subacetate solution* and *diluted lead subacetate solution*.

Gouley's catheter (goo'lēz) [John Williams Severin Gouley, American surgeon, 1832–1920] see under *catheter*.

goundou (gōon'doo) osteoplastic periostitis of the nose, a disease seen in natives of Central Africa and South America, marked by headache, purulent nasal discharge, and the formation of symmetrical painless swellings (bony exostoses) at the sides of the nose. It is a sequel of yaws. Called also *henpue*, *gundo*, *henpuye*, and *anakhre*.

Goundou (Castellani and Chalmers).

gousiekte (goo-sek'te) [Dutch "rapid disease"] a condition in sheep marked by myocarditis, dilatation, and heart failure, caused by eating the poisonous plant *Vangueria pygmaea*.

gout (gowt) [L. *gutta* a drop, because of the ancient belief that the disease was due to a "noxa" falling drop by drop into the joint] a hereditary form of arthritis characterized by an excess of uric acid in the blood (hyperuricemia) and by recurrent paroxysmal attacks of acute arthritis usually involving a single peripheral joint, followed by complete remission. The attacks result from deposition of crystals of monosodium urate in and around the joints. The hyperuricemia may be due to an increased rate of synthesis of the purine precursors of uric acid or to decreased elimination of uric acid by the kidneys, or to both. The disease, which affects chiefly men, is probably of polygenic inheritance. **abarticular g.**, that which does not affect the joints. **articular g.**, gout affecting the joints. **calcium g.**, calcinosis. **chalky g.**, tophaceous g. **irregular g.**, abarticular g. **latent g.**, **masked g.**, lithemia without the typical features of gout. **lead g.**, gout ascribed to lead poisoning. **misplaced g.**, gout in which the arthritic symptoms have disappeared and are followed by severe constitutional disturbances; called also *Da Costa's disease*. **oxalic g.**, oxalism. **polyarticular g.**, an atypical form of gout which attacks many joints and which resembles rheumatic fever in that an attack may last for weeks. **poor man's g.**, gout ascribed to hard work, exposure, ill feeding, and excess in the use of malt liquors. **regular g.**, articular g. **retrocedent g.**, misplaced g. **rheumatic g.**, rheumatoid arthritis. **saturnine g.**, lead g. **tophaceous g.**, gout in which there are tophi or chalky deposits of sodium urate. **visceral g.**, a disease of birds characterized by the deposition of sodium urates on the viscera.

gouty (gow'te) affected with or of the nature of gout.

Gowers' column, etc. (gow'ez) [Sir William Richard Gowers, celebrated English neurologist, 1845-1915] see under *column*, *contraction*, *disease*, *fasciculus*, *sign*, *solution*, and *tract*, and see *vasovagal attack*, under *attack*.

Goyrand's hernia (gwar-ahndz') [Jean Gaspar Blaise Goyrand, French surgeon, 1803-1866] see under *hernia*.

G.P. general practitioner; general paresis (see *dementia paralytica*).

G6PD glucose-6-phosphate dehydrogenase.

G.P.I. general paralysis of the insane.

GPT glutamic-pyruvic transaminase.

gr. grain.

graafian follicle, vesicle (graf'e-an) [Reijnier (Regner) de Graaf, a celebrated Dutch physician and anatomist, 1641-1673] see *folliculi ovarici vesiculosi*.

gracile (gras'il) [L. *gracilis*] slender or delicate.

Grad. abbreviation for L. *gradatim*, by degrees.

gradatim (gra-da'tim) [L.] gradually; by degrees.

Gradenigo's syndrome (grah-dē-ne'gōz) [Giuseppe Gradenigo, Italian physician, 1859-1926] see under *syndrome*.

gradient (gra'dē-ent) the rate of increase or decrease of a variable magnitude; also the curve which represents it. **g. of approach**, the inverse relationship between distance from a positive stimulus and the tendency to approach it. **g. of avoidance**, the inverse relationship between the distance from a negative stimulus and the tendency to withdraw from it. **density g.**, the continuous variation in density (concentration) of a solute along the height or width of a confined solution. **mitral g.**, the difference in pressure in the left atrium and the left ventricle in diastole. **systolic g.**, the difference in pressure between the left atrium and left ventricle in systole. **ventricular g.**, the net differences in ventricular electrical activity of varying duration, as determined by the algebraic sum of the electrocardiographic vectors representing the QRS and T-wave areas.

graduate (grad'u-āt) [L. *graduatus*] 1. a person who has received a degree from a university or college. 2. a measuring vessel marked by a series of lines.

graduated (grad'u-āt-ed) [L. *gradus* step] marked by a succession of lines, steps, or degrees.

Graefe's disease, knife, operation, sign (gra'fēz) [Albrecht von Graefe, German ophthalmologist, 1828-1870] see *ophthalmoplegia progressiva*, and see under *knife, operation*, and *sign*.

Gräfenberg's ring (graf'en-burg) [Ernest Grafenberg, German gynecologist in United States, 1881-1957] see under *ring*.

graft (graft) 1. any tissue or organ for implantation or transplantation. 2. to implant or transplant such tissues. See also *flap*. **accordion g.**, a full-thickness skin graft in which multiple slits have been made so that the graft may be stretched to cover a larger area. **activated g.**, a graft in which the nerves and blood supply have grown to nourish it, after a period of denervation and tenuous vascularity. **allogeneic g.**, allograft. **autochthonous g.**, autograft. **autodermic g.**, **autoepidermic g.**, a skin graft taken from the patient's own body. **autogenous g.**, **autologous g.**, **autoplastic g.**, autograft. **avascular g.**, a graft of tissue in which not even transient vascularization is achieved. **Blair-Brown g.**, a split-skin graft of intermediate thickness. **bone g.**, a piece of bone taken from an animal or from some bone of the patient and used to take the place of a removed bone or bony defect. **Braun g.**, a thick skin graft. **Braun-Wangenstein g.**, implanted grafts of skin cut from a large graft. **brephoplastic g.**, the transplantation of tissue from an embryo or newborn to an adult animal. **cable g.**, a nerve graft made up of several sections of nerve in the manner of a cable. **chorioallantoic g.**, the placing of cells, tissues, or parts on the chorioallantoic membrane of the embryonic chick. **cutis g.**, dermal g. **Davis g.**, pinch g. **delayed g.**, a skin graft which is sutured back into its bed and subsequently shifted to a new recipient bed. **dermal g.**, **dermic g.**, skin from which epidermis and subcutaneous fat have been removed; used instead of fascia in various plastic procedures. Called also *cutis g.* **diced cartilage g's**, numerous small segments of cartilage that can be packed or molded into any desired contour like wet grains of sand; used to repair faulty cartilage or bone structure. **double-end g.**, a pedicle flap or rope flap. **Douglas's g.**, sieve g. **epidermic g.**, a piece of epidermis implanted upon a raw surface; called also *Reverdin's g.* **Esser g.**, a full-thickness skin graft applied by spreading the graft over a mold of Stent preparation and suturing the graft and mold into a prepared pocket; called also *Stent's g.* **fascia g.**, a graft taken from the fascia lata or from the lumbar fascia. **fascicular g.**, a nerve graft in which the bundles of nerve fibers are approximated and sutured separately. **fat g.**, a graft of fat completely freed from its bed; used in filling depressions. **filler g.**, a graft used for the filling of defects, as the filling of a bony cyst cavity with bone chips. **free g.**, a graft of tissue completely freed from its bed, in contrast to a flap. **full-thickness g.**, a skin graft consisting of the full thickness of the skin, with little or none of the subcutaneous tissue. **gauntlet g.**, pedicle flap. **Gillies' g.**, rope flap. **hetero-**

dermic g., a skin graft taken from a donor of another species. **heterologous g.**, **heteroplastic g.**, xenograft. **homologous g.**, allograft. **homoplastic g.**, allograft. **hyperplastic g.**, a skin graft which is in a state of active repair, as in recovery from inflammation. **implantation g.**, a graft in which small pieces of skin are embedded in granulation tissue of the same individual. **island g.**, see under *flap*. **isogeneic g.**, **isologous g.**, **isoplastic g.**, isograft. **jump g.**, see under *flap*. **Kiel g.**, denatured calf bone used to fill defects or restore facial contour; often used for chin and nasal augmentation. **Krause-Wolfe g.**, a graft of full thickness of the skin. **lamellar g.**, replacement of the superficial layers of an opaque cornea by a thin layer of clear cornea from a donor eye. **mucosal g.**, a graft of mucosal tissue, usually comprising the entire mucosal thickness. **nerve g.**, replacement of an area of defective nerve with a segment from a sound one. **Ollier-Thiersch g.**, a very thin skin graft in which long, broad strips of skin, consisting of the epidermis, rete, and part of the corium, are used. **omental g's**, free or attached segments of omentum used to cover suture lines following gastrointestinal or colonic surgery. **onlay bone g.**, bone used as a graft that is laid on or over cortical bone of the recipient site(s). **osseous g.**, bone g. **patch g.**, a graft of living tissue or prosthetic material used to close a vascular incision in order to enlarge the lumen of the vessel. **pedicle g.**, see under *flap*. **penetrating g.**, a full-thickness corneal transplant. **periosteal g.**, a piece of periosteum applied to a denuded area of a bone. **pinch g.**, a piece of skin about 1/4 in. in diameter, obtained by elevating the skin with a needle and slicing it off with a knife; the thickness of the graft may vary, but it is always free of fat. **Reverdin g.**, epidermic g. **rope g.**, see under *flap*. **seed g.**, implantation g. **sieve g.**, a skin graft from which very small circular islands of skin are removed so that a larger denuded area can be covered, the sieve-like portion being placed over one area, and the individual islands over surrounding or other denuded areas. **skin g.**, a piece of skin transplanted to replace a lost portion of the body skin surface; it may be a full-thickness, thick-split, or split-skin graft. **sleeve g.**, a graft for repairing traumatic gaps in nerves by a sleeve-like extension from the distal stump which is sutured to the central stump. **split-skin g.**, a skin graft consisting of only a portion of the skin thickness. **split-thickness g.**, a graft, varying in thickness, containing only mucosal elements and no subcutaneous tissues. **sponge g.**, a bit of sponge inserted into a wound to promote the formation of granulations. **Stent g.**, Esser g. **syngeneic g.**, isograft. **thick-split g.**, a skin graft cut in small or large pieces, often including about two thirds of the full thickness of the skin. **Thiersch's g.**, Ollier-Thiersch g. **thin-split g.**, Ollier-Thiersch g. **thyroid g.**, a piece of the thyroid gland implanted in the tissues as a remedy for myxedema; no longer done. **tube g.**, **tunnel g.**, rope flap. **valise handle g.**, a graft of the auricle of the ear. **white g.**, avascular g. **Wolfe's g.**, **Wolfe-Krause g.**, **Krause-Wolfe g.**

grafting (graft'ing) the implanting or transplanting of any tissue or organ. **Mangoldt's epithelial g.**, the covering of wounds and granulating areas with epithelial tissue cut from the epidermis with a razor. **skin g.**, implantation of patches of healthy skin on a denuded area to form centers of cicatrization.

Graham's law (gra'amz) [Thomas Graham, English chemist, 1805-1869] see under *law*.

Graham's test (gra'amz) [Everts Ambrose Graham, American surgeon, 1883-1957] see under *test*.

Graham Little syndrome (gra'am-lit'el) [Sir Ernest Gordon Graham Little, English physician, 1867-1950] see under *syndrome*.

Graham Steell murmur (gra'am stēl) [Graham Steell, English physician, 1851-1942] see under *murmur*.

Grahamella (gra'am-el'lah) a genus of the family Bartonellaceae, order Rickettsiales, made up of Bartonella-like microorganisms, and occurring as two species, *G. peromysci* and *G. talpae*, infecting deer mice and moles, respectively.

grahamellosis (gra'am-el-o'sis) infection with organisms of the genus *Grahamella*.

grain (grān) [L. *grānum*] 1. a seed, especially of a cereal plant. 2. the twentieth part of a scruple: 0.065 gram. Abbreviated gr. **cayenne pepper g's**, brown crystals of uric acid in the urine.

grainage (grān'ij) weight in grains or parts of a grain.

gram (gram) [Fr. *gramme*] the basic unit of mass (weight) of the metric system, being the equivalent of 15.432 grains, or 0.035 ounces avoirdupois. Abbreviated gm.

-gram (gram) [Gr. *gramma* that which is written; a mark] a word termination meaning that which is written or recorded.

Gram's method, stain, solution (gramz) [Hans Christian Joachim Gram, Danish physician, 1853-1938] see *Table of Stains and Staining Methods*, under *stain*, and see *gram-negative* and *gram-positive*.

gram-equivalent (gram'e-kwiv'ah-lent) see under *equivalent*.

gramicidin (gram'i-si'din) [USP] an antibacterial polypeptide produced by *Bacillus brevis*, which is one of the two principal components of tyrothricin, and is effective against many gram-

positive organisms; it occurs as a white, or nearly white, crystalline powder, and is applied topically in pyodermic, ocular, and other localized infections due to susceptible bacteria. Called also *g. D. Gramicidin S* is a closely related substance produced by a thermophilic strain of *B. brevis*; called also *Soviet g.*

gramine (gram/'i-nin) chemical name: 3-(dimethylaminomethyl)-indole. A crystalline indole alkaloid, $C_{11}H_{14}N_2$, from barley; called also *donaxine*.

graminin (gram/'i-nin) a fructosan from rye flour.

graminivorous (gram/'ē-niv'o-rus) feeding or subsisting on grass or cereal grains.

gram-ion (gram-i'on) that quantity of an ion whose weight in grams is numerically equal to the atomic weight of the ion.

grammeter (gram/'me-ter) a unit of work, representing the energy expended in raising 1 gm. of weight 1 meter vertically against gravitational force. It is one thousandth of a kilogrammeter, or about 98,000 ergs.

grammole (gram/'mol) gram-molecule.

gram-molecule (gram-mol/'ē-kūl) as many grams of a substance as are numerically equal to its molecular weight. See *mole*, def. 3.

gram-negative (gram-neg/'ah-tiv) losing the stain or decolorized by alcohol in Gram's method of staining, a primary characteristic of bacteria having a cell wall surface more complex in chemical composition than do the gram-positive bacteria.

gram-positive (gram-poz/'i-tiv) retaining the stain or resisting decolorization by alcohol in Gram's method of staining, a primary characteristic of bacteria whose cell wall is composed of peptidoglycan and teichoic acid.

grana [pl. of *granum* grain] dense green, chlorophyll-containing bodies in chloroplasts consisting of numerous, closely-packed lamellae which make them appear to be suspended in a matrix.

granatum (grah-na'tum), gen. *grana'ti* [L.] pomegranate.

Grancher's system (grahn-shāz) [Jacques Joseph Grancher, French physician, 1843-1907] see *splenopneumonia*, and see under *system*.

grandiose (gran/'dī-ōs) in psychiatry, pertaining to exaggerated belief or claims of one's importance or identity, often manifested by delusions of great wealth, power, or fame.

grandiosity (gran/'de-os/'i-te) a condition characterized by delusions of grandeur.

grand mal (grahn mahl) see under *epilepsy*.

Grandy's corpuscles (grahn/'drēz) [French anatomist of the 19th century] *menisci tactus*.

Granger line, sign (grān/'jer) [Amedee Granger, New Orleans radiologist, 1879-1939] see under *line* and *sign*.

granoplasm (gran/'o-plazm) granular protoplasm.

granula (gran/'u-lah), pl. *gran'ulae* [L.] granule, def. 2. **g. irid'ica**, a black or brown outgrowth from the edge of the iris in horses; called also *nigroid body*.

granular (gran/'u-lar) [L. *granularis*] made up of or marked by presence of granules or grains.

granulase (gran/'u-lās) an enzyme thought to be present in grain and to have the power of splitting starch into achroodextrin and maltose.

granulatio (gran/'u-la'she-o), pl. *granulatio'nes* [L.] [NA] a general term denoting a granule, or granular mass. **granulatio'nes arachnoideales** [NA], **granulatio'nes arachnoideales** [Pacchio'ni], arachnoidal granulations: small elevations, visible to the naked eye, thought by some to be enlargements of arachnoid villi, which project into the superior sagittal sinus and associated venous lacunae and create slight depressions on the inner surface of the cranium; these granulations are the structures through which cerebrospinal fluid is reabsorbed into the blood in the venous system. Called also *arachnoid villi*, and *pacchionian bodies* or *granulations*. **granulatio'nes cerebrales**, **granulatio'nes pacchio'ni**, granulationes arachnoideales.

granulation (gran/'u-la'shun) [L. *granulatio*] 1. the division of hard or metallic substances into small particles. 2. the formation in wounds of small, rounded masses of tissue composed largely of capillaries and fibroblasts, often with inflammatory cells present; also a mass so formed. 3. a small, round, abnormal mass of lymphoid tissue, as on the conjunctiva of the eyelids or within the pharynx. **arachnoidal g's**, granulationes arachnoideales. **Bayle's g's**, gray tubercular nodules of the lung that have undergone fibroid degeneration. **Bright's g's**, the granulations seen in chronic interstitial nephritis. **cell g's**, small masses seen in the cytoplasm of certain cells that give the latter a characteristic appearance when stained; see the various granules, under *granule*. **exuberant g's**, excessive proliferation of granulation tissue in healing wounds. **pacchionian g's**, granulationes arachnoideales. **pyroninophilic g's**, structures seen in liver and other cells, which stain red with methyl green-pyronine by Pappenheim's stain; they are one of the early effects of carbon tetrachloride poisoning. **Reilly g's**, large azurophilic granules in the cytoplasm of polymorphonuclear leukocytes and lymphocytes, occurring in gargoylism. **Vir-**

chow's g's, granulations containing ependymal and glia fibers, found in the walls of the cerebral ventricles in general paralysis.

granulationes (gran/'u-la'she-o'nēz) [L.] plural of *granulatio*.

granule (gran/'ūl) [L. *granulum*] 1. a small particle or grain, as the small beadlike masses of tissue formed on the surface of wounds, or the insoluble nonmembranous particles found in cytoplasm. 2. a small pill made from sucrose. **acidophil g's**, granules staining with acid dyes, such as those of the alpha cells of the adenohypophysis; see also *carminophil* (def. 3) and *orangeophil* (def. 3). **acrosomal g.**, a large globule formed by the coalescence of proacrosomal granules, contained within a membrane-bounded *acrosomal vesicle*, which enlarges further to become the core of the acrosome of a spermatozoon. **albuminous g's**, granules seen in the cytoplasm of many normal cells; which optically disappear on the addition of acetic acid, but are not affected by ether or chloroform; called also *cytoplasmic g's*. **aleuronoid g's**, colorless myeloid colloidal bodies found in the base of pigment cells. **alpha g's**, 1. oval granules found in blood platelets; their membrane structure and the contained acid phosphate suggest that they are lysosomes. 2. large granules in the alpha cells of the islets of Langerhans, which are insoluble in alcohol and secrete glucagon. 3. the acidophilic granules in the alpha cells of the adenohypophysis; see also *carminophil* and *orangeophil*. **Altmann's g's**, mitochondria. **amphophil g's**, granules that stain with either acid or basic dyes. **argentaffine g's**, granules which stain with silver. **azur g.**, **azurophil g.**, a granule which stains easily with azure dyes; they are coarse reddish granules seen in many lymphocytes. **Babes-Ernst g's**, metachromatic g's. **basal g.**, basal body. **basophil g's**, granules staining with basic dyes, such as those of the beta cells of the adenohypophysis; see also *gonadotrope* (def. 3) and *thyrotrope* (def. 2). **beta g's**, 1. the granules in the beta cells of the islets of Langerhans, which secrete insulin and are soluble in alcohol. 2. basophilic granules in the beta cells of the adenohypophysis; see also *gonadotrope* (def. 3) and *thyrotrope* (def. 2). **Bollinger's g's**, 1. Bollinger's bodies. 2. small, yellowish white granules in mulberry-like masses, containing micrococci, seen in the granulation tissue of botryomycosis. **Bütschli's g's**, swellings on the bipolar rays of the amphiaser in the ovum. **carbohydrate g's**, particles of carbohydrate matter in the body fluids in the course of being assimilated. **chromatic g's**, **chromophilic g's**, Nissl's bodies; see under *body*. **cone g's**, the nuclei of the visual cells of the retina in its outer nuclear layer which are connected with the cones. **cortical g's**, special structures in the cortex of the ovum of many animals, which break up during fertilization and supply the material for the development of the fertilization membrane. **cytoplasmic g's**, albuminous g's. **delta g's**, fine basophilic granules occurring in the lymphocytes. **Dioscorides' g.**, a pill of lactose and gum arabic with arsenious acid. **Ehrlich's g's**, **Ehrlich-Heinz g's**, cell granules which stain with Ehrlich's triacid stain. **elementary g's**, hemoconia. **eosinophil g's**, granules staining with eosin. **Fauvel's g's**, peribronchitic abscesses. **fuchsinophil g's**, granules staining with fuchsin. **Fordyce's g's**, see under *spot*. **gamma g's**, a name applied to basophilic granules found in the blood, marrow, and in the tissues. **Heinz g's**, Heinz-Ehrlich bodies. **hyperchromatin g.**, **azur g.** **iodophil g's**, granules staining brown with iodine, seen in polymorphonuclear leukocytes in various acute infectious diseases. **juxtaglomerular g's**, stainable osmophilic secretory granules present in the juxtaglomerular cells, closely resembling zymogen granules. **kappa g.**, **azur g.** **keratohyalin g's**, irregularly shaped granules, representing deposits of keratohyalin on tonofibrils in the stratum granulosum epidermidis. They stain with some acid dyes and with certain basic dyes. See also *keratohyalin*, def. 1. **Kölliker's interstitial g's**, various sized granules seen in the sarcoplasm of muscle fibers. **Kretz's g's**, granules found in the liver in cirrhosis. **Lang-erhans' g's**, peculiar rod-shaped, membrane-bound structures with a central linear density found in the Langerhans cells of the epidermis, which resemble superficially the vermiform bodies of the Kupffer cells of the liver; called also *vermiform g's*. **Lang-ley's g's**, granules seen in secreting serous glands. **membrane-coating g's**, granules in the uppermost cells of the stratum spinosum epidermidis, which may deposit dense material on the inner aspect of the cell membrane; they contain the enzyme acid phosphatase, and may be involved in the desquamation of the stratum corneum epidermidis. Called also *keratinosomes*. **meningeal g's**, granulationes arachnoideales. **metachromatic g's**, polymetaphosphate granules, present in many bacterial cells, which have an avidity for basic dyes and cause irregular staining of the cell; called also *Babes-Ernst bodies*, *corpuscles*, or *granules*. **Mezei g's** (*obs.*), spherical brownish granules seen in smears from the lesions of cutaneous actinomycosis. **Much's g's**, granules and rods found in tuberculous sputum which do not stain by the usual processes for acid-fast bacilli, but do stain with Gram stain; regarded as modified tubercle bacilli. **Neusser's g's** (*obs.*), basophil granules seen about the nuclei of leukocytes. **Nissl's g's**, Nissl's bodies. **oxyphil g's**, acidophil g's. **Paschen's g's**, see under *body*. **perichromatin g's**, granules believed to contain nucleic acid, found near the masses of nuclear chromatin in the hepatic parenchymal cells.

foreign-body giant cells in a mass of fibrotic granulation tissue. **coccidioidal g.**, coccidioidomycosis. **dental g.**, a mass of granulation tissue usually surrounded by a fibrous sac continuous with the periodontal ligament and attached to the apex of a root; it is the common result of dental caries and subsequent infection of the pulp. **Durck's g.**, **malarial g.**, **g. endem'icum** (obs.), cutaneous leishmaniasis. **eosinophilic g.**, 1. a type of xanthomatous characterized by the presence of rarefactions or cysts in one or more bones and sometimes associated with eosinophilia. 2. a disorder similar to eosinophilic gastroenteritis and characterized by localized nodular or pedunculated lesions of the gastric submucosa and muscle walls, especially of the pyloric area of the stomach, caused by infiltration of eosinophils, but without peripheral eosinophilia and allergic symptoms. It may also affect the small intestine. 3. anisakiasis. **g. fissura'tum**, a circumscribed, firm, reddish, fissured, fibrotic granuloma of the gum and buccal mucosa, occurring on an edentulous alveolar ridge and in the fold between the ridge and cheek; it is caused by an ill-fitting denture. **foreign-body g.**, a localized histiocytic skin reaction to a foreign body in the tissue, such as starch, talc, or oil. **g. fungoi'des** (obs.), mycosis fungoides. **g. gangraenes'cens**, a condition beginning with the formation of proliferating granulations in the nasal mucous membrane which invade the adjacent tissues and soon become gangrenous. **giant cell reparative g.**, an abnormal, benign reparative reaction to an injury, characterized by fibroplastic proliferation with numerous giant cells; the lesions occur peripherally in the soft tissue of the gingivae (giant cell epulis) and centrally in bones of the jaw. **g. glutea'le infan'tum**, a nodular dermatosis occurring on the buttocks of infants, which may be mistaken for hemangiomas or hematomas. The lesions are elevated bluish or brownish red plaques or nodules from 1 to 3 or 4 cm. in width, containing a polymorphic cellular infiltrate with microabscesses but no suppuration, and abundant extravasation of red cells. In reported cases, treatment has been ineffective but spontaneous recovery has occurred within a few months. **Hodgkin's g.**, see under *disease*. **infectious g.**, granuloma caused by a specific microorganism, as the tubercle bacilli. **infective g.**, one due to the presence in the tissues of living agents. **g. inguina'le**, a granulomatous venereal disease characterized by deep purulent ulcerations of the skin of the external genitals, caused by *Calymmatobacterium granulomatis* and affecting especially dark-skinned people. Called also *donovanosis*, *fourth venereal disease*, *granuloma venereum*, *puddental ulcer*, and *ulcerating granuloma of the pudenda*. **laryngeal g.**, a firm nodule on the larynx due to trauma, particularly from endotracheal intubation or from excessive use of the voice. **lethal midline g.**, a rare necrotizing granuloma that results in destruction of the midface and invariably in death. It is nearly always preceded by longstanding nonspecific inflammation of the nose or nasal sinuses, with purulent, often bloody discharge. It leads to extreme erosion of the nose, cheeks, hard or soft palate, and orbital cavities. **lipoid g.**, a granuloma containing lipid cells; xanthoma. **lipophagic g.**, a granuloma attended by the loss of subcutaneous fat. **lycopodium g.**, a granulomatous lesion developing after an operation as a result of the introduction of lycopodium spores into the operative wound. **Majocchi's g.**, trichophytic **g. malarial g.**, a granulomatous lesion sometimes seen in the brain in fatal cases of cerebral malaria. **midline g.**, lethal midline **g.** **Mignon's eosinophilic g.**, a solitary destructive lesion affecting the skull and other bones of children and young adults. **monilia g.**, monilial **g.**, candida **g.** **g. multifor'me**, a slowly progressive localized confluent papular granulomatous disease encountered so far only in Africa, clinically easily confused with tuberculoid leprosy and granuloma annulare. Necrobiosis and necrosis of collagen and elastic fibers occurs, with phagocytosis. **paracoccidioidal g.**, paracoccidioidomycosis. **peripheral giant cell reparative g.**, a pedunculated or sessile lesion of the gingivae or alveolar ridge, apparently arising from periodontal ligament or mucoperiosteum, and usually resulting from trauma, such as tooth extraction, or denture irritation. **plasma cell g.**, granuloma in which other inflammatory cells are very greatly outnumbered by plasma cells. **g. puden'di**, granuloma inguinale. **g. puden'te trop'icum**, **g. inguinale**. **pyogenic g.**, **g. pyogen'icum**, a benign, solitary, dull red, soft, raised, sometimes pedunculated nodule resembling granulation tissue, found anywhere on the body, commonly intraorally, and usually occurring at the site of trauma as a response of the tissues to a nonspecific infection. It was formerly thought to be due to a botryomycotic infection and was called *botryomycosis hominis*. See also *pregnancy tumor*, under *tumor*. **reticulohistiocytic g.**, solitary reticulohistiocytoma, histologically indistinguishable from the lesions of multicentric reticulohistiocytosis (q.v.), with no systemic involvement, and occurring mainly in men. **rheumatic g's**, nodules occurring in various parts of the body in rheumatism. **g. sarcomato'des** (obs.), mycosis fungoides. **septic g.**, granuloma pyogenicum. **silicotic g.**, pseudotubercula silicoticum. **swimming pool g.**, a granulomatous lesion that complicates abrasions sustained in swimming pools, attributed to *Mycobacterium balnei* (*M. marinum*). It tends to heal spontaneously in a few months or years. **g. telangiectat'icum**, a form characterized by numerous dilated blood ves-

granuloma (gran'ū-lo'mah) a tumor-like mass or nodule of granulation tissue, with actively growing fibroblasts and capillary buds, consisting of a collection of modified macrophages resembling epithelial cells (*epithelioid cells*), surrounded by a rim of mononuclear cells, chiefly lymphocytes and sometimes a center of giant multinucleate cells, either of the Langhans' or foreign body type; it is due to a chronic inflammatory process associated with infectious disease, such as tuberculosis (see *tubercle*), syphilis, sarcoidosis, leprosy, lymphogranuloma, etc., or with invasion by a foreign body. **amebic g.**, granulomatous lesions of the colon sometimes seen in amebiasis. **g. annulare**, a granuloma consisting of hard, reddish nodules arranged in a circle which enlarge until they form a ring. **apical g.**, a modified type of granulation tissue containing elements of chronic inflammation located adjacent to the root apex (chronic apical periodontitis) and continuous with the periodontal ligament of a tooth which has an infected necrotic pulp; this tissue has excellent repair potential. **bath'ei g.**, swimming pool g. **benign g. of thyroid**, a chronic inflammation of the thyroid gland which changes it into a bulky tumor which later becomes extremely hard. **beryllium g.**, a local sarcoid-like reaction in the skin caused by the accidental implantation of a beryllium compound in abrasions or other wounds. **candida g., candidal g.**, granulomatous nodules in the form of horns or heavily crusted nodules, which develop on the scalp, face, fingers, mucous membranes, and elsewhere, in longstanding generalized candidiasis; called also *monilia*, or *monilial g.* **central giant cell reparative g.**, see *giant cell reparative g.* **cholesterol g.**, a granulomatous lesion in which crystals of cholesterol esters are surrounded by

sels. **trichophytic g., g. trichophyt'icum**, a rare form of *tinea corporis*, occurring chiefly on the lower legs, which is caused by *Trichophyton rubrum* infecting hairs at the site of involvement. It is characterized by the development of elevated, sharply circumscribed, rather boggy granulomas, from rose red to a cyanotic hue, disseminated or arranged in chains; after persisting for three or four months the lesions are slowly absorbed, or undergo necrosis, leaving depressed scars. Called also *Majocchi's g.* and *tinea profunda*. **g. trop'icum** yaws. **ulcerating g. of the pudenda**, granuloma inguinale. **umbilical g.**, granulation tissue on the stem of the umbilical cord in newborn infants. **venereal g., g. vene'reum**, granuloma inguinale. **xanthomatous g.**, eosinophilic. **zirconium g.**, an itchy eruption of aggregated, purple papules caused by a tubercloid or sarcoid cutaneous reaction to zirconium salts, like those used in antiperspirants.

granulomatosis (gran'u-lo'mah-to'sis) — the formation of multiple granuloma. **allergic g.**, extensive necrotizing angitis occurring in debilitated asthmatic patients, with granulomas; called also *Churg-Strauss syndrome*, and *necrotizing angitis with granulomata*. **g. discifor'mis chron'ica et progressi'va**, necrobiosis lipoidica. **lipophagic intestinal g.**, intestinal lipodystrophy. **lymphomatoid g.**, a systemic and visceral form of granulomatous vasculitis mimicking lymphoma and differing from its cutaneous counterpart, lymphomatoid papulosis, in that skin lesions occur in only about 30 per cent of cases; the course is highly unpredictable. **malignant g.**, Hodgkin's disease. **necrotizing respiratory g.**, Wegener's g. **g. siderot'ica**, a condition in which brownish nodules (Gamna nodules) are seen in the enlarged spleen. **Wegener's g.**, a progressive disease, characterized by granulomatous lesions of the respiratory tract, focal necrotizing arteriolitis, and, finally, widespread inflammation of all the organs of the body.

granulomatous (gran'u-lom'ah-tus) composed of granulomas.

granulomere (gran'u-lo-mēr') the center portion of a platelet in a dry, stained blood smear, apparently filled with fine purplish red granules. Cf. *hyalomere*.

granulopenia (gran'u-lo-pe'ne-ah) agranulocytosis.

granuloplasm (gran'u-lo-plazm) endoplasm.

granuloplastic (gran'u-lo-plas'tik) [*granule* + Gr. *plassein* to form] forming granules.

granulopoiesis (gran'u-lo-poi-e'sis) [*granulocyte* + Gr. *poiein* to make] the formation of granulocytes.

granulopoietic (gran'u-lo-poi-et'ik) pertaining to or concerned in the formation of granulocytes.

granulopoietin (gran'u-lo-poi-e'tin) hypothetical substance(s) believed to serve as the humoral regulator of granulopoiesis; leukopoietin.

granulopotent (gran'u-lo-po'tent) capable of forming granules.

granulosa (gran'u-lo'sah) cumulus oophorus; see also under *cell*.

granulose (gran'u-lōs) 1. the more soluble portion of starch; see *amylose*. 2. a bacterial polysaccharide occurring as cytoplasmic granules and staining red to blue with iodine.

granulosis (gran'u-lo'sis) the formation of a mass of granules. **g. ru'bra na'si**, sweating and hyperhidrosis confined to the nose and surrounding area of the face and sometimes the chin, associated with red papules and sometimes many small vesicles; it occurs most often in children, usually clearing up at puberty. There is some evidence that an inheritable trait is involved in the etiology.

granulosity (gran'u-lo'si-te) a mass of granulations.

granulotherapy (gran'u-lo-ther'ah-pe) a method once used for treating infection based on the presumption that leukocytosis could be stimulated by the intravenous injection of carbon particles that would be of benefit to the infected person.

granulovacuolar (gran'u-lo-vak'u-o-lar) characterized by granules and vacuoles.

granum (gra'num), pl. *gra'na* [L.] grain; see *grana*.

grapes (grāps) 1. granulations formed in severe cases of grease in horses. 2. bovine tuberculosis.

graph (graf) [Gr. *graphein* to write, or record] a diagram or curve representing varying relationships between sets of data. Often used as a word termination denoting an instrument for writing or recording.

graphesthesia (graf'es-the'ze-ah) [Gr. *graphein* to write + *aisthēsis* perception] the sense by which are recognized figures or numbers written on the skin with a dull-pointed object.

graphic (graf'ik) [Gr. *graphein* to write] written or drawn; pertaining to representation by diagrams.

graphite (graf'it) [L. *graphites*, from Gr. *graphis* a style, or writing instrument] plumbago, a form of native mineralized carbon.

graphitosis (graf'i-to'sis) pneumoconiosis due to inhalation of and tissue reaction to graphite dust.

Graphium (graf'e-um) a genus of imperfect fungi which produce several cultural spore types.

grapho- (graf'o) [Gr. *graphein* to record] a combining form denoting relationship to writing or to a record.

graphoanalysis (graf'o-ah-nal'i-sis) analysis of character based on handwriting.

graphocatharsis (graf'o-kah-thar'sis) a method of relieving psychic distress by writing out one's thoughts.

graphokinesthetic (graf'o-kin'es-thet'ik) [*grapho-* + Gr. *kinein* to move + *aisthēsis* perception] pertaining to the sensation aroused by the act of writing.

graphology (graf-ol'o-je) [*grapho-* + *-logy*] the study of the handwriting as a method of analyzing personality.

graphomotor (graf'o-mo'tor) [*grapho-* + *motor*] pertaining to, or affecting, the movements required in writing.

graphopathology (graf'o-pah-thol'o-je) the study of handwriting as an indication of mental or physical disorder.

graphorrhea (graf'o-re'ah) [*grapho-* + Gr. *rhoia* flow] a morbid mental condition marked by the writing of a long succession of meaningless and unconnected words.

graphoscope (graf'o-skōp) [*grapho-* + Gr. *skopein* to examine.] an instrument for treating myopia and asthenopia.

graphospasm (graf'o-spazm) [*grapho-* + Gr. *spasmos* spasm] writers' cramp.

-graphy (graf'e) [Gr. *graphein* to write, record] a word termination meaning the act of writing or recording, or a method of recording.

Grashey's aphasia (grash'ēz) [Hubert von Grashey, Munich psychologist, 1839–1911] see under *aphasia*.

grass (gras) any plant of the order Gramineae. Some of the grasses which by their pollen are important causes of hay fever are: Bermuda g., *Cynodon dactylon*; June g., *Poa pratensis*; Johnson g., *Sorghum halepense*; Orchard g., *Dactylis glomerata*; Redtop g., *Agrostis alba*; Sweet vernal g., *Anthoxanthum odoratum*; and Timothy g., *Phleum pratense*. **couch g.**, *Agropyron repens* (L.) Beauv. (Gramineae). **scurvy g.**, a cruciferous plant, *Cochlearia officinalis*, once used as a remedy for scurvy.

Grasset's law, phenomenon (sign) (grah-sāz') [Joseph Grasset, French physician, 1849–1918] see *Landouzy-Grasset law*, under *law*, and see under *phenomenon*.

Grasset-Gaussel phenomenon (grah-sa'go-sel') [Joseph Grasset; Amans Gausse], French physician, 1871–1937] Grasset's phenomenon; see under *phenomenon*.

Grasset-Gaussel-Hoover sign (grah-sa'go-sel'-hoo'ver) [Joseph Grasset; Amans Gausse]; Charles Franklin Hoover, American physician, 1865–1927] see under *sign*.

gratification (grat'i-fi-ka'shun) the lowering of an emotional tension which follows the fulfillment of an instinctual aim.

Gratiola (grah-ti'o-lah) a genus of plants. **G. officina'lis**, the hedge hyssop, a scrophulariaceous plant of Europe; it is purgative, emetic, and diuretic.

Gratiolet's radiating fibers, optic radiation (grah-te'o-lāz') [Louis Pierre Gratiolet, French anatomist, 1815–1865] see under *fiber*, and see *radiatio optica*.

grattage (grah-tahzh') [Fr.] the removal of granulations (as in trachoma) by scraping or by friction with a stiff brush.

grave (grāv) [L. *gravis*] severe or serious.

gravedo (gra-ve'do) [L.] cold in the head, or nasal catarrh.

gravel (grav'el) a term applied to fairly coarse concretions of mineral salts, as from the kidneys or bladder, of smaller size than the so-called stones.

Graves' disease (grāvz) [Robert James Graves, Irish physician, 1796–1853] see under *disease*.

grave-wax (grāv'waks) adipocere.

gravid (grav'id) [L. *gravidus* heavy, loaded] pregnant; containing developing young.

gravida (grav'i-dah) a pregnant woman. Called *gravida I* or *primigravida* during the first pregnancy, *gravida II* or *secundigravida* during the second pregnancy, *gravida III* or *tertiogravida* during the third pregnancy, and so on. Cf. *Para*.

gravidic (grah-vid'ik) occurring in pregnancy.

gravidism (grav'id-izm) pregnancy, or the sum of symptoms, signs, and conditions associated with it.

graviditas (grah-vid'i-tas) pregnancy. **g. examnia'lis**, pregnancy in which the amnion has burst and is retracted around the insertion of the umbilical cord, but the chorion is intact. **g. exochoria'lis**, pregnancy in which the membranes have burst and shrunk, leaving the fetus in the uterus but outside of the chorion.

gravity (grah-vid'i-te) [L. *gravitas*] pregnancy; the condition of being pregnant, without regard to the outcome. Cf. *parity*.

gravidocardioc (grav'i-do-kar'de-ak) [L. *gravidus* + Gr. *kardia* heart] pertaining to heart disease of pregnancy.

gravidopuerperal (grav'i-do-pu-er'per-al) pertaining to pregnancy and the puerperium.

gravimeter (grah-vim'ē-ter) [L. *gravis* heavy + *metrum* measure] an instrument for determining specific gravities.

gravimetric (grav'i-met'rik) pertaining to measurement by weight; performed by weight, as gravimetric method of drug assay.

gravistatic (grav'i-stat'ik) due to gravitation, as *gravistatic* pulmonary congestion.

gravitation (grav'i-ta'shun) the force that tends to draw all bodies together; see *law of gravitation*.

gravitometer (grav'i-tom'ē-ter) a balance for measuring specific gravity.

gravity (grav'i-te) [L. *gravitas*] weight; tendency toward the center of the earth. **specific g.**, the weight of a substance compared with that of an equal volume of another substance taken as a standard.

Grawitz's tumor (grah'vits-ez) [Paul Albert Grawitz, pathologist in Greifswald, 1850–1932] see under *tumor*.

gray (gra) 1. of a hue between white and black. 2. the gray matter of the nervous system. 3. a proposed unit of absorbed radiation dose equal to 100 rads. Abbreviated Gy. **central g.**, relatively undifferentiated gray matter which retains its primitive position near the ventricles and central canal. **nervous g.** (obs.), Nissl's term for the unknown specific constituent of the gray matter of the nervous system. **silver g.**, **steel g.**, nigrosin.

grease (grēs) an inflammatory swelling in a horse's leg in the region of the fetlocks and pasterns, with the formation of cracks in the skin and the excretion of oily matter.

grease-heel (grēs-hēl') grease.

green (grēn) 1. having the color of fresh leaves or of grass. 2. a green coloring matter or dye. **acid g.**, any of several green acid dyes, generally light g. S F. **brilliant g.**, a basic dye having powerful bacteriostatic properties for gram-positive organisms; used topically as an anesthetic. **bromocresol g.** [USP], an indicator used in the determination of hydrogen ion concentration, being yellow at pH 4.0 and blue at pH 5.4. **Brunswick g.**, 1. chrome g. 2. copper arsenite. 3. copper subcarbonate. 4. copper oxychloride. **chrome g.**, chromium sesquioxide, Cr_2O_3 . **diazin g. S.**, Janus g. B. **ethyl g.**, brilliant g. **fast acid g. N.**, light g. S F. yellowish. **Hoffman g.**, iodine g. **indocyanine g.** [USP], a tricarboyanine dye, $\text{C}_{43}\text{H}_{47}\text{N}_2\text{NaO}_6\text{S}_2$, occurring as an olive-brown, dark green, dark blue, or black powder; used intravenously as a diagnostic aid in the determination of blood volume, cardiac output, and hepatic function. **iodine g.**, a triphenylmethane dye used as a chromatin stain. **Janus g. B.**, an azo dye used supravivally for the demonstration of mitochondria. **light g.**, 2 G or 2 GN, light g. S F. yellowish. **light g. N.**, malachite g. **light g. S F yellowish**, an acid dye used as a plasma stain. **malachite g.**, a triphenylmethane dye used as a stain for bacteria and as an antiseptic for wounds. **malachite g. G.**, brilliant g. **methyl g.**, 1. a mixture of hepta and hexa methyl-pararosaniline. 2. ethyl g. **methylene g.**, a mononitromethylene blue, interesting for its dark green metachromasia. **new solid g.**, malachite g. **Paris g.**, a double salt of copper acetate and copper metaarsenite, $\text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 3\text{Cu}(\text{AsO}_2)_2$, used as an insecticide. **Schweinfurt g.**, Paris g. **solid g.**, malachite g. **Victoria g.**, malachite g.

Greene's sign (grēnz) [Charles Lyman Greene, American physician, 1862–1929] see under *sign*.

Greenhow's disease (grēn'howz) [Edward Headlam Greenhow, English physician, 1814–1888] vagabond's disease; see under *disease*.

gregaloid (greg'ah-loid) [L. *greg* flock + Gr. *eidos* form] formed by casual union of independent cells; said of a loose grouping of protozoa, including Sarcodina, which may become attached by their pseudopodia.

Gregarina (greg'ah-ri'nah) [L. *gregarius*, crowding together] a genus of sporozoa of the order Gregarinida, species of which are common parasites in the digestive tract and body cavities of insects.

gregarina (greg'ah-ri'nah), pl. *gregari'nae*. An organism of the genus *Gregarina*.

gregarine (greg'ah-rin) 1. pertaining to the Gregarinida. 2. any member of the order Gregarinida.

Gregarinida (greg'ah-ri'nī-dah) an order of protozoa of the subphylum Sporozoa, generally parasitic in the digestive tract and body cavities of invertebrates; it includes the genera *Gregarina*, *Monocystis*, and *Lankesteria*.

Gregory's mixture (greg'o-rēz) [James Gregory, Scotch physician, 1753–1821] compound powder of rhubarb; see under *powder*.

grenz rays [Ger. *Grenze*, boundary] see under *ray*.

GRF growth hormone releasing factor; see under *hormone*.

GRH growth hormone releasing hormone.

grid (grid) 1. a grating; in radiology, a device consisting essentially of a series of narrow lead strips closely spaced on their edges and separated by spacers of low density material; used to reduce the amount of scattered radiation reaching the x-ray film. 2. a chart with horizontal and perpendicular lines for plotting curves. **baby g.**, a direct reading control chart on infant growth. **focused g.**, in radiography, one in which the lead foils are placed

at an angle so that they all point toward a focus at a specified distance. **moving g.**, a grid which is moved continuously or oscillated throughout the making of a radiograph. **parallel g.**, in radiography, one in which the lead strips are oriented parallel to each other. **Potter-Bucky g.**, a grid utilizing the principle of the moving grid, with an oscillating movement. **stationary g.**, one placed in apposition to a roentgenographic film for its accentuation of detail; the grid lines will be visible on the resultant roentgenograms. **Wetzel g.**, a direct reading chart for evaluating physical fitness in terms of body build, developmental level, and basal metabolism.

grief (grēf) the normal emotional response to an external and consciously recognized loss; it is self-limited, gradually subsiding within a reasonable time.

Griesinger's disease, sign (symptom) (gre'zing-erz) [Wilhelm Griesinger, German neurologist, 1817–1868] see *hookworm disease*, under *disease*, and see under *sign*.

Grignard's reagent (compound) (grēn-yahrz') [François Auguste Victor Grignard, French chemist, 1871–1935] see under *reagent*.

Grifulvin (grī-ful'vin) trademark for a preparation of griseofulvin.

Grindelia (grin-de'le-ah) [H. Grindel, 1776–1836] a genus of American composite-flowered plants; the leaves and flowering tops of *G. camporum*, *G. cuneifolia*, and *G. squarrosa*, of the western United States, are used as a mild expectorant.

grinding (grind'ing) rubbing together with force; wearing away or polishing by rubbing. See also *bruxism*. **selective g.**, the modification of the occlusal forms of teeth by grinding according to a plan. **spot g.**, occlusal equilibration.

grinding-in (grind'ing-in) the process of correcting errors in the centric and eccentric occlusions of natural or artificial teeth.

grip (grip) 1. [Fr. *grippe*] influenza. 2. a grasping or seizing. **Dabney's g.**, epidemic pleurodynia. **devil's g.**, epidemic pleurodynia.

grippal (grip'al) pertaining to grip, or influenza.

grippe (grip) influenza. **g. aurique'**, a polyneuritis sometimes resulting from the therapeutic use of gold salts. **Balkan g.**, a respiratory infection reported in the Balkans during World War II which proved to be due to *Rickettsia burneti*. See *Q fever*.

Grisactin (gris-ak'tin) trademark for a preparation of griseofulvin.

griseofulvin (gris'e-o-ful'vin) [USP] chemical name: (1'S-trans)-7-chloro-2',4,6-trimethoxy-6'-methylspiro[benzofuran-2(3-H),1'-[2]cyclohexene]-3,4'-dione. An antibiotic produced by *Penicillium griseofulvum* or by other means, $\text{C}_{17}\text{H}_{17}\text{ClO}_6$, occurring as a white to creamy white powder; used as an antifungal in the treatment of dermatophytic infections of the hands, feet, nails, and scalp, administered orally. Called also *Curling factor*.

griseomycin (gris'e-o-mi'sin) proactinomycin B.

Grisolle's sign (gre-zolz') [Augustin Grisolle, French physician, 1811–1869] see under *sign*.

Gris-PEG (gris'peg) trademark for a preparation of griseofulvin.

Gritti's amputation (operation) (gre'tēz) [Rocco Gritti, surgeon in Milan, 1828–1920] see under *amputation*.

Gritti-Stokes amputation (gre'te-stōks) [Rocco Gritti; Sir William Stokes] see under *amputation*.

Grocco's sign (triangle, triangular dullness) (grok'ōz) [Pietro Grocco, physician in Florence, 1856–1916] see under *sign*.

grog (grog) navicular disease.

groin (groin) [L. *inguen*] the junctional region between the abdomen and thigh; called also *inguen* [NA].

Grönblad-Strandberg syndrome (gren'blad-strand'berg) [Ester Elizabeth Grönblad, Swedish ophthalmologist, born 1898; James Victor Strandberg, Swedish dermatologist] see under *syndrome*.

groove (grōōv) a shallow linear depression, especially one appearing during embryonic development or persisting in definitive bone or tooth substance; see also *fissure* and *sulcus*. **alveolingual g.**, the groove between the lower jaw and the tongue. **anterolateral g. of medulla**, sulcus lateralis anterior medullae oblongatae. **anterolateral g. of spinal cord**, sulcus lateralis anterior medullae spinalis. **anteromedian g. of spinal cord**, fissura mediana anterior medullae spinalis. **arterial g's**, sulci arteriosi. **atrioventricular g.**, auriculoventricular g., sulcus coronarius cordis. **basilar g.**, sulcus basilaris pontis. **basilar g. of occipital bone**, clivus ossis occipitalis. **basilar g. of sphenoid bone**, clivus ossis sphenoidalis. **bicipital g. of humerus**, sulcus intertubercularis humeri. **bicipital g.**, lateral, sulcus bicipitalis lateralis. **bicipital g.**, medial, sulcus bicipitalis medialis. **Blessig's g.**, a trace in the eye of the developing embryo corresponding in position with the future ora serrata retinae. **branchial g.**, an external furrow, lined with ectoderm, occurring in the embryo between two branchial arches. **buccal g.**, a developmental groove on the buccal surface of a posterior tooth. **carotid g. of sphenoid bone**, cavernous g. of sphenoid bone, sul-

cus caroticus ossis sphenoidalis. **costal g.**, sulcus costae. **dental g.**, primitive, a groove in the border of the jaws of the embryo. **developmental g's**, fine grooves in the enamel which mark the junction of the primitive lobes of a tooth. **digastric g.**, incisura mastoidea ossis temporalis. **distobuccal g.**, the distal of the two buccal grooves ordinarily found on the mandibular first molar. **enamel g's**, the grooves bounding the enamel knot. **ethmoidal g.**, ethmoidal sulcus of nasal bone. **g. for eustachian tube**, sulcus tubae auditivae. **genital g.**, urethral g. **gingival g.**, free, a shallow groove on the facial surface of the gingiva, running parallel to the margin of the gingiva at a distance of 0.5 to 1.5 mm., and usually at the level of, or somewhat apical to, the bottom of the gingival sulcus. **g. of great superficial petrosal nerve**, sulcus nervi petrosi majoris. **hamular g.**, sulcus hamuli pterygoidei. **Harrison's g.**, a horizontal depression along the lower border of the thorax, corresponding to the costal insertion of the diaphragm; seen in advanced rickets in children. **infraorbital g. of maxilla**, sulcus infraorbitalis maxillae. **interatrial g.**, a slight depression on the external surface of the heart, marking the separation of the atria. **interdental g.**, a linear, vertical depression on the surface of the interdental papillae; it functions as a sluiceway for the egress of food from the interproximal areas. **interosseous g. of calcaneus**, sulcus calcanei. **intertubercular g. of humerus**, sulcus intertubercularis humeri. **interventricular g., anterior**, sulcus interventricularis anterior. **interventricular g., posterior**, sulcus interventricularis posterior. **labial g.**, an embryonic groove produced by degeneration of the central cells of the labial lamina, which later becomes the vestibule of the oral cavity. **lacrimal g.**, fossa sacci lacrimalis. **g. of lacrimal bone**, sulcus lacrimalis ossis lacrimalis. **laryngotracheal g.**, a furrow at the caudal end of the embryonic pharynx that develops into the respiratory tract. **lateral g. for lateral sinus of occipital bone**, sulcus sinus transversi. **lateral g. for lateral sinus of parietal bone**, sulcus sinus sigmoidei ossis parietalis. **lateral g. for sigmoidal part of lateral sinus**, sulcus sinus sigmoidei ossis temporalis. **Liebermeister's g's**, developmental grooves on the surface of the liver. **lingual g.**, a developmental groove on the lingual surface of a posterior tooth. **medullary g.**, neural g. **mesio-buccal g.**, the mesial of the two buccal grooves ordinarily found on the mandibular first molar. **mesio-lingual g.**, a groove over the junction of the fifth cusp on an upper molar tooth. **g. for middle temporal artery**, sulcus arteriae temporalis mediae. **musculospiral g.**, sulcus nervi radialis. **mylohyoid g. of inferior maxillary bone**, mylohyoid sulcus of mandible; see under *sulcus*. **nail g.**, a pathological linear depression of the nail plate running either lengthwise or, much more often, transversely. **nasal g., g. for nasal nerve**, ethmoidal sulcus of nasal bone. **nasolacrimal g.**, an epithelial ingrowth parallel with but medial to the nasomaxillary groove of the embryo, which marks the site of later development of the nasolacrimal duct. **nasomaxillary g.**, a furrow located between the maxillary and the lateral nasal process of the same side in the embryo. **nasopalatine g.**, a furrow on the lateral surface of the vomer for the nasopalatine nerve and vessels. **nasopharyngeal g.**, a faint line between the nasal cavity and the nasopharynx. **neural g.**, the groove produced by the invagination of the neural plate of the embryo during the process of formation of the neural tube; called also *medullary g.* **obturator g.**, sulcus obturatorius ossis pubis. **occipital g.**, sulcus arteriae occipitalis. **occlusal g's**, the developmental grooves on the occlusal surface of a posterior tooth. **olfactory g.**, ethmoid fossa. **optic g.**, sulcus chiasmatis. **palatine g., anterior**, canalis incisivus. **palatine g's of maxilla**, sulci palatini maxillae. **palatine g. of palatine bone**, sulcus palatinus major ossis palatini. **palatomaxillary g. of palatine bone**, sulcus palatinus major ossis palatini. **paraglenoid g's of hip bone**, sulci paraglenoidales ossis coxae. **paramedian g. of spinal cord, anterior (obs.)**, sulcus intermedius anterior medullae spinalis. **paramedian g. of spinal cord, posterior (obs.)**, sulcus intermedius posterior medullae spinalis. **posterolateral g. of spinal cord**, sulcus lateralis posterior medullae spinalis. **preauricular g's of ilium**, sulci paraglenoidales ossis coxae. **primitive g.**, a lengthwise furrow on the outer surface of the primitive streak of the embryo. **pterygopalatine g. of pterygoid plate**, sulcus pterygopalatinus processus pterygoidei. **radial g., g. for radial nerve**, sulcus nervi radialis. **sagittal g.**, a groove on the inner surface of the skull for the superior longitudinal sinus. **Sibson's g.**, a furrow sometimes seen at the lower border of the pectoralis major muscle. **sigmoid g. of temporal bone**, sulcus sinus sigmoidei ossis temporalis. **g. of small superficial petrosal nerve**, sulcus nervi petrosi minoris. **spiral g.**, sulcus nervi radialis. **subclavian g.**, a furrow along the middle of the clavicle for the subclavius muscle. **subcostal g.**, sulcus costae. **g. for superior longitudinal sinus**, sulcus sagittalis ossis parietalis. **supplemental g's**, grooves on the surface of a tooth which do not mark (as do the developmental grooves) the junction of the primitive lobes of the tooth. **g. for tibialis posticus muscle**, sulcus malleolaris tibiae. **trigeminal g.**, the embryonic structure which devel-

ops into the gasserian ganglion. **ulnar g., g. of ulnar nerve**, sulcus nervi ulnaris. **urethral g.**, the embryonic groove that becomes the penile urethra as the genital folds at each side bridge it. **venous g's**, venous sulci. **Verga's lacrima g.**, a groove running downward from the lower orifice of the nasal duct. **vertebral g.**, the depression on each side of the spine between the spinous processes, laminae, and transverse processes; it lodges the deep back muscles.

gross (grös) [L. *grossus* rough] coarse or large; visible to the naked eye, as gross pathology; macroscopic; taking no account of minutiae.

Gross's disease (grös'ez) [Samuel David Gross, American surgeon, 1805–1884] see under *disease*.

Grossich's method (grös'iks) [Antonio Grossich, surgeon in Fiume, 1849–1926] see under *method*.

Grossman's sign (grös'manz) [Morris Grossman, American neurologist, born 1881] see under *sign*.

ground-glass (grownd-glas) having a filmy, hazy appearance, as in radiographs of a lung containing excess fluid.

group (grōop) 1. an assemblage of objects having certain things in common. 2. a number of atoms forming a recognizable and usually a transferable portion of a molecule. **alcohol g.**, a combination of carbon, hydrogen, and oxygen atoms in a molecule, which is characteristic of a chemical compound known as an alcohol. There are three: —CH₂OH, the primary, =CHOH, the secondary, and ≡COH, the tertiary alcohol group. **azo g.**, a bivalent chemical group composed of two nitrogen atoms, —N:N—. **blood g.**, see *blood group*, under *B. coli-aerogenes g.*, a group of microorganisms which includes *Escherichia coli*, *Aerobacter aerogenes*, and a variety of forms intermediate between these two organisms; called also *coliform bacilli* or *coliform bacteria*. **colon-typhoid-dysentery g.**, a collective term referring to bacteria of the genera *Escherichia*, *Salmonella*, and *Shigella*. **complementophil g.**, in Ehrlich's side-chain theory, the group of the amboceptor by means of which it is attached to the complement. **cytophil g.**, in Ehrlich's side-chain theory, the group of the amboceptor by means of which it is anchored to the sensitive cell. **encounter g.**, a sensitivity group in which the members strive to gain emotional rather than intellectual insight with emphasis on the expression of interpersonal feelings in the group situation. **ergophore g.**, see *ergophore*. **glucophore g.**, see *glucophore*. **haptophore g.**, see *haptophore*. **heboid-paranoid g.**, a former concept of a group of mental disorders, including the juvenile insanities, dementia praecox, and paranoia. **hemorrhagic-septicemia g.**, a group of bacteria of which *Pasteurella pestis* is the type organism. **hog cholera g.**, paratyphoid-enteritidis g. **methyl g.**, a monovalent chemical group, —CH₃. **osmophore g.**, see *osmophore*. **paratyphoid-enteritidis g.**, a group of organisms of the genus *Salmonella*, causing food poisoning in man and various diseases in animals. **peptide g.**, the bivalent radical, —CO·NH—, formed by reaction between the NH₂ and COOH groups of adjacent amino acids, and by such linkage building up compounds known as di-, tri-, tetra-[etc.]peptides, depending on the number of amino acids making up the molecule. **prosthetic g.**, 1. an organic radical, nonprotein in nature, which together with a protein carrier forms an enzyme. 2. a cofactor tightly bound to an enzyme, i.e., it is an integral part of the enzyme and not readily dissociated from it. 3. a cofactor that may reversibly dissociate from the protein component of an enzyme; a coenzyme. **proteus g.**, a group of bacteria of which *Proteus vulgaris* is the type organism. **saccharide g.**, a combination of carbon, hydrogen, and oxygen atoms in a hypothetical molecule, C₆H₁₀O₅, the number of which in the compound determines the specific name of the polysaccharide, as di-, tri-, or tetrasaccharide. **salmonella g.**, enteric bacilli of the genus *Salmonella*. **sapophore g.**, see *sapophore*. **sensitivity g.**, **sensitivity training g.**, a nonclinical group not intended for persons with mental illnesses or substantial emotional problems, which, in an effort to develop the assets of leadership, management, counseling, or other roles, focuses on self-awareness and understanding and on interpersonal interactions. Called also *training g.* (*T g.* or *T-g.*). **T g., T-g.**, sensitivity g. **sulfonic g.**, a monovalent radical, —SO₂OH. **toxophore g.**, see *toxophore*. **training g.**, sensitivity g.

grouping (grōop'ing) the classification of individual entities according to certain common characteristics. **antigenic structural g.**, antigenic determinant; see under *determinant*. **blood g.**, the classification of blood (erythrocytes) according to the type to which it belongs; employed in determination of the suitability of blood for transfusion in a particular recipient, in cases of disputed paternity, and in certain criminal cases. See *blood group*, under *B. haptenic g.*, haptenic.

group-specific (grōop'spē-sif'ik) specific for a given group; as a blood group or certain microorganisms; said of agglutinins.

group-transfer (grōop'trans'fer) denoting a chemical reaction, excluding oxidation and reduction, in which molecules exchange functional groups, a process catalyzed by enzymes called transferases.

Grove's cell (grōv) [Sir William Robert Grove, English physicist, 1811–1896] see under *cell*.

growth (grōth) 1. a normal process of increase in size of an organism as a result of accretion of tissue similar to that originally present. Cf. *differentiation*. 2. an abnormal formation, such as a tumor. 3. the proliferation of cells as in a bacterial culture. **absolute g.**, an expression of the actual increase in size of an individual, or of a particular organ or part. **accretionary g.**, increase in size resulting from increase in number of special cells by mitotic division, other more differentiated cells which perform various physiological functions having lost the ability to proliferate. **allometric g.**, the growth of different organs or parts of an organism at different rates. **appositional g.**, growth by addition at the periphery of a particular structure or part. Cf. *interstitial g.* **auxetic g.**, auxesis. **balanced g.**, a steady state condition in which every component of the cell doubles in a cell generation (time between divisions). **condylar g.**, the growth of the condyle of the temporomandibular joint, usually reflected in a downward and forward positioning of the mandible and teeth. **differential g.**, an expression of the comparison of the increases in size of dissimilar organisms, organs, or parts. **heterogonous g.**, growth of such a nature that, when it is plotted logarithmically, it gives a straight line. **histiotypic g.**, uncontrolled growth of cells as occurs in tissue cultures. **interstitial g.**, growth occurring in the interior of parts or structures already formed. Cf. *appositional g.* **intussusceptive g.**, auxesis. **isometric g.**, the growth of different organs or parts of an organism at the same rate. **multiplicative g.**, increase in the size of an organism, organ, or part, resulting from increase in the number of cells brought about by their mitotic division, the average size of the cells remaining about the same. **new g.**, a neoplasm, or tumor. **organotypic g.**, controlled growth of cells as occurs normally in the production of organs and parts. **relative g.**, an expression of the comparison of the increases in size of similar organisms, organs, or parts.

grübel-sucht (grē-bel-sōōkt) [Ger.] the drawing of overly fine distinctions (hair-splitting); worrying over trifles. Seen in obsessive-compulsive personalities.

Gruber's bougies, speculum, test (groo'berz) [Josef Gruber, Austrian otologist, 1827–1900] see under *bougie, speculum, and tests*.

Gruber's fossa, hernia, suture (groo'berz) [Wenaslaus Leopoldovich Gruber, Russian anatomist, 1814–1890] see under *fossa and hernia*, and see *fissura petrosphenooccipitalis*.

Gruber's reaction test (groo'berz) [Max von Gruber, bacteriologist in Munich, 1853–1927] Widal's test.

Gruber-Widal reaction, test (groo'ber-ve-dahl') [Max von Gruber; Georges Fernand Isidore Widal, French physician, 1862–1929] Gruber's reaction.

Grubyella (groo'be-el'ah) former name for the genus *Trichophyton*.

gruel (groo'el) a thin paste or porridge made of cereal grain.

gruffs (grufs) the coarse part of a drug.

grumose, grumous (groo'mōs, groo'mus) [L. *grumus* heap] clotted or lumpy.

Grünbaum-Widal test (grēn'bowm-ve-dahl') [A. S. Grünbaum; Georges Fernand Isidore Widal, French physician, 1862–1929] Gruber's reaction.

grundplatte (groont-plaht'tē) [Ger.] lamina basalis.

grutum (groo'tum) [L.] (*obs.*) milium.

Grynfelt's hernia, triangle (grin'felts) [Joseph Casimir Grynfelt, French surgeon, 1840–1913] see under *hernia*, and see *Lesgaft's space, under space*.

Grynfelt-Lesgaft triangle (grin'felt-les'gaft) [Joseph Casimir Grynfelt; Peter Frantsevich Lesgaft, Russian physician, 1837–1909] Lesgaft's space.

gryochrome (grī'o-krōm) [Gr. *gry morsel* + *chrōma* color] a nerve cell in which the stainable matter of the cell body appears as fine granules; used also adjectively.

gryphosis (grī-fō'sis) abnormal curvature; see *gryposis*.

gryposis (grī-po'sis) [Gr. *grypōsis* a crooking, hooking] abnormal curvature, as of the nails. **g. pe'nis** chordee. **g. un'guum** (*obs.*), onychogryphosis.

GSH reduced glutathione.

GSSG oxidized glutathione.

G.S.W. gunshot wound.

gt. abbreviation for *L. gut'ta*, drop.

GTH gonadotropic hormone.

GTP guanosine triphosphate.

gtt. abbreviation for *L. gut'tae*, drops.

GU genitourinary.

guaco (gwah'ko) [Spanish American] a name given to many South American plants, and especially to *Mikania guaco*; Humb. & Bonpl. (Compositae); used by certain South American natives in asthma, dyspepsia, gout, rheumatism, and skin diseases, and reportedly for snakebite.

guaiac (gwi'ak) a resin from the wood of *Guajacum officinale*

L. and *G. sanctum* L. (Zygophyllaceae), trees of Haiti and the Dominican Republic; used as a reagent in tests for occult blood and formerly in the treatment of rheumatism.

guaiacol (gwi'ah-kol) the methyl ether of pyrocatechin, a solid or a colorless oily liquid, $\text{OH} \cdot \text{C}_6\text{H}_4\text{O} \cdot \text{CH}_3$, derived from beech creosote; formerly used as an expectorant.

guaifenesin (gwi-fen'ē-sin) [USP] chemical name: 3-(2-methoxyphenoxy)-1,2-propanediol. The glyceryl ester of guaiacol, $\text{C}_{10}\text{H}_{14}\text{O}_4$, occurring as a white or slightly gray, crystalline powder; used as an expectorant, administered orally. Called also *glyceryl guaiacolate*, *guaiphenesin*, and *methphenoxydiol*.

guaiphenesin (gwi-fen'ē-sin) guaifenesin.

guaithylline (gwi'thī-lin) chemical name: theophylline compound with 3-(*o*-methoxyphenoxy)-1,2-propanediol; a bronchodilator and expectorant, $\text{C}_7\text{H}_8\text{N}_4\text{O}_2 \cdot \text{C}_{10}\text{H}_{14}\text{O}_4$.

guanabenz (gwan'ah-benz) chemical name: 2-[(2,6-dichlorophenyl)methylene]hydrazinecarboximidamide; an antihypertensive, $\text{C}_8\text{H}_8\text{Cl}_2\text{N}_4$.

guanacine sulfate (gwan'ah-klēn) chemical name: [2-(3,6-dihydro-4-methyl-1(2*H*)-pyridyl)ethyl]guanidine sulfate (1:1) dihydrate; an antihypertensive, $\text{C}_{10}\text{H}_{18}\text{N}_4 \cdot \text{H}_2\text{SO}_4 \cdot 2\text{H}_2\text{O}$.

guanadrel sulfate (gwan'ah-drel) chemical name: (1,4-dioxaspiro[4.5]dec-2-ylmethyl)guanidine sulfate (2:1); an antihypertensive, $(\text{C}_{10}\text{H}_{10}\text{N}_2\text{O}_2)_2 \cdot \text{H}_2\text{SO}_4$.

guanase (gwan'ās) guanine deaminase.

gancycidine (gwan'si-dēn) chemical name: *N'*-cyano-*N*-(1,1-dimethylpropyl) guanidine; an antihypertensive, $\text{C}_7\text{H}_{14}\text{N}_4$.

guanethidine (gwan-eth'i-dēn) chemical name: [2-(hexahydro-1(2*H*)-azocinyl)ethyl]guanidine; an adrenergic blocking agent, $\text{C}_{10}\text{H}_{22}\text{N}_4$, which has prolonged and marked hypotensive effects. **g. monosulfate**, the monosulfate salt of guanethidine, $\text{C}_{10}\text{H}_{22}\text{N}_4 \cdot \text{H}_2\text{SO}_4$, used as an antihypertensive. **g. sulfate** [USP], the sulfate salt of guanethidine, $(\text{C}_{10}\text{H}_{22}\text{N}_4)_2 \cdot \text{H}_2\text{SO}_4$, used as an oral antihypertensive.

guanidase (gwan'i-dās) an enzyme produced by several organisms, including *Aspergillus niger*; it hydrolyzes guanidine into urea and ammonia.

guanidine (gwan'i-din) a poisonous base, the amidine of amino carbamic acid, $\text{NH}:\text{C}(\text{NH}_2)_2$. **g. hydrochloride**, a compound used in the treatment of myasthenia gravis.

guanidinemia (gwan'i-din-e'me-ah) the presence of guanidine in the blood.

guanine (gwan'in) a white, crystalline base, 2-amino-6-oxypurine, $\text{C}_5\text{H}_5\text{N}_5\text{O}$, found in guano, fish scales, leguminous seedlings, and various animal tissues. It is a fundamental constituent of DNA and RNA, and occurs as a white deposit in the tissues of swine affected with a kind of gout. **g. nucleotide**, guanylic acid.

guanochlor sulfate (gwan'o-klor) chemical name: 2-[2-(2,6-dichlorophenoxy)ethyl]hydrazinecarboximidamide sulfate (2:1); an antihypertensive, $(\text{C}_8\text{H}_{12}\text{Cl}_2\text{N}_4\text{O})_2 \cdot \text{H}_2\text{SO}_4$.

guanophore (gwan'o-for) [*guanine* + Gr. *phoros* bearing] a cell filled with guanine crystals which produce interference in the light and thus give the cell a silvery appearance.

guanosine (gwan'o-sin) a nucleoside, guanine riboside, $\text{C}_{10}\text{H}_{13}\text{O}_5\text{N}_5$, a major constituent of DNA and RNA; it is extracted from the leaves and unripe berries of the coffee plant and is used in biochemical research. **g. monophosphate (GMP)**, a nucleotide important in metabolism and for the formation of RNA on DNA templates. **g. triphosphate (GTP)**, an energy-rich compound, analogous to adenosine triphosphate (ATP), involved in several metabolic reactions, e.g., the formation of peptide bonds in protein synthesis and of an intermediate in purine synthesis.

guanoxabenz (gwahn-oks'ah-benz) chemical name: 2-[(2,6-dichlorophenyl)methylene]-*N*-hydroxyhydrazine carboximidamide; an antihypertensive, $\text{C}_8\text{H}_8\text{Cl}_2\text{N}_4\text{O}$.

guanoxan sulfate (gwan-oks'an) chemical name: (2,3-dihydro-1,4-benzodioxin-2-ylmethyl)guanidine; an antihypertensive, $(\text{C}_{10}\text{H}_{13}\text{N}_3\text{O}_2)_2 \cdot \text{H}_2\text{SO}_4$.

guarana (gwah-rah'nah) [Tupi-Guarani] a dried paste prepared from the seeds of *Paullinia cupana*, a tree of Brazil; used as an astringent in diarrhea.

guaranine (gwah-rah'nin) caffeine.

guard (gahrd) a protective device. **mouth g.**, an elastoplastic removable appliance, used to protect the teeth and their investing tissues in contact sports. **night g.**, an acrylic resin removable device used to stabilize the teeth and to minimize the traumatic effects of occlusal habits such as bruxism.

Guarnieri's bodies (corpuscles) (gwar'ne-er'ēz) [Guiseppe Guarnieri, Italian physician, 1856–1918] see under *body*.

guayule (gwi-oo'la) the Mexican rubber plant, *Parthenium argentatum*, which may produce a severe allergic dermatitis (guayule dermatitis).

gubernacular (gu'ber-nak'u-lar) pertaining to a gubernaculum.

gubernaculum (gu'ber-nak'u-lum) [L. "helm," "rudder"] something which guides. **chorda g.**, a portion of the guber-

naeculum testis and round ligament that develops in the body wall of the embryo. **Hunter's g.**, g. testis. **g. tes'tis** [NA], the fetal ligament attached to the lower end of the epididymis and testis and, at its other end, to the bottom of the scrotum; it is present during, and is thought to guide, the descent of the testis into the scrotum and then atrophies. Called also *Hunter's g.*

Gubler's hemiplegia, etc. (gōōb'lerz) [Adolphe Marie Gubler, French physician, 1821–1879] see under *hemiplegia*, line, *paralysis*, *sign*, and *tumor*.

Gubler-Robin typhus [A. M. Gubler; Albert Edouard Charles Robin, French physician, 1847–1928] see under *typhus*.

Gudden's commissure, law [Bernhard Alloys von Gudden, German neurologist, 1824–1886] see *commissurae supraorbitae*, and see under *law*.

Guelpa treatment (gwel'pah) [Guglielmo Guelpa, Italian physician in Paris, 1850–1930] see under *treatment*.

Guéneau de Mussy's point (ga-no'dü-mis-sēz') [Noel François Odon Guéneau de Mussy, French physician, 1813–1885] see *de Mussy's point*, under *point*.

Guenz (gints) see *Günz*.

Guenzburg (gints'boorg) see *günzburg*.

Guérin's fold, etc. (ga-ranz') [Alphonse François Marie Guérin, French surgeon, 1816–1895] see under *fold*, *fracture*, *gland*, *sinus*, and *valve*.

guidance (gid'ans) 1. a guide. 2. an act of guidance. **condylar g.**, the mechanical device on a dental articulator which is intended to produce guidance in articulator movement similar to those produced by the paths of the condyles in the temporomandibular joints. **incisal g.**, the influence on mandibular movements by the contacting surfaces of the mandibular and maxillary anterior teeth.

guide (gid) a device by which another object is led in its proper course, such as a grooved sound, or a filiform bougie over which a tunneled sound is passed, as in stricture of the urethra. **adjustable anterior g.**, an anterior guide whose superior surface may be varied to provide desired separation of dental casts in various eccentric relationships. **anterior g.**, that part of a dental articulator on which the anterior guide pin rests to maintain the vertical dimension of occlusion; it influences the degree of separation of the casts in eccentric relationships. **condylar g. inclination**, the angle of inclination of the condylar guidance mechanism of an articulator in relation to the horizontal plane of the instrument. **incisal g.**, that part of a dental articulator which maintains the incisal guide angle.

guideline (gid'lin) any line used as a marker or indicator. **clasp g.**, survey line.

Guidi's canal (gwe'dēz) [Guido Guidi (L., *Vidius* (Vidus), Italian physician, 1500–1569] canalis pterygoideus.

Guillain-Barré syndrome (ge-yan'-bar-ra') [Georges Guillain, French neurologist, 1876–1961; Jean Alexander Barré, French neurologist, born 1880] acute febrile polyneuritis.

guillotine (gil'o-tēn) [Fr.] an instrument for excising a tonsil or the uvula.

Guinard's treatment (method) (ge-narz') [Aimé Guinard, French surgeon, 1856–1911] see under *treatment*.

guinea pig (gin'e pig) a small rodent, *Cavia cobaya*, used extensively for experimental work.

Guinon's disease (ge-nawz') [Georges Guinon, French physician, 1859–1929] Gilles de la Tourette syndrome.

Guiteras' disease (ge-ta'ras) [Juan Guiteras, Cuban physician, 1852–1925] see under *disease*.

Gull's disease (gulz) [Sir William Withey Gull, English physician, 1816–1890] see under *disease*.

gullet (gul'et) the esophagus.

Gullstrand's slit lamp, law (gul'strandz) [Allvar Gullstrand, Swedish ophthalmologist, 1862–1930; winner of the Nobel prize for physiology and medicine in 1911 for his work on the dioptrics of the eye] see under *lamp* and *law*.

L-gulonolactone (gu'lo-no-lak'tōn) the immediate precursor of ascorbic acid in plants and in those animals capable of its biosynthesis; gulonolactone is itself formed from L-gulonic acid.

gulose (gu'lōs) a hexose, CH₂OH(CHOH)₄CHO, isomeric with glucose but nonfermentable.

gum (gum) [L. *gummi*] 1. a mucilaginous excretion from various plants; on hydrolysis gums yield hexoses, pentoses, and uronic acids. 2. see *gingivae*. **acaroid g.**, a resin derived from *Xanthorrhoea hastilis* and *X. arborea*, tall liliaceous plants growing in Australia. **animal g.**, a polysaccharide isolated from various proteins and tissues; possibly an impure chondroitin. **g. arabic**, acacia. **Australian g.**, wattle g. **g. benjamin**, **g. benzoin**, benzoin, def. 1. **blackboy g.**, acaroid g. **blue g.**, 1. eucalyptus. 2. the bluish discoloration of the gums seen in lead poisoning. **Botany Bay g.**, acaroid gum. **British g.**, dextrin. **g. camphor**, camphor. **cape g.**, a gum from *Acacia horrida*. **eucalyptus g.**, red g. **ghatti g.**, a gum from the dhava tree of India; used like acacia. **guar g.** [NF], a gum obtained from the ground endosperms of the leguminous tree *Cyamopsis tetragonolobus*; used as a tablet binder and disintegrant

in pharmaceutical preparations. **Indian g.**, karaya g. **karaya g.**, the dried gummy exudation from *Sterculia urens* or other species of *Sterculia*, which becomes gelatinous when moisture is added; used as a bulk laxative. Because of its adhesive properties, products containing karaya gum are used as dental adhesives and as skin adhesives and protective skin barriers in the fitting and care of colostomy appliances and in other conditions involving an artificial stoma. Called also *sterculia g.* **Kordofan g.**, the best variety of acacia from Kordofan and adjacent region. **mesquite g.**, a gum from *Prosopis juliflora*, of Texas; used as a substitute for acacia. **g. opium**, opium. **red g.**, an exudation from the bark of *Eucalyptus rostrata* and other species; used as an astringent in throat affections. **g. senegal**, acacia. **sterculia g.**, karaya g. **g. thus**, turpentine. **g. tragacanth**, tragacanth. **xanthan g.** [NF], a high molecular weight polysaccharide gum produced by a pure-culture fermentation of a carbohydrate with *Xanthomonas campestris*, then purified by recovery with isopropyl alcohol, dried, and milled; it contains D-glucose and D-mannose as the dominant hexose units, along with D-glucuronic acid, is prepared as the sodium, potassium, or calcium salt, and is used as a suspending agent in pharmaceutical preparations. **wattle g.**, the gum of several Australian species of *Acacia*, an excellent substitute for acacia.

gumboil (gum'boil) parulis.

gumma (gum'ah), pl. *gummas* or *gum'mata* [L. *gummi* gum] a soft, gummy tumor, such as that occurring in tertiary syphilis, made up of tissue resembling granulation tissue; syphiloma. **miliary g.**, the large gumma of syphilitic aortitis which obliterates the normal perivascular arrangement of cells. **scrofulous g.**, tuberculous g. **tuberculous g.**, a soft gummy tumor of tuberculous origin, occurring in scrofuloderma gummosa.

gummata (gum'ah-tah) plural of *gumma*.

gummate (gum'āt) an arabate.

gummatous (gum'ah-tus) of the nature of gumma.

gummi (gum'i) [L.] gum (of plants).

gummy (gum'e) resembling a gum or a gumma.

Gumprecht's shadow (goom'prekts) [Ferdinand Gumprecht, German physician, born 1864] see under *shadow*.

gum-resin (gum-rez'in) a concrete juice exuding from various trees. The gum-resins consist of a principle soluble in water and insoluble in alcohol, combined with a volatile oil or resin soluble in alcohol, but not in water, and include ammoniac, gamboge, myrrh, and scammony.

guncotton (gun-kot'n) pyroxylin.

gundo (goon'do) goundou.

Gunn's dots, syndrome (phenomenon) (gunz) [Robert Marcus Gunn, English ophthalmologist, 1850–1909] see under *dot* and *syndrome*.

Gunning's test (reaction) (gun'ingz) [Jan Willem Gunning, Dutch chemist, 1827–1901] see under *test*.

Gunning's splint (gun'ingz) [Thomas Brian Gunning, American dentist, 1813–1889] see under *splint*.

Günz's ligament (gints'ez) [Justus Gottfried Günz, German anatomist, 1714–1754] see under *ligament*.

Günzberg's test (gints'boorgz) [Alfred Günzberg, German physician, born 1861] see under *tests*.

gurgulio (gur-gu'le-o) [L. "gullet"] uvula palatina.

gurney (ger'nē) a wheeled cot used in hospitals.

Gussenbauer's operation, suture (goos'en-bow'erz) [Carl Gussenbauer, German surgeon, 1842–1903] see under *operation* and *suture*.

gustation (gus-ta'shun) [L. *gustatio*, from *gustare* to taste] the act of tasting or the sense of taste. **colored g.**, the association of colors with tastes.

gustatism (gus'tah-tizm) a sensation of taste produced indirectly by other than gustatory stimuli.

gustatory (gus'tah-to're) [L. *gustatorius*] pertaining to the sense of taste.

gustin (gus'tin) a polypeptide (molecular weight, 27,000) present in saliva and containing two zinc atoms; it is apparently necessary for normal development of the taste buds.

gustometer (gus-tom'tē-ter) [L. *gustare* to taste + Gr. *metron* measure] an apparatus used in the quantitative determination of taste thresholds.

gustometry (gus-tom'tē-tre) the clinical determination of thresholds of the sense of taste.

gut (gut) 1. the intestine or bowel. 2. the primitive digestive tube, consisting of the fore-, mid-, and hindgut. 3. catgut. **blind g.**, the cecum. **postanal g.**, a temporary extension of the embryonic gut caudal to the cloaca. **preoral g.**, Seessel's pouch. **primitive g.**, archenteron. **ribbon g.**, an absorbable ribbon of the intestinal tissue of animals used for suturing where broad support is to be secured. **silkworm g.**, see *silk-worm-gut*, under *S.* **tail g.**, postanal g.

Guthrie's formula (guth'rēz) [Clyde Graeme Guthrie, American physician, 1880–1931] see under *formula*.

Guthrie's muscle (guth'rēz) [George James *Guthrie*, English surgeon, 1785–1856] *musculus sphincter urethrae*.

gutta (gut'ah), pl. *gut'tae* [L.] a drop. **g. sere'na** (obs.), amaurosis.

guttae (gut'e) plural of *gutta*.

gutta-percha (gut'ah-per'chah) [USP] the coagulated, dried, purified latex of trees of the genera *Palaguium* and *Payena*, most commonly *Palaguium gutta*; used as a dental restoration agent and in orthopedics for fracture splints. **baseplate g.**, gutta-percha combined with fillers and coloring materials, rolled into sheets; used in dentistry for temporary restorations, filling root canals, separating teeth, and restricting gingival tissue.

Guttat. abbreviation for *L. gutta'tim*, drop by drop.

guttate (gut'āt) characterized by lesions that are drop-shaped.

guttatim (gut-ta'tim) [L.] drop by drop.

guttation (gut-ta'shun) the secretion of water by plant cells under humid conditions, an indication that the cells actively transport some materials against a concentration gradient.

guttering (gut'er-ing) the operation of cutting a gutter-like excision in a bone.

gutti (gut'i) cambogia.

gut-tie (gut'ti) 1. a twisting of the intestine of animals, causing colicky pains. 2. a condition in cattle in which a loop of intestine passes through a tear in the peritoneum and is held there, producing obstruction of the bowels.

Guttmann's sign (goot'mahnz) [Paul *Guttmann*, Berlin physician, 1834–1893] see under *sign*.

Gutt. quibusd. abbreviation for *L. gut'tis quibusdam*, with a few drops.

guttur (gut'ur) [L.] throat.

guttural (gut'ur-al) pertaining to the throat.

gutturaphony (gut'ur-o'ne) [guttur + Gr. *phōnē* voice] throaty quality of the voice.

gutturrotetany (gut'ur-o-tet'ah-ne) [guttur + *tetany*] a guttural spasm, resulting in a kind of stutter.

Gutzeit's test (goot'zit) [Max Adolf *Gutzeit*, Leipzig chemist, 1847–1915] see under *tests*.

Guy de Chauliac see *Chauliac*.

Guyon's amputation (operation), sign (ge-yonz') [Felix Jean Casimir *Guyon*, surgeon in Paris, 1831–1920] see under *amputation* and *sign*.

GVH graft-versus-host; see under *reaction*.

Gwathmey's oil-ether anesthesia (gwath'mēz) [James Taylor *Gwathmey*, New York surgeon, 1863–1944] see under *anesthesia*.

Gy gray, def. 3.

gymnastics (jim-nas'tiks) [Gr. *gymnastikos* pertaining to athletics] systematic muscular exercise. **ocular g.**, systematic exercise of the eye muscles in order to secure proper movement, accommodation, or fixation. **Swedish g.**, a system of exercise following a rigid pattern of carefully chosen free, active, deliberate movement, utilizing little equipment and stressing correct bodily posture. **vocal g.**, methodical exercise for the purpose of increasing the lung expansion and strengthening the voice.

Gymnema (jim-ne'mah) a genus of trees. The leaves of *G. sylvestre* R. Bv. (Asclepiadaceae), of Africa, are used to disguise the taste of unpleasant medicines. See also *gymnemic acid*, under *acid*.

gymno- (jim'no) [Gr. *gymnos* naked] a combining form meaning naked or denoting relationship to nakedness.

Gymnoascaceae (jim'no-as-ka'se-e) a family of the ascomycetous fungi, order Eurotiales, series Plectomycetes, in which the reproductive organs are in the form of naked asci. It includes the genera *Ajellomyces*, *Arthroderma*, *Gymnoascus*, and *Nannizzia*.

Gymnoascus (jim'no-as'kus) a genus of keratinophilic fungi of the family Gymnoascaceae, some species of which have been isolated from skin lesions of domestic animals and man.

gymnobacteria (jim'no-bak-te're-ah) [gymno- + *bacteria*] plural of *gymnobacterium*.

gymnobacterium (jim'no-bak-te're-um), pl. *gymnobacteria*. A microorganism which has no flagella.

gymnocarpous (jim'no-kar'pus) [gymno- + Gr. *karpos* fruit] having the hymenium, or fertile layer, exposed during spore formation; said of certain fungi.

gymnocyte (jim'no-sit) [gymno- + Gr. *kytos* hollow vessel] a cell with no cell wall.

Gymnodinium (jim'no-din'e-um) a genus of protozoa of the order Dinoflagellata, class Phytomastigophora, most species of which have many colored (yellow, brown, green, or blue) chromatophores. They inhabit salt, fresh, or brackish waters and, when present in great numbers, cause the discoloration known as red tide, which may result in the death of many fish and invertebrates.

gymnoplast (jim'no-plast) [gymno- + Gr. *plastos* formed] a mass of protoplasm without an enclosing wall.

gymnoscopic (jim'no-skop'ik) [gymno- + Gr. *skopein* to examine] (obs.) inclined to or concerned with viewing the naked body.

gymnosophy (jim-nos'o-fe) [gymno- + Gr. *sophia* wisdom] (obs.) the cult of nakedness; nudism.

gymnosperm (jim'no-sperm) [gymno- + Gr. *sperma* seed] a plant in which the seeds are not enclosed in an ovary.

gymnospore (jim'no-spōr) a spore without any protective envelope.

gymnothecium (jim'no-the'se-um) the fruiting body produced by the sexual (perfect) stage of dermatophytes of the genera *Arthroderma* and *Nannizzia*; it is a loose network of mycelium through which ascospores filter and are released following maturation. Cf. *apothecium*, *cleistothecium*, and *perithecium*.

Gymnothorax (jim'no-tho'raks) [gymno- + Gr. *thōrax* chest] a genus of moray eels whose flesh is sometimes used as food.

gyn- see *gyneco-*.

gynaeco- for words beginning thus, see those beginning *gyneco-*.

gynander (jī-nan'der) [gyn- + Gr. *anēr, andros* man] 1. a hermaphrodite. 2. a masculine woman.

gynandria (jī-nan'dre-ah) gynandrisms.

gynandrisms (jī-nan'drizm) [gyn- + *andr-* + *-ism*] 1. hermaphroditism. 2. female pseudohermaphroditism.

gynandroblastoma (jī-nan'dro-blas-to'mah) [gyn- + *andro-* + *blastoma*] a rare ovarian tumor containing histological features of both arrhenoblastoma and granulosa cell tumor.

gynandroid (jī-nan'droid) [gyn- + *andr-* + Gr. *eidōs* form] 1. hermaphrodite. 2. female pseudohermaphrodite.

gynandromorph (jī-nan'dro-morf) an individual exhibiting gynandromorphism.

gynandromorphism (jī-nan'dro-mor'fizm) [gyn- + *andro-* + Gr. *morphē* form] the presence of chromosomes of both sexes in different tissues of the body, producing a mosaic of male and female characteristics; a condition common among bees and silkworms. **bilateral g.**, bilateral hermaphroditism.

gynandromorphous (jī-nan'dro-mor'fus) 1. pertaining to or characterized by gynandromorphism. 2. pertaining to a gynandromorph.

gynandry (jī'nan-dre) gynandrisms.

gynanthropia (jī'nan-thro'pe-ah) gynandrisms.

gynanthropism (jī-nan'thro-pizm) gynandrisms.

gynatresia (jī'ah-tre'ze-ah) [gyn- + a neg. + Gr. *trēsīs* perforation] occlusion of some part of the female genital tract, especially of the vagina.

gynecic (jī-nēs'ik) pertaining to women.

gynecium (jī-ne'se-um) [gyn- + Gr. *oikos* house] the female part of a flower; called also *pistil*.

gyneco-, gynaeco, gyn-, gyne-, gyno- [Gr. *gynē, gynaikos* woman] a combining form denoting relationship to woman or to the female sex.

gynecogen (jī'ē-ko-jen) any substance (female sex hormones) which produces or stimulates female characteristics.

gynecogenic (jī'ē-ko-jen'ik) [gyneco- + Gr. *gennan* to produce] causing or producing female characteristics.

gynecography (jī'ē-kog'rah-fe) roentgenography of the female reproductive tract.

gynecoid (jī'ē-koid) [gyneco- + Gr. *eidōs* form] woman-like; resembling a woman.

gynecologic (gi'nē-ko-loj'ik, jī'nē-ko-loj'ik) pertaining to or affecting the female reproductive tract.

gynecological (gi'nē-ko-loj'i-k'l, jī'nē-ko-loj'i-k'l) pertaining to gynecology.

gynecologist (gi'nē-kol'o-jist, jī'nē-kol'o-jist) a person skilled in gynecology.

gynecology (gi'ne-kol'o-je, jī'nē-kol'o-je) [gyneco- + *-logy*] that branch of medicine which treats of diseases of the genital tract in women.

gynecomania (jī'nē-ko-ma'ne-ah) [gyneco- + Gr. *mania* madness] satyriasis.

gynecomastia (jī'nē-ko-mas'te-ah) [gyneco- + Gr. *mastos* breast] excessive development of the male mammary glands, even to the functional state. **nutritional g.**, refeeding *g.*, refeeding *g.*, transitory enlargement of the male breast developing during rehabilitation and recovery from a state of malnutrition. **rehabilitation g.**, refeeding *g.*

gynecomastism (jī'nē-ko-mas'tizm) gynecomastia.

gynecomasty (jī'nē-ko-mas'te) gynecomastia.

gynecomazia (jī'nē-ko-ma'ze-ah) gynecomastia.

gynecopathy (jī'nē-kop'ah-the) [gyneco- + Gr. *pathos* disease] a disease peculiar to women.

gynecophoral (jī'nē-kof'o-ral) see under *canal*.

gynecotokology (jī'nē-ko-to-kol'o-je) [gyneco- + Gr. *tokos* birth + *-logy*] a name suggested for the combined specialties of gynecology and obstetrics.

gyneduct (jī'nē-dukt) [gyne- + *duct*] the primitive female duct; müllerian duct.

gynephilia (jin/'ē-fil'e-ah) a morbid desire in adolescent boys to be in the company of women or girls.

gynophobia (jin/'ē-fo/be-ah) [*gyne-* + Gr. *phobein* to be affrighted by + *ia*] dread of or morbid aversion to the society of women.

gyneplasty (jin/'ē-plas'te) gynoplasty.

Gynergen (jin/'ēr-jen) trademark for preparations of ergotamine tartrate.

gynesis (jin/'ē-sin) trigonelline.

gyno- see *gyneco-*.

gynogamon (ji-no-gam'ōn) a gamone released by the ovum.

gynogenesis (jin/'o-jen'ē-sis) [*gyno-* + Gr. *genesis* production] development of an egg that is stimulated by a sperm in the absence of any participation of the sperm nucleus.

gynomerogon (jin/'o-mer'o-gon) an organism developed from a fertilized ovum that contains the female pronucleus only, the cells, as a result, containing only the maternal set of chromosomes.

gynomerogone (jin/'o-mer'o-gon) gynomerogon.

gynomerogony (jin/'o-mē-rog'o-ne) [*gyno-* + Gr. *meros* part + *gonos* procreation] development of a portion of a fertilized ovum containing the female pronucleus only. Cf. *andromerogony* and *merogony*.

gynopathic (jin/'o-path'ik) [*gyno-* + Gr. *pathos* disease] caused by or pertaining to disease of women.

gynopathy (jin-op'ah-the) any disease of women.

gynophobia (ji/'no-fo/be-ah) gynephobia.

gynoplastic (ji/'no-plas'tik) pertaining to gynoplastics.

gynoplastics (ji/'no-plas'tiks) [*gyno-* + Gr. *plastos* formed] the plastic or reconstructive surgery of the female reproductive organs.

gynoplasty (ji/'no-plas'te) plastic or reconstructive surgery of the female reproductive organs.

Gynorest (gi/'no-rest) trademark for a preparation of dydrogesterone.

gypsum (jip'sum) [L.; Gr. *gypsos* chalk] native calcium sulfate dihydrate; when calcined, it becomes plaster of Paris, much used in making permanent dressings for fractures and in dentistry for taking dental impressions. See also *calcium sulfate*.

gyrate (ji/rāt) [L. *gyratus* turned round] twisted in a ring or spiral shape.

gyration (ji-ra'shun) revolution in a circle or in circles.

gyre (jir) gyrus.

gyrectomy (ji-rek'to-me) excision or resection of a cerebral gyrus, or of a portion of the cerebral cortex. **frontal g.**, topectomy.

Gyrencephala (ji/'ren-sef'ah-lah) [*gyrus* + Gr. *enkephalos* brain] a group of higher mammals in which the brain is characteristically marked by convolutions. Cf. *Lissencephala*.

gyrencephalic (ji/'ren-sē-fal'ik) pertaining to the Gyrencephala; having a brain marked by convolutions. Cf. *lissencephalic*.

gyri (ji'ri) [L.] plural of *gyrus*.

gyro- (ji'ro) [Gr. *gyros* ring or circle] a combining form meaning round or denoting relationship to a gyrus.

gyrochrome (ji'ro-krōm) [*gyro-* + Gr. *chrōma* color] a nerve cell in which the Nissl bodies have a ringlike arrangement in the cytoplasm. Cf. *arkyochrome*, *perichrome*, and *stichochrome*.

gyrometer (ji-rom'ē-ter) [*gyro-* + Gr. *metron* measure] an instrument for measuring the cerebral gyri.

Gyropus (ji'ro-pus) a genus of biting lice. **G. ova'lis**, a biting louse found on guinea pigs.

gyrose (ji'rōs) marked by curved lines or circles.

gyrospasm (ji'ro-spazm) [*gyro-* + Gr. *spasmos* spasm] rotatory spasm of the head.

gyrotrope (ji'ro-trōp) rheotrope.

gyrous (ji'rus) gyrose.

gyrus (ji'rus), pl. *gy'ri* [L.; Gr. *gyros* ring or circle] [NA] one of the tortuous elevations (convolutions) of the surface of the brain caused by infolding of the cortex; see *gyri cerebri*. **angular g.**, **g. angula'ris** [NA], a convolution of the inferior parietal lobule, arching over the posterior end of the superior temporal sulcus and continuous with the middle temporal gyrus. **annectant gyri**, **gy'ri annecten'tes**, gyri transitive cerebri. **gy'ri bre'ves in'sulae** [NA], short gyri of insula: the short, rostrally placed gyri on the surface of the insula; called also *preinsular gyri*. **Broca's g.**, see under *convolution*. **callosal g.**, **g. callo'sus**, g. cinguli. **central g.**, anterior, g. precentralis. **central g.**, posterior, g. postcentralis. **g. centra'lis ante'rior**, g. precentralis. **g. centra'lis poste'rior**, g. postcentralis. **g. cerebel'li**, folia cerebelli. **gy'ri cere'bri** [NA], gyri of cerebrum, the tortuous elevations (convolutions) of the surface of the cerebral hemisphere, caused by infolding of the cortex and separated by the fissures or sulci. Many are constant enough that they have been given special names. **cingulate g.**, **g. cin'guli** [NA], arch-shaped convolution closely related to the surface of the corpus callosum, from which it is separated by the callosal sulcus; called also *callosal g.* or *g.*

callosus. **dentate g.**, 1. gyrus dentatus (def. 1). 2. gyrus fasciolaris. **g. denta'tus**, 1. [NA], the dentate gyrus: a serrated strip of gray matter under the medial border of the hippocampus and in its depths; it is an archicortex which develops along the edge of the hippocampal fissure and which consists of molecular, granular, and polymorphic layers. Called also *fascia dentata hippocampi*. 2. gyrus fasciolaris. **g. fasciola'ris** [NA], a posterior and upward extension of the dentate gyrus, forming a transitional area between the dentate gyrus and the indusium griseum; called also *fasciola cinerea*. **g. fornica'tus**, the marginal portion of the cerebral cortex on the medial aspect of the hemisphere, including the gyrus cinguli, gyrus parahippocampalis, isthmus, and uncus; it forms a major part of the limbic system. **frontal g.**, ascending, g. precentralis. **frontal g.**, inferior, g. frontalis inferior. **frontal g.**, middle, g. frontalis medius. **frontal g.**, superior, g. frontalis superior. **g. fronta'lis infe'rior** [NA], inferior frontal gyrus: a convolution of the frontal lobe below the inferior frontal sulcus; it is divided by the anterior and ascending branches of the lateral sulcus into orbital, triangular, and opercular parts. **g. fronta'lis media'lis** [NA], the medial surface of the frontal lobe, separated from the cingulate gyrus by the cingulate sulcus, and continuous with the superior frontal gyrus above and the gyrus rectus below. **g. fronta'lis me'dius** [NA], middle frontal gyrus: a convolution of the frontal lobe between the superior and inferior frontal sulci, extending anteriorly from the precentral gyrus. **g. fronta'lis supe'rior** [NA], superior frontal gyrus: a convolution of the frontal lobe above the superior frontal sulcus, extending anteriorly from the precentral gyrus. **fusiform g.**, **g. fusifor'mis**, a gyrus of the temporal lobe on the inferior surface of the hemisphere between the inferior temporal gyrus and the parahippocampal gyrus. It consists of a lateral and a medial part, called [NA] *g. occipitotemporalis lateralis* and *g. occipitotemporalis medialis*. **g. genic'uli**, a vestigial gyrus at the anterior end of the corpus callosum. **Heschl's g.**, gyri temporales transversi. **hippocampal g.**, **g. hippocam'pi**, g. parahippocampalis. **infracalcarine g.**, **g. infracalcarin'us**, g. lingualis. **gy'ri in'sulae** [NA], the gyri that are found on the surface of the insula, including the *gyrus longus insulae* and the *gyri breves insulae*. **g. lim'bicus**, gyrus fornicatus. **lingual g.**, **g. lingua'lis** [NA], a gyrus of the occipital lobe on the inferior surface of the hemisphere, forming the inferior lip of the calcarine sulcus and, with the cuneus, the visual cortex; it is continuous anteriorly with the parahippocampal gyrus. **long g. of insula**, **g. lon'gus in'sulae** [NA], the long, occipitally directed gyrus on the surface of the insula. **marginal g.**, g. frontalis medialis. **marginal g. of Turner**, g. frontalis medialis. **g. margina'lis** g. frontalis medialis. **occipital gyri**, lateral, see *occipital g.*, inferior and *occipital g.*, superior. **occipital g.**, inferior, the lower of the two gyri separated by the lateral occipital sulcus on the lateral aspect of the occipital lobe. **occipital g.**, superior, the upper of the two gyri separated by the occipital lateral sulcus on the lateral aspect of the occipital lobe. **occipitotemporal g.**, lateral, g. occipitotemporalis lateralis. **occipitotemporal g.**, medial, g. occipitotemporalis medialis. **g. occipitotempora'lis latera'lis** [NA], lateral occipitotemporal gyrus: the lateral portion of a gyrus (g. fusiformis) on the inferior surface of the cerebral hemisphere, separated from the medial portion by the occipitotemporal sulcus, and continuous laterally with the inferior temporal gyrus. **g. occipitotempora'lis media'lis** [NA], middle occipitotemporal gyrus: the medial portion of a gyrus (g. fusiformis) on the inferior surface of the cerebral hemisphere, separated from the lateral portion by the occipitotemporal sulcus, and from the parahippocampal gyrus by the collateral sulcus. **g. olfacto'rius latera'lis of Retzius**, limen insulae. **g. olfacto'rius media'lis**, area subcallosa. **g. olfacto'rius media'lis of Retzius**, area subcallosa. **gy'ri oper'ti** (obs.), gyri breves insulae. **orbital gyri**, **gy'ri orbita'les** [NA], the various irregular convolutions lateral to the olfactory sulcus on the orbital surface of the frontal lobe. **paracentral g.**, **g. paracentra'lis**, lobulus paracentralis. **parahippocampal g.**, **g. parahippocampa'lis** [NA], a convolution on the inferior surface of each cerebral hemisphere, lying between the hippocampal and collateral sulci; called also *g. hippocampi* and *hippocampal g.* **paraterminal g.**, **g. paratermina'lis** [NA], a thin sheet of gray substance in front of and ventral to the genu of the corpus callosum; called also *g. subcallosus* and *subcallosal g.* **parietal g.**, any one of the convolutions into which the surface of the parietal lobe is divided. **parietal g.**, ascending, **postcentral g.**, **g. postcentra'lis** [NA], the convolution of the parietal lobe lying between the central and postcentral sulci; the primary sensory area of the cerebral cortex. Called also *g. centralis posterior* and *posterior central g.* **precentral g.**, **g. precentra'lis** [NA], the convolution of the frontal lobe lying between the precentral and central sulci; the primary motor area of the cerebral cortex. Called also *g. centralis anterior* and *anterior central g.* **preinsular gyri**, gyri breves insulae. **gy'ri profun'di cer'e'bri**, the deeply placed cerebral convolutions. **quadrate g.** (obs.), precuneus. **g. rec'tus** [NA], a convolution on the orbital surface of the frontal lobe, medial to the olfactory sulcus and continuous with the medial frontal gyrus on

the medial surface. **short gyri of insula**, gyri breves insulae. **subcallosal g.**, **g. subcallo'sus**, **g. paraterminalis**. **subcollateral g.** (*obs.*), the occipitotemporal gyri. **supracallosal g.**, **g. supracallo'sus**, **indusium griseum**. **supramarginal g.**, **g. supramargina'lis** [NA], the convolution of the inferior parietal lobe that curves around the upper end of the posterior branch of the lateral fissure and is continuous behind it with the superior temporal gyrus. **temporal g.**, any gyrus of the temporal lobe. **temporal g., inferior**, **g. temporalis inferior**. **temporal g., middle**, **g. temporalis medius**. **temporal g., superior**, **g. temporalis superior**. **temporal gyri, transverse**, gyri temporales transversi. **g. tempora'lis infe'rior** [NA], inferior temporal gyrus: the convolution of the temporal lobe lying between the inferior temporal sulcus and the lateral occipitotemporal gyrus, the two gyri being continuous at the inferolateral margin of the temporal lobe.

H

H chemical symbol for *hydrogen*; symbol for *henry*.

H 1. symbol for *oersted*. 2. a symbol for *Hauch*, denoting the motile or flagellate type of a microorganism, as contrasted with the *O* (*ohne Hauch*) or nonmotile type.

H. abbreviation for [L.] *haustus* (a draft), *horizontal*, [L.] *ho'ra* (hour), *hypermetropia*, and *Holzkecht unit*.

H⁺ symbol for *hydrogen ion*.

[H⁺] symbol for *hydrogen ion concentration*.

h symbol for *Planck's constant*.

¹H chemical symbol for *protium* (ordinary, or light, hydrogen); also written *H*1, *H*¹, and *hydrogen-1*. See *hydrogen*.

²H chemical symbol for *deuterium* (heavy hydrogen); also written *H*2, *H*², and *hydrogen-2*. See *hydrogen*.

³H chemical symbol for *tritium*; also written *H*3, *H*³, and *hydrogen-3*. See under *hydrogen*.

H & E hematoxylin and eosin stain; see *Table of Stains and Staining Methods*.

HA hemadsorbent.

Ha symbol for *hahnium*.

HAA hepatitis-associated antigen.

Haab's degeneration, magnet, reflex (hahbz) [Otto Haab, professor of ophthalmology in Zurich, 1850-1931] see under *degeneration*, *magnet*, and *reflex*.

habena (hah-be'nah), pl. *habe'nae* [L. "rein"] see *habenula* (def. 2).

habenal, habenar (hah-be'nal, hah-be'nar) pertaining to the habena.

habenula (hah-ben'u-lah), pl. *haben'ulae* [L., dim. of *habena*] 1. a frenulum, or reinlike structure, such as one of a set of such structures in the cochlea. 2. [NA] a component of the epithalamus, being the small eminence on the dorsomedial eminence of the thalamus, just in front of the posterior commissure on the lateral edge of the habenular trigone; called also *pineal peduncle*. **h. arcua'ta**, the inner portion of the basilar membrane of the cochlea. **h. cona'rii**, habenula (def. 2). **Haller's h.**, vestigium processus vaginalis. **h. pectina'ta**, the outer portion of the basilar membrane of the cochlea. **haben'ulae perfora'tae**, foramina nervosa limbus laminae spiralis; see under *foramen*. **h. urethra'lis**, either of two whitish lines extending from the urinary meatus to the clitoris in girls and young women.

habenulae (hah-ben'u-le) plural of *habenula*.

habenular (hah-ben'u-lar) pertaining to the habenula.

habit (hab'it) [L. *habitus*, from *habere* to hold] 1. a fixed or constant practice established by frequent repetition. 2. predisposition or bodily temperament; see under *type*. **apoplectic h.**, habitus apoplecticus. **asthenic h.**, see under *type*. **clamping h.**, the prolonged or sustained clenching of the mandibular teeth against the maxillary teeth, a practice that may produce injury to the various elements of the stomatologic system. **drug h.**, see under *addiction*. **endothelioid h.**, a condition in which the nucleus of a cell is relatively small as compared with the cytoplasm. **full h.**, habitus apoplecticus. **glaucomatous h.**, shallowness of the anterior chamber of the eye with dilated pupil; seen in persons who have a predisposition to glaucoma. **leptosomatic h.**, a light, thin build of body. **leukocytoid h.**, endothelioid habit. **opium h.**, opium addiction. **oral h.**, a habit that causes changes in occlusal relationships, e.g., thumb and finger sucking, tongue thrusting. **physiologic h.**, an acquired modification of behavior or response to stimulation brought about and permanently fixed by constant repetition. **pycnic h.**, a short, stocky build of body.

habitat (hab'i-tat) the natural abode or home of an animal or plant species.

habituation (hah-bit'u-a'shun) 1. the gradual adaptation to a stimulus or to the environment. 2. the extinction of a condi-

g. tempora'lis me'dius [NA], middle temporal gyrus: the convolution of the temporal lobe lying between the superior and the inferior temporal sulci; it is continuous posteriorly with the angular gyrus. **g. tempora'lis supe'rior** [NA], superior temporal gyrus: the convolution of the temporal lobe lying between the superior temporal sulcus and the lateral sulcus, continuous behind with the supramarginal gyrus. **gy'ri tempora'les transver'si** [NA], transverse temporal gyrus: the transverse convolutions marking the posterior extremity of the superior temporal gyrus and lying mostly in the lateral sulcus; the more marked of these, the anterior transverse temporal gyrus (Heschl's convolution), represents the cortical center for hearing. Called also *Heschl's g.* **gy'ri transiti'vi cer'ebri**, various small folds on the cerebral surface that are too inconstant to bear special names; called also *annectant gyri* and *gyri annectentes*. **uncinate g.**, **g. uncina'tus**, uncus.

tioned reflex by repetition of the conditioned stimulus; called also *negative adaptation*. 3. a condition resulting from the repeated consumption of a drug, with a desire to continue its use, but with little or no tendency to increase the dose; there may be psychic, but no physical dependence on the drug, and detrimental effects, if any, are primarily on the individual.

habitus (hab'i-tus) [L. "habit"] 1. attitude (def. 1). 2. physique; see also under *habit* and *type*. **h. apoplec'ticus**, a full, heavy, thick-set body build indicating a possible tendency to apoplexy. **Buddha-like h.**, the froglike posture of the fetus due to abdominal enlargement. **h. enteroptot'icus**, the bodily conformation seen in enteroptosis, marked by a long narrow abdomen. **h. phthis'icus**, a bodily habit predisposing to pulmonary tuberculosis, marked by pallor, emaciation, poor muscular development, and small bones.

Habronema (hab'ro-ne'mah) [Gr. *habros* graceful + *nema* thread] a genus of nematode worms of the superfamily Spiruroidea, which are parasitic in the stomach of horses. The larval forms are taken up from the feces of horses by flies and the flies, swallowed by horses with their feed, transmit the larvae to the horses' stomachs. The larvae may also be transmitted to the skin of horses where they produce a dermatitis and a form of granuloma; in the conjunctiva they produce bungeye. The species are *H. megastoma*, *H. muscae*, *H. microstoma*, and *H. zebrae*.

habronemiasis (hab'ro-ne-mi'ah-sis) infection with *Habronema*. **cutaneous h.**, a disease of horses in various parts of the world, including the southern United States, Brazil, India, and the Philippines, caused by infection with larvae of *Habronema*, and characterized by cutaneous granulomas that grow in size until the skin over and around the lesions is destroyed, leaving a large raw surface. Because of the clinical similarity between cutaneous habronemiasis and hyphomycosis destruens equi, the disorders are often confused. Called also *bursautee*, *esponja*, and *summer sores*.

habu (hah'boo) [native name in Ryukyu Islands] an extremely venomous pit viper, *Trimeresurus flavoviridis*, inhabiting the warmer parts of East Asia, especially the Ryukyu Islands.

hachement (ash-maw') [Fr.] a chopping or hacking stroke in massage.

Hackenbruch's experience (hah'ken-brōōks) [Peter Theodor Hackenbruch, German surgeon, 1865-1924] (*obs.*) the rhombic-shaped area of anesthesia produced by the injection of a local anesthetic.

hadernkrankheit (hahd'ern-krahnh-khit) [Ger.] a disease affecting rag-pickers, variously regarded as anthrax or malignant edema.

hae- for words beginning thus, see also those beginning *he-*.

Haeckel's law (hek'elz) [Ernst Heinrich Philipp August Haeckel, German naturalist, 1834-1919] see *recapitulation theory*, under *theory*.

haem (hēm) heme.

haem-, haema- see *hemo-*; for words beginning thus, see also those beginning *hem-*.

Haemadipsa (he'mah-dip'sah) [*haema-* + Gr. *dipsa* thirst] a genus of leeches, the land leeches, of the family Gnathobdellidae.

H. ceylon'ica, a species common in Ceylon, which is annoying to man and animals because of its painful bite. **H. chilia'ni**, a species attacking horses and cattle in South America. **H. japon'ica**, a species found in Japan. **H. zeylan'dica**, a species attacking mammals in the tropical jungles of Asia.

Haemagogus (hem'ah-go'gus) [*haem-* + Gr. *agōgos* leading] a genus of mosquitoes some of which transmit jungle yellow fever in tropical Central and South America.

Haemamoeba (ham'ah-me'bah) *Plasmodium*.

Haemaphysalis (hem'ah-fis'ah-lis) [Gr. *haima* blood + *physallis* bubble] a genus of ticks. **H. concin'na**, one of the vectors

of *Rickettsia sibirica*, the etiologic agent of Siberian tick typhus. **H. humero'sa**, the bandicoot tick, one of the vectors of *Coxiella burneti*. **H. leach'i**, the common dog tick of South Africa; it transmits canine babesiosis. **H. leporispalpus/tris**, the rabbit tick, one of the vectors of Rocky Mountain spotted fever and tularemia among wild animals. **H. puncta'ta**, a species of tick which acts as a vector of babesiosis in Southern Europe, and which has been considered the cause of tick paralysis in chickens. **H. spiniger'a**, a species occurring in the tropical forests of India that is a vector of Kyasanur Forest disease in forest workers.

haemato- see *hemo-*; for words beginning thus, see also those beginning *hemato-*.

Haematobia (hem'ah-to'be-ah) a genus of flies of the family Muscidae. **H. ir'ritans**, a genus of small flies, "horn flies," which are very troublesome to cattle; called also *Lyperosia irritans* and *Siphona irritans*.

Haematopinus (hem'ah-to-pi'nus) [*haemato-* + Gr. *pinein* to drink] a genus of sucking lice, species of which infest horses, swine, and cattle.

Haematosiphon (hem'ah-to-si'fon) a genus of insects closely related to the genus *Cimex*, but having longer legs and a very long beak. **H. in'dorus**, a species of southwestern United States and Mexico, which may be a serious pest of poultry and sometimes attacks man.

Haematoxylon (he'mah-tok'si-lon) [*haemato-* + Gr. *xylon* wood] a genus of leguminous trees of Central America and the West Indies; the heart-wood of *H. campechianum* L. (Leguminosae), or logwood, contains tannin, hematoxilin, and resin, and is used mainly as a dye.

Haementeria (hem'en-te're-ah) a genus of leeches. **H. officina'lis**, a species used for medicinal purposes in Mexico and South America.

haemo- see *hemo-*; for words beginning thus, see also those beginning *hemo-*.

Haemobartonella (he'mo-bar'to-nel'lah) a genus of the family Bartonellaceae, order Rickettsiales, occurring in eight species which are parasitic for various lower animals. **H. ca'nis**, a species which infects dogs. **H. mu'ris**, a common parasite of the laboratory rat, in which the infection is activated by splenectomy.

Haemocytosia (hem'o-si'to-to'ah) Haemosporidia.

Haemodipsus (hem'o-dip'sus) a genus of lice. **H. ven-trico'sus**, the common sucking louse of the rabbit which transmits the infective agent of tularemia from rabbit to rabbit.

Haemogregarina (hem'o-greg'ah-ri'nah) a genus of sporozoan parasites of the order Coccidia found in the blood corpuscles of reptiles, amphibians, and some warm-blooded animals. Part of their life cycle is passed in another host, an insect, leech, or other blood-sucking invertebrate.

Haemonchus (he-mon'kus) a genus of parasitic nematode worms of the family Trichostrongylidae. **H. contor'tus**, the wireworm or stomach worm; a small nematode parasite of the abomasum (fourth stomach) of sheep and other ruminants, which produces weakness, wasting, and death of the infected animal; it has also been reported as having been found in man. **H. pla'cei**, *H. contortus*.

Haemophilus (he-mof'i-lus) *Hemophilus*.

Haemophoructus (hem'o-to-ruk'tus) a genus of blood-sucking flies of the family Heleidae.

Haemopsis (he-mo'pis) a genus of leeches, the horse leeches, of the family Gnathobdellidae. *H. paludum* is parasitic in the nose and throat in Ceylon. *H. sanguisuga* of Europe and North Africa infests the nasal passages.

Haemoproteidae (hem'o-pro-te'i-de) a family of protozoa of the order Haemosporidia, subphylum Sporozoa, found as parasites in erythrocytes, visceral endothelial cells, leukocytes, liver cells, and other organs of vertebrate hosts. It includes the genera *Haemoproteus* and *Leukocytozoon*.

Haemoproteus (hem'o-pro'te-us) a genus of sporozoan parasites of the family Haemoproteidae, order Haemosporidia, found in the visceral endothelial cells and erythrocytes of birds and reptiles; the sexual (perfect) stages occur in insects. *H. colum'bae* is a sluggish ameboid organism found in the red blood cells of pigeons. Its invertebrate host is a biting fly (*Pseudolynchia canariensis*, and other species of *Pseudolynchia*). Other species include: *H. danielaeus'kyi*, found in the crow (*Corvus cornix*), *H. noc'tuae*, found in the little owl (*Glaucidium noctuae*), and *H. pas'seris*, found in the blood of the sparrow.

haemorrhagia (hem'o-ra'je-ah) [L.] hemorrhage.

Haemosporidia (hem'o-spo-rid'e-ah) [*haemo-* + Gr. *sporos* seed, spore] an order of sporozoa which live parasitically in the red blood corpuscles of vertebrate animals. It includes the families Plasmodiidae, Haemoproteidae, and Babesiidae.

haemosporidia (hem'o-spo-rid'e-ah) plural of *haemosporidium*.

haemosporidium (hem'o-spo-rid'e-um), pl. *haemosporidia*. An individual organism of the order Haemosporidia.

Haenel's symptom (ha'nelz) [Hans *Haenel*, German neurologist, 1874-1942] see under *symptom*.

Haeser (ha'ser) see *Häser*.

Haff disease (haf) [named for Königsberg *Haff*, a lagoon connected with the Baltic Sea, where epidemics occurred in 1924-5, 1932-3, and 1940] see under *disease*.

hafnium (haf'ne-um) [L. *Hafniae*, Copenhagen] a chemical element of atomic number 72 and atomic weight 178.49; symbol Hf. Discovered in a zircon, in 1923, by Coster and Hevesy of Copenhagen.

Hagedorn needle (hahg'ë-dorn) [Werner *Hagedorn*, German surgeon, 1831-1894] see under *needle*.

Haglund's disease (hahg'loondz) [Sims Emil Patrik *Haglund*, Swedish orthopedist, 1870-1937] see under *disease*.

Hagner's bag, operation (hag'nerz) [Francis Randall *Hagner*, American surgeon, 1873-1940] see under *bag* and *operation*.

hahnemannian (hah'në-man'e-an) pertaining to Christian Friedrich Samuel *Hahnemann* (1755-1843), founder of homeopathy.

hahnemannism (hah'në-man'izm) homeopathy.

hahnium (hah'ne-um) [named for Otto *Hahn*, German physical chemist, 1879-1968] a transuranic element of atomic number 105, atomic weight 260, symbol Ha, produced by an induced nuclear reaction.

Haidinger's brushes (hi'ding-erz) [Wilhelm von *Haidinger*, Austrian mineralogist, 1795-1871] see under *brush*.

Haines' formula (coefficient), reagent, test (hānz') [Walter Stanley *Haines*, Chicago chemist, 1850-1923] see under *formula*, *reagent*, and *tests*.

hair (hār) [L. *pilus*; Gr. *thrix*] a long slender filament. Applied especially to such filamentous appendages of the skin (pili [NA]), consisting of keratin; also the aggregate of such filaments, especially that of the scalp (capilli [NA]). Each hair consists of a cylindrical *shaft* and a root, which is contained in a flasklike depression (*hair follicle*) in the corium and subcutaneous tissue. The base of the root is expanded into the *hair bulb*, which rests upon and encloses the *hair papilla*. **auditory h's**, hairlike attachments of the specialized epithelial cells of the cristae acusticae and the maculae acusticae. **bamboo h.**, trichorhexis nodosa. **beaded h.**, hair marked with alternate swellings and constrictions, as seen in monilethrix. **burrowing h.**, one which does not emerge from the skin but grows horizontally beneath its surface, exciting a foreign body papule, which may become infected. Cf. *ingrown h.* **club h.**, a hair the root of which is surrounded by a bulbous enlargement composed of completely keratinized cells, preliminary to normal loss of the hair from the follicle; see *telogen*. **exclamation point h.**, a hair which, when pulled out, shows atrophy and attenuation of the bulb; it is characteristic of alopecia areata. **h's of eyebrow**, supercilia. **Frey's h's**, stiff hairs mounted in a handle; used for testing the sensitiveness of the pressure points of the skin. **ingrown h.**, one which emerges from the skin but curves and reenters it, exciting a foreign body papule, which may become infected. Cf. *burrowing h.* **knotted h.**, trichonodosis. **lanugo h.**, the fine hair growing on the body of the fetus, constituting the lanugo. **moniliform h.**, beaded h. **h's of nose**, vibrissae. **olfactory h's**, modified cilia that are extremely long and nonmotile, which project from the bulblike distal part of an olfactory cell (*olfactory vesicle* [def. 2]), and function as sensory receptors. Called also *olfactory cilia*. **pubic h.**, h's of pubis, pubes, def. 1. **resting h.**, see *telogen*. **sensory h's**, hairlike projections on the surface of sensory epithelial cells. **stellate h.**, a hair split at the end in a starlike form. **tactile h's**, hairs which are sensitive to touch, as the vibrissae of certain animals. **taste h's**, short hairlike processes projecting freely into the lumen of the pit of a taste bud from the peripheral ends of the taste cells. **terminal h.**, the coarse hair growing on various areas of the body during adult years. **twisted h.**, a hair which at spaced intervals is twisted through an axis of 180 degrees, being abnormally flattened at the site of twisting; called also *pilus tortus*. **vellus h.**, the downy hair growing on the body during the prepuberal years, constituting the vellus. **wooly h.**, lanugo.

hairball (hār'bawl) trichobezoar.

haircap (hār'kap) *Polytrichum juniperinum*.

haircast (hār'kast) a trichobezoar filling and assuming the shape of the stomach.

halation (hal-a'shun) indistinctness or blurring of the visual image by strong illumination coming from the same direction as the viewed object.

halazepam (hal-az'ë-pam) chemical name: 7-chloro-1,3-dihydro-5-phenyl-1-(2,2,2-trifluoroethyl)-2H-1,4-benzodiazepin-2-one; a tranquilizer, C₁₇H₁₂ClF₃N₂O.

halazone (hal-ah-zōn) [USP] chemical name: *p*-(dichlorosulfamoyl)benzoic acid. A white, crystalline powder, C₇H₅Cl₂NO₂S, having a chlorine-like odor; used as a disinfectant for water supplies.

halcinonide (hal-sin'o-nid) chemical name: 21-chloro-9-fluoro-11β-hydroxy-16α,17-[(1-methylethylidene)bis(oxy)]pregn-4-ene-

3,20-dione. A synthetic glucocorticoid, $C_{24}H_{32}ClFO_5$; used as a topical anti-inflammatory in the treatment of various steroid-responsive dermatoses.

Haldane chamber (apparatus) (haw/'dān) [John Scott Haldane, English physiologist, 1860-1936] see under *chamber*.

Haldol (hal/'dol) trademark for a preparation of haloperidol.

Haldron (hal/'drōn) trademark for a preparation of paramethasone acetate.

Hales' plesimeter (hālz) [Stephen Hales, English physiologist, 1677-1761] see under *plesimeter*.

half-life (haf/'lif) the time in which the radioactivity originally associated with a sample of isotopes will be reduced by one half through radioactive decay. The half-life of the remaining half will be equal to that of the original sample, and so on. **antibody h.**, a measure of the mean survival time of antibody molecules following their formation, usually expressed as the time required to eliminate 50% of a known quantity of immunoglobulin from the animal body. Half-life varies from one immunoglobulin class to another. **biological h.**, the time required for a living tissue, organ, or organism to eliminate one-half of a radioactive substance which has been introduced into it. **effective h.**, the time required for the radioactivity of a radioactive nuclide to be diminished 50 per cent through the combined action of radioactive decay and biological elimination.

half-retinal (haf-ret/'i-nal) pertaining to or affecting one half of the retina.

half-value see under *layer*.

halfway house (haf/'wa hous'') a residence for patients, such as mental patients, drug addicts, and alcoholics, who do not require complete hospitalization but who need an intermediate degree of care until they have again become established in the community.

halide (hal/'id) 1. haloid. 2. a binary compound of one of the halogens (fluorine, chlorine, bromine, or iodine).

hali-ichthyotoxin (hal/'i-ik''the-o-tok'sin) a poisonous base of bacterial origin from stale fish.

halisteresis (hah-lis''tē-re'sis) [Gr. *hals* salt + *sterēsis* privation] osteomalacia; a loss or lack of the lime salts (calcium) of bone. **h. ce'rea**, waxy softening of the bones.

halisteretic (hah-lis''tē-ret'ik) affected with or of the nature of halisteresis.

halitosis (hal-i-to'sis) [L. *halitus* exhalation] offensive breath; bad breath.

halituous (hah-lit'u-us) [L. *halitus* exhalation] covered with moisture or vapor.

halitus (hal'i-tus) [L.] an exhalation or vapor; an expired breath. **h. saturni'nus**, lead breath.

Hall band (haw/) [Herbert H. Hall, Bohemian obstetrician and gynecologist in the United States, born 1914] see under *band*.

Hall's disease, facies, method (haw/z) [Marshall Hall, English physician, 1790-1857] see *spurious hydrocephalus*, under *hydrocephalus*; see under *facies*, and see *artificial respiration*, under *respiration*.

Hall-Stone ring (haw/'ston) [Herbert H. Hall; Martin Lawrence Stone, American obstetrician and gynecologist, born 1920] see under *ring*.

hallachrome (hal/'ah-krōm) a compound formed from dihydroxy phenylalanine by tyrosinase.

Hallauer's glasses (hal/'ow-erz) [Otto Hallauer, Basel ophthalmologist, born 1866] see under *glasses*.

Hallberg effect (haw/'berg) [J. Henry Hallberg, American radiologist] see under *effect*.

Hallé's point (al-āz') [Adrien Joseph Marie Noël Hallé, French physician, born 1859] see under *point*.

Haller's ansa, etc. (hal/'erz) [Albrecht von Haller, Swiss physiologist, 1708-1777, the master physiologist of his time] see under *arch*, *circle*, *cone*, *crypt*, *duct*, *fretum*, *habenula*, *layer*, *line*, *membrane*, *plexus*, *rete*, and *tripod*.

hallex (hal/'eks), pl. *hal'lices*. Hallux.

Hallion's test (al-yawz') [Louis Hallion, French physiologist, 1862-1940] Tuffier's test.

Hallopeau's acrodermatitis (al-o-pōz') [François Henri Hallopeau, French dermatologist, 1842-1919] see *acrodermatitis continua*.

hallucal (hal/'u-kal) pertaining to the hallux, or great toe.

halluces (hal/'ū-sēs) plural of *hallux*.

hallucination (hah-lu/'si-nā'shun) [L. *hallucinatio*; Gr. *alyein* to wander in the mind] a sense perception without a source in the external world; a perception of an external stimulus object in the absence of such an object. **auditory h.**, the hearing of unreal sounds. **depressive h.**, a hallucination occurring in the course of acute depression. **gustatory h.**, a hallucination of taste. **haptic h.**, a tactile hallucination. **hypnagogic h.**, a hallucination occurring between sleeping and awakening. **lilliputian h.**, a hallucination in which things seem smaller than they actually are. **olfactory h.**, hallucination of smell. **reflex h.**, arousal of a secondary sensation by a sensation of a

different modality. **stump h.**, phantom limb. **tactile h.**, hallucination of touch. **visual h.**, a sensation of seeing not stimulated by actual presence of the object seen.

hallucinative, hallucinatory (hah-lu/'si-na-tiv; hah-lu/'si-nah-to're) characterized by hallucinations.

hallucinogen (hah-lu/'si-no-jen'') [*hallucination* + Gr. *gennan* to produce] an agent which induces hallucinations.

hallucinogenesis (hah-lu/'si-no-jen'ē-sis) the production of hallucinations.

hallucinogenetic (hah-lu/'si-no-jē-net'ik) hallucinogenic.

hallucinogenic (hah-lu/'si-no-jen'ik) producing hallucinations.

hallucinoses (hah-lu/'si-no'sis) a psychosis marked by hallucinations. **acute h.**, **alcoholic h.**, a form of alcoholic psychosis, marked by auditory hallucinations and loose delusions of persecution.

hallucinotic (hah-lu/'si-not'ik) pertaining to or characterized by hallucinoses.

hallux (hal/'uks), pl. *hal'luces* [L.] [NA] the great toe, or first digit of the foot. **h. doloro'sa**, a painful disease of the great toe usually associated with flatfoot. **h. flex'us**, *h. rigidus*. **h. mal'leus**, hammer toe of the hallux. **h. rig'idus**, painful flexion deformity of the great toe in which there is limitation of motion at the metatarsophalangeal joint. **h. val'gus**, angulation of the great toe away from the midline of the body, or toward

Hallux valgus.

the other toes; the great toe may ride under or over the other toes. **h. va'rus**, angulation of the great toe toward the midline of the body, or away from the other toes.

Hallwachs effect (hal/'vaks) [Franz Hallwachs, physiologist in Dresden, 1859-1922] photoelectrical effect; see under *effect*.

halmatogenesis (hal''mah-to-jen'ē-sis) [Gr. *halma* a jump + *genesis* production] a sudden alteration of type from one generation to another; called also *saltatory variation*.

halo (ha/'lo) [L.; Gr. *halōs*] 1. a luminous or colored circle, such as the colored circle seen around a light in glaucoma. 2. a ring seen around the macula lutea in ophthalmoscopic examination. 3. the imprint of the ciliary processes upon the vitreous body.

Fick's h., a colored circle appearing around a light, caused by the wearing of contact lenses; see *Fick's phenomenon*. **h. glaucomato'sus, glaucomatous h.**, peripapillary atrophy seen in severe or chronic glaucoma. **h. saturni'nus**, lead line. **senile h.**, a zone of variable width surrounding the optic papilla, caused by exposure of various elements of the choroid as a result of senile atrophy of the pigmented epithelium.

halo- (hal'o) [Gr. *hals* salt] a combining form denoting relationship to a salt.

halobacteria (hal''o-bak-te're-ah) plural of *halobacterium*.

Halobacterium (hal''o-bak-te're-um) a genus of halophilic microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as highly pleomorphic rod-shaped cells. The halobacteria possess a purple pigment, bacteriorhodopsin (closely related to rhodopsin), which powers a system of photosynthesis. It includes five species, *H. cutiru'brum*, *H. halo'bium*, *H. marismort'ui*, *H. salina'rium*, and *H. trapan'icum*.

halobacterium (hal''o-bak-te're-um), pl. *halobacte'ria*. Any member of the genus *Halobacterium*.

halodermia (hal''o-der'me-a) any skin eruption caused by a halide.

haloduric (hal''o-du'rik) [Gr. *hals* salt + L. *durare* to endure] capable of existing in a medium containing a high concentration of salt.

halofenate (hah/'lo-fen'āt) chemical name: 4-chloro-α-[3-(trifluoromethyl)phenoxy]benzeneacetic acid 2-(acetylaminio)ethyl ester; an antihyperlipidemic and uricosuric agent, $C_{19}H_{17}ClF_3NO_4$.

Halog (hal/'og) trademark for preparations of halcinonide.

halogen (hal'o-jen, ha/'lo-jen) [*halo-* + Gr. *gennan* to produce]

an element of a closely related chemical family, all of which form similar (saltlike) compounds in combination with sodium and most other metals. The halogens are bromine, chlorine, fluorine, iodine, and astatine.

halogeton (hal-o-ge'ton) a small grayish brown plant introduced into the southwestern U.S. that contains soluble oxalates, which can be highly poisonous, causing respiratory difficulty and hemorrhage as well as hypocalcemia. The major species is *Halogeton glomeratus* (Bieb.) C. A. Mey. (Polygonaceae).

haloid (hal'oid) [*halo-* + Gr. *eidos* form] saltlike; derived from or resembling a halogen.

halometer (hah-lom'ē-ter) [*halo-* + Gr. *metron* measure] 1. an instrument for measuring ocular halos. 2. an instrument for estimating the size of red corpuscles by measuring the diffraction halos which they produce.

halometry (hah-lom'ē-tre) 1. the measurement of ocular halos. 2. the measurement of the size of red blood corpuscles by utilizing the blood smear as a diffraction grating.

halopemide (hal'o-pem'id) chemical name: *N*-[2-[4-(5-chloro-2,3-dihydro-2-oxo-1*H*-benzimidazol-1-yl)-1-piperidinyl]ethyl]-4-fluorobenzamide; a tranquilizer, $C_{21}H_{22}ClFN_4O_2$.

haloperidol (hah'lo-per'i-dol) [USP] chemical name: 4-[4-(4-chlorophenyl)-4-hydroxy-1-piperidinyl]-1-butanone. A tranquilizer, $C_{21}H_{23}ClFNO_2$, which also has antiemetic, hypotensive, and hypothermic actions, occurring as a white to faintly yellowish, amorphous or microcrystalline powder; used especially in the management of psychoses and for the control of the vocal utterances and tics of Gilles de la Tourette's syndrome, administered orally and intramuscularly.

halophil (hal'o-fil) a microorganism that requires a high concentration of salt for optimal growth.

halophile (hal'o-fil) 1. halophil. 2. halophilic.

halophilic (hal'o-fil'ik) [Gr. *hals* salt + *philein* to love] pertaining to or characterized by an affinity for salt; applied to microorganisms which require a high concentration of salt for optimal growth.

halopredone acetate (hal'o-pre'don) chemical name: 17,21-bis(acetyloxy)-2-bromo-6 β ,9-difluoro-11 β -hydroxypregna-1,4-diene-3,20-dione; a topical anti-inflammatory, $C_{25}H_{29}BrF_2O_7$.

haloprogyn (hah'lo-pro'jin) chemical name: 1,2,4-trichloro-5-[(3-iodo-2-propynyl)oxy]benzene. A synthetic topical antifungal, $C_6H_4Cl_3IO$, occurring as a pale yellow, crystalline powder; used in the treatment of various forms of tinea.

halosteresis (hah-lost'ē-re'sis) halisteresis.

Halotestin (hal'o-tes'tin) trademark for a preparation of fluoxymesterone.

Halotex (hal'o-tek-s) trademark for a preparation of haloprogyn.

halothane (hal'o-thān) [USP] chemical name: 2-bromo-2-chloro-1,1,1-trifluoroethane. A general anesthetic, $C_2HBrClF_3$, occurring as a colorless, mobile, nonflammable, heavy liquid; administered by inhalation.

haloxon (hah-loks'on) an organophosphorus compound, $C_{14}H_{14}Cl_3O_6P$, used in veterinary medicine against intestinal nematodes.

halquinol (hal'kwin-ōl) halquinols.

halquinols (hal'kwin-ōls) a topical anti-infective compound, consisting of a mixture of 5,7-dichloro-8-quinolinol, 5-chloro-8-quinolinol, and 7-chloro-8-quinolinol in proportions resulting naturally from chlorination of 8-quinolinol; it has antiamebic, antifungal, and antibacterial actions.

Halsted's operation, suture (hal'stedz) [William Stewart Halsted, Baltimore surgeon, 1852-1922] see under *operation* and *suture*.

Haly Abbas see *Ali Abbas*.

halzoun (hal'zun) a disease of Syria once thought to be caused by *Fasciola hepatica* attaching itself to the pharyngeal mucous membrane, but now recognized to be more frequently the result of the presence of linguatulid larvae in the same region.

Hamamelis (ham'ah-me'lis) [Gr. *hama* together + *mēlon* apple] a genus of trees and shrubs. The leaves of *H. virginiana* L. (Hamamelidaceae), or witch hazel, contain tannin and hamamelose.

hamamelis (ham'ah-me'lis) the dried leaves of *Hamamelis virginiana*, or witch hazel, which have been used as an astringent, and in veterinary medicine in the treatment of anal irritation of dogs.

hamamelose (ham-am'e-lōs) a natural sugar, $CH_2OH\cdot(CHOH)_2\cdot COH(CH_2OH)\cdot COH$, from the bark of *Hamamelis virginiana*, or witch hazel.

hamarthrit (ham'ar-thri'tis) [Gr. *hama* together + *arthrit*] arthritis of all the joints at the same time.

hamartia (ham-ar'she-ah) [Gr. "defect"] a defect in tissue combination during development.

hamartial (ham-ar'she-al) pertaining to or exhibiting a hamartia.

hamarto- (ham'ar-to) [Gr. *hamartia* defect, sin] a combining form denoting relationship to a defect.

hamartoblastoma (ham-ar'to-blas-to'mah) [*hamarto-* + Gr. *blastos* germ + *-oma*] a tumor developing from a hamartoma.

hamartoma (ham'ar-to'mah) [*hamarto-* + *-oma*] a benign tumor-like nodule composed of an overgrowth of mature cells and tissues that normally occur in the affected part, but often with one element predominating.

hamartomatosis (ham'ar-to-mah-to'sis) the development of multiple hamartomas.

hamartomatous (ham'ar-to'mah-tus) pertaining to a disturbance in growth of a tissue in which the cells of a circumscribed area outstrip those of the surrounding areas.

hamartoplasia (ham'ar-to-pla'ze-ah) [*hamarto-* + Gr. *plassein* to form] overdevelopment of a tissue as a reaction to its attempts at repair.

hamate (ham'at) hooked, as the hamate bone.

hamatum (hah-ma'tum) [L. "hooked"] the os hamatum, or unciform bone.

Hamberger's schema (ham'ber-gerz) [Georg Erhard Hamberger, German physician, 1697-1755] see under *schema*.

Hamburger interchange (ham'boor-ger) [Hartog Jacob Ham-burger, Dutch physiologist, 1859-1924] the ionic interchange between the corpuscles and plasma of the blood; bicarbonate passes from the erythrocytes into the plasma, and chloride ions pass from the plasma into the erythrocytes. Called also *secondary buffering*.

Hamilton's bandage, test (ham'il-tonz) [Frank Hastings Hamilton, American surgeon, 1813-1886] see under *bandage* and *tests*.

Hamman's disease (syndrome), sign (ham'an-anz) [Louis Hamman, American physician, 1877-1946] see under *disease* and *sign*.

Hamman-Rich syndrome (ham'an rich) [Louis Hamman; Arnold Rice Rich, American pathologist, born 1893] diffuse interstitial pulmonary fibrosis.

Hammarsten's test (ham'er-stenz) [Olof Hammarsten, physiologist in Upsala, 1841-1932] see under *tests*.

hammer (ham'er) 1. an instrument with a head designed for striking blows. 2. the hammer-shaped bone of the middle ear; the malleus. **Mayor's h.** (obs.), a metal hammer intended to be heated in boiling water and applied to the skin as a counterirritant. **Neef's h., Wagner's h.**, an instrument for the rapid opening and closing of a galvanic circuit.

Hammerschlag's method (test) (ham'er-shlahgz) [Albert Hammerschlag, physician in Vienna, 1863-1935] see under *method*.

Hammond's disease (ham'undz) [William Alexander Hammond, American neurologist, 1828-1900] athetosis.

hamster (ham'ster) a ratlike rodent, the most common of which is *Cricetus cricetus* of Europe and Western Asia, bred and used extensively as a laboratory animal. Other species are *Cricetulus labensis*, the Chinese hamster, and *Mesocricetus auratus*, the Syrian hamster.

hamstring (ham'string) one of the tendons that bound the popliteal fossa laterally and medially. **inner h.**, the tendons of the gracilis, sartorius, and two other muscles. **outer h.**, the tendon of the biceps flexor femoris.

hamular (ham'u-lar) shaped like a hook.

hamulus (ham'u-lus), pl. *ham'uli* [L. "little hook"] [NA] a general term denoting a hook-shaped process. **h. coch'leae**, h. laminae spiralis. **h. of ethmoid bone**, processus uncinatus ossis ethmoidalis. **frontal h., h. fronta'lis**, ala cristae galli. **h. of hamate bone**, h. ossis hamati. **lacrimal h., h. lacrima'lis** [NA], the hooklike process on the anterior part of the inferolateral border of the lacrimal bone, articulating with the maxilla. **h. lam'inae spira'lis** [NA], the hooklike upper end of the osseous spiral lamina. **h. os'sis hama'ti** [NA], hamulus of hamate bone: a hooklike process on the volar surface of the hamate bone, to which numerous structures are attached. **pterygoid h., h. pterygoi'deus** [NA], a hooklike process on the inferior extremity of the medial pterygoid plate of the sphenoid bone, around which the tendon of the tensor veli palatini muscle passes. **trochlear h., spina trochlearis**.

hamycin (hah-mi'sin) an antibiotic derived from *Streptomyces pimprina*, having antifungal, antitrichomonal, and anti-inflammatory actions; it has been used topically in various fungal infections of the skin.

hand (hand) [L. *manus*] the part of the upper limb distal to the forearm: the carpus, metacarpus, and fingers together; called also *manus* [NA]. **accoucheur's h.**, obstetrician's h. **ape h.**, a hand with the thumb permanently extended. **benediction h.**, a hand in which the ring and little fingers are flexed; there is weakness of abduction and adduction of the index and middle fingers but they can be extended normally, and the thumb remains normal; seen in ulnar paralysis and syringomyelia. **claw h.**, see *clawhand*. **cleft h.**, malformation of the hand in which the division between the fingers extends into the metacarpus; also a hand in which the middle digits are absent, and the remaining fingers are abnormally large; called also *lobster-claw*.

hand and main fourché. **club h.**, clubhand; see *talipomanus*. **dead h.**, an occupational disorder seen sometimes in those who use vibratory tools, and apparently caused by the multitude of concussions. The hands are painful and dark blue in color, but blanch on exposure to cold. **drop h.**, see *wristdrop*. **flat h.**, manus plana. **frozen h.**, stiffness of the hand resulting from edema accompanying trauma. **ghoul h.**, a condition in which the skin of the palm is depigmented and of a dead-white, tallow-yellow color, with blotchy areas of brownish hyperpigmentation, observed in Nigeria and thought to be associated with tertiary yaws. **Krukenberg's h.**, a forklike stump created by separating the distal ends of the ulna and radius and covering them with skin, after amputation proximal to the carpus. **lobster-claw h.**, cleft h. **Marinesco's succulent h.**, a hand marked by edema with lividity and coldness of the skin; seen in syringomyelia. **mirror h's**, a deformity in which there are two crude hands growing from a common wrist. **mitten h.**, a hand in which several fingers are fused together and have a common nail. **monkey h.**, a hand showing atrophy of the thenar muscles; called also *main en singe*. **obstetrician's h.**, the contraction of the hand in tetany; the hand is flexed at the wrist, the fingers at the metacarpophalangeal joints but extended at the interphalangeal joints, the thumb being strongly flexed into the palm. **opera-glass h.**, a pawlike hand marked by telescoping of the fingers caused by absorption of the phalanges; occurs in chronic arthritis. **phantom h.**, a paresthetic feeling as if the hand were still present after amputation. **preacher's h.**, benediction h. **skeleton h.**, a hand markedly atrophied and held in a position of extension: seen in progressive muscular atrophy; called also *main en squelette*. **spade h.**, the thick square hand of myxedema and acromegaly. **split h.**, cleft hand. **trench h.**, contracture or other incapacity of the hand from frostbite in the trenches; called also *main de tranchées*. **trident h.**, the characteristic hand of achondroplasia: the fingers are relatively of the same length, and there is a peculiar separation of the second and third fingers at the second phalangeal joint, causing the fingers to spread out. **writing h.**, a peculiar position of the hand in which the hand appears poised for writing; seen in paralysis agitans.

Hand's disease, syndrome (handz) [Alfred Hand, Jr., Philadelphia pediatrician, 1868–1949] Hand-Schüller-Christian disease; see under *disease*.

Hand-Schüller-Christian disease (syndrome) (hand-shil'er-kris'chan) [Alfred Hand; Artur Schüller; Henry A. Christian] see under *disease*.

handedness (hand'ed-nes) the preferential use in voluntary motor acts of the hand of one side. **left h.**, the preferential use in voluntary motor acts of the left hand. **right h.**, the preferential use in voluntary motor acts of the right hand.

handicap (han'di-kap) any physical or mental defect or characteristic, congenital or acquired, preventing or restricting a person from participating in normal life or limiting his capacity to work.

Handley's lymphangioplasty (method) (hand'lēz) [William Sampson Handley, English surgeon, 1872–1962] see under *lymphangioplasty*.

handpiece (hand'pēs) that part of a dental engine which is held in the hand of the operator and which engages the bur or working point while it is being revolved.

Hanger's test (hang'erz) [Franklin M. Hanger, Jr., American physician, born 1894] see under *tests*.

hangnail (hang'nāl) a shred of eponychia on a proximal or lateral nail fold.

Hannover's canal (han'o-verz) [Adolph Hannover, Danish anatomist, 1814–1894] see under *canal*.

Hanot's cirrhosis (disease, syndrome) (an-ōz') [Victor Charles Hanot, French physician, 1844–1896] 1. primary biliary cirrhosis. 2. secondary biliary cirrhosis.

Hanot-Chauffard syndrome (an-o'sho-far') [Victor Charles Hanot; Anatole Marie Emile Chauffard, French physician, 1855–1932] see under *syndrome*.

Hansen's bacillus, disease (han'sunz) [Gerhard Henrik Armauer Hansen, Norwegian physician, 1841–1912] see *Mycobacterium leprae* and *leprosy*.

Hansenula (han-sen'u-lah) a genus of ascomycetous yeasts of the order Endomycetales, family Saccharomycetaceae; formerly called *Willia*. **H. anom'ala**, a nonpathogenic species commonly found in soil and in the respiratory and intestinal tracts.

Hanson's unit (han'sunz) [Adolph M. Hanson, American surgeon, born 1888] see under *extract* and *unit*.

haphalgnesia (haf'al-je'ze-ah) [Gr. *haphē* touch + *algēsis* sense of pain + *-ia*] the sensation of pain on touching nonirritating objects or when the skin is lightly touched.

haplo- (hap'lo) [Gr. *haploos* simple, single] a combining form meaning simple or single.

haplobacteria (hap'lo-bak-te're-ah) [*haplo-* + *bacteria*] bacteria which are not filamentous.

Haplochilus (hap'lo-ki'lus) a genus of fish. **H. pan'chax**, a small fish, called *ikan kapala timah* in Malay, which is placed in fishponds in Indonesia to eat the larvae of *Anopheles* mosquitoes.

haplodiploidy (hap'lo-dip'loi-de) the state in which males develop from unfertilized eggs and are haploid, and females develop from fertilized eggs and are diploid, as in honeybees.

haplodont (hap'lo-dont) [*haplo-* + Gr. *odont* tooth] having molar teeth without cusps or ridges.

haploid (hap'loid) [*haplo-* + Gr. *eidōs* form, shape] 1. having a single set of chromosomes, as normally carried by a gamete, or having one complete set of nonhomologous chromosomes. In man, the haploid number is 23. Symbol, 1 N. Cf. *diploid* (def. 2). 2. an individual or cell having only one member of each pair of homologous chromosomes.

haploidentity (hap'lo-i-den'ti-te) the condition of having the same antigenic phenotype at certain specified loci; said of donor-recipient combinations in transplantation studies.

haploidy (hap'loi-de) the state of having only one member of each pair of homologous chromosomes.

haplomycosis (hap'lo-mi-ko'sis) adiospiromycosis.

haplont (hap'lont) a haploid individual.

Haplopappus (hap-lo-pap'pus) a genus of composite-flowered plants, the ingestion of which causes a disease similar to trembles.

haplopathy (hap-lop'ah-the) [*haplo-* + Gr. *pathos* disease] an uncomplicated disease.

haplophase (hap'lo-fāz) that phase in the life history of germ cells when the nuclei are haploid.

haplopia (hap-lo'pe-ah) [*haplo-* + Gr. *ōps* vision] single vision; the condition in which an object looked at is seen single and not double.

Haplorchis (hap-lor'kis) a genus of minute trematodes found in tropical areas, which are intestinal parasites of dogs, cats, and other vertebrates. **H. tai'chui**, an intestinal parasite of birds and mammals, rarely including man.

haploscope (hap'lo-skōp) [*haplo-* + Gr. *skopein* to examine] a form of stereoscope used for testing the visual axes. **mirror h.**, an instrument for making experiments, with different degrees of convergence of the visual axes.

haplosopic (hap-lo-skop'ik) pertaining to a haploscope; stereoscopic.

haplosporangin (hap'lo-spo-ran'jin) an antigen derived from the fungus *Emmonsia parva*.

Haplosporangium (hap'lo-spo-ran'je-um) *Emmonsia*.

haplotype (hap'lo-tip) the group of alleles of linked genes contributed by either parent; the haploid genetic constitution contributed by either parent.

Hapsburg jaw, lip [*Hapsburg*, a German-Austrian royal family, including among its members many rulers of European states, such as Austria (1278–1918) and Spain (1504–1700)] see under *jaw* and *lip*; see also *hemophilia* (disease of the Hapsburgs).

hapt-, hapte- see *hapto-*.

haptēn (hap'ten) a specific protein-free substance whose chemical configuration is such that it can interact with specific combining groups on an antibody, but which, unlike antigenic determinants, does not itself elicit the formation of a detectable amount of antibody. When coupled with a carrier protein, it does elicit the immune response. In humoral immunity, the antibody specificity is directed primarily to the haptēn; in cell-mediated immunity, to both the haptēn and the carrier protein. **group A h.**, a high-molecular-weight polysaccharide; in human blood; agglutinin from blood group A.

haptene (hap'tēn) haptēn.

haptenic (hap'ten'ik) pertaining to or caused by haptens.

haptic (hap'tik) [Gr. *haptikos* able to lay hold of] tactile.

haptics (hap'tiks) the science of touch, or the sense of contact.

haptin (hap'tin) haptēn.

hapto-, hapt-, hapte- (hap'to, hapt, hap'te) [Gr. *haptēin* to touch, seize upon, or hold fast] a combining form denoting relationship to touch or to seizure.

haptoglobin (hap'to-glo'bin) a group of glycoproteins in the α_2 -globulin fraction of serum which share the same or similar subunits and have the common property of binding free hemoglobin. Three types, distinguished on the basis of electrophoretic patterns, are determined by the interaction of two allelic autosomal genes, *Hp¹* and *Hp²*. Other variants have also been described. All three types of haptoglobin consist of two kinds of polypeptide chains, termed α and β . Three different α chains and one β chain have been distinguished by electrophoresis. Haptoglobin is a heterogenous protein with a large (about 20 per cent) carbohydrate moiety.

haptometer (hap-tom'ē-ter) [*hapto-* + Gr. *metron* measure] an instrument for measuring sensitivity to touch.

haptophil, haptophile (hap'to-fil) [*hapto-* + Gr. *philein* to love] having a peculiar affinity for a haptophore.

haptophore (hap'to-fōr) [*hapto-* + Gr. *phoros* bearing] in Ehrlich's side-chain theory, the specific group of the molecule of toxins, agglutinins, precipitins, opsonins, and lysins by which they become attached to their antibodies, antigens, or the receptors of cells, thus making possible their specific activity.

haptophoric (hap/'to-för'ik) haptophorous.

haptophorous (hap-tof'o-rus) causing the combination of an antitoxin with cells; see *haptophore*.

harara (hah-rar'ah) an allergic skin reaction caused by bites of the sand fly *Phlebotomus papatasi*. It occurs in the Middle East, and is characterized by urticarial and inflammatory papules and blisters. Immunity usually follows the initial exposure. Called also *urticaria multififormis endemica*. The term is also a popular name for various types of skin eruptions.

hardening (hard'en-ing) the procedure of rendering tissue firm, so that it may be more readily cut for purposes of microscopic examination.

Harder's glands (hard'erz) [Johann Jacob Harder, Swiss anatomist, 1656–1711] see under *gland*.

harderian (hard'er-e-an) named for Johann Jacob Harder, as *harderian fossa* or *glands*.

hardness (hard'nes) 1. a quality of water produced by soluble salts of calcium and magnesium or other substances which form an insoluble curd with soap and thus interfere with its cleansing power. 2. the quality of firmness produced by cohesion of the particles composing a substance, as evidenced by its inflexibility or resistance to indentation or distortion. 3. the penetrating power of roentgen rays depending on their wavelength: the shorter the wavelength the harder the rays and the greater their penetrating power. 4. the degree of refraction of the residual gas in a glass tube: the higher the vacuum the shorter the wavelength of the resulting roentgen rays. **permanent h.**, hardness of water not removed by boiling; it is usually due to sulfates and chlorides. **temporary h.**, hardness of water removed by boiling; it is due to soluble bicarbonates, which lose CO₂ on boiling and precipitate as normal carbonates.

Hare's syndrome (härz) [Edward Selleck Hare, British surgeon, 1812–1838] Pancoast's syndrome, def. 1.

harelip (här'lip) a congenital cleft or defect in the upper lip, usually due to failure of the median nasal and maxillary processes to unite. The maxilla and palate may also be involved. **acquired h.**, a cleft of the upper lip caused by trauma. **double h.**, a cleft on either side of the upper lip as a result of bilateral failure of closure of the cleft between the median nasal and the maxillary process. **median h.**, a midline defect of the lip caused by failure of the median nasal processes to unite. **single h.**, a lateral cleft of the upper lip caused by failure of the median nasal and the maxillary process to unite.

harlequin (hahr'lě-kwin) a venomous snake belonging to the genus *Elaps*.

Harley's disease (har'lěz) [George Harley, English physician, 1829–1896] intermittent hemoglobinuria.

harmonia (har-mo'ne-ah) [L.] sutura plana.

harmony (har'mo-ne) the state of working together smoothly. **occlusal h.**, proper occlusion of the teeth occurring in various positions of the mandible. **occlusal h.**, **functional**, such occlusion of the teeth in all positions of the mandible during mastication as will provide the greatest masticatory efficiency without imposing undue strain or trauma on the supporting tissues.

Harmonyl (har'mo-nil) trademark for preparations of deserpidine.

Harpirhynchus (har'pe-ring'kus) [Gr. *harpē* bird of prey + Gr. *rhynchus* snout] a genus of mites parasitic on birds.

harpoon (har-pōon') [Gr. *harpazein* to seize] an instrument for removing small pieces of living tissue for diagnostic examination.

Harrington's solution (har'ing-tonz) [Charles Harrington, American physician, 1856–1908] see under *solution*.

Harris' segregator (separator), suture (har'is) [Malcolm La Salle Harris, Chicago surgeon, 1862–1936] see under *segregator* and *suture*.

Harris' staining method (har'is) [Downey Lamar Harris, American pathologist, born 1875] see under *Table of Stains*.

Harris' syndrome (har'is) [Seale Harris, British physician, born 1870] see under *syndrome*.

Harrison antinarcotic act a Federal law, enacted March 1, 1915, which regulates the possession, sale, purchase, and prescription of habit-forming drugs, such as cocaine, morphine, opium, etc.

Harrison's groove (curve, sulcus) (har'i-sunz) [Edward Harrison, London physician, 1766–1838] see under *groove*.

Harrower's hypothesis (har'o-erz) [Henry Robert Harrower, American physician, born 1883] hormone hunger.

harrowing (har'o-ing) herbage.

Hartel's treatment (method, technic) (har'telz) [Fritz Hartel, German surgeon] see under *treatment*.

Hartley-Krause operation (hart'le-krows) [Frank Hartley, New York surgeon, 1857–1913; Fedor Krause, German surgeon, 1857–1937] see under *operation*.

Hartmann's curet, speculum (hart'manz) [Arthur Hartmann, laryngologist in Berlin, 1849–1931] see under *curet* and *speculum*.

Hartmann's point, pouch, procedure (operation, colos-

tomy) (hart'manz) [Henri Hartmann, French surgeon, 1860–1952] See *Sudeck's critical point*, under *point*, and see under *pouch* and *procedure*.

Hartmannella (hart'man-el'ah) a genus of small amebae of the order Amoebida, class Rhizopoda. Most species are free-living, but some may be facultative parasites of the respiratory passages and central nervous system of various mammals, including man.

H. hyali'na, a coprozoic ameba found in human feces.

hartshorn (harts'horn) 1. ammonium carbonate. 2. the horn of the stag or hart; cornu cervi.

harveian (har've-an) named in honor of William Harvey.

Harvey (har've), William (1578–1657). A celebrated English physician whose brilliant reasoning and innovative experiments, described in his *De motu cordis* (1628), establish him as the true discoverer of the circulation of the blood. He was also one of the first to disbelieve the doctrine of preformation of the fetus.

Häser's formula (coefficient) (ha'zerz) [Heinrich Häser, German physician, 1811–1884] see under *formula*.

Hashimoto's disease, struma, thyroiditis (hash'i-mo'tōz) [Hakaru Hashimoto, Japanese surgeon, 1881–1934] struma lymphomatosa.

hashish (hash-ēsh') [Arabic "herb"] a preparation of the undulterated resin scraped from the flowering tops of cultivated female hemp plants, *Cannabis sativa* L. (Cannabaceae), which is smoked or chewed for its intoxicating effects. It is far more potent than marihuana. See *cannabis*. Also referred to as *charas* or *churus*.

hashishin (hash-e'shin) a person psychologically dependent on hashish.

hashishism (hash'ēsh-izm) psychological dependency on hashish.

Hasner's fold, valve (hahs'nerz) [Joseph Ritter von Artha Hasner, an ophthalmologist in Prague, 1819–1892] see *plica lacrimalis*.

Hassall's corpuscles (bodies) (has'alz) [Arthur Hill Hassall, English chemist and physician, 1817–1894] see under *corpuscle*.

Hassin's syndrome (has'inz) [George Boris Hassin, Russian neurologist in the United States, 1873–1951] see under *syndrome*.

Hata's phenomenon, preparation (hah'tahs) [Sahachiro Hata, Japanese physician, 1873–1938] see under *phenomenon* and *preparation*.

Hauch (howkh) [Ger. "breath"] See *H*.

Haudek's sign (niche) (haw'deks) [Martin Haudek, roentgenologist in Vienna, 1880–1931] see under *sign*.

haunch (hawneh) the hip and buttock.

hauptganglion of Küttner (howpt'gang'gle-on) Küttner's ganglion; see under *ganglion*.

Haust. abbreviation for *L. haustus*, a draft.

haustellum (haw-stel'lum), pl. *haustel'la* [L. from *haustus* draw up] a mouthpart of certain ectoparasites, such as bedbugs and lice, modified for piercing and sucking, consisting of a hollow tube with an eversible set of five stylets, by which the organism attaches itself to the host and through which the blood is drawn up.

haustorium (haw-stor'i-um), pl. *haus'tra* [L. from *haustus* draw up] a structure of certain parasites adapted specially to penetrate the host's tissues and absorb nutrients and water.

haustra (haws'trah) plural of *haustrum*.

haustral (hos'tral) pertaining to the haustra of the colon.

haustration (hos-tra'shun) 1. the formation of a haustrum. 2. a haustrum.

hastrum (hows'trum), pl. *haus'tra* [L. *haustor* drawer] [NA] a general term denoting a recess. **haus'tra co'li** [NA], **haustra of colon**, sacculations in the wall of the colon produced by adaptation of its length to that of the tenia coli, or by the arrangement of the circular muscle fibers.

haustus (haws'tus) [L.] draft. **h. ni'ger**, black draft.

haut-mal (o-mahl') [Fr.] grand mal; see under *epilepsy*.

HAV hepatitis A virus.

Haverhill fever (ha'ver-il) [Haverhill, Mass., where an epidemic occurred in 1925] see under *fever*.

Haverhillia multiformis (ha'ver-il'e-ah mul'ti-for'mis) the name given to a slender gram-negative streptobacillus which was found in cases of Haverhill fever; now called *Streptobacillus moniliformis*.

haversian canal (space), glands, lamella, system (ha-ver'-shan) [Clopton Havers, English physician and anatomist, 1650–1702; known for his researches on the minute structure of bone, which were recorded in his *Osteologia nova* (1691)] see *canalis nutricius ossis* and *villi synoviales*, and see under *lamella* and *system*.

Hay's test (hāz) [Matthew Hay, Scotch physician, 1855–1932] see under *tests*.

Hayem's corpuscles, encephalitis, icterus (jaundice), solution (a-yawz') [Georges Hayem, physician in Paris, 1841–

1933] see *platelet* and *encephalitis hyperplastica*, see *hemolytic anemia*, under *anemia*, and see under *solution*.

Hayem-Widal syndrome (a-yaw-ve'dal) [Georges Hayem; Georges Fernand Isidore Widal, French physician, 1862-1929] hemolytic anemia.

hay fever (ha fe'ver) see under *fever*.

Haygarth's nodes (nodosites) (ha'garths) [John Haygarth, English physician, 1740-1827] see under *node*.

Haynes' operation (hānz) [Irving Samuel Haynes, New York surgeon, 1861-1946] see under *operation*.

Hazen's theorem (ha'zenz) [Allen Hazen, American civil engineer, born 1869] see under *theorem*.

HB hepatitis B.

HB_C hepatitis B core (antigen); an antigen in the core of the Dane particle.

HB_S hepatitis B surface (antigen); an antigen on the surface of the Dane particle.

Hb symbol for *hemoglobin*.

HB_CAg hepatitis B core antigen.

HB_eAg e antigen.

HB_SAg hepatitis B surface antigen.

HbO₂ oxyhemoglobin.

H₃BO₃ boric acid.

HBr hydrobromic acid.

HBV hepatitis B virus.

H.C. hospital corps.

HCG human chorionic gonadotropin.

HCHO formaldehyde.

HCl hydrochloric acid.

HCN hydrocyanic acid.

HCO₃ the bicarbonate radical.

H₂CO₃ carbonic acid.

HCT hematocrit.

HD₅₀ a hemolyzing dose of complement that lyses 50 per cent of a suspension of sensitized red blood cells.

H.d. abbreviation for *Lo'ra decu'bitus*, at bedtime.

HDL high-density lipoprotein.

HDN hemolytic disease of the newborn; see *erythroblastosis fetalis*.

H and E hematoxylin and eosin (stain). See *Table of Stains*.

He chemical symbol for *helium*.

he- for words beginning thus, see also those beginning *hae-*.

head (hed) [L. *caput*; Gr. *kephalē*] the upper, anterior, or proximal extremity of a structure or body, especially that part of an organism which contains the brain and the organs of special sense; called also *caput* [NA]. **angular h. of quadratus labii superioris muscle**, musculus levator labii superioris alaeque nasi. **articular h.**, an eminence on a bone by which it articulates with another bone. **h. of astragalus**, caput tali. **big h.**, bighead. **h. of blind colon**, cecum, def. 1. **h. of caudate nucleus**, caput nuclei caudati. **h. of condyloid process of mandible**, caput mandibulae. **coronoid h. of pronator teres muscle**, caput ulnare musculi pronatoris teretis. **deep h. of triceps brachii muscle**, caput mediale musculi tricipitis brachii. **deep h. of triceps extensor cubiti muscle**, caput mediale musculi tricipitis brachii. **drum h.**, membrana tympani. **engaged h.**, the position of the fetal head when the biparietal eminences have passed the pelvic inlet. **h. of epididymis**, caput epididymidis. **h. of femur**, caput femoris. **h. of fibula**, caput fibulae. **first h. of triceps brachii muscle**, caput longum musculi tricipitis brachii. **first h. of triceps extensor cubiti muscle**, caput longum musculi tricipitis brachii. **floating h.**, the head of the fetus when it is freely movable above the inlet of the birth canal. **great h. of adductor hallucis muscle**, caput obliquum musculi adductoris hallucis. **great h. of triceps brachii muscle**, caput laterale musculi tricipitis brachii. **great h. of triceps extensor cubiti muscle**, caput laterale musculi tricipitis brachii. **great h. of triceps femoris muscle**, musculus adductor magnus. **hot cross bun h.**, caput natiforme. **hourglass h.**, a head in which the coronal suture is depressed. **humeral h. of flexor carpi ulnaris muscle**, caput humerale musculi flexoris carpi ulnaris. **humeral h. of flexor digitorum sublimis muscle**, caput humeroulnare musculi flexoris digitorum superficialis. **humeral h. of pronator teres muscle**, caput humerale musculi pronatoris teretis. **h. of humerus**, caput humeri. **infraorbital h. of quadratus labii superioris muscle**, musculus levator labii superioris. **lateral h. of gastrocnemius muscle**, caput laterale musculi gastrocnemii. **lateral h. of triceps brachii muscle**, caput laterale musculi tricipitis brachii. **lateral h. of triceps extensor cubiti muscle**, caput laterale musculi tricipitis brachii. **little h. of humerus**, capitulum humeri. **little h. of mandible**, processus condylaris mandibulae. **little h. of metatarsal bone**, caput ossis metatarsalis. **long h. of adductor hallucis muscle**, caput obliquum musculi

adductoris hallucis. **long h. of adductor triceps muscle**, musculus adductor longus. **long h. of biceps brachii muscle**, caput longum musculi bicipitis brachii. **long h. of biceps femoris muscle**, caput longum musculi bicipitis femoris. **long h. of biceps flexor cruris muscle**, caput longum musculi bicipitis femoris. **long h. of biceps flexor cubiti muscle**, caput longum musculi bicipitis brachii. **long h. of triceps brachii muscle**, caput longum musculi tricipitis brachii. **long h. of triceps extensor cubiti muscle**, caput longum musculi tricipitis brachii. **long h. of triceps femoris muscle**, musculus adductor longus. **h. of malleus**, caput mallei. **h. of mandible**, 1. caput mandibulae. 2. processus condylaris mandibulae. **medial h. of biceps brachii muscle**, caput breve musculi bicipitis brachii. **medial h. of biceps flexor cubiti muscle**, caput breve musculi bicipitis brachii. **medial h. of gastrocnemius muscle**, caput mediale musculi gastrocnemii. **medial h. of triceps brachii muscle**, caput mediale musculi tricipitis brachii. **medial h. of triceps extensor cubiti muscle**, caput mediale musculi tricipitis brachii. **medusa h.**, caput medusae. **h. of metacarpal bone**, caput ossis metacarpalis. **h. of metatarsal bone**, caput ossis metatarsalis. **middle h. of triceps brachii muscle**, caput longum musculi tricipitis brachii. **middle h. of triceps extensor cubiti muscle**, caput longum musculi tricipitis brachii. **h. of muscle**, the end of a muscle at the site of its attachment (origin) to a bone or other fixed structure; called also *caput musculi*. **nasal h. of levator labii superioris alaeque nasi muscle**, musculus levator labii superioris alaeque nasi. **nerve h.**, discus nervi optici. **oblique h. of adductor hallucis muscle**, caput obliquum musculi adductoris hallucis. **oblique h. of adductor pollicis muscle**, caput obliquum musculi adductoris pollicis. **overriding h.**, the condition of the fetal head when it overrides the symphysis pubis instead of sinking into the pelvic cavity. **h. of pancreas**, caput pancreatis. **h. of penis**, glans penis. **h. of phalanx of fingers**, caput phalangis digitorum manus. **h. of phalanx of toes**, caput phalangis digitorum pedis. **plantar h. of flexor digitorum pedis longus muscle**, musculus quadratus plantae. **quadrate h. of flexor digitorum pedis longus muscle**, musculus quadratus plantae. **radial h. of flexor digitorum sublimis muscle**, caput radiale musculi flexoris digitorum superficialis. **radial h. of flexor digitorum superficialis muscle**, caput radiale musculi flexoris digitorum superficialis. **radial h. of humerus**, capitulum humeri. **h. of radius**, caput radii. **h. of rib**, caput costae. **saddle h.**, a head with a sunken crown. **scapular h. of triceps brachii muscle**, caput longum musculi tricipitis brachii. **scapular h. of triceps extensor cubiti muscle**, caput longum musculi tricipitis brachii. **second h. of triceps brachii muscle**, caput laterale musculi tricipitis brachii. **short h. of biceps brachii muscle**, caput breve musculi bicipitis brachii. **short h. of biceps femoris muscle**, caput breve musculi bicipitis femoris. **short h. of biceps flexor cruris muscle**, caput breve musculi bicipitis femoris. **short h. of biceps flexor cubiti muscle**, caput breve musculi bicipitis brachii. **short h. of coracoradialis muscle**, caput breve musculi bicipitis brachii. **short h. of triceps brachii muscle**, caput mediale musculi tricipitis brachii. **short h. of triceps extensor cubiti muscle**, caput mediale musculi tricipitis brachii. **short h. of triceps femoris muscle**, musculus adductor brevis. **h. of spleen**, extremitas posterior lienis. **h. of stapes**, caput stapedis. **steeple h.**, oxycephaly. **swelled h.**, bighead, def. 2. **h. of talus**, caput tali. **tower h.**, oxycephaly. **transverse h. of adductor hallucis muscle**, caput transversum musculi adductoris hallucis. **transverse h. of adductor pollicis muscle**, caput transversum musculi adductoris pollicis. **h. of ulna**, caput ulnae. **ulnar h. of flexor carpi ulnaris muscle**, caput ulnare musculi flexoris carpi ulnaris. **ulnar h. of pronator teres muscle**, caput ulnare musculi pronatoris teretis. **white h.**, witkop. **zygomatic h. of quadratus labii superioris muscle**, musculus zygomaticus minor.

Head's zones [Sir Henry Head, London neurologist, 1861-1940] see under *zone*.

headache (hed'āk) pain in the head; cephalgia. **anemic h.**, headache ascribed to anemia, local or general. **bilious h.**, headache associated with gastrointestinal symptoms; usually migrainous. See *migraine*. **blind h.**, migraine. **cluster h.**, migrainous neuralgia. **congestive h.**, headache ascribed to congestion or hyperemia. **cough h.**, stabbing pain produced by the traction on pain-sensitive structures resulting from coughing or straining. **dynamite h.**, a severe headache occurring in persons handling high explosives. **functional h.**, headache due to tension or other emotional upset. **helmet h.**, pain involving the upper half of the head. **histamine h.**, Horton's h., migrainous neuralgia. **hyperemic h.**, congestive h. **lumbar puncture h.**, puncture h. **migraine h.**, see *migraine*. **miners' h.**, headache due to the gases produced by exploded nitroglycerin. **Monday morning h.**, a term sometimes applied to cases of malingering or "hangover." **organic h.**, headache due to intracranial disease or other organic disease. **postspinal h.**, puncture h. **puncture h.**, the headache and

associated symptoms following puncture of the spinal canal and removal of cerebrospinal fluid. **pyrexial h.**, that due to fever. **reflex h.**, that associated with disease of some organ, as the stomach, eyes, etc.; called also *symptomatic h.* **rhinogenous h.**, headache due to nasal disease. **sick h.**, migraine. **spinal h.**, puncture h. **symptomatic h.**, reflex h. **tension h.**, a type due to prolonged overwork or emotional strain, or both, affecting especially the occipital region. **toxic h.**, headache due to systemic poisoning. **vacuum h.**, headache due to obstruction of the outlet of the frontal sinus. **vasomotor h.**, migrainous neuralgia.

headcap (hed'kap) headgear.

headgear (hed'gēr) a removable extraoral appliance used as a source of anchorage to apply force to the teeth and jaws; called also *headcap*.

headgrit (hed'grit) yellows, def. 2.

headgut (hed'gut) the foregut.

Heaf test [Frederick R. G. Heaf, British physician, born 1894] see *tuberculin test*, *Sterneedle*, under *tests*.

heal (hēl) to restore wounded parts or to make healthy; to become well or healthy.

healing (hēl'ing) a process of cure; the restoration of integrity to injured tissue. **h. by first intention**, healing in which union or restoration of continuity occurs directly without the intervention of granulations. **h. by granulation**, healing by second intention. **h. by second intention**, union by closure of a wound with granulations which form from the base and both sides toward the surface of the wound. **mental h.**, psychotherapy.

health (helth) a state of optimal physical, mental, and social well-being, and not merely the absence of disease and infirmity. **holistic h.**, a system of preventive medicine that takes into account the whole individual, his own responsibility for his well-being and the total influences—social, psychological, environmental—that affect health, including nutrition, exercise, and mental relaxation. **public h.**, the field of medicine concerned with safeguarding and improving the health of the community as a whole.

health maintenance organization (HMO) a broad term encompassing a variety of health care delivery systems utilizing group practice and providing alternatives to the fee-for-service private practice of medicine and allied health professions. They are essentially prepaid, organized systems for providing comprehensive health care within a geographic area to all persons under contract and they emphasize preventive medicine.

healthy (hel'the) pertaining to, characterized by, or promoting health.

hearing (hēr'ing) [L. *auditus*] the sense by which sounds are perceived; capacity to perceive sound. **color h.**, chromesthesia. **double disharmonic h.**, diplacusis. **monaural h.**, hearing with one ear. **visual h.**, lip reading.

hearing loss (hēr-ing los') partial or complete loss of hearing; see also *deafness*. **Alexander's h.l.**, congenital deafness due to cochlear aplasia involving chiefly the organ of Corti and adjacent ganglion cells of the basal coil of the cochlea; a high-frequency hearing loss results. Called also *Alexander's deafness*. **conductive h.l.**, hearing loss due to a defect of the sound conducting apparatus, i.e., of the external auditory canal or middle ear. Called also *transmission h.l.* **pagetoid h.l.**, that occurring in osteitis deformans (Paget's disease) of the bones of the skull. **paradoxical h.l.**, hearing loss in which the hearing is better during loud noise. Called also *paracusia willisana*. **sensorineural h.l.**, hearing loss due to a defect in the inner ear or the acoustic nerve. **transmission h.l.** conductive h.l.

heart (hart) [L. *cor*; Gr. *kardia*] the viscus of cardiac muscle that maintains the circulation of the blood. Called also *cor* [NA]. It is divided into four cavities—two atria and two ventricles. The left atrium receives oxygenated blood from the lungs. From there the blood passes to the left ventricle, which forces it via the aorta through the arteries to supply the tissues of the body. The right atrium receives the blood after it has passed through the tissues and given up much of its oxygen. The blood then passes to the right ventricle, and then to the lungs, to be oxygenated. The major valves are four in number: the *left atrioventricular* (*bicuspid*, or *mitral*), between the left atrium and ventricle; the *right atrioventricular* (*tricuspid*), between the right atrium and ventricle; the *aortic*, at the orifice of the aorta; and the *pulmonary*, at the orifice of the pulmonary trunk. The heart tissue itself is nourished by the blood in the coronary arteries. See Plate XX. **abdominal h.**, a heart displaced into the abdominal cavity. **armored h.**, **armor h.**, a condition marked by calcareous deposits in the pericardium. **artificial h.**, a pumping mechanism that duplicates the output, rate, and blood pressure of the natural heart. It may replace the function of the entire heart or a portion of it, and may be an intracorporeal, extracorporeal, or paracorporeal heart. **athlete's h.**, aortic incompetence due to strain in athletic exercise. **athletic h.**, hypertrophy of the heart with no disease of the valves, sometimes seen in athletes. **beer h.**, hypertrophy and dilatation of the heart attributed to excessive beer drinking; recently cobalt, as an additive in beer, has been implicated in some

instances. See also *alcoholic myocardiopathy*, under *myocardiopathy*. **beriberi h.**, heart failure from thiamine deficiency. **boat-shaped h.**, the heart of aortic regurgitation due to dilatation and hypertrophy of the left ventricle. **bony h.**, a heart or pericardium containing calcareous deposits. **booster h.**, auxiliary ventricle. **bovine h.**, cor bovinum, a greatly enlarged heart. **cervical h.**, one situated in the neck. **chaotic h.**, a heart which exhibits frequent premature systoles. **dynamite h.**, a condition occurring in workers exposed to nitroglycerin, in which the blood vessels become dilated during exposure and then, when exposure is discontinued, contract and thus reduce the blood supply to heart. **encased h.**, a heart affected with chronic constrictive pericarditis. **extracorporeal h.**, an artificial heart located outside the body and usually performing a pumping and an oxygenating function. **fat h.**, **fatty h.**, 1. a heart affected with fatty degeneration. Called also *cor adiposum*. 2. a condition in which there is an excessive layer of fat deposited about and in the heart muscle. **fibroid h.**, a heart affected with chronic myocarditis in which fibrous tissue replaces portions of the myocardium. **flask-shaped h.**, the x-ray appearance of the heart in pericarditis with effusion. **frosted h.**, a condition in which the pericardium is thickened, giving the heart the appearance of being frosted like a cake. Cf. *hyaloserositis*. **hairy h.**, cor villosum. **hanging h.**, a condition as seen in the roentgenogram in cardiopneumonia, in which the heart appears as if hanging straight down from the aorta. **horizontal h.**, a counterclockwise rotation of the electrical axis (deviation to the left) of the heart; a moderate deviation (0° to -20°) is normally observed in asthenic persons with a transversely situated heart, in the obese, and in pregnant women. **hyperthyroid h.**, the heart in thyrotoxic heart disease. **hypoplastic h.**, a heart of small size. **icing h.**, frosted h. **intracorporeal h.**, an artificial heart implanted in the body. **irritable h.**, neurocirculatory asthenia. **left h.**, the left atrium and ventricle; that portion of the heart which propels the blood in systemic circulation. **lymph h.**, an organ in frogs and fishes concerned in the distribution of lymph. **mechanical h.**, artificial h. **myxedema h.**, an enlarged heart associated with hypothyroidism. **ox h.**, cor bovinum. **paracorporeal h.**, an artificial heart worn at the side of the body. **parchment h.**, see *hypoplasia of right ventricle*. **pear-shaped h.**, the x-ray appearance of the heart in combined aortic and mitral disease. **pectoral h.**, a heart situated in the front of the chest where it produces a bulging area. **pulmonary h.**, right heart. **Quain's fatty h.**, a fatty degeneration of the heart muscle. **right h.**, the right atrium and ventricle; that portion of the heart which propels the blood in the pulmonary circulation. **round h.**, the x-ray appearance of the heart in mitral stenosis and regurgitation. **sabot h.**, coeur en sabot. **soldier's h.**, neurocirculatory asthenia. **systemic h.**, left heart. **tabby cat h.**, a condition of the heart in which the inner surface of the ventricular wall and the papillary muscles are streaked and spotted; seen in marked cases of fatty degeneration. Called also *thrush breast h.*, *tiger h.*, and *tiger lily h.* **three-chambered h.**, a developmental anomaly in which the heart has a single or common ventricle with two atria emptying into it (absence of the ventricular septum), or a single or common atrium and two normal ventricles (absence of the atrial septum); called also *cor trilobulare* or *trilobular h.* **thrush breast h.**, *tiger h.*, *tiger lily h.*, *tabby cat h.* **tobacco h.**, a heart showing irregularity of action attributed to excessive use of tobacco. **Traube's h.**, heart disease resulting from kidney disorder. **triatrial h.**, cor triatriatum. **trilobular h.**, three-chambered h. **vertical h.**, a clockwise rotation of the electrical axis (deviation to the right) of the heart; a moderate deviation (90° to 100°) is normally observed in asthenic persons with a vertically situated heart and in early infancy. **wandering h.**, an abnormally movable heart. **wooden-shoe h.**, coeur en sabot.

heart block (hart'blok) impairment of conduction in heart excitation; often applied specifically to atrioventricular heart block (q.v.). **arborization h.b.** (obs.), an intraventricular conduction defect attributed to loss of function of the distal ramifications of the bundle branches and/or Purkinje tissue. **atrioventricular h.b.**, a form in which the block occurs in the atrioventricular junctional tissue (atrioventricular node, bundle of His, or its branches); it is called *first degree h.b.* when conduction time is prolonged but all atrial beats are followed by ventricular beats; *second degree (partial) h.b.* when some, but not all, atrial beats are conducted; and *third degree (complete) h.b.* when no impulses whatsoever are conducted by the junctional tissues, owing to pathologic factors. The condition may be permanent or paroxysmal and if syncopal attacks occur, it is known as *Adams-Stokes disease*. **bundle-branch h.b.**, a form in which one ventricle is excited before the other because of absence of conduction in one of the branches of the bundle of His. **complete h.b.**, loss of conduction through the atrioventricular junctional tissue due to pathologic factors, with atrioventricular dissociation in which a sinus or atrial beat excites the atria while an idioventricular pacemaker below the site of block excites the ventricles; see also *atrioventricular h.b.* **congenital h.b.**, heart block due to defective development of junction conduction tissues of the heart; it may be associated with other cardiac anomalies. **incomplete**

h.b., second degree h.b.; see *atrioventricular h.b.* **interven-tricular h.b.**, bundle-branch h.b. **intraventricular h.b.**, a general term denoting an abnormal excitation pattern of the ventricles due to absence of conduction in the bundle branches or their ramifications. **Mobitz h.b.**, second degree atrioventricular heart block marked by a periodic dropped beat with a fixed P-R interval. **partial h.b.**, second degree h.b.; see *atrioventricular h.b.* **sinoatrial h.b.**, partial or complete impairment of conduction from the sinoatrial node to the atria, resulting in delay or absence of an atrial beat. **Wenckebach h.b.**, second degree atrioventricular heart block marked by a periodic dropped beat with a varying P-R interval.

heartburn (hart/bern) an esophageal symptom consisting of a retrosternal sensation of warmth or burning occurring in waves and tending to rise upward toward the neck; it may be accompanied by a reflux of fluid into the mouth (water brash). It is often associated with gastroesophageal reflux. Called also *pyrosis*.

heart failure (hart/fäl-yer) a clinical syndrome characterized by distinctive symptoms and signs resulting from disturbances in cardiac output or from increased venous pressure. Most often applied to myocardial failure with increased pressures distending the ventricle (high end-diastolic pressure [EDP]) and a cardiac output inadequate for the body's needs; often subclassified as right- or left-sided heart failure depending on whether the systemic or pulmonary veins are predominantly distended. Cf. *cardiac arrest*, under *arrest*. **acute congestive h.f.**, rapidly occurring deficiency in cardiac output marked by venocapillary congestion and hypertension and edema, usually pulmonary edema. **backward h.f.**, that produced by passive engorgement of the systemic venous system caused by a rise in distending (diastolic) pressures in the right heart. **congestive h.f.**, a clinical syndrome due to heart disease and characterized by breathlessness and abnormal sodium and water retention, resulting in edema. The congestion may occur in the lungs or in the peripheral circulation, or in both, depending on whether the heart failure is right-sided, left-sided, or general. **forward h.f.**, a concept of heart failure that emphasizes the inadequacy of cardiac output relative to body needs; edema is attributed primarily to renal retention of sodium and water, and venous distention is considered a secondary feature. **high output h.f.**, heart failure in which the cardiac output remains high, most often associated with hyperthyroidism. **left-sided h.f.**, **left ventricular h.f.**, failure of adequate output by the left ventricle despite an increase in distending pressure and in end-diastolic volume, with dyspnea, orthopnea, etc.; see *heart failure*. **right-sided h.f.**, **right ventricular h.f.**, failure of proper functioning of the right ventricle, with venous engorgement, hepatic enlargement, and subcutaneous edema; it is often combined with left-sided heart failure.

heartwater (hart-wot'er) a fatal disease of cattle, sheep, and goats, marked by fluid accumulation in the pleura, pericardium, and pleural cavity. It is caused by *Cowdria ruminantium*, which is transmitted by the ticks *Amblyomma hebraeum* and *A. variagata*.

heartworm (hart/werm) *Dirofilaria immitis*.

heat (hēt) [L. *calor*; Gr. *thermē*] 1. the sensation of an increase in temperature. 2. the energy which produces the sensation of heat. It exists in the form of molecular or atomic vibration (thermal agitation) and may be transferred by conduction through a substance, by convection by a substance, and by radiation as electromagnetic waves. 3. energy that is transferred as a consequence of a gradient in temperature. 4. estrus. **atomic h.**, the product of the atomic weight of an element and its specific heat. **conductive h.**, heat transmitted to the body by contact with a heated object, such as a hot water bag. **convective h.**, heat conveyed to the surface of the body from warm currents of water or air. **conversive h.**, heat developed in the tissues by the resistance of the tissues to the passage of high-frequency electromagnetic radiation through them. **delayed h.**, recovery heat. **dry h.**, heat that is not moist. Heated dry air is used in an apparatus such as a covered "baker," designed for the production of hyperemia. The dry air rapidly absorbs from the skin the moisture of perspiration induced in the apparatus during treatment. **initial h.**, the heat produced in muscle at the beginning of muscular contraction. Cf. *recovery h.* **latent h.**, that which apparently disappears when it is absorbed by bodies which thereby are not rendered warmer; the heat which a body may absorb without changing its temperature. **molecular h.**, the product of the molecular weight of a substance multiplied by its specific heat. **prickly h.**, miliaria rubra. **radiant h.**, heat applied to the surface of the body by rays from a source of infrared radiation, such as a heat lamp. **recovery h.**, that part of the heat developed by muscular contraction which is evolved after shortening. Cf. *initial h.* **sensible h.**, the heat which, when absorbed by a body, produces a rise in temperature. **specific h.**, the amount of heat required to raise the temperature of unit mass of a substance one degree.

Heath's operation (hēths) [Christopher Heath, English surgeon, 1835-1905] see under *operation*.

Heaton's operation (he'tonz) [George Heaton, Boston surgeon, 1808-1879] see under *operation*.

heatstroke (hēt'strōk") see under *stroke*.

heaves (hēvz) a respiratory disturbance, most common in the Equidae, resulting from reduced elasticity in and rupture of the elastic network of the respiratory bronchioles and pulmonary alveoli and characterized by partly forced expiration.

Hebdom. abbreviation for L. *hebdom'ada*, a week.

hebdomadal (heb-dom'ah-dal) [L. *hebdomada* a week] pertaining to the first week of life.

hebeosteotomy (heb'e-os'te-o'to-mē) (obs.) pubiotomy.

hebephrenia (heb'ē-fre'ne-ah) [Gr. *hēbē* youth + *phrēn* mind] hebephrenic schizophrenia. **grafted h.**, hebephrenia superimposed upon an already existing mental deficiency (Kraepelin).

hebephreniac (heb'ē-fre'ne-ak) hebephrenic.

hebephrenic (heb'ē-fren-ik) 1. see under *schizophrenia*. 2. an individual affected with hebephrenic schizophrenia.

Heberden's asthma, disease, nodes (signs), rheumatism (he'ber-denz) [William Heberden, English physician, 1710-1801] see *angina pectoris*, and see under *disease*, *node*, and *rheumatism*.

hebetie (hē-bet'ik) [Gr. *hēbētikos* youthful] pertaining to or occurring at the time of puberty.

hebetomy (he-bet'o-mē) (obs.) pubiotomy.

hebetude (heb'ē-tūd) [L. *hebetudo*] apathy or dullness from any cause; in psychiatry, emotional dullness, a characteristic of schizophrenia.

hebiatrics (he'be-at'riks) epebiatrics.

heboid (heb'oid) [Gr. *hēbē* youth + *eidos* form] the simple form of schizophrenia.

heboidophrenia (heb'oi-do-fre'ne-ah) schizophrenia marked by simple dementia; a term rarely used.

hebestomy (he-bos'te-o'to-mē) pubiotomy.

hebotomy (he-bot'o-mē) pubiotomy.

Hebra's disease, pityriasis (he'brahs) [Ferdinand von Hebra, Austrian dermatologist, 1816-1880, founder of the histologic school of dermatology] see *erythema multiforme* and *dermatitis exfoliativa*.

hecatomeral (hek'ah-tom'er-al) hecatomeric.

hecatomeric (hek'ah-to-mer'ik) [Gr. *hekatēron* each of two + *meros* part] having processes which divide into two, one going to each side of the spinal cord; said of certain neurons.

Hecht's phenomenon (hekts) [Adolf Franz Hecht, Vienna pediatricist, born 1876] Rumpel-Leede phenomenon.

Hecht's test (hekts) [Hugo Hecht, Prague physician, in Cleveland, born 1883] see under *tests*.

hectic (hek'tik) [L. *hcticus*; Gr. *hektikos* consumptive] associated with tuberculosis or with septic poisoning, as hectic fever.

hecto- [Fr., from Gr. *hekatōn* one hundred] a combining form designating one hundred; used in naming units of measurement to indicate a quantity 100 (10²) times the unit designated by the root with which it is combined.

hectogram (hek'to-gram) a unit of mass of the metric system, being 10² grams; the equivalent of 3.527 ounces avoirdupois, or 3.215 ounces apothecaries' weight.

hectoliter (hek'to-le-ter) a unit of capacity of the metric system, being 10² liters; the equivalent of 26.4 United States or 22 Imperial gallons.

hectometer (hek-tom'ē-ter) a unit of linear measure of the metric system, being 10² meters, or the equivalent, roughly, of 328 feet, one inch.

H.E.D. abbreviation for German *Haut-Einheits-Dosis* (unit skin dose), a unit of roentgen-ray dosage established by Seitz and Wintz.

Hedera (hed'er-ah) a genus of climbing woody vines, including English ivy (*H. helix*).

hederiform (hed'er-i-form) [L. *hedera* ivy + *forma* shape] ivy-shaped; (obs.) a term applied to certain nerve endings in the malpighian layer of the skin.

hedonia (he-do'ne-ah) abnormal cheerfulness.

hedonic (he-don'ik) pertaining to pleasure.

hedonics (he-don'iks) [Gr. *hēdonē* pleasure] the study of pleasurable and unpleasurable feelings.

hedonism (he-do-nizm) [Gr. *hēdonē* pleasure] devotion to pleasure; the doctrine that regards pleasure and happiness as the highest good.

hedratresia (hed'rah-tre'se-ah) [Gr. *hedra* anus + *atresia*] imperforate anus; see under *anus*.

hedrocele (hed'ro-sēl) [Gr. *hedra* anus + *kēlē* hernia] (obs.) hernia, or prolapse, of the intestine through the anus.

Hedulin (hed'u-lin) trademark for a preparation of phenindione.

heel (hēl) the hindmost part of the foot; called also *calx* [NA]. **anterior h.**, a triangular-shaped piece of leather fastened obliquely across the ball of the shoe just behind the heads of the metatarsal bones, the object being to support the heads, equalize the pressure, and support the anterior arch. **basketball h's**, talon noir. **big h.**, epidemic enlargement of the heel occurring

DETAILS OF STRUCTURE OF THE HEART

in parts of Africa. **contracted h.**, hoof-bound. **cracked h's**, pitted keratolysis. **gonorrheal h.**, the development of exostoses on the heel, attributed to gonorrheal infection. **painful h.**, a condition in which pain is caused by pressure on the heel. **policeman's h.**, calcanodinia in a policeman. **prominent h.**, a swelling on the back of the heel due to thickening of the periosteum of the os calcis. **Thomas h.**, a shoe correction consisting of a heel $\frac{1}{2}$ in. longer and $\frac{1}{4}$ in. higher on the inside, used to bring the heel of the foot into varus and to prevent depression in the region of the head of the talus.

Heerfordt's disease (här'forts) [Christian Frederik Heerfordt, Danish ophthalmologist] uveoparotid fever.

hefefflavin (hef'f-fla'vin) (obs.) a lyochrome pigment from yeast.

hefilcon A (hē-fil'kon) chemical name: 2-hydroxyethyl methacrylate polymer with 1-vinyl-2-pyrrolidinone and ethylene dimethacrylate; a hydrophilic contact lens material, $(C_6H_9O_3)_x (C_6H_8NO)_y (C_{10}H_{14}O_4)_z$.

Hegar's dilator, sign (ha'garz) [Alfred Hegar, gynecologist in Freiburg, 1830-1914] see under *dilator* and *sign*.

Heiberg-Esmarch maneuver (hi'berg es'mark) [Jacob Heiberg, Norwegian surgeon, 1843-1888; Johann Friedrich August von Esmarch, German surgeon, 1823-1908] see under *maneuver*.

Heidenhain's cells, law, rods, stain (hi'den-hinz) [Rudolf Peter Heidenhain, German physiologist, 1834-1897] see *chief cells* (def. 1) and *parietal cells*, under *cell*, and see under *law*, *rod*, and *stain*.

height (hīt) the vertical measurement of an object or body. **anterior facial h.**, the linear measurement along a line extending from the nasion to the menton. **apex h.**, the magnitude of the ordinates of the summated twitches of a muscle following application of electric or other stimulation. **h. of contour**, 1. a line encircling a tooth representing its greatest circumference. 2. the line encircling a tooth in a more or less horizontal plane and passing through the surface point of greatest radius. 3. the line encircling a tooth at its greatest bulge or diameter with respect to a selected path of insertion. **cusp h.**, 1. the shortest distance between the tip of a cusp of a tooth and its base plane. 2. the shortest distance between the deepest part of the central fossa of a posterior tooth and a line connecting the points of the cusps of the tooth. **posterior facial h.**, 1. a linear measure of the line perpendicular from the sella-nasion plane intersecting the mandibular plane. 2. in orthodontics, the ramus height, i.e., from condylare to gonion. **sitting h.**, sitting vertex h. **sitting suprasternal h.**, the distance from the middle of the anterior-superior border of the manubrium sterni to the surface on which the subject is seated. **sitting vertex h.**, the distance from the highest point of the head in the sagittal plane to the surface on which the subject is seated; commonly called *sitting height*. Cf. *crown-rump length*. **standing h.**, the distance from the highest point of the head in the sagittal plane to the surface on which the individual is standing, measured when the subject is not wearing shoes. Cf. *crown-heel length*.

Heilbronner's thigh (sign) (hil'bron-erz) [Karl Heilbronner, Dutch physician, 1869-1914] see under *thigh*.

Heim-Kreysig sign (him-kri'sig) [Ernst Ludwig Heim; Friedrich Ludwig Kreysig, German physician, 1770-1839] see under *sign*.

Heimlich maneuver (him'lik) [Henry Heimlich, American physician] see under *maneuver*.

Heine's operation (hi'nez) [Leopold Heine, German oculist, 1870-1940] see under *operation*.

Heine-Medin disease (hi'nē ma'din) [Jacob von Heine, German physician, 1806-1879; Karl Oskar Medin, Swedish physician, 1847-1927] see *poliomyelitis*.

Heineke-Mikulicz pyloroplasty (operation) (hi'nē-kē mik' u-lich) [Walter Hermann Heineke, German surgeon, 1834-1901; Johann von Mikulicz-Radecki, Polish surgeon, 1850-1905] see under *pyloroplasty*.

Heinz bodies (granules) (hīnz) [Robert Heinz, German pathologist, 1865-1924] Heinz-Ehrlich bodies; see under *body*.

Heinz-Ehrlich bodies (hīnz-ār'lik) [Robert Heinz; Paul Ehrlich, German bacteriologist, 1854-1915] see under *body*.

Heisrath's operation (his'raths) [Friedrich Heisrath, German ophthalmologist, 1850-1904] see under *operation*.

Heister's diverticulum, fold, valve (his'terz) [Lorenz Heister, German anatomist, 1683-1758] see *bulbus venae jugularis superior* and *plica spiralis*.

HEK human embryo kidney (cell culture).

Hektoen phenomenon (hek'tōn) [Ludvig Hektoen, Chicago pathologist, 1863-1951] see under *phenomenon*.

HEL human embryo lung (cell culture).

HeLa cells (he'lah) [from the name of the patient from whose carcinoma of the cervix uteri the parent carcinoma cells were isolated in 1951 at Johns Hopkins Hospital by Dr. George O. Gey] see under *cell*.

helcoid (hel'koid) [Gr. *helkos* ulcer + *eidōs* form] resembling an ulcer.

helcology (hel-kol'o-je) [Gr. *helkos* ulcer + *-logy*] the scientific study of ulcers.

helcoma (hel-ko'mah) [Gr.] corneal ulcer (Hippocrates).

helcosis (hel-ko'sis) [Gr. *helkōsis*] ulceration; the formation of an ulcer.

Helcosoma tropicum (hel'ko-so'mah trop'i-kum) *Leishmania tropica*.

Heleidae (hē-le'i-de) a family of flies of the suborder Nematocera, order Diptera, containing, among others, the four genera *Culicoides*, *Haemaphysalis*, *Lasiohelea*, and *Leptoconops*, various species of which suck the blood of man, and may serve as vectors of disease. Called also *Ceratopogonidae*.

helenine (hel'ē-nēn) an antiviral substance produced by *Penicillium funiculosum* that is active against nucleic acid synthesis; thought to be a ribonucleoprotein.

heliathin (he-le-an'thin) methyl orange; see under *orange*.

heliation (he'le-a'shun) treatment by exposure to the sun's rays.

helical (hel'i-kal) shaped like a helix.

Helicella (he'li-sel'ah) a genus of snails that serves as a host of *Dicrocoelium dentriticum*.

Helicellidae (he'li-sel'i-de) a family of snails (suborder Stylomatophora, order Pulmonata) that serves as a host of trematodes infecting man.

helicin (hel'i-sin) a glycoside formed by oxidizing salicin, which on hydrolysis yields glucose and salicylic aldehyde.

helicine (hel'i-sin) 1. of spiral form. 2. of or pertaining to a helix.

helico- (hel'i-ko) [Gr. *helix* coil] a combining form denoting relationship to a coil, or to a snail (*Helix*).

helicoid (hel'i-koid) [*helico-* + Gr. *eidōs* form] resembling a coil or helix.

helicopepsin (hel'i-ko-pep'sin) [*helico-* + *pepsin*] an enzyme resembling pepsin, from snails.

helicopod (hel'i-ko-pod") denoting a peculiar dragging gait; see under *gait*.

helicopodia (hel'i-ko-po'de-ah) helicopod gait.

helicoprotein (hel'i-ko-pro'te-in) [*helico-* + *protein*] a glucoprotein substance obtained from the snail, *Helix pomata*.

helicotrema (hel'i-ko-tre'mah) [*helico-* + Gr. *trēma* hole] [NA] the passage of the ear that connects the scala tympani and scala vestibuli at the apex of the cochlea; called also *Breschet's* or *Scarpa's hiatus*.

helioccephalitis (he'le-en-sef'ah-li'tis) encephalitis from exposure to the sun (sunstroke).

helio- (he'le-o) [Gr. *hēlios* sun] a combining form denoting relationship to the sun.

helioaerotherapy (he'le-o-a'er-o-ther'ah-pe) [*helio-* + Gr. *aēr* air + *therapeia* treatment] treatment by exposure to the sun's rays and to fresh air.

helion (he'le-on) helium.

heliopathia (he'le-o-path'e-ah) [*helio-* + Gr. *pathos* disease] any pathological disturbance caused by sunlight.

heliosin (he'le-o'sin) a compound containing keratin and various inorganic salts.

heliosis (he'le-o'sis) [*helio-* + *-osis*] sunstroke.

heliotaxis (he'le-o-tak'sis) [*helio-* + Gr. *taxis* arrangement] phototaxis.

heliotherapy (he'le-o-ther'ah-pe) [*helio-* + *therapy*] the treatment of disease by exposing the body to the sun's rays; the therapeutic use of the sun bath.

Heliotiales (he'le-o-she-a'lēz) an order of ascomycetes (series Pyrenomycetes, subclass Euascomycetidae), some members of which are saprophytes and others are parasites of plants. It includes the genus *Sclerotinia*.

heliotrope B (he'le-o-trōp") amethyst violet; see under *violet*.

heliotropism (he'le-o-trōpizm) [*helio-* + Gr. *tropē* a turn, turning] phototropism, def. 1.

helistarine (hē-lis'ter-in) [Gr. *helix* snail] a sterol from snails.

helium (he'le-um) [Gr. *hēlios* sun] a colorless, odorless, tasteless gas, which is not combustible and does not support combustion. It is one of the inert gaseous elements, which was first detected in the sun and is now obtained from natural gas. Symbol, He; atomic number, 2; atomic weight, 4.003. Used in medicine [USP] as a diluent for other gases, being especially useful with oxygen in the treatment of certain cases of respiratory obstruction, and as a vehicle for general anesthetics.

Helix (he'liks) a genus of gastropods that contains the common garden snails.

helix (he'liks) [Gr. "snail," "coil"] 1. a coiled structure, such as the coil of wire in an electromagnet. 2. [NA] the superior and posterior free margin of the pinna of the ear. **α-h.**, **alpha h.**, the complex structural arrangement of some protein molecules, such as keratin, in which the single polypeptide chains of proteins spiral right-handedly to form helices. Each NH group is connected

to a CO group by a hydrogen bond at a distance equivalent to 3 amino acid residues; the helix makes a complete turn for each 3.6 residues. **double h.**, **Watson-Crick h.**, a double helix, each chain of which contains information completely specifying the other chain, representing a structural formulation of the mechanism by which the genetic information in DNA reproduces itself; see *illustration*.

The DNA helix, representing the structure of deoxyribonucleic acid. *Upper*: as a spiral staircase. *Middle*: as an arrangement of organic molecules (A = adenine, C = cytosine, G = guanine, P = phosphate, S = sugar, T = thymine) and hydrogen bonds. *Lower*: as an arrangement of atoms of carbon, hydrogen, oxygen, and phosphorus, and base pairs as shown. (From Swanson: *The Cell*, Prentice-Hall, Inc., 1960.)

Hellat's sign (hel'ats) [Piotr Hellat, Russian otologist, 1857-1912] see under *sign*.

hellebore (hel'ē-bōr) [L. helleborus; Gr. helleboros] a violent gastrointestinal poison, having hydragogue, cathartic, and emmenagogue properties. **American h.**, *Veratrum viride*. **black h.**, the root of *Helleborus niger*. **green h.**, *Veratrum viride*. **white h.**, *Veratrum album*.

Hellendall's sign (hel'en-dahlz) [Hugo Hellendall, gynecologist in Düsseldorf, born 1872] Cullen's sign.

Heller's operation (hel'erz) [Ernst Heller, Leipzig surgeon, born 1877] cardiomyotomy.

Heller's test (hel'erz) [Johann Florian Heller, Vienna pathologist, 1813-1871] see under *tests*.

Heller-Döhle disease (hel'er-de'le) [Arnold Ludwig Gotthilf Heller, Kiel pathologist, 1840-1913; Karl Gottfried Paul Döhle, German pathologist, 1855-1928] syphilitic aortitis.

Hellin's law (hel'inz) [Dyonizy Hellin, Polish pathologist, 1867-1935] see under *law*.

Helmholtz's ligament, theory (helm'holtz-ez) [Hermann Ludwig Ferdinand von Helmholtz, German physiologist, who in 1851 invented the ophthalmoscope, 1821-1894] see under *ligament* and *theory*.

helminth (hel'minth) [Gr. *helmins* worm] a parasitic worm.

helminthagogue (hel-min'thah-gog) [*helminth* + Gr. *agōgos* leading] anthelmintic.

helminthmesis (hel'min-them'ē-sis) [*helminth* + Gr. *emesis* vomiting] the vomiting of worms.

helminthiasis (hel'min-thi'ah-sis) an infection with worms. **cutaneous h.**, larva migrans. **h. elas'tica**, the occurrence of elastic tumors in the groin and axilla, probably due to filariae.

helminthic (hel-min'thik) pertaining to or caused by parasitic worms.

helminthicide (hel-min'thī-sid) [*helminth* + L. *caedere* to kill] vermicide.

helminthism (hel'min-thizm) the presence of worms in the body.

helminthoid (hel-min'thoid) [*helminth* + Gr. *eidos* form] wormlike.

helminthology (hel'min-thol'o-je) [*helminth* + *-logy*] the scientific study of parasitic worms.

helminthoma (hel'min-tho'mah) [*helminth* + *-oma*] a tumor caused by a parasitic worm.

helminthous (hel-min'thus) pertaining to or infected with worms.

helo- [Gr. *hēlos* nail] a combining form denoting relationship to a nail, or to a wart or callus.

Heloderma (he'lo-der'mah) [*helo-* + Gr. *derma* skin] a genus of venomous lizards of Arizona and New Mexico. *H. horridum*, the Mexican beaded lizard. *H. suspectum*, the Gila monster.

heloma (he-lo'mah) [*helo-* + *-oma*] a corn or callosity on the hand or foot. **h. du'rum**, hard corn, the usual type occurring over joints of the toes. **h. mol'le**, a soft corn.

Helophilus (hē-lof'i-lus) a genus of flies, hover flies, of the family Syrphidae, whose "rat-tail" maggots (larvae) may cause nasal and intestinal myiasis.

helosis (he-lo'sis) the condition of having corns.

helotomy (he-lo'to-me) [*helo-* + Gr. *temnein* to cut] the excision or, more often, the paring of corns or calluses.

Helvella (hel-vel'ah) a genus of fungi of the family Helvellaceae, the saddle fungi, species of which contain a heat-stable hemolysin. Helvellic acid is a constituent of *H. infula*. Other species, including *H. esculenta*, cause a form of mycetismus.

Helvellaceae (hel'vel-a'se-e) a family of ascomycetous fungi of the order Pezizales, series Discomycetes, some species of which are edible; it includes the genus *Helvella*.

Helweg's bundle, tract (hel'vegz) [Hans Kristian Saxtorph Helweg, Danish physician, 1847-1901] olivospinal tract.

hem-, hema- see *hemo-*.

hemabrometer (hem'ah-bah-rom'ē-ter) [*hema-* + *barometer*] an instrument for ascertaining the specific gravity of the blood.

hemachromatosis (hem'ah-kro'mah-to'sis) hemochromatosis.

hemachrome (hem'ah-krōm) hemochrome.

hemachrosis (hem'ah-kro'sis) [*hema-* + Gr. *chrōsis* coloring] (obs.) abnormal or excessive redness of the blood.

hemacyanin (hem'ah-si'ah-nin) hemocyanin.

hemacyte (hem'ah-sit) hemocyte.

hemacytometer (hem'ah-si-tom'ē-ter) [*hema-* + Gr. *kytos* hollow vessel + Gr. *metron* measure] an instrument used in counting the blood corpuscles.

hemacytometry (hem'ah-si-tom'ē-tre) the counting of blood corpuscles by means of a hemacytometer.

hemacytopoiesis (hem'ah-si'to-poi-e'sis) hematopoiesis.

hemacytozoon (hem'ah-si'to-zo'on), pl. *hemacytozo'a*. (obs.) hemocytozoon.

hemaden (hem'ah-den) [*hem-* + Gr. *adēn* gland] an endocrine gland.

hemadenology (hem'ad-ē-nol'o-je) [*hem-* + Gr. *adēn* gland + *-logy*] endocrinology.

hemadostenosis (hem'ad-o-stē-no'sis) [Gr. *haimas* blood stream + *stenōsis* narrowing] the narrowing or obliteration of a blood vessel.

hemadsorbent (hem'ad-sor'bent) inducing or characterized by hemadsorption, as hemadsorbent viruses.

hemadsorption (hem'ad-sorp'shun) the adherence of red cells to other cells, particles, or surfaces; see under *tests*.

hemadynamometry (hem'ah-di'nah-mom'ē-tre) measurement of blood pressure.

hemafacient (hem'ah-fa'shent) hematopoietic.

hemafecia (hem'ah-fe'se-ah) [*hema-* + *feces*] blood in the feces.

hemagglutination (hem'ah-gloo'ti-na'shun) agglutination of erythrocytes, which may be caused by antibodies (see *hemagglutinin*), by certain virus particles (e.g., the viruses of influenza and mumps), or by substances such as high-molecular-weight dextrans. **passive h.**, the agglutination of erythrocytes on which antigen has been adsorbed in the presence of antiserum to that antigen. **viral h.**, the agglutination of erythrocytes (usually chicken) in the presence of hemagglutinating viruses, e.g., influenza, mumps, etc.

hemagglutinative (hem'ah-gloo'ti-na'tiv) pertaining to, characterized by, or causing agglutination of erythrocytes.

hemagglutinin (hem'ah-gloo'ti-nin) [*hem-* + *agglutinin*] an antibody that agglutinates erythrocytes, classified according to the cells which it agglutinates as *autologous* (cells of the same organism), *heterologous* (cells of individuals of other species), and *homologous* (cells of other individuals of the same species). Some hemagglutinins are effective with erythrocytes suspended in 0.85 per cent sodium chloride solution; others are ineffective unless hydrophilic colloids (e.g., albumin, fibrinogen) are added, or the

erythrocytes have been treated with a proteolytic enzyme. **cold h.**, one which acts only at temperatures near 4° C. **warm h.**, one which acts only at temperatures near 37° C.

hemagonium (hem''ah-go''ne-um) [*hema-* + Gr. *gonē* seed] hemocytoblast.

hemal (he''mal) 1. pertaining to the blood or the blood vessels. 2. ventral to the spinal axis, where the heart and great vessels are located, as, e.g., the hemal arches. Cf. *neural*.

hemalexin (hem''ah-lek''sin) an alexin (complement) of the blood.

hemalum (hem-al''um) a mixture of hematoxylin and alum introduced by Mayer, widely used as a nuclear stain, especially in combination with eosin as a general oversight method. Also, any alum and hematoxylin stain. Called also *alum hematoxylin*.

hemanalysis (hem''ah-nal''i-sis) [*hem-* + *analysis*] analysis or examination of the blood.

hemangiectasia (hem''an-je-ek-ta''se-ah) angiectasis.

hemangiectasis (hem''an-je-ek-tah-sis) [*hem-* + Gr. *angeion* vessel + *ektasis* dilatation] angiectasis.

hemangioameloblastoma (hē-man''je-o-ah-mel''o-blas-to''mah) a highly vascular ameloblastoma.

hemangioblast (hē-man''je-o-blast) a mesodermal cell which gives rise to both vascular endothelium and hemocytoblasts.

hemangioblastoma (hē-man''je-o-blas-to''mah) a capillary hemangioma of the brain consisting of proliferated blood vessel cells or angioblasts.

hemangioblastomatosis (hē-man''je-o-blas''to-mah-to''sis) multiple or widespread hemangioblastomas.

hemangioendothelioblastoma (hē-man''je-o-en''do-the''le-o-blas-to''mah) [*hem-* + Gr. *angeion* vessel + *endothelium* + Gr. *blastos* germ + *-oma*] a tumor of mesenchymal origin of which the cells tend to form endothelial cells and line blood vessels.

hemangioendothelioma (hē-man''je-o-en''do-the''le-o''mah) [*hemangioma* + *endothelioma*] a hemangioma in which the endothelial cells are the most prominent component. **benign h.**, a benign neoplasm of blood-vessel endothelium. **malignant h.**, hemangiosarcoma.

hemangioendotheliosarcoma (hē-man''je-o-en''do-the''le-o-sar-ko''mah) hemangiosarcoma.

hemangiofibroma (hē-man''je-o-fi-bro''mah) a hemangioma containing fibrous tissue.

hemangioma (hē-man''je-o''mah) [*hem-* + *angioma*] a benign tumor made up of new-formed blood vessels. Cf. *angioma* and *lymphangioma*. **ameloblastic h.**, a highly vascular ameloblastoma. **capillary h.**, nevus flammeus. **h. cavernosum**, **cavernous h.**, a tumor, usually present at birth or appearing soon after, manifested as a red-blue spongy mass made up of a connective tissue framework enclosing large, cavernous,

Cavernous hemangioma.

vascular spaces that are partly or entirely filled with blood. Called also *cavernous angioma*, *erectile tumor*, and *strawberry nevus*. **sclerosing h.**, a solidly cellular lesion (dermatofibroma or histiocytoma) purportedly developing from a hemangioma by proliferation of endothelial cells and connective tissue stroma. **strawberry h.**, vascular nevus.

hemangiomatosis (hē-man''je-o-mah-to''sis) a condition in which multiple hemangiomas are developed.

hemangiopericyte (hē-man''je-o-per''i-sit) pericyte.

hemangiopericytoma (hē-man''je-o-per''i-si-to''mah) a tumor composed of spindle cells with a rich vascular network, which apparently arises from pericytes. It is related to a glomus tumor but, unlike the latter, has no nerve elements.

hemangiosarcoma (hē-man''je-o-sar-ko''mah) a malignant tumor formed by proliferation of endothelial and fibroblastic tissue.

hemapheic (hem''ah-fe''ik) pertaining to or characterized by hemaphein.

hemaphein (hem''ah-fe''in) [*hema-* + Gr. *phaios* dusky, gray] a brown coloring matter of the blood and urine.

hemapheism (hem''ah-fe''izm) the presence of hemaphein in the urine.

hemapheresis (hem''ah-fer''ē-sis) [*hema-* + Gr. *aphairesis* removal] any procedure in which blood is withdrawn, a portion (plasma, leukocytes, platelets, etc.) is separated and retained, and the remainder is retransfused into the donor.

hemaphotograph (hem''ah-to''to-graf) hemophotograph.

hemapoiesis (hem''ah-poi-e''sis) [*hema-* + Gr. *poiēsis* formation] hematopoiesis.

hemapoietic (hem''ah-poi-et''ik) hematopoietic.

hemapophysis (hem''ah-pof''i-sis) [*hem-* + *apophysis*] a costal cartilage regarded as an apophysis of the hemal spine.

hemarthros (hem-ar''thros) hemarthrosis.

hemarthrosis (hem''ar-thro''sis) [*hem-* + Gr. *arthron* joint] extravasation of blood into a joint or its synovial cavity.

hematoma (hem''ar-to''mah) hemangioma.

hemastrontium (hem''as-tron''she-um) a tissue stain prepared by adding strontium chloride to a solution of hematein and aluminum chloride in alcohol and citric acid.

hemat- see *hemo-*.

hematal (hem''ah-tal) pertaining to blood or blood vessels.

hematopostema (hem''at-ah-pos-te''mah) [*hemat-* + Gr. *apostēma* abscess] an abscess containing effused blood.

hemate (hem''āt) a compound of hematein.

hematein (hem''ah-te''in) [NF] a brownish-red, crystalline substance, $C_{16}H_{12}O_8$, derived from hematoxylin by oxidation; used as an indicator and stain.

hematemesis (hem''ah-tem''ē-sis) [*hemat-* + Gr. *emesis* vomiting] the vomiting of blood. **Goldstein's h.**, hematemesis due to bleeding telangiectases in the stomach.

hematencephalon (hem''at-en-sef''ah-lon) the effusion of blood into the brain.

hematherapy (hem''ah-ther''ah-pe) hemotherapy.

hemathermal (hem''ah-ther''mal) homiothermic.

hemathermous (hem''ah-ther''mus) homiothermic.

hemathorax (hem''ah-tho''raks) hemothorax.

hematic (he-mat''ik) 1. pertaining to or contained in blood. 2. hematinic.

hematidrosis (hem''at-i-dro''sis) [*hemat-* + Gr. *hidrosis* sweating] the excretion of bloody sweat.

hematimeter (hem''ah-tim''ē-ter) hemacytometer.

hematimetry (hem''ah-tim''ē-tre) hemacytometry.

hematin (hem''ah-tin) 1. the hydroxide of heme formed by the oxidation of heme from the ferrous or Fe(II) to the ferric or Fe(III) state; it does not combine reversibly with oxygen. Called also *metheme*. 2. former name for *heme*.

hematinemia (hem''ah-ti-ne''me-ah) [*hematin* + Gr. *haima* blood + *-ia*] the presence of hematin (heme) in the blood.

hematinic (hem''ah-tin''ik) 1. pertaining to hematin. 2. an agent which improves the quality of the blood, increasing the hemoglobin level and the number of erythrocytes.

hematinogen (hem''ah-tin''o-jen) a substance that produces blood.

hematinoimeter (hem''ah-tin-om''ē-ter) hemoglobinometer.

hematinuria (hem''ah-tin-u''re-ah) [*hematin* + Gr. *ouron* urine + *-ia*] the presence of hematin (heme) in the urine.

hemato- see *hemo-*.

hematobia (hem''ah-to''be-ah) plural of *hematobium*.

hematobilia (hem''ah-to-bil''e-ah) bleeding into the biliary passages.

hematobium (hem''ah-to''be-um), pl. *hemato''bia* [*hemato-* + Gr. *bios* life] (*obs.*) any organism that lives in the blood, especially an animal microorganism.

hematoblast (hem''ah-to-blast'') hemocytoblast.

hematocatharsis (hem''ah-to-kah-thar''sis) [*hemato-* + Gr. *katharsis* purging] the ridding of the blood of toxic substances; blood lavage.

hematocele (hem''ah-to-sēl'') [*hemato-* + Gr. *kēlē* tumor] an effusion of blood into a cavity, especially into the tunica vaginalis testis. **parametric h.**, **pelvic h.**, a tumor formed by effusion of blood into Douglas' pouch. **pudendal h.**, a sanguineous tumor in a labium of the pudenda. **retrouterine h.**, **parametric h.** **scrotal h.**, effusion of blood into the tissues of the scrotum. **vaginal h.**, effusion of blood into the tunica vaginalis testis.

hematocelia (hem''ah-to-se''le-ah) hematocoele.

hematocephalus (hem''ah-to-sef''ah-lus) [*hemato-* + Gr. *kephalē* head] a fetus born with its head distended with blood.

hematochezia (hem''ah-to-ke''ze-ah) [*hemato-* + Gr. *chezein* to go to stool] the passage of bloody stools.

hematochlorin (hem"ah-to-klo'rin) [*hemato-* + Gr. *chlōros* green] a green coloring matter occurring in the placenta and derived from hemoglobin.

hematochromatosis (hem"ah-to-kro'mah-to'sis) [*hemato-* + Gr. *chrōma* color] staining of tissues with blood pigment; hemo-chromatosis.

hematochyluria (hem"ah-to-ki-lu're-ah) [*hemato-* + Gr. *chylos* chyle + *ouron* urine + *-ia*] the discharge of blood and chyle with the urine, due to *Wuchereria bancrofti*.

hematocoelia (hem"ah-to-se'le-ah) [*hemato-* + Gr. *koilia* cavity] effusion of blood into the peritoneal cavity.

hematocolpometra (hem"ah-to-kol'po-me'trah) [*hemato-* + Gr. *kolpos* vagina + *mētra* uterus] accumulation of menstrual blood in the vagina and uterus.

hematocolpos (hem"ah-to-kol'pos) [*hemato-* + Gr. *kolpos* vagina] an accumulation of menstrual blood in the vagina.

hematocrit (he-mat'o-krit) [*hemato-* + Gr. *krinein* to separate] the volume percentage of erythrocytes in whole blood. Originally applied to the apparatus or procedure used in its determination, but now also used to designate the result of the determination. Abbreviated HCT. **large vessel h.**, the fraction of blood, sampled from a large vessel, that is occupied by the erythrocytes as measured upon centrifugation. **whole body h.**, the fraction of the total blood volume, as measured by suitable dilution of a plasma component and an erythrocyte component, that is occupied by the erythrocytes, expressed as a percentage, showing the ratio of erythrocyte volume to total blood volume.

hematocryal (hem"ah-tok're-al) [*hemato-* + Gr. *kryos* cold] poikilothermic.

hematocyanin (hem"ah-to-si'ah-nin) [*hemato-* + Gr. *kyanos* blue] hemocyanin.

hematocyst (hem"ah-to-sist") [*hemato-* + Gr. *kystis* sac, bladder] an effusion of blood into the bladder or into a cyst.

hematocystis (hem"ah-to-sis'tis) hematocyst.

hematocyte (hem"ah-to-sit) hemocyte.

hematocytoblast (hem"ah-to-si'to-blast) hemocytoblast.

hematocytolysis (hem"ah-to-si-to'li'sis) hemolysis.

hematocytometer (hem"ah-to-si-tom'ē-ter) hemacytometer.

hematocytopenia (hem"ah-to-si'to-pe'ne-ah) [*hematocyte* + Gr. *penia* poverty] deficiency in all the cellular elements of the blood.

hematocyturia (hem"ah-to-si-tu're-ah) [*hematocyte* + Gr. *ouron* urine + *-ia*] the presence of red blood cells in the urine.

hematodialysis (hem"ah-to-di-al'i'sis) hemodialysis.

hematoencephalic (hem"ah-to-en'sē-fal'ik) [*hemato-* + Gr. *enkephalos* brain] pertaining to the blood and the brain.

hematogenesis (hem"ah-to-jen'ē-sis) [*hemato-* + *genesis*] hematopoiesis.

hematogenic (hem"ah-to-jen'ik) 1. hematopoietic. 2. hematogenous.

hematogenous (hem"ah-toj'ē-nus) produced by or derived from the blood; disseminated by the circulation or through the blood stream.

hematoglobulin (hem"ah-to-glo'bin) hemoglobin.

hematoglobulinuria (hem"ah-to-glo-bin-u're-ah) hemoglobinuria.

hematoglobulin (hem"ah-to-glob'u-lin) hemoglobin.

hematogone (hem"ah-to-gōn) a lymphocyte-like cell regarded as a blood cell precursor, often presenting as a naked nucleus in

the bone marrow, observed in infants and patients with pure red cell anemia, lymphocytic leukemia, and the nodular lymphomas.

hematohidrosis (hem"ah-to-hid-ro'sis) hematidrosis.

hematohistioblast (hem"ah-to-his'te-o-blast) hemohistioblast.

hematohyaloid (hem"ah-to-hi'ah-loid) [*hemato-* + *hyaloid*] the hyaline matter formed by degeneration of thrombi through conglutination of the red corpuscles or blood platelets.

hematoid (hem"ah-toid) [*hemato-* + Gr. *eidos* form] resembling blood.

hematoidin (hem-ah-toid'in) a substance which is apparently chemically identical with bilirubin but which has a different site of origin, being formed locally in the tissues from hemoglobin, particularly under conditions of reduced oxygen tension.

hematokolpos (hem"ah-to-kol'pos) hematocolpos.

hematolin (hem"ah-to'lin) a compound, $C_{88}H_{78}O_7N_8$, from heme.

hematolith (hem"ah-to-lith) (obs.) hemolith.

hematologist (hem"ah-to'l'o-jist) a specialist in the study of the blood.

hematology (hem"ah-to'l'o-je) [*hemato-* + *-logy*] that branch of medical science which treats of the morphology of the blood and blood-forming tissues.

hematolymphangioma (hem"ah-to-lim'fan-je-o'mah) [*hemato-* + L. *lymph* + Gr. *angeion* vessel + *-ome*] a tumor composed of blood vessels and lymph vessels.

hematolysis (hem"ah-to'l'i-sis) hemolysis.

hematolytic (hem"ah-to-lit'ik) hemolytic.

hematoma (hem"ah-to'mah), pl. *hematoma's* [*hemato-* + *-oma*] a localized collection of blood, usually clotted, in an organ, space, or tissue, due to a break in the wall of a blood vessel. **aneurysmal h.**, false aneurysm. **h. au'ris**, hematoma of the perichondrium of the ear. **epidural h.**, accumulation of blood in the epidural space, due to damage to the middle meningeal artery and producing compression of the dura mater and thus compression of the brain. Unless evacuated, it may result in herniation through the tentorium, and death. **pelvic h.**, a collection of blood in the pelvic cellular tissue. **perianal h.**, a hematoma under the perianal skin, caused by rupture of a subcutaneous vessel, the blood being kept localized by fibroelastic septa and causing much pain. **retrouterine h.**, an effusion of blood into the retrouterine connective tissue. **subdural h.**, accumulation of blood in the subdural space. In the severe *acute* form, both blood and cerebrospinal fluid enter the space as a result of laceration of the brain and a tear in the arachnoid, adding subdural compression to the direct injury to the brain. In the *chronic* form, only blood effuses into the subdural space as a result of rupture of the bridging veins, usually due to closed head injury. The effusion is a gradual process resulting, weeks after the injury, in headache, progressive stupor, and hemiparesis, followed by dilating pupil, a sign of herniation of the tentorium. **subungual h.**, an accumulation of blood under the nail plate.

hematomancy (hem"ah-to-man-se) [*hemato-* + Gr. *manteia* divination] diagnosis by examination of the blood.

hematomanometer (hem"ah-to-mah-nom'ē-ter) sphygmomanometer.

hematostadiastinum (hem"ah-to-me'de-as-ti'num) [*hemato-* + *mediastinum*] hemostadiastinum.

hematometakinesis (hem"ah-to-met'ah-ki-ne'sis) [*hemato-* + Gr. *meta* across + *kinesis* movement] the phenomenon of the shifting of blood from one part of the body to another, as from the skin to the internal organs; called also *borrowing-lending hemodynamic phenomenon*.

hematometer (hem"ah-tom'ē-ter) [*hemato-* + Gr. *metron* measure] a hemoglobinometer.

hematometra (hem"ah-to-me'trah) [*hemato-* + Gr. *mētra* uterus] an accumulation of blood in the uterus.

hematometry (hem"ah-tom'ē-tre) [*hemato-* + Gr. *metron* measure] measurement of the hemoglobin and estimation of the percentage of the various cells in the blood.

hematomole (he-mat'o-mōl) Breus' mole.

hematomphalocoele (hem"at-om-fal'o-sēl) [*hemat-* + *omphalocoele*] an umbilical hernia containing blood.

hematomphalus (hem"at-om'fah-lus) Cullen's sign; see under sign.

hematomycosis (hem"ah-to-mi-ko'sis) (obs.) fungemia.

hematomyelia (hem"ah-to-mi-e'le-ah) [*hemato-* + Gr. *myelos* marrow + *-ia*] hemorrhage into the spinal cord, usually confined to the gray substance, most often due to trauma, and marked by the sudden onset of flaccid paralysis with sensory disturbances.

hematomyelitis (hem"ah-to-mi'ē-li'tis) [*hemato-* + *myelitis*] acute myelitis with bloody effusion within the spinal cord.

hematomyelopore (hem"ah-to-mi'el-o-pōr") [*hemato-* + Gr. *myelos* marrow + *poros* opening] a disease marked by the formation of canals in the spinal cord, due to hemorrhage.

hematoncometry (hem"at-on-kom'ē-tre) [*hemat-* + Gr. *onkos* mass + *metron* measure] measurement of blood volume.

hematonephrosis (hem''ah-to-něfro'sis) presence of blood in the pelvis of the kidney.

hematonic (hem''ah-ton'ik) a blood tonic.

hematopathology (hem''ah-to-pah-thol'o-je) hemopathology.

hematopedesis (hem''ah-to-pě-de'sis) hemodiapedesis.

hematopenia (hem''ah-to-pe'ne-ah) [*hemato-* + Gr. *penia* poverty] deficiency of blood.

hematopericardium (hem''ah-to-per''i-kar'de-um) hemopericardium.

hematoperitoneum (hem''ah-to-per''i-to-ne'um) hemoperitoneum.

hematopexin (hem''ah-to-pek'sin) hemopexin.

hematopexis (hem''ah-to-pek'sis) hemopexis.

hematophagocyte (hem''ah-to-fāj) hemophagocyte.

hematophagia (hem''ah-to-fa'je-ah) 1. blood drinking. 2. the act of subsisting on the blood of another animal. 3. hemocytophagia.

hematophagocyte (hem''ah-to-fag'o-sit) hemophagocyte.

hematophagous (hem''ah-tof'ah-gus) [*hemato-* + Gr. *phagein* to eat] pertaining to or characterized by hematophagia.

hematophagy (hem''ah-tof'ah-je) hematophagia.

hematophilia (hem''ah-to-fil'e-ah) hemophilia.

hematophyte (hem''ah-to-fit'') [*hemato-* + Gr. *phyton* plant] (*obs.*) any vegetable microorganism or species living in the blood.

hematophytic (hem''ah-to-fit'ik) (*obs.*) pertaining to or caused by hematophytes.

hematopiesis (hem''ah-to-pi'ě-sis) [*hemato-* + Gr. *piesis* pressure] blood pressure.

hematoplast (hem''ah-to-plast) hemocytoblast.

hematoplastic (hem''ah-to-plas'tik) [*hemato-* + Gr. *plassein* to mold] concerned in the elaboration of the blood.

hematopoiesis (hem''ah-to-poi-e'sis) [*hemato-* + Gr. *poiein* to make] the formation and development of blood cells. **extramedullary h.**, the formation and development of blood cells outside the bone marrow, as in the spleen, liver, and lymph nodes.

hematopoietic (hem''ah-to-poi-et'ik) [*hemato-* + Gr. *poiein* to make] 1. pertaining to or effecting the formation of blood cells. 2. an agent that promotes the formation of blood cells.

hematopoiectin (hem''ah-to-poi'e-tin) erythropoietin.

hematoporphyrin (hem''ah-to-por-fi're-ah) porphyrin.

hematoporphyrin (hem''ah-to-por'fi-rin) [*hemato-* + Gr. *porphyrā* purple] chemical name: 1,3,5,8-tetramethyl-2,4-bis(α -hydroxyethyl)-6,7-dipropionic acid porphyrin. A dark violet, iron-free powder resulting from decomposition of hemoglobin, with the addition of HOH to the vinyl groups.

hematoporphyrinemia (hem''ah-to-por-fi-rin-e'me-ah) the presence of hematoporphyrin in the blood.

hematoporphyrinism (hem''ah-to-por'fi-rin-izm) a state characterized by hematoporphyrinemia and a sensitiveness to sunlight.

hematoporphyrinuria (hem''ah-to-por'fi-rin-u're-ah) the occurrence of hematoporphyrin in the urine.

Hematopota (hem''ah-top'o-tah) *Chrysozona*.

hematorrhachis (hem-ah-tor'ah-kis) [*hemato-* + Gr. *rhachis* spine] hematomyelia.

hematorrhea (hem''ah-to-re'ah) [*hemato-* + Gr. *rhoia* flow] a free or copious hemorrhage.

hematosalpinx (hem''ah-to-sal'pinks) an accumulation of blood in the uterine tube.

hematoschecele (hem''ah-tos'ke-o-sēl'') [*hemato-* + Gr. *oscheon* scrotum + *kēlē* tumor] a collection of blood within the scrotum.

hematoscope (hem''ah-to-skōp'') [*hemato-* + Gr. *skopein* to examine] an instrument for the optical or spectroscopic examination of the blood.

hematoscopy (hem''ah-tos'ko-pe) examination of the blood, as with a spectroscope.

hematosepsis (hem''ah-to-sep'sis) septicemia.

hematoside (hem''ah-to-sid'') any sphingoglycolipid that contains a sialic acid component; they occur in the erythrocyte stroma and in the brain and spleen.

hematosis (hem''ah-to'sis) (*obs.*) the formation of the blood.

hematospectrophotometer (hem''ah-to-spek'tro-to-m'ē-ter) a spectrophotometer for determining the amount of hemoglobin in the blood.

hematospectroscope (hem''ah-to-spek'tro-skōp) [*hemato-* + *spectroscope*] a spectroscopy for examining thin layers of blood.

hematospectroscopy (hem''ah-to-spek-tros'ko-pe) [*hemato-* + *spectroscopy*] the spectroscopic examination of the blood.

hematospermatocele (hem''ah-to-sper-mat'o-sēl) [*hemato-* + Gr. *sperma* seed + *kēlē* tumor] a spermatocele containing blood.

hematospermia (hem''ah-to-sper'me-ah) hemspermia.

hematospherinemia (hem''ah-to-sfēr'i-ne'me-ah) [*hemato-* + Gr. *sphaira* sphere + *haima* blood + *-ia*] hemoglobinemia.

hematosporidia (hem''ah-to-spo-rid'e-ah) any member of the order Haemosporidia.

hematostatic (hem''ah-to-stat'ik) [*hemato-* + Gr. *stasis* standing] due to or characterized by stagnation of the blood.

hematosteon (hem''ah-tos'te-on) [*hemat-* + Gr. *osteon* bone] hemorrhage into the medullary cavity of a bone.

hematotherapy (hem''ah-to-ther'ah-pe) hemotherapy.

hematothermal (hem''ah-to-ther'mal) [*hemato-* + Gr. *thermē* heat] homiothermic.

hematothorax (hem''ah-to-tho'raks) hemothorax.

hematotoxic (hem''ah-to-tok'sik) [*hemato-* + *toxic*] 1. pertaining to hematoxicosis. 2. poisonous to the blood and hematopoietic system.

hematotoxicosis (hem''ah-to-tok'si-ko'sis) toxic damage to the hematopoietic system.

hematotrachelos (hem''ah-to-trah-ke'los) [*hemato-* + Gr. *trachēlos* neck] distention of the cervix of the uterus with blood, owing to atresia of the external os or of the vagina.

hematotropic (hem''ah-to-trop'ik) [*hemato-* + Gr. *tropos* a turning] having a special affinity for or exerting a specific effect on the blood or blood cells.

hematotympanum (hem''ah-to-tim'pah-num) [*hemato-* + *tympanum*] a hemorrhagic exudation into the middle ear.

hematotoxic (hem''ah-tok'sik) hematotoxic.

hematoxylin (hem''ah-tok'si-lin) a colorless crystalline compound, $C_{18}H_{14}O_6 + 3H_2O$, obtained by extracting logwood (*Haematoxylon campechianum*) with ether. It may be used as an indicator with a pH range of 5-6, but is mainly used in oxidized form as a stain in microscopy. See also *Table of Stains and Staining Methods*. **alum h.**, hemalum. **Delafield's h.**, see *Table of Stains and Staining Methods*. **iron h.**, see *iron hematoxylin method*, *Heidenhain's iron hematoxylin stain*, and *Weigert's hematoxylin stain*, all in the *Table of Stains and Staining Methods*.

Hematoxylon (he'mah-tok'si-lon) *Haematoxylon*.

hematozemia (hem''ah-to-ze'me-ah) [*hemato-* + Gr. *zēmia* loss] a gradual loss of blood.

hematozoa (hem''ah-to-zo'ah) plural of *hematozoon*.

hematozoic (hem''ah-to-zo'ik) pertaining to or caused by hematozoa.

hematozoon (hem''ah-to-zo'on), pl. *hematozoa* [*hemato-* + Gr. *zōon* animal] (*obs.*) any animal microorganism or species living in the blood.

hematuresis (hem''ah-tu-re'sis) hematuria.

hematuria (hem''ah-tu're-ah) [*hemat-* + Gr. *ouron* urine + *-ia*] blood in the urine. **endemic h.**, urinary schistosomiasis.

enzootic bovine h., a disease of cattle marked by passing of blood in the urine, anemia, and debilitation. **essential h.**, hematuria for which no cause has been determined; called also *primary h.* **false h.**, redness of the urine due to food or drugs containing pigment. **microscopic h.**, blood in the urine, the presence of which can be demonstrated only by the microscope. **primary h.**, essential h. **renal h.**, hematuria in which the blood comes from the kidney. **urethral h.**, hematuria in which the blood comes from the urethra. **vesical h.**, hematuria in which the blood comes from the bladder.

hemautograph (hem-aw'to-graf) [*hem-* + Gr. *autos* self + *graphein* to record] a tracing made by an arterial blood jet.

hemautography (hem'aw-tog'rah-fe) the recording of a hemautograph.

heme (hēm) the nonprotein, insoluble, iron protoporphyrin constituent of hemoglobin, various other respiratory pigments and of many cells, both animal and vegetable. It is $C_{34}H_{38}O_4N_4FeOH$, an iron compound of protoporphyrin, with the iron in the ferrous, or Fe(II), state, and so constitutes the pigment portion or protein-free part of the hemoglobin molecule. It is responsible for the characteristic coloring and oxygen-carrying properties of hemoglobin. Formerly known as *hematin*.

hemendotherlioma (hem'en-do-the'le-o'mah) hemangioendothelioma.

Hementaria (he'men-ta're-ah) *Haementaria*.

hemeralope (hem'er-al-ōp) a person affected with hemeralopia.

hemeralopia (hem'er-ah-lo'pe-ah) [Gr. *hēmeralops* the contrary of *nyktalops* + *-ia*] day blindness; defective vision in a bright light. The term is used in French (and incorrectly in English) to mean nyctalopia.

Hemerocampa (hem'er-o-kam'pah) a genus of moths. **H. leukostig'ma**, the white-marked tussock moth; in the larval stage the smaller white hairs are venomous and may produce severe urticaria.

hemerythrin (hēm'ē-rith'rīn) [*hem-* + Gr. *erythros* red] the coloring matter of the blood of earthworms which is contained in the plasma.

hemi- (hem'e) [Gr. *hēmi-* half] a prefix signifying one half.

hemiablepsia (hem''e-ah-blep'se-ah) hemianopia.

hemiacardius (hem''e-ah-kar'de-us) [*hemi-* + *a neg.* + Gr. *kardia* heart] one of twin fetuses in which only a part of the circulation is accomplished by its own heart.

hemicephalus (hem''e-ah-sef'ah-lus) [*hemi-* + *a neg.* + Gr. *kephalē* head] a monster whose head lacks a brain and calvarium.

hemiacetal (hem''i-as'ē-tal) a derivative formed by a combination of an aldehyde with an alcohol.

hemiachromatopsia (hem''e-ak'ro-mah-top'se-ah) [*hemi-* + *achromatopsia*] color blindness in one half, or in corresponding halves, of the visual field.

hemiacidrin (hem''e-as'i-drin) a solution containing citric and gluconic acids, magnesium hydroxycarbonate, magnesium acid citrate, and calcium carbonate; it is capable of dissolving struvite calculi. Called also *renacidin*.

hemiageusia (hem''e-ah-gu'ze-ah) [*hemi-* + *a neg.* + Gr. *geusis* taste + *-ia*] loss or absence of the sense of taste on one side of the tongue.

hemiageustia (hem''e-ah-gūs'te-ah) hemiageusia.

hemialbumin (hem''e-al-bu'min) [*hemi-* + *albumin*] hemialbumose.

hemialbumose (hem''e-al'bu-mōs) a crystallizable product of the digestion of certain proteins; normally found in bone marrow, and occurring in the urine of osteomalacia and diphtheria.

hemialbumosuria (hem''e-al-bu'mo-su're-ah) [*hemialbumose* + Gr. *ouron* urine + *-ia*] the presence of hemialbumose in the urine.

hemialgia (hem''e-al'je-ah) [*hemi-* + *-algia*] pain affecting one side of the body only.

hemiammaurosis (hem''e-am'aw-ro'sis) hemianopia.

hemiambyopia (hem''e-am'ble-o'pe-ah) [*hemi-* + *amblyopia*] impairment of the visual power of one half of the retina.

hemiamyosthenia (hem''e-ah-mi'os-the'ne-ah) [*hemi-* + *a neg.* + Gr. *mys* muscle + *sthenos* strength + *-ia*] lack of muscular power on one side of the body.

hemianacusia (hem''e-an'ah-ku'ze-ah) [*hemi-* + *a neg.* + Gr. *akousia* hearing] loss of hearing in one ear only.

hemianalgesia (hem''e-an'al-je'ze-ah) [*hemi-* + *analgesia*] analgesia of one side of the body.

hemianencephaly (hem''e-an'en-sef'ah-le) [*hemi-* + Gr. *an neg.* + *enkephalos* brain] congenital absence of one side of the brain.

hemianesthesia (hem''e-an'es-the'ze-ah) anesthesia affecting only one side of the body; called also *unilateral anesthesia*. **alternate h.**, *h. cruciata*. **cerebral h.**, that which is due to lesion of the internal capsule of the lenticular nucleus. **crossed h.**, *h. cruciata*. **h. cruciata**, loss of sensation on one side of the face with contralateral loss of pain and temperature sense on the body, resulting from a lateral lesion in the pons or medulla, affecting both the sensory root of the trigeminal nerve and the spinothalamic tract. **mesocephalic h.**, **pontile h.**, that which is due to disease of the pons. **spinal h.**, that which is due to a lesion of the spinal cord.

hemianopia (hem''e-ah-no'pe-ah) [*hemi-* + *a neg.* + Gr. *ōpē* vision + *-ia*] defective vision or blindness in half of the visual field. **absolute h.**, blindness to light, color, and form, in half of the visual field. **altitudinal h.**, defective vision or blindness in a horizontal half of the visual field. **bilateral h.**, true *h.* **binasal h.**, heteronymous hemianopia in which the defects are in the nasal half of the field of vision in each eye. **binocular h.**, true *h.* **bitemporal h.**, heteronymous hemianopia in which the defects are in the temporal half of the field of vision in each eye. **h. bitemporalis fu'gax**, transient bitemporal hemianopia. **complete h.**, hemianopia affecting an entire half of the visual field of each eye. **congruous h.**, homonymous hemianopia in which the defects in the field of vision in each eye are symmetrical in position and similar in all other respects. **crossed h.**, heteronymous *h.* **equilateral h.**, homonymous *h.* **heteronymous h.**, hemianopia affecting the nasal or the temporal half of the field of vision of each eye. **homonymous h.**, hemianopia affecting the right halves or the left halves of the visual fields of the two eyes. **horizontal h.**, altitudinal *h.* **incomplete h.**, hemianopia affecting less than an entire half of the visual field. **incongruous h.**, homonymous hemianopia in which the defects in the field of vision in the two eyes differ in one or more respects, as in extent or intensity. **lateral h.**, vertical *h.* **lower h.**, defective vision in the lower half of the visual field. **nasal h.**, defective vision or blindness in the medial vertical half of the visual field, i.e., the half nearest the nose. **quadrant h.**, **quadrantic h.**, quadrantanopia. **relative h.**, defective vision or blindness to form or color in half of the visual field, the perception of light being retained. **temporal h.**, defective vision or blindness in the lateral vertical half of the visual field, i.e., the half nearest the temple. **true h.**, defective vision or blindness in one vertical half of each eye, usually due to a single lesion of the optic tract, at or above the level

of the chiasm. **unilateral h.**, defective vision or blindness in half of the visual field of one eye only. **uniocular h.**, unilateral *h.* **upper h.**, defective vision in the upper half of the visual field. **vertical h.**, defective vision or blindness in a lateral half of the visual field.

hemianopic (hem''e-ah-no'pik) pertaining to or characterized by hemianopia.

hemianopsia (hem''e-an-op'se-ah) hemianopia.

hemianoptic (hem''e-an-op'tik) hemianopic.

hemianosmia (hem''e-an-oz'me-ah) [*hemi-* + *anosmia*] loss of the sense of smell in one of the nostrils.

hemipraxis (hem''e-ah-prak'se-ah) [*hemi-* + *apraxis*] apraxia affecting one side of the body only.

hemiarthrosis (hem''e-ar-thro'sis) [*hemi-* + *arthrosis*] a spurious synchondrosis.

Hemiascomycetidae (hem''e-as'ko-mi-se'ti-de) a subclass of primitive ascomycetous fungi in which the mycelium is small or lacking and the asci develop without hyphae, including the family Endomycetales.

hemiasynergia (hem''e-ah'sin-er'je-ah) [*hemi-* + *asynergia*] asynergia affecting one side of the body only.

hemiataxia (hem''e-ah-tak'se-ah) [*hemi-* + *ataxia*] ataxia affecting one side of the body only.

hemiataxy (hem''e-ah-tak'se) hemiataxia.

hemiatheiosis (hem''e-ath'ē-to'sis) [*hemi-* + *athetosis*] athetosis affecting one side of the body only.

hemiatrophy (hem''e-at'ro-fe) [*hemi-* + *atrophy*] atrophy of one side of the body or of one half of an organ or part. **facial h.**, atrophy of one half of the face which is sometimes progressive, and is of unknown cause; called also *Romberg's disease*. **progressive lingual h.**, progressive atrophy of one lateral half of the tongue.

hemiautotroph (hem''e-aw'to-trōf) (*obs.*) a microorganism which can build up protein from inorganic nitrogen but requires organic carbon.

hemiautotrophic (hem''e-aw'to-trōf'ik) [*hemi-* + *autotrophic*] (*obs.*) partly self-nourishing; a term applied to microorganisms which can build up protein from inorganic nitrogen but require organic carbon.

hemiaxial (hem''e-aks'e-al) at any oblique angle to the long axis of the body or a part.

hemiballism (hem''e-bal'izm) hemiballismus.

hemiballismus (hem''e-bal-iz'mus) [*hemi-* + Gr. *ballismos* jumping] a violent form of motor restlessness involving only one side of the body and being most marked in the upper extremity, resulting from a destructive lesion of the hypothalamic nucleus; called also *body of Luys syndrome*.

hemibladder (hem''i-blād'er) a half bladder; a developmental anomaly in which the bladder is formed as two physically separated parts, each with its own ureter.

hemiblock (hem''i-blok) failure in conduction of the cardiac impulse in either of the two main divisions of the left ventricular conducting system (bundle of His); it is called *left anterior hemiblock* when the anterior-superior division is interrupted and *left posterior hemiblock* when the posterior division is interrupted.

hemic (he'mik, hem'ik) [Gr. *haima* blood] pertaining to the blood.

hemicanities (hem''e-kah-nish'e-ēz) grayness of the hair on one side of the body.

hemicardia (hem''e-kar'de-ah) [*hemi-* + Gr. *kardia* heart] a congenital anomaly characterized by the presence of only half of a four-chambered heart. **h. dex'tra**, hemicardia in which the right side of the heart is present. **h. sinis'tra**, hemicardia in which the left side of the heart is present.

hemicardius (hem''e-kar'de-us) a free twin fetus whose development is greatly reduced but whose body form and various parts are still recognizable.

hemicellulase (hem''e-sel'u-lās) an enzyme that catalyzes the hydrolysis of hemicellulose.

hemicellulose (hem''e-sel'u-lōs) a general name for a group of high molecular weight carbohydrates that resemble cellulose but are more soluble and more easily decomposed. They can be extracted by dilute alkali and precipitated with dilute acid, and usually contain a hexose, a pentose, and a uronic acid.

hemacentrum (hem''e-sen'trum) [*hemi-* + *centrum*] either lateral half of a vertebral centrum.

hemicephalia (hem''e-sē-fa'le-ah) [*hemi-* + Gr. *kephalē* head] congenital absence of the cerebrum.

hemicephalus (hem''e-sef'ah-lus) a monster exhibiting hemicephalia.

hemicerbrum (hem''e-ser'ē-brum) [*hemi-* + *cerebrum*] a cerebral hemisphere.

hemichorea (hem''e-ko-re'ah) [*hemi-* + *chorea*] chorea which affects only one side; see *Huntington's chorea*, under *chorea*.

hemichromatopsia (hem''e-kro'mah-top'se-ah) [*hemi-* + *chromatopsia*] color blindness in one half of the visual field.

hemichromosome (hem'e-kro'mo-sōm) [*hemi-* + *chromosome*] a body formed by the longitudinal division of a chromosome.

hemicolecotomy (hem'e-ko-lek'to-me) [*hemi-* + *colectomy*] excision of approximately half of the colon. **left h.**, resection of the left half of the colon, from the middle of the transverse segment to the rectum. **right h.**, resection of the right half of the colon, from the ileum to the middle of the transverse segment.

hemicorporectomy (hem'e-kor'po-rek'to-me) [*hemi-* + *L. corpus* body + *Gr. ektomē* excision] surgical removal of the lower part of the body, including the bony pelvis, external genitals, and the lower part of the rectum and anus.

hemisideria (hem'e-kra'ne-ah) [*hemi-* + *Gr. kranion* skull] 1. pain or aching in one side of the head. 2. incomplete anencephaly.

hemisideriectomy (hem'e-kra'ne-ek'to-me) [*hemi-* + *Gr. kranion* skull + *ektomē* excision] Doyen's operation of sectioning the vault of the skull from before backward, near the median line, and forcing the entire side outward, thus exposing half of the brain.

hemisideriosis (hem'e-kra'ne-o'sis) a condition marked by hyperostosis on one half of the cranium or face, with cerebral involvement. The condition is believed to be due to endothelioma of the dura.

hemisideriectomy (hem'e-kra'ne-o'to-me) [*hemi-* + *Gr. kranion* skull + *temnein* to cut] hemisideriectomy.

hemidecortication (hem'e-de-kor'ti-ka'shun) removal of one half of the cerebral cortex.

hemidesmosome (hem'e-des'mo-sōm) [*hemi-* + *desmosome*] a structure similar to a desmosome but representing only half of it, found on the basal surface of some epithelial cells, forming the site of attachment between the basal surface of the cell and the basement membrane. Called also *half desmosome*.

Hemidesmus (hem'e-des'mus) a genus of asclepiadaceous plants. The root of *H. indicus* R.Br. has been used as a demulcent, diuretic, and alterative.

hemidiaphoresis (hem'e-di'ah-fo-re'sis) [*hemi-* + *diaphoresis*] hemihyperhidrosis.

hemidiaphragm (hem'e-di'ah-fragm) one half of the diaphragm.

hemidrosis (hem'i-dro'sis) hemihidrosis.

hemidysergia (hem'e-dis-er'je-ah) dysergia affecting one side of the body.

hemidysesthesia (hem'e-dis'es-the'ze-ah) [*hemi-* + *dys-* + *aisthesis* feeling] a disorder of sensation affecting one side of the body only.

hemidystrophy (hem'e-dis'tro-fe) unequal development of the two sides of the body.

hemiectromelia (hem'e-ek-tro-me'le-ah) a developmental anomaly characterized by imperfect development of the limbs of one side of the body.

hemielastin (hem'e-e-las'tin) a substance formed by the digestion or hydrolysis of elastin.

hemiencephalus (hem'e-en-sef'ah-lus) [*hemi-* + *Gr. enkephalos* brain] a fetus that lacks one cerebral hemisphere.

hemiepilepsy (hem'e-ep'i-lep-se) [*hemi-* + *epilepsy*] epilepsy affecting one side of the body only.

hemifacial (hem'e-fa'shal) pertaining to or affecting one half of the face.

hemigastrectomy (hem'e-gas-trek'to-me) excision of one half of the stomach.

hemigeusia (hem'e-gu'se-ah) [*hemi-* + *Gr. geusis* taste + *-ia*] presence of taste perception on one side of the tongue only.

hemigigantism (hem'i-gi'gan-tizm) overgrowth of one side of the entire body or of a portion of one side, as of the face.

hemiglossal (hem'e-glos'sal) [*hemi-* + *Gr. glōssa* tongue] affecting one side of the tongue.

hemiglossectomy (hem'e-glos-sek'to-me) [*hemi-* + *Gr. glōssa* tongue + *ektomē* excision] resection of one side of the tongue.

hemiglossitis (hem'e-glos-si'tis) [*hemi-* + *Gr. glōssa* tongue + *-itis*] inflammation involving only one side of the tongue.

hemignathia (hem'e-nath'e-ah) [*hemi-* + *Gr. gnathos* jaw + *-ia*] a developmental anomaly characterized by partial to complete lack of the lower jaw on one side.

hemihépatectomy (hem'e-hep'ah-tek'to-me) excision of half of the liver.

hemihidrosis (hem'e-hi-dro'sis) [*hemi-* + *Gr. hidrōs* sweat] sweating on one side of the body only.

hemihypalgesia (hem'e-hi'pal-je'ze-ah) [*hemi-* + *hypalgesia*] diminished sensitiveness to pain affecting one side of the body.

hemihyperesthesia (hem'e-hi'per-es-the'ze-ah) [*hemi-* + *hyperesthesia*] abnormally increased acuteness of sensation on one side of the body.

hemihyperidrosis (hem'e-hi'per-i-dro'sis) [*hemi-* + *Gr. hyper* over + *hidrōs* sweat] excessive sweating on one side of the body only; called also *hemidiaphoresis*.

hemihypermetria (hem'e-hi'per-me'tre-ah) hypermetria affecting one side of the body.

hemihyperplasia (hem'e-hi'per-pla'ze-ah) overdevelopment of one side of the body, or of one half of an organ or part, as of the cranium.

hemihypertonia (hem'e-hi'per-to'ne-ah) [*hemi-* + *Gr. hyper* over + *tonos* tension + *-ia*] increased tone of the muscles of one side, which may result in contractures; sometimes seen after a stroke. Called also *hemitonina*.

hemihypertrophy (hem'e-hi'per'tro-fe) [*hemi-* + *hypertrophy*] overgrowth of one half of the body or unilateral hypertrophy of a part. **facial h.**, hypertrophy of half of the face.

hemihypesthesia (hem'e-hi'pes-the'ze-ah) abnormally decreased acuteness of sensation on one side of the body.

hemihypoesthesia (hem'e-hi'po-es-the'ze-ah) hemihypesthesia.

hemihypometria (hem'e-hi'po-me'tre-ah) hypometria affecting one side of the body.

hemihypoplasia (hem'e-hi'po-pla'ze-ah) underdevelopment of one side of the body, or of one half of a part or organ, as of the brain.

hemihypotonia (hem'e-hi'po-to'ne-ah) [*hemi-* + *Gr. hypo* under + *tonos* tension + *-ia*] reduced muscle tone of one side of the body.

hemikaryon (hem'e-kar'e-on) [*hemi-* + *Gr. karyon* nucleus] a cell nucleus which contains the haploid number of chromosomes.

hemiketal (hem'e-ke'tal) a derivative formed by a combination of a ketone group with an alcohol.

hemilaminectomy (hem'e-lam'i-nek'to-me) surgical removal of a vertebral lamina on one side only.

hemilaryngectomy (hem'e-lar'in-jek'to-me) excision of one lateral half of the larynx.

hemilateral (hem'e-lat'er-al) affecting one lateral half.

hemileision (hem'e-le'zhun) a lesion of one side of the spinal cord only.

hemilingual (hem'e-ling'gwal) [*hemi-* + *L. lingua* tongue] affecting one side of the tongue.

hemimacroglossia (hem'e-mak'ro-glos'e-ah) enlargement of one side of the tongue.

hemimandibulectomy (hem'e-man-dib-u-lek'to-me) surgical excision of half of the mandible.

hemimelia (hem'e-me'le-ah) [*hemi-* + *Gr. melos* limb + *-ia*] a developmental anomaly characterized by absence of all or part of the distal half of a limb; see illustration under *amelia*. **fibular h.**, hemimelia of the lower limb in which the fibular side is absent. **radial h.**, hemimelia of the upper limb in which the radial side is absent. **tibial h.**, hemimelia of the lower limb, in which the tibial side is absent. **ulnar h.**, hemimelia of the upper limb, in which the ulnar side is absent.

hemimelus (hem-im'ē-lus) an individual exhibiting hemimelia.

hemin (he'min) [*Gr. haima* blood] the crystalline chloride of heme, $C_{34}H_{32}N_4O_4FeCl$, with the iron in the ferrous or Fe(II) state, of which Teichmann's crystals are composed.

heminephrectomy (hem'e-nē-frek'to-me) excision of a portion of a kidney.

heminephroureterectomy (hem'e-nef'ro-u-re'ter-ek'to-me) excision of a portion of a kidney and ureter.

hemineurasthenia (hem'e-nu'ras-the'ne-ah) neurasthenia affecting one side of the body only.

hemiobesity (hem'e-o-bēs'i-te) [*hemi-* + *obesity*] obesity of one side of the body only.

hemipalgia (hem'e-op-al'je-ah) [*hemi-* + *Gr. ōps* eye + *-algia*] pain in one side of the head and in one eye.

hemipopia (hem'e-o'pe-ah) 1. hemianopia (Plenk). 2. absence of visual power in one half of the retina.

hemipopic (hem'e-op'ik) [*hemi-* + *Gr. ōps* eye] 1. affecting one eye. 2. pertaining to hemipopia.

hemipagus (hem-ip'ah-gus) [*hemi-* + *Gr. pagos* thing fixed] twin fetuses united laterally at the thorax.

hemiparalysis (hem'e-pah-ral'i-sis) hemiplegia.

hemiparaneesthesia (hem'e-par'an-es-the'ze-ah) [*hemi-* + *Gr. para* below + *anesthesia*] anesthesia of the lower half of one side of the body.

hemiparaplegia (hem'e-par'ah-ple'je-ah) [*hemi-* + *paraplegia*] paralysis of the lower half of one side of the body.

hemiparesis (hem'e-par'e-sis) [*hemi-* + *paresis*] muscular weakness or partial paralysis affecting one side of the body.

hemiparesthesia (hem'e-par'es-the'ze-ah) [*hemi-* + *paresthesia*] perverted sensation on one side of the body.

hemiparetic (hem'e-pah-ret'ik) 1. pertaining to hemiparesis. 2. one affected with hemiparesis.

hemiparkinsonism (hem'e-par'kin-son-izm) parkinsonism affecting only one side of the body.

hemipelvectomy (hem'e-pel'vek'to-me) amputation of a lower limb through the sacroiliac joint.

hemipeptone (hem/'e-pep'tōn) [*hemi-* + *peptone*] one of the intermediate products of pepsin digestion of protein; it is formed along with antipeptone, and differs from the latter in being convertible into amino-acids by trypsin.

hemiphalangectomy (hem/'e-fal'an-jek'to-me) the excision of part of a digital phalanx.

hemipinta (hem/'i-pin'tah) a rare form of pinta in which the pigmentary disturbances affect only one half of the body.

hemiplacenta (hem/'e-plah-sen'tah) [*hemi-* + *placenta*] an organ, composed of the chorion, yolk sac, and, usually, allantois, which puts marsupial embryos into temporary relation with the maternal uterus.

hemiplegia (hem/'e-ple'je-ah) [*hemi-* + Gr. *plēgē* stroke] paralysis of one side of the body. **h. al'ternans hypoglos'sica**, hemiplegia due to lesion of the hypoglossal nerve on the side opposite the paralyzed part. **alternate h.**, that which affects a part on one side of the body and another part on the opposite side.

alternating oculomotor h., syndrome of Weber. **ascending h.**, ascending paralysis of one lateral half of the body.

capsular h., hemiplegia due to lesion of the internal capsule. **cerebral h.**, that which is due to a lesion of the brain. **contralateral h.**, hemiplegia on the side of the body opposite to the site of the brain lesion causing it. **crossed h.**, alternate h.

h. crucia'ta, alternate h. **facial h.**, paralysis of one side of the face, the body being unaffected. **faciobrachial h.**, paralysis of one half of the face and of the arm on the same side.

faciolingual h., paralysis of one side of the face and tongue. **flaccid h.**, hemiplegia with loss of tone of the muscles of the paralyzed part and absence of tendon reflexes. Cf. *spastic h.*

Gubler's h., 1. alternate h. 2. apparent hemiplegia occurring as a symptom in hysteria. **infantile h.**, hemiplegia due to cerebral thrombosis or hemorrhage at delivery or occurring before birth. **puerperal h.**, hemiplegia of women occurring shortly after childbirth. **spastic h.**, hemiplegia marked by spasticity of the muscles of the paralyzed part and increased tendon reflexes. Cf. *flaccid h.* **spinal h.**, a form due to a lesion of the spinal cord. **Wernicke-Mann h.**, partial hemiplegia of the extremities; called also *Wernicke-Mann type*.

hemiplegic (hem/'e-ple'jik) pertaining to or of the nature of hemiplegia.

hemiprostactectomy (hem/'e-pros'tah-tek'to-me) removal of one lateral half of the prostate.

Hemiptera (he-mip'ter-ah) [*hemi-* + Gr. *pteron* wing] an order of insects which may be winged or wingless, including ordinary bugs and lice, characterized by having the mouth parts adapted to piercing or sucking. The families Cimicidae and Reduviidae (suborder Heteroptera) contain species of considerable medical importance.

hemipterous (he-mip'ter-us) of or pertaining to insects of the order Hemiptera.

hemipylorectomy (hem/'e-pi'lor-ek'to-me) excision of half of the pylorus.

hemipyocyanin (hem/'e-pi'o-si'ah-nin) an antibiotic produced by the growth of *Pseudomonas aeruginosa* which is active against *Trichophyton schoenleini* and *Candida albicans*.

hemipyonephrosis (hem/'e-pi'o-nē-frō'sis) a hydronephrotic sac in a portion of the kidney; or pyonephrosis of half of a double kidney.

hemirachischisis (hem/'e-rah-kis'kī-sis) rachischisis without prolapse of the spinal cord.

hemisacralization (hem/'e-sa'kral-i-za'shun) fusion of the fifth lumbar vertebra to the first segment of the sacrum on only one side.

hemiscotosis (hem/'e-sko-to'sis) hemianopia.

hemisection (hem/'e-sek'shun) 1. bisection. 2. division into two equal parts.

hemiseptum (hem/'e-sep'tum) either half of a septum, especially the lamina of the septum pellucidum of the brain. **h. cer'e'bri**, the lateral half of the septum pellucidum of the brain.

hemisoantibody (hēm/'i-so-an'ti-bod-e) an antibody of one individual that reacts with red blood cells of another individual of the same species.

hemisomnambulism (hem/'e-som-nam'bu-lizm) somnambulism in which the subject behaves as though he were awake.

hemisomus (hem/'e-so'mus) [*hemi-* + Gr. *sōma* body] an imperfectly developed fetus.

hemisotonic (hem/'i-so-ton'ik) [Gr. *haima* blood + *isotonic*] having the same osmotic pressure as the blood.

hemispasm (hem/'e-spazm) spasm affecting one side only.

hemisphaeria (hem/'i-sfe're-ah) [L.] plural of *hemisphaerium*.

hemisphaerium (hem/'i-sfe're-um), pl. *hemisphae'ria*. Hemisphere; see also *hemispherium*. **hemisphae'ria bul'bi ure'thrae**, the lateral halves of the bulb of the urethra.

hemisphere (hem/'i-sfēr) [*hemi-* + Gr. *sphaira* a ball or globe] half of any spherical or roughly spherical structure or organ, as the hemispheres of the brain (hemispherium [NA]). **animal h.**, the half of the mass of cells formed by cleavage of a fertilized telolecithal ovum that is nearest the animal pole. **cerebellar**

h., hemispherium cerebelli. **cerebral h.**, either of the pair of structures constituting the largest part of the brain in humans, formed by evagination of the embryonic telencephalon and separated by the fissura longitudinalis cerebri; together they comprise the cerebral cortex, centrum semiovale, basal ganglia, and rhinencephalon, and contain the lateral ventricles. The hemispheres are connected at the bottom of the fissura by the corpus callosum. Called also *hemispherium* [NA]. **dominant h.**, that cerebral hemisphere which is more concerned than the other in the integration of sensations and the control of many functions, such as the preferential use of one or the other of paired organs in voluntary movements, e.g., the left cerebral hemisphere in right-handed persons, and vice versa. However, the left hemisphere is usually dominant for speech, regardless of the handedness. **vegetal h.**, the half of the mass of cells formed by cleavage of a fertilized telolecithal ovum that is nearest the vegetal pole.

hemispherectomy (hem/'i-sfēr-ek'to-me) [*hemisphere* + Gr. *ek-tomē* excision] resection of a cerebral hemisphere.

hemispherium (hem/'i-sfe're-um), pl. *hemisphe'ria* [L.] [NA] a general term denoting half of a spherical or spheroid structure. Also [NA] the cerebral hemisphere; see under *hemisphere*. **h. cerebel'li** [NA], cerebellar hemisphere: the part of the cerebellum lateral to the vermis, each hemisphere being composed of the ala lobuli centralis, lobulus quadrangularis, lobulus simplex, lobulus semilunaris superior, lobulus semilunaris inferior, lobulus biventer, tonsilla, and flocculus.

hemisphygmia (hem/'i-sfig'me-ah) [*hemi-* + Gr. *sphygmos* pulse] a condition in which there appears to be twice as many pulse beats as there are heart beats (pulsus bisferiens).

Hemisporea stellata (hem-'is'po-rah stel-la'tah) a dematiaceous imperfect soil fungus reported to have been isolated from cold abscesses, periosteitis, and lesions resembling sporotrichosis.

hemispore (hem/'e-spōr) a spore formed by the differentiation and division of the terminal portion of a hypha.

hemistrumectomy (hem/'e-stroo-mek'to-me) hemithyroidectomy.

hemisynndrome (hem/'e-sin'drōm) a syndrome indicative of a unilateral lesion of the spinal cord.

hemiterata (hem/'e-ter'ah-tah) [*hemi-* + Gr. *teras* monster] a group of congenitally deformed individuals who cannot be classed as teratisms or monstrosities.

hemiteratic (hem/'e-ter-at'ik) congenitally deformed, but not monstrous.

hemitetany (hem/'e-tet'ah-ne) tetany limited to one side of the body.

hemithermoanesthesia (hem/'e-ther'mo-an'es-the'ze-ah) absence of temperature sensation on one side of the body.

hemithorax (hem/'e-tho'raks) [*hemi-* + *thorax*] one side of the chest.

hemithyroidectomy (hem/'e-thi'roid-ek'to-me) excision of one lobe of the thyroid gland.

hemitomias (hem/'i-to'me-as) [Gr. *hēmitomias* half a eunuch] a person deprived of one testis.
